tractor is entitled to an extension of time. In connection with that, we feel we are entitled to show all the circumstances in connection with the construction, so the Court may determine whether the plaintiff was delayed by causes beyond his control; and there has been, in the cross-examination of other witnesses, criticism of the fact that the concrete lining was not laid up closer to the face, and we desire to show the facts in connection with that.

[1293]

This witness has testified, if your Honor please, that this interpretation of this provision was that the lifts which could not be more than 6 feet, measured vertically, were the lifts between each of these layers; in other words, these lifts could not be more than 6 feet deep, measured in a vertical direction.

Mr. Wittschen: Are those horizontal, Mr. Marrin?

Mr. Marrin: No; they are not. In this provision with respect to the tunnel concrete lining, there is nothing said about it being horizontal.

Mr. Wittschen: I just read it. It is under "General Concrete"; and they refer to that at page 25, on the right-hand side:

> "Conveying, Placing and Compacting Concrete. Concrete shall be deposited in uniform horizontal layers, not deeper than twelve inches (12"), care being taken to avoid inclined planes or inclined construction joints. Construction

(Testimony of Thomas Moore Price.)

joints must be built with square ends and level tops, except as otherwise directed by the District Engineer; in arch type structures——"

This certainly was an arch type structure——

"——joints shall be made at right angles to the axis of the rib. Each layer shall either be placed before the previous layer shall have taken its initial set, or if the previous layer has taken its initial set, the surface of the previous layer shall be prepared as herein specified for the preparation of hardened surfaces."

I am willing to concede you are right, for the argument. I still think it is wholly immaterial, in this controversy, because they contracted to build a tunnel; they contracted to leave certain things to the Engineer—and let us assume they are correct, that he misinterpreted the specifications: He had a right to misinterpret them because they agreed that his interpretation should prevail; and it does not make a bit of difference, particularly when you come down to the fact they never once objected to it, in writing, and never once [1294] noted it as a ground for rescission.

Mr. Marrin: We are not attempting to attack the Engineer's decision on this. We are simply showing he had reasonable cause to believe, from these statements, that the method was a practical method; and the other provision with respect to concrete in the tunnel lining being placed in lifts of not more than 6 feet, measured verticaly, is a

(Testimony of Thomas Moore Price.)

specific provision referring to the tunnel lining. The section you have read is a general——

Mr. Tinning: What section do you refer to now?

Mr. Marrin: On page 25:

> "Concrete for the tunnel lining shall be placed continuously between any two adjacent construction joints, in lifts not more than six feet (6′) deep, measured in a vertical direction."

Now, the other provision relates to other concrete; and there were many structures,—outside structures and buildings,—which were to be constructed with concrete; and, as we want to show, that construction—it was provided for placing concrete horizontally in one foot layers; that was meant to refer to those structures; but we don't question the Engineer's decision, in insisting upon the method, except as it shows that the method which we proposed, and we had a right to assume we could use, was impracticable in view of his construction of the specifications.

The Court: That goes back to that phrase I used, —a homely phrase: that all the Engineer was, was an umpire.

Mr. Wittschen: Yes.

Mr. Marrin: On this particular subject, we did not have the benefit of his decision before we bid upon these plans and specifications.

The Court: I know very well you did not.

(Testimony of Thomas Moore Price.)

Mr. Wittschen: Well, nobody had.

The Court: Nobody had. I am trying to analyze this; that is [1295] the reason I suggested that the language in the specifications, aside from the fact counsel indicates even though he misrepresented it, it would accomplish nothing by this testimony.

Mr. Marrin: Well, I think it would, your Honor. It would show we were in good faith, if it was a reasonable interpretation.

The Court: I am not questioning anyone's good faith.

Mr. Marrin: We, in good faith, did everything we could to get the plans arranged and go ahead with the work.

Mr. Wittschen: When I said it did not make any difference, I still stand by that; but you produce these paragraphs—the one you called for and the one we called for; they are on the same page; and it says he shall place them horizontally. I think you have utterly misconceived it; but, for the sake of putting on my argument, I am willing to admit the Engineer utterly misconceived it. However, his judgment controls; and if he interpreted "horizontally" to be in a straight line, I don't think you can find any fault with it.

The Court: Well, I want to give you a record, of course, on whatever you have in mind; but I rather agree with counsel's view, namely, that the specifications provide for this method and the manner of procedure.

(Testimony of Thomas Moore Price.)

Mr. Marrin: Well, perhaps that is true, your Honor; but I think, nevertheless—we are offering this testimony, if your Honor please, for the purpose of showing the plans that we had for placing the concrete; and will follow that by showing we could not place it by this method, and the steps that were taken to remedy that situation to meet the Engineer's objection and his interpretation.

The Court: I will give you a record on it; but I have indicated my state of mind. However, I want to give you a record. I am satisfied this is the best example of it. Of course, the Contractor pursues the most economic method he can, under the circumstances. [1296] He tried probably to satisfy the Engineer. However, in this phase of the work, there was not any controversy, that I recall from what has been placed in the record to date.

Mr. Marrin: Well, there is a controversy, if your Honor please.

The Court: Well, if there has been up to this point, I have failed to understand it.

Mr. Marrin: Proof of that will be developed,—the concrete lining proposition,—before this case is closed. We propose to show, on our case, simply what we did, and the plans we made, and whether or not the concrete was placed; that will be shown eventually. In other words, this evidence is of facts.

(Testimony of Thomas Moore Price.)

Mr. Wittschen: Well, the notice of rescission did not specify any interference with the concrete. The notice of rescission or no letter ever objected to the District Engineer's interpretation of the concreting situation. This is bringing into the case—and the authorities are uniform, when one rescinds on a specific ground,—as the Supreme Court of the United States has said in one case,—he cannot come into court and assert other grounds, —he cannot mend his hold and here you are asserting something new and different, as a ground of your action.

Mr. Marrin: No; we are not. We will connect this up and show that the delay resulting from the concrete operation here slowed up all of the work. We did rescind, on the ground that we were entitled to an extension of time, which was refused. We did rescind, on the further ground that a penalty was imposed which was unjustified, and this is part of the facts going to prove our case on that issue. We did not, if the Court please, attempt to specify in the notice of rescission everything that happened on the job.

The Court: You may proceed. I have indicated I will give you a record, so you will not lose any of your legal rights. I will rule finally. I have indicated my view. [1297]

Mr. Marrin: Yes—not to go into this any further?

(Testimony of Thomas Moore Price.)

The Court: You may have a record on it. I don't want to construct this tunnel again, if I can avoid it. I don't want to mislead you, or don't want to waste your time, much less my own. If you want a ruling, I will give a ruling, so that you have a proper record here. I will give you the privilege, of course, to show what you wish.

Mr. Marrin: I don't understand quite the state of the record.

The Court: Even though I disagree with your view, I want you to have a record; so, if I am in error, after you leave here at least you will have a record to comfort you.

Mr. Marrin: Thank you, your Honor.

Q. Mr. Price, were you able to pour the concrete, in the west portal section, in the manner which you have indicated on the blackboard?

Mr. Wittschen: We object to that, on the same ground.

The Court: Overruled.

Mr. Wittschen: Exception.

The Witness: A. No; we were not able to pour it that way.

Mr. Marrin: Q. How were you required to pour it?

A. We were required to pour it——

Mr. Wittschen: I—I make the same objection. How he poured the concrete is wholy immaterial, and it is not a basis for rescission, if your Honor please.

(Testimony of Thomas Moore Price.)

The Court: Objection overruled.

Mr. Wittschen: Exception.

The Witness: A. We were required to pour it in conformity with the general specifications on structural concrete, which required that the concrete would not be moved in the forms over 3 feet, and shall not be put in, in layers over one foot in thickness.

Mr. Marrin: Q. Did you thereafter change your plan for pouring [1298] the concrete lining in the tunnels? A. Yes.

Q. Will you state what you did, in that connection, in the change of plan?

Mr. Wittschen: We object to that as immaterial and not a ground for rescission.

The Court: Q. You may answer.

Mr. Wittschen: Exception.

The Witness: A. After the concrete in the portal section had been stripped, in the early part of December, 1934, the concrete was inspected early in January by Professor Raymond E. Davis of the University of California, and the District Engineer, Mr. Bogs; and they pointed out to me that there were inclined joints, apparently cold joints, existing in this portal concrete, and that there were some rock pockets in it; and the District Engineer stated to me that further concrete of that type would not be acceptable.

In the pouring of the portal concrete, by the pneumatic gun, we had—the decision was imme-

(Testimony of Thomas Moore Price.)

diately upon me; and, at that time of the year, I arrived on the job—it was late in the fall—the concrete had to be poured some way just as quickly as possible, in order to protect the portal structure of the tunnel, and make it possible to work in the tunnel during the winter months. The concrete plant was not ready; the supply of concrete was not ready; and I used any emergency method I could. I obtained concrete to pour on the portal section. There was a concrete plant set up, owned by the subcontractor, K. E. Parker Company; and we used that in pouring the south tunnel. It did not function very well, and we were not able to get over 8 yards per hour. When we poured the north tunnel, we obtained permission from the Engineer to pour it in lifts along the side walls, 15 foot lifts, I believe; and obtained concrete from a paving mixer, which we set up in the portal to [1299] supply the pneumatic gun; and, in order to get it done just as quickly as possible, the Engineer told me he would let me use that method for that section, but it would not be permitted in future concreting. With the use of that method in the north tunnel, we were not much better off; we could not make much better than 8 cubic yards per hour. In other words, it was so slow it was impossible to prevent cold joints from forming in the concrete; and, naturally, a cold joint is, I think, the worst thing that can happen to concrete. I concluded, from this, that it would be impracticable, if not probably im-

(Testimony of Thomas Moore Price.)

possible, to pour the concrete and comply with the Engineer's specification, with the pneumatic system; and I set about to find some other system that could be used. The pneumatic system was the only system, at the time, that had been used for a number of years, and had proved practicable, and it was particularly practicable in this tunnel, from the standpoint of complying with the Industrial Accident Commission's requirements.

Mr. Wittschen: I submit your witness has answered the question.

Mr. Marrin: No; he has not.

Mr. Wittschen: You did not ask him anything about the Industrial Accident Commission or any compliance with Mr. Davis's order. I have given him a lot of latitude.

The Court: Answer the question and proceed.

Mr. Marrin: Q. Will you just state what you did, in connection with changing the concrete plans or plants for placing the concrete?

Mr. Wittschen: To be consistent, your Honor, I make the same objection.

The Court: Overruled.

Mr. Wittschen: Exception.

The Witness: A. I looked into the method of pouring concrete by the Pumpcrete method, manufactured by the Chain Belt Company of Milwaukee, Wisconsin.

Mr. Marrin: Q. What did you know of the Pumpcrete method? [1300]

(Testimony of Thomas Moore Price.)

Mr. Wittschen: I object to that as immaterial, what he knew about it. It is not binding on us. It was their obligation to lay the concrete, and on all of the other grounds stated.

The Court: I will allow it.

Mr. Wittschen: Exception.

A. What was the question?

The Court: He wanted to know what did you know of the Pumpcrete method. Describe what that was.

A. The pumpcrete method was a machine based on a German patent manufactured by the Chain Belt Company, of Milwaukee, Wisconsin, which consisted essentially of a reciprocating pump which forced the concrete by piston pressure through pipes into the place where it was to be used.

Mr. Marrin: Q. Will you go ahead and state what you knew of the use of that Pumpcrete method at that time?

A. It was quite a new method in this country, and we had been through an operation with it at Boulder Dam for two years preceding this. The Chain Belt Company had asked the Six Companies to take one of these pumps and try it out down there and see if we could make it work, and we did succeed in making it work on 1½-inch aggregates, in exposed places around the job, and I believe in some cases in small tunnels where 1½-inch aggregates were acceptable. However, the machine had not been developed fully at all, and had not been

(Testimony of Thomas Moore Price.)

proven with respect to completing the arch in the lining of tunnels. The specifications for aggregates on the tunnel were 2½ inches in size, and it was about the latter part of the season of 1934 that they had made an improvement in the pump which permitted it to pump the concrete manufactured with 2½-inch aggregates.

The Court: The ultimate fact, however, was you were able to go on with the work under this method?

A. No, we were not at that time. [1301]

Q. I misunderstood you then.

A. I was getting around to the point that the machine had always been driven by electricity, and we could not have electric power in these tunnels.

Mr. Marrin: Q. Was this machine a standard factory product at the time?

A. No, it was not a standard factory product.

Q. Was it being put out specially for this job?

A. Yes, they had an engineer who was designing the machine at the factory and came out with the machine for the job, Mr. C. F. Ball.

Q. What were the problems that had to be worked out with this machine before it could be used on this job?

A. The application of the power was the most important problem; we were prevented from running electric cables or wires of any kind into the tunnel by the provisions of the Industrial Accident Commission, and we could not use the motors in the tunnel, except a special type of motor called "Ex-

(Testimony of Thomas Moore Price.)

plosion Proof Motors," and it was practically impossible to get them in that size and to drive them after we got them in, because we could not get batteries enough in there to continuously operate them; it was impracticable to supply air motors to the Pumperete, because of the power required by the machines.

Q. Do you mean by that that some kind of power was necessary to drive the pump? A. Yes.

Q. The kind of power that was previously used was electric motors? A. Yes.

Q. Due to the regulations of the Industrial Accident Commission the motors previously used were not permitted in the tunnel? A. Yes.

Q. Did you communicate with the Chain Belt Company with respect to this matter?

Mr. Wittschen: Objected to.

Mr. Marrin: I am not asking for the communication. [1302]

Mr. Wittschen: I don't know, my experience is limited, but can we have an objection to all of this without repeating it?

The Court: As I have indicated, I want both sides to have a record, and I will permit any reasonable latitude. But let us take the phase of this problem now that we are talking about and analyze it for a moment. How could that be charged, under these plans and specifications, to the District? I am speaking legally, and after all, of course, this will have to be finally determined legally.

(Testimony of Thomas Moore Price.)

Mr. Marrin: I am not trying to charge them with a breach on account of the concrete. I am simply trying to bring out, to show to your Honor that we used every effort to produce a method of placing this concrete which would be satisfactory to the District Engineer, and we were just as diligent as we could be in working this out and placing the concrete lining as soon as possible. Now, in connection with that it developed it was not practicable, in our opinion, to use the pneumatic gun method, it was slow, it was bad concrete, it was objected to by the District Engineer. In good faith we went to another method, which at that time had not been fully developed, namely, this Pumpcrete. There were difficulties in connection with that in getting the proper power to operate that machine; there were difficulties in connection with getting permission of the Industrial Accident Commission for changes on this machine, the particular design of the machine had to be worked out with the Chain Belt Company, and we want to make a record and we want to show the diligence and efforts that the contractor put in to develop that as quickly as possible and get the concrete lining placed in a manner satisfactory to the District. That is the purpose of this testimony at this time.

Mr. Wittschen: I think it is obvious from the gas encountered [1303] in the tunnel that the Industrial Accident Commission would not permit electrically-driven motors.

(Testimony of Thomas Moore Price.)

The Court: That is obvious to me.

Mr. Wittschen: It is also obvious the way this would have to be done, and all of those things I assume prudently would have been taken care of before you got to that place—that is argumentative, it is not binding on us how you did it; you were permitted to do it any way you pleased, as long as you complied with the specifications.

Mr. Marrin: Yes, but when we came up against a condition which required an entire change in the plan we were entitled to show the diligence with which we attempted to proceed with the contract.

The Court: What, for example, has been developed in regard to delay on account of pouring this concrete? I do not recall that there has been any delay other than what Larson testified to, in relation to the difficulties. Was there any written communication?

Mr. Wittschen: No.

Mr. Marrin: We advised them of these changes.

Mr. Wittschen: That you were objecting to delay.

Mr. Marrin: Objections to delay on account of the concrete?

The Court: Yes.

Mr. Wittschen: How did you put the first 110 feet of concrete in?

Mr. Marrin: We put that in accordance with the pneumatic method, and Mr. Price stated he made a concession there which would not be made for the

(Testimony of Thomas Moore Price.)

rest of the tunnel, it would have to be changed, and the engineer objected to the concrete, and we were trying to comply with his objection.

Mr. Wittschen: He merely objected to your method of laying. He did not object to the apparatus. [1304]

Mr. Marrin: He required a method, and it our opinion that was wholly impracticable to lay the concrete.

The Court: What is before the Court now?

Mr. Wittschen: I understand it could have been done with a Hackley gun. It was laid in the Sunset tunnel that way, with a Hackley gun.

Mr. Marrin: Was it laid horizontally?

Mr. Wittschen: In Twin Peaks, so I am told. I was not there. I was advised of that fact. I cannot tell you about the other tunnels, because I don't know.

The Court: Let us proceed. I think during the recess we had better work out an understanding so that both sides will be protected, and I will give you my views if it may be helpful. Proceed.

A. May I have the question?

(Question read by the reporter.)

A. Yes.

Mr. Marrin: Q. Over what period of time, Mr. Price?

A. Over the period of time from the latter part of November, 1934 up through June, 1935, approximately.

(Testimony of Thomas Moore Price.)

Q. Were there any problems in connection with the use of the Pumpcrete that had to be worked out in addition to the power?

Mr. Wittschen: The same objection, on all of the grounds stated.

The Court: The objection will be overruled.

Mr. Wittschen: Exception.

A. Yes, there were two problems connected with the power; the Industrial Accident Commission would not permit the use of motors, ordinary motors in the tunnel, and I had evolved a plan about the first week in April of installing motors in a steel box and feeding them with compressed air in order to keep the pressure in the place where the motors operated at a higher pressure than the tunnel [1305] air, so that the explosive mixture, if there were any in the tunnel, would not get into where the motors were and cause an explosion.

Q. It has been testified here, and I think you testified here, that excavation was resumed in December, 1934?

A. Yes, excavation on the core in the concrete section.

Q. Were you able immediately at the time of resumption of excavation to determine the type of concrete equipment which should be used in concreting the tunnel? A. No.

Q. Why not?

Mr. Wittschen: Objected to as immaterial, and on all of the grounds previously stated.

The Court: Overruled.

(Testimony of Thomas Moore Price.)

Mr. Wittschen: Exception.

A. It was impossible to determine it because we could not determine what kind of forms we could use, or how our equipment had to be placed; it might be necessary for us to continue on with the drift method and build the forms in place, leaving the core in place until the tunnel had been concreted, and then remove them. On the other hand, if we were able to open up the tunnel and timber it, and timber it so that it would hold, excavating the core, it would be possible to build the steel forms which could be moved into the tunnel so that concrete could be placed in them in the most economical way that it could be placed, and that had to be determined; it was necessary to see if we could open up the tunnel and hold it open for a specific distance to perform that operation before the plan could be determined.

Q. How much of the ground would have to be opened up before you could determine that?

A. Approximately 300 feet.

Q. When was that amount of ground opened up in the tunnel? [1306]

A. Approximately around April 1, 1935.

Q. When was the Pumpcrete ordered?

Mr. Wittschen: Objected to as immaterial, and on all of the grounds heretofore stated.

The Court: You may answer.

Mr. Wittschen: Exception.

A. The Pumpcrete was ordered after I received permission from the Industrial Accident Commis-

(Testimony of Thomas Moore Price.)

sion at a hearing before Mr. Fry and his assistant in San Francisco permitting the use of slip ring motors.

Mr. Wittschen: I object to that statement.

Mr. Marrin: Q. I just asked you about the date on which you ordered the Pumpcrete.

A. Approximately April 12, on or about that date.

Mr. Wittschen: 1935? A. Yes.

Mr. Marrin: Q. When were the forms ordered for the tunnel?

A. The forms were first ordered on—bids were asked on February 28th.

Q. Of what year? A. 1935.

Mr. Tinning: I submit the answer should go out as not responsive. The question was when they were ordered.

The Court: When were they ordered?

Mr. Marrin: When were they ordered?

A. The forms for placing the concrete in the tunnel, April 13, 1935.

Q. And when was the Pumpcrete delivered to the work?

A. On or about June 20 or 21, 1935.

Q. When were the forms delivered to the work, Mr. Price?

A. The forms were delivered about the first week in July, I believe.

Q. 1935?

A. 1935. That is the first of the forms. We ordered two sets.

(Testimony of Thomas Moore Price.)

Mr. Marrin: I have here a copy of a letter from T. M. Price [1307] to Wallace B. Boggs, dated February 9, 1935, to which is attached two drawings. Will it be stipulated that was sent and received by Mr. Boggs?

Mr. Tinning: Yes.

Mr. Marrin: I would like to offer that in evidence.

Mr. Tinning: It was sent by Mr. Price and received by Mr. Boggs.

Mr. Marrin: That is right.

Mr. Wittschen: In view of the fact that we have admitted all correspondence we won't object to that.

(The letter was marked "Plaintiff's Exhibit 62.")

[Set forth in the Book of Exhibits at page 281.]

Q. Attached to that, Mr. Price, are two drawings. Will you explain what those drawings show?

A. The drawing numbered A2-7 shows the concrete plant that was used inside of the tunnel in lining the tunnel.

Mr. Tinning: Q. Mr. Price, can you tell me where you got the marking of A2-7? Isn't that something that you have made up in your exhibit? The number on this seems to be DWG No. 13.

A. You are right, there is DWG No. 13 underneath.

Q. You are calling a number that you put on in preparing your exhibits. I have a photostatic copy of that diagram that you furnished the district. It is dated January 31, 1935. A. Yes. [1308]

(Testimony of Thomas Moore Price.)

Mr. Marrin: Will you explain what that shows?

A. The drawing reading from right to left shows the agitator car on the ramp, which car was used in hauling the mixed concrete from the mixing plant located at the West Portal into the tunnel. It had power agitation and discharged into a machine which represents the Pumpcrete.

Q. Will you show that to the Court?

A. The whole apparatus is mounted on a car which operated on the same track as the excavated muck was hauled out of the tunnel on.

The Court: Where did I see a diagram of this before?

Mr. Tinning: In the April 2 letter that went in evidence.

Mr. Marrin: There is a difference here that I want to bring out.

A. The pipes are shown leading from the Pumpcrete into the concrete forms which are represented immediately to the left of the Pumpcrete, and the concrete forms are shown to be filled by means of chutes leading from ports in the pipe to these chutes; that is shown in cross section at the left-hand side of the drawing, where the tunnel concrete is shown and the pipe leading into it, the chutes leading into it from the pipe leading from the chute.

Mr. Tinning: The chutes went through the sides of the concrete form?

A. Yes. This is a pipe looking at the cross section.

(Testimony of Thomas Moore Price.)

Mr. Marrin: Q. Will you pass to the second drawing?

A. The second drawing, No. 16, dated February 10, 1935, illustrates the concrete forms which we originally planned to use, and which we planned to use at that time. This second drawing shows the concrete called the furring concrete, being poured integrally with the concrete lining.

Q. Will you explain what you mean by "furring concrete"?

A. Furring concrete is concrete that is placed, as I understand it, to level up indentations in the structure that may be placed in [1309] other concrete, but it is not particularly designed to support, to carry any strength. At this point about 7 feet above the bottom, on the right-hand side of the tunnel, there were ventilating flues approximately every 12 feet; these flues were constructed of light steel, supposed to be constructed of light steel, like sheet steel, and set in the concrete, and the spaces between them, about two inches on each side of them, were covered with concrete.

The Court: What was the purpose of that?

A. The purpose of that was to lead the fresh air from the ventilating duct up here down into the roadway section all along the tunnel so that fresh air would be in there.

Mr. Tinning: Q. The furring is like a coating of plaster in a room, it covers up the conduits and

(Testimony of Thomas Moore Price.)

air spaces and gives a smooth interior to the inside of the tunnel? A. Yes.

The Court: We will take a recess now until two o'clock.

(A recess was here taken until two o'clock p. m.)

[1310]

Afternoon Session

THOMAS MOORE PRICE,

Direct Examination (continued)

Mr. Marrin: Q. Mr. Price, just before the noon adjournment, you were explaining Exhibit 62, which is the letter from you to Mr. Boggs, enclosing and sending to him the two drawings which are part of that exhibit. Did Mr. Boggs make any statement to you, with respect to those drawings, when you submitted them to him?

Mr. Wittschen: We object to that as incompetent, irrelevant and immaterial, calling for a conversation which would not necessarily be binding upon the defendant, tending to prove no issue.

The Court: I will allow it subject to a motion to strike and over your objection.

Mr. Wittschen: Exception.

The Witness: A. No; not at the time I submitted them.

(Testimony of Thomas Moore Price.)

Mr. Marrin: Q. Did he, thereafter?

Mr. Wittschen: Same objection.

The Court: The same ruling.

Mr. Wittschen: Exception.

The Witness: A. Yes. Along in the middle of March, 1935, to the best of my recollection, Mr. Boggs told me that, while he would not stop us if we wished to proceed with the installation of the concrete lining with the furring concrete included in it, nevertheless he did seriously object to it, and would not recommend that we pour the furring concrete with the lining of the tunnel.

Mr. Marrin: Q. Did he state the reason for his objection?

Mr. Wittschen: Same objection.

The Witness: A. Yes.

The Court: Same ruling.

Mr. Wittschen: Exception. [1311]

Mr. Marrin: Q. State what he said.

Mr. Wittschen: Same objection.

The Court: Same ruling; and note an exception.

The Witness: A. He stated that, due to the ventilating flues which were of light—the metal flues leading the air from the upper chamber in the tunnel to the roadway section were constructed of light sheet metal, and the electrical conduits being constructed of a material that would break easily, there would be serious possibility of damage to them, by pouring the concrete around them, due to the hydrostatic pressure and due to misplacing them or disturbing them during the operation of pouring.

(Testimony of Thomas Moore Price.)

Mr. Marrin: Q. Did you do anything thereafter to meet his objection? A. Yes.

Mr. Wittschen: Same objection on all the grounds heretofore stated.

The Court: The same ruling.

Mr. Marrin: Q. What did you do?

A. We redesigned the forms.

Q. I refer you to Defendant's Exhibit "II," which is a letter from you to Mr. Boggs, dated April 2, 1935, to which there is a drawing attached. Are these the forms, as you redesigned them to meet that objection? Is that a drawing of it?

A. Yes, this is.

Q. You sent that to Mr. Boggs on or about the date of the letter? A. Yes.

Q. Thereafter—I refer you now to Defendant's Exhibit "JJ",—which is a letter dated April 9, 1935, from Mr. Boggs to you, or to Six Companies of California, to your attention,—which has been read in evidence; and I will ask you: Does that contain his comments on the revised design which you submitted? A. Yes, it does.

Q. What did you do, after receiving the letter?

A. Why, the comments that were brought up there did not affect the basic design [1312] of the forms; so I ordered the forms immediately, believing that we could straighten out the points he brought up on the actual pouring conditions.

Q. And the forms, as ordered by you,—did they provide or did they not provide for pouring the furring concrete integral with the concrete lining?

(Testimony of Thomas Moore Price.)

A. They did not provide for it.

Q. In other words, you met the objections that Mr. Boggs made to your earlier design? A. Yes.

Mr. Marrin: I have here the original of a letter received from the Industrial Accident Commission, written by Fred L. Lowell, Supervising Engineer, Mining Section, of the Industrial Accident Commission, to Tom Price, General Manager of Six Companies of California, dated April 11, 1935; and I offer that in evidence as plaintiff's exhibit next in order.

Mr. Wittschen: May we look at it a moment?

Mr. Marrin: Surely.

Mr. Wittschen: We object to the introduction of this letter, on the ground it is incompetent, irrelevant and immaterial, and on the further ground that the contract provides that the Contractor would abide by all the safety rules of the Industrial Accident Commission.

Mr. Marrin: If your Honor please, this letter is a letter from the Industrial Accident Commission setting forth the regulations of the Commission with respect to the use of motors and power on the concrete; and we offer it.

The Court: I will allow it.

Mr. Wittschen: Exception.

(The letter was marked "Plaintiff's Exhibit No. 63.")

Mr. Marrin. This is a letter on the letterhead of the Industrial Accident Commission, dated April 11, 1935: [1313]

PLAINTIFF'S EXHIBIT No. 63

Industrial Accident Commission
State Building
San Francisco

April 11, 1935

Tom Price, General Manager,
Six Companies of California,
P. O. Box 120,
Berkeley, California

Subject: Concrete pump and flood lights in Low Level Broadway Tunnels.

Dear Sir:

Any "wound-rotor" or slip ring motors with their speed control equipment are to be enclosed in tight fitting boxes, and fresh dry air from the compressed air line is to be piped into these enclosures for ventilation. The starting devices for each of these two motors are to be so arranged that the motors cannot be started without first establishing compressed air ventilation.

Power lines and heavy-duty portable cable will supply 440 volt power from the transformers located outside of the tunnel to the concrete machine until it is approximately 1000 feet from the portal. The 440 volt cable may then supply power to step-up transformers (440 to 2300 volts), 1000 feet in from the portal where the power will then be stepped up to 2300 volts and carried to the next bank of transformers located approximately 2000 feet from the portal, where the voltage will be stepped down again (2300 to 440 volts) for the machine.

(Testimony of Thomas Moore Price.)

The transformers underground are to be located in the cross-cuts between the two tunnels. There must be a tight fitting door on both sides of the underground transformers with fresh dry air from the compressed air line ventilating the space between the doors and about the transformers.

The lights to be used on this machine shall be of the "vapor-proof" or "explosion-proof" type.

These lights and the power for the machine must be disconnected by switches located outside of the tunnel when blasting is done in the tunnel, and are not to be turned on after blasting until the fire boss has made a test of the tunnel air for explosive gas and found it to contain not more than ½ of one per cent methane gas in any part of the tunnel.

The vapor-proof flood lights exhibited at our office are approved for tunnel lighting between the portal and the flood lights now in use at the face subject to the same provisions for extinguishing them by a switch outside the tunnel when blasting is being done in the tunnels.

Yours very truly,

(Signed) FRED L. LOWELL
Supervising Engineer
Mining Section

[Endorsed]: U. S. Dist. Ct. N. D. Cal. No. 20101-R. Plff's Ex. No. 63. Filed April 29, 1933. Walter B. Maling, Clerk. By J. A. Schaertzer, Deputy Clerk.

(Testimony of Thomas Moore Price.)

Mr. Marrin: Q. Was that ruling made pursuant to a request made by you? A. Yes.

Q. Was that a modification of former rulings of the Commission, with reference to the use of electricity in the tunnels? A. It was.

Q. What were the former regulations?

A. That no electric wiring would be permitted in the tunnels.

Q. And this is the first permission you have to use electric motors or wiring in the tunnels?

A. I had received verbal permission the preceding day. This was a confirmation of it.

Mr. Marrin: I have here a letter from Six Companies of California to W. B. Boggs, dated July 1, 1935; and I offer that in evidence as plaintiff's exhibit next in order.

Mr. Wittschen: We object that on the ground it is incompetent, irrelevant and immaterial; that they were bound by the rulings of the Commission; and in no way binding upon the defendant.

The Court: Indicate, for the purpose of the record, the purpose of the offer.

Mr. Marrin: This is a letter transmitting to Mr. Boggs, at his request, a copy of the ruling of the Industrial Accident Commission.

The Court: I will allow it.

Mr. Wittschen: Exception.

(The letter was marked "Plaintiff's Exhibit No. 64.") [1315]

Mr. Marrin: This letter is dated July 1, 1935, and is addressed to Mr. W. B. Boggs, District Engineer, Joint Highway District No. 13, 1448 Webster Street, Oakland, California; and reads as follows:

PLAINTIFF'S EXHIBIT No. 64

July 1, 1935

Mr. W. B. Boggs,
District Engineer,
Joint Highway District No. 13,
1448 Webster St.,
Oakland, Calif.

Dear Sir:

As per your verbal request of today, we are enclosing copy of letter from the Industrial Accident Commission, covering the use of motors in tunnels.

Very truly yours,
SIX COMPANIES
OF CALIFORNIA
By T. M. PRICE,
Project Manager

P:C
Enc.

[Endorsed]: U. S. Dist. Ct. N. D. Cal. No. 20101-R. Plff's Ex. No. 64. Filed April 29, 1938. Walter B. Maling, Clerk. By J. A. Schaertzer, Deputy Clerk.

Mr. Marrin: Q. This letter refers to a verbal request by Mr. Boggs, Mr. Price. What was that request?

(Testimony of Thomas Moore Price.)

Mr. Wittschen: Same objection as heretofore made.

The Court: Overruled.

Mr. Wittschen: Exception.

The Witness: A. He requested me to give him my authority for installing the motor on the Pumpcrete, in that manner.

Mr. Marrin: Q. Is the letter which is referred to in here, from the Industrial Accident Commission, the same letter which has just been introduced as Plaintiff's Exhibit No. 63? A. Yes.

Q. When you sent to Mr. Boggs the copy of the ruling of the Industrial Accident Commission contained in Plaintiff's Exhibit No. 63, did he say anything to you with respect to it?

Mr. Wittschen: Objected to on the ground it is incompetent, irrelevant and immaterial. The matter of putting in concrete was entirely a matter for the Contractor and his obligation. It does not prove any issue in the case.

Mr. Marrin: We expect to show, your Honor, even at that date Mr. Boggs stated that he did not consider that the Contractor had sufficient authority to use these motors in the tunnels, and requested [1316] the Contractor to apply to the Industrial Accident Commission for further permission.

The Court: In accordance with the plans and specifications?

Mr. Marrin: What is that, your Honor?

The Court: Because of the plans and specifications?

(Testimony of Thomas Moore Price.)

Mr. Marrin: No; because of the ruling of the Industrial Accident Commission with respect to the use of electricity in the tunnels.

The Court: Read the question.

(Pending question read by the reporter.)

The Court: I will allow it.

Mr. Wittschen: Exception.

The Witness: A. Yes; he stated to me that he did not consider that the ruling of the Industrial Accident Commission covered the situation, or the conditions which we were using on the Pumpcrete, with respect to induction motors.

Mr. Marrin: Now, I have here a copy of a letter from Six Companies of California, dated July 2, 1935, to the Industrial Accident Commission, requesting a further ruling with respect to the motors; and I will offer that in evidence as plaintiff's exhibit next in order.

Mr. Wittschen: We make the same objection on all grounds heretofore stated.

The Court: Objection overruled.

Mr. Wittschen: Exception.

(The letter was marked "Plaintiff's Exhibit No. 65.")

Mr. Marrin: This letter is dated July 2, 1935, and reads as follows: [1317]

(Testimony of Thomas Moore Price.)

PLAINTIFF'S EXHIBIT No. 65

July 2, 1935

Industrial Accident Commission,
State Building,
San Francisco, Calif.

Gentlemen:

In reviewing your letter of April 11, it apparently is not clear as to whether we have permission or not, to operate induction type motors, which would not be enclosed in tight fitting boxes and fed with compressed air.

In order to clear this up, we herewith respectfully request permission to operate small motors of this type, which, according to the manufacturers, are absolutely spark proof, there being no moving electrical connections. In connection with the pumping and hauling equipment, for the concrete, we plan to have two motors of this type on the pump rig itself, as well as one rotor, or slip-ring, motor, which will be protected as per your letter. We would also have one motor on each of the hauling agitators for concrete, and of which one at a time will be located at the pumping rig.

We would also like to work a 3-HP induction motor on a small conveyor belt, immediately adjacent to the pumping rig, to load muck from the concrete excavation, immediately ahead of the forms.

(Testimony of Thomas Moore Price.)

We thought this matter had been covered, and have made our plans accordingly; therefore, any consideration at your earliest convenience, on this, would be appreciated.

Very truly yours,
SIX COMPANIES
OF CALIFORNIA
By T. M. PRICE,
Project Manager.

P:C

[Endorsed]: U. S. Dist. Ct. N. D. Cal. No. 20101-R. Plif's Ex. No. 65. Filed April 29, 1938. Walter B. Maling, Clerk. By J. A. Schaertzer, Deputy Clerk.

Mr. Tinning: Mr. Marrin, perhaps it would save delay later on, in cross-examination: What was the date the Pumpcrete arrived on the job? Would you give us that?

Mr. Marrin: Q. Could you state the date the Pumpcrete arrived on the work, Mr. Price?

A. On or about June 21, to my best recollection.

Mr. Marrin: June 1st of—— A. June 21st.

Q. Of 1935? A. Of 1935. [1313]

Mr. Marrin: I have here a letter from the Industrial Accident Commission, addressed to T. M. Price, dated July 10, 1935; and I offer that in evidence as plaintiff's exhibit next in order.

Mr. Wittschen: Would you wait until we read it?

(Testimony of Thomas Moore Price.)

Mr. Marrin: Surely.

Mr. Wittschen: We make the same objection as heretofore stated: that, by their contract, the plaintiff was bound to conform to the rulings of the Industrial Accident Commission; and the introduction of these letters tends to prove no issue in the case, and is entirely incompetent, irrelevant and immaterial.

The Court: Indicate, for the purpose of the record, the purpose of this line of testimony and the purpose of the offer.

Mr. Marrin: This letter, if the Court please, is——

The Court: I am not limiting it to that letter—this line of testimony, namely, the compliance with the Industrial Accident Commission ruling.

Mr. Marrin: This line of testimony is offered for the purpose of showing that the type of concrete equipment which the plaintiff was attempting to perfect here, in order to place the concrete lining, was required to be driven by a certain type of power; and that, under the regulations in effect by the Industrial Accident Commission governing safety in the tunnels at the time the Contractor commenced to work out this design of equipment, the use of electricity for electric motors in the tunnels was prohibited; and it was necessary for the Contractor to apply to the Industrial Accident Commission and get its permission for a modifica-

(Testimony of Thomas Moore Price.)

tion of those regulations, before either the District or the Commission would permit the use of the equipment; and that that was done.

Mr. Wittschen: I call attention to the fact that all of that is in the specifications. It requires the Contractor to abide by the rulings of the Commission; and that it, the plaintiff, chose the [1319] equipment that it would use, could have laid the concrete in any way it pleased, and that it is entirely immaterial as tending to establish any issue in the case; on the further ground, it is not mentioned as a basis for rescission.

Mr. Marrin: I would like to add that this is offered for the purpose of showing that the Contractor was unavoidably delayed in working out this problem for placing the concrete lining.

The Court: I will allow it subject to a motion to strike and over the objection of counsel.

Mr. Wittschen: Exception.

(The letter was marked "Plaintiff's Exhibit No. 66.")

Mr. Marrin: This letter is on the letterhead of the Industrial Accident Commission, State Building, San Francisco, dated July 10, 1935, and is addressed to Mr. T. M. Price, Manager, Six Company of California, Post Office Box 120, Berkeley, California; and reads as follows: [1320]

(Testimony of Thomas Moore Price.)

PLAINTIFF'S EXHIBIT No. 66

Industrial Accident Commission
State Building
San Francisco

July 10, 1935

Mr. T. M. Price,
Manager, Six Companies of California,
P. O. Box 120,
Berkeley, California.

Dear Sir:

Your letter of June 15, 1935, addressed to the Industrial Accident Commission and also your letter of June 26, 1935, also addressed to the Commission, both of which request exemption from the safety order pertaining to the lights to be used in the east tunnels, were duly received and considered and referred to this department for consideration and answer.

Your letter of July addressed to the Commission requesting exemption from the safety order pertaining to electric equipment particularly that part pertaining to permissible electric motors, was also received and considered and referred to this department for consideration and answer.

In regard to the request for exemption from permissible lights in the east tunnels, we wish to say that:

1. The Benjamin vapor-proof lamp may be

(Testimony of Thomas Moore Price.)

installed 10 feet back of the mucking machine and that any other lights used in the tunnel shall be of this type of lamp or else of the vapor-proof type formerly used at the Hetch Hetchy tunnels.

2. That no other type of lamp globes shall be used in any of the east tunnels and no lights except approved cap lamps shall be used between the floodlight 10 feet back of the mucking machine and the face of the tunnels.

3. That all lamp sockets and lamp connections shall be kept in good repair at all times and that it shall be the duty of the fire boss to examine all light connections and if any are found defective, it shall be his duty to report it to some proper electrician who shall repair it immediately.

4. If these lights are not kept in good repair and in safe condition at all times, then all light wires and globes may be ordered out of the tunnels and only permissible cap lamps shall be used exclusively in these tunnels.

In regard to the request for exemption from Special Safety Order pertaining to stationary electric motors we wish to say that:

1. The use of two induction motors on the concrete pump,—one induction motor on each of the two concrete agitators and one induction motor for driving a short conveyor belt in connection with excavation for the concrete work

(Testimony of Thomas Moore Price.)

is approved as long as the motors are used for this particular purpose but not for any other purpose without permission from the Commission. These motors shall be kept in the concreted section or within a few feet of it.

After the meeting in your office on July 8, 1935, and subsequent inspection of the project, we have the following suggestions to make which we think will have a tendency to improve safety conditions and health conditions as well.

It appeared that too much stress was being made of the fact that installations of equipment on the job was only temporary and therefore not necessary to devote too much care in protection of it. Equipment must be completely guarded before it is put into operation. No work shall be started until safe conditions prevail.

There should be close co-operation between the management, superintendents, walkers, shift bosses and the safety engineer and fire bosses.

The superintendents, walkers and shift bosses must be more diligent in order to detect and correct unsafe conditions. There seemed to be a tendency to install electric wires in the east tunnel hurriedly without due care for safety. These could have been installed correctly at first and thereby have saved the labor of hav-

(Testimony of Thomas Moore Price.)

ing to change them later, and also the criticism of putting in unsafe equipment.

It is recommended that the change rooms at the east end and at the west end be enlarged to provide sufficient showers for all men who desire to use them, also that ample arrangements be made so that all men can hang their working clothes in an orderly and sanitary manner so that they may dry properly.

Very truly yours,
(Signed) F. L. LOWELL
C.H.F.
FRED L. LOWELL
Supervising Engineer
Mining Section.

[Endorsed]: U. S. Dist. Ct. N. D. Cal. No. 20101-R. Plff's Ex. No. 66. Filed April 29, 1938. Walter B. Maling, Clerk. By J. A. Schaertzer, Deputy Clerk.

Mr. Tinning: Mr. Marrin, perhaps we can clear this up. I notice in this letter of July 10th it refers to the Six Companies' letter of June 15th and the letter of June 26th. There are two letters omitted.

Mr. Marrin: I am not sure of that. Do you recall, Mr. Price?

A. No, I do not just at the moment.

Mr. Tinning: We suggest you make a note of it and you have them for cross-examination.

(Testimony of Thomas Moore Price.)

Mr. Marrin: All right, we will have them. I have here a letter from Wallace B. Boggs to Six Companies of California, dated February 13, 1935, which I would like to offer in evidence as Plaintiff's Exhibit next in order.

(The letter is marked "Plaintiff's Exhibit 67.")

This letter is on the letterhead of Joint Highway District No. 13 of the State of California, Oakland, Calif., February 13, 1935.

PLAINTIFF'S EXHIBIT NO. 67

Joint Highway District No. 13
of the
State of California

Oakland, Calif.
February 13, 1935

File: Broadway Tunnel
Schedule

Six Companies of California,
Field Office,
Post Office Box 120,
Berkeley, California

Dear Sir: Attention of Mr. T. M. Price, Project Manager

I am in receipt of copy of your revised construction schedule.

My communication of February 5 requested that this schedule be submitted in triplicate.

(Testimony of Thomas Moore Price.)

Will you kindly furnish me with two additional copies at your earliest convenience?

Yours very truly,

(Signed) WALLACE B. BOGGS

District Engineer

WBB/VE

[Endorsed]: U. S. Dist. Ct. N. D. Cal. No. 20101-R Plff's Ex. No. 67. Filed April 29, 1938. Walter B. Maling, Clerk. By J. A. Schaertzer, Deputy Clerk.

If your Honor please, the construction schedule was placed in evidence by the defendant as Defendant's Exhibit O.

Q. Mr. Price, other than that letter did Mr. Boggs ever make any [1323] comment to you with reference to this construction schedule?

Mr. Wittschen: Objected to as immaterial, irrelevant, and incompetent, and not proving any issue in this case.

Mr. Marrin: I desire to show, if your Honor please, that this construction schedule was presented to the District Engineer and he never made any objection to the schedule.

Mr. Wittschen: The specifications expressly provide that the District Engineer is not the monitor or guardian of the contractor, and he does not have to object to everything that is done, and I object that it does not tend to prove any issue in this case whether he commented or not.

(Testimony of Thomas Moore Price.)

The Court: You want to prove he was silent?

Mr. Marrin: If your Honor please, our construction of the District Engineer's duty is somewhat different.

The Court: He was silent?

Mr. Marrin: He was silent and never said anything about it, and he was there as engineer for the owner in charge of the whole construction operation, and anything that was not going on properly on this job, or if the contractor's construction schedule was not proper, it was the duty of the District Engineer to make the objection and point those matters out to the contractor.

Mr. Wittschen: In the first place, the specifications expressly provide that the failure of the engineer shall not in any way relieve the contractor of his duty, and I repeat it was no part of the engineer's function to take the contractor by the hand and tell him what to do.

Mr. Marrin: We offer it for the purpose of showing that there was never any objection, except this letter of August 30, 1935, two days after the cave-in, by the District Engineer to any of the contractor's methods or construction schedule of operations. [1324]

The Court: I agree that there was no legal obligation on him. However, I will allow you to have a record on it.

Mr. Wittschen: Exception.

A. Not that I recall.

(Testimony of Thomas Moore Price.)

Mr. Marrin: Q. Mr. Price, I draw your attention to Defendant's Exhibit O and will ask you to point out on there on what date that construction schedule states that the concrete lining will be commenced, that is, after the concreting of the west portal? A. On May 1, 1935.

The Court: Have we got that date on this report? A. Yes.

The Court: This rather confuses me in this, is there any doubt about when it started between counsel?

Mr. Wittschen: I think the point is it did not start until May, and he is trying to show now we did not object to it, but it pointed out that the contract would finish on time, and I think Mr. Marrin's desire is, if I may read his mind, to show we did not object, we were waiting for him to start.

Mr. Marrin: I simply want to show how much ground this construction schedule showed would be opened in the tunnel at the time the concrete lining was contemplated starting in accordance with this construction schedule which was submitted to the District in February preceding, and to which it made no objection.

The Court: How many feet would be open? What does the testimony already show in relation to that portion of the tunnel where Larson stopped?

Mr. Marrin: It shows there were about 800 or 900 feet in each tunnel which was open at the time of the cave-in of August 28th.

(Testimony of Thomas Moore Price.)

Mr. Tinning: Mr. Larson's testimony was that there was about 618 feet open in the south tunnel and 573 feet open in the north tunnel on April 30. [1325]

The Court: What is your thought?

Mr. Marrin: My thought is simply to show that according to this construction schedule it shows that——

The Court: Is this in evidence?

Mr. Marrin: Yes, it was put in evidence by the defendant.

The Court: Proceed.

A. This was a proposed construction schedule. It was made out with the information after January as planned, not accomplished. At that time the concrete is shown as starting on May 1, 1935 after the excavation for the sandstone section had been completed, practically completed. The sandstone section was estimated to start on November 1, 1934 and be completed on May 15, 1935, at which time the cherts formation would be started and completed in October, 1935, at which time the Orindan would be started and completed in March, 1936.

Mr. Wittschen: May I just ask a question to be sure I understand you? When you say completed, you mean excavation completed or concrete completed? A. The excavation.

Q. When was the concreting to be completed?

A. The concreting was to be started May 1 and continued to completion on April 25, 1936.

(Testimony of Thomas Moore Price.)

Q. Within the contract time? A. Yes.

Mr. Marrin: Q. How much of the tunnels would be excavated on May 1, 1935, at the time the concrete was contemplated to start?

A. Excluding the portal section, which was concreted approximately 650 or 660 feet.

Mr. Tinning: Let us not get confused. I think that Mr. Larson gave those actual distances, and that the distance was 618 feet, if I remember it, in the south tunnel, and 573 feet open on the north tunnel. [1326]

Mr. Marrin: That is actual excavation. I am talking of this proposed construction schedule, what it shows.

Mr. Tinning: I beg your pardon, I thought you were asking what was actually excavated.

Mr. Marrin: No, I am talking what the construction schedule showed, which was contemplated.

The Court: This is in evidence?

Mr. Marrin: Yes, the defendant put it in evidence.

Q. Mr. Price, when were concreting operations resumed in the tunnel in 1935 after the west portal had been concreted?

A. Why, footing concrete was started about the 1st of July or shortly, about the first week in July, 1935, and approximately at the same time in both tunnels; as I recall, the arch concrete was started in the south tunnel on or about July 19, and in the north tunnel on or about August 8.

(Testimony of Thomas Moore Price.)

Q. Was the Pumpcrete used in resuming pouring? A. Yes.

Q. Was any difficulty experienced in getting it into operation?

Mr. Wittschen: Objected to as immaterial, and on the grounds stated to a similar question.

The Court: The objection is overruled.

Mr. Wittschen: Exception.

A. Yes, there was some difficulty in the method of transferring the concrete from the Pumpcrete, itself, into the forms.

Mr. Marrin: Q. Was that satisfactorily solved? A. Yes, it was after a considerable time had elapsed with a lot of experimenting.

The Court: After a little educational program.

Mr. Marrin: Q. How much time did that take?

A. To the best of my recollection it took several pours, probably three or four weeks before we got it working in a manner that pouring was satisfactory to everyone. [1327]

Q. Did anything have to be done with the timbering in the tunnel preparatory to placing the concrete?

A. Yes; at the start of the concreting in each tunnel the timbers had intruded just east of the concrete portal section, had intruded two or three inches into the concrete. That is the first place we started after excavating the core of the portal concrete. Those timbers had to be trimmed in order to clear the specified distance of the concrete lining.

(Testimony of Thomas Moore Price.)

Q. For what distance did that trimming have to be done in the part of the tunnel that was opened?

A. As I recall it, for approximately four or five short pours in the south tunnel, and approximately three in the north tunnel. I desired to make short pours, 8 or 9 feet at that time, in order not to trim too much of the tunnel timber at any one time. As that was done the concrete in the next section would be poured, and so on, until the forms carried the section where the timbers had intruded.

Q. Do you mean that all of the timber that had to be trimmed was simply for a distance of four or five pours in the entire open excavation of the two tunnels?

A. Yes, that is true entirely in the south tunnel, to the best of my recollection up to the point in the tunnel about where the cherts formation began, about station 117, I believe. However, in the north tunnel there were two points, one about station 114 and one about station 116+70 or 75, where the timbers had intruded very shortly after they had been installed by Mr. Larson, and where he was forced to go back and reinforce timbers and put in additional timbers and brace them in order to keep them from coming in. At those points they had intruded several inches, up to six inches, into the concrete sections, but that movement occurred shortly after they had been installed and were watched carefully for a period of six months after they were [1328] installed and showed no more movement.

(Testimony of Thomas Moore Price.)

Q. Were those timbers at those points trimmed, or were they reset?

A. The timbers at the first point, about station 114, were the timbers which were being reset at the time of the August 28th cave-in.

Q. Will you describe briefly the operation of re-setting the timbers?

A. The timbers were reset—I should say that the only timbers that were being reset were the arch timbers; the post, the side wall post and the wall plate apparently were in good shape, and had not intruded.

Q. Would you mind just illustrating that briefly on the board, what you mean by that, so that it will be clear?

A. These are the side wall posts, and this is the wall plate, looking at the end. These are the segments which had intruded into the tunnel at the crown approximately 6 inches into the concrete area.

Q. Where you were re-timbering?

A. Where we were re-timbering; that extended over an area of approximately 25 or 30 feet, as I recall it, and we had started at—let us assume that is the section of the timbers that had been intruded; we started at the east end and worked back toward the west, resetting the timbers. The normal operation on that is to take out a small section. I will draw a short cross section, at any point like this, and assume that these are the two sets that are in-

(Testimony of Thomas Moore Price.)

truding into the concrete area, so that is the outside of the concrete line, and it is necessary to get these timbers back so that this point is outside of the concrete line. The method that we used was to take these timbers, take the lagging behind these timbers, which would represent a 2 by 12 or 3 by 12 timber in that position, take it out at this point, here, dig out behind, and get it so that it would look in a revised condition like this, loosening out the portion [1329] of the ground behind that post or lagging and blocking it with blocks off of the existing timbers which still intruded and proceed up accordingly all the way around until we had the lagging down and blocked to the existing sets which intruded. Then after that had been done all the way around, we placed a new set right there to hold that lagging, which set would extend from the wall plate around to a new post like that.

The Court: Q. What was the distance of that?

A. As I recall that is approximately 30 feet across there.

Q. Is it through that section that the cave-in occurred?

A. It is in that particular section that that particular cave-in occurred; we had started that work three or four days before in order to save time with the concreting, so that by the time the forms for concreting reached that point the timbers would be back out of the concrete line and no delay would be suffered by reason of waiting to re-timber the section.

(Testimony of Thomas Moore Price.)

Mr. Tinning: Might I ask Mr. Price a question?

Q. How long, approximately, was each one of those segments, in yards or feet?

A. Six or seven feet, I should judge.

Q. There were seven of them, so that they would be 42 feet?

A. Possibly I misunderstood your question; around the arch there would be approximately 40 to 45 feet from this point, measured on the curve over to the wall plate.

Mr. Marrin: Q. How large was that lagging?

A. It was 2 by 12 or 3 by 12 in the arch, it was 3 by 12 sometimes, no regularity, at least 2 by 12 and sometimes 3 by 12.

Q. And the method of procedure was to take out one piece of lagging at a time?

A. Take out one piece of lagging at a time.

The Court: Q. At the bottom, or how?

A. Starting at the bottom and working toward the top. There is the segment inside, starting and taking that piece of lagging out and setting it [1330] back and blocking it to the set that was intruding in the concrete.

Q. This was exposed for how long?

A. It had been exposed approximately six or seven months.

Mr. Marrin: Q. This particular section of the timbering? A. This particular section.

The Court: I recall now, but at this point of the intrusion, the intrusion had occurred shortly after it was excavated?

(Testimony of Thomas Moore Price.)

A. Well, in two or three days after we had noticed the spring on the timbers and removed it, and Mr. Larson went back and braced it up.

Mr. Marrin: Q. At the time you reset the timbering in this section was the timbering moving in?

A. No. I did not quite finish my previous answer. We had almost completed the setting back of these timbers, as I recall it, when the cave-in occurred, we had already set some ten or twelve sets coming toward the west end of the portal, and only had two or three more to reset, to the best of my recollection, at the time the cave-in occurred.

Q. Is that the usual manner of resetting timbers?

A. That is my understanding of the usual manner. I have never seen them reset in any other way.

Q. Who had charge of the resetting of the timbers? A. Mr. Whitmire.

Q. Did you confer with him with respect to it?

A. Yes, I conferred with him, quite a bit about it, and we both collaborated on the men who were to do that work; we both felt that they should be experienced, skilled men, and we put the best men, the best crew on it we had; the operation was continued 24 hours a day on the basis of three shifts, and it took quite a crew of men, because the work was necessarily slow and tedious.

Q. Why didn't you trim the timbers at this point instead of resetting them?

(Testimony of Thomas Moore Price.)

A. For two reasons. First, it would have been [1331] unsafe to trim that much of the timber, and the second reason, because the concrete was going so slowly, because the engineer required us to hold the forms in place for 72 hours after pouring, before we could move them or shift them; this took almost five days to make a concrete pour, and if that had been maintained we would have lost about ten days going through that section where the timbers were down, if we had done it in short sections, whereas we could save that much if the timbers were out of the arch and we could have gone ahead.

Q. If I understand your answer, the setting back of the timbers rather than the trimming of them would have enabled you to make longer pours?

A. Yes.

Q. And would speed up the operation of concreting the tunnel? A. Yes.

Q. Did the tunnel cave in on August 28, 1935, Mr. Price? A. Yes.

Q. At about what station? I might ask first, which tunnel? A. The north tunnel.

Q. At about what station?

A. Well, I would say it was approximately between station 114 and 125, somewhere along in there, I don't know the exact station.

Q. From 114 to 125?

A. From 114 to 114+25.

Q. What operations were being carried on at that point at the time of the cave-in?

(Testimony of Thomas Moore Price.)

A. The timbers in the arch were being reset outside of the concrete line.

Q. Was the concrete pouring on that date?

A. Not at that particular point. It was pouring further west in the tunnel. As I recall it, it was about 100 feet back of them.

Q. What concrete had been poured between the time the Pumpcrete was put into operation in July, 1935 and the time of this cave-in?

A. Could I refer to my little book? You mean the concrete in the north tunnel?

Q. You might state it fully.

A. In the north [1332] tunnel the portal concreted section the concrete had been poured from station 112+53 to station 113+13.

The Court: What is that distance?

Mr. Tinning: That was 60 feet.

A. Approximately 60 feet. And in the south tunnel concrete had been poured from station 112+45 to station 113+61, a distance of 116 feet.

Q. Had any arrangements been made at that time for pouring footing concrete?

A. Yes, footing concrete had been started earlier than the arch concrete, and preceded it by both distance and time.

Q. Why did you pour the footing concrete first?

A. For two reasons, I might say, in order to make a foundation to set the forms against so that the forms would be in good alignment, and particularly, shortly after the August 21st cessation of

(Testimony of Thomas Moore Price.)

excavation I determined to pour all of the footings in the tunnel that was then open, with the belief that 5 feet of concrete, 2½ to 3 feet high, located at the bottom of the plumb posts would shorten the height of the plumb posts and would stop the breaking; that was the principal trouble, the plumb posts broke, and if the concrete had been placed at the time it would strengthen the whole tunnel and stop the breaking; with that in mind I put the heading crews and crews that had been working pouring the tunnel after August 21, I moved them over to get these concrete footings in as fast as possible; that could be poured quickly without any forms, and we just dumped the concrete, as I remember, from the mixing plant to the forms, and that I felt could be done in a few days, and would strengthen the whole tunnel.

Q. Was the footing concrete poured at the point of the cave-in before the cave-in occurred?

A. Yes, it was.

Q. Were the plumb posts which you mentioned breaking in that part of the tunnel?

A. No, the plumb posts were breaking in the cherts formation, not in the sandstone. [1333]

Q. Were you at the tunnel at the time of the cave-in? A. No, I was not.

Q. What time of the day did it occur?

A. It was in the evening, somewhere around seven o'clock, I forget the exact time.

Q. How long had it been previous to that that you had been at the tunnel?

(Testimony of Thomas Moore Price.)

A. I do not recall exactly; to the best of my recollection I left the tunnel early that afternoon, around 3 or 4 o'clock; in any event, I had not arrived at home when I heard the report of the cave-in, but had arrived very shortly afterward.

Q. You arrived at the scene of the cave-in shortly afterward? A. Yes, about 7:30.

Q. Did you observe the cave-in? A. Yes.

The Court: Describe it in your own way, so that I will get some idea about the cave-in.

A. When I arrived at the job I found, naturally, a lot of excitement, the men had all come out of the tunnel and were down at the office. There was a statement that some men had been caught.

Q. The matter I had in mind was the cave-in, itself.

A. I think a longitudinal section of it would describe it better for you. A portion about 50 feet in the arch had fallen into the tunnel and filled it up, approximately like that.

Q. 50 feet?

A. 50 feet of this portion of the tunnel had come in and filled this area, here, and had worked this way to the top of the ground, and the top of the ground above the tunnel sunk about ten or fifteen feet.

Q. About what distance was it to the top of the ground?

A. I would estimate around 75 feet, maybe 100 feet. The proportions here are bad, but this had fallen down into the tunnel and blocked it.

(Testimony of Thomas Moore Price.)

Q. That is sufficient for my purpose. [1334]

Mr. Marrin: Q. Mr. Price, I show you a picture which has a legend on it,

"August 28, 1935 cave-in—Taken at point at top of arch on west end immediately thereafter. Note arch cap pushed down but not broken—also remains of catwalk."

Is that a true reproduction of the part of the tunnel at the time of the cave-in? A. Yes.

Q. Would you show it to his Honor? That was taken about what time—Will you explain that?

A. That is looking into the tunnel, your Honor.

The Court: Q. From what point?

A. From the west end, looking in. Assuming this is the portal out here, that picture is taken looking at that point right there (indicating on blackboard.)

Mr. Tinning: Looking from the west end at the top of the—

A. Yes, these are the timber sets. This is looking—

The Court: I cannot locate myself.

The Witness: Here is the top of the tunnel.

The Court: Q. The top? A. Yes.

Mr. Tinning: Your Honor, this would be just about where the camera was standing—somewhere about here (indicating).

The Court: I see.

Mr. Tinning: And pointing in toward the pile of earth.

(Testimony of Thomas Moore Price.)

The Witness: That is the same approximate line there; you are looking at those two timbers, your Honor.

The Court: I see.

Q. What is the size of these timbers?

A. Those are either 2 by 12's or 3 by 12's.

Mr. Tinning: Down here. These are 12 by 12, down here?

The Witness: Yes. This is the remains of the catwalk that was constructed throughout the tunnel, hanging from the ceiling like this, with a railing for the men to inspect the timbers up in [1335] the arch.

Mr. Marrin: I will offer that in evidence.

Mr. Tinning: I wonder if we could save some time, if you are going to put them all in, by putting them in as one exhibit?

Mr. Marrin: Yes; I will put them in as one exhibit. I think that might be better.

Q. I will show you another photograph, which has the legend on it:

> "August 28, 1935 cave-in—Taken about two hours later. Upper cross timbers are the start of the bulkhead—lower piled timbers are remains of staging on which men were working and catwalk."

Is that a true reproduction of the conditions at the time stated on the picture?

Mr. Tinning: Where was it taken from?

(Testimony of Thomas Moore Price.)

Mr. Marrin: Q. Will you explain where it was taken from?

A. It is taken again from the west end, looking into the cave-in. It shows the cross timbers; shows the timber bulkhead that was being constructed, and particularly these timbers in here.

Mr. Tinning: That was something that was put in after? A. After the cave-in.

Q. As part of the recovery work? A. Yes.

Mr. Marrin: Q. That bulkhead was constructed immediately afterward?

A. Immediately after the cave-in, yes, on each end.

Mr. Tinning: On that designation, the photograph shows, "Lower piled timbers"—That means the timbers down on the floor of the tunnel, as they dropped off the ceiling?

A. Yes; the remains of that catwalk and so forth.

Mr. Marrin: Q. I show you another picture, dated "August 28, 1935 cave-in—Showing start of sidewall drift to recover bodies." Will you explain that?

A. That was the beginning of that drift which was driven at this point through the muck,—the muck that caused the cave-in. [1336]

Mr. Tinning: The witness indicates two floor drifts, one at grade on each side of the tunnel, that is driven in, and that shows—

(Testimony of Thomas Moore Price.)

A. That particular drift is the—

Mr. Tinning: —that shows it in longitude.

A. It would be like this; starts there, and goes in like this.

Mr. Marrin: Q. This next photograph: "Cave-in of August 28, 1935—Showing hand driving of recovery drifts,"—what does that show?

A. That is a picture taken inside the drift after we got in a ways, and shows the spiling and men working.

Mr. Tinning: When it says "Cave-in of August 28—" that does not mean the photograph was taken on the 28th; it is taken at some later date?

A. Taken two or three days later. The bodies were recovered approximately September 3rd, I believe, and this work was some time prior to that.

Mr. Marrin: Q. This next photograph, "August 28, 1935 cave-in—Showing completed recovery drift, south side. Note concrete footing on lower right with reinforcing steel bent over—original tunnel posts on right,"—that is a picture of the recovery drift after it was completed, was it not?

The Court: You said there was about 50 feet of this?

The Witness: Your Honor, there was about 50 feet, as I recall it, in the arch; but the material spread out.

The Court: Oh, I see.

(Testimony of Thomas Moore Price.)

Mr. Marrin: The next photograph has a legend, "Cave-in of August 28,—Showing where cave-in broke surface of ground."

Q. What does that represent, Mr. Price?

A. That is a picture of the ground surface at the point where the cave-in material reached here, and where the normal ground sank down 10 or 15 feet.

Mr. Tinning: Made a pit in the surface?

A. Made a pit in the surface. [1337]

Q. A cone? A. Round.

The Court: Q. That was taken where?

A. That was taken from the surface, above the tunnel.

Mr. Marrin: We will offer all those as plaintiff's exhibit next in order.

(The six photographs were marked "Plaintiff's Exhibit No. 68.")

[Set forth in the Book of Exhibits at page 281.]

The Court: We will take a recess for a few minutes.

(Recess)

Mr. Marrin: I have here a letter from C. H. Fry, Superintendent of Safety, Industrial Accident Commission of the State of California, to Six Companies, dated September 1, 1935; and I offer that in evidence as plaintiff's exhibit next in order.

Mr. Wittschen: We object to that as incompetent, irrelevant and immaterial, not tending to prove any issue in the case, and on the further ground

(Testimony of Thomas Moore Price.)

that the Contractor agreed to be bound by the safety rulings of the Industrial Accident Commission.

The Court: Objection overruled.

Mr. Wittscben: Exception.

(The letter was marked "Plaintiff's Exhibit No. 69.")

Mr. Marrin: This letter reads as follows:

PLAINTIFF'S EXHIBIT NO. 69

Oakland, California,
September 1, 1935.

Six Companies of California,
Post Office Box 120,
Berkeley, California.
Attention Mr. T. M. Price, Project Manager

Gentlemen:

After conference this morning, with Mr. Wallace B. Boggs, District Engineer; and Messrs. Lippincott and Van Ormond, Consulting Engineers for Joint Highway District No. 13; it was the unanimous opinion that there should be another crosscut driven between the upgrade and downgrade tunnels, as near the face of the right-hand drift in the north tunnel as is practicable.

This work is to start at once, and be carried through as rapidly as possible, in order that there may be an emergency exit beyond the

(Testimony of Thomas Moore Price.)

present one, which is now at station 118+30 in the upgrade tunnel.

Yours very truly,

(Signed) C. H. FRY,
Superintendent of Safety,
Industrial Accident Commission of the State of California.

copy to Mr. Boggs

[Endorsed]: U. S. Dist. Ct. N. D. Cal. No. 20101-R. Plff's Ex. No. 69. Filed April 29, 1938. Walter B. Maling, Clerk. By J. A. Schaertzer, Deputy Clerk.[1338]

The Court: What is the history of the first drift that went in there?

Mr. Tinning: There were three adits in this tunnel, under the specifications, spaced about one-third—spaced so they divided the tunnel into four; and when this accident occurred, the Industrial Accident Commission asked that an emergency drift be put through; and it was; and it was later substituted for one of the regular adits.

Mr. Wittschen: It should be brought out that it added no additional work; it merely took the place—

Mr. Marrin: Well, Mr. Wittschen, you can bring that out on your cross examination.

The Court: Well, I developed this; I just wanted to follow it.

(Testimony of Thomas Moore Price.)

Mr. Wittschen: Don't you want to clear that up?

Mr. Marrin: Yes; I am going to ask him some questions about it.

Q. This adit that was ordered was a cross-tunnel,—a small tunnel between the two larger tunnels, Mr. Price? A. Yes.

Q. This cave-in did not extend back to the face of the tunnel, did it? A. No.

Q. And there was plenty of room to drive the cross-adit between the two tunnels back of the cave-in? A. Yes—Oh, yes.

Q. And was that adit driven? A. Yes.

Mr. Wittschen: Mr. Marrin, to clear that up—this is a good [1339] place; but, if you object, I won't press it—There was already an adit back of the cave-in; so this was just one further on to make two?

Mr. Marrin: Yes; there was one adit already driven back of the cave-in.

Mr. Wittschen: As part of the plans and specifications; and the second one was merely put in another place. There had been provision for it, but they had not got up to it?

Mr. Marrin: Yes.

Mr. Tinning: And the first adit was the one through which the men escaped when the slide occurred,—the men who were working on the face.

Mr. Marrin: That is correct, Mr. Tinning—the men who were back of the cave-in escaped through that adit, or got out.

(Testimony of Thomas Moore Price.)

I have a letter here, dated September 2, 1935, from C. H. Fry, Superintendent of Safety, Industrial Accident Commission of the State of California, addressed to Six Companies of California; and I offer that in evidence as plaintiff's exhibit next in order.

Mr. Wittschen: To which I make the same objection that was made to the preceding exhibit.

The Court: Same ruling.

Mr. Wittschen: Kindly note an exception; and I don't think I took an exception to the other ruling. Will you note an exception to that ruling, please?

(The letter was marked "Plaintiff's Exhibit No. 70.")

Mr. Marrin: This letter reads as follows:

PLAINTIFF'S EXHIBIT NO. 70

Oakland, Calif.,
September 2, 1935.

Six Companies of California,
Post Office Box 120,
Berkeley, Calif.

Attention Mr. T. M. Price, Project Manager

Gentlemen:

I have before me a copy of a letter dated September 1, 1935, from Six Companies of California, by T. M. Price, Project Manager, addressed to Mr. Wallace B. Boggs, District Engineer, Joint Highway District No. 13, 1448 Webster Street, Oakland, California, which

(Testimony of Thomas Moore Price.)

concerns certain changes in the concreting of the unlined portions of the excavated tunnels.

The plan as outlined will permit of concreting operations in much of the unlined portions of the tunnel without weakening the present timbering by trimming to present specifications.

This plan, or some other plan approved by the consulting engineers, which will give the same result, seems not only desirable but necessary.

In connection with the concreting operations or with repair operations, where removal of the arch segments or the posts is necessary, temporary supports, perhaps square sets, shall be provided in order that the removal of the segments or posts shall not throw undue stresses on the adjacent timbering.

The plan proposed is approved subject to the approval of the consulting engineers of the District and Six Companies of California.

Other plans, if any, will be given consideration.

Sincerely yours,

(Signed) C. H. FRY,
Superintendent of Safety,
Industrial Accident Commission of the State of California.

[Endorsed]: U. S. Dist. Ct. N. D. Cal. No. 20101-R. Plff's Ex. No. 70. Filed April 29, 1938. Walter B. Maling, Clerk. By. J. A. Schaertzer, Deputy Clerk. [1340]

(Testimony of Thomas Moore Price.)

Q. Prior to writing that letter, had Mr. Fry given you any orders with respect to the timbers in the tunnel?

Mr. Wittschen: Objected to as incompetent, irrelevant and immaterial, and not tending to prove any issue, and not binding on the District; and in order merely to acquaint your Honor of what has gone before: you will understand when this order was given, permitting the section to be dropped 10 inches, the Contractor agreed he would do that without any extra expense; in other words, [1341] it was a concession upon the part of the District to permit it; so it does not prove anything in the case.

Mr. Marrin: The defendants, themselves, on cross examination of Mr. S. D. Bechtel, introduced in this case all the orders from the Industrial Accident Commission in respect to the modified arch, and went into this to a considerable extent. We desire to make the record on that subject complete; and we desire to show all of the orders, both verbal and written, issued by the Commission, in connection with this matter.

Mr. Wittschen: The point of my objection is this: Counsel, himself, stated the order of the Commission which we introduced and which was the order signed by Mr. Reardon and Mr. MacDonald is the ultimate fact. All these letters that led up to the order don't prove anything.

Mr. Marrin: We propose to show that, immediately following the cave-in, Mr. Fry, Superin-

(Testimony of Thomas Moore Price.)

tendent of Safety, ordered this plaintiff not to remove or reset or trim any of the timbers in the tunnel.

The Court: He was prompted, in doing that, by this disaster, I take it.

Mr. Marrin: Yes, your Honor.

The Court: I will allow it.

Mr. Wittschen: Exception.

The Witness: May I have the question, please?

(Pending question read by the reporter.)

The Witness: A. Yes.

Mr. Marrin: Q. What were they?

Mr. Wittschen: Same objection.

The Court: Same ruling.

Mr. Wittschen: Exception. [1342]

The Witness: A. Mr. Fry was there, daily, for the few days after the cave-in; and he told me not to do anything at any time without first taking the matter up with him; and by anything, I mean any work in the tunnel without getting his approval; and in line with this, I gave him this copy—showed him this copy of the proposal for lowering the arch; and he told me at that time not to move or reset or trim any timbers in the tunnel at all until the whole thing had been clarified, and some definite plan had been agreed upon by all the parties in question.

Mr. Marrin: Q. I show you Defendant's Exhibit "OO," Mr. Price, dated September 1, 1935. Is that the letter that you showed Mr. Fry, and to which he referred in his letter? A. Yes, sir.

(Testimony of Thomas Moore Price.)

Mr. Marrin: That letter has been read into evidence, if the Court please, and it is the letter which was introduced by the defendant and which the plaintiff wrote to Mr. Boggs and suggested a method of concreting the tunnels which would avoid the removal or trimming of any more timbers.

Q. Mr. Price, I might ask you what you did after sending the letter of September 1, 1935, which is Defendant's Exhibit "OO," to Mr. Boggs, stating or suggesting the modification of the arch to obviate the removal of timbers—what work was carried on after that?

Mr. Wittschen: They modified that by a letter two days later.

Mr. Marrin: I am asking what he did after he wrote a letter which has been introduced in evidence by you.

Mr. Wittschen: Yes.

The Witness: A. We continued to concrete in the south tunnel, where we were able to do so without trimming or touching or disturbing in any way the timbers.

Mr. Marrin: Q. There were parts of the tunnel in which you were carrying on the concreting operations without trimming or removing timber? [1343]

A. Yes; in the south tunnel, which had not been affected by the cave-in in the north tunnel. We were able to pour concrete up to something like the first cross-adit, about Station 118, I believe, without any timber interference. The timber in that section had not intruded.

(Testimony of Thomas Moore Price.)

Q. Did you take any action looking toward installing a modified arch in the tunnel?

A. Yes, we did. I did not take any action in consulting with the Engineer, because Mr. O. W. Petersen had been appointed by the Six Companies of California to conduct negotiations with the Engineer, and, on his advice—

Q. Mr. Price, defendants have introduced in evidence as their exhibit "RR" a letter dated September 5th, addressed to Six Companies of California, Field Office, Berkeley, California, attention Mr. T. M. Price, Project Manager, signed "Wallace B. Boggs," and it reads:

"Dear Sir:

"I am advised by you and Mr. O. W. Peterson, your engineer, that Six Companies of California, the contractor on the Broadway Tunnel Project, is planning to proceed with the pouring of concrete in tunnel bores using forms which will result in a permanent reinforced concrete tunnel lining which does not conform to the plans and specifications for the work.

"You are hereby ordered to cease and desist in any such procedure as the same is entirely without authorization by this District and is a direct violation of your contract with the District. You are further advised that such work must not be performed and all steps on your part to perform such work as you have indicated you intend to perform, should immedi-

(Testimony of Thomas Moore Price.)

ately cease if the work is now in progress, and that any concrete tunnel lining placed in accordance with your proposal will be rejected by the District and will be ordered removed.

"Yours very truly,

(Signed) WALLACE B. BOGGS,

District Engineer.

[1344]

What work were you doing that Mr. Boggs stopped by that letter?

A. Mr. Peterson advised me—

Mr. Wittschen: Pardon me. This does not call for any advice by Mr. Peterson.

The Witness: I was modifying the concrete forms, cutting them down, and starting to modify the concrete forms by cutting them down to a smaller size, so they would be all right on the modified section.

Mr. Marrin: Q. On receipt of that letter, did you stop that work? A. Yes.

Mr. Tinning: Mr. Marrin, let's see if we understand this. I think the situation there was that it was more than cutting down the forms. He notified the District that they were going to pour concrete in modified form at that time. Isn't that what you were actually planning to do—just to refresh your memory?

The Witness: No; that was not correct. It was quite a job to cut down those forms, and we took three or four days' time, with blow torches, getting

(Testimony of Thomas Moore Price.)

the forms out of the tunnel and getting them back in again; and it took several days to do that; and I attempted to start this work, with the hope the Engineer would not stop me.

Mr. Marrin: Q. When you received that letter, did you stop this work? A. I did.

Q. What did you do thereafter, Mr. Price, in connection with the work, from about the 5th of September to the 14th of September, 1935?

A. We did not do a great deal. We were at a loss to know what to do. We had been told by one authority we could not change the timbers, and we had been told by another that we had to change the timbers; and we shut down for a few days, to find out what the situation would develop into before we proceeded.

Mr. Marrin: I have here a copy of a letter from Six Companies of California, T. M. Price, Project Manager, to the Industrial [1345] Accident Commission, dated September 14, 1935; and I will offer that in evidence as plaintiff's exhibit next in order.

Mr. Wittschen: We make the same objection: that we made to all these letters between the plaintiff and the Industrial Accident Commission; we were not parties to them; and the plaintiff had agreed to abide by all safety orders, and it proves no issue in the case.

The Court: Did you get a copy of these letters?

Mr. Wittschen: I don't think so.

Mr. Marrin: This is a letter, if your Honor please, transmitting to the Commission a copy of

(Testimony of Thomas Moore Price.)

the letter "Defendant's Exhibit SS," which was introduced.

The Court: Did you have knowledge of this?

Mr. Wittschen: No.

Mr. Smith: We did not, your Honor.

The Court: You will have to connect up the proper foundation.

Mr. Tinning: If the Court please, that applies to several of the others.

The Court: Well, for some reason or other, I assumed—

Mr. Wittschen: They may have sent something—

The Court: —I assumed they did. They would have to have some knowledge of them, to be bound by them in some fashion.

Mr. Marrin: Well, when the plans and specifications were made, they were drawn by the defendant itself; the plaintiff was required to comply with the rules of the Industrial Accident Commission.

The Court: Yes.

Mr. Marrin: This is simply showing—It has been shown here, by the evidence, part of which has been introduced by the defendants themselves, that this matter was taken up with the Commission, and [1346] certain orders were issued; and this letter is simply for the purpose of showing that a copy of Defendant's Exhibit "SS" was sent to the Commission; and Defendant's Exhibit "SS" is the letter of September 14, 1935.

Mr. Wittschen: From whom?

(Testimony of Thomas Moore Price.)

Mr. Marrin: From T. M. Price to Mr. Wallace Boggs, District Engineer; and it read as follows:

"We desire to acknowledge receipt of your letter of the 5th instant.

"Six Companies of California suggested the alternative plan outlined in our letter dated September 1st for concreting the tunnels for the purpose of making the construction operations safer and minimizing the damages which would result from exactly following the plans and specifications.

"However, in view of the instructions contained in your letter, we shall proceed immediately to concrete the tunnels in strict compliance with the plans and specifications.

"By doing so we do not waive any of our rights or any claims which we now have, or may hereafter have, against the District and you are notified that we shall claim and hold the District responsible for all damages resulting from this procedure.

"Very truly yours,
SIX COMPANIES OF
CALIFORNIA,
By (signed) T. M. PRICE,
Project Manager."

The Court: I will allow that letter.

Mr. Wittschen: This letter is already in.

Mr. Marrin: That is a letter that is in, your Honor. This letter we are offering now is the letter

(Testimony of Thomas Moore Price.)

from Mr. Price, of the same date, transmitting to the Industrial Accident Commission a copy of the letter he wrote to Mr. Boggs.

The Court: I may clear up this situation; and this is subject [1347] to correction; the conduct and the action on the part of the Industrial Accident Commission, to enforce the law as they saw it, under the plans and specifications, the ultimate fact they did it cannot inure to the benefit of either side in this case, as I see it.

Mr. Marrin: Well, I think it can, your Honor.

The Court: Well, point it out.

Mr. Marrin: We take the position, if the Court please, that the accident in the tunnel was an unavoidable accident.

The Court: Unavoidable accident?

Mr. Marrin: That is right.

The Court: Now, let's see. Let's check as we go along. There were sections of this tunnel that indicated clearly what you would have to do after this unfortunate accident, weren't there?

Mr. Marrin: I am not sure I understand your Honor.

The Court: After this accident, you were under their rules, that, in substance and effect, that you must support this in another way—Is that true?

The Witness: We must do something that would be agreeable to all and accepted by all the parties concerned.

The Court: And the purpose of that was for safety, was it not?

(Testimony of Thomas Moore Price.)

The Witness: Yes, sir.

The Court: And the probabilities are: if, while they could not foresee what this unfortunate disaster was, probably if that had been done in the first place, the disaster would not have occurred?

The Witness: Possibly not.

The Court: It is well to analyze these situations, unless I get the wrong viewpoint.

Mr. Marrin: I don't think your Honor is clear on the point we are offering that letter on. [1348]

Mr. Wittschen: Well, what happened was this: It is a fact there was a request to permit the timbers to intrude there and we consented to it, and we got the consent of the United States Government, which was interested, but the present matter before the Court is on a little different situation. Mr. Boggs wrote a letter—Mr. Price wrote a letter to Mr. Boggs, that is Exhibit SS, in which he said they will proceed to do this in accordance with the plans and specifications, either trimming them or resetting them; he said, "We will proceed."

Now, the letter that counsel is now trying to introduce is a letter from Mr. Price to the Industrial Accident Commission, enclosing to them a copy of the letter of Mr. Boggs. I say that anything he does with the Industrial Accident Commission is not binding on us. It does not tend to prove any issue, and the specifications expressly state that the contractor shall abide by all the safety rules of the Commission.

(Testimony of Thomas Moore Price.)

The Court: I made a statement here. We are now concerned with communications that went from the Industrial Accident Commission—

Mr. Wittschen: To the contractor.

The Court: To the contractor, and, I will say, a representative of the District, so we won't miss anybody.

Mr. Wittschen: Some of them are not.

The Court: When he has acknowledged it it is clear in my mind that he is limited in his authority, and other conditions. Now, I am speaking generally, and I want to clear my own mind up on this, if it is possible to do so. It may not be directly on the subject where we are dealing with the enforcement of the law as they saw it, keeping in mind the plans and specifications here. They were developing that for what purpose? [1349]

Mr. Wittschen: Safety of the workmen, and nobody else.

The Court: I indicated that as a legal matter. I did not see how either side could take advantage of that.

Mr. Marrin: May I make a statement, your Honor?

The Court: It may be I am in error, I don't know.

Mr. Marrin: May I make a statement?

Mr. Wittschen: My answer to your Honor's statement, it was purely for the safety of the workmen; in other words, there were other ways in which

(Testimony of Thomas Moore Price.)

they could have done that. They could have put steel frames under it to support it, but as a practical matter, and without undue cost, they said in the ventilating section, because it was up near the roof, why, they suggested we let them intrude 10 inches. We said all right, we will do that. That was so they would not have to be removed. But if that had not been acceptable and it was a matter of finishing the tunnel, there were other ways in which you could make a tunnel of that size, by going to other methods of operation.

Mr. Marrin: May I make a statement, your Honor? I do not agree, of course, with Mr. Wittschen's position in this matter.

The Court: I do not expect you to, so don't be disappointed.

Mr. Marrin: You asked the witness, for instance, just a moment ago, pardon me for going back to this, but I want to clear the thing up in your mind if I can, as to whether this would have happened if we followed the method pursued by the Industrial Accident Commission.

The Court: I limited that to the thought that the conduct of the Commission in enforcing the law in relation to the safety—I cannot see where either side can take advantage of that in the issues before me. Maybe I do not make myself clear.

Mr. Wittschen: We don't take any advantage of it. It was [1350] the contractor's duty to build it. He was doing the constructing.

(Testimony of Thomas Moore Price.)

The Court: You are offering it, yourself.

Mr. Wittschen: No, I think your Honor has not got my thought. He was the one who was doing the constructing, and the orders of the Commission were paramount as to the method, not as to the result, and we are attempting to say to your Honor that they should have complied with those.

Mr. Marrin: I would like to state, if the Court please, in the first place none of these orders resulted from anything which occurred prior to the time of the cave-in. The contractor was going along with the excavating, and with the retimbering, and resetting, without any objection from the Industrial Accident Commission, or the district, or the district engineer, or anybody. The cave-in occurred which we claim was an unavoidable accident. Thereafter the contractor, in order to attempt to get this tunnel lined, without danger to workmen, without danger of further cave-in, suggested to the district a method of modification. Immediately when the cave-in occurred the Industrial Accident Commission stopped any resetting or retimbering or timbering. It was necessary, therefore, in order to comply with this order, to work out some new design for doing this. The plaintiff promptly attempted to do this and the District wrote a letter to the contractor and refused to permit the modification which was suggested. When the contractor went ahead and attempted to work under this modified plan the District Engineer issued a Cease and

(Testimony of Thomas Moore Price.)

Desist Order, and then, as your Honor will remember, due to the intervention of various orders by the Industrial Accident Commission, finally, after the District insisted the contractor go ahead in strict accordance with the specifications, it was brought to the point where the Commission ordered both the District and the contractor before [1351] it for a hearing. As a result of that, and not until that, did the District consent to any action which would permit the work to proceed. Thereafter—

Mr. Tinning: Mr. Marrin, you agreed to do that.

Mr. Marrin: Now, Mr. Tinning, may I make my statement ?

The Court: I want to give you a full opportunity.

Mr. Marrin: Thereafter the contractor proceeded on the basis of the Commission's order to make this modified section, although the District did not give any formal consent to this until November 8, 1935, and notified the contractor, as we will show by another letter here, that it was proceeding at its own risk until a formal consent was given. Now, all these things, your Honor, caused a great deal of delay in the performance of this work. They caused the work to be shut down. They caused a lot of additional work in connection with the tunnel, and they caused a great delay in the contractor's progress in completing these tunnels, and is our point that when the work is shut down by the order of the State authorities, as a result of

(Testimony of Thomas Moore Price.)

something which the contractor has no control, that this delay—

The Court: You are assuming a fact not in evidence there, that you had no control; you had complete control, did you not?

Mr. Wittschen: Yes.

Mr. Marrin: Well, we had control of the work but an accident happened which is not due to our fault.

The Court: Oh, I see.

Mr. Marrin: It resulted in great delay in the work. It is something which is beyond our control and for which we are entitled to an extension of time, and the District and the District Engineer knew all about these facts when they denied the extension of time, and it is our point that when the work was shut down by [1352] order of the State authorities, as a result of something over which the contractor had no control, it was a delay.

The Court: You are assuming it was something you had no control over.

Mr. Marrin: We had control of the work, but it was an accident that happened, not due to our fault.

The Court: Assuming your position to be correct, was there a delay of the work to any appreciable extent?

Mr. Marrin: Oh, yes, a very serious delay of the work, as has already been testified in this case,

(Testimony of Thomas Moore Price.)

because of the fact that the ground encountered was not of the character which was expected the contractor shut down the further excavation on August 21 in order to attempt to get the concrete up. Then when this accident occurred the work that Mr. Price has just testified to was actually shut down. We were between two fires, the order of the Industrial Accident Commission on one side saying you cannot remove or set back the timbers, and the order of the Commission that you may do so and so, but for the period at least from September 1 until after the order of the Commission on the 24th the contractor did not know what to do.

The Court: All of these difficulties developed when this tunnel was 618 feet on one side, and what is the measurement on the other?

Mr. Tinning: There was about 900 or a thousand feet.

The Court: In any event, all of these difficulties that we have discussed arose out of the portion of the tunnel in which the timber came out?

Mr. Marrin: That is true.

The Court: Very well. You do not need to answer this if you do not wish. Why was not that cemented? [1353]

Mr. Marrin: That is just what we have been trying to prove to your Honor through the testimony of this witness as to the difficulties that we had with the concrete plant which we had contemplated using, and the length of time after that it

(Testimony of Thomas Moore Price.)

took to develop a new concrete plant in order to line this section. Furthermore, if your Honor please, we have shown here through the representation of the geological report that good self-supporting ground might be anticipated, and if we had been in that kind of ground there would have been absolutely no necessity for lining this tunnel at all.

The Court: I see I am getting very little help in solving the matter in my mind. However, the only way that I can see that we can do is allow counsel to have a record and protect your legal rights, even though we are here for so long.

Mr. Wittschen: There are two or three things that are confusing. The first one is when this cave occurred, the ground had been standing for six or seven months. The orders of the Industrial Accident Commission that came in after the cave-in were not formally made at the time of this letter; they were made some 20 days thereafter, if my memory serves me right. It is perfectly true that the District Engineer did not formally say "You go ahead until another 20 or 30 days," and in the meantime they went ahead, they did not stop, they did not wait for a formal order of the District Engineer; as soon as they got the Industrial Accident Commission's order they proceeded to drop the section 10 inches, in connection with correspondence between Mr. Tinning and Mr. Thelen, in which they said we will do that, and we won't charge anything more for it, or make any extra claim; in other

(Testimony of Thomas Moore Price.)

words it was a concession to them to let them drop in this tunnel. Mr. Marrin is claiming that there was a delay of a certain length of time while [1354] the Industrial Accident Commission made its order.

The Court: You answer that by saying the engineer said, "We will let you do this and let you take all risks in the work under your contract." I am afraid I cannot help either side.

Mr. Marrin: May this be allowed in?

The Court: It may go in.

Mr. Wittschen: I suppose we ought to take an exception.

Mr. Marrin: This letter is dated September 14, 1935, and it reads:

PLAINTIFF'S EXHIBIT NO. 71

September 14, 1935.

Industrial Accident Commission,
State Building,
San Francisco, California.
Attention Mr. C. H. Fry, Superintendent of Safety

Gentlemen:

We enclose herewith copy of a letter dated September 5, received from the District Engineer of Joint Highway District No. 13; also a copy of our reply dated September 14.

These copies, together with this letter, are in reply to a letter from your Mr. Fry, dated September 2, 1935, in which it is stated that a

(Testimony of Thomas Moore Price.)

proposed plan for lowering and narrowing the concrete forms, in order not to disturb the present timbering in the tunnel, "or some other plan approved by the consulting engineers, which will give the same result, seems not only desirable but necessary".

This information is given to you in order that the Industrial Accident Commission may be fully informed of the present status of this matter.

For your information, the specifications in paragraph E, section 32, page 60, state that "Timbers found to project within the concrete lines shall be removed and reset before concreting".

Very truly yours,
SIX COMPANIES OF CALIFORNIA,
By T. M. PRICE,
Project Manager.

P:C

[Endorsed]: U. S. Dist Ct. N. D. Cal. No. 20101-R. Plff's Ex. No. 71. Filed April 29, 1938. Walter B. Maling, Clerk. By J. A. Schaertzer, Deputy Clerk.

And the letter enclosed was Defendant's Exhibit SS, which I have [1355] just read.

(The letter was marked "Plaintiff's Exhibit No. 71.")

71.")

(Testimony of Thomas Moore Price.)

Mr. Wittschen: In order to keep the record straight, no copy of that was sent to the District.

Mr. Marrin: I think that is right.

Q. Now, Mr. Price, you then received from the Industrial Accident Commission on September 19, 1935, an order to show cause, which was introduced in evidence as Defendant's Exhibit EEE, which, without reading the whole order, provided that all timber in both the north and south tunnel shall not be removed and reset before concreting, and the concrete forms may be lowered sufficiently to clear encroachments in the tunnel section, or some other plan whereby the timbering will not be disturbed, may be submitted to the Commission for approval.

A. Yes.

Q. After you received that letter from the Commission did you stop work?

A. We had never started on the work involved in this moving or resetting of the timbers; we had resumed concreting the south tunnel in the sandstone section where we were able to do so, and I believe we had made one concrete pour somewhere in the cherts section where there was one place of approximately 20 feet where the timbers had not intruded sufficiently to stop pouring of the concrete in the south tunnel.

Q. Thereafter, as was brought out in the cross examination of Mr. S. D. Bechtel, the Commission issued an order on September 24, 1935, authorizing the placing of the modified section of the arch?

A. Yes.

(Testimony of Thomas Moore Price.)

Q. What did you do after you received that order, Mr. Price?

A. We started lining the tunnels with concrete in conformance with the section which was approved by the District Engineer; by "approved," I mean he approved the lining of it as conforming with the [1356] Commission's order.

Q. I show you Defendant's Exhibit KKK, and ask you if you will explain to the Court what that modification was of the arch which was permitted by the Commission in its order?

A. This is a cross section of the tunnel showing the concrete as designed by the dotted line, the outside dotted line, with a notation on it, "Neat line of type 'A' Section," right there—

The Court: That is the original?

A. The original; the inside section shows the modified line, the outside of the modified section, and this shows the inside of the modified section; that shows dropping the arch 10 inches, and contracting the side walls six inches at some points above the floor line.

Q. No change in the floor?

A. No change in the floor.

Q. You did that to overcome your timber problem?

A. The timber which had intruded down into the concrete section in the cherts formation.

Mr. Marrin: Q. Did that affect the width of the roadway at all? A. No, it did not.

Q. Does this change which you have just pointed

(Testimony of Thomas Moore Price.)

out in this diagram show the total extent of the changes which were made? A. Yes.

Mr. Marrin: Is that clear to your Honor?

The Court: Yes.

Mr. Marrin: Q. After you received the order of the Industrial Accident Commission of September 24, 1935, you proceeded to install the arch, the modified arch?

A. Yes, we constructed timber forms and started pouring the concrete on the modified section.

Mr. Marrin: Now I have here a letter dated October 3, 1935, from Wallace B. Boggs, District Engineer, to the Six Companies of California, which I offer in evidence as Plaintiff's Exhibit next in order. This letter reads as follows [1357]

PLAINTIFF'S EXHIBIT NO. 72

Joint Highway District No. 13 of the
State of California
Oakland, California,
October 3, 1935.

File: Broadway Tunnel Lining.
Six Companies of California,
Field Office,
Post Office Box 120,
Berkeley, California.

Attention of Mr. T. M. Price, Project Manager

Dear Sir:

On October 2, 1935, you poured concrete tunnel lining with forms which do not conform to

(Testimony of Thomas Moore Price.)

the Type "A" section as set forth in the plans.

You are advised that no authorization has been received from the Government Engineer for the placing of the concrete tunnel lining as you placed it on October 2, 1935, and that such lining is subject to rejection in the event such authorization is not received from the Government Engineer.

Yours very truly,

(Signed) WALLACE B. BOGGS,
District Engineer.

WBB/VE

[Endorsed]: U. S. Dist. Ct. N. D. Cal. No. 20101-R. Plff's Ex. No. 72. Filed April 29, 1938. Walter B. Maling, Clerk. By J. A. Schaertzer, Deputy Clerk.

(The letter was marked "Plaintiff's Exhibit 72.")

Mr. Wittschen: Mr. Marrin, will you stipulate that shortly thereafter or sometime thereafter the Government Engineer gave his approval and they never were required to remove any of that lining, which was the purpose of that letter?

Mr. Marrin: We were not required to remove it, but we never received any formal permission from the District Engineer until November 8, 1935.

Mr. Wittschen: But you went right ahead and put it in?

(Testimony of Thomas Moore Price.)

Mr. Marrin: We went right ahead and put it in in order to get the work done.

Mr. Wittschen: You took none out?

Mr. Marrin: We did not have to take it out, but we took the risk of doing it.

The Court: He recognized he took risk, but he followed it up by saying no.

Mr. Marrin: We did not have to take it out.

Mr. Wittschen: It was simply a matter of waiting for the [1358] Government's approval.

Mr. Marrin: Q. Mr. Price, there was introduced in evidence in connection with the witness S. D. Bechtel's cross examination Exhibit MMM, of which I show you a copy. Are you familiar with that? A. Yes.

Q. You received that letter on or about November 8, 1935? A. Yes.

Q. Is that the first formal permission you received from the District Engineer to place this concrete in this manner? A. Yes.

Mr. Tinning: It was a complete approval of what had been done.

Mr. Marrin: It was the first permission they received from Mr. Boggs.

Mr. Tinning: The first written or formal.

Mr. Marrin: I do not think he ever committed himself otherwise.

Mr. Tinning: Your question says "formal", doesn't it?

(Testimony of Thomas Moore Price.)

Mr. Marrin: The first written approval. Was it the first permission of any kind?

A. Yes, that I had received.

Q. During this time you had been proceeding with the pouring of concrete in the tunnels, had you not? A. Yes.

Q. Will you state on what date you completed the pouring of concrete in the south tunnel, that part of the south tunnel which had been excavated at the time of the cave-in?

A. As a matter of fact, we did not complete the pouring of that section until February 29, 1936. As a matter of practicability we completed it about the 23rd of November, 1935, leaving a portion there in which to conduct operations, an unlined portion.

Q. By that you mean you left a small unlined portion near the face so that you could recommence the excavating operation?

A. Yes. That, however, has been gunnited.

Q. Will you state on what date you completed concreting of the north [1359] tunnel which was excavated at the time of the cave-in of August 28, 1935?

A. Approximately on January 15, 1936.

Q. When was the excavation resumed in the south tunnel?

A. The excavation was resumed in the south tunnel at station 124+57 on February 2, 1936.

Q. When was excavation resumed in the north tunnel? A. December 22, 1935.

(Testimony of Thomas Moore Price.)

Q. How long was the excavation carried on by Six Companies thereafter in the tunnels?

A. I wish to make a correction in the previous statement in the south tunnel, if I may.

Q. Yes, surely.

A. The date that I gave you was the core excavation. In the south tunnel we proceeded to excavate the tunnel by constructing side wall drifts without doing any core excavation until we contacted and intercepted the drifts which had been driven from the east end. That work was done prior to any core excavation in the south tunnel.

Q. When did you commence that work?

A. That work was commenced on November 26, 1935, approximately.

Q. From then on until late in February, which you gave us before, you were excavating drifts in the south tunnel?

A. Yes, we did not do any work in the south tunnel but excavate side wall drifts through to where we contacted the east portal drifts.

Q. And you contacted those two east portal drifts in February of 1936? A. Yes.

Q. And thereafter did you excavate the south tunnel by the wall plate system?

A. We went back there again to where we had started to drift and excavated the core and followed up with the concrete lining; after we reached the wall plate drift from the east end then we proceeded to drive the tunnel by the wall plate drift method.

(Testimony of Thomas Moore Price.)

Q. When you resumed excavation in the north tunnel what system was followed there?

A. The wall plate drift system. [1360]

Q. Then did you continue the excavation continuously thereafter in the two tunnels—for how long did you continue continously?

A. The excavation was continued in the south tunnel without interruption and in the north tunnel without interruption until February 22, 1936.

Q. Why did you stop at that time?

A. We experienced a cave-in in the north tunnel.

Q. And after the cave-in was cleared was work thereafter resumed in those tunnels? A. Yes.

Q. Will you state the date on which your work was resumed in the south tunnel?

A. Work was resumed in the south tunnel on March 26, 1936.

Q. In which tunnel did the cave-in occur?

A. In the north tunnel.

Q. Would you state when work was resumed in the north tunnel after the cave-in of February 22nd?

A. Approximately on the 5th to 9th of May, I have it here. I presume the first excavation was made on the 9th of May.

Q. 1936? A. Yes.

Q. Was the excavation carried on then continuously in both tunnels? A. Yes.

Q. What was the character of the ground in the tunnel which was encountered after the resumption of excavation following the first cave-in and up till June 13, 1936?

(Testimony of Thomas Moore Price.)

A. It continued heavy and non-uniform somewhat similar to the ground which we had previously passed through.

Q. Was any of it self-supporting? A. No.

Q. Mr. Price, during the time that you were employed by Six Companies of California, who set the lines and grades of the tunnels in which you worked in constructing the tunnel?

A. The Six Companies of California engineers.

[1361]

Q. Who set the lines and grades on the outside work?

A. The Highway District No. 13 engineers.

Q. Do you know what lines and grades, if any, the District set in the tunnel during that period?

A. No, I am unable to say. I saw their men working back behind us at various times, but they never did any work which helped us in any way. The tunnels were driven and the bore was made by work done by our own engineers. I am unable to state what they did.

The Court: Were they in your way?

A. No, they were not in our way. They were behind us.

The Court: We will take an adjournment now until Tuesday morning at ten o'clock.

(An adjournment was here taken until Tuesday, May 3, 1938, at ten o'clock a. m.) [1362]

(Testimony of Thomas Moore Price.)
Tuesday, May 3, 1938;
10 O'Clock A. M.

THOMAS MOORE PRICE

Direct Examination (continued)

Mr. Marrin: If your Honor please, in connection with Mr. Larson's testimony, there appears a statement, on pages 313 and 314 of the transcript, in which he testified, in answer to certain questions of Mr. Tinning, that at the time he examined the tunnels on August 28, 1935, the east portal drifts were driven all the way through. That was an error; and the other side is willing to stipulate the transcript may be corrected.

Mr. Tinning: Yes.

Mr. Marrin: To show they were not driven through at that time.

Mr. Tinning: But, in making this stipulation, it may be understood that there were several hundred feet of portal drifts excavated on the east portal, but none of them had penetrated through to the west portal excavation at that time.

Mr. Marrin: Yes.

Mr. Tinning: The question was with respect to the inspection of the Orindan formation in those tunnels; but, in so far as Mr. Larson's answer applies to the portion that he saw, why, it will be understood it will stand,—his answers.

(Testimony of Thomas Moore Price.)

Mr. Tinning: It was a mutual mistake as to how far that work had progressed.

Mr. Marrin: Yes.

Q. Mr. Price, I show you a tabulation entitled "Work Completed by Six Companies of California." Was that prepared under your direction?

A. Yes, sir.

Q. From the records of Six Companies of California? A. Yes, sir.

Q. To the best of your knowledge, it is correct?

A. It is. [1363]

Q. Will you state what that shows?

A. That shows the work completed by Six Companies of California, on a footage basis; it shows the excavation in the tunnel,—the portions where the excavation was completely performed, where only the ring excavation was performed, the wall plate drifts, the east end drifts, the rings on the east end, and the excavation on the east end.

Q. That was the amount completed up to June 13, 1936? A. Yes.

Mr. Tinning: May I ask a question, here, Mr. Marrin, in the interest of time?

Mr. Marrin: Surely.

Cross Examination

Mr. Tinning: Apparently, from the tabulation, the north tunnel shows 2,875 feet. You have added drifts and ring excavation and completed excava-

(Testimony of Thomas Moore Price.)

tion, so that you have practically put the tunnel through.

The Witness: That is the complete work.

Mr. Tinning: I don't think you understood me, Mr. Price. The figures at the bottom of the totals here show 2,875 feet. You have added the rings, the wall plate drifts—I think that should be made clear.

The Witnes: Yes. In other words, we had done some work in every portion of the tunnel; that is the station starting at the beginning of the tunnel and the station at the end.

Mr. Tinning: Q. I understand; but you have a total, under "Excavation," which might be understood that you excavated 2,875 feet.

A. Well, that would not be correct. The excavation for the tunnel is that portion in the first line, from station 111+43.45 to 129+86, a total of 1,843.45 feet on the west end; and the full excavation on the east was from 139+48 to the end, a total of 70.16 feet.

Q. Yes. So, it really might be misleading, unless it was explained that you have added all the lineal feet of drift, you might have [1364] built on both sides, and, as a matter of fact, you have about 1,900 feet of excavation completed, and the rest was drifts partially excavated?

A. Yes. On the second page, the same procedure is carried all the way through on each item of work,—the ventilating concrete—here, we have, on

(Testimony of Thomas Moore Price.)

the second page, that no concrete placed at all for a distance of 1,000 feet—

Q. The point is: These totals are not totals of the same thing; they are the result of a numerical addition of the various footages of drifts and so on? A. Yes.

Q. That was shown on the diagram?

Direct Examination (resumed)

Mr. Marrin: These totals are the total length of the tunnels? A. Yes, they are.

Q. The detail shown above shows the amount of excavation which was carried on in that part of the tunnel which was excavated? A. Yes.

Q. Does that also show the amount of the concrete placed, Mr. Price?

A. Yes; it shows the timbering, also; the excavation above the timbering; then the concrete rings; then the grouting and the ventilation concrete, in each tunnel.

Mr. Marrin: I offer that in evidence.

Mr. Tinning: Subject to checking against the figures,—I assume they will be correct; and also subject to Mr. Price's explanation that the totals do denote different classes of work in each case?

Mr. Marrin: Surely.

The Court: This is off the record.

(Discussion, off record.)

The Court: We will proceed.

(The document was marked "Plaintiff's Exhibit No. 73.")

(Testimony of Thomas Moore Price.)

PLAINTIFF'S EXHIBIT NO. 73

Work Completed by Six Companies of California

Excavation			
North Tunnel			
Excavation completed	111+42.55	129+86	1,843.45
Ring excavation	129+86	130+44	58.
Wall plate drifts, both sides	130+44	131+37	93.
Wall plate drift, right side only	131+37	132+36	99.
East wall plate drifts, both sides	132+36	139+35.3	699.30
Ring excavated	139+35.3	139+48	12.70
Excavation completed	139+48	140+18.16	70.16
Total			2,875.61
South Tunnel			
Excavation completed	111+53.25	135+79	2,425.75
Ring excavated	135+79	136+18	39.
East wall plate drifts, both sides	136+18	140+08	390.
Ring excavated	140+08	140+25	17.
Excavation completed	140+25	140+97.68	72.68
Total			2,944.43
Timbering			
North Tunnel			
Open cut, no timbering	111+42.55	111+58	15.45
Full timbering	111+58	129+80	1,822.
Ring timber placed	129+80	130+43	63.
Wall plate only	130+43	130+70	27.
Wall plate drifts, both sides	130+70	131+37	67.
Wall plate drift, right only	131+37	132+36	99.
Wall plate drifts, both sides	132+36	139+35.3	699.30
Full timbering	139+35.3	139+78	42.70
Open cut, no timbering	139+78	140+18.16	40.16
Total			2,875.61

(Testimony of Thomas Moore Price.)

South Tunnel			
Open cut, no timbering	111+53.25	111+68	14.75
Full timbering	111+68	135+64.5	2,396.50
Ring timber placed	135+64.5	136+16.50	52.

[Endorsed]: U. S. Dist. Ct. N. D. Cal. No. 20101-R. Plaintiff's Ex. No. 73. Filed May 3, 1938. Walter B. Maling, Clerk. By J. A. Schaertzer, Deputy Clerk.

Mr. Marrin: I have here a poster which shows the modified sections of the tunnels about which we were talking on Friday, and shows the sections of the tunnels in which the modified section was [1365] installed and the section in which the regular concrete lining was installed; and also shows the places where the concrete lining was placed with wood forms and the place where it was placed with steel forms; and I want to examine the witness with respect to that, and I would like to offer that in evidence as plaintiff's exhibit next in number.

Mr. Tinning: Subject to check as to accuracy of distances.

Mr. Marrin: Surely.

(The document was marked "Plaintiff's Exhibit 74.")

Mr. Marrin: Q. Mr. Price, will you explain what that exhibit shows?

(Testimony of Thomas Moore Price.)

The Court: Exhibit what, for the purpose of the record?

Mr. Marrin: Exhibit No. 74.

The Court: Briefly outline what that diagram indicates.

The Witness: A. The two drawings at the bottom of the poster indicate on the left the typical cross-section of the concrete as designed; on the right, it indicates the typical cross-section as modified.

Mr. Marrin: Q. That was modified after the order of the Industrial Accident Commission on September 24, 1935?

A. Yes. The plan, at the top of the poster, shows the two tunnels and the pink portion,—the part that is colored pink, or red,—indicates the portion where the standard section was used,—the section on the—

Q. By "standard section," you mean the section as stated in the original plans and specifications?

A. Yes; and the blue portion indicates the place in the tunnel, or places, where the modified section was used,—the modified concrete section. In each of these two colorings, the hatched portion indicates the places where timber forms were used, where we were unable to use steel forms, and built timber forms in place. The white portion, or where no [1366] color exists, indicates the point where no concrete lining was placed in the tunnel.

Q. By Six Companies of California?

(Testimony of Thomas Moore Price.)

A. By Six Companies of California.

The Court: Q. The white portion?

A. The white portion at the right-hand side of the poster.

Q. Did it need any support at all?

A. We did not do that work, your Honor.

Mr. Wittschen: That was left; but that was done by others.

Mr. Marrin: Q. In other words, the end of the colored section indicates the points to which the Six Companies had completed the main concrete lining at the time they stopped work on June 13, 1936?

A. Yes, sir.

Q. And the white portion here was finished by another contractor? A. That is correct.

Q. To the best of your knowledge, is that poster correct, Mr. Price?

A. Yes, to the best of my knowledge, it is.

Q. Mr. Price, will you describe, or tell us of what the concrete plant consisted which was required for placing concrete in the lining of these tunnels?

A. I will describe the plant according to the flow of the concrete and the materials that went with it. We required a place on the railroad for unloading the sand, gravel and cement to make the concrete. This particular place was a portion of the highway down near what was called the Landvale Cutoff. We hauled the material approximately a mile and a half to a mixing plant, where

(Testimony of Thomas Mo[illegible] Price.)

the separate ingredients for the concrete,—consisting of sand, gravel, cement and water,—were weighed out, and then mixed in a mixer. The next portion of the plant was a requirement to haul the mixed concrete from this mixing plant which was located near the west portal into the tunnel. The next portion of the plant [1367] was a machine required to force that concrete through pipes into the forms,—the forms which held the plastic concrete until it could set up and become firm; that was the last section of the plant.

Q. During the time you were employed by Six Companies, Mr. Price, how many hours per day was the work carried on?

A. It was carried on 24 hours a day for 6 2-3 days a week, throughout the year, with the exception of one or two days,—holidays; and I think it was July 4th.

Q. With full crews?

A. Yes, as near full crews as we could obtain. [1368]

Q. Why was the one-third day a week not worked?

A. Because of the 40-hour limitation placed upon men, we used four shifts to work a week's period, the shifts being only 21 shifts in a week, three shifts per day, would be 21 shifts per week; we were only able to work in that manner, divided among four crews, which made five shifts for each man at 8 hours per day, a 40-hour week.

(Testimony of Thomas Moore Price.)

Q. In other words, the reason you did not work seven days a week was because you could not divide the shifts into the total number of hours?

A. Yes, we took one shift off on Sunday.

Q. Mr. Price, will you state what timber was left in place before the concrete lining was laid by the Six Companies of California?

A. All of the timber was left in place that did not intrude into the neat concrete section, as far as I know or recall.

Q. None of the timber outside of the neat lines of the concrete was taken out before the lining was placed?

A. I don't recall any.

Q. During the time you were employed by Six Companies of California did the company do anything which delayed the work?

A. Not to my knowledge.

Q. The work was shut down two or three days in September, 1935, was it not? A. Yes.

Mr. Marrin: That is all. You may cross examine.

Cross Examination

Mr. Tinning: Q. Mr. Price, you have just been discussing the concrete plant and the loading plant; the loading plant, showing this perspective map, Defendant's Exhibit P, that you described on the Landvale connection was at about where I am pointing

(Testimony of Thomas Moore Price.)

near Lake Chabot and Pacific Gas & Electric Substation, was it not?

A. I would term it the unloading plant rather than a loading plant, yes. [1369]

Q. You had a sidetrack from the Sacramento Northern on which cars came in and then you loaded into that plant, or unloaded into the plant, and loaded into the cars? A. Yes.

Q. And your concrete plant was on the north side of the road, just west of the portal buildings, that is, the mixing plant, was it not? A. Yes.

Q. And your railroad system, the same railroad system that you used for transporting muck out of the tunnel was used for hauling the concrete into the tunnel, was it not?

A. With the exception of that portion or a portion of the railroad outside of the tunnel.

Q. You had a switch running over, but it was a matter of 200 or 300 feet from the portal, was it not? A. Yes.

Q. You said the other day when you came there in September you threw that railroad over to the other side of the canon. Now, looking at this perspective map, is it not a fact that what you did was put a rock bunker, a muck bunker, approximately opposite the concrete plant on the south side of the road, perhaps a little further west than the concrete mixing bunker, but in the same general locality?

A. Yes.

(Testimony of Thomas Moore Price.)

Q. And that you eliminated the railroad from that point of the west portal where your track entered near the muck bunker, down to the part where it had formerly run, it was pulled out of there, and you later used that track as you went into the tunnel? A. Yes.

Q. Mr. Price, when you testified here last week you stated you had been with the Kaiser Company approximately 18 or 20 years. I think you said you started to work for Mr. Kaiser in Seattle in 1919; is that correct? A. Yes.

Q. How long has the Kaiser headquarters been in Oakland, California? A. Since about 1921.

Q. Since that time has your home been in Oakland? A. No, not wholly. [1370]

Q. I do not mean when you were off on jobs in your construction work, but where was your residence since 1921?

A. I resided in several places.

The Court: He wants to know where your home was. A. I had several, I had no one home.

Mr. Tinning: Q. Did you vote in those places where you were?

The Court: You resided at various places?

A. Yes.

Q. Are you a man of family? A. Yes.

Q. Where did your children go to school?

A. Where I was.

Mr. Tinning: Q. How long have you resided in Oakland?

(Testimony of Thomas Moore Price.)

A. I resided in Oakland from about 1924 to approximately 1931, and I resided in Boulder City from approximately 1931 to 1934, and I have since resided in Oakland.

Q. So that you had lived in Oakland about seven years before you went to Boulder dam, and then when you came back to go on this Broadway Tunnel job in 1934 you returned to Oakland to live?

A. Yes.

Q. As I understood your testimony you said that while you were employed by Mr. Kaiser up to 1931 that you had been the superintendent on paving, earth dams and industrial plant construction, largely?

A. I have been superintendent for the company, but I have not been particularly in charge of earth dams; I have been largely on paving, aggregate production and on dams where the aggregate production was connected with the dams.

Q. When you went to Boulder Dam to take charge of the building and operating of the aggregate plant you took along with you a long experience in the handling of that type of work, handling aggregates, designing plants and operations?

A. Yes, approximately ten years. [1371]

Q. As I understood, one part of your work at Boulder Dam was arranging a method of transportation of tunnel muck for Six Companies.

A. Yes.

(Testimony of Thomas Moore Price.)

Q. By the way, Six Companies, Inc., that you worked for at Boulder Dam, that is not the same corporation that was building this tunnel?

A. It was a different corporation.

Q. A different corporation? A. Yes.

Q. Were all of the constituent companies the same in the Six Companies of California, the plaintiff in this case, as the constituent Companies of the Six Companies Inc. which built the Boulder Dam?

A. I do not believe they were actually exactly the same, but I believe practically the same.

Q. What did you mean when you said that when you came to work on September 20, 1934 you took charge of the business end of the project, of the tunnel?

A. Well, I mean just that, the management of the job, the negotiations with the subcontractors, negotiations with the District Engineer, approval of purchases, seeing that the proper records were kept, checking the work that was being done in the tunnel, and seeing that the proper supplies were obtained, and work of that nature; largely executive work, if I may say that.

Q. What is that?

A. Largely executive work.

Q. Executive work? A. Yes.

Q. You had trained technical tunnel men under you in your employ, did you not? A. Yes.

(Testimony of Thomas Moore Price.)

Q. Had you ever been the superintendent or project manager on any job before which had to do with the construction of a tunnel? A. No.

Q. This was your first job?

A. This was my first job.

Q. When you took this work, managing the driving of this tunnel, Mr. Price did you make any investigation of tunnels that had been built in this Bay Area?

A. Well, I do not quite understand your [1372] question. Do you mean prior to my taking the work?

Q. Well, yes, when you started in, either on September 20 or immediately following September 20, when you went on with the work, did you make any investigation or any study as an engineer of the problems that had been met in the various tunnels that had been constructed around San Francisco Bay?

A. Yes, I gathered all the information that I could in my contact with our people.

Q. Did you find any of those tunnels built in self-supporting ground?

A. I don't recall that I did.

Q. Did you find any of those tunnels built where you were able to drive with a full-face operation?

A. Well, the time we investigated as to those, do you mean?

Q. Well, at any time.

(Testimony of Thomas Moore Price.)

A. At any time up to that time, I do not recall that I did, with the exception of a small tunnel that had been driven by a full-face method, as a matter of fact the drift on the east end of the Broadway tunnel was driven by a full-face method.

Q. I am talking of comparable tunnels, there are highway tunnels, or railway tunnels, or some of comparable size, did you find any of those?

A. No, I did not find any of comparable size.

Q. Did you find any tunnels that had been driven here without the use of timber for support?

A. With the exception of one or two, one particularly, I remember, on the Southern Pacific near Oleum; I believe that is the only one, that is not supported with timber.

Q. That is the only one, and that is through sandstone with every little overbreak, is it not?

A. Yes.

Q. It is the tunnel adjacent to the Union Oil Company's plant on the south shore of San Pablo Bay, is it not?

A. Yes. I have passed through it several times and noticed it had no support.

Q. Did you have that in mind when you were conducting the operations [1373] on the Broadway Tunnel? A. I don't recall particularly.

Q. Your inspection was made as you went through on the train? A. Yes.

Q. Last Friday Mr. Marrin read to you some letters, Defendant's Exhibits BB and CC, which

(Testimony of Thomas Moore Price.)

had already been introduced, regarding the extension of time on outside work. He did not read to you another letter which was put in evidence, Defendant's Exhibit FF, a letter of January 23, 1935, in which Mr. Boggs replied to your letter of January 18th, when you discussed the possibility of requiring an extension, in which Mr. Boggs told you that this was outside work upon which time of completion did not seem to have any bearing on the completion of the contract, and it did not appear that the suspension of work which he had ordered in any way could constitute a basis for the granting of an extension of time. You remember that letter, do you not?

A. Yes, I have some recollection of it.

Q. And then on the next day, you wrote a letter to Mr. Boggs, January 24, 1935, which is already in evidence as Defendant's Exhibit GG, in which you stated that you did not mean your previous letter to be an application for extension of time, but wished merely to call his attention to the paragraph of the specifications governing this.

> "We merely wish to put ourselves on record in the matter with the thought that actual decision as to the extension might be made at the time application is made if decided necessary, and provided by the specifications."

The matter dropped at that time, did it not? There was nothing further about that?

(Testimony of Thomas Moore Price.)

A. Yes.

Q. And it was true that the time required for this work was comparatively short and did not control, it was outside work, and it was concrete structures from the west portal down to the west end of the approach, and on the Landvale connection that he was referring to, was it not?

A. Yes, but I didn't know what might happen in the future. [1374]

Q. It was work which required a comparatively short time to complete?

A. No, I would not entirely agree with that.

The Court: Q. In other words, it was not the tunnel proper, in any event?

A. No, it was not the tunnel proper. It took considerable time, though, to complete it.

Mr. Tinning: We will come to that, Mr. Price. As a matter of fact, it was not completed when you left, or when the Six Companies quit on the 13th of June, 1936, was it? A. No.

Q. Although the schedule of Six Companies, filed on August 9, 1934, said that all of the foundations and all of that work would be completed by December 1, 1934. Do you remember that schedule?

A. I believe it did. I think it is a matter of record.

Q. Defendant's Exhibit N. And that schedule showed, did it not, that you intended, the Six Companies intended at the time the schedule was filed to so conduct the work that all of the footings, all

(Testimony of Thomas Moore Price.)

of the structural work on all of the structures on the 2½ miles of highway up to the west portal building would be completed by December 1, 1934—that is what that schedule showed—that was the schedule filed with the District, was it not?

A. I would prefer to examine the schedule again.

Q. It is Defendant's Exhibit N.

Mr. Tinning: Your Honor has seen this at various times before. I might say it is the construction schedule filed with the District or sent to the District on August 9, 1934, Defendant's Exhibit N.

Q. Isn't it true that all of the structural work, the Golden Gate Avenue crossing foundation would be completed by November 1?

A. No, the Golden Gate Avenue crossing foundation was to be completed September 25.

Q. September 25?

A. Yes. You are looking at the Tunnel Boulevard.

Mr. Wittschen: 1934.

Mr. Tinning: September 25, 1934?

A. Yes. [1375]

Q. Landvale foundation by October 10, 1934?

A. Yes.

Q. So that all of the foundation work which was the subject of the correspondence in which Mr. Boggs asked you to cease operations, when you sent this schedule in to the district was planned to be done by the middle of October, or 20th of October,

(Testimony of Thomas Moore Price.)

was it not, the Landvale foundation September 25, Golden Gate Avenue crossing foundation October 10?

A. Yes, apparently it was. This is a proposed schedule at that time, not an actual schedule.

Q. It is a schedule of what you proposed to do?

A. Yes.

Mr. Wittschen: You did not give the year.

Mr. Tinning: 1934, this schedule, the first that we have been discussing, you and I both understood, for the sake of the record, it all referred to 1934?

A. Yes. For the record also I think it should be clear that is for grading only, and that the structural concrete had to be performed after that time.

Q. And the structural concrete showed that that was proposed to be completed, looking down on the structure miscellaneous work, small areas in the structure were to be completed by November 15, miscellaneous east portal wall and culvert by November 10—that work was all supposed to be completed by then, Temescal culvert, west portal retaining wall.

A. By this construction schedule it was—it was proposed it would be completed at that time.

Q. As a matter of fact that schedule, in fairness to you, Mr. Price, was prepared before you came on the job, was it not? A. Yes.

Q. By your predecessor? A. Yes.

(Testimony of Thomas Moore Price.)

Q. The schedule that was submitted with your letter of February 12, 1935 was one which was prepared while you were project manager, was it not?

A. It was prepared with the best information I had at that time as to—

Q. What you proposed to do?

A. When the work would be completed. [1376]

Q. And you show the work for the Golden Gate Avenue crossing foundation to be completed by June 30, 1935, do you not? A. Yes.

Q. And the other work, structural and paving was all to be completed by that date, was it not?

A. Yes.

Q. That was not done?

A. The structural and paving, no

Q. I am not talking about paving. I am talking about the structural work, the pouring of concrete, the walls and those structural areas; I have not discussed paving at all.

A. I misunderstood you. I thought you said structures and paving.

Q. Under the heading "Structures and paving," but I am referring to the item "Culverts, retaining walls, Temescal culvert," all of those were to be done by June 30, 1935, were they not?

A. Yes.

Q. They were not finished, were they?

A. No.

Q. Was the district in any way responsible for the fact that that schedule was not maintained?

(Testimony of Thomas Moore Price.)

Mr. Smith: I object to that question on the ground it is argumentative.

Mr. Wittschen: It is a proper question. He said he was without fault. We are now asking if the district was in any way responsible for that, where they said they would be finished in 1935.

Mr. Smith: That is purely a legal question, and calls for a judgment of the Court and not the witness. He can testify to the facts only.

The Court: Read the question. (Question read.) You may answer. A. I believe that it was.

Mr. Tinning: Q. In what respect?

A. In order to pour the concrete structure it was necessary to start somewhere and the place that I wanted to start in January, where Mr. Boggs stopped me, was the first concrete to be placed in the structure, namely, the footings; and that was the only place where the weather might have any effect on the work. [1377] It was my contention at that time that if he would let me pour those footings between storms that I could pursue the rest of the concrete work that spring, whether it rained or whether it did not rain, and get that concrete structure completed so that the grading could be resumed when dry weather came. Now, if we could never start the footings we could never pour the concrete structure. It turned out that that happened to be a wet spring, and we were not able to get back to these footings until along in May.

(Testimony of Thomas Moore Price.)

Q. There had been six months since the contract had been let, there had been two schedules filed with the district, one before you were project manager and one in February, that you had all of the fall of 1934 and none of the concrete was poured in those footings at that time, was it?

A. None of the concrete had been poured in the footings.

Q. In other words, this was all basic work, and it was in January, when you had open excavations, which were full of rain water, and there was wet ground around and you could not get a good foundation to put these foundations in that Mr. Boggs said you were not going ahead with the work because you were delayed in getting started, isn't that true, that if you had started before the rains set in you would have had no trouble?

A. I am sorry, the question is so involved I could not answer it.

Mr. Tinning: I am sorry. I will divide the question.

Q. Why didn't you do the work between June and December, 1934?

A. We were doing other work which seemed to be equally important, and we thought we could continue the work.

Q. Isn't it a fact that all of this work was subcontracted? A. Yes.

Q. And there was no reason why these subcontractors, with proper forces of men, proceeding at

(Testimony of Thomas Moore Price.)

the proper speed in the summer and fall of 1934, could not get that concrete in in that summer and fall, was there? You just did not do it?

A. I would like to correct [1378] my former answer. I say it was all subcontracted. I believe it was at that time. I think later on we took over some of the work.

Q. But in 1934 you had subcontractors selected by Six Companies employed to do this work, did you not? A. Yes, at that time we did.

Q. And you gave the District a schedule showing that the work would be done at that time?

A. Yes.

Q. Why didn't you do it?

A. Apparently they were not able to get that much work done in that period.

Q. Is that your conclusion, or do you know?

A. It is my conclusion. I saw the work almost constantly and pressed them every day for the work; they seemed to be going as fast as they could reasonably. The work that we were pressing was particularly the work at the portals of the tunnel, and the retaining walls where wet weather conditions would be very disadvantageous, and I believed personally that the bridge work could be done during the winter season.

Q. But the District Engineer did not agree with you on that? A. He would not let me start.

(Testimony of Thomas Moore Price.)

Q. And you wanted to start at the end of December or the 1st of January, and six months had elapsed at that time?

A. We were continuing at the time.

Q. It is true, is it not, that six months had elapsed when you wanted to start putting in the foundations of these buildings?

A. No, I cannot agree with you, because we had already started with it, we had never stopped.

Q. Did you have any concrete in? A. Yes.

Q. Where?

A. We had concrete in the west portal retaining wall.

Q. We are talking now about these structures. What did you have in from the west portal walls at the approach to the cut at Broadway, about two and a half miles of highway?

A. We had, I believe, all of the culverts in; we had to put the culverts in before any concrete [1379] work could be performed. We had gotten, I think, most of the walls in. We had performed some of the work on the east end where there was a large culvert which had to be done because of stream diversion there, and we were just preparing, we were continuing the work at the time; we were not starting the work. The work had been continued all that time and was being continued in January.

Q. The letter DD of Mr. Boggs told you not to start footing excavation, did it not? A. Yes.

(Testimony of Thomas Moore Price.)

Q. So that there were excavations which you were proposing to start in in the middle of the rainy season, at the time you wrote that letter?

A. No, I won't agree with you about starting; we were continuing.

Q. Mr. Price, we are not trying to fence with each other. We can go on faster; you understand I am talking about particular structures that are referred to in this letter. A. Yes.

Q. Do you remember the letter?

A. Yes. Might I explain what I mean, and maybe that would clear it up. We had excavated the structures and the footing for the Golden Gate Bridge, as I would call it, two or three times, and had a shower on it, and that work had been done in December, and each time that it rained the engineer required us to go back and clean up the work, and possibly excavate a little more footing so as to get a good cut for the footing.

Q. Was that unreasonable?

A. No, I don't think so.

Q. In other words, it was the only way that the work could be done properly, was it not?

A. Yes.

Q. And when it became wet from rainfall you had to clean it before you put the concrete in in order to get a proper foundation?

A. Yes. I had not quite finished with my other statement. It was my plan to get that first concrete poured between storms, if we could only get

(Testimony of Thomas Moore Price.)

a foot of it poured, and then proceed with the work.

Q. Have you finished? A. Yes. [1380]

Q. Why didn't you do that work between June and December, as the schedule showed you planned it?

A. The subcontractors could not get around to it.

Q. You selected the subcontractors, the Six Companies did?

A. The Six Companies of California did.

Q. Why didn't you do it in the succeeding year between May and December?

Mr. Smith: You mean 1935?

Mr. Tinning: 1935, that is the succeeding year.

A. We did do it.

Q. Did you finish it?

A. We finished the portion that we are talking about, the footings; I believe we practically finished the Golden Gate Bridge and most of the Landvale viaduct.

Q. Do you say most of the Landvale was done when you left in 1936 in June?

A. Yes. I think the greater portion of it was completed. That would be a matter of record. I have not got the exact percentage.

Q. As a mater of fact, there was a good deal of it; you had the main structure in but all the upper works had to be finished by the other contractor after you left?

A. If you are referring to the walls, the railing

(Testimony of Thomas Moore Price.)

on each side of the bridge, I think that had to be done.

Q. Quite a good deal of work remained to be done?

A. A question of percentage, I don't know the exact percentage.

Q. On the east portal you had to have that culvert in there so that the highway could pass over. That was the reason for that, was it not?

A. And also to take care of the drainage from that creek, from the portal, which was down in the bottom of the canon.

Q. That was done in the fall of 1934, was it not?

A. Yes.

Q. Isn't it a fact that this plan for carrying on the work that was given the District on August 9, 1934, called for the progress of all of these structures consecutively, concurrently—the contractor [1381] was not going to work on one structure and then then when he finished that go to another—the exact lines shown on that diagram showed proposed progress of those various outside structures were to run along consecutively, I mean concurrently, so that two or three jobs were going on at the same time. That was the way it was proposed, was it not? Would you like to look at the diagram? This is the August 9th plan which shows that this work was to be carried on concurrently.

A. This is the proposed construction schedule

(Testimony of Thomas Moore Price.)

again, and it shows exactly what work was proposed to be done at a certain time.

Q. The Sacramento Northern Railway work was to be done between July 5 and September 15?

A. September 10.

Q. September 10? A. Yes.

Q. The Landvale connection culverts were to be done at the same time?

A. To be done August 31.

Q. They were to be done concurrently, then?

A. Those two were to be performed concurrently.

Q. The west portal wall and the Temesal culvert were both being done, were planned to be done at the same time? A. Those two.

Q. The Golden Gate overhead miscellaneous west end structures were all planned to be done at the same time?

A. They were not planned to be done, they were running concurrently.

Q. The east portal walls and culverts were supposed to be running during the same period—that took a longer period than this other work on the west end tc be done?

A. Not all of the other work; only the Landvale, the Golden Gate.

Q. What about the Temescal culvert?

A. Yes, it took a portion of that time.

Q. Did the same subcontractor have the work at the east end that was doing the work on the west portal? A. Yes. [1382]

(Testimony of Thomas Moore Price.)

Q. Or the west approach? A. Yes.

Q. Was any of the work done concurrently?

A. I am sorry, I did not follow you.

Q. Was any work done by the subcontractors—the subcontractor was a man named Ball, was it not? A. Yes.

Q. And Mr. Ball subcontracted to a man named Bohnett? A. Yes. [1383]

Q. Did Bohnet build the culvert on the east side?

A. I believe he did; that work was done before I arrived.

Q. That was completed before you got there; so that did not delay the work, did it?

A. No; I don't think it did.

Q. That followed on schedule?

A. I am not positive exactly, on the date it was started and was completed.

Q. But it wasn't anything to trouble you, and would delay you by reason of it? A. No.

Q. So that, while our problems from now on will be a discussion of the west portal, it is a fact, on the west approach, where Mr. Bohnet was a subcontractor under Mr. Ball, who was a subcontractor under Six Companies, the work was not done in accordance with the schedule? Isn't it true that, by supplying adequate equipment and a proper number of men, there was no reason whatsoever that that work could not be done?

A. I would not agree with the last part of your

(Testimony of Thomas Moore Price.)

statement. I would say it would be very uneconomical to put a crew on every structure.

Q. It would be a question of economics, then, not progress?

A. I presume the Contractor had that in mind in doing his work.

Q. Mr. Bohnet had a subcontractor working for him, didn't he, named Harry Talbot, who hauled the material?

A. Yes. I wouldn't call him a "subcontractor," unless you would call anyone that you purchase anything from "a subcontractor."

Q. Do you call hauling something you purchase——

The Court: A supply man?

The Witness: A. Yes, a supply man.

Mr. Tinning: Q. Then, it is true, isn't it, that Mr. Bohnet had a subcontractor who supplied reinforcing steel for him,—the Pacific Coast Steel Company?

A. Yes. Pacific Coast Steel Company placed all the steel on the job, both inside and outside. [1384]

Q. Starting at the top, with the District, then comes Six Companies, then comes Mr. Ball, then comes Mr. Bohnet, then comes Mr. Talbot, then Pacific Coast Steel Company; then, off to one side, there, you had "Excavating and Grading, McKinley"?

A. Yes; but he was not under Mr. Talbot or Mr. Ball.

(Testimony of Thomas Moore Price.)

Q. No. We are switching over to another branch of the family tree now. We are now talking about Mr. McKinley. Mr. McKinley was the man who was to do the structural excavation, wasn't he?

A. I believe that is correct.

Q. And the structural excavation that was called for, on those schedules of August 9th, was not completed, with respect, at least, to the Golden Gate Structure,—overhead structure,—by December 1, 1934? A. No, sir; I don't think it was.

Q. The other day you testified, as I understand it, that the paving in some way had control of the time that Six Companies could finish this work. Is it not a fact the only thing on the whole project which was controlled in any respect by tunnel operation was the half mile, approximately, of highway from the west portal down to somewhere near Station, I think you called it, 78 on your schedule, a distance of some 3000 feet from the west portal where, under the specifications, there was a provision for putting the tunnel muck into the embankments on the highway? A. Yes.

Q. So that all the rest of this highway, from Broadway up to the point where you had to put tunnel muck, could have been paved at any time that the grade was completed?

A. Yes, it could have, subject to weather conditions.

Q. Before that, all the summer of 1935, Mr. Price, how was the weather during that summer?

(Testimony of Thomas Moore Price.)

A. As I recall it, it was a good summer.

Q. You did not do any paving then, did you?

A. Yes. We paved the Old Tunnel Road, I believe. We had a portion of the road leading up [1385] to the Old Tunnel,—which is not shown on there in color.

Q. The Old Tunnel Road was set back, by reason of the excavation for the project, somewhere——

A. Well, it shows the two there.

Q. Yes?

A. This road here, up the hill, just above the yellow portion on Exhibit "P."

Q. Just above the Old Tunnel Road shown on Defendant's "P",—that is the light colored line that runs along, meanders up the hill—a winding, narrow, old road? Now, just above the Pacific Gas and Electric Substation on, I will call it, the north side of the road, for about—what was it,—1000 feet; something in there?

A. It was nearer 1500 feet.

Q. Well, there was about 1500 feet of tunnel road there was moved back because of the grading below; it had to be set back further into the hill—is that correct? A. Yes.

Q. That was a travelled road at that time?

A. Yes.

Q. And part of your duty, under the contract to maintain detours and travel over existing roads, was it not?

(Testimony of Thomas Moore Price.)

A. Well, to a limited extent. I don't think it was our duty to maintain the detours all the way over the hill and through the tunnel to the east end. I think it was only a portion where our work was going on.

Q. Only within your work; and this 1500 feet was a part of your work; and, while you were doing your work, the travel had to be maintained over that road, did it not?

A. Yes; some of the time, that Old Tunnel was blocked by a slide, and all the travel was diverted to the Fish Ranch Road.

Q. That was something you had nothing to do with; that slide that filled up the Old Tunnel was some time in the fall of 1935, and for several months during 1935 it was closed? A. Yes.

Q. During that period, this 1500 feet of Old Tunnel Road was paved, was it not, during 1935,—the summer? A. Yes.

Q. So, when the Old Tunnel Road was reopened, after the cave that [1386] occurred in that tunnel, your work was done on that 1500 feet? A. Yes.

Q. It is also true that, in that same year, from the west end of the project down to where it intersects with Broadway, you completed paving about—How many lineal feet would there be there?

A. Well, I am unable to say, or to express it, in lineal feet, because there was a large intersection of the road leading up to the tunnel. I imagine,

(Testimony of Thomas Moore Price.)

around 1000 feet was paved; but the intersection had to be regraded and paved. That was the principal work.

Q. And the intersection was one which the travelling public,—the people using Broadway going out to Berkeley and to Claremont and south on the Fish Ranch Road,—used; it was a heavily-used piece of road; and you paved about 1000 feet, at the west end of the project, to connect with the intersection, so people could use that? A. Yes.

Q. Other than that, there was no paving done on the job in 1935?

A. No; there was not; there was some temporary paving on the west end——

Q. Temporary paving——

A. At the east end.

Q. Detour paving? A. Yes.

Q. Which you were required to do, under your contract? A. Yes.

Q. All the travel that came over that road,—the Tunnel Road,—from Walnut Creek into Oakland, had to pass over the construction which was going on in the bottom of the canyon there; and you had the Fish Ranch Road on one side and the Old Tunnel Road on the other, and your work was between the forks of the "Y" there, was it not? A. Yes.

Q. A very tight place to work? A. Quite.

Q. Your August 9, 1934, schedule shows that you completed—that you planned to do all the paving,

(Testimony of Thomas Moore Price.)

from the west end of the job to Station 75, in 47 days? Do you recollect that? [1387]

A. No; I don't recollect that, but, if the schedule states it, that is all I know.

Q. That work was not done in any 47 days or any other days in 1935, was it?

A. I do not think so.

Q. The fact that you were falling behind in the driving of the tunnels had nothing whatsoever to do with the delay of the paving from Station 75 west to Broadway, did it?

A. Yes; it had its effect. The job was not acceptable, in part; it had to be accepted as a whole, which included the tunnels as well as all the outside work; and, due to the fact that the pavement could not be completed entirely from the tunnel work until enough muck had been received from the tunnel to make those fills, it was impractical to do the paving at one time, because the cuts in the winter of 1934 and '35 on the west approach, and also some of the fills on the west approach hill, had slid in the highway to a very large extent; and it seemed practical to me to put the paving off, if possible, on those fills and in those cuts, because it would be destroyed in the winter of 1935 and '36, and then we would have to replace it at the expense of the Contractor; it would be better to pave it as near as possible at the end of the job, in order to save this destruction by the slides; and the Engineer would not let us move

(Testimony of Thomas Moore Price.)

any dirt except the dirt which came down into the roadway section; we could not slope the sides to make them safe.

Q. You got paid for whatever slide material you moved?

A. Whatever came into the roadway section.

Q. Mr. Price, isn't it a fact that what you had in mind about not doing that paving was you did not want to haul over it with your construction operations and so on; you wanted to wait until you were done, so you did not have to maintain the paving during this period of time?

A. That had some effect on it. That was not the entire cause. [1388]

Q. That had quite an important effect?

A. No; I don't think it was quite important. We planned on hauling the material for the concrete up the Old Tunnel Road and then over the new road.

Q. There was really no particular reason for failing to put in the paving, except you thought it would be wiser to wait until the end of the job to do it?

A. Yes; I thought it would be wiser; and I thought we would do the paving all at one time.

Q. If you put the paving in and slides would come down on it and you would haul the slides away and the pavement would have still been there, —just the way they do along the state highways all over the state?

(Testimony of Thomas Moore Price.)

A. Well, I noticed, in the last slide recently out there, the pavement was quite well chewed up when they took the slide out. It would depend on the man who was taking it out, to a large extent.

Q. If it were done carefully and not with WPA labor, you could take it out without chewing up the paving? Now, the pavement specified is an oil macadam, Mr. Price—that is true, isn't it?

A. Yes.

Q. You said that temperature controls pavement laying?

A. It is my impression that section of the specifications has a reference to temperature.

Q. Isn't it a fact, Mr. Price, that the specifications provide for two types of oil macadam pavement: one is a hot oil pavement, of which there is a temperature control; and the other is a cold oil emulsion, which could be laid in winter or stormy weather? I refer you to Section 17, Page 32.

A. Yes, I think that is correct—I don't know if the page is correct.

Q. My question correctly states the fact with respect to the specifications; one method was the hot oil method, which is proper to use in warm weather; and there is also an oil emulsion method, which could be used in cold weather—is that not true?

[1389]

A. That is apparently what the specifications state.

(Testimony of Thomas Moore Price.)

Q. So, there was a flexibility provided by the specifications that would permit you to put down oil pavement in accordance with the specifications at any time that you could get a subgrade that was hard enough to put it on; isn't that true?

A. Yes. It is my impression, however—my recollection, I should say, that, from talking that over with the District Inspectors, the oil emulsion pavement was not contemplated for the entire job but only the necessary work in the winter season when the other work could not be performed, and that, in any event, it would be necessary to have a hard subgrade before any kind of pavement could be laid on it.

Q. That was the reason it was in the specifications; so, if it was necessary to finish up the work, —the road work outside, in the winter, —it could be done at any time between storms?

Mr. Marrin: I object to that part of the question that says: "That is the reason it is in the specifications." He cannot possibly answer that.

Mr. Tinning: Well, he is an engineer.

Mr. Marrin: Well, he did not draw the specifications.

Mr. Tinning: I will withdraw the question.

Q. Is it not a fact that, under the specifications, the Contractor had the option of putting in either hot oil emulsion in the summer time or, if he could not comply with the temperature requirements, he would put in a cold oil emulsion?

(Testimony of Thomas Moore Price.)

A. I did not so understand that.

Q. You did not so understand it?

A. No; I did not understand—I thought it was a question of extent, to the best of my recollection.

The Court: Q. Briefly, what is the cost differential between the two forms?

A. I am unable to give you any difference, your Honor. I don't know whether there is any particular difference or not. [1390]

Q. Both equally satisfactory, are they?

A. Well, personally, I don't like either one of them.

Q. Well, I did not ask you that.

A. I guess they are equally unsatisfactory.

Q. I had in mind, from the viewpoint of the Contractor; one is as good as the other?

A. I wouldn't say the cold emulsion is as good as the hot—

Q. I did not think so, myself. That was the only reason I asked you.

Mr. Tinning: Q. Six Companies bid just the same price for either method, didn't it?

A. I think so.

Q. If you will look at Subsection 1 of Section 17 on Page 32, "Penetration Oil Macadam Pavement," then:

"Description.—A Penetration Oil Macadam Pavement shall be constructed at locations and of widths shown on the plans, and as directed consist of two (2) courses, namely, a water-

(Testimony of Thomas Moore Price.)

bound base course consisting of rock and screenings, compacted by rolling and watering and of a depth not less than six inches (6″) after final compacting, and a penetration oil macadam top course two inches (2″) in thickness after compacting, consisting of rock and screenings compacted by rolling and bound and sealed by applications of hot road oil or cold emulsified road oil, as hereinafter specified."

A. I might correct you there. You said "waterlogged." I presume you meant "waterbound"?

Q. Thank you. The point of this is, Mr. Price, that you could use either hot or cold oil method, could you not? A. I believe so.

Q. How much material did Six Companies take out of the west portal building excavation?

A. I am unable to give you the exact figures. I have a recollection as to approximately around 40,000 [1391] yards; but I would not be sure.

Q. Well, it is a fact, is it not, the neat excavation required for buildings was approximately 20,000 yards?

A. I am unable to say exactly. I think it is something around that figure, to the best of my recollection.

Q. You think you took out about twice as much?

(Testimony of Thomas Moore Price.)

A. That is my memory.

Q. How much material did you take out of the west portal approach cut, in cubic yards?

A. I am sorry; I thought you were talking about both the buildings and the approach cut.

Q. Well, I wasn't. Where did you put the material that came out of the west approach cut and the west portal building cut?

A. I am not sure where it went; I was not there at that time.

Q. As a matter of fact, it went into the half mile of road between the west portal, where your tunnel muck went also, did it not?

A. I could not say. I presume that it did. I think some of it was used to build a site for the blacksmith shop and the lumber yard, but I would not be sure; I do not know.

Q. Can you look it up and find out?

A. I don't know whether I could; I don't know whether I would find the record of it.

Q. Isn't there anyone in the engineering organization of Six Companies who knows where you put it,—the 40,000 yards of material that came out of that cut?

A. I probably could find out. I will try, if you wish me to.

Q. Isn't it a fact, Mr. Price, that there was 20,000 yards of neat excavation; it shows from the plan, in the west portal building?

(Testimony of Thomas Moore Price.)

A. I don't recall, Mr. Tinning. I don't have those figures very clear in my mind.

Q. Isn't it a fact that there was 31,000 cubic yards of excavation in the west portal cut, west of the portal building itself?

A. As I say, I would have to refresh my mind, from the records on [1392] it; I am not clear on it.

Q. Well, we will take that up later on. I would like to have you look it up at the recess, if you will, please.

You testified with respect to a conversation between Mr. Bechtel, Mr. Boggs and yourself, some time in May, in which ground conditions, you say, were discussed, and a question of an extension of time. Did you make any memorandum as to the date of that conversation?

A. No, sir; I did not.

Q. Or of the conversation itself?

A. No, sir; I did not.

Q. Is it not a fact that this conversation that you refer to occurred on the 21st day of May, 1935, shortly before the noon hour, on the front steps of Six Companies' office building near the west portal of the tunnel?

A. I could agree with you upon your statement that it occurred on the front steps of the office building. To the best my memory, it was about the middle of May; and it was, as I recall, about ten o'clock in the morning.

Q. Upon that occasion, Mr. Price, you recollect that Professor Charles Derleth, Jr., one of the District's consultants, was present.

(Testimony of Thomas Moore Price.)

A. He definitely was not there.

Q. He definitely was not there?

A. Not at our conference.

Q. You so testify?

A. Yes, sir. I will definitely tell you that.

Q. Was he present at any conference in May of 1935, at the west portal building, when you and Mr. Bechtel and Mr. Boggs and Professor Derleth were all present?

A. I don't recall. When I saw Professor Derleth out there occasionally and discussed—you know, like you pass the time of day with somebody you like—I asked about things in general,—nothing in particular; I had no particular conference, nor do I recall any definite conference with Professor Derleth at any time out there.

Q. Mr. Price, we are getting away from the subject. We are talking [1393] about a conference in which Mr. Bechtel and yourself and Mr. Boggs and Professor Derleth discussed certain phases of the work.

Mr. Smith: He said no such conference occurred. How can you be talking about it?

Mr. Tinning: Mr. Smith, I tried to make very clear then whether there is a misunderstanding about it. The witness has said he remembered some discussions with Professor Derleth about nothing.

Q. When you met Professor Derleth out there, did you simply pass the time of day with him, Mr. Price? A. Largely.

(Testimony of Thomas Moore Price.)

Q. Did not discuss the problems of your work at all? A. No; not that I recall.

Q. Never recalled discussing them?

A. I do not recall, except a fragment of one discussion with Professor Derleth, and I am unable to place the time it was; that was a discussion, to the best of my recollection, in the latter part of 1935.

The Court: Q. Was anyone present at that conversation?

A. I am unable to recall, your Honor—Mr. Boggs and myself were present, Professor Derleth.

Mr. Tinning: Q. Where were you when that occurred?

A. We were right in front of the District office, up there by the west portal.

Q. That was a couple of hundred feet west, let us say, of where this conversation you had in May was; but the office was nearer the portal than the District office?

A. Yes; and Professor Derleth was talking about the controversy that had arisen between the Six Companies of California and the District, and he advised Mr. Boggs that it had always been his policy to compromise with the contractor. That was the extent of it. I don't remember anything else about the conversation.

Q. You remember that, because it sounded good to you?

A. Yes, I do. It had an effect on me.

(Testimony of Thomas Moore Price.)

A. Yes, I do. It had an effect on me. [1394]

Q. Mr. Price, coming back to this May conversation, do I understand it is your positive testimony that Professor Derleth was not present at the conference to which you testified the other day, in which you said that Mr. Boggs told you you were entitled to an extension of time?

A. Yes; he was not present.

Q. He was not present?

A. That is, at the conference. I am unable to say he was not on any portion of the work; I do not know; I do not recall. He was not at the conference.

Q. At the time? A. At the time.

Q. Isn't it a fact that, at that time and place, Mr. Price, that Professor Derleth advised you and Mr. Bechtel that he considered it highly dangerous to leave such a large, long section of the tunnel supported by timbers, supported in that manner over the length of time that had elapsed, and he thought you ought to get your concrete started immediately?

A. No; I don't recall Professor Derleth ever telling me that at any time until after the cave-in of August 28, 1935.

Q. He did tell you that afterwards; you remember that?

A. Well, a lot of people told me; and he was there, and I presume he told me, also.

Q. Isn't it a fact, at the time and place of this conference that you have referred to, that Mr. Boggs

(Testimony of Thomas Moore Price.)

stated it was not imperative Six Companies required an extension of time, and that, before any extension of time could be granted, it would have to be approved by the PWA and the Board of Directors, and that, in order to get such approval, Six Companies would have to have a good and substantial reason for an extension of time, and that he, Mr. Boggs, knew of no reason for the extension and would not recommend it? A. No.

Q. Isn't it true that following, in the conversation, Mr. Boggs suggested that you defer your request for an extension of time until [1395] a short time before the completion, until it was then evident that Six Companies could not finish within the contract time? A. Yes.

Q. Isn't it true that, at that time, Mr. Bechtel stated, in your presence, to Mr. Boggs that he felt it was necessary to put in a request at that time as a matter of record, and that he was going to do so?

A. I don't recall the statement regarding the matter of record; I know he stated he felt it was necessary to put in a request at that time.

Q. Isn't it a fact that, at that time, nothing was said whatsoever about ground conditions being different than you had anticipated?

A. I would like to have the question over again.

The Court: Read the question, Mr. Reporter.

(Pending question read by the reporter.)

The Witness: A. No; that is not a fact.

Mr. Tinning: Q. You stated that you met Mr. Boggs in December, 1935, and had some conversa-

(Testimony of Thomas Moore Price.)

tion with him in connection with time extension. Have you any notes or memoranda of the date?

A. No, sir. I did not keep records of conversations in my diary. There were so many of them I would not have had time to do much else. I did not keep a record of that particular conversation; but I remember it very well, as to what happened. I cannot place the exact location; but my best recollection is it was near the east portal of the tunnel.

Q. You fix the time roughly as December, 1935?

A. Yes.

Q. As I understand it, you had been advised to discuss the matter with Mr. Boggs on a noncontroversial basis? A. Yes.

Q. You asked him if he considered that the paving to be done in the spring of 1936 would be a legitimate cause for granting the Contractor a time extension?

A. Yes; I asked him that in connection with the slides in the cuts and sinking of the roadway as it already had been completed,—the three are practically tied together: the roadway, grading and paving; and Mr. Boggs told me he [1396] thought it was an adequate reason for time extension, and would be noncontroversial.

Q. For many years, you have been a highway contractor, have you not?

A. Well, I have worked for one.

Q. You know that grades through hills always

(Testimony of Thomas Moore Price.)

have slides in the wintertime, especially on new construction?

A. It is normal, I think, in most ground.

Q. And the contractor anticipated that when he made the bid on this job, didn't he?

A. I am unable to say.

Q. Well, that depends on how you bid on a job of this kind? [1397]

A. It would entirely depend on the conditions surroundings the job, the slope which the engineer specified in his plans, the slope of the banks, the nature of the ground, itself, as to whether the engineer would try to correct the slide then or just wait until it came to him, all of those factors; it is difficult to give an answer to it.

Q. Isn't it true, with all of your knowledge of what might happen, as an engineer, handling this work of construction, where you had estimated this job and put in a bid, where you knew you were going to have a number of months to do this work, at least one winter season, and possibly two, required to do the work, that you could anticipate there would be slides?

A. I think it would be a reasonable anticipation.

Q. And there was also the settlement of fills?

A. I do not think that would be so—

Q. Not so material a fact?

A. Not so material a fact as figuring slides.

Q. Something that might occur?

(Testimony of Thomas Moore Price.)

A. If a fill is properly designed it will not slide in unless the foundations are placed in wrong.

Q. Mr. Price, isn't it a fact that you knew when you went on this job that there would be slides and that the contract called for the removal of the slides by the contractor, and he got paid for it?

A. No, I do not recall that was the condition at the time I went on in September, 1934.

Q. You know you got paid for removing the slide material?

A. Yes, we got paid for the material that came into the roadway cut.

Q. You knew when you had this talk with Mr. Boggs in 1935 that the contractor had written this letter of July 26th, this letter of August 23rd and August 28th, 1935—you knew about those letters, didn't you? A. Yes. [1398]

Q. In which the contractor was claiming the right to an extension of time? A. Yes.

Q. And you knew that the District claimed that the contractor's delay in going on with the work was entirely due to the method that the contractor had used in driving the job?

A. Yes, it is my impression that is what the District claimed.

Q. You knew that that was the controversy, did you not? A. I think so.

Q. You did not apply in writing for an extension of time in December, 1935, did you?

A. No, not that I recall.

(Testimony of Thomas Moore Price.)

Q. And there was no written application for an extension of time made again following the one that was made in June, 1935—the Six Companies never made another application for extension of time until the 10th of May, or 8th of May, 1936?

A. I believe not. However, it is my understanding that an attempt was made to write such a letter, and that there was a conference between Mr. Boggs and Mr. Hindmarsh, and Mr. Boggs again stated it would be unwise, in his opinion, to apply for an extension of time at that time, and would prefer to have us do it at the end of the job, and Mr. Hindmarsh agreed to his opinion. That is hearsay with me.

Mr. Tinning: Your Honor, then, I move that that go out.

The Court: It may go out.

Mr. Tinning: Q. Mr. Price, do you remember a visit to Mr. Boggs' office on December 24, 1934, with Mr. J. Q. Barlow?

A. I remember going to Mr. Boggs' office with Mr. Barlow at one time, but; I am unable to approximate the date exactly.

Q. Did you make any notes of that visit?

A. No, I did not. I wrote a memorandum about it. I could refresh my memory about that.

Q. Do you mean a memorandum?

A. Inter-office memorandum.

Q. Does that state the conversation that you had there at that time? [1399]

(Testimony of Thomas Moore Price.)

A. I don't recall whether it states the conversation or not.

Q. Have you that with you?

A. No, not with me. I am under the impression that we have a memorandum, but I am not positive.

Q. Will you bring that memorandum when you come to court this afternoon?

A. If I can find it.

Q. In discussing engineering service on this work with Mr. Marrin, as I remember your testimony, you told him that the District Engineer did no work inside of the tunnel and all of the work outside of the tunnel.

A. I said the District Engineer did no work in the tunnel that was of any benefit to us, as far as I knew.

Q. And that they did work outside the tunnel that was of great benefit to you?

A. They set the lines and grades on the outside work.

Q. They set in the tunnel, did they not, a concrete monument at varying distances behind the excavated face which was 24 inches square and about 30 inches deep, which set about the center of the tunnel; isn't that correct?

A. I say they set some monuments back behind, Mr. Tinning, but I would not be positive as to the size or what the monuments consisted of. I presume they were intended to be a permanent monument in the tunnel.

(Testimony of Thomas Moore Price.)

(A recess was here taken for the Grand Jury.)

(After recess:)

Mr. Tinning: Q. Mr. Price, it is a fact, is it not, that following your conversation with Mr. Boggs on December 24, 1934, Christmas Day, and the next day December 26, 1934, you wrote the first letter requesting additional engineering, that letter of December 26, 1934, which is in evidence as one of the exhibits in this case?

A. Yes, I recall I wrote him immediately after that conference, at his request, but I do not recall just now at the moment whether that was the first letter, or not. [1400]

Q. Do I understand you to state now that Mr. Boggs requested you to write the letter on the engineering?

A. Yes, the letter describing the conference with Mr. Barlow.

Q. Is it not a fact that at that conference that Mr. Boggs told you that he would continue to give you the same kind of engineering that you had had up to that time, the center line, the grade in the center of each tunnel, and Mr. Barlow said, "If it was my job I would quit"?

A. Yes, that sounds like him, but I don't recall his saying that.

Q. Isn't it a fact that you got up and went out after that, and then you wrote the letter the next day, or the next business day?

(Testimony of Thomas Moore Price.)

A. My recollection is that Mr. Boggs asked me to—I may be confused on the letters. I would like to see the letters so that I could refresh my memory. But it is my recollection Mr. Boggs asked me to describe what I wanted him to do on the lines and grades.

Q. I will show you my working copy of the letter of December 26th to refresh your recollection. I am referring now to Defendant's Exhibit BB, now in evidence. It is a fact that this letter was written on the next business day following your conference with Mr. Boggs, is it not? A. Yes.

Q. You now testify that he requested you to send him the letter? A. Yes.

Q. And then when you left the office when Mr. Barlow advised you to quit, you wrote this letter of December 26, 1934, and Mr. Boggs replied to that letter on the 3rd of January and told you that he was not going to do any additional engineering, he was going to continue to give you the engineering just as he had before. Do you remember that? It is Defendant's Exhibit CC.

A. Mr. Tinning, I have a recollection of such a letter being received, I don't recall the date. [1401]

Q. And he said,

"With respect to your outline of engineering work which you desire the District to perform in connection with the establishment of lines and grades, I wish to advise you that the District Engineer will continue to establish lines

(Testimony of Thomas Moore Price.)

and grades on a single base line in each tunnel, and that any additional points which your working crews require should be furnished by your own engineering organization, as required by the specifications".

Now, in the face of Defendant's Exhibit CC, which you received on January 3, 1935, is it still your opinion that on December 24, when you and Mr. Barlow were in Mr. Boggs' office, he asked you to write him a letter?

A. Yes. He asked me to write a letter, asking me to describe what we wanted in lines and grades in the tunnel, and that is a letter giving him the grades and lines which we did wish to be established.

Q. As a matter of fact, the contractor had an engineering crew working on this work before December 24, 1934, did it not?

A. We had had one since I was there, and I understand prior to that date.

Q. And after you got these letters you continued to keep that engineering crew at work, did you?

A. Yes.

Q. You did not quit?

A. We did not quit. I could not agree with the letter you mentioned of January 3, in which Mr. Boggs said he would continue to set lines and grades, because they had already been set.

Q. You were still driving the tunnel, weren't you?

(Testimony of Thomas Moore Price.)

A. Yes, but after you set something once you cannot set it again, it is already set.

Q. Didn't he follow up along in the tunnel?

A. I don't know, we could never use his work.

Q. You did not make any observation to determine what kind of monu- [1402] ments he had in the tunnel?

A. His work did not affect us, at all; he only worked where we had completed the tunnel.

Q. Will you answer my question? Did you observe any monuments in the tunnel?

A. I observed some quite a ways back of where we were working.

Q. Those were concrete monuments placed in the center of the tunnel, at the center line of the tunnel, approximately 24 inches by 24 inches, and about 30 inches deep, sunk down into the subgrade of the tunnel?

A. I didn't notice the size, but they were placed in the completed section of the tunnel as far as excavated.

Q. Didn't you ever look at any?

A. I don't recall measuring them or looking at them, but I am of the impression they were about 6 by 6 inches.

Q. That is your recollection?

A. Yes, they were all behind. They were not up near the excavation.

Q. Now, I am not talking about how far behind they were, I am talking about how big they were,

(Testimony of Thomas Moore Price.)

Mr. Price. You were able to observe they were 6 by 6, you say?

A. Yes, as a matter of fact I think they were buried; there was quite a distance buried in the ground.

Q. Who buried them?

A. The District engineer.

Q. Did he cover them up after he buried them? Do you mean he covered them over with dirt?

A. They would naturally be covered with water down low; I think most of the time they were covered with water.

Q. As a matter of fact, your own engineers based their operations ahead on those monuments, did they not? A. I do not think so.

Q. You do not think they did? A. No.

Q. Do you know?

A. No, I could not say definitely.

Q. Who was the engineer in charge of your engineering party in 1934, 1935?

A. Well, pardon me, you said two years, didn't you?

Q. We spend a lot of time getting my questions corrected for you. My question is, in December, 1934. A. I think Mr. Shaw. [1403]

Q. And Mr. Shaw continued through January, February, March, April and May, June and July as the head of the engineering department?

Mr. Smith: Of what year?

A. He continued up until 1935, I forget the month.

(Testimony of Thomas Moore Price.)

Mr. Tinning: Q. When did he leave?

A. I don't remember.

Q. How long was he with you?

A. I would estimate approximately a year, to the best of my memory.

Q. Who did the engineering after Mr. Shaw left?

A. Mr. Hall.

Q. Do you know whether Mr. Hall used the monuments set by the District in the tunnels to start his work, as he went ahead to do the work as provided in the contract?

A. No, he would not need to use those.

Q. He did not need to? A. No.

Q. You know that is a fact?

A. Yes, I believe that to be a fact.

Q. Do you know it is a fact?

A. No, I don't know it.

Q. You don't know how much about it, do you?

A. Yes, I think I know some about it.

Q. Did you ever see one of those engineers that worked for you start a base line in that tunnel?

A. Yes.

Q. Where? A. At the portal.

Q. At the portal? A. Yes.

Q. And on what date?

A. Soon after I came on the job, in the latter part of September.

Q. Just as you were going underground?

A. Yes.

(Testimony of Thomas Moore Price.)

Q. Beyond that time do you know where they got their base lines?

A. Well, I don't understand, quite.

Q. Do you mean to say, Mr. Price, that your engineers went to the mouth of the tunnel at the place you said you set your base line and continued to work every time they wanted to run a line in the tunnel after they got clear back?

A. Oh, no, they set their lines [1404] in the tunnel; they were on the bench marks.

Q. What were the bench marks on?

A. On the timber.

Q. Those timbers you told us moved quite a bit?

A. Yes.

Q. Did the bench marks move with them?

A. I presume they did. By that time the next point had been established. This was in the heading, not behind.

Q. Did you ever give your own engineers a single direction as to how they should do their work?

A. No, I did not.

Q. As a matter of fact, you don't know what they used for a base line in those tunnels, do you, of your own knowledge?

A. Well, I understand they used the base line outside of the tunnel.

Q. Do you know of your own knowledge what your engineers used as a base line in the tunnels?

A. Not of my own knowledge, No.

(Testimony of Thomas Moore Price.)

The Court: We will take a recess now until two o'clock.

(A recess was here taken until two o'clock p. m.)

[1405]

Afternoon Session

THOMAS MOORE PRICE,

Cross Examination (continued)

Mr. Tinning: Q. Mr. Price, did you find the memorandum of your conversation with Mr. Boggs, in December of 1934?

A. Yes. It was not as long as I thought.

Q. This memorandum of discussion is that

"Mr. Barlow and I discussed the matter of tunnel engineering with Mr. Boggs, and I feel somewhat weakened his position. At any event he asked for plans and descriptions of the work we desired the District to do, which has been done. If I hear nothing from him soon will push the matter further."

Well, this memorandum was apparently written on December 28, 1934. When you said, "which was done," you meant you had written a letter on December 26th? A. Yes.

Q. This memorandum you made of a conversation was December 28th,—the date it bears,—when you dictated both, to someone in the organization, as to what you had done on the 24th and the 28th?

(Testimony of Thomas Moore Price.)

A. Yes. I don't remember the date the 24th, exactly.

Mr. Tinning: Gentlemen, thank you for producing the two letters that I asked for. I agree with you that they are immaterial.

Mr. Marrin: All right.

Mr. Tinning: Q. Mr. Price, during the noon hour did you have a chance to check over the records of your organization to determine the yardage that we were discussing before lunch?

A. Well, not a very good chance; I found we did not have the records at the place where most of our records are kept now. I asked our auditor to go down to the other office; and, in the short time he had, he found the indications were that the District had paid us for approximately 42,000 yards of the west portal approach cut, and that there were approximately 26,000 cubic yards in the building [1406] which was excavated, in the lump sum. I, personally, did not get a chance to look at the records here, myself.

Q. Is it your recollection, Mr. Price, that, in addition to 42,000 yards that you were paid for, there was other material at the west portal on which the District did not pay you, by reason of the fact you excavated beyond the line that the District's plans called for?

A. I am not clear on that point. I presume that is correct.

(Testimony of Thomas Moore Price.)

Q. Well, you remember the correspondence that we had here with respect to slides on the west portal cut? A. Yes.

Q. In which, as I recollect, roughly, the Contractor was seeking to be paid for additional material there, and, as I recollect it, the District said the only pay material was the material that would come within the prism that is shown on the plans?

A. Yes.

Q. That 42,000 yards you were paid for there: can you tell us where that was placed?

A. To my personal knowledge, I don't know. I think most of it was placed in the fill at the west portal.

Q. When you went over those figures, Mr. Price, did you distinguish between material that came out of the west portal building and what came out of the west portal cut—rather, those two separate pay items? A. I attempted to explain that.

Q. Was the 42,000 the total of what was taken out?

A. That is the point I am not clear on. I think that much was taken out and paid for on the west portal approach.

Q. Isn't it true, in the building, that 26,000 cubic yards was taken out and paid for by the District? A. That is what our record indicates.

Q. So, in addition to 42,000, there was 26,000, or that would be 68,000 cubic yards of material that came out? [1407] A. Possibly, yes.

(Testimony of Thomas Moore Price.)

Q. Well, you add them together? That is what it indicates.

A. I was not there at the time, Mr. Tinning, and I have not had a chance to thoroughly work the thing out. I think that is correct.

Q. From the data that you had up to this time, which you got from your auditor,—the figures we just discussed are correct; and you were paid for 68,000 cubic yards of material moved at the west portal excavation,—the 26,000 that came out from the building, and 42,000 that came out west of the building in the approach cut?

A. Yes. I would like to make it clear, though, that was two different kinds of payment; we got no payment as such for the yardage of dirt out of the portal building; that was included in the lump sum price for the building, as I recall it. We did get paid by the yard for the excavation up to the building, I believe.

Q. Mr. Price, the thing we are trying to arrive at here is a reasonably accurate estimate of the yards of material that were removed from the west portal, not how you were paid for it; but the District's records, I should say, coincide with your statement, and it shows there was approximately 68,000 yards of material moved from that place and placed somewhere else. Now, I am asking you where that 68,000 yards went.

A. Well, I did not see it moved; but I would presume it went in this roadway fill west of the tunnels, and in the fill for the plant.

(Testimony of Thomas Moore Price.)

Q. How much would you say went into the west roadway fill?

A. Oh, I wouldn't be able to say. I would have to guess at it. I would say approximately 80 per cent.

Q. Approximately 80 per cent?

A. 75 to 80 per cent.

Q. Let's take it this way: Let's say 75 per cent of it, and 25 per cent of it went into the fill that you made for your muck bunkers and the railroad yard and the blacksmith shop—Is that about right?

[1408]

A. All these figures of mine that I am giving are guesses. I don't know. I am just estimating. That would be my estimate at the moment.

Q. Yes, your estimate. Of that 75 per cent of material in the fill, 75 per cent of 68,000 would be in the neighborhood of 51,000 cubic yards of material that went into that roadway fill from the west portal building and west portal approach cut?

A. Approximately, yes.

Q. You told Judge Roche the other day, in testifying, when he asked you a question regarding the quantities that you figured about 170,000 yards of the tunnel material was required to make the embankments in the portions of the roadway west of the tunnel?

A. I said our engineers figured it.

Q. Well, you took that from your records. You were project manager?

(Testimony of Thomas Moore Price.)

A. Yes; the records say that.

Q. You said you thought, from what you took out of the tunnel, that you had approximately 37,000 cubic yards more material in the tunnel that you required to fill those embankments west of the tunnel?

A. Well, that, you see, was the basis of moving the dirt from the tunnel, which we did not do and did not claim—You mean the portions we worked, or the portions—

Q. You used the figures—

A. That was all estimates of approximately 207,000 neat yards in the tunnel, regardless of who excavated it.

Q. Regardless of who took it out? A. Yes.

Q. So that, at the beginning of the job, when you were setting up the balancing of the materials, where you would place them, you planned that you would have approximately 37,000 yards of extra material from the tunnel that you would have to place somewhere other than in the embankments?

A. Yes. [1409]

Q. And the 170,000 cubic yards required for your embankments—

A. My understanding is we had—

Q. Well, that was your testimony.

A. I am trying to explain what I meant to say at that time, if I said it or not. My understanding is our engineers stated we had 170,000 yards of material from the tunnels that had to be compacted in

(Testimony of Thomas Moore Price.)

this fill on any excavation for which we received pay quantities,—that is, of the yards that are not included in the 170,000 yards.

Q. That was because you had to take your material out of the tunnels as a lump sum bid?

A. Yes.

Q. So, you did not get paid for that yardage?

A. Yes.

Q. You had a space in the fill to take care of 170,000 cubic yards?

A. Which would not be compacted from any other price.

Q. Yes. We are not talking about price now. We are talking about yards. You had planned, in that 170,000 yards, or the space required for 170,000 yards—you had already placed, before you started any tunnel excavation, 51,000 yards from the west portal building and the west portal cut?

A. No. That was the point I was trying to explain to you: This material from the west portal cut, the District paid us by the cubic yard, and on any material which the District paid us by the cubic yard, it is my understanding that the compaction was figured in the price which we bid to the District; so that the only portion of the 170,000 yards which went into the building was that yardage for which the District did not pay us on a bid price but on a lump sum price. On that basis, the material from the building and from the tunnel would

(Testimony of Thomas Moore Price.)

be in the 170,000 yards, but not the material from the approach cut.

Q. How many thousand yards of material did you have in the tunnel altogether?

A. You mean that we excavated?

Q. Yes. A. I don't recall.

Q. Well, I will show you: [1410]

Q. I will show you Defendant's Exhibit N, that is the August schedule, and, incidentally, the February schedule figure that I am referring to is exactly the same, 230,000 cubic yards was what you estimated in your schedule would be required for the fill in the tunnels, from Station 106 to 76?

A. I think that is 78.

Q. I did not read them correctly; from station 106 to station 78. Between those stations is where the tunnel fill went, is it?

A. Yes, approximately.

Q. So that by the estimates that you hold there now it appears that you had 230,000 cubic yards of material to deposit from the tunnel in the fills. Is that correct?

A. This estimate indicates that, but it is not an estimate in the first place, but it is a proposed progress schedule which indicates that. However, I studied the estimate, itself, and I learned they only estimated 170,000 yards to be compacted rather than 230,000 cubic yards to be compacted. I think

(Testimony of Thomas Moore Price.)

this 230,000 cubic yards compacting figure is in error from that standpoint.

Q. It is an error of the Six Companies and it was sent to the District on two separate occasions, one on August 9, 1934, and again on February 12, 1935.

A. Might I say further, Mr. Tinning, the error is not an error in yardage, but an error in the amount to be compacted. I think the yardage is supposed to be the yardage to be moved from the tunnel, regardless of what was to be done with it.

Q. The 170,000 cubic yards that you referred to in your testimony means cubic yards of material in place in the highway embankment fill?

A. That is my understanding.

Q. That is what you testified to, that is what you were referring to, in place? A. Yes.

Q. How many yards of material in addition to the 170,000 cubic yards that you have referred to were necessary to place in that fill [1411] to build it according to the plans and specifications from station 78 to station 176?

A. I am sorry, I do not understand you.

Q. Read the question.

A. I am unable to say, I didn't know that there was any.

Q. There was not any more?

A. I don't know that.

Q. When you testified here you testified that it took 170,000 cubic yards of material to build the

(Testimony of Thomas Moore Price.)

fills from station 106 to station 78. Wasn't that your testimony?

A. That is not stating it exactly as I stated it. I had estimated that it would take 170,000 cubic yards to make the fills at the west portal of compacted material.

Q. Isn't that the same thing, 170,000 cubic yards measured in place in the embankment.

A. Yes.

Q. So it took 170,000 cubic yards in place to build that road? A. I am unable to say.

Q. And of that 170,000 cubic yards you have now testified you supplied 51,000 from the west portal cut and the buildings? A. No.

Q. What did you supply?

A. My understanding of the 170,000 cubic yards is that that yardage, over yardage paid for by the district as a unit price.

Q. Mr. Price, let us forget all about the price.

The Court: We are dealing in yards only.

A. I can answer it no other way. We had two separate payments to be paid for by the cubic yard; we bid on each by the cubic yard. In our bid we had an amount set aside for compacting. We did not have any amount in that for compacting the dirt from the tunnel and from the buildings, and we had to estimate that and put it in addition. That is the 170,000 I am speaking of.

Q. How many yards went into the fill, do you know?

A. No, I am unable to say. [1412]

(Testimony of Thomas Moore Price.)

Q. Who does know, if you know?

A. None of our people know, I do not think. I do not think it was ever estimated.

The Court: Proceed. I see I have failed.

Mr. Tinning: It is modest to say that I have failed tremendously at this point by seeing if we could get anything.

Q. Your neat section you testified, in response to Judge Roche's question last week, the neat amount of material, you used the words, required in the west portal of the tunnel to the point on the west where you ceased to use the tunnel muck for embankment fill was 170,000 cubic yards. You had a design for doing all that you had to build, didn't you? A. Yes.

Q. If you cared to make that embankment thicker or bigger in wasting material you had a right to do so so long as you stayed on the district right of way, didn't you?

A. Provided it met with his approval.

Q. As a matter of fact, that is what you did there, is it not? A. Yes.

Q. That embankment is considerably wider at the base and at the top than the neat section that required 170,000 cubic yards? A. I think it is.

Q. So that you did mean what you had to put in there was 170,000 cubic yards and you had to use that from somewhere in that neighborhood as an economical basis of operation? A. Yes.

Q. Now, of that 170,000 cubic yards, before you started excavating the tunnel, you had placed in

(Testimony of Thomas Moore Price.)

the embankment 51,000 cubic yards. Perhaps we do not understand each other, Mr. Price.

A. I am afraid we don't.

Q. It is evidently my fault. You certainly made the building excavation before you dug anything out of the tunnel, didn't you? A. Yes. [1413]

Q. And you made the west portal cut before you dug out the tunnel? A. Yes.

Q. You had to put that earth some place, didn't you? A. Yes.

Q. You carried it down on your railroad and put it into this embankment?

A. I don't know that. I was not there. I don't know how it was moved. I believe by a truck.

Q. Mr. Price, how many cubic yards of earth were excavated by Six Companies in each lineal foot of tunnel excavation?

A. 42 to 43 yards.

Q. Isn't it a fact that the records show 45?

A. I do not think so. My memory is 42, between 42 and 43.

Q. 42 or 43?

A. Somewhere in that neighborhood.

Q. Your neat section was 35.6 cubic yards per lineal foot of excavation: is that correct?

A. Yes.

Q. You think you had about 20 per cent excess?

A. Yes.

Q. Would you quarrel with the District record if it showed it was 24.6 per cent?

A. I do not quite understand.

(Testimony of Thomas Moore Price.)

The Court: Q. Would you approve their figures as reasonable or not?

A. You mean the excess excavation was 24.6?

Mr. Tinning: Yes, would you quarrel with the District figures?

A. I do not want to quarrel. My memory is it was 43 yards, and I could not change them unless I could refresh my memory.

Q. What I have in mind is that you had approximately, you say you had 43 cubic yards per lineal foot. Will you figure out how much earth you had out of the tunnel on April 1, 1936 in cubic yards? There was 3,193 feet completed on April 1st, fully excavated. A. 3,193?

Q. Yes. A. At 43 yards?

Q. At the west portal.

A. I get 137,300 cubic yards, approximately.

[1414]

Q. And you had 51,000 yards out of the west portal buildings and the west portal approach cut. Will you add those two?

A. Approximately 188,000.

Q. You only needed 170,000 to finish the fill?

A. Yes, Mr. Tinning, but you do not understand me, when I say the 170,000, it was excessive dirt that came from excavation paid for by the District as such.

Q. I confess I do not understand you, but the

(Testimony of Thomas Moore Price.)

fact is you required 170,000 yards to build an embankment west of the portal from tunnel material and by April 1, 1936 the material that had been placed in that fill and what had been excavated from the tunnel that you wanted to put in the tunnel, you had 188,818 or 18,818 more than you required to complete the fill on the west portal?

A. No, I cannot agree with the figures given, because I estimated we had only to compact 170,000 cubic yards; any addition to that we were paid for at the unit price; I don't know how much earth there was in the fill; I think that is probably where we are confused; I don't know the amount of dirt that was required in the fills. All I know is they estimated that 170,000 cubic yards would have to be compacted, on which we had not been paid for on the unit price of excavation.

Q. Under the specifications you were required to make the fill west of the portal out of tunnel excavation. You did not get paid for that, did you?

A. That is the yardage I am talking about.

Q. That is what made up the cut Under your schedule of August 9, 1934 you show that you expected to do the macadam pavement on the portions of the highway between station 75 and station 111 in 25 days, from October 5 to 30. That is correct, is it not? A. Yes.

Q. From April 1, 1936 to May 24, the completion date under the [1415] contract was 54 days, was it not? A. I would have to check it.

(Testimony of Thomas Moore Price.)

Q. Just add it, there are 30 days in April and 24 in May. A. April 1 to—

Q. April 1 to May 24. A. 54 days.

Q. Your estimate that you gave the District for doing that work was to be done in October, was 25 days; was the estimate unreasonable?

A. It looks a little short to me.

Q. How long do you think you should have to complete that 3,000 feet or 2,500 feet of oil macadam pavement?

A. I believe you might do it in a month.

Q. About a month. It was five days short?

A. Yes.

Q. All right, look at the schedule that you delivered to the District on February 12, 1935, and you will see where you take the 54 days as a proper figure, and you were going to finish on May 24.

A. Yes, but that includes cleaning up, etc.

Q. So that you think about 30 days is plenty of time to do that work?

A. Under the conditions I think it would be, without any delay.

Q. What subcontractor had the subcontract to do the paving on this job?

A. N. M. Ball & Son.

Q. Was it Ball who did the paving up on the old Tunnel road and down at the west end?

A. Yes.

Q. And that is all he ever did on that job?

(Testimony of Thomas Moore Price.)

A. All the paving.

Q. When was he relieved from his contract?

A. He was never relieved.

Q. He was still waiting around on June 13, 1936 to do that work?

The Court: Or did he leave the job?

A. He did not leave the job. He still had the subcontractor for him working on the structure at that time.

Mr. Tinning: I am talking about the Ball outfit, I do not consider that Mr. Bohnett or Mr. McKinley, or somebody else that [1416] had a subcontract out there under Ball. Ball, as I understand it, worked his own force on paving and subcontracted all the other work that he undertook to do under his original subcontract?

A. I think that is essentially correct.

Q. Is there anything fundamentally wrong with it? A. I do not recall at the moment.

Q. I would like to get it clear. We have been through the subcontractors and Mr. Ball was the first man employed by the Six Companies on the outside work—he had a contract for everything on the outside? A. Except the grading.

Q. McKinley had the grading and Ball had all the outside structures?

A. The portal buildings were subcontracted to another party.

(Testimony of Thomas Moore Price.)

Q. The portal buildings, under their own schedules, are not called outside structures, they are separate structures, so that the portal buildings K. E. Parker had, and McKinley had the grading, and Ball had all of the outside structures, I mean under your own designation. A. Yes.

Q. And all of the work that Mr. Ball's own outfit was doing was the paving on the tunnel road at the west end. Was there any paving done at the east end?

A. Nothing except the detour, as I recall it.

Q. When did Ball move off the job?

A. He did not move off the job.

Q. Was he waiting around there to finish the paving sometime in the summer of 1935 till the 13th of June, 1936, ready to go to work on this paving? A. Yes.

Q. Standing around all the time with his equipment and ready to go?

A. I cannot say about standing around. He was doing other work in the meantime.

Q. What was he doing?

A. He was contracting other jobs.

Q. You mean on outside jobs? A. Yes.

[1417]

Q. I mean on this job.

A. No, he was not doing anything except finishing structures on his subcontract.

Q. Somebody else's work on subcontract?

A. No; Mr. Balls'.

(Testimony of Thomas Moore Price.)

Q. McKinley had a grading contract, and you said that the District did full service outside of all engineering. Didn't McKinley have an engineer working with him? A. Yes.

Q. Mr. Powers? A. Yes.

Q. Then when McKinley got through his grading Mr. Powers was employed by Mr. Bohnett?

A. Yes, I think that is right.

Q. So there was a slight amount of services done on the outside by somebody else besides the District?

A. My understanding of these men was they were checking the quantities so as to be sure to get the proper payments.

Q. They were checking the District surveyors?

A. Yes.

Q. The other day when you testified you said that the normally accepted method of driving a tunnel as you understood it was keeping the concrete from 200 to 300 feet back of the face, the excavated face of the tunnel. Do you remember that testimony?

A. I don't remember stating it exactly in that way.

Q. It is on page 866 of the transcript.

The Court: Q. Do you recall that statement?

A. I would not say that that statement is entirely correct, your Honor. The normal accepted way of driving a tunnel is to complete the tunnel before any concreting is done in the tunnel.

(Testimony of Thomas Moore Price.)

Mr. Tinning: Q. Mr. Price, when you made that statement did you do so with the knowledge of the fact that the Richmond Tunnel, Pt. Richmond Tunnel, on the San Francisco Bay shore, some 1,400 feet long, and larger in cross section than this was entirely drifted through, ringed out around the perimeter and the lining placed before the core was removed? A. I didn't know that. [1418]

Q. Do you know of any tunnel over the size of some particular drift in this tunnel that was entirely excavated before it was lined with permanent concrete?

A. The Boulder diversion tunnel was that way.

Q. That is not exactly in this vicinity.

A. I did not understand you were talking of this vicinity.

Q. I am talking about the Coast Range Mountains and the vicinity of San Francisco Bay.

A. I don't know of; I don't know of any tunnel as large as this except the Yerba Buena.

Q. Was the Yerba Buena built that way?

A. The Yerba Buena core was left in place.

Q. It was not excavated before it was lined?

A. No. That is the only tunnel that compares with this in size.

Q. Why did you call it the normal way? Were you referring as a basis for your answer to the Boulder Dam tunnel?

A. By "normal way" was referring to the nor-

(Testimony of Thomas Moore Price.)

mal way of concreting, namely, using movable steel forms.

Q. When you spoke about the normal accepted method of excavating and concreting you were referring only to lining with cement with steel forms?

A. Yes, that is what I mean.

Q. You had 800 or 900 feet of tunnel open in each bore of the Broadway Tunnel before you started your normal concrete operation, did you not?

A. Well, it is a matter of record, but I could check it up again, but I will say somewhere around there. It might have been a little more than one or a little less than the other.

Q. We will average it up. You knew in May 1935 that the timbers were moving?

A. The latter part of May.

Q. Had anyone told you during the preceding months from December to May that it was likely that the timbers would start moving if you did not get the concrte in?

A. I do not recall any advice to that effect.

Q. What about your guiding star?

A. He never did. [1419]

Q. He never told you? A. No.

Q. You knew, didn't you, when you were in charge of this work, that in the Sacramento Northern Tunnel, approximately a mile or a mile and a half away, that there had been a great deal of difficulty in holding the timbers?

(Testimony of Thomas Moore Price.)

A. No, I did not know it at that time.

Q. You didn't know about that? A. No.

Q. You have learned since that is true, haven't you?

A. No, I can't say that I did, except I understood from one of the men who was on the job they had some difficulty near one portal, and the rest, my understanding is to the effect that the tunnel was timbered and left open, and that the Sacramento Northern annually made an effort to put in a little concrete, and eventually I believe they got it concreted all the way through, but I am not sure of that fact.

Q. Have you ever been through the tunnel?

A. Only on the train.

Q. The same way you inspected the one at Oleum?

A. No, I inspected the one at Oleum from the rear end. I did not this other.

The Court: The train was not going very fast at that point?

A. I might say the Oleum tunnel is a larger tunnel.

Mr. Tinning: Q. Much larger in size than the Sacramento Northern? A. Yes.

Q. Your knowledge you gained from the inspection you expected to use in the Broadway Tunnel?

A. No, I do not claim that.

Q. After you discovered that the timbers were

(Testimony of Thomas Moore Price.)

moving, Mr. Price, did you continue to measure them?

A. No, we did not do a great deal of measuring until in the August period, as I recall it; we watched them carefully, the tunnel superintendent watched them carefully.

The Court: August, 1935?

A. August, 1935. I don't recall measuring them particularly at that time.

Mr. Tinning: Q. In other words, during the months when your [1420] consultants came on?

A. Yes, I believe so.

Q. After that you began to take measurements of the timbers? A. Yes.

Q. And you discovered, did you not, Mr. Price, that this was a progressive movement, increasing rapidly as time elapsed?

A. Yes, in the portion we had last excavated.

Q. And that the only way to control the movement once it had started was to reset timbers?

A. At first, during July, apparently there was no movement in the arch, as far as we did detect or could detect, the movement was in the side wall against a plumb post, and we noticed it by the plumb posts bowing and breaking.

Q. Did you have any jumbo or other apparatus by which you could measure the arch in July?

A. No, but we had a catwalk up there, and it was inspected daily.

Q. In other words, it would have to be visible,

(Testimony of Thomas Moore Price.)

you did not take measurements of particular timbers?

A. No.

Q. You didn't know that there were any particular stresses on the segments of the arch as they went up until in August?

A. Not in general, but in the plumb posts.

Q. These plumb posts that you described yesterday were particularly around this Wildcat fault area that were giving you difficulty?

A. They were in the cherts section, all of it. I never could distinguish any fault through there at all, unless it was all fault.

Q. You never saw any fault?

A. Unless it was all fault, there was not any difference in it.

Q. You went through the Wildcat fault and you didn't notice there was any difference in it?

A. I did not. I hoped to get out of it every day, which we never did.

Q. You said that you had considerable difficulty about getting your concrete started and spent some time on Friday and the day [1421] before discussing that. The matter of ordering forms was a matter for the decision of the contractor, was it not?

A. Yes.

Q. I think you testified it was April 21 when you finally ordered forms, is that correct?

A. April 13.

Q. April 13? A. April 13, 1935. [1422]

(Testimony of Thomas Moore Price.)

Mr. Tinning: Q. You knew in December that you planned to use steel forms, didn't you?

A. We hoped to use them, yes.

Q. On June 7th of 1934, Six Companies sent the District a plan of steel forms, did they not?

A. I am not sure.

Q. And throughout the entire plan of progress, you had expected to use the method of using steel forms in these tunnels? A. Yes.

Q. No steel form was ordered until, you now state, the 13th of April, 1935?

A. None were ordered until that date.

Q. It was approximately 10 months after the contract date? A. Yes.

Q. And you were several hundred feet underground in April, and by the time the steel forms were on the job, it took some time into June before they were ready, you had progressed or driven a couple of hundred feet further into the hill. I am using round numbers. A. Approximately, yes.

Q. You stated something about the time that you had to hold your forms,—the difficulties involved in that. You knew, from your specifications, that the District Engineer could provide that you would have to hold your forms 21 days in places of heavy pressure, and that, in all concrete arches, you might expect to have to hold them 72 hours, which was in the specifications?

A. Yes, I knew that; but I did not think anybody would ever be so crazy as to enforce that time,

(Testimony of Thomas Moore Price.)

on concrete forms. I don't mean "crazy"; I mean "unwise."

Q. You think it was too slow?

A. Entirely too slow.

Q. You knew about these provisions, though in the specifications, didn't you? A. Yes.

Q. And the specifications were the same when you bid,—when Six Companies bid,—as when you came on the job on September 20th?

A. Yes, sir. I wish to say, again, though, that is an unheard of procedure, and I don't think ever was the practice anywhere, nor was the practice at Broadway. The practical time he finally got it at [1423] was 24 hours except in places of pressure.

Q. How long did you hold your wooden forms?

A. Well, it was not a question of holding them. If we had any difficulties, I don't think there is any record of it.

Q. I am talking not about the contractor's convenience or desire to get along with a minimum number of steel forms, which were, of course, expensive pieces of equipment. I am talking now about the integrity of the structure to secure lining of a hardness and strength which permits support of the weight in moving ground. Isn't it a fact that, wherever you built wood forms, as shown on your diagram, Plaintiff's Exhibit 74, those were installed in places where the ground was showing pressure;

(Testimony of Thomas Moore Price.)

at the time the concrete forms were installed there had been moving of the timbers? A. Yes.

Q. And, in all of those places where you placed wooden forms, you were holding 21 days?

A. I do not think so. I don't recall we were holding, any particular time. There was no requirement that I can recall of ever stripping timber off. We could not do much when they moved back.

Q. So the fact they remained there some length of time had nothing to do with the fact that it was necessary to support the concrete arch until, in these moving areas, the concrete had acquired its strength by seasoning for 21 days?

A. I don't think so. I have a memory that we stripped a lot of those forms in 10 days; but I am not positive of it.

Q. In the sections where you did not have wood forms, after you got started and it was determined what the setting strength of your concrete was, by test, you were permitted to remove those forms in what time?

A. Progressively; the first 5 days for some period of time after we started on the east of the portal concrete—I don't mean "5 days." I mean "72 hours"; and then, I believe, 48 hours and, [1424] finally, 24 hours.

Q. That is the way you worked through the majority of the tunnel, then, is it not? A. Yes.

(Testimony of Thomas Moore Price.)

Q. Have you ever seen the collapsible steel form which can be collapsed in sections and carried forward through to the new fresh work underneath the remainder of the steel form?

A. Yes, I have.

Q. That is a common practice, is it not, in using steel forms in tunnels?

A. I think it is, particularly in smaller tunnels.

Q. You consider the Sunset Tunnel, here in San Francisco, a very much smaller tunnel than this?

A. Yes, I think considerably smaller.

Q. You think the problems that they had there are not comparable to the problems here?

A. No; I don't think so. I don't think they are comparable in size and in shape, particularly in shape.

Q. The Sunset Tunnel had a top or cross-section of 29 feet, which is 35—29 cubic yards per lineal foot; and this was 35,—the neat design?

A. 36, isn't it?

Q. Not very much difference, was there?

A. About 33 per cent—35 per cent.

Q. Between 29 and—25 per cent smaller. The Sunset Tunnel was a big tunnel?

A. I will take it the other way, to get a bigger figure; that much bigger than the Sunset Tunnel.

Q. I see. Mr. Price, it is true, is it not, in the Sunset Tunnel, that the contractor provided 120 lineal feet of steel forms that were in sections and folded down and moved up ahead into the fresh

(Testimony of Thomas Moore Price.)

work underneath the forms which were holding the concrete up until it seasoned?

A. I understood he did move them underneath, but I don't recall that anyone ever told me about how many feet he had.

Q. As a tunnel engineer of experience, you would not say he did not [1425] have 120 feet?

A. No; I wouldn't know.

Q. How many lineal feet of form did you have in this tunnel?

A. We had 36 in each tunnel.

Q. That would be 72? A. 72 feet.

Q. You had 6000 feet of tunnel in contemplation when you started? A. Yes.

Q. You stated, the other day, Mr. Price, that you referred the question of the steel forms to Mr. Boggs on February 9th, and you had no reply until March. Isn't it a fact that, during all of January, February, March, April, May, June, there was a man named Counzelman working for Six Companies who was in direct charge of the design of the steel forms? A. Yes.

Q. Isn't it a fact that he was in almost daily communication with the District Engineer, throughout this period? A. Yes.

Q. And he was reporting to you what the suggestions were that were being made by the District Engineer?

A. Yes, he was working with them, trying to get the answer.

(Testimony of Thomas Moore Price.)

Q. And, from day to day, he received answers on these matters, and he was told that the chutes that he provided in the manifold forms that were shown on your plan of February 9th would be likely to plug and block in the same way you had found trouble when you used the Hackley gun?

A. I am not clear on what you mean.

Q. You will remember your February 9th plan had some chute or tube that ran down. You have a poster here, gentlemen, that shows that.

The Court: We will take a recess while you are looking it up.

(Recess) [1426]

(After Recess)

Mr. Tinning: Q. Mr. Price, we were discussing the steel forms shown by the plan which accompanied your letter?

The Court: I am familiar with this.

Mr. Tinning: Q. —your letter of February 9, 1935; and I asked you if it was not a fact that Mr. Counzelman was advised by the District people that they thought he would have difficulty with the manifolds that are shown on this plan leading into the concrete forms.

A. I don't recall that; but I do recall that they suggested that we would have trouble in preventing segregation as the material discharged from the chute.

(Testimony of Thomas Moore Price.)

Mr. Smith: What exhibit number is that, Mr. Tinning?

Mr. Tinning: Exhibit 62.

The Witness: The principal problem we were worried with was the discharging from the pipe into the forms at various points.

Mr. Tinning: Q. Well, you did not have to wait until March to get that information from the people who were consulted by Mr. Counzelman; you stated you did not get any reply to your letter of February 9th of 1935 until some time in March?

A. We never did get a written reply from them.

Q. Did you get any information from the District as to whether or not it was a plan which they thought would be satisfactory?

A. I don't recall anything particularly, with the exception of Mr. Bogg's position on pouring concrete.

Q. What was that?

A. While he would not stop us, if we wished to pour the lining integral with the furring concrete, nevertheless he did not feel it would be a good plan to do so.

Q. He did not believe it would be satisfactory, because he thought it might endanger some of the members that had to be poured into—

A. Yes; the ventilating flues.

Q. Looking at Exhibit 74, the furring concrete that is referred to [1427] is this material I am

(Testimony of Thomas Moore Price.)

pointing to, in the interior of the arch, or it is no part of the structural arch that holds up the mass, the ground?

A. It is the lighter shade of concrete against the side wall in the cross-sections.

Q. You were desirous, when you presented that plan of trying to work out a method, of pouring all of the material that is shown below the ventilating slab at one pour? A. Yes.

Q. In about every few feet was a metal duct, shown by the dotted lines, leading from the ventilation slab down to a point about 4 or 5 feet above the floor of the tunnel?

A. I believe they were on 12 foot centers.

Q. 12 foot centers. Those were—They are wider at the top and come down narrow at this point, and then, with a nozzle at the bottom that carries the fresh air from the fresh air duct down through the concrete and into the tunnel at a point 4 or 5 feet above the base? A. Yes.

Q. Those were about 12 feet apart; and there was about 2 inches of concrete over their face, was there not?

A. Approximately; I do not recall.

Q. A thin section? A. A thin section.

The Court: In the chamber?

Mr. Tinning: This duct, your Honor, is a steel chamber that leads down between— It is a pipe that leads down,— a flattened pipe that leads down

(Testimony of Thomas Moore Price.)

from the air duct, at the top of the tunnel, and carries the air through the concrete. It is a conduit.

The Court: Oh, I understand.

Mr. Tinning: And those were 10 feet apart; and lightly constructed of metal; and there was a section between each, where the concrete would have had considerable additional space where there were no ducts, so there was a complication there, in trying to get the concrete in and out, was there not?

A. No. I did not [1428] think there was any complication, getting the concrete in and out. I thought it would be easier to get it in through the opening at the top. The principal difficulty was due to the thickness of the metal in the ventilating flues, —the hydrostatic pressure might damage it.

Q. Yes. So you would not get the air circulation for which the tunnel was designed?

A. Yes.

Q. On the other side of the tunnel, there were electric conduits, called for in the plans and specifications, that carried wiring—

A. Yes; soapstone conduits.

Q. Which would also present difficulty with respect to displacement and so on? A. Yes.

Q. Upon concrete being poured in?

A. Yes.

Q. That method was, from your talk with Mr. Boggs — he said he would not forbid you to do it; but you finally decided to abandon that method?

A. Yes.

(Testimony of Thomas Moore Price.)

Q. And go on to another one?

A. He got me scared on it.

Q. He did not mislead you in that respect?

A. Not that I recall. [1429]

Q. In your plan of April 2, 1935, Defendant's Exhibit II, you prepared another method of handling this concrete after you got it out of the pipe, and that was the so-called "elephant trunk"?

A. No, you are confused in the drawing; that is in the side elevation shown as a chute following the form down to the port into the form, so that the concrete would be shot into the form at various elevations.

Q. Was the form built that way?

A. Yes, it was built that way, and changed on the job.

Q. After you got it on the job you adopted a method of putting your concrete in near the top of the arch and letting it down with an elephant trunk inside? A. Yes.

Q. It is a fact, is it not, that you had a meeting with respect to the design of the steel forms at Mr. Boggs' office on February 2, 1935?

A. I do not recall, Mr. Tinning, possibly so.

Q. Do you remember being present at a meeting later of Mr. Counzelman, yourself, Mr. Boggs, Mr. Barkley, Boggs' assistant, and Davis, of the District Engineer's Office, Mr. Brown, and C. H. Sweetser, of the Bureau of Public Roads, in which you outlined the proposed method of placing concrete? A. As I say, I don't recall.

(Testimony of Thomas Moore Price.)

Q. You don't recall that? A. No, I do not.

Q. And don't you recall that following that meeting Mr. Boggs wrote you a letter of February 5, asking you to present your sketches, which you sent him on February 9th?

A. I know he wrote a letter. I do not recall the meeting. I do not deny that, but just at the moment I do not remember it.

Q. You do not recall that? A. No.

Q. When you sent him that schedule on February 12, 1935, you showed the proposed plan of concreting operations on the first of May?

A. Yes.

Q. You did not have your steel forms ordered until the 13th of April, [1430] and they were not delivered on the job until sometime in June?

A. That is right.

Q. Isn't it true that following your conversation with Mr. Boggs on February 2nd, and all of these other gentlemen present, that Mr. Counzelman was in consultation with Mr. Collins, one of the District Engineers, and in charge of the concreting for the district on many days during the period from February 9 to February 12, 1935, up to and including the time that actual concreting operations started?

A. Yes, I believe that is so.

Q. And with respect to all of these details that you proposed you had suggestions from the District Engineer, I am referring to Mr. Collins, and his discussions with Mr. Counzelman with respect to

(Testimony of Thomas Moore Price.)

all of the details which were taken up from time to time with the District Engineer?

A. I could not answer that yes, because Mr. Counzelman reported to me in these conversations the general answer was that he did approach the District Engineer's representative to get an approval on something, and there was no suggestion as to improvements on it, or anything else; the only answer that we could get was that would not be acceptable or that would be acceptable. For instance, taking a little matter about the ventilation hangers, the steel members that were embedded in the concrete lining to support the ventilation flues, it was difficult to construct them because it required welding in the tunnel, which was against the regulations of the Industrial Accident Commission, and they stuck down in the tunnel as they were designed, and interfered with the movement of the forms. And that was one of the principal things Mr. Counzelman was working on, as well as the ventilation flues. Mr. Boggs worried me about the ventilating flues being distorted and disturbed by any attempt in pouring concrete around them, and I knew that sometime we had to pour concrete around them, [1431] because they had to be embedded in concrete, and they are subject to some hydrostatic pressure, not as much as in the forms, and I conceived the idea of changing the design of the hangers and ventilating flues, and that was one of the principal

(Testimony of Thomas Moore Price.)

things that Mr. Counzelman was working on and endeavoring to get that design changed.

Q. He did not get it changed, did he?

A. Yes, we got both of them changed. We never did make the changed designs of the flues. We went back to the metal flues after we had been able to get the district to change the method. He let the manufacturer fabricate them, and all of these changes of hanger designs completely changed it.

Q. What was the difference in the design of the hangers? The hangers are these metal pieces shown on Plaintiff's Exhibit 54, the members which hold the ventilation slabs? A. Yes.

Q. What was the change in the design?

A. The hangers shown by the plans consisted of a flat bar of steel cast into the concrete projecting downward into the tunnel approximately 9 inches, as I recall, at each one of these places, and the plans of the job provided for welding these additional bars onto these hangers. That at the time was not practicable, because we were prohibited from doing any welding in the tunnel.

Q. How did you work it out?

A. I worked it out by designing a casting which would fit up inside of the concrete that had threads in it, so that these hangers could be rounded off, and screwed up into the concrete and thereby giving us a hanger flush with the concrete.

Q. You knew that the specifications and plans were matters of your own consideration, that those

(Testimony of Thomas Moore Price.)

had to be worked out. That was in the plans and specifications?

A. Yes, that is what we designed. [1432]

The Court: Am I correct that your plan was a more economical method?

A. No, I do not think there was much difference in the cost.

Q. As the welding and the operation that you have described there?

A. Possibly some more. I don't know what the welding would cost, we never did it.

Q. I spent a good many years of my life in the iron work business. You would be surprised about it.

A. I have no way of comparing it directly.

Q. You want to be careful. The useful part of my life, when I thought I was producing something, in my younger days, I was familiar with some of these matters that you are discussing now. Proceed.

Mr. Tinning: Q. There was no substantial difference in the price, I understand?

A. I don't know, Mr. Tinning. I have not the costs on it.

Q. It was done for the convenience of the contractor, in working out the method of using steel forms in the way in which he desired?

A. Yes, and for the purpose of complying with the requirements of the Industrial Accident Commission.

(Testimony of Thomas Moore Price.)

The Court: If that was the only problem on this job we would have no worry.

A. It was difficult to get his approval. I believe we asked for it in January, 1935, and we did not finally get the engineer's approval of it until June.

Mr. Tinning: Q. Of course, you were held up all the time in your work, the concrete plant was ready and the forms were ready, and you were just atremble waiting for that?

A. No, I do not claim that.

Q. It did not make any difference?

A. I do not say it did not make any difference. I do not claim that we were held up by it [1433] to any extent.

Q. Did you ever give any consideration toward subcontracting the placing of concrete in the tunnel?

A. I think we did talk about it once upon a time. I think we approached Mr. Hackley on it.

Q. Isn't it a fact that on January 24, 1935, that you and Mr. Stanley Hand went over to the tunnel and discussed the question of Six Companies subcontracting this work?

A. Not to Mr. Hand.

Q. Whom did you discuss it with besides Mr. Hackley?

A. I do not recall just at the moment. I remember discussing it with him once.

Q. Did you discuss it with Mr. Kettlewells?

A. I don't recall.

Q. You don't recall that? A. No.

(Testimony of Thomas Moore Price.)

Q. But you did discuss it with Mr. Hackley?

A. Yes, I remember discussing it with him.

Q. In what month? A. I do not recall.

Q. Was it not in January and February of 1935?

A. It possibly was, I do not recall.

Q. You were just getting under ground and you were not able to make a satisfactory arrangement to subcontract?

A. As I recall it we did not get far with Mr. Hackley. He was either not interested or, anyway, no concrete result came from it.

Q. Either way? A. Either way.

Q. Either in the tunnel or subcontracting?

A. No.

Q. It is true, is it not, Mr. Price, there were other ways of handling electric power in this tunnel than through a box with a motor in it and compressed air, keeping out any explosive gases that might gain entrance to the box?

A. Yes. The only other way, however, I knew was to have a box strong enough, like a box on the electric power, which is operated by batteries, so if an explosion occurred in the motor, itself, the case would be so strong it could not possibly break it.

[1434]

Q. Isn't it a fact that for a great many years there had been electric motors for use in mines, motors built to special specifications and approved by the United States Bureau of Mines?

A. That was the motor I am speaking of.

(Testimony of Thomas Moore Price.)

Q. Isn't it true that those motors could be obtained from General Electric Company on order?

A. Yes.

Q. Why didn't you get them?

A. I tried to get them. It took them, I think it was, about six months to get them built specially for the job. They had to be built specially for this pumpcrete.

Q. As I understand it, you needed about 50 horsepower motors on each side of the pump, two 50-horsepower motors? A. Yes.

Q. Isn't it a fact that they used alternating current motors in the Hetch Hetchy tunnel?

A. I don't know.

Q. Which was constructed a year or two before the Broadway Tunnel? A. I don't know that.

Q. Did you know anything about the Hetch Hetchy tunnels when you were working on the Broadway tunnel?

A. I knew quite a bit from hearsay. I do not recall that particular point, though. One of the particular troubles outside of the motors was running wires into the tunnel and these explosion proof motors that you are speaking of operated by batteries on the trains that run in and out.

Q. Mr. Price, I am asking you if it is not a fact that on the Hetch Hetchy tunnels alternating current motors constructed by the General Electric Company, approved by the Industrial Accident Commission of the State of California were used in a

(Testimony of Thomas Moore Price.)

tunnel in which they had special safety orders due to gas?

A. I knew they were used on locomotives.

Q. I am not talking about batteries, or direct current motors. I am talking about alternating current motors made by the General Electric Company.

A. I don't know that.

Q. You don't know that? A. No. [1435]

Q. And that these motors, new, from the General Electric Company, could be delivered in three weeks' time? A. I didn't know that.

Q. You don't know what the regulations were by the Industrial Accident Commission, then, with respect to the operation of alternating current motors in the Hetch Hetchy tunnels? A. No, I do not.

Q. Did you make any inquiry when you were trying to solve this problem?

A. I do not recall making any inquiry. I made inquiry with respect to air motors from the Hetch Hetchy supply, the warehouse, at Livermore.

Q. For the things that they had been using over there? A. Yes.

Q. How big was the air motor you had on your steam shovel?

A. I don't know, it was a revamped steam engine.

Q. How many horsepower did it deliver?

A. I don't know.

Q. Approximately?

(Testimony of Thomas Moore Price.)

A. I would say approximately, I would just approximate it as 20 or 25 horsepower, I may be wrong.

Q. How big was the steam shovel? What was the yardage capacity of the bucket?

A. A yard, I think.

Q. One yard? A. Yes.

Q. Wasn't it a yard and a half?

A. We had a bucket on there at the beginning which I believe was 1½ yards, and which we found was too large, and I believe we changed back to the old size of the standard design for the shovel.

Q. It is your testimony now that you think that the horsepower of the air motor that operated the steam shovel was 25 horsepower?

A. Only a guess, I would estimate that.

Q. You are testifying?

A. I am telling you, I don't know.

Q. You don't know? A. No, I don't know.

Q. How many steam shovels did you have in the tunnel, power shovels?

A. We had two steam shovels operated by air, one in each tunnel.

Q. Did they both have the same kind of revamped engine from the Hetch [1436] Hetchy?

A. No, they did not come from the Hetch Hetchy, at all.

Q. Where did they come from?

A. I don't know exactly where they came from.

Q. Were they new equipment?

(Testimony of Thomas Moore Price.)

A. No, they were not. They were revamped equipment with the boom shortened and dipper stick shortened to fit the tunnel. They were secured before I came on the job. I forget who they got them from.

Q. Did they have the same sized air motor on them? A. Yes, I think so.

Q. What was that revamped from?

A. An air engine and a steam engine are identical. There was no change made.

Q. What did you mean by being revamped?

A. I was speaking of the boom and dipper stick.

Q. I thought you said the air motors were revamped. A. No, I did not mean to say that.

Q. They were steam shovels, and instead of putting steam into them you put air into them?

A. Yes.

Q. You think they were 25-horsepower motors?

A. Yes.

Q. Isn't it a fact that air motors could be purchased in the general trade, 50 horsepower air motors, that were subsequently used on the Pumperete?

A. No.

Q. It was not possible?

A. I tried to adapt them to it; the pumperete had to be moved from one tunnel into the other, had to be portable.

Q. You didn't know a way of doing it, that you could buy 50 horsepower air motors if you desired it?

(Testimony of Thomas Moore Price.)

A. I presume you could buy a steam engine which would serve the purpose. They were a very clumsy arrangement.

Q. And it would even have been possible, Mr. Price, if it was deemed necessary for you to work it out, to have put in a steam plant at [1437] the mouth of the tunnel and run a pipe line in and operated these plants with steam?

A. I would be inclined to answer no.

Q. You don't think it would?

A. I don't think it would because of the distance in the tunnel.

Q. Now, with respect to your concrete plant, you said that when you came on the job it was practically finished.

A. That portion of the plant with respect to the unloading of the material at the railroad and the mixing plant at the west portal, I presume that, I think that the whole concrete arrangement could be called a plant, a concrete plant. I do not think any individual item of it would be a concrete plant.

Q. You had the unloading bins at the railroad, you had the concrete mixing plant where you mixed your concrete near the west portal; that plant was not finished when you started in to concrete these rings at the west portal in October, was it?

A. No.

Q. It could easily have been finished if you had cared to do so in advance of that time, because it was practically finished when you came down on September 20th?

(Testimony of Thomas Moore Price.)

A. Yes, but I do not admit it could be easily finished.

Q. How long would it take, in your opinion, to finish the concrete plant, including these various units, after September 20th? You said it was practically finished, when you came on the job.

A. Well, if the Landvale track were not in there, it would have taken at least six weeks to get that portion of it ready. The plant, itself, was ready, but the servicing arrangement of the plant was not finished, at the upper portals,—I am not quite clear on the state in which the mixers were. I am inclined to think one of the mixers—none of the machinery for batching the concrete had been put in. I would say it would take at least six weeks to do that work.

Q. As a matter of fact, the mixers did not come on the job until [1438] sometime in November? They came up from the Boulder Dam?

A. Possibly so, I can't recall.

Q. About Thanksgiving Day they were there?

A. I don't recall.

Q. You remember that fact?

A. I don't remember, but it is entirely possible.

Q. Then the plant just stood there from that time until along about June of 1935, didn't it?

A. In the meantime we had completed it.

Q. What did you do to it from the time you came there in September until, say, the 1st of June, 1935?

(Testimony of Thomas Moore Price.)

A. Well, we completed the plant and tuned it up, got it so that it would run, got all the batching apparatus in, built a pipe line from the highway to the plant; when we tried it out we did not have enough water; we perfected a method of hauling cement from the unloading plant and made all of the thousand and one changes on the plant in order to get it to function properly.

Q. As a matter of fact, wasn't that done, all of that work done after June 20, 1935? A. No.

Q. Just before you started concreting?

A. No, I do not think so.

Q. You do not think so? A. No.

Q. Isn't it a fact that the first aggregate that you hauled from your Landvale connection to the concrete bunkers to make your first trial run was June 26, 1935?

A. I would say approximately about that date.

Q. So you could not test it until you had something in it to work on?

A. I did not mean we did test it.

Q. Isn't it a fact that the concrete engineer, Mr. Davis, checked the scales or had the scales checked and sealed on the 27th of June, 1935?

A. I don't recall.

Q. Isn't it a fact that the concrete plant was not ready for operation until the 1st of July, 1935?

A. I think that is approximately [1439] correct.

Q. What is that?

A. I think that is approximately correct.

(Testimony of Thomas Moore Price.)

Q. Over a year after you had started work on the project? A. Yes.

Q. After you started to run the plant it took you a couple of weeks to get it smoothed down, didn't it?

A. After we started to run the plant—you are referring to the plant, itself?

Q. The aggregates plant, up where you had your cement in one bunker and your sand in another bunker and your aggregate and your rock in another?

A. I don't recall that, it would be an expectable result.

Q. Mr. Price, you had, on the chute that led from your gravel bin down to your concrete mixer, you had to put vibrators on so that the material would run through them?

A. As I recall it we had some trouble with the chutes and I put on belt conveyors.

Q. But when you started on July 2, 1935, you had to put form vibrators in there so that the stuff would run down and mix?

A. That is the general practice in cement.

Q. How about the sand?

A. It might have been at that particular time—I don't recall. I know we usually use vibrators on chutes that carry cement.

Q. After you put your belt conveyor in you continued to use vibrators, didn't you?

(Testimony of Thomas Moore Price.)

A. I don't think there was any chute left after we put the conveyors in.

Q. You got rid of the chutes? A. Yes.

Q. And put in belt conveyors? A. Yes.

Q. And that was completed on July 17th?

A. I don't recall.

Q. So it was about the middle of July, 1935, something over fifteen months after commencing the work on the concrete plant before you had your concrete aggregates plant operating to put concrete into the tunnel? A. Yes, approximately.

Q. How long did it take after you started to set up the Boulder Dam [1440] concrete plant?

A. I think about 21 months.

Q. 21 months? A. Yes.

Q. How long do you think was a reasonable time to get your concrete plant ready on the Broadway tunnel?

A. The concrete plant could have been gotten ready shortly after the first of the year 1935.

Q. You think it would take six months to get the plant in shape as a reasonable time?

A. I don't understand your question.

Q. You say shortly after the 1st of January. The contract started in June. That would be about six months, would it not?

The Court: He wants to know if it would take that long to get the concrete plant ready.

A. Yes, I would say it would take six months.

Mr. Tinning: Q. Now, with reference to the Pumpcrete, I understood you to say it was not a

(Testimony of Thomas Moore Price.)

thoroughly tested equipment at the time it came on the job, and that you did not know very much about it, so you made an investigation.

A. I do not understand your question.

Q. Read it.

(Question read by the reporter.)

A. I do not agree with the last part of the statement.

Q. Which part, about the investigation?

A. That I did not know a great deal about it.

Q. You did know a good deal about it, didn't you? A. I knew something about it.

Q. I believe you said that you knew that it had been used for two years at Boulder Dam in the tunnel.

A. No, I said it had been used off and on on the remote sections of the work of Boulder Dam for approximately two years. My best recollection is it had been used in some of the small inclined shafts right from the power house. [1441]

Q. Is it your testimony now that it was not used in lining arches of the main Boulder Dam tunnel?

A. It was not. A Hackley gun was used.

Q. What was the size of the aggregates that you used in your Pumperete at Boulder Dam?

A. Up to the latter part of 1934 1½ inches.

Q. By the time that you were making your investigation of the Pumperete did you know that the Pumperete had been successfully using aggregates of 2½-inch size?

(Testimony of Thomas Moore Price.)

A. In the latter part of 1934, in December, yes.

Q. That was the size that you had used on the tunnel? A. On the Broadway Tunnel.

Q. Mr. Price, I show you a Pumpcrete circular issued by the Chain Belt Company, of Milwaukee, Wis., U. S. A., "Concrete by Pipeline," Copyrighted in 1934, and ask you if the picture of the Boulder Dam tunnels is a fair representation of those tunnels as you saw them?

A. Yes, but that is a picture of the raise from the diverting tunnel to the intake, to the spillway. I think that was done in the latter part of 1934.

Q. Is the Pumcrete shown in this photograph?

A. Yes.

Q. What size aggregates at that time were worked?

A. Approximately 3-inch, pass a 3-inch screen.

Q. Considerably larger than what was required at the Broadway tunnel?

A. The Broadway tunnel required aggregate passing a 3-inch screen.

Q. I will ask you to look at page 2 of this catalog and the photographic reproduction appearing at the left of the page entitled "Forms and pipe set at downstream end of 37-foot tunnel being fed by dual Pumpcrete above."

A. Yes, that is the upper penstock tunnel.

Q. Is that a small tunnel?

A. Yes, it was approximately 40 feet, as I recall,

(Testimony of Thomas Moore Price.)

outside diameter, compared with the 60-foot for the diversion tunnel. [1442]

The Court: Let me see that.

Mr. Tinning: Q. So that the tunnel that you have called a small tunnel at Boulder Dam, 37 feet, was just about the same size as our tunnel, was it not?

Mr. Marrin: I wonder if we might have that marked for identification?

Mr. Tinning: I was going to introduce it.

The Court: It may be admitted. That is what you want.

(The catalog is marked "Defendant's Exhibit F-4.")

Mr. Tinning: Q. The tunnel that I have just been discussing with you, Mr. Price, is a tunnel 37 feet in diameter? A. Yes.

Q. You call that a small penstock tunnel?

A. No.

Q. What tunnel do you call it?

A. The upper penstock tunnel.

Q. You call it 37 feet, don't you? A. Yes.

The Court: This one?

Mr. Tinning: Yes.

Q. I am asking you if this tunnel that you just referred to of 37 feet was not about the same size as our tunnel, the Broadway Tunnel?

A. Yes, approximately.

(Testimony of Thomas Moore Price.)

Q. You used Pumpcrete in 1934 at Boulder Dam on a 37-foot tunnel and that was successful?

A. In the latter part, very late in 1934.

Q. You were a member of the Six Companies, and that information was available to you?

A. Yes, and that is how I know about it, because it was only in the latter part of 1934 that the Pumpcrete—that the Chain Belt Company had been able to perfect their valve arrangement so that it could handle 2½-inch aggregates, and that is why I was considering it for the Broadway Tunnel. The pump up to that time had not been successful on the 2½-inch aggregates. The tunnel I was speaking of was a tunnel that we used Pumpcrete on that would handle 1½-inch aggregates, up to that time, up to the very late [1443] part of 1934.

Q. Right here on San Francisco Bay one of Mr. Kaiser's companies was using the Pumpcrete pumping concrete and 2½-inch aggregates into the foundations of the San Francisco Bay Bridge in the fall of 1934, was it not?

A. No, it was not Mr. Kaiser's company. And how I knew about the operations, I spent many nights on it. I was out there approximately 30 or 40.

Q. That was an independent contractor?

A. That was an independent contractor. It was being built by the Chain Belt Company, and my personal friend, C. F. Ball, was out here with the Pumpcrete from the Chain Belt Company, and it was not a success.

(Testimony of Thomas Moore Price.)

Q. It was not a success?

A. It was not a success.

Q. But that is the way it was built?

A. That is the way it was built after wasting a lot of concrete trying to get the thing running, because it would stop up about every twenty minutes.

Q. That was in 1934?

A. In the early part of 1934, as I recall.

Q. I was directing attention to the use of the pumpcrete on the Bay Bridge in the latter part of 1934. Were you on the bridge span with your friend from the Chain Belt Company until you got this plant working well? A. Yes.

The Court: We will take an adjournment now until tomorrow morning at ten o'clock.

(An adjournment was here taken until tomorrow, Wednesday, May 4, 1938, at ten o'clock a.m.)

[1444]

Wednesday, May 4, 1938
10:00 o'Clock A. M.

THOMAS MOORE PRICE

Cross Examination (continued)

Mr. Tinning: Q. Mr. Price, yesterday, when we were engaged in this examination, I understood you to say that you thought a reasonable time to complete construction of the concrete plant, which

(Testimony of Thomas Moore Price.)

includes the different units that you referred to. would be about six months; and I notice the record, on page 1033, says "16 months." I understood your answer correctly, did I not?

A. No; I thought you were referring to the mixing plant.

The Court: In any event, his testimony was six months?

Mr. Tinning: Yes.

The Court: The record is in error. Wasn't that true?

Mr. Tinning: May it be stipulated that Mr. Price's reply to the Court's question on page 1033 of the transcript should have stated "six months" instead of "sixteen months," as the record shows?

Mr. Marrin: Yes; that is what Mr. Price stated.

The Court: If there is any question about it, you can clear it up on examination by either side.

Mr. Tinning: Q. There is not any question about it, is there, Mr. Price, that is what you said?

A. That is what I said, but I was referring particularly to the plant outside the tunnel, — the mixing plant.

Q. That is what I was referring to.

A. Yes.

Q. All the Landvale plant and whatever went into the mixing plant? A. Yes.

Q. And six months was a reasonable time, in your opinion, for that construction?

A. I believe so.

(Testimony of Thomas Moore Price.)

Q. Defendant's Exhibit "N," the schedule of August 9, 1934, shows that it was planned to complete all of this plant by August 31, 1934. [1445] Was Mr. Fontaine's judgment in that respect erroneous, in your opinion?

A. Well, I imagine the facts speak for themselves. I don't know exactly what his judgment was. It was not completed by that time.

Mr. Tinning: May we have Defendant's Exhibit "N," please, Mr. Clerk?

Q. "Company Work Tunnel Proper Plant and Equipment Installation,"—that line shows it was to be completed on August 31, 1934, does it not?

A. Yes.

Q. Do you consider, in your opinion, that Mr. Fontaine was wrong in contemplating the construction of that plant in six weeks, as the exhibit shows?

A. I am unable to say.

Q. Could it have been constructed in six weeks?

A. In six months?

Q. Six weeks.

A. Well, I don't know what extent that particular item went to; but I don't believe all the plant, as finally installed—that there may be installed in six weeks— For instance, it is very difficult, at the beginning of a job, to know the extent of what it will consist of. For instance, a lot of the plant on the Broadway job was not completed for a considerable time after 1935; and, as I recall, things are improved and changed all the time as the job progresses.

(Testimony of Thomas Moore Price.)

Q. The point I am referring to is what your progress schedule,—Six Companies' progress schedule,—that was filed with the District on August 9, 1934 showed, with respect to the "Company Work Tunnel Proper," the first item is "Preparatory Study." Those were to be concluded by the 31st of July. "Plant and Equipment Installation" was to be started somewhere around the 12th of July, and to be completed on August 31, 1934?

A. That is correct, as the diagram says; but the only point I make is: I don't know to what extent that item consists.

Q. Well, Mr. Price, if you just look at the subjects shown under [1446] that heading of "Company Work Tunnel Proper," it includes the construction of the tunnel, does it not?

A. Apparently so.

Q. Mr. Price, you testified here on April 28th, on direct examination, according to the record—and I am now reading from page 846—

A. I am sorry; I did not understand that question due to the confusion in the room.

Q. I can read from here, and that will make it a little easier for you. You understood what I was asking?

A. No; I did not. Someone coughed and I missed the question.

Q. On April 28th, you testified, in response to Mr. Marrin's question, as follows—and I am reading, gentlemen from page 846:

(Testimony of Thomas Moore Price.)

"Q. What was your position with Six Companies of California?

"A. I was called project manager.

"Q. What were the duties of that position?

"A. The duties of the position were to handle the business end of the job.

"Q. How long did you remain in that position?

"A. Why, I am still in it, so far as I know. I stayed with the job until we rescinded the job in June, 1936. Since that date, I was occupied for the first year in looking after Six Companies of California equipment and tools and other interests on the job, and since that time I have been largely engaged in making preparation for this litigation."

Q. Is that what you testified at that time?

A. Yes, to the best of my recollection.

Q. As a matter of fact, Mr. Price, isn't it true that you last worked and went off the payroll of Six Companies of California on the 31st day of December, 1935?

A. No, sir; I have never been off since I started.

Q. By "this job," I am referring to the Broadway Tunnel job. I don't know what you may have done for Six Companies somewhere else.

A. No. [1447]

Q. Isn't it a fact the certified transcripts of payrolls filed by Six Companies of California with the

(Testimony of Thomas Moore Price.)

Joint Highway District show that you were carried on the payroll as project manager to December 31, 1935, and that thereafter you do not again appear on any payroll that was filed with the District at that time or at any time?

A. I am unable to say.

Q. You don't know?

A. I don't know exactly—

Q. As project manager, didn't you have to certify these payrolls that were filed?

A. No; I don't recall that I did.

Q. Who did?

A. I think, the auditor,—Mr. Sloane.

Q. Why were you left off after December 31, 1935?

A. I cannot tell you. I still got my pay.

Q. Or was it charged to something other than Joint Highway District No. 13,—that Broadway Tunnel job?

A. I don't know that it was. I am unable to tell you, at the moment.

Q. Well, we will come back to that. Mr. Price, do you recollect the conversation on or about the 20th of June, 1935 that occurred near the east portal of the tunnel, in which Mr. S. D. Bechtel and yourself were present representing Six Companies, and Resident Engineer Gelston and District Engineer Boggs were also present?

A. No; I do not recall it.

(Testimony of Thomas Moore Price.)

Q. What is it that you do not recall,—the incident of a conversation or the date?

A. I don't recall—I have been trying to refresh my mind since I heard you ask Mr. Bechtel about that meeting, but I just simply don't recall it.

Q. Well, it is a fact, is it not, that at a conference at which you were present in June of 1935, after you knew there was some intrusion of timber,—the timbers were moving,—you were present when Mr. Bechtel asked Mr. Boggs for permission to permit the timbers to intrude into the neat concrete section?

A. Yes; I know [1448] Mr. Bechtel asked Mr. Boggs that, on several occasions; but I am unable to place any definite conference.

Q. Well, it was prior to your starting the concreting, was it not?

A. Possibly so; I don't recall.

Q. Well, Mr. Price, at the time these conversations with respect to permitting the timbers to intrude into the specified section of the concrete lining, you had not started concreting, had you?

A. I am unable to tell you, Mr. Tinning. We started concreting on July 19th, as I recall—on or about that date; that is the arch lining.

Q. You knew, some time in May the timbers were moving into the required section?

A. Yes, the latter part of May, 1935.

Q. So that you would not say that such a conversation in which Mr. Bechtel requested permis-

(Testimony of Thomas Moore Price.)

sion to permit the timbers to intrude into the neat concrete section did not occur in June of 1935 and the persons I have stated were present?

A. I am unable to state the time.

Q. You have no memory on it?

A. I explained that I have no memory of the exact time. I remember Mr. Bechtel speaking of it to Mr. Boggs.

Q. When you installed the concrete in the west portal rings, you knew, after the forms were stripped, that the concrete that was placed there was not satisfactory?

A. Well, it was not satisfactory, to the extent that there were cold joints, apparently, in the concrete; and I think cold joints are not good concrete.

Q. You also had voids, did you not, places where the concrete was not of uniform texture; there had been segregation?

A. Yes; but I did not regard that so seriously, because that is quite a common condition in most tunnels,—voids in the concrete; and it is easily repaired. It is not a serious condition, in my opinion.

Q. Well, it costs considerable time and money to have to put in [1449] pneumatic guns, and drill and chip out that type of bad concrete, does it not?

A. It depends upon the extent of it.

The Court: We will take a short recess.

(Recess) [1450]

(Testimony of Thomas Moore Price.)

(After recess):

Mr. Tinning: Q. Mr. Price, you stated that there were some cold joints in the Hackley concrete. I would like to show you two photographs taken in the down-grade tunnel which show what I believe to be cold joints. Will you look at the one which you are holding on top, which is a view of crown area down-grade tunnel April 8, 1936, Station 111+90, and I will ask you if that is a fair representation of the cold joints that you refer to?

A. Yes, I think that is a fair representation—no. I think that is a construction joint, Mr. Tinning. The cold joint that I had reference to that I particularly noticed with Mr. Boggs and Professor Davis was down near the floor of the tunnel rather than the arch. I believe that is the down-grade tunnel, isn't it?

Q. Yes.

A. I think that is a construction joint. I would not be positive, but apparently it is.

Q. The down-grade tunnel was poured when you had two Hackley guns?

A. We poured from the rear end of the tunnel to the front end in raises.

Q. Or lifts? A. Yes.

Q. Did you pour that with a Hackley gun throughout? A. Yes.

Q. So that the concrete that is shown on the bottom of the picture below this point is a Hackley gun concrete?

(Testimony of Thomas Moore Price.)

A. This is all Hackley gun concrete.

Q. And the top is also Hackley? A. Yes.

Q. And the top is the arch, is it not?

A. It appears to be so from the photograph.

Q. In the part of the tunnel which was poured by the drawing out of the pipe that led the concrete from the Hackley gun into the forms and as you drew out the pipe the concrete was discharged toward the interior of the tunnel, attempting to concrete the top of the [1451] arch by that method?

A. Yes, apparently so. I think it should be explained for the record that this picture represents the concrete after it had been dug out with pneumatic equipment and not as it was left.

Q. I am coming to that. The area above the line that you say is a construction joint and which appears to be broken or rough concrete shows the reinforcing steel and shows the marks of tools, does it not? A. Apparently it does.

Q. That was concrete that was cut out in 1936 because it was defective, it was soft or porous?

A. I did not see the concrete at the time it was cut out. I understand that the Bureau of Public Roads raised some objection to it, and that they desired it to be repaired. I did not see it. I did not notice it when it was taken out, that it was very bad. I did not see any rock pockets. I did not see it after it had been cut out. I saw it after it had been repaired with gunnite.

(Testimony of Thomas Moore Price.)

Q. You know it was cut out and repaired by Six Companies?

A. That is my understanding, a portion of it, approximately 8 yards, or an infinitesimal part of it.

Q. Infinitesimal?

A. A small percentage.

Q. If the arch was weak at that point the tunnel might fall down, it didn't have to be 8 square yards to be defective?

A. Cubic yards.

Q. Or square yards. You were in heavy ground at this portal, were you not, you had pressures there so that it required stulling against the core when you poured the concrete? A. Yes.

Q. It was a place where the integrity of the arch was required, if at any place in the tunnel it was required? A. Yes.

Q. That was the reason the concrete was repaired, to give you a full arch there?

A. That is my understanding.

Mr. Tinning: We offer these two photographs in evidence [1452] of the down-grade tunnel station 111+90 as Defendant's Exhibit in proper order.

The Court: They may be admitted and marked.

Mr. Tinning: We will ask that they be marked 1 and 2, but be all one exhibit.

[Set forth in the Book of Exhibits at page 464.]

(The photographs were marked Defendant's Exhibit G-4.)

(Testimony of Thomas Moore Price.)

Q. Mr. Price, I show you a photograph marked "View of left crown up-grade tunnel, station 112+05, May 30, 1936," and ask you if that appears to be a picture of the roof or crown, in other words looking up at the arch of the tunnel?

A. Yes, it appears to be.

Q. From your knowledge of the stations of the tunnel would you say that that was in the ring that was poured with the Hackley gun in the up-grade tunnel?

A. Yet, it apparently is; as you say, it was Station 112+05, and that was poured at the time.

Q. Doesn't the photograph show two marks in the same manner that the preceding photograph shown you indicates that the concrete had been chipped out? A. Yes.

Q. And that was done to take care of what condition?

A. In the same manner as in the south tunnel, the engineer ordered that this concrete be chipped and repaired with fresh concrete.

Q. That was concrete placed by the Hackley gun under the difficulties and method that both Mr. Larson and you have described? A. Yes.

Mr. Tinning: We offer this photograph in evidence as Defendant's Exhibit in proper order.

The Court: It may be admitted and marked.

(Testimony of Thomas Moore Price.)

(The photograph was marked "Defendant's Exhibit H-4.")

[Set forth in the Book of Exhibits at page 466.]

Mr. Tinning: Q. You have already testified that the original method planned for concreting this tunnel was the Hackley gun, and you demonstrated to your own satisfaction, in attempting to get the concrete into the first ring, that first 100 feet of the west [1453] portal that the method was not satisfactory for use in these tunnels?

A. Yes, under the interpretation of the specifications by the engineer.

Q. I believe you also said it was general practice to shoot concrete into the top of the form and let it fall down over the sides of the form toward the bottom. Do you remember that testimony, Mr. Price?

A. Yes. I think I qualified that by in my experience it was general practice as far as I knew.

Q. In your experience? A. Yes.

Q. You never had poured concrete in a tunnel before, had you, Mr. Price?

A. I had seen concrete poured in the tunnels at Boulder Dam.

Q. Would you mind answering the question, had you ever poured concrete in any tunnel before, yourself? A. No, I had not.

Q. And in Boulder Dam is the place that you had seen concrete poured in a tunnel?

(Testimony of Thomas Moore Price.)

A. Yes, and also in the Metropolitan Aqueduct in Southern California.

Q. The Metropolitan was a small tunnel?

A. Yes.

Q. 15 feet?

A. Variable, but I think it was somewhat larger.

Q. About the size of the Claremont Tunnel or a little bit larger?

A. I was never in the Claremont Tunnel, but I believe it was approximately the same.

Q. It was an aqueduct, a water project?

A. Yes.

Q. Isn't it true, Mr. Price, that by dropping the concrete over the sides of the forms, unless you have an apparatus to continue your discharge so that you rapidly fill the form, when you get your coat of concrete on the inside the upper part of the form will build up like plaster or concrete, and that you do not get a smooth form when you come up and build up the point where this concrete has stuck onto the form as it dropped back?

A. I would say that would [1454] depend on the time element.

Q. That is what I am asking you about. You have a concrete gun and you are pouring a lift into the form and you can only put in enough concrete to pour six feet of lift and then have to stop for half an hour or an hour while you get more concrete ready to put in there, and in the meantime the concrete that was spattered on the

(Testimony of Thomas Moore Price.)

side of the form will drop down and go into place and it will harden, and you have a rough interior to your form, where the concrete is stuck?

A. You should not stop pouring; under the plan I think you should pour on you should not stop for half an hour or an hour, and, furthermore, if the concrete stuck to the form on top, if it was good concrete, I do not see any objection to its sticking there, because the form would shape the concrete on the inside of the form and not the concrete, itself.

Q. You would have, in effect, a cold joint?

A. Yes, if it stopped too long you would have.

Q. Isn't that about what you did in these pictures that required you to chip that stuff out?

A. From the cut of these, I am rather inclined to think they were rock pockets than cold joints.

Q. By a rock pocket you mean a place where the material had segregated?

A. Yes, where there was not enough mixture in the concrete to complete the fill.

Q. It is a fact that you had to shut down in your operations in placing concrete in the Broadway Tunnel far in excess of half an hour?

A. Oh, yes, it was a very unsatisfactory operation.

Q. You had to get in your forms and clean them off where the concrete had stuck and hard-

(Testimony of Thomas Moore Price.)

ened while you were getting more concrete to put into the forms?

A. Well, we had to get in there and clean off the forms on the inspector's orders, regardless of whether we were waiting for concrete or any other reason. [1455]

Q. But you had to get in there, if there was concrete sticking in the forms, you had to get in and clean them off? A. Oh, yes.

Q. You also had to clean off the reinforcing steel? A. Yes.

Q. That was due to the fact that the concrete was shot in there under very high pressure, was it not?

A. Yes, but I think it is the normal pressure for that type of placing.

Q. You had a wooden baffle box, did you not, a kind of a long box in there that concrete went in and distributed through gates into various parts of the form? A. Yes, we tried that.

Q. It did not work very well?

A. Not very well.

Q. It blew to pieces from the force of the concrete that was shot in there?

A. Yes, it would blow to pieces and stop up with the rock and block the pipe line. It was almost impossible to divert that concrete any way except from a straight line.

Q. Did you know that in the pouring of the

(Testimony of Thomas Moore Price.)

Sunset Tunnel in San Francisco that a Hackley gun was used? A. Yes.

Q. And used satisfactorily?

A. It is my understanding that it was.

Q. Now, in that tunnel when you were trying to solve this problem at the west portal with your Hackley gun, did you know that they had poured the Sunset Tunnel by gravity about four feet in height on each side of the tunnel?

A. I don't know the height, but I understood that they had.

Q. And then moved in a collapsible steel form, in which there was 120 feet used, and that in this steel form, when it was placed in the proper location in that tunnel a steel baffle box was placed into which the discharge pipe from the Hackley gun discharged the concrete? Did you know that?

A. I found it out shortly after that.

Q. You did not use a steel baffle box in the Broadway Tunnel? [1456].

A. Yes, we started with it.

Q. Did you use the steel baffle box while you were trying to pour these two rings at the west portal?

A. Yes, particularly in the south tunnel, the first tunnel we poured.

Q. What do you mean? You just told us a few moments ago you used a wooden baffle box.

A. We tried wood and steel. both.

(Testimony of Thomas Moore Price.)

Q. What was your steel baffle box, the dimensions, the size? A. I don't recall.

Q. You don't recall? A. No, not exactly.

Q. You were in charge of the work. How long was the steel baffle box.

A. I don't recall. I would estimate around 3 or 4 feet.

Q. That would be a kind of a nozzle, would it?

A. No, I would not so regard it. I understand a baffle box to be a box to absorb the force of the flow of the concrete as much as possible from the end of the pipe.

Q. How long was your wooden baffle box?

A. I do not recall.

Q. Was it 6 feet, or 10 feet, or 15 feet, or 20 feet, or how long was it? A. I do not recall.

Q. You have no recollection?

A. No, I don't remember the wooden box particularly, at all. I was thinking of the steel box. We might have tried a wooden box lined with steel, I do not recall.

Q. How long was the steel baffle box that was used in the Sunset Tunnel?

A. I don't know exactly.

Q. What do you estimate it was?

A. I would estimate it as 3, or 4 or 5 feet.

Q. 3 or 4 feet.

A. Somewhere in there. I never saw it. I am just trying to give you my understanding.

Q. Your understanding from the information you have?

(Testimony of Thomas Moore Price.)

A. That I gathered from various sources since that time, shortly after the pouring.

Q. You did not control this work, yourself, did you? A. In the [1457] tunnel?

Q. The concreting that you have mentioned?

A. No, I did not.

Q. Mr. Larson was doing that?

A. Yes, I conferred with him daily about it, trying to help to get the thing along.

Q. But you had had no experience in that specific kind af an operation? A. No, I had not.

Q. This baffle box that was used in the Sunset Tunnel was used throughout the tunnel in placing the Hackley concrete, was it not?

A. That is my understanding.

Q. Wherein did the baffle box that you tried to use in the Broadway Tunnel differ from the baffle box that was used in the Sunset Tunnel?

A. I don't think it was a question of baffle box. As a matter of fact, to my understanding there were several reasons why the concrete in the Sunset Tunnel could be successfully poured, where it could not be successfully poured by that method in the Broadway Tunnel. Now, those reasons particularly are as follows: In the first place, the aggregate in the Sunset Tunnel was 1¼-inch aggregate, a very small aggregate, gravel; the aggregate in the Broadway Tunnel was almost 3-inch aggregate, particularly 2½ inches in size, that is the maximum

(Testimony of Thomas Moore Price.)

size through a 3-inch screen; it makes a tremendous difference in handling aggregate from a pneumatic gun with 3-inch aggregates and with 1¼-inch aggregates; you can control it much better. In the second place, according to the plans which were made on the job, the concrete in the Sunset Tunnel was permitted to fall approximately 18 feet in the open, and in the Broadway Tunnel we could not let it fall over 6 feet, which meant that concrete had to be led from the top of the baffle box down almost to the bottom; in the third place, they permitted the use of flowing sand in the concrete, 40 per cent, of the sand was a very fine flowing sand picked up at the banks near Golden Gate Park, where these [1458] sand dunes are, and which makes the concrete very plastic. In the concrete section on the Broadway Tunnel we had to use a very small grained sand, which made very good concrete if it could be handled, but nevertheless it was not plastic like the concrete on this Sunset Tunnel. For those reasons it made a totally different job handling it with the Hackley gun.

Q. You knew all about that, you have told us, at the time you were doing the work?

A. No, I found out later.

Q. In other words, it is your explanation now that due to the different qualities in the concrete on the Sunset Tunnel that the problem was different from that on the Broadway Tunnel?

A. I think it was totally different.

(Testimony of Thomas Moore Price.)

Q. And you also considered another element was different, and that is on the Sunset Tunnel the contractor was permitted to drop the concrete a distance of 18 feet? A. Yes.

Q. Isn't it a fact that in the Sunset Tunnel there was a long baffle box which extended the length of the form, whatever form they were pouring, that it had chutes in it, open chutes 6 feet in length, extending out from the baffle box, and that there were gates in the baffle box which were closed to permit the concrete to run in one of these chutes, so that it would be carried over the top of the arch by the chute and not spatter against the top of the arch and causing this flow of raised material to drop down whatever distance was necessary up to 18 feet, or whatever it might have been?

A. I do not recall the exact dimensions of the baffle box. I think probably I have a drawing somewhere if I could locate it and get it as a matter of record.

Q. Your study of the Sunset Tunnel is something that you have made since you have been in this controversey and you did not have that study in mind when you were attempting the pouring?

A. No, I went [1459] into it first shortly after our ill success with the Broadway job, because I was informed that they had used it satisfactorily over there, and I refreshed my mind in the last three months on it again.

(Testimony of Thomas Moore Price.)

Q. Now, do you know that the specifications for the Figueroa Tunnel in Los Angeles provided for horizontal layers of concrete, nearly horizontal layers of concrete?

A. No, I have never seen those specifications.

Q. When you were doing the pouring on this tunnel, after you came there on September 20, you did not have in mind the experience and methods that were used in the Figueroa Tunnel?

A. I did not, because I did not know about it. The concrete placing system was largely planned when I arrived on the job in September, 1934.

Q. But you were going to change the concrete placing system when you arrived on the job; you had a Hackley gun system and then you were going to change when you found it did not work, and I am now directing your attention to other places where the Hackley gun had been used on tunnels of comparative size, and I am asking if you knew about the Figueroa Tunnel.

A. No, I didn't know the conditions down there, the requirements or the conditions.

Q. You didn't know in that tunnel the sides were poured from a gravity car and that the top was poured by pneumatic gun method?

A. No, I didn't know anything about the job.

Q. Or that in that tunnel all the lining was placed before the core was taken out?

A. I did not know that.

(Testimony of Thomas Moore Price.)

Q. And later on the walls of the tunnel on the north end of the Golden Gate Bridge were built?

A. Yes.

Q. The core was left in and lining put in and then the core taken out? A. Yes.

Q. Did you know of the Sepulveda Tunnel that was built in 1929 and 1930, where the Hackley gun was used and horizontal layers of con- [1460] crete were laid with lifts coming up in the forms and that a removable pipe with sections was used for placing concrete in that manner in the forms?

A. I don't know of the tunnel. I know to the best of my knowledge a Hackley gun, or some form of pneumatic gun was practically the only system that was available up to the latter part of 1934.

Q. And it worked in those tunnels?

A. I presume it did.

Q. They were built that way. Now, in this tunnel while you were working out a method of placing your concrete you had gone in a distance of approximately 1000 feet in each tunnel before you started concreting?

A. I think it was about 800 feet.

Q. Something like that. And you shut that work down on August 21, 1935, due to the fact that you had a large amount of timber that had to be taken up and taken care of before you could continue the driving of the tunnel?

A. Yes, I think that is correct.

(Testimony of Thomas Moore Price.)

Q. If you had placed your concrete in that tunnel prior to removing the timbers you would not have had to shut down on August 21, would you?

A. I do not think so.

Q. And any delay that resulted from that shutdown or from the repairing of timbers was due to the fact that you had not concreted the tunnel as the excavation progressed?

A. Yes, of course you understand with extenuating circumstances in connection with it; if you could not concrete you could not concrete.

Q. They had concreted the other tunnels?

A. If the ground lining was strong enough to hold it, if it had been, I presume it would not have come in.

Q. It has not fallen down since the concrete lining was put in?

A. I do not think so, I have not checked.

Q. You think you would have heard about it if the Western Construction Company——

A. Yes, I would have heard if there had been any alarming movement. [1461]

Q. You stated that, under the concrete specifications, there was some confusion in your mind as to the method you could use in concreting this tunnel; is that correct?

A. No; I don't remember the word "confusing." I gave my interpretation of what I thought the Contractor could do under the specifications — under my interpretation of the specifications.

(Testimony of Thomas Moore Price.)

Q. Your interpretation of the specifications was — you had a longitudinal view of the tunnel, and you showed the concrete lining, the running down at about a 45 degree line?

A. Yes; that was a sketch of whatever slope the concrete was run on.

Q. Well, it was a demonstration that you thought it could be placed in lines like that? A. Yes.

Q. That would have permitted you to shoot into a solid mass of concrete, or permitted the Hackley gun to discharge against the end of the form and build up, and then you would gradually pull the discharge pipe back, always keeping the end of the discharge pipe in concrete?

A. Your men could stand back of that safely and be vibrating the concrete, which would place it on a slope or slide.

Q. So you could get sloping concrete, sliding concrete or sliding contact lines in that concrete, at whatever slope —

A. Well, that depends on the speed. I don't think you could get contact lines if you poured it continuously and fast enough.

Q. You did not have a plant when you poured these rings on the mouth to permit you to do that?

A. No. The District Inspector, — Mr. P. K. Davis, — told me they would not permit that.

Q. Prior to your pouring? A. Yes.

Q. Did you make any written protest in regard to that? A. No.

(Testimony of Thomas Moore Price.)

Q. Did you read the rest of the specifications after Mr. Davis told you you could not pour that?

A. I read them prior to that.

Q. What is a lift of concrete?

A. I would say a lift of concrete [1462] in my opinion, is a raise in which — It is while you are working; a work interval.

Q. Yes. Where you cease working to put in another form or for some other reason, you make a joint? A. For some reason.

Q. In building a dam, a lift is what you build in one set of forms, isn't it?

A. Yes, I think it could possibly be interpreted that way.

Q. So, when you were interpreting the matter that you read on page 25 of the specifications the other day, as being a section that permitted you to put in layers of concrete and then measured vertically, you did not construe a lift in the manner in which you have just construed it?

A. Yes, I think it is practically the same thing. It is a work interval. You pour concrete on one side to the height you want, and then you go to the other side and pour.

Q. Well, Mr. Price, a lift is something where you get a cold joint, as I understand it, and you said you were going to pour continuously in this form—

A. No; I don't think a lift applies necessarily to a cold joint. I think it would apply to work interval.

(Testimony of Thomas Moore Price.)

Q. What does a layer mean?

A. I would say a lift and a layer is practically synonymous.

Q. The same thing. You think, if you were placing the concrete in a dam, a lift, say, of 10 feet, a set of forms, that the layer which you put in at one form would mean the same thing as a lift?

A. No. I am inclined to think it wouldn't be the same thing. I think a layer probably would be the portion of the lift itself.

Q. The portion of a lift?

A. If you used it that way in a dam, that would be my opinion of it.

Q. Wouldn't it be just the same in concrete forms in a tunnel?

A. Yes, it would be the same thing, except my understanding of the specifications was the lift meant a change from one side, and then you go to the other side and make another lift of 6 feet. Those lifts [1463] would naturally have possibly many layers of the concrete running down the side of the form.

Q. So, if you used your method that you described there, those things you show as the concrete went down were layers, were they not?

A. I think my interpretation of it was you could make a 6 foot raise on one side, and that side would be composed of many layers; and the concrete ran down the side of the form.

Q. And if you had one of these inclined lifts of

(Testimony of Thomas Moore Price.)

6 feet, then you would have, — if you had one of these inclined lifts of 6 feet, then you would have — if you had to stop, you would have a cold joint running down at the angle, or whatever angle the concrete was?

A. Depending on the time it took to get back——

Q. That is what I say; if you were delayed?

A. Long, yes.

Q. You were delayed a good many times, were you not?

A. Yes; we had a lot of delays on pouring the portal concrete.

Q. Now, if you will look at the specifications, Plaintiff's Exhibit No. 3 — look at page 25, Mr. Price. I will call to your attention, first, the section that we read the other day — page 25, the lefthand column:

> "Concrete for the tunnel lining shall be placed continuously between any two adjacent construction joints, in lifts not more than 6 feet deep, measured in a vertical direction. The topmost lift, having a width not to exceed 8 feet, shall not be placed until the adjoining concrete on both sides has been in place for at least seven days, unless otherwise directed by the District Engineer."

You knew of that in the specifications when you started to pour this concrete, didn't you?

A. Yes; we had asked the Engineer about this.

Q. You had been told that you could not pour,

(Testimony of Thomas Moore Price.)

in the inclined lifts or inclined planes that you indicated on your diagram? A. Yes.

Q. You made no protest?

A. Made no protest. [1464]

Q. As I understand it, you stated the other day that you thought that was the controlling matter in placing concrete?

A. No; I did not. I did not intend to make such a statement — such a positive statement as that.

Q. When you were making your plans for this concreting, did you have in mind the provision of Paragraph 12, the provision of Section 15, appearing on page 25, which is headed, "Conveying, Placing and Compacting Concrete"? Did you have those provisions of the specifications in mind?

A. Why, I had them in mind, because we were discussing it almost constantly both with the inspectors and among ourselves.

Q. Now, you will start there with the first sentence which says:

"Concrete, when mixed, shall be immediately conveyed to the forms and deposited without separation of its ingredients."

That meant you could not drop it 18 feet.

A. It does not say anything about 18 feet.

Q. But if you dropped concrete 18 feet, you would likely get separation, wouldn't you?

A. I think you probably would.

Q. "The use of open chutes to convey and deposit concrete will not be permitted, except

(Testimony of Thomas Moore Price.)

for distances of less than 20 feet, and then only by special permission of the District Engineer. When open chutes are used, they must be of such cross section and laid at such inclination that they will permit the flow of concrete of the consistencies herein specified, without the use of additional water to promote free flow."

Now, coming back to the first sentence about the ingredients —

"Only methods of transporting and placing which will deliver concrete of specified consistency without separation of its ingredients will be permitted."

You knew about that, too, didn't you?

A. I knew that was in the specifications.

Q. And that was something that was put in there to give you concrete [1465] on the job and that would prevent rock holes and other things that weaken the concrete if these provisions were not in there? A. Yes, I think so.

Q. Now, we refer to the next portion of this paragraph 12 that appears here:

"Concrete shall not be permitted to fall from a height greater than 6 feet except through an enclosing pipe, in which case the height of fall shall not exceed 12 feet. An enclosing pipe may be required by the District

(Testimony of Thomas Moore Price.)

Engineer for placing concrete in column, walls and deep footings."

The first sentence gave you a right to drop concrete 6 feet, which is, I think, reasonable, isn't it? It will not be likely to segregate in a fall of that distant? A. Yes.

Q. And it also permits the dropping through an enclosed pipe up to 12 feet, — a distance of 12 feet; and that was designed to prevent segregation, was it not?

A. I assume so. I don't think it would hurt to drop it further than that in an enclosed pipe.

Q. But the District Engineer's judgment was different? A. Apparently so.

Q. That was what was bid on; that was the way you bid on the work, wasn't it? A. Yes.

Q. That was the reason for the design of the pipes that accompanied your steel form designs that were presented to the District? A. Yes.

Q. That was the reason you were submitting those, — to be sure they would be acceptable?

A. I was trying to do everything I could to comply with his wishes.

Q. And with the specifications?

A. Well, more particularly with his wishes.

Q. You were able to interpret the specifications?

A. Apparently, I had not been able to up to that time. I interpreted the [1466] specifications on tunnel lining concrete in the way I described the other

(Testimony of Thomas Moore Price.)

day, and the only place it says anything about concrete for tunnel lining — You are reading the specifications that apply to concrete structures outside of the tunnels.

Q. You say it was your interpretation of these specifications that that was a matter appearing in the left-hand column on page 25 about placing tunnel concrete?

A. Well, it particularly describes the tunnel lining.

Q. You say there is nothing in the other column that deals with it?

A. It does not refer to tunnel lining at all. It says "concrete."

Q. Well, we will proceed to consider the next paragraph; in paragraph 12, on the right-hand column of Section 15:

> "Concrete shall be uniformly distributed during the progress of depositing and in no case after deposition shall any portion be displaced in the forms more than 3 feet in a horizontal direction. Care must be taken not to displace the reinforcement, pipes, anchor bolts or other devices which are to be embedded in the concrete."

Mr. Price, as you worked this out in your steel form, you had some kind of an elephant trunk that you swung back and forth so you were able to comply with this paragraph?

(Testimony of Thomas Moore Price.)

A. Yes, we had an elephant trunk that we could swing back and forth.

Q. The next paragraph:

"Concrete shall be deposited in uniform horizontal layers, not deeper than 12 inches, care being taken to avoid inclined planes or inclined construction joints."

Now, those inclined planes that you show in your diagram would not comply with this provision of the specifications, would they?

A. No; it would not, unless the concrete were poured so fast the inclined plane would be obliterated in the pouring.

Q. And possibility of human error needs to be considered in pouring a permanent structure?

A. Yes. [1467]

Q. "Construction joints must be built with square ends and level tops, except as otherwise directed by the District Engineer; in arch type structures, joints shall be made at right angles to the axis of the rib. Each layer shall either be placed before the previous layer shall have taken its initital set, or, if the previous layer has taken its initial set, the surface of the previous layer shall be prepared as herein specified for the preparation of hardened surfaces."

(Testimony of Thomas Moore Price.)

What did you understand by the previous sentence, where it said: "Arch type structures"? Didn't you consider that that referred to tunnel concrete?

A. No. We had several arch type structures outside the tunnel.

Q. What is the diameter of the tunnel structure?

A. It is an arch.

Q. Did you overlook that when you were looking at the specifications, — that the tunnel was an arch?

A. I don't remember seeing it particularly, but I have explained why I felt the other concrete applied to this particular set of specifications.

Q. Would you say, now, you were in error in considering —

A. The engineer told me I was, before I even tried.

Q. Let's look at the headings which appear in Paragraph 10, which appears at the bottom of page 24. It says:

"Placing Concrete." Placing concrete refers to placing concrete everywhere on this project, does it not? A. I think so.

Q. The only place in the specifications where, in detail, the methods that will be permitted are specified? A. I think so.

Q. In the tunnels and outside the tunnels. Below "Placing Concrete," it says, "Time and Rate of Placing." Then, under Paragraph 11, you have, "Preparation of Forms and Surfaces." Then, on

(Testimony of Thomas Moore Price.)

Paragraph 12, on the right-hand column, page 25, you have, "Conveying, Placing and Compacting Concrete." That applied to all the concreting, whether it [1468] was in a culvert, an outside structure, a building or the tunnel; those are the only places in the specifications where you find concrete specifications — isn't that so?

A. That was the Engineer's interpretation of it.

Q. Do you find it anywhere else?

A. No, except under the "Tunnels," which refers back to it.

Q. We have already been over that, and you so testified? A. Yes.

Q. You said you were to look for your tunnel concreting in Section 13 and Section 15?

A. Well, 13 refers to it.

Q. Look on page 61, please, Mr. Price, and you will be able to follow this — page 61, the left-hand column, a portion of Section 32, Paragraph 6:

"Description. — The concrete lining for the tunnels shall consist of the concrete arch ring as shown on the plans, with steel reinforcing as designated or as otherwise directed by the District Engineer.

"The thicknesses of concrete shown are minimum thicknesses, and the attention of the Contractor is directed to provisions hereinbefore set forth in this section, requiring additional concrete as made necessary by the methods of

(Testimony of Thomas Moore Price.)

excavating, timbering. or otherwise supporting the excavation.

"7. Materials. — Concrete for lining shall be Class 'B' concrete, as provided in Section 13, 'Portland Cement Concrete,' of these specifications, and the provisions thereof and the provisions contained in Section 15, 'Concrete Structures,' shall apply to all concrete in tunnel linings except as modified herein. Grouting shall be performed as elsewhere specified in these specifications."

Now, what we have been considering here this morning in these specifications are all portions of Section 15, which appears on page 22 of the specifications, under the heading, "Concrete Structure"? That is true, is it not?

A. Yes. I have also made [1469] reference to aggregates, which are contained under "13," and refer —

Q. That was what you were guided by in your concreting; you made a reference over here on page 61, Section 32, to the Tunnel Concrete; you found yourself in Section 13, the aggregate, the constituents; you understood those specifications without and difficulty? A. Yes, I think so.

Q. "15" was your Concrete Structures?

A. Yes.

Q. You also looked at that, and you were told that the concrete lining should be built in the tun-

(Testimony of Thomas Moore Price.)

nel in accordance with the provisions of Section 15?

A. Yes.

Q. Then you came over to Paragraph 10, subparagraph 10, "Placing Concrete"; and you came to Paragraph 11, and you came to Paragraph 12 of Section 15? A. Yes.

Q. And you got mixed up on your interpretations of this 6 foot lift business?

A. I was so informed by Mr. Davis, the District Inspector.

Q. You thought a lift was the same as a layer?

A. No; I don't say that. I thought a lift referred to an amount of work on one set of the forms.

Q. At any rate, you got straightened out on that with the District Engineer, and you went ahead with the work.

A. I at all times tried to do what he wanted.

Q. Well, you went ahead with the work?

A. To the best of our ability.

Q. You made no written protest about the Engineer's interpretation?

A. No; I don't recall any.

Q. When the Pumperete came on the job in the latter part of June, 1935, you drew to Mr. Boggs's attention the authority that you received from the Industrial Accident Commission, by a letter dated some time in April; he had never seen that letter at that time, had he, Mr. Price?

(Testimony of Thomas Moore Price.)

A. Not to my knowledge. [1470]

Q. You had not advised him of any permission that you had to use electric power in the tunnels at that time? A. I don't recall advising him.

Q. The equipment had come on the job that day, or had just recently come on the job — not the same day; and you talked with Mr. Boggs, and advised him you had an electric motor to operate there?

A. Yes. I would like to explain my last answer: I had been contacting the District through Mr. Counzelman, who had contacted Mr. Collins. I had assumed that he — I say "assumed"; I had been told by Mr. Counzelman that the District Engineer — I don't mean Mr. Boggs — but Mr. Collins had been well aware what we were doing at all times, because I had given orders to Mr. Counzelman to make that clear to Mr. Boggs and the District; so I am unable to definitely state that he was not advised; I don't recall advising him, myself, but, under normal circumstances, I think he would have been advised.

Q. Well, Mr. Price, all I am trying to make clear is that, in so far as a copy of your letter of authority from the Industrial Accident Commission was not communicated to the District, you had not sent a copy of that letter?

A. No, sir; not to my recollection.

Q. What you have in mind about Mr. Counzelman and Mr. Collins — there is no quarrel about

(Testimony of Thomas Moore Price.)

that; they were in almost daily contact about problems?

A. The problem of getting the concrete underway.

Q. And, so far as you know from any conference, you have no knowledge that there was a direct discussion between Counzelman and Collins, or any other inspector of the District, and the Engineer, as to your authority to use the power?

A. No; I don't know as I told Mr. Counzelman to argue, but to thoroughly acquaint the District with every point of that power, and be sure everything was approved before we started anything. We had one sad experience in the portals, and I did not want another; but I was trying my best to make everything go along satisfactorily. [1471]

Q. And when Mr. Boggs saw your equipment on the job, — the two electric motors, with approximately 50 horsepower, as I understood it, — why, he asked you if you had authority to operate that type of equipment with electric power in the tunnels, from the Industrial Accident Commission, under their regulations?

A. Yes. I don't remember him asking me, but apparently, from the letter, he did ask me, and that is why I sent it.

Q. Then you went back to the Industrial Accident Commission and got specific authority?

(Testimony of Thomas Moore Price.)

A. I had already had specific authority, on the slip ring type of motor, but Mr. Boggs had called to my attention we apparently did not have authority on the induction type of motor.

Q. What is the difference between slip ring type of motor and the induction type of motor?

A. A slip ring type of motor is a motor in which the rotating part was electrically charged, by means of brass rings which rotate; whereas an induction motor. the rotating part is not charged.

Q. Is one less likely to spark than the other.

A. Yes.

Q. The induction type is a safer motor, in gas—

A. No; much less safe.

Q. Were the large motors on the Pumpcrete slip ring type?

A. Yes; it was necessary to use a slip ring motor on account of the tremendous starting power required for just a moment or two when the machine started up under a load; also, so it could be stopped at any time with a complete load in the pipeline; so it was necessary to have sufficient power so it could be stopped and again start with a load of concrete moving through the pipe. The slip ring motor, as I understand it, generates a tremendous torque, or starting force for a few moments.

Q. That is for the purpose of starting up with an inert mass of concrete? A. Yes. [1472]

Q. After you get the concrete moving, I think

(Testimony of Thomas Moore Price.)

you said it takes about one-tenth the power it did to start? A. Well, something like that.

Q. That is a general estimate?

A. Yes, a general estimate.

Q. This permit was for the slip ring motor?

A. Yes, I think it was.

Q. What was it, Mr. Price, that you had to get your permission for?

A. The small induction motor.

Q. Even though they were a safer type of motor than the other type? A. Yes.

Q. So you complied with the specifications and secured a specific safety order from the Industrial Accident Commission?

A. Yes. I would like to explain how it is I had received the permission: In a conference with members of the Safety Department of the Industrial Accident Commission in San Francisco, I had taken my mechanics and electricians over there, Mr. Counzelman, the designer and we had a meeting which lasted almost all the afternoon; and, in that meeting, I brought up, or somebody brought up, the point about the induction motor,—that it had been approved; and we particularly noticed the letter that we received from the Commission——

Q. You are referring now to a letter that was written in April. A. Yes; April, 1935.

Q. Now, you put this Plaintiff's Exhibit No. 74 on the easel the other day, and discussed it; and

(Testimony of Thomas Moore Price.)

there is another exhibit, gentlemen, that is the east portal drift. Exhibit 74 does not show the east portal drift; but Plaintiff's Exhibit 61 does shows those drifts. You will recall, as you stated, it was about the 1st of May, 1935, when you started those drifts? A. Yes.

Q. What did you do with the earth that was removed from the portal?

A. We wasted it on the Fish Ranch or Claremont Road on some private property. [1473]

Q. So, you did not haul any of that dirt over the hill? A. No.

Q. The way Mr. Marrin was indicating on the perspective map. You took the dirt and placed it in a ravine a little above the tunnel?

A. Yes; on private property.

Q. How many thousand cubic yards of that did you remove from the portal?

A. I don't know just at the moment. I know there was a lot, because we open cutted quite a portion of the tunnel job. The banks would slide, and we could not get a face, and we kept cutting back with an open cut to get to the point where we would be safe — where it would be safe for the workmen to start on the drifts.

Q. Isn't it a fact you removed about 25,000 yards of earth from the east portal drifts?

A. The drifts themselves?

Q. Yes.

A. I am unable to state. That is, definitely.

(Testimony of Thomas Moore Price.)

Q. In addition to that, you took, out of those rings on the east end, 60, 75 or 80 feet?

A. Yes; that wouldn't amount to much.

Q. It is shown on Exhibit 74 as being a part of that that was removed, is it not?

A. Just a portion of it .

Q. That also went into this ravine?

A. Yes.

Q. So, 25,000 yards would be a reasonably accurate estimate of the quantity of material that was removed from the tunnel at the east end and placed in the ravine?

A. From the center of the tunnel itself?

Q. Well, you had charge of the tunnel; you have had a lot of experience; you had an east portal approach; and you had an east portal building?

A. Yes. What I mean is we open cutted 35 or 40 or 50 feet of the tunnel on the east end before we ever started the drifts. We were unable to get the banks to the point where they were sufficiently safe, so we excavated quite a considerable yardage of material.

Q. Some of that material was taken a half mile down the road and put on the Eastbay Utility District land, was it not, in a ravine [1474] just this side of the Old Fish Ranch, the north side of the road?

A. I don't recall.

Q. At any rate, there was a considerable amount of material and approximately 25,000 yards that

(Testimony of Thomas Moore Price.)

came out of the tunnel itself and was placed at the east portal?

A. I believe so.

Q. Do you remember your examination of the geological report that you have referred to here, in a discussion of the conditions of the east portal as to whether they might be expected to be good or bad?

A. I think he did mention the east portal; but I would have to have it to refer to again.

Q. He also mentioned the west portal?

A. Yes, I know the west portal was definitely mentioned.

Q. It would have been possible, in this tunnel construction that you were doing, to construct drifts at the west portal and drive through ahead of the general excavation, would it not?

A. Yes, I think it would have been possible. I don't think it would have been practical, on account of interference with the other work.

Q. It would have been possible to proceed with the excavation of those drifts from the west end and have been well underground at the same time you were constructing the west portal building, would it not?

A. Yes, I think almost anything is possible.

Q. You did it at the east portal, didn't you; you had a building under construction on the east portal at the time you were doing this drift work?

A. Yes, we did.

(Testimony of Thomas Moore Price.)

Q. You used one drift to get underground, and then crossed over in another drift to open up —

A. Yes; but we had an area which had been open cutted behind the building.

Q. That would have been possible at the west portal, would it not?

A. Sure. It is possible. I did not think it was practical.

Q. You did not think it was practical. It was practical from the east end?

A. Yes, it was practical because we had an open cut — [1475]

Q. Well, isn't it true, Mr. Price, that you could have gone underground at the east portal without open cutting or drifting in from the east end of the east portal building, and gone right underground, and you would have later had to abandon approximately 100 feet of drift? It could have been done?

A. Yes; but I don't think it would have been practical.

Q. Why not?

A. To work on the building at the same time.

Q. Why not? You had the space in the building in which you had to put your foundation — the space for the transition house, and where the tunnel goes — you could go through the building foundation?

A. In the portal building, that goes underneath the tunnel — the struts —

(Testimony of Thomas Moore Price.)

Q. Your construction struts could have been placed underneath the tunnel? A. Yes.

Q. But you did not? A. No.

Q. It is a fact, however, that you went underground with one drift and then crossed over and drove ahead in two drifts? A. Yes.

Q. And it is also a fact, if you desired to do so, you could have started doing that work in 1934?

A. Yes.

Q. And if you had done it in 1934, you would have had your tunnel hole through much sooner; you would have had no difficulty regarding ventilation, and you would have had drafts through your tunnel? A. Yes.

Q. And you would have been able to use non-safety equipment in it, under those conditions?

A. Yes. I think that would have been a very impractical thing to do. The practical thing to do is to drive the tunnel from the west end completely. We only went to the east end when we found out we could not make sufficient progress on the west end to complete in time.

Q. If you had known all the factors that you would encounter in driving the tunnel, you could have — had you known those things in [1476] 1934, you would not have started the east portal drifts at all?

A. Yes. I think, if one knew everything prior to doing it, it would be a foregone conclusion as to what the result would be.

(Testimony of Thomas Moore Price.)

Q. A great many tunnels are driven from both ends, aren't they?

A. Yes. I don't think tunnels are driven from both ends when the grade is very excessive, though.

Q. How about the Claremont Tunnel?

A. I don't know. I think it was.

Q. Didn't you hear Mr. Larson testify that it was 3. x x x? A. No. [1477]

Q. There was enough grade in the tunnel so that a flood went into it?

A. The amount of grade in the Claremont is so slight that you or I could not tell the difference.

Q. Is there a grade in the Sunset Tunnel?

A. I do not recall. I think there was about 3 per cent.

Q. And they hauled the dirt out of the Sunset Tunnel in trucks, the motors of which were operated to hoist the dirt up the grade?

A. I think most of it was done by lowering, as I recall it, most of the excavation.

Q. Naturally, you would not be able to run it out by gravity?

A. The normal thing to do in a tunnel is to work it from the lower end to get the drainage. If your tunnel is too long, it can be done from both ends.

Q. Would you say that the Sunset Tunnel was an abnormally long tunnel?

A. No, I would say it was not. I would say it was a short tunnel.

(Testimony of Thomas Moore Price.)

Q. It was 4500 feet, was it not — 4200 feet. Would you say the Sunset Tunnel was a short tunnel?

A. It was 4200 feet, you say. I do not recall. I understand it was not a very long tunnel.

Q. Why did you say it was short?

A. Because, as tunnels go, it was not a very long tunnel.

Q. This is a short tunnel, and the same methods that were applied at the Sunset Tunnel as normal methods would be normal at the Broadway Tunnel, would they? A. Yes, possibly.

Q. In tne Sunset Tunnel they excavated from both the upper end of the ground and lower end, and then hauled the material, the tunnel muck, out in trucks, with hoists and cables, up the grade?

A. I understand they did some of it that way. I do not know to what extent. I am of the impression that it was not a great deal.

Q. In this tunnel it is a fact that you did drive from the east end, that you waited until 1935 to do it?

A. We drove wall plate drifts [1478] from the east end, and we did it after we found we were behind schedule on the west end.

Q. And it was your selection to drive from the west end until you started these wall plate drifts in the east end. You selected the method, didn't you, yourself?

(Testimony of Thomas Moore Price.)

A. It was our understanding the method that would be required on account of the muck removal, because it was the normal thing to do, and drive up hill.

Q. It was normal in the Sunset Tunnel?

A. I think they drove largely on the Sunset, I don't know how much, but that is my impression.

Q. Isn't it a fact that you don't know much about what happened in the Sunset Tunnel?

A. No, I have forgotten; it would only be my impression, because I have not refreshed by mind.

Q. Do you not know that they drove with full crews from both ends of the Sunset Tunnel?

A. I think they did a portion of it.

Q. Isn't it a fact that they continuously throughout the driving of the tunnel operation drove on each end with a full crew?

A. I do not think so, but I may be wrong.

Q. You don't know, then?

A. I say I don't think so.

Q. Mr. Price, you testified as to cave-ins, one on the 28th of August, 1935, and the second one on the 22nd of February, 1936. Those cave-ins occurred in the timbered portions of the tunnel?

A. Yes.

Q. There never was a cave-in in any portion of the tunnel where the concrete lining was installed?

A. No, there was not.

Q. I ask you if it was not a fact that on De-

(Testimony of Thomas Moore Price.)

cember 31 your name was dropped from the certified copy of the payroll that was furnished to the District by the Six Companies throughout the time it was on the contract, and that after the 31st of December, 1935, your name no longer appeared on the payroll certificate that was furnished to the District by the Six Companies?

A. I understand that to be the case. [1479]

Q. You do understand that to be the case?

A. Since you asked me, yes.

Q. Have you checked your own records on that?

A. No.

Q. We have a certified copy of the payroll.

The Court: What is the fact? Can you stipulate to that at this time?

Mr. Marrin: Surely, we will be glad to stipulate that at the end of 1935 Mr. Price was transferred onto a different payroll, the General Overhead Payroll of the Company, and consequently his salary did not appear in this particular payroll other than in connection with the work, although he was still retained in the employ of the company and his duties were practically the same.

Mr. Wittschen: Previous to that time his name was carried on it every month, and after that time it never did appear on anything that was given to the District?

Mr. Marrin: I am not arguing the case. I am simply giving the fact.

(Testimony of Thomas Moore Price.)

The Court: I am trying to get the important thing. What was the fact?

Mr. Wittschen: Mr. Marrin said that he was charged differently. The only thing we want him to admit is that for all the time from September, 1934, until December, 1935, on each and every payroll his name appeared as project manager, and after that it was left out and never appeared on anything given to us.

The Court: Is that a fact?

Mr. Marrin: That is a fact.

Mr. Tinning: That is all.

Redirect Examination

Mr. Marrin: Q. Mr. Price, if the ground through which the Broadway Tunnels were driven had been self-supporting, in your opin- [1480] ion could the entire tunnel have been excavated from the west end within the contract time? A. Yes.

Q. And there would have been no necessity for any excavation on the east end?

A. There would not, in my opinion.

Q. I meant starting the excavation at all from the east end?

A. You mean tunnel excavation; naturally we had to excavate for the buildings.

Q. The east portal drifts were not started until after you had prospected enough ground to determine that it probably would not be as represented in the geological report? A. Yes.

(Testimony of Thomas Moore Price.)

Q. Now, referring to your testimony that the work was shut down on August 21, 1935, if the ground had been self-supporting would it have made any difference in the continuance of the excavation whether the concrete lining had been placed or not?

A. I don't think it would.

Q. You could have gone right ahead with the concrete lining and the excavation at the same time?

A. That was my plan, to get to good ground so that we would not have to worry about maintaining it.

Q. There would have been no delay at all to the entire job from the fact that the concrete had not been placed at that time in the excavated portion of the tunnel?

A. I don't think there would have been, other than the delay which naturally slowed us up going through the portion of the ground which we had already excavated; in other words, if we go through bad ground until we could get good ground, we would have to delay going through the bad ground, that is what I mean.

Q. If you had been in good ground at the time you stopped, regardless of the character of the ground which you passed through in the past, you could have continued with the excavation?

A. I would have [1481] recommended continuing it.

Q. While you were concreting the portion that was open? A. Yes.

(Testimony of Thomas Moore Price.)

Q. It was because of the fact that the ground appeared to be continuously worse that the excavation was stopped? A. Yes.

Q. You were asked about the specifications on the Sunset Tunnel and you explained some of the differences between those specifications and the specifications for concreting on the Broadway Tunnel. Did the specifications for the Sunset Tunnel require internal vibration of the concrete?

A. No, I do not think they did.

Q. What do you mean by "internal vibration"?

A. I mean vibration with a mechanical machine of some kind that moves very rapidly through a very small place, like any kind of vibrator that jiggles the concrete and shakes it down into a homogeneous condition.

Q. What is the difference between internal vibration and external vibration?

A. Vibration inside the form and outside the form.

Q. On internal vibration the men have to get into the forms with these machines? A. Yes.

Q. And place them in the concrete and turn the air on and vibrate the concrete?

A. There are two types, there are air and electricity.

Q. And that form of vibration was required in the Broadway Tunnel? A. Yes.

Q. It was not required in the Sunset Tunnel, to the best of your knowledge?

(Testimony of Thomas Moore Price.)

A. To the best of my memory it was not.

Q. Would that make any difference in the handling of concrete?

A. I think it would be less dangerous. It is rather dangerous working around a pneumatic gun, because of flying rock.

Q. In other words, if the men had to be in the forms to vibrate the concrete it would be dangerous to shoot concrete when in there?

A. Yes, it would also make some difference—I would say that is [1482] largely the principal difference, because he would have to stop shooting while you vibrated.

Q. Mr. Tinning asked you on cross-examination about Six Companies, Inc., that built Boulder Dam, and the Six Companies of California. Those were separate corporations, were they not? A. Yes.

Q. The stockholders of the two corporations were not the same? A. They were not the same.

Q. In other words, Six Companies, Inc. had some stockholders who were not stockholders in Six Companies of California?

A. That is my understanding.

Q. Mr. Price, what is the general practice of contractors with respect to subcontracting work?

Mr. Wittschen: Objected to as immaterial, irrelevant, and incompetent, and not in any way binding upon the defendant, and calling for the opinion and conclusion of the witness upon a matter that is not the subject of expert testimony, or material in this case.

(Testimony of Thomas Moore Price.)

Mr. Marrin: On cross-examination they have emphasized the fact that there were subcontractors here, and that one subcontractor relied on another subcontractor, and created an erroneous impression. I want to simply bring out it is very general practice in large constructions to subcontract a part of the work, and that the procedure in this case of the general contractor which was pursued, taking the difficult part of the work on the tunnel and subcontracting the outside work, is not unusual in the construction industry.

The Court: In any event any subcontractor or any number of them, they would be answered for by the contractor.

Mr. Marrin: That is true, the contractor is responsible for them.

Mr. Wittschen: We merely brought out in answer to their claim [1483] of delay that they were subcontractors of their own choosing. It is not material what is done on any other job. There is ample authority on that if your Honor cares to hear it. It does not affect a particular job.

The Court: He has indicated the purpose of the offer. There is no confusion in my mind.

Mr. Marrin: If there is no confusion in your Honor's mind I will withdraw the question.

The Court: Very well.

Mr. Marrin: Q. Mr. Price, you were asked a question on cross-examination by Mr. Tinning with reference to the time when this road from this point

(Testimony of Thomas Moore Price.)

here up to the tunnel and from this point was constructed.

Mr. Tinning: For the sake of the record, you are referring to the Landvale connection and the west portion of the highway?

Mr. Marrin: Yes, I am referring to the highway from the west portal of the tunnel to its connection with Broadway and Keith Avenue in Oakland.

The Court: On what?

Mr. Marrin: On Defendant's Exhibit P.

Q. Would the public have been able to use that road, Mr. Price, had it been completed prior to the completion of the tunnel?

Mr. Tinning: Mr. Marrin, simply for the record, I object to the question. There was no intention on our part to in any way suggest that any part of the project could be turned over to the public use until it was completed as a whole. Our questions were with respect to delay.

Mr. Marrin: Will it be stipulated, then, Mr. Tinning, that this road would not have been in use by the public until the tunnel was completed? [1484]

Mr. Tinning: Yes, until the tunnel was completed.

Mr. Marrin: Mr. Price, in your cross-examination, in answer to a question of Mr. Tinning, you said that the only written applications for an extension of time that had been made were those of June 10, 1935 and the one, I believe, that was dated May 8, 1936. I call your attention to Plaintiff's Exhibit

(Testimony of Thomas Moore Price.)

49, which is a letter of August 28, 1935, and which has already been introduced in evidence and read, and draw your attention to the following part of this letter:

"You are further notified that we have and assert a valid claim for an extension of time for the performance of our contract arising from the causes heretofore stated to you in our request for such extension dated June 10th, 1935, and in addition to the extension of time requested therein, we now assert a right to and request such additional extension of time as may be necessary to complete the contract, in the event that we continue to perform same, based upon the following reasons in addition to those heretofore asserted:

"(a) Heavy, treacherous and unforeseen character of the ground making construction more difficult and slower through no fault of the contractor;

"(b) Inadequacy and unsafety of the design in accordance with our letter to you dated August 23, 1935;

"(c) Additional work required to be done not included, intended, or contemplated by the contract, plans and specifications."

That written application for an extension of time was also filed in addition to those which were testified to, was it not?

A. Yes. I did not think of it at the moment.

(Testimony of Thomas Moore Price.)

Q. You did not have that in mind at the time that you were testifying on cross-examination?

A. No.

Q. Now, I would like to call your attention to Defendant's Exhibit [1485] QQQ, which is a letter dated April 20, 1936, addressed to the Board of Directors, Joint Highway District No. 13, State of California, 1448 Webster Street, Oakland, California. Gentlemen:

"This will serve as formal notice that by proceeding with the construction of the Broadway Low Level Tunnels, the undersigned, Six Companies of California, does not waive, in any manner, the rights and claims which it has heretofore asserted and does now assert against your District.

"The undersigned does, on the contrary, reaffirm and reassert all of its claims as heretofore stated to you in writing, including particularly the statement thereof contained in the letter dated August 28th, 1935, from us to you, and will continue to assert each and all of said claims and any others which may have since been made, either in writing or otherwise, until the same are fully satisfied.

"Yours very truly,

SIX COMPANIES OF CALIFORNIA

By (Signed) HARRY J. KAISER,

President."

That was a reiteration of the claim——

(Testimony of Thomas Moore Price.)

Mr. Tinning: I object to the question as being leading.

Mr. Wittschen: And also calling for a conclusion as to what it was. It speaks for itself.

Mr. Marrin: Q. Did you have that letter in mind at the time you made your answer?

A. No.

Q. That was also filed with the District, was it not? A. Yes.

Mr. Wittschen: We introduced it.

Mr. Marrin: Mr. Price's answer was not quite correct and I wanted to clear it up.

Q. On one of the questions on cross-examination you testified that one of the subcontractors had some engineers checking quantities on the outside work. Do you recall that, Mr. Price? A. Yes. [1486]

Q. What do you mean by checking quantities?

A. A contractor is paid by quantities, so many yards of dirt or so many yards of concrete, or so many lineal feet, and this figure is set by the engineer, and the contractor generally measures or estimates the figures in some way so that he can be sure he is receiving his just reward.

Q. In other words, that is a check made immediately after the work is done?

A. Yes, it is different with different contractors; our own policy on jobs is to check it monthly as the engineer does when he gives it.

Q. I simply wanted to clear up what checking of quantities was. The checking of quantities is

(Testimony of Thomas Moore Price.)

simply so that the subcontractor knows that the engineer is allowing the proper quantity?

A. Yes, the subcontractor or any contractor.

The Court: We will be in recess now until two o'clock.

(A recess was here taken until two o'clock p. m.)

[1487]

Afternoon Session

THOMAS MOORE PRICE,

Redirect Examination (Continued)

Mr. Marrin: Q. Mr. Price, you stated, in answer to a question by Mr. Tinning on cross-examination, that you did not know of any other tunnel construction contract where the Hackley gun had been used that was not successful. Do you desire to correct your answer?

A. Yes; I do know of one case.

Q. What case was that?

A. It was the case in connection with the finishing of this tunnel by the succeeding contractor.

Q. Do you know the facts in connection with the attempt to use the Hackley gun in that case?

A. Yes; I was out there and saw the work.

Q. Will you state what they were?

A. They started out to concrete by the Hackley pneumatic gun, and it took them approximately two days to make the first pour, with it; in other words, they did not make much more progress than we had

(Testimony of Thomas Moore Price.)

made at the portal; that was about the first week in February, as I recall it, in 1937. After pouring a couple of more pours, they gave the system up and rented our Pumpcrete equipment to finish the job with that. I did not think of that at the time.

Q. You testified, on your cross-examination, that the tunnel did not cave in at any place where the concrete had been placed. How far back of the face of the excavation did the cavein of February 22, 1936 occur?

A. I would say the center of—approximately 50 feet back of the core face.

Q. How far was the concrete back of the face of the excavation at that time?

A. Approximately 125 or 130 feet.

Q. Under any plan of concrete that you considered, would the concrete have been closer than that to the face?

A. Not with movable [1488] steel forms. With the core removed, you need some place to work; you had to have space to work in excavation and concrete equipment.

Q. This much space was necessary to work on the excavation?

A. Yes, approximately that much space.

Mr. Marrin: That is all.

Mr. Tinning: No questions.

CLARK RANKIN,

called for the plaintiff; sworn.

Direct Examination

Mr. Marrin: Q. Will you give us your address, Mr. Rankin?

A. 729 Prospect Road, San Mateo, California.

Q. Will you state your education and your experience in construction work?

A. Well, I have lived in construction camps almost from the time I can remember; and my first job on construction work was in the summer of 1922 on the O'Shaughnessy Dam of the Hetch Hetchy Water Supply. The following summer I worked for the Southern Pacific Company, on their double tracking work of the road over the Summit, and on that work I became familiar with hard rock tunnels.

Q. There were some tunnels constructed on that work?

A. Yes; they were short tunnels, constructed through hard rock. I worked on both of these jobs, I might add, on the surveying parties, giving lines and grades for the work that was done by the engineering parties. During this time, I was going to either high school or college; and the following summer, I worked for the Central Pacific Railroad, or the Central Pacific part of the Southern Pacific; it was known as the "Central Pacific." They were putting up the money for this particular job,—the construction work of the Natron Cutoff; I believe it is now known as the Cascade Line.

(Testimony of Clark Rankin.)

Q. Where was that located?

A. This particular work was located in Oregon, —the summit of the Cascade Mountains. I first worked as an [1489] estimator for the railroad company on grading work, and later as a tunnel timbering inspector, tunnel concrete inspector and force account man.

Q. There were tunnels in that work?

A. There was a three-quarter of a mile tunnel, and also a deadend "Y" tunnel of about, I should say, 700 feet in length; single track tunnels.

Q. You may proceed.

A. I was attending Stanford University during this time, although, I might add, I delayed returning to college while being employed on these particular tunnels. I was interested in the work, and stayed there until the completion, in November of 1923, returning to college. Then the next summer I went to work for the Southern Pacific, at what is known as the Weed Cutoff. That was bridge work. I worked as timekeeper and estimator on that. The following summer, 1923, I returned to college and—that was the summer of 1924 that I worked on the Weed Cutoff. In 1925, I worked on a section of the Hetch Hetchy Water Supply; I cannot recall just now—it was pipeline work, if I remember right. The summer of 1926 I worked on the Coast Range Division; that was just opening up; it was the Hetch Hetchy Coast Range Division near Livermore; returning to school; and, in the summer of 1927, again

(Testimony of Clark Rankin.)

returned to these tunnels. During that time, I worked there—the work was just getting underway, and I worked, at that time—well, the work was primarily outside survey work, and also building camps and plant layout of the different portals and the shafts of the future tunnels and building construction.

In December, 1927, I returned to the Hetch Hetchy Project on the Coast Range Division at Livermore, and continued there, working either in engineering or supervisory capacities, depending on which was required of me, at the time, until, I believe, about August of 1934. From August, 1934, until December of 1934, I continued working for the City of San Francisco on the Hetch Hetchy Project, on [1490] the pipeline and building construction. December 13, 1934, I was employed by Six Companies of California, at the Broadway Tunnel, as personnel man or personnel manager. My duties, at that time with Six Companies, were to assist in the employment of tunnel men and labor for the project for Six Companies.

Q. How long did you continue in your position as personnel manager of Six Companies of California?

A. I might add, at this time, that I did not graduate in civil engineering from college; I did not finish my course.

The Court: Q. What excuse have you got for that?

(Testimony of Clark Rankin.)

A. I became primarily interested in the construction work and an opportunity I could not overlook.

The Court: That is all right.

Mr. Marrin: Q. In connection with the Hetch Hetchy work, did you work in the tunnels?

A. I did; I worked in the tunnels and in the office, depending on the work required of me. That was a period, as I say, from 1927 to 1934; and I covered practically every phase of the work at different times.

The Court: Q. How old are you?

A. Thirty-two.

Mr. Marrin: Q. What work did you do when you were in the tunnels?

A. Well, it covers a large field.

The Court: In this tunnel?

Mr. Marrin: In the Hetch Hetchy Tunnel.

The Witness: A. In the Hetch Hetchy Tunnel, I had the opportunity, as I stated before, to see practically every phase of the work. I had the designing of timber sets, in charge of Gunite operation, the headings, special structures. I had the outside designing of buildings, camp buildings, plants, setup of equipment, designing of underground equipment, grouting, superintendent of grouting. Well, there was just any number of things. I had a hand in practically every phase of it that went on at different times. [1491]

(Testimony of Clark Rankin.)

Q. How large were the Hetch Hetchy tunnels?

A. The Hetch Hetchy tunnels were circular in shape, 10 foot 6 diameter inside; the excavation varied from 12 to 16 feet.

Q. Why was the excavation so large?

A. To provide ample lining for the different kinds of ground encountered.

Q. Some difficult ground was encountered?

A. Very difficult.

Q. You stated you were employed by Six Companies on December 13, 1934, as personnel manager. What were your duties in connection with that work?

A. Well, under the system of hiring men, the men were sent to us from the different agencies. I acted as representative of Six Companies in connection with an agent of the National Reemployment Service, and, together, we investigated the experience of the men and passed upon that.

Q. How long did you continue in that position?

A. I continued in that position until about May 30, 1935.

Q. What change was made then?

A. Mr. Whitmire, superintendent of both the north and south tunnels, was injured. I believe it was on the morning of May 30th—It was thereabouts; and I was appointed superintendent,—temporary superintendent,—in his absence.

Q. Of the driving operations?

A. Of the driving operations.

(Testimony of Clark Rankin.)

Q. Were you superintendent of the driving operations from that time until the excavation operations were closed down on August 21, 1935?

A. I was in charge of the driving operations until August 21st, under more or less the direction of Mr. Whitmire.

The Court: Q. August, 1936?

A. August 21, 1935.

Mr. Marrin: For illustrative purposes, I would like to offer in evidence this poster, to be marked plaintiff's exhibit next in number.

(The poster was marked "Plaintiff's Exhibit No. 75.") [1492]

Mr. Marrin: Q. Mr. Rankin, will you describe the method of driving which you followed while you were in charge of the tunnel operations; and, in stating that, you can refer to Exhibit 75?

The Court: This is not his method, is it?

The Witness: This method was adopted by Mr. Whitmire.

The Court: Q. Before you went on the job?

A. Before I went on the job and that was where he left off. At the time I went on the job, this method had been employed in the south tunnel for some distance; this is the dragline scraper bottom drift method; Mr. Whitmire designed it and perfected it. At the time I went on the job—Immediately before I went on the job, I think, from April 30th until May 30th, Mr. Whitmire had been in charge also of the north tunnel; and he had not, at

(Testimony of Clark Rankin.)

that time, introduced this system to the north tunnel. He was using the wall plate system in the north tunnel, with these scrapers operating in the wall plate drifts to remove the muck.

Mr. Marrin: Q. Mr. Rankin, a Bagley scraper has been mentioned in the evidence here two or three times. Is a Bagley scraper represented on this drawing?

A. Yes. That is drawn to a scale. This is a Bagley scraper here, the whole back line there; and there is a block in the heading in the drift. This is the load line here, which extended to a hoist mounted on a Jumbo, as illustrated on a poster that was presented before. These two lower drifts were driving ahead. This is a section through the tunnel, and this is a cross-section cut through on the bottom line; that would come down like this. This line represents the core of this area in here, as I said before. Other drifts were pushed through there.

Mr. Tinning: Q. Mr. Rankin, so we can have more or less of a clear record here, which we will be able to follow, you refer to "these drifts,"—the two drifts at floor grade?

A. Yes, the bottom drifts. [1493]

Q. On either side of the tunnel?

A. On either side of the tunnel.

Mr. Marrin: And the witness is referring to the diagram on the left side of the poster.

A. This drift was driven ahead, and the muck that was broken down in the face of this bottom

(Testimony of Clark Rankin.)

drift was removed by the Bagley scraper running back and forth in here. Behind the bottom drift and above it was driven a second drift on each side. The muck from that drift was dropped into the lower drift and was also removed by the Bagley scraper. At the toe of the core was the air-operated shovel. Following behind the second drift, the operation was carried in one large drift or ring drift; this whole area here was opened up and dropped down on either side, and that muck was also taken out with the Bagley scraper.

Q. This longitudinal section, this part to which I am pointing, represents the lower drift to which I am pointing on the diagram on the right-hand side of the poster? A. Yes.

Q. The part in here, which is the second drift on the longitudinal section, represents the second drift on the poster? A. Yes.

Q. And the part here, which is the upper part on the longitudinal section, represents the ring part on the poster? A. That is right.

Q. And the muck was—These piles here represent muck which was dropped down onto these boards which were the floor of the second drift?

A. That is right.

Q. And these were then dragged out to the core; the wavy line represents the core? A. Yes.

Q. And dropped down through the face?

A. Yes.

Q. Was that method of excavation followed all the time you were in charge of the driving?

(Testimony of Clark Rankin.)

A. All the time, in both the north and south tunnels. [1494]

Q. What distance in each of the tunnels was excavated under your supervision from May 30, 1935 to August 21, 1935?

A. As I recall, the total excavation from May 30 to August 21 in the north tunnel was approximately 450 feet; in the south tunnel the distance was 550 or 560 feet. Those are approximate figures.

Q. What was the character of the gorund that was encountered in this excavation when you were in charge?

A. During the time I was in charge the ground was of a very mottled character, you might say, it was not in true formation. It consisted of what I called junk. There were kidneys of sandstone, I think the geologist called them a diabase dyke, and various formations in between. Some cherts, so called cherts.

Q. Was it self-supporting? A. Not at all.

Q. All required heavy timbering?

A. All required heavy timbering, as shown in the poster.

Q. What were the reasons for closing down the excavation on August 21, 1935?

A. Well, on August 21, 1935, particularly in the north tunnel, we were going into very bad ground, showing weight, and immediately behind the core, and in the headings of the drifts, we were pushing ahead, we had a cross spreader of the timbers in

(Testimony of Clark Rankin.)

the drift, and, by the way, they were 12 by 12 timbers, and they were showing considerable weight, the rings were in very bad ground, and showed weight right above the core.

Q. Where were the timbers causing the trouble in the tunnel, in what part of the tunnel?

A. At that time, that is, as of August 21, the posts throughout the tunnel that I had charge of the driving of were giving trouble practically all the way through, particularly in the north tunnel from a point about 25 or 30 feet to the west of the cross adit to the face.

Q. When you say the tunnel that you had charge of driving, you mean [1495] the part that had been driven under your supervision?

A. The part driven when I was there.

Q. Were the timbers in the sandstone section giving any trouble?

A. No, we did not have to replace any posts in the sandstone section.

Q. What did you do with the timbers which were causing trouble in the newly-excavated portion?

A. Well, we were patroling the tunnel, the walkers on shift at the time, myself, the District men, and any sign of weight and breaking of posts was given immediate attention. We had a timber crew, as I remember, we had timber men working there from June sometime until we quit, that replaced the posts as they broke.

(Testimony of Clark Rankin.)

Q. Pardon me just a minute. You said it was very heavy ground, as shown by the poster. What did you mean by that?

A. I meant to say that the timber was as shown on the poster, to take care of this ground.

Q. And by the timber you mean it required all of this spiling?

A. Spiling, breast-boarding, and the sets averaged 2-foot centers, they were 12 by 12.

Q. That means 2 feet from the center of this one to the center of this one?

A. There were 3 12 by 12 in a distance of six feet.

Q. Mr. Rankin, I show you a photograph, and I want to ask you to explain to the Judge what that shows.

A. This shows a heading of the lower drift, and this is a case where our spiling and the forward breast-boarding was giving weight, and this is the running condition of the ground that occurred at that point. The water that was in there was done away with.

Q. What date is that, approximately?

A. August 5, 1935.

The Court: Locate the tunnel.

A. It is the bottom drift of the south tunnel, as I remember it; I believe the south bottom drift of the south tunnel, if I remember [1496] right. That is my recollection at the time.

Mr. Tinning: Q. What station?

(Testimony of Clark Rankin.)

A. I could not say off-hand what station that was on August 5.

The Court: Locate it as near as you can.

Mr. Tinning: Mr. Price has the books that will do that. A. This one will give it approximately.

Mr. Marrin: May we have this offered so that we may have an exhibit number on it?

The Court: It may be admitted and marked.

(The photograph was marked "Plaintiff's Exhibit 76.")

[Set forth in the Book of Exhibits at page 290.]

Mr. Marrin: For the sake of the record, this testimony is with respect to Plaintiff's Exhibit 76.

Mr. Tinning: He referred to the top photograph shown on Plaintiff's Exhibit 76.

Mr. Marrin: Q. Can you locate that station, Mr. Rankin?

A. I would say it was a north drift from the progress report, that is, at station 124+72.

Mr. Marrin: Q. And that was at the inner face of the excavation on that date?

A. Yes, that was at the heading. This picture——

Q. The witness is now referring to the lower photograph on Plaintiff's Exhibit No. 76.

A. This picture was taken in the heading of the lower south drift of the north tunnel. It illustrates the spiling overhead, the 4 by 6 spiling, the breast-boarding of the base, and the rail blocks of the Bagley scraper.

Q. Is that the lower drift?

(Testimony of Clark Rankin.)

A. The lower right drift of the north tunnel, to the best of my recollection. I was with the photographer at the time these were taken, but that is as I remember it.

Mr. Tinning: Q. What station would that be?

A. That is at station 122+44, about.

Q. Is the photograph taken looking ahead in the tunnel, looking east? [1497]

A. The photograph is taken looking east. This illustrates the breastboarding, and you can see the end of the spiling at the face. They are just about ready to put the next set in.

Mr. Marrin: Now, I have here a series of photographs which were taken in the tunnel in the early part of August, 1935, which I would like to offer as one exhibit.

Mr. Tinning: How many are there in that group that you are offering? They are numbered.

Mr. Marrin: They are 131, 132, 133, 135, 140 and one without a number. There are six photographs.

The Court: Mark them as one exhibit consisting of six photographs.

(The photographs were marked "Plaintiff's Exhibit 77.")

[Set forth in the Book of Exhibits at page 291.]

Mr. Marrin: Q. Now, Mr. Rankin, will you explain to his Honor what this photograph shows, and the witness is now referring to the photograph marked 131, Plaintiff's Exhibit 77.

(Testimony of Clark Rankin.)

A. This photograph was taken in the south tunnel looking toward the west portal. It illustrates the cross bracing and diagonal bracing that was made necessary by the weight shown on the timbers at that location. I believe that this is in the vicinity of the first cross adit. This is a square set, approaching the 14 feet of timbers that were placed across the tunnel to hold the weight of the ground.

Q. By the braces you refer to the cross braces?

A. Yes, the diagonal bracing. These are the cross bracing and this is the square set in here.

Q. Do you know at about what station that adit was? A. I could not recall off-hand.

Q. Could you tell from this?

A. At about station 118+25, roughly, in the south tunnel. [1498]

Q. That picture was taken in the south tunnel?

A. It was taken in the south tunnel looking toward the west portal.

Q. Take the photograph marked 132, Plaintiff's Exhibit 77; will you explain what that shows?

A. This is a photograph also taken in the south tunnel on the same day looking toward the face, but some distance back. It shows in the immediate foreground the 12 by 12 segments that are ready for placing in the ring.

Q. These are the segments?

A. Yes, and beyond that the jumbo on which were mounted the hoists for pulling the Bagley scraper. This, by the way, is the jumbo which was

(Testimony of Clark Rankin.)

originally designed for the job but modified to fit the use it was later put to, that is, a hoist mounted for the Bagley scraper.

Q. What was the use made of the jumbo?

A. The jumbo carried the hoist that motivated the Bagley scraper. These tracks on either side of the tracks that the jumbo moved ahead on.

Q. Now, refer to photograph 135, Plaintiff's Exhibit 77, and will you explain what that shows?

A. This photograph was taken in the south tunnel at a short distance west of the core, it shows the core and the lower and upper drift on the left-hand side of the tunnel looking toward the east. It also shows the top of the core, or the so-called ring.

Q. These at the left of the photograph are the drifts?

A. Those are the drifts as illustrated on the poster Exhibit 75. This in the foreground is the Bagley scraper.

Q. And this photograph No. 132 and this photograph No. 133 were taken on August 6, 1935?

A. That is correct.

Q. Referring to photograph 135, of Plaintiff's Exhibit 77, will you explain what that shows?

A. This photograph was taken in the south tunnel on the same day as the previous photograph. This is at the face of the ring, shows the timber in place, and the top of the core. [1499]

Q. This timber in this photograph 135 shows the timber in the ring at the top of the arch?

A. That is right.

(Testimony of Clark Rankin.)

Q. Now, referring to photograph No. 140 of Plaintiff's Exhibit 77, will you explain what that shows?

A. This is an illustration of the breastboarding at the face of the lower drift in the south tunnel; this is marked the "Lower north drift." I am not certain whether the one preceding it is marked "Lower north drift," or this one is right. There is some confusion, but these were pictures in the south tunnel, one heading into the other. This photograph shows the ring.

Q. These timbers ahead of the man as shown on the photograph were the breastboarding?

A. This represents the breastboarding and this represents a flow of water coming through.

Q. Now, refer to the photograph on Plaintiff's Exhibit 77 which is unnumbered, and which has the legend, "Showing excavation method in arch of north tunnel, F method." Will you explain what that shows?

A. This shows excavation in the arch of the north tunnel using the same system. This is the top ring. These are the ring timbers. These are the lagging that has been placed ahead and this is the core, here. This is taken on a sort of an angle. This shows the dark shaley material here, and this is a kidney, the lighter material there.

Mr. Tinning: Q. Which is the kidney of lighter material?

A. This is the kidney of lighter material shown here.

(Testimony of Clark Rankin.)

Q. Where the man is standing?

A. Yes. He is spading this lump out here in order to get in another set of timbers.

Mr. Marrin: The kidney of lighter material shows lighter on the photograph than the other material?

A. That is right.

Q. And the part of the photograph back of the man who is working with an air hammer or drill is the ground?

A. Or the face of the [1500] ring drift.

Mr. Marrin: I have one more photograph here which I would like to offer in evidence as Plaintiff's Exhibit 78.

The Court: It may be admitted and marked.

(The photograph was marked "Plaintiff's Exhibit 78.")

[Set forth in the Book of Exhibits at page 297.]

Mr. Marrin: Q. Mr. Rankin, referring to Plaintiff's Exhibit No. 78, will you explain what that shows?

A. This is a picture looking toward the west portal of the north tunnel, from a station some distance in, in fact, it is probably about 50 feet east of the station where the first cross adit carries on to the south tunnel. This is the rigging that we used to haul the cars out of the cross adit and elevate them for dumping into the heading muck cars.

Q. These timbers at the side of the tunnel are what are known as spreaders?

(Testimony of Clark Rankin.)

A. These spreaders were put in after this weight became noticeable, that started at that section.

Q. Now, did you remain in the employ of the company after the excavation operation was shut down on August 21, 1935?

A. Yes, I did. Following the shut-down of August 21, I was working on a general survey of the conditions of the tunnel, that is, a survey of the timber and things of that nature.

Q. But you did not supervise any further excavation operations for the company?

A. Not at that time.

Q. Did you ever thereafter supervise any excavation operations for the company? A. I did.

Q. Where was that?

A. On the east portal ring and at the concrete on the east portal.

Q. When were you employed on that work?

A. I believe from some time in the middle of September until about the 3rd of November.

Mr. Wittschen: 1935? [1501]

Mr. Marrin: Q. 1935? A. 1935.

Q. Did you leave the employ of the company on November 3, 1935?

A. I cannot exactly place that date; it was somewhere around there, I was transferred to other work.

Q. You were not thereafter employed on this particular work? A. No.

Mr. Marrin: You may cross-examine.

Mr. Tinning: No questions.

VICTOR G. HINDMARSH,

Called for the Plaintiff; Sworn.

Mr. Marrin: Q. Mr. Hindmarsh, what is your present occupation?

A. General superintendent for Bechtel, McCone Co., building refineries for the Standard Oil.

Q. Where is the refinery being built?

A. Richmond.

Q. Will you state your experience in construction work, Mr. Hindmarsh?

A. Well, I started construction work in 1901 in the engineering department of the Southern Pacific Company on the Central Pacific reconstruction in Nevada, at Linden. We were building three tunnels there, straightening out the line running from, as I remember it, about 1500 feet to 4000 feet long. In 1905 I was transferred from there to the Bayshore Cut-off and took charge of the surveying on tunnel No. 1 and tunnel No. 2.

Q. That was for the Southern Pacific Company?

A. Southern Pacific Company. The latter part of 1906 I was transferred to the Dumbarton Bridge project and had charge of the engineering and the construction of the railroad bridge across San Francisco Bay, between the years 1906, the latter part of 1906, to 1910. In June, 1910 I was transferred to the Natron Cut-off in Oregon, as resident engineer of 15 miles of that line, which was let under contract, [1502] and on that job there was principally grading, a lot of bridges, culverts, and one tunnel about 600 feet long. I worked there until 1913 and

(Testimony of Victor G. Hindmarsh.)

was then transferred to Marshfield, Oregon, as resident engineer in charge of construction on about 30 miles of the road of the Willamette Pacific Railroad; this was grading, several large bridges and three tunnels ranging from 900 feet to a mile long in the Coast Range. I stayed there until July, 1917, when I went to work for the Government in charge of the North Portland Shipyard, and stayed there until the armistice was signed, and I left the Government the latter part or late part of 1918 and went to work for J. F. Clark & Company, general contractors, as general superintendent, and while with them I widened a tunnel for the Northern Pacific Railroad at Corbett, Oregon, about 600 feet long, and lined it with concrete, and did considerable highway work in Eastern Oregon. I stayed with them until 1922 when I went to work for Grant, Smith & Company, as general superintendent, and was sent to California in charge of all of their California work. They were just finishing up the tunnel at Susanville, it was practically completed; they were working on the Pulgas Tunnel, at Redwood City, which was under the City of San Francisco, under Mr. O'Shaughnessy, and a highway at Sonoma County. I finished up this work in California and went to Tacoma, where we built a large highway bridge for the State of Washington, which took a little over a year's time to build, and I was transferred to Chelan, Washington, in charge of a project for the Washington Power Company, on which

(Testimony of Victor G. Hindmarsh.)

Grant Smith had the contract; this consisted of two and a half miles of tunnels and a dam and a power house. I worked there until the fall of 1927, when we finished the project, and I went with the General Construction Company as general superintendent in charge of all their outside work; this consisted of a lot of canal work in Eastern Oregon, the Bureau [1503] of Reclamation, a railroad from Nissa, Oregon, to the Owyhee Dam, and when we finished the railroad we were successful contractors on the Owyhee Dam, and on this railroad there was a 600-foot tunnel. Then I worked on the dam, on which there was a diversion tunnel 30 feet in diameter, mostly, and 300 feet of it, I believe now, was 40 feet in diameter, and the shaft, 300 feet high, was 30 feet in diameter. I left there in the middle of 1930, went up to Alberta, Canada, and built a canal for the City of Calgary across the Elbow River, which was in connection with the City Water-Works, and a filtration plant for the City. I completed that job in the spring of 1932 and came to Sunnyvale, California, and went to work for J. H. Pomeroy Company, as general superintendent on the Sunnyvale Hangar, and worked with him until February, 1934, when I went to work for W. A. Bechtel Company, and while I was with them I estimated a good many jobs and was bidding work most of the time till, I believe, February of 1935, I went to work for Bridge Builders, Inc., of which the Bechtel Company was a stockholder, and had charge of the

(Testimony of Victor G. Hindmarsh.)

painting of the Bay Bridge, which the Bridge Builders had a contract for, and also estimated work all over the United States for the company until September, 1935, I went to work for the Six Companies of California as general superintendent of the construction of the Broadway Tunnel.

The Court: What date was this?

A. September 5, 1935. [1504]

Mr. Marrin: Q. What were your duties as general superintendent of construction for Six Companies of California, Mr. Hindmarsh?

A. I had charge of all the construction work, both inside and outside of the tunnel.

Q. Did you examine the Broadway Low Level Tunnels which were being constructed by Six Companies of California about the time you were employed as general manager?

A. Yes, I examined them.

Q. Will you describe the condition of the north tunnel at the time, as you observed it?

A. Well, the north tunnel: there had been a cave-in, in the north tunnel, at about Station 114; it filled the tunnel full; the north tunnel had been driven about, as I remember it, 1000 feet, fully excavated and timbered.

Q. How far had the concrete lining been placed in the tunnel?

A. The concrete was in about 170 feet.

Q. What was the condition of the timbering, as you observed it?

(Testimony of Victor G. Hindmarsh.)

A. The timber was not in bad condition; some of it showed considerable weigh and showed considerable of it had moved into th. concrete, considerably; but did not see that there was any immediate danger of collapse of any part of the tunnel; there was very little of it broken. Some of it showed weight, from crushing in at the adit rather than anything else; and one or two of the segments had broken; but, outside of it being moved in or pushed in, so it would have to be moved to concrete, why, the tunnel was not in bad condition.

Q. Would all of the timbers have to be moved back?

A. No; I would say there was probably in the neighborhood of 50 per cent of it that had to be moved.

Q. Where was most of the timbering that had to be moved back?

A. Most of it was in the north tunnel, from the adit at Station about 118 and over to the heading.

Q. That would be from this adit, which is shown—I am now referring to Plaintiff's Exhibit 74, and the longitudinal sections [1505] of the tunnels on there, and referring to the adit shown on there that is furthest toward the westerly end; and you stated the heavier condition of the timbering was from this adit up to Station 114 in the north tunnel?

A. 118 in the north tunnel.

Q. From about 118?

(Testimony of Victor G. Hindmarsh.)

A. Yes; right in here, which is about Station 118, or 117+75, up to Station 122; right in here, some place.

Q. Mr. Hindmarsh, what was the condition of the timbers in the south tunnel?

A. The south tunnel was considerably better; it had not shown the movement that it did in the north. Around the adit, at practically the same station in the opposite tunnel, it showed some pretty heavy moves in there; and, of course, those moves—that had moved considerably, especially the posts; but the rock,—the rest of the tunnel had not moved very much. From the portal up to the adit, the timber was practically not moved at all; but, from the adit up to the face, some of the posts had been moved, and a good many of the segments and the caps had lowered so they encroached into th concrete, and would have to be either trimmed heavily or moved off the concrete, or something would have to be done.

Q. What did you do after taking charge of the work, Mr. Hindmarsh?

A. Well, the first thing that was apparent to me that had to be done was to find out the exact condition of the timbers; and I made a complete survey of every set there was in both tunnels, to ascertain just how much they had encroached into the concrete, and what had to be done,—whether some of them could be trimmed or whether some of them had to be moved.

(Testimony of Victor G. Hindmarsh.)

Q. Mr. Hindmarsh, I show you here a volume of sheets which are marked "Timber Intrusion, North Tunnel," and ask you to explain to the Judge what that shows, if that is the survey to which you refer.

The Court: What is this, for the purpose of the record?

Mr. Marrin: This is a timber survey which was done under Mr. [1506] Hindmarsh's supervision. A few of the sheets were taken prior to the time he came on the work, but most of it was done afterwards; and if there is no objection I will offer it in evidence before it is used.

Mr. Tinning: Well, Mr. Marrin, could we just ascertain what you have in mind?

Your Honor, if there is going to be an afternoon recess, perhaps Mr. Marrin and I could check this up and save a good deal of time. There is no intention to delay the matter.

The Court: That is a timely suggestion. We will take a recess and you can do that.

(Recess)

Mr. Marrin: If the Court please, I think we are in agreement on this.

Mr. Tinning: May I ask a question or two, before you proceed?

Mr. Marrin: Yes.

Mr. Tinning: As I understood Mr. Hindmarsh's statement, apparently this was practically every timber, and in the south tunnel there are 182 posts, and there were 1010 feet of tunnel; that would seem to

(Testimony of Victor G. Hindmarsh.)

be a timber space of 5½ feet. I think, from what he previously said and from my own knowledge, they are a little closer than that.

The Witness: That spacing of the timber was 2 posts every 6 feet. That is after I took charge of it. Before that, I think they were a little closer together; there were 3 posts every 6 feet.

Mr. Tinning: Q. If you had a group of 3 timbers, you just took one measurement of that set?

A. Yes.

Q. So that there have been some omitted in this record of the timber measurements in the south tunnel—— A. Yes.

Mr. Tinning: That was the intention.

The Witness: That was the intention. [1507]

Mr. Tinning: Q. And, likewise, the north tunnel? A. The north tunnel, too.

Mr. Wittschen: Q. A set might consist of one or two timbers?

A. Yes; might be one or two or two or three.

Mr. Tinning: Q. If they were placed close together, they are measured as one set? A. Yes.

Q. And one measurement was taken?

A. That is right.

Mr. Marrin: I offer in evidence a volume entitled "Timber Intrusion, North Tunnel, Six Companies of California-Joint Highway District No. 13," as plaintiff's exhibit next in order.

(The volume was marked "Plaintiff's Exhibit No. 79.")

(Testimony of Victor G. Hindmarsh.)

Mr. Marrin: I offer in evidence a volume entitled "Six Companies of California-Joint Highway District No. 13, Timber Intrusion, South Tunnel," as plaintiff's exhibit next in order.

(The volume was marked "Plaintiff's Exhibit No. 80.")

Mr. Marrin: May I have Exhibit 79, please?

Q. Mr. Hindmarsh, I have selected here at random, from Plaintiff's Exhibit No. 79, one of the pages, which happens to be page 11, and I would like to have you explain that to the Judge—explain what that shows.

A. These figures here on the inside are inches; they show the clearance of the timber outside of the concrete, so that there is no encroachment in this set whatever. They are all outside of the concrete lines.

Mr. Tinning: Q. Where it says 8 inches?

A. That is 8 inches outside.

Q. Outside and above; and this is 5 inches?

A. Yes.

Mr. Marrin: This means the post which would be on the north side of the north tunnel is outside of the concrete line by 4 inches?

A. That's right.

Q. And the date at the bottom states, "Position of Timber with Relation To Prescribed Neat Lining on 9-11-1935." That is the date [1508] on which the survey was made of that particular set?

A. Yes.

(Testimony of Victor G. Hindmarsh.)

Q. At Station 115+18; that is the station in the north tunnel at which this timber set was?

A. Yes.

Q. Then, as it states, the inside figures are inches of clearance; these are the figures in here; and the outside figures are inches of encroachment? Perhaps another one would be clearer.

Referring to page 17, referring to the outside figures, "2" on the posts on the north side of the north tunnel: that means that the posts at that point encroach 2 inches within the neat line of the concrete? A. Yes.

Q. And at the lower part of the same one, the post is 2 inches outside of the neat line of the concrete? A. Yes.

Q. At the point marked "O. K." the timber is just at the neat line of the concrete? A. Yes.

Q. Then, "Date of Placing Post, 3-22-1935": that means that the posts on that diagram were placed on March 22, 1935, page 17? A. Yes.

Q. The date of placing the arch segment on 3-18-1935 means that the segments above the wall plate shown on that diagram were placed on March 18, 1935? A. Yes.

Q. And the date of the arch concrete pour, October 18, 1935, shows the date on which the concrete was poured? A. Yes.

Q. Where it says, "Measurement Obtained by Pantograph or Tape," it shows the way in which the measurement was taken?

(Testimony of Victor G. Hindmarsh.)

A. Yes; some were taken with a tape and some with a pantograph.

Q. Will you explain what a pantograph is?

A. Well, it is simply an instrument which you set up on a certain part of the middle of the tunnel, and it shows the distance any part of the arch in the tunnel is, so you can get the exact measurement,—the exact distance or position of the timber.

The Court: Q. From your center point?

A. That's right. [1509]

Mr. Marrin: Q. Whereas it shows on page 17, with reference to the cross in the square opposite the word "Tape," it means it was measured by tape measurement?

A. Yes. When we did that, we spotted a point that high, and we took measurements from that, with a tape, to each segment.

Q. When you referred, in your testimony earlier this afternoon, to timbers encroaching, you referred to the movement of the timber into the neat concrete? A. Into the neat concrete line.

Q. Lined section.

Mr. Tinning: How about this one; how was this taken?

A. Well, that was taken with a tape; I know, because I know the man who took it; he did not use the pantograph at all.

Q. It was just omitted? A. Just omitted.

Mr. Marrin: Q. This survey was taken, to the best of your knowledge, in the north tunnel, start-

(Testimony of Victor G. Hindmarsh.)

ing at Station 114+80—Would you point out where that station is, on Plaintiff's Exhibit 42?

A. Right about at that point.

Q. Was that east of the cave-in?

A. Yes; just east of the cave-in.

Q. Of course, you did not make a survey of the timber in the caved-in section?

A. No; you could not.

Mr. Tinning: Well, Mr. Marrin, this measurement that appears on page 1, appears to have been taken on the 15th of August, 1935. That was two weeks before the cave-in. I think Mr. Hindmarsh said there were some measurements taken before he was on the job.

The Witness: Yes, that's right. When they started to concrete, they found, in that section where it caved in—that was the point where they were changing the timbers, taking the timbers out, when the tunnel caved. They had taken measurements there to see what the encroachment was. [1510]

Mr. Marrin: Q. To the best of your knowledge, this contains a survey of each timber from Station 114+80 to Station 121+98 in the north tunnel?

A. Well, so far as I recollect, it does. We tried to get every timber. There may be some of them left out; I don't know; I cannot say about that.

Q. But most of the timbers?

A. Yes, most of them were taken.

Mr. Tinning: The important thing is that where-

(Testimony of Victor G. Hindmarsh.)

ever timber measurements occur here, it was accurately made and recorded?

A. That is right.

Mr. Marrin: Q. Referring to Plaintiff's Exhibit 80,—which is a similar survey of the timbers, taken in the south tunnel,—is it not? A. Yes.

Q. —that survey started at Station 114+10?

A. Yes. [1511]

Q. Did that timber survey enable you to locate where the timbers would have to be set back?

A. Yes, either trimmed or set back.

Q. About what proportion of the tunnel did you find the timbers had to be set back?

A. Well, that must have been about 60 or 70 per cent. of it.

Q. 60 or 70 per cent. of it? A. Yes.

Q. What did you do then?

A. I first started in putting in square sets in both the south tunnel and the north tunnel, wherever we thought it was necessary to either remove timbers or trim them very heavily.

Mr. Marrin: In order that we may understand what a square set is I have a drawing for illustrating his testimony which I would like to offer as Plaintiff's Exhibit next in order.

Mr. Tinning: Subject to check.

Mr. Marrin: I just want it as an illustration.

Mr. Tinning: It is not supposed to illustrate any particular timber that was put in. It is to illustrate

(Testimony of Victor G. Hindmarsh.)

a standard method of square setting, is that correct?

Mr. Marrin: That is correct.

(The drawing was marked "Plaintiff's Exhibit 81.")

[Set forth in the Book of Exhibits at page 298.]

Mr. Marrin: Q. Explain to the Judge how that square setting was done.

A. This is a typical square set.

Q. You are referring to the drawing on the left-hand side of Exhibit 81, looking at it, and that drawing shows a cross section of a square set?

A. Yes. This square set is designed so that our muck cars can go through here for taking out the debris or anything; the tunnel was not being operated at that time, but there was a lot of debris that collected in here, and had to be taken out, and it was to get in, back and forth; it was also designed so that the concreting could be placed and do very little changing to the [1512] square sets, by leaving room on both sides so that our wood form arch section could be placed right into the square set, our square sets being centered on the concrete forms.

Q. These small things at the bottom here illustrate railroad tracks?

A. That is the muck track.

Q. You erected first these posts?

A. Erected these posts with caps on and put these braces in.

Q. And then braced the timber on the edge of the tunnel to the square sets?

(Testimony of Victor G. Hindmarsh.)

A. Put stulls in wherever necessary to keep any timber that showed any weakness at all or showed any movement.

Q. That square set was for the purpose of holding the timber in the tunnel rigid? A. Yes.

Q. Until it could be concreted?

A. Until it could be concreted.

Q. Referring to the drawing on the right-hand side of Plaintiff's Exhibit 81, explain what that shows.

A. This shows a side view of the square set; the dark line in the plan represents the square set, and the two light lines represent the permanent timber.

Q. That is a view you would get if you were standing in the center looking at the side?

A. Looking at the side.

Mr. Marrin: As further illustrating that I have some photographs here, four, taken of the square setting in the tunnels, which I would like to offer as our exhibit.

(The four photographs were marked "Plaintiff's Exhibit 82.")

[Set forth in the Book of Exhibits at page 299.]

Q. Mr. Hindmarsh, I show you Plaintiff's Exhibit 82, and ask you to explain to the judge what this represents. The witness was referring first to the photograph which was marked "Typical square set."

A. I do not know exactly what station this is in, but it shows a typical square set with a railway

(Testimony of Victor G. Hindmarsh.)

opening, by which you would get the cars through, and the bracing that is taking care of it. [1513]

Mr. Tinning: Q. What size timbers are shown there? A. Mostly 12 by 12.

Q. Are those in the photograph 12 by 12 next to that man?

A. Yes, that is 12 by 12. Some of them—well, now, I would not say—there are some places we used 10 by 10, but most all of the timbering was 12 by 12; there might be a 10 by 10 once in a while.

Q. Refer now to the one marked "Typical square setted section."

A. That just shows a picture of the section that was square setted, showing the tracks all the way through.

Q. Refer now to the picture marked "Square setting of south tunnel," and will you explain what that shows?

A. That shows a typical section through the square setting along about the adit; that is the Pumcrete pipe laying there where we had used it pumping concrete up into the forms.

Q. Refer to the next photograph, marked "Square setting, north tunnel."

A. This is the square setting, as I remember it, I am not sure about it, I think this is right close to the adit in the north tunnel; that was in heavy ground there and we had to cross brace here, which shut off our track entirely.

(Testimony of Victor G. Hindmarsh.)

Q. These are typical of the square setting that was done on the tunnel following the cave-in of August, 1935? A. That is right.

Mr. Marrin: I have a drawing which was made up from company records, which shows the place in the two tunnels where the square sets were placed. I would like to offer that in evidence as Plaintiff's Exhibit next in order.

(The drawing is marked "Plaintiff's Exhibit 83.")

[Set forth in the Book of Exhibits at page 303.]

Q. Mr. Hindmarsh, will you take Exhibit 83 and point out to the Court where these square sets were placed in the two tunnels following the cave-in of August 28, 1935?

A. The square setting in the south tunnel was all of this black mark, referring to the square [1514] setting that was laid where the cave-in was.

Q. The witness is now referring to the shaded portion between station 113+49 and 114+90.

A. That was square-setted where the cave was; just ahead of the cave, 115+63 and 116+25, it showed heavy ground, and we square-set that, and we did not put any more square sets until 117+55, and it was square-set solid from there to 122+05, and in the north tunnel—that was up to what date, did you say?

Mr. Tinning: October 7, 1935.

A. I forget what date you asked me.

(Testimony of Victor G. Hindmarsh.)

Mr. Marrin: Oh, no. This square setting at station 125+87 to 126+90 in the north tunnel was done in February, 1936? A. Yes.

Q. That was the place of the second cave-in?

A. Yes.

Mr. Tinning: So that I can understand and not interrupt you, the date that appears above the point, here, supposed to indicate when that square setting was done, 2/22/23, 1936?

A. They were about practically that date; we worked all day on that cave-in; we did put about six square sets in.

Q. Take here between 117 plus 55 and 122 plus 05, there is a date 10/1 to 10/7, 1935.

Mr. Marrin: Those apparently indicate the date on which the square setting was done?

A. Yes. Those were in the south tunnel. That is all the square setting that was necessary in the south tunnel.

The Court: What is the distance?

A. 100 feet.

Q. How do you account for that?

A. There was considerable difference between the north tunnel all the way through than the south tunnel, the ground was heavier and broken up.

Q. How do you account for that?

A. It is pretty hard to account [1515] for it except this tunnel ran up a gulch and this tunnel was on one side of the gulch, and this on the other. That is the only way I could account for it. It seemed to

(Testimony of Victor G. Hindmarsh.)

be in a little better formation in the south tunnel than the north tunnel. We never had anywhere near the trouble in the south tunnel as the north tunnel.

Mr. Marrin: Q. The formation was different even in one tunnel?

A. Yes, there was considerable difference in the north tunnel and south tunnel.

The Court: What is this, here?

A. That is where they figured there was the Wildcat fault. That was the only place in the south tunnel it was necessary to put in square setting.

Mr. Marrin: Q. Now, after you placed the square set, what did you do, Mr. Hindmarsh?

A. During the time we were placing the square sets, as soon as we could get organized at all we started in concreting; in several places in the tunnel the steel forms were set up, in the portal, right about 200 feet of the portal on the south tunnel, and we started concreting with those forms, and we poured one pour with the forms that were set up west of the cave-in in the north tunnel; then I tore these forms down and moved them to the south tunnel and through the adit and back into the east end of the cave-in and set them up in there ready to pour concrete, and while we were doing this we were continuing with the square sets and also building wood forms where we thought it was going to be necessary to use wood forms for concreting before the square sets could be taken out.

(Testimony of Victor G. Hindmarsh.)

Q. In concreting where the square sets were did you use steel forms or wooden forms?

A. No, it was necessary to use wood forms.

Q. Referring to Plaintiff's Exhibit No. 81, these wood forms were built right in behind the square sets, were they?

A. Yes, the square sets were designed purposely so that the wood forms could [1516] be built right in them.

Q. What did you do with the braces that ran from the square sets to the timbers?

A. When we got ready to concrete, before we arrived at these lagged concrete forms the wood stulls were cut off and steel stulls where necessary were provided to take their place, and they were concreted right in, left right in the concrete.

Q. Why did you substitute steel for the wood?

A. So that it would not be necessary to take the wood out of the concrete afterward.

Q. In other words, if you had left the wood in there you would have had to take it out?

A. You would have to botch around it and then remove it and fill that portion up with concrete afterward.

Q. By substituting steel you were permitted to leave that in the concrete? A. Yes.

Q. Why didn't you use the steel forms in this section?

A. You were unable to remove your square sets before it was concreted, and you could not move the steel forms in where the square sets were.

(Testimony of Victor G. Hindmarsh.)

Q. What was the purpose of the square sets, Mr. Hindmarsh?

A. Well, there were two or three reasons for square-setting. One reason was that the Industrial Accident Commission had given the Six Companies an order that they could not move any of the timbers or trim them without first square-setting. Then another reason was to stop any movement, any further movement, if possible, until we could get the tunnel concreted.

Q. And the square sets held the timber until the concrete could be poured?

A. Yes. Another reason was where we had to use wood forms we could use the square sets for centering on the wood forms.

Q. How long were these wood forms left on the concrete?

A. To the best of my recollection we generally left the forms on for about seven days after concreting. [1517]

Q. Could those forms be re-used?

A. Well, a good deal of it could by tearing them all to pieces, you could salvage it and rebuild it, that is the only way.

Q. In other words, these forms are built right in place? A. Yes.

Q. And the steel forms were not built in place but were built ahead of time and moved into place?

A. They were complete forms built on a heavy jumbo that moved right into position.

(Testimony of Victor G. Hindmarsh.)

Q. Did you place the concrete consecutively in the tunnel after the cave-in?

A. No, we placed it wherever it was possible to get in a form and place it. Our object was to get it concreted as soon as possible; wherever we could get a section ready either with wooden forms or steel forms we poured it, and we made a good many jumps in between the concreting, that was afterwards closed in.

Q. In other words, you finally got it all concreted? A. Yes.

Q. Most of the concreting in the north tunnel was done back of the cave-in, was it not?

A. Up to about station 119+50, as I remember it, from just east of the cave-in up to station about 119+50, was all done from the south tunnel through the adit.

Q. In other words you got your materials in through the adit? A. Through the adit.

Q. Did you have to take the forms in in that way?

A. Yes, the forms all had to go in; I took the forms down from the west end of the cave and cut them down so that I could get them through this 4 by 6 adit and take them through and rebuild them again in the east end of the cave-in.

Q. Was that the means by which you got the concrete into the tunnel?

A. It was pumped with the pumpcrete via the pump line, from the pumpcrete gun we run through

(Testimony of Victor G. Hindmarsh.)

the adit, and then to wherever we were concreting in the south tunnel, some distance, I think the maximum distance was probably 750 or 800 feet. [1518]

Q. And all of the men had to go through that?

A. Everything had to go through the adit. That is the only place they could go through.

Q. At that time there was another adit made between the tunnels. Was that of any use to you?

A. No, that was not any use at all, on this work. It would serve if anything happened for the men to escape, but at the time that was driven it was driven as close as possible to the bench in the south tunnel and the south tunnel was considerably ahead of the north tunnel; it came out in one of the small drifts in the north tunnel.

Q. In other words, referring to Plaintiff's Exhibit No. 43, this is the second adit. A. Yes.

Q. At about Station 123?

A. Yes, that is right.

Q. And in that north tunnel that adit came into a drift? A. Yes.

Q. And consequently it was of no use in getting material back of the cave-in portion. A. Yes.

Q. You employed Mr. Larson to help you remove the cave-in?

A. Yes, that was one of the first things I really did after I took charge, was to employ Mr. Larson to remove the cave-in.

(Testimony of Victor G. Hindmarsh.)

Q. Did you do any resetting of timbers while you were engaged on this square setting?

A. I don't recall that I did. I do not think so.

Q. Now, when was the excavation resumed on the north tunnel following the cave-in, Mr. Hindmarsh?

A. In the north tunnel I think it was sometime in December, the latter part of December, 1935, as I remember it.

Q. And in the south tunnel?

A. In the south tunnel it was in November, somewhere around the 20th, or 23rd, or 24th of November.

Q. Of 1935? A. Yes.

Q. Had it taken up until that time to complete the concreting of these tunnels?

A. Yes, we had concreted at that time almost [1519] to the face in both tunnels when they started excavation.

Mr. Marrin: I have here, gentlemen, a copy of a letter from the Industrial Accident Commission to Six Companies authorizing the resumption of driving in the tunnel, which I should like to offer in evidence.

Mr. Wittschen: Was a copy of this letter sent to the District?

Mr. Marrin: It has noted on there copy to Joint Highway Commission #13.

Mr. Tinning: No objection.

(Testimony of Victor G. Hindmarsh.)

Mr. Marrin: I offer that in evidence as Plaintiff's Exhibit 84.

The Court: It may be admitted and marked.

(The letter was marked "Plaintiff's Exhibit 84.")

Mr. Marrin: This is a letter on the letterhead of the Industrial Accident Commission, State Building.

PLAINTIFF'S EXHIBIT NO. 84

Industrial Accident Commission
State Building

San Francisco
November 22, 1935

The Six Companies,
Stock Exchange Bldg.,
San Francisco
Attention: S. Bechtel

Gentlemen:

It appearing from a report submitted to the Industrial Accident Commission under date of November 21, 1935, by L. K. Reinhardt, Supervising Construction Engineer of the said Commission that all sections of the Broadway Low Level Tunnel located in Alameda and Contra Costa Counties are free from the hazard of caving, and that the South tunnel is ready for driving, you are hereby notified that the Industrial Accident Commission herewith and hereby grants the Six Companies permission to resume

(Testimony of Victor G. Hindmarsh.)

the driving of the South Tunnel, pursuant to the Safety Laws of California.

Yours very truly,
(Signed) T. A. REARDON,
Chairman, Industrial Accident Commission.

FJB:RN
cc: Joint Highway Commission #13
1448 Webster St.,
Oakland, Calif.

[Endorsed]: U. S. Dist. Ct. N. D. Cal. No. 20101-R. Plff's. Ex. No. 84. Filed May 4, 1938. Walter B. Maling, Clerk. By J. A. Schaertzer, Deputy Clerk. [1520]

Mr. Marrin: Did you receive permission from the Industrial Accident Commission to resume driving of the north tunnel?

A. That was either received as an order or in a verbal order from Mr. Rhinehart; I don't remember which it was. He was in close contact with the tunnels all the time; and I collaborated with him considerably during the driving.

Q. That permission may have been oral?

A. May have been oral; I don't remember.

Q. Will you describe the method of excavation which you pursued when you resumed excavating in the tunnel, Mr. Hindmarsh; and, in doing so, you may, if you desire, refer to Plaintiff's Exhibit 42,

(Testimony of Victor G. Hindmarsh.)

which shows the different methods of excavation used in the tunnel?

A. In the south tunnel, when we started excavations, we used the three-drift system, starting from about Station 125, as I remember it, and using this system until we connected with the wall plate system that was driven——

Mr. Marrin: Pardon me. The witness is referring to a system designated as "I" in Plaintiff's Exhibit 42.

Mr. Tinning: When Mr. Hindmarsh says "the three-drift system," he was referring to "I"?

Mr. Marrin: Yes.

The Witness: Yes.

Mr. Marrin: Yes.

Mr. Tinning: There were three drifts on each side?

A. Three drifts on each side. We continued this three-drift system until we connected up with the wall plate drifts that were driven from the east end a distance of approximately 600 feet. After these drifts were fully excavated and we placed the permanent posts in these drifts, and also the "A" segment on both sides of the tunnel, and then the next operation we trapped the ring section which was let down into the three drifts and left that material there until such time as we could take the core out with the shovel. That [1521] all came out then at the same time, when the ring was completed.

(Testimony of Victor G. Hindmarsh.)

Mr. Marrin: Q. Now, that section which you have described as "I" is shown on the longitudinal section of the tunnel drawing on Plaintiff's Exhibit 42, and is marked "I", and runs from about what station? A. Station 124+80 to 131+20.

Q. At Station about 131+20, you intersected, or you contacted the wall plate drift which had been driven from the east end? A. That is right.

Q. Those are illustrated on this exhibit, by the diagram marked "K"? A. Marked "K."

Q. And from the point of intersection with the wall plate drifts from the east end, what system of excavation did you follow in the south tunnel?

A. We followed the wall plate system entirely then, which is shown on this Exhibit 42 as "G."

Q. And it shows on the longitudinal section, by the same color, marked "G"? A. Yes.

Q. What system of excavation did you follow in the north tunnel, Mr. Hindmarsh?

A. When they stopped excavation in the north tunnel, on the 21st of August, they were using——

Q. 21st of August, 1935?

A. 1935——they were using a two-drift method, a bottom drift on each side of the tunnel, and one drift immediately above that.

Q. That is illustrated by the diagram marked "F" in Plaintiff's Exhibit 42?

A. Yes, sir. The bottom drift, as I recollect, was about 100 feet. I completed the second drift that same distance the lower drift was completed to,

(Testimony of Victor G. Hindmarsh.)

and took the ring out for that distance, completing the timbering in full section up to that point; but, from there on, I changed the system into the wall plate method, which was the "H" section.

Q. As shown on Plaintiff's Exhibit 42?

A. As shown on Plaintiff's Exhibit 42; and continued with the "H" section then until we stopped on June 13th. [1522]

Q. Would you point out at about what station you started the excavation on the north tunnel, on Plaintiff's Exhibit 42?

A. It was approximately 122+11, where the bench was.

Q. And you followed the method known as "F" section to Station about 123+47? A. 123+47.

Q. From that point on——

A. From that point on, I followed the wall plate method, or the "H" section, as far as we went in the tunnel.

Q. What station was that, as far as you went in the tunnel.

A. That is just 131+40; about that.

The Court: That method, in blue on the south tunnel, is it just the same, or is it different?

A. Well, there is a little difference, your Honor, because the wall plate drifts were a little different. They were drifts that were driven from the east end, and they were much larger drifts than these drifts we pursued in the north tunnel.

(Testimony of Victor G. Hindmarsh.)

Mr. Marrin: Now, I have here some photographs showing the type "I" method of timbering in the south tunnel. There is a series of three photographs, which I would like to offer as one exhibit.

(The three photographs were marked "Plaintiff's Exhibit No. 85.")

[Set forth in the Book of Exhibits at page 304.]

Mr. Marrin: Q. Mr. Hindmarsh, referring to the first of these photographs, Plaintiff's Exhibit No. 85, which is marked showing type "I" method of timbering in south tunnel, will you state what that represents?

A. Well, this shows another section in the south tunnel where it was driven by the "I" method; it shows no wall plate. You will notice they are all individual sets. This was taken from the bench, looking back.

Q. In other words, this is looking toward the portal? A. Yes.

Mr. Tinning: Mr. Hindmarsh, so I may understand you, these were posts that you put in before you took out the core; you put them [1523] in as you went ahead?

A. Yes. Well, after the drifts were driven clear through, then I went in and set all the posts for the 600 feet, and the "A" segment.

Q. The "A" segment is the first part of the circle above the plumbpost?

A. That's right. It shows the concrete Jumbo back of the timber and the section being concreted when this picture was taken.

(Testimony of Victor G. Hindmarsh.)

Mr. Marrin: Referring to the second photograph, marked "Type 'I' Method Timbering South Tunnel," that shows the same method of timbering, does it?

A. Yes, that shows the same method of timbering.

Q. In the south tunnel which was done under your supervision? A. Yes.

Q. And referring to Type "I" excavation and timbering method, which is the third photograph of Exhibit 85——

A. This was in the south tunnel.

Q. Shows the posts?

A. Shows the posts and cross-bracing,—the first cross-bracing; it does not go high enough to show the second bracing.

Q. Well, there is another set?

A. The cross-bracing just above this.

Q. Those photographs are typical of the method of timbering that was carried on under the so-called Type "I" method? A. Yes.

The Court: You are coming this way, are you?

A. Well, no; going the other way—yes, the concrete is coming this way.

Mr. Marrin: This way is the portal into the tunnel?

A. The portal is that way; and that is the electric shovel, sitting right there.

Mr. Tinning: Could I ask Mr. Hindmarsh a question?

(Testimony of Victor G. Hindmarsh.)

Mr. Marrin: Surely.

Mr. Tinning: In the first of these photographs, where we are [1524] looking back toward the portal of the tunnel, where do those braces appear when you get your concrete in? Did you take those out?

A. Took those out as we came ahead.

Q. So that between where the camera was and where the Jumbo was, you had taken out those cross-braces?

A. Yes. We were getting ready to move the Jumbo ahead. We had about 27 feet.

Q. You cleared those out in that space?

A. Yes.

Mr. Marrin: Q. Mr. Hindmarsh, referring further to the first photograph, on the right-hand side of the photograph, which would be the south side of the south tunnel, would you explain what this material is here?

A. That is the north side.

Q. Yes.

A. That is Gunite material, which is inserted between the timbers so as to strengthen the timbers.

The Court: Q. To strengthen it?

A. To strengthen it; makes them all work in unison. That was Gunite shot in between the timbers and cemented.

Mr. Marrin: Q. Will you explain why the Gunite was placed in the timbers, Mr. Hindmarsh?

A. Well, the Gunite was placed there to strengthen the timbers and give them more support,

(Testimony of Victor G. Hindmarsh.)

as we were having trouble with the timbers moving, and wanted to try to hold them until such time as we could get the concrete in to save trimming.

Q. Did you have trouble with the timbers moving in the part of the tunnel that you excavated?

A. Yes; I had considerable trouble with them; in fact, they would move practically constantly from the time it was excavated until you got the concrete in.

Q. What was the formation through which you excavated the tunnel?

A. It was mostly cherts; possibly 450 feet of Orindan.

Q. Over half of your excavation in the tunnel was in the cherts formation?

A. Yes; all the north tunnel was cherts, and about half the south tunnel was cherts. [1525]

Q. You found that after you set the timbers, they commenced moving in? A. Yes.

Q. How rapid was that movement?

A. Well, it varied considerably. The ground was very ununiform and spotty; and it was rapid at different points; some places your timber would start moving in probably the second or third day after it was set; and they would move in progressively, somewhere around one-eighth of an inch a day up to a quarter; sometimes about half an inch a day.

Q. Now, I have here a schematic photograph showing a cross-section of the lining and Guniting,

(Testimony of Victor G. Hindmarsh.)

which I would like to offer as Plaintiff's Exhibit next in order.

Mr. Tinning: In respect to this photograph, I gather that it is not a photograph of any actual condition? This is one I have seen before in a book.

Mr. Marrin: Yes.

Mr. Tinning: And it is really a diagram; and if it goes in for that purpose, to show something in connection with the theory of your case, there is no objection to it; but I don't want to have it understood this is a photograph of any particular condition. This was worked up to demonstrate a particular theory——

Mr. Marrin: Yes; I am putting it in to illustrate the method used in Guniting between the timbers.

Mr. Tinning: Well, if it is to illustrate a method, we will object to its introduction as not being a photograph of a condition of the tunnel.

Mr. Marrin: In other words, it is simply to have the witness explain and make clear the method used in Guniting; not necessarily illustrating the exact condition, because this is painted in here on this photograph; it has been superimposed on there in the nature of a drawing. [1526]

Mr. Tinning: Well, it is to demonstrate a method.

Mr. Marrin: That is all.

Mr. Tinning: It is not indicative of anything beyond what is shown here of the concrete form. It is something that has been worked up from a

(Testimony of Victor G. Hindmarsh.)

photograph by a draughtsman or a photographer, and is simply indicative of a proposed plan as a basis of some theory?

Mr. Marrin: Yes.

Mr. Tinning: And not an actual condition?

Mr. Marrin: Yes.

Mr. Tinning: With that understanding, I have no objection.

(The document was marked "Plaintiff's Exhibit No. 86.")

[Set forth in the Book of Exhibits at page 307.]

Mr. Marrin: Q. Mr. Hindmarsh, referring to Plaintiff's Exhibit No. 86, will you explain to the Court what that shows?

A. This is a photograph that has been retouched to show a method that we used in Guniting between the timbers, to strengthen the timbers. You will see these black lines are the timber sets and the grey is the Gunite that has been shot in between.

Q. Did that Gunite contain reinforcing steel that is placed——

A. There was reinforcing steel placed between each set of timbers, strengthening it with Gunite, as well as holding it in place while it was being shot in there. This section here shows in the permanent lining of the concrete.

Mr. Marrin: The witness is referring to the arch section,—the inside of the arch section. So this photograph shows the concrete forms in place?

A. Yes; that shows the steel forms that are in place, at the time.

(Testimony of Victor G. Hindmarsh.)

Mr. Tinning: The concrete is also put in by——

A. Yes; I think that is right.

Mr. Marrin: But the interior beyond the concrete, where the concrete is put in, is apparently a photograph of the concrete? [1527]

A. Yes.

Mr. Tinning: Looking through the steel forms?

A. Yes.

Mr. Marrin: That shows the method to put in additional support for the timbers?

A. Yes, that is right.

The Court: Now, I think it is about time for adjournment. We will take a recess until tomorrow morning at ten o'clock.

(Thereupon, an adjournment was taken until Thursday, May 5, 1938, at 10 o'clock a. m.) [1528]

Thursday, May 5, 1938;
10 o'Clock A. M.

VICTOR G. HINDMARSH,

Direct Examination (Continued)

Mr. Marrin: Q. Mr. Hindmarsh, yesterday I asked you this question, which appears at page 1110 of the transcript:

"Q. Did you do any resetting of timbers while you were engaged on this square setting?

A. I don't recall that I did. I do not think so."

(Testimony of Victor G. Hindmarsh.)

In that answer, you referred, did you, to resetting of the timbers while you were doing the square setting? A. That's right.

Q. Did you do any resetting of timbers after the square setting was done?

A. Oh, yes. We reset lots of the timbers. The timbers, where the square sets were placed,—that was where most all of the ground moved, to a certain degree; and, I believe, had to be trimmed or moved; and, where it was necessary to move it, why, it was necessary to have the square sets in; and the worst place that the timbers were moved was the last place that was excavated, right up next to the face. There were timbers there,—some of the arch timbers,—segments, that moved in as much as 15 inches. Some of the posts moved in 8 or 10 inches, and that could not be trimmed,—that much off; that had to be moved back.

Mr. Tinning: Q. Mr. Hindmarsh, what station do you refer to?

A. Between station 121+50 and 122+11.

Q. That was in the north tunnel? A. Yes.

Mr. Marrin: Q. One of the purposes of the square setting was to hold the timbers while you were moving them? A. Yes, that's right.

Q. How many feet of these tunnels were excavated under your supervision, Mr. Hindmarsh?

A. About 800 feet in the north tunnel, and about 1100 feet in the south tunnel. [1529]

(Testimony of Victor G. Hindmarsh.)

Q. Would you describe the character of the ground encountered by you in excavating the tunnels?

A. Well, the cherts: all the north tunnel was in cherts; it was very spotty and ununiform, and the chert laminations had been cut by an intrusion of some mineral substance of some kind; I don't know what the geologist called it; that would cut across the laminations, in varied conditions and positions, in some places only 2 inches thick, and some places it would come in kidneys 5 or 6 feet thick; that would cut all the laminations of the cherts and take the stability away from it entirely. When we got into the Orindan, it was not as bad as the cherts; we did not have as much trouble with it as we did on the cherts, although it moved continuously from the time we put the timbers in until we got the concrete in.

Q. The ground was moving? A. Yes.

Q. About what rate did it move?

A. Well, it would move from an eighth of an inch a day to half an inch a day. Then probably it would be spotty; but some places moved faster than others. In the north tunnel, along in January, the timbers began to move rapidly, and it was necessary to stop the driving in order to catch up to the concrete so there would not be any interference, and we could get the concrete up next to the face in order to hold it; I was not able to hold the timbers.

Q. Exerted pressure on the timbers?

(Testimony of Victor G. Hindmarsh.)

A. Yes.

Q. How far outside of the neat concrete of the concrete lining did you place the timbers?

A. There was a minimum of 3 inches; up to some places in the arch, as much as 5 inches.

Q. You testified, yesterday, that in an attempt to reinforce the timbers you placed Gunite and reinforcing steel between them?

A. That's right.

Q. Did it stop the movement of the timbers?

A. Well, it seemed to in some places; and there were other places that it did not; and some of the Gunite had moved in when we came to the concrete, and we [1530] had to chip that off, as much as 3 or 4 inches.

Q. How close were you keeping the concrete up behind the excavation?

A. Probably a maximum of 125 feet. I tried to keep it there, and keep working, at the time, between there and the face. There were some places, I think, where I got as close as 70 or 75 feet to the face where I had bad ground.

Q. How long would it be, after a given section was excavated, before the concrete lining was placed?

A. Well, it would be—when it was back 125 feet, it would be approximately 10 days.

Q. During that period of time, the timbers would move in to such an extent they would have to be trimmed?

(Testimony of Victor G. Hindmarsh.)

A. In some places it moved in. We did not do but very little trimming when we got the concrete up close. It would just above move in the distance it was set up beyond the concrete line. However, there were places where it got in before we could get the concrete in, and we would have to trim it off.

Q. Did those same conditions prevail through all the ground which was excavated under your supervision? A. Yes, it did.

Q. But the cherts section was worse than the Orindan?

A. The cherts was more treachereous.

Q. Did a cave-in occur in the tunnel on February 22, 1936? A. Yes.

Q. In which tunnel? A. The north tunnel.

Q. At about what time of day?

A. Early in the morning; about 2:30; between 2:30 and 3 o'clock in the morning.

Q. On which side of the north tunnel?

A. The cave-in started on the south side of the north tunnel, just above the wall plate line.

Q. At about what station?

A. About 126+50.

Q. How long had the timbers been placed at the point where the cave-in occurred?

A. The ring timbers had been set about 10 days —10 or 11 days; and the posts had been set about 4 or 5 days.

Q. The ring timbers were set in the drifts ahead of the posts? A. Yes. [1531]

(Testimony of Victor G. Hindmarsh.)

Q. Did you state how many feet back from the face the cave-in occurred? A. About 45 feet.

Q. Were you present on the work at the time of the cave-in? A. No; I was not.

Q. How long prior to that had you been present?

A. Oh, I was in the tunnel about 8 or 9 o'clock that night before the cave-in,—probably 6 or 7 hours before the cave-in.

Q. How close up was the concrete to the face at that point?

A. It was about 125 feet, as I remember it now; that is about the way we kept it.

Q. In other words, the cave-in occurred between the place where the concrete lining ended and the face of the excavation which was about 125 feet ahead? A. Yes.

Q. Had you inspected the timbers in the north tunnel the day before the cave-in?

A. Yes. I inspected the timbers practically every day. I was in the tunnel constantly from early in the morning until 9 or 10 o'clock at night.

Q. Did they appear to be in good shape?

A. There was nothing there that—I did not see anything at all that would give any sign of any weakness.

Q. Were you in charge of the excavation at the time you drove through this particular place where this cave-in occurred. A. Yes.

Q. Did you observe the character of the ground, at the point at which the cave-in later occurred, at the time you excavated through it?

(Testimony of Victor G. Hindmarsh.)

A. Yes. We observed the ground. We had one of those intrusions or gouges that I spoke about, which was running across the tunnel on a diagonal; it started in on the north side of the north tunnel and went diagonally across the tunnel; and it varied, starting almost only 2 or 3 inches in thickness, as I remember it, at the north side; and then it widened out in the middle of the tunnel, [1532] and went diagonally across, and went out of the tunnel just about the wall plate line; and I would say it was probably a couple of feet thick there—maybe 2 or 3 feet thick at that point; and when we drove the drift there, we observed it; but it did not concern me very much; I did not pay any more attention to it, because it was well taken care of and well packed, and the gouge seemed to be considerably harder than the ones that we had just gone through back there. I did not think it would give us any trouble.

Q. You had gone through similar gouges before?

A. Yes; lots of them.

Q. What was the size of the timbers used at this particular point?

A. 12 by 12's and 14 by 14's.

Q. How soon after the cave-in occurred did you arrive at the site of the work?

A. I guess about 45 minutes.

Q. That was about 3 o'clock in the morning of the 22nd? A. Yes.

Q. Will you describe, generally, the appearance of the cave-in, at the time you arrived at the work?

(Testimony of Victor G. Hindmarsh.)

A. Well, there were about 6 or 8 sets of timbers that had fallen down, and the roof had caved, from the south side above the wall plate, and enough material had come in to cover up—to practically cover our air shovel that we had standing there working; and considerable of the timbers fell in beyond that, and all the roof timber was down on the ground; and there was one man who was caught in this timber; and they were working then to get that man free,—to dislodge him from the timbers, when I arrived; and we were successful in getting the man out, with very minor injuries; but no one was hurt; but the material then started to cave in, and kept on dropping and caving, from the south side of the tunnel, and gradually working over the roof of the tunnel; and, in order to catch it up and keep the cave from running away, further into the timbered tunnel, I started to bulkhead at the toe of the cave; and I was able to build a bulkhead as fast as the [1533] cave came in.

Mr. Tinning: Q. Mr. Hindmarsh, was that bulkhead on the west end of the cave?

A. West end of the cave; the toe of the cave; but I was just about able to keep that bulkhead ahead of the caving; it would ave and roll, and it kept falling on the bulkhead; and that night the tunnel was full, so far as we could see; but it continued to cave all that night; you could hear the big lumps caving and rolling back into the tunnel.

Q. In other words, after the first rush of ma-

(Testimony of Victor G. Hindmarsh.)

terial came in, the rest of the material came in gradually?

A. Spasmodically, yes; just kept dropping; every few minutes there would be a boulder drop out of the roof.

Q. Did it eventually fill the tunnel?

A. Yes, it eventually filled the tunnel, and filled it from the bulkhead to the excavated face of the tunnel.

Q. It would be a distance of about how far?

A. Oh, about 60 or 70 feet.

Q. Were the timbers broken?

A. No. After we took the cave out from the westerly end, the timbers were not broken; they were simply pushed out, just about the wall plate line; and that cave came in, when the kidneys came in, it started on the ring and the "A" segment there, and evidently pushed that out, and that let the rest of the ring down.

Q. Was this the system you were using?

A. No. I was using the wall plate system,—that "H" system.

Q. This segment in there? A. Yes.

Q. Above the wall plate?

The Court: Q. On the south side?

A. On the south side of the tunnel, yes. The tunnel runs east and west.

Q. And it was on the south side?

A. Yes. [1534]

(Testimony of Victor G. Hindmarsh.)

Mr. Marrin: I have here four photographs taken at the time of the cave-in; and I would like to offer them as plaintiff's exhibit next in order.

(The four photographs were marked "Plaintiff's Exhibit No. 87.")

[Set forth in the Book of Exhibits at page 308.]

Mr. Marrin: Q. Mr. Hindmarsh, I show you a photograph which is part of Plaintiff's Exhibit No. 87—I believe I will mark this No. 1.

Mr. Tinning: "87-1."

Mr. Marrin: Q. Will you explain to the Court what that shows?

A. That shows that gouge that I was speaking about; and this is the south side of the tunnel, just above the wall plate line there, and running up into the roof of the tunnel. You could readily see, in this picture, how that gouge varied; it was taken from the Jumbo,—right on top of the Jumbo, just back of the cave-in, west of the cave-in, looking in.

Mr. Tinning: Q. Mr. Hindmarsh, could you tell us about when these photographs were taken; about what hour, approximately?

A. I believe that was probably taken around, as I remember it now, 6 or 7 o'clock in the morning. I am not sure. There was so much confusion around there at that time, and I know the photographer was there, taking them. I don't know what time it was; but I think it was around about that time.

Mr. Marrin: Q. After the cave-in, did it develop that this gouge widened out, outside of the tunnel?

(Testimony of Victor G. Hindmarsh.)

A. Yes; it widened out considerably. After you got outside the skin face of the tunnel,—the lining of the tunnel,—it widened out into a large kidney; it worked up back there on the face of the tunnel, and, when we went through there taking the cave out, you could see we had some large boulders of this gouged material that was right up in the roof; that was right up there, and left there.

Q. I show you a photograph marked "2"——

[1535]

Mr. Tinning: "Plaintiff's Exhibit 87-2."

Mr. Marrin: Q. What does that show?

A. This shows the condition of the tunnel when I arrived. You can see the cave-in from up here. This shows the condition of the tunnel when I arrived there, showing that the tunnel had caved in just above the wall plate line and partly buried our air shovel with which we were excavating at the time. Just to the north of the tunnel was where the men were trapped in the timber that fell down from the roof. The roof had not caved in, but this part of the tunnel—the roof was bare there; there was timber that held it up, which had not yet caved, and which caved afterwards.

The Court: Q. Do I understand there was no roof on the tunnel where it caved?

A. The timber had all come down, your Honor, and left the rock bare there for the time being; and then started dropping and weakened and was dropping down.

(Testimony of Victor G. Hindmarsh.)

Mr. Marrin: Q. There had been timber there?

A. Yes; it was all timbered solid.

Q. I show you two more, marked "3." Will you explain them to the Court?

A. This is a little later picture, taken—there is the shovel there, after the cave-in had come down, and a little more completely covering the shovel. There is the shovel; and here it is here.

The Court: Q. That would be beyond——

A. Yes; the cave-in was enough to cover the shovel completely there, and went back in on the other side. That picture shows the cross-bracing that we had in at the time of the cave-in.

Mr. Marrin: Q. Picture No. 4 of Plaintiff's Exhibit 87 shows the commencement of the bulkheading?

A. That shows the commencement of the bulkheading. This bulkhead was run practically vertically, clear to the roof, to support the other timbers, so the cave-in would not run back into the tunnel.

[1536]

Q. Eventually, the caved material filled all the space back of the bulkhead?

A. Yes; all the way in, as I remember, about 70 feet.

Mr. Tinning: May I ask a question?

Mr. Marrin: Surely.

Mr. Tinning: Q. With respect to Plaintiff's Exhibit 87-2, which you said shows the condition at the time you arrived: was there a photographer there by that time or after that time?

(Testimony of Victor G. Hindmarsh.)

A. Yes, there was a photographer there. I think it was the Tribune photographer who was there at the time I got there. [1537]

Q. Was the work stopped?

A. The work was stopped in both tunnels immediately by the order of the Industrial Accident Commission.

Mr. Marrin: I have here a copy of the order of Mr. Reinhardt. I have the original that was sent by the Industrial Accident Commission to Six Companies of California, which I will offer in evidence as Plaintiff's Exhibit next in order.

(The document was marked "Plaintiff's Exhibit 88.")

Mr. Marrin: This order reads as follows:

PLAINTIFF'S EXHIBIT No. 88

Department of Industrial Relations
Industrial Accident Commission
Of the State of California

San Francisco Office	Los Angeles Office
State Building	State Building

Notice to Employer to Remedy Unsafe Conditions of Place of Employment

Legal name, Six Companies of Calif.

Office address, Stock Exchange Bldg., S. F.

Inspection made at (Place of employment) Broadway Low Level Tunnel.

(Testimony of Victor G. Hindmarsh.)

Address for mail, S. F.

Supt., Hindmarsh. No. of employees, 600.

Ins. carrier, Ind. Ind. Ex. Date, 2/22/36.

Safety Requirements

1. Due to the character of the ground through which the Broadway Low Level tunnels are being driven, you are hereby ordered to stop further driving of both tunnels until such time as future plans for driving are approved by the Industrial Accident Commission.

Recommendations explained to Mr. Hindmarsh.

Inspected by Reinhardt.

Your attention is called to Section 402(c) of the Penal Code of California, Chapters 332, 333 and 334, Laws of 1921, and Sections 34, 35, 36, 48, 49 and 50 of the Workmen's Compensation, Insurance and Safety Act of 1917 (Chapter 586, Laws of 1917), which render the maintenance of an unsafe place of employment a misdemeanor, and authorize the Industrial Accident Commission to enforce said laws.

Form 200, 95154 5-32 15M.

[Endorsed]: U. S. Dist. Ct. N. D. Cal. No. 20101-R. Plff's Ex. No. 88. Filed May 5, 1938. Walter B. Maling, Clerk. By J. A. Schaertzer, Deputy Clerk.

Q. Mr. Hindmarsh, was the original order delivered to you by Mr. Reinhardt? A. Yes.

(Testimony of Victor G. Hindmarsh.)

Q. That is his handwriting?

A. Yes, that is his handwriting.

Mr. Marrin: I have here another order of the Industrial Accident Commission dated February 29, 1936, which I will offer [1538] in evidence as Plaintiff's Exhibit next in order.

(The document was marked "Plaintiff's Exhibit 89.")

The order reads as follows:

PLAINTIFF'S EXHIBIT No. 89

State of California
Department of Industrial Relations
Industrial Accident Commission
State Building
San Francisco

T. A. Reardon, Chairman
Meredith P. Synder
Frank C. MacDonald
Members
Frank J. Burke, Secretary

Order to Correct Unsafe Conditions or to Show Cause

February 29, 1936.

To Six Companies of California,
Field Office,
Berkeley, Calif.

You Are Hereby Notified that an inspection of your Broadway Low Level Tunnel, located at Oakland, California, made on the 22nd and 28th

(Testimony of Victor G. Hindmarsh.)

day of February, 1936, by L. K. Reinhardt, Engineer for the Industrial Accident Commission, shows the existence of unsafe conditions which must be corrected as hereinafter appears. These unsafe conditions of your place of employment constitute a menace to the lives or safety of any person or persons employed thereabout and such places of employment, machines, devices or apparatus, are being operated or used in violation of the Workmen's Compensation, Insurance and Safety Laws of the State of California, and the Safety Rules and Orders of the Industrial Accident Commission of the State of California;

Now, Therefore, You Are Hereby Directed to comply with the requirements hereinafter set forth, and to notify this Commission in writing to that effect on or before March 11, 1936, or to show cause, if any you have, in writing, on or before said date, to this Commission at its office above noted, why an order should not be made forthwith by this Commission, adopting said requirements as a special safety order or orders of this Commission, prohibiting the use of said equipment in its unsafe condition and directing the attachment to said equipment of a notice to such effect. If you desire an oral hearing before this Commission upon said requirements, in place of the hearing in writing provided above, you are hereby directed to file a

(Testimony of Victor G. Hindmarsh.)

request in writing with the Commission at its office above noted, for such oral hearing before said date.

The requirements for the correction of the aforesaid unsafe conditions appear on the attached sheets.

T. A. REARDON,
Chairman,
Ind. Accident Com.
(C. H. FRY),
Superintendent of Safety.

1. Due to the character of the ground through which the Broadway Low Level Tunnels are being driven, you are hereby ordered to stop further driving of both tunnels until such time as future plans for driving are approved by the Industrial Accident Commission.

2. By reason of the severe construction hazards involved in proceeding under the present design of the tunnel, you are ordered to appoint a committee consisting of a representative of the Six Companies of California, the Joint Highway District and other interested parties, to present a future program before proceeding further with the job.

[Endorsed]: U. S. Dist. Ct. N. D. Cal. No. 20101-R. Plff's Ex. No. 89. Filed May 5, 1938. Walter B. Maling, Clerk. By J. A. Schaertzer, Deputy Clerk. [1539]

(Testimony of Victor G. Hindmarsh.)

Mr. Marrin: I think that the District received an identical order, did they not?

Mr. Tinning: I believe that is correct, I do not seem to find it chronologically.

Mr. Marrin: Will it be stipulated, subject to check, that the District was sent a copy of that order?

Mr. Tinning: Yes, we will stipulate that the District received a copy of it, if I find that is correct.

Mr. Marrin: Q. Mr. Hindmarsh, what was done by you after receiving these orders?

A. Well, the tunnel was shut down completely, we were not working any further, and I talked to Mr. Reinhardt to ascertain what would be necessary, and what kind of a program [1540] or plan would be acceptable to the Commission so that we could make up a proposed plan and submit it to him on the meeting that they called for.

Mr. Wittschen: Mr. Marrin, I did not object to the question asking what he did, but if he is going to say as to what Mr. Reinhardt said I think that is objectionable.

Mr. Marrin: Yes, I think that is beyond the question.

Q. So far as the work was concerned, Mr. Hindmarsh, no further work was carried on for the time being? A. No.

Q. The work was shut down?

A. Shut down.

(Testimony of Victor G. Hindmarsh.)

Q. This order applied to the south tunnel as well as the north tunnel? A. Both tunnels.

Mr. Marrin: I have here another order of the Industrial Accident Commission, addressed to the Six Companies of California, dated March 16, 1936, and I will offer that in evidence as Plaintiff's Exhibit next in order.

(The document was marked "Plaintiff's Exhibit 90.")

It reads as follows:

PLAINTIFF'S EXHIBIT No. 90

Industrial Accident Commission
State Building
San Francisco

March 16, 1936.

Six Companies of California,
1522 Latham Square Building,
Oakland, California.

Gentlemen:

You are hereby advised that the order of this Commission to stop further driving of the Broadway Low Level Tunnels as dated February 29, 1936, is modified to the following extent:

1. Driving may be resumed in the upgrade tunnel by the contractor by following a method presented by the contractor and approved by the engineers of this Commission, which method consists in general of installing 8"x10" timber

(Testimony of Victor G. Hindmarsh.)

spreaders in each timber set and extending across the tunnel approximately 16′ and 27′ respectively above the finished floor of the tunnel; further by installing excavation equipment which may be operated beneath the lower spreader without interfering with it.

Spreaders are to be installed as soon as the ground between each timber set is excavated. Two longitudinal timbers, 2″x12″, are to be fastened to the spreaders to prevent bowing.

2. When driving in the upgrade tunnel reaches the wall plate drifts, the contractor shall present a plan for future driving for approval by the Commission.

3. An electrically operated shovel will be permitted.

4. A record shall be kept by the Fire Bosses on each shift of all overbreaks above the wall plate line and notations made whether the overbreak was in running ground and then lagged or if the overbreak was packed with timbering. If the ground warrants guniting, the gunite ring shall be constructed.

5. The core in the tunnel section shall be benched sufficiently to provide safety against caving ground to the workmen drilling lifter or similar holes.

6. The caved-in section of the downgrade tunnel may be excavated and concreted in a manner similar to that employed in doing like

(Testimony of Victor G. Hindmarsh.)

work from the caved-in section of August 28, 1935.

With the exceptions above specified, the original order of this Commission made on February 29, 1936, is still in effect and in no event shall driving in the downgrade tunnel be resumed until plans for future driving in that tunnel are approved by this Commission and said original order is hereby extended until such plans are presented and approved by this Commission.

Very truly yours,
(Signed) T. A. REARDON,
(Signed) FRANK C. MacDONALD,
Members,
Industrial Accident
Commission.

[Endorsed]: U. S. Dist. Ct. N. D. Cal. No. 20101-R. Plff's Ex. No. 90. Filed May 5, 1938. Walter B. Maling, Clerk. By J. A. Schaertzer, Deputy Clerk. [1541]

Q. Now, when was the driving resumed in the south tunnel, Mr. Hindmarsh?

A. I think it was on the 23rd of March.

Q. This order is dated March 16. Would you state why you delayed resuming driving until March 23rd?

A. When the Industrial Accident Commission ordered us to put these spreaders below, the present equipment that we were using for excavating the

(Testimony of Victor G. Hindmarsh.)

tunnel would not work, the shovel was too high and would interfere. We had to work under these timbers, and our shovel was too large, it would not work under the timbers without knocking them out, and they would not allow us to use it, so we had to find a shovel then that would work under that 16 feet, and there was only one on this western coast, which was down on the Metropolitan Tunnel, built specially for the Metropolitan Tunnel, and we immediately bought that shovel and had it shipped up here, and that was as quick as we could possibly get this shovel out and get the other one in. That delayed our work that length of time.

Q. That required a specially-built shovel to work under the timbers?

A. Specially built, of any size at all, that was a yard shovel, to handle that class of material; we needed it especially in the Orindan, and there was only one shovel of that size on the coast, and there were only two other ones made, and they were busy in the East.

Q. Mr. Hindmarsh, will you point out where that slide was on the longitudinal sketch of the section shown on Plaintiff's Exhibit 42?

A. It was about station 126+50, as I remember it, right there.

Q. That was the center of the slide, 126+50?

A. That was about the center of the slide.

Q. How far did it extend either side of that point?

(Testimony of Victor G. Hindmarsh.)

A. It extended possibly 30 or 40 feet each way.

Mr. Marrin: Mr. Tinning, I am not sure that our stipulation [1543] covered that prior exhibit. I think I said you received a copy of it. As a matter of fact, you received an identical original?

Mr. Tinning: We received an order, as I remember it, addressed by the Commission to the District. In other words, I think it is very much the same, they sent one to the District as the owner and one to you as the contractor.

Mr. Marrin: How about this last letter?

Mr. Tinning: They received a similar letter, also.

Mr. Marrin: I have here a copy of an order issued by Mr. Reinhardt, of the Industrial Accident Commission to the Six Companies of California, which I would like to offer in evidence as Plaintiff's Exhibit next in order.

(The document was marked "Plaintiff's Exhibit 91.")

This order reads as follows:

(Testimony of Victor G. Hindmarsh.)

PLAINTIFF'S EXHIBIT No. 91

Industrial Accident Commission
of the State of California

San Francisco Office
State Building

Notice to Employer to Remedy Unsafe Conditions of Place of Employment

Legal name: Six Companies.

Office address: Latham Square Bldg., Oakland.

Inspection made at: Broadway Tunnel.

Address for mail: Latham Square Bldg.

Supt.: Mr. Hindmarsh.

No. of employees: 300.

Ins. carrier: Ind. Ind. Ex. Date 3/30/36.

Safety Requirements

1. Slope face of core in South Tunnel to approx. 45°

2. Provide jump sets in both top drifts in North Tunnel thro caved section.

3. Block up broken segments over tunnel drifts.

Complied with 3/31

L. K. R.

Recommendations explained to Mr. Whitmire.

Inspected by Reinhardt.

[Endorsed]: U. S. Dist. Ct. N. D. Cal. No. 20101-R. Plff's Ex. No. 91. Filed May 5, 1938. Walter B. Maling, Clerk. By J. A. Schaertzer, Deputy Clerk. [1544]

(Testimony of Victor G. Hindmarsh.)

Mr. Wittschen: You will stipulate we did not receive a copy of that order?

Mr. Marrin: I think you did not receive a copy of that.

Q. This order required you to keep the face of the core on a 45° angle, did it not? A. Yes.

The Court: What do you mean by that?

A. On a 1 to 1 slope, in other words, one foot down and one foot out.

The Court: I understand now.

Mr. Marrin: Q. Did Mr. Reinhardt tell you why he was making that requirement?

Mr. Wittschen: Just a moment. That is objected to as immaterial, irrelevant, and incompetent, and calling for hearsay testimony, and not binding on the district.

Mr. Tinning: The order is the final evidence.

Mr. Wittschen: The order, as Mr. Tinning says, is the final evidence, and the contractor, by the plans and specifications, agreed to be bound by all of the rulings of the Industrial Accident Commission, and what Mr. Reinhardt told him is not binding on the District.

The Court: Mr. Reinhardt is a public official, is he not?

Mr. Wittschen: He is an inspector for the Industrial Accident Commission.

The Court: I will allow it subject to the motion to strike and over the objection.

Mr. Wittschen: Note an exception.

(Testimony of Victor G. Hindmarsh.)

A. Read the question.

The Court: A 45° angle.

A. To make a safer condition so that the material on the upper part of the core would not cave down on to the men that were working underneath.

Mr. Marrin: Q. Did that requirement, Mr. Hindmarsh, in any way [1545] delay the work?

Mr. Wittschen: Objected to as immaterial.

The Court: I will allow it.

Mr. Wittschen: Exception.

A. It slowed up the work because it was necessary to keep another crew of men up on the top bench sloping this ground back; a 45° slope is a pretty heavy slope to carry on any tunnel, and it makes it hard to get in your timber, and it makes it very difficult to do—all of the top bank has practically to be handled by hand, the shovel cannot reach it.

Q. It makes the work more expensive?

A. It pretty nearly doubles your crew on the bench.

The Court: Q. In any event, it was only 70 or 80 feet?

A. No, this was in the other tunnel. He was not talking about the slide, this was driving ahead.

Mr. Tinning: This was excavation.

Mr. Marrin: These orders applied to the entire balance of the excavation in both tunnels.

I have here an order of the Industrial Accident Commission dated April 16, 1936, addressed to Six

(Testimony of Victor G. Hindmarsh.)

Companies of California, which I will offer in evidence as Plaintiff's Exhibit next in order; and inasmuch as that refers to a diagram I should like at this time to offer in evidence a copy of the diagram. They may be marked as one exhibit, the letter of April 16 and the diagram which was numbered 119.

(The documents were marked "Plaintiff's Exhibit 92.")

[Set forth in the Book of Exhibits at page 313.]

[1546]

Now, there are a number of matters in there which I think may bear explanation so that your Honor will understand it.

Mr. Wittschen: We did not get a copy of that drawing.

Mr. Marrin: Didn't you get a copy of it?

Mr. Tinning: We have got it here, but this drawing which is introduced as a part of your Exhibit No. 92 was sent by the Six Companies to the Industrial Accident Commission; it was something prepared, apparently, by Six Companies, and that was not submitted to the District, and I am advised that this is the first time [1548] the District has ever seen the diagram.

Mr. Marrin: Did you get the letter?

Mr. Tinning: We got the letter.

Mr. Marrin: In other words, you received the letter from the Commission dated April 16, 1936, addressed to the District, which was identical with the letter received by the Six Companies?

(Testimony of Victor G. Hindmarsh.)

Mr. Wittschen: We received a copy of the letter addressed to you.

Mr. Tinning: I think it is addressed to the District, but the point is you have introduced this as one exhibit, and I wanted the record to be clear that the diagram which forms a part of Plaintiff's Exhibit 92, as you have introduced it, was not something that the Industrial Accident Commission sent to us as a plan for doing this work; it was taken to the Industrial Accident Commission by the Six Companies.

Mr. Marrin: However, with the knowledge of the District Engineer, was it not?

Mr. Tinning: It was discussed with the District Engineer, but the plan, itself, was something that was not received by the District, and it was something that went from the Six Companies to the Industrial Accident Commission.

Mr. Marrin: That is correct.

The Court: Did the District Engineer have knowledge of it, did he know about it?

Mr. Tinning: Yes.

The Court: The drawing, as well?

Mr. Tinning: No, we did not have knowledge of the plan or drawing.

The Court: In any event, you are not taken by surprise by this drawing?

Mr. Tinning: No, we are not misled. [1549]

The Court: Proceed.

(Testimony of Victor G. Hindmarsh.)

Mr. Marrin: Q. Will you explain to his Honor, —in the first place this letter refers on the drawing to 8 x 10 timber spreaders.

A. That is these spreaders across here, these are 8 by 10. When we had the other shovel in the tunnel we were using top spreaders and top hangers, and then when we had the cave-in the Industrial Accident Commission made us put these additional spreaders across at a lower level.

Q. And it was because of the lower spreaders that the shovel and equipment which you had could not operate?

A. Yes, the shovel would not work under these spreaders, which had to be every six feet across there.

Q. And the hangers which are referred to are these 2 by 12 that go up and down vertically?

A. 2 by 12 spiked to the top spreader and to the bottom spreader, and the horizontal timbers are spiked on the top of the spreader, one on each side, to keep the timbers from bowing.

Q. Now, referring to the diagram at the bottom of the drawing, No. 119, will you explain to the Court what batter posts are, as shown on there?

A. These posts show batter under the wall plate, they are the ones that they refer to. The reason those were used was in keeping the bench on a slope —this diagram only shows about a 20° slope, and we had to keep on about a 45°, and in order to cut down this distance from where the wall plate came

(Testimony of Victor G. Hindmarsh.)

out of the wall plate drift to this post, we tried to put in a batter post.

The Court: Indicate it on there generally.

A. This is the wrong section; looking from the side you see this post, this is the post, only it is inclined the other way. This stuff comes down here at a 45° angle; your toe is away out here in the wall plate drift at this point, and there is so much dis-

[1550] tance there that we run a batter post to shorten that unsupported wall plate.

Q. When the batter posts were installed were they thereafter removed?

A. No, as I remember they were not removed; there was a plumb post put in.

Q. The plumb posts were put in alongside of the batter posts? A. Yes.

Q. Was the balance of the tunnel excavated while you were on the work, excavated according to this method? A. Yes, they were.

Q. When was the excavation resumed in the north tunnel? A. I think on May 9.

The Court: 1936? A. Yes.

Q. And the cave-in was what date?

A. February 22.

The Court: March, April, May.

Mr. Marrin: That was sometime after the date of this order.

A. Yes, that order was issued right after we had the cave-in concreted, but we still had to clean the cave-in out, get up to the face of the material in

(Testimony of Victor G. Hindmarsh.)

the tunnel before we could go to work. There was quite a lot of debris to clean out after we received that order.

Q. You heard Mr. Larson explain the method of removal of the cave-in of 1935? A. Yes.

Q. And this cave-in was removed in substantially the same manner?

A. Well, the details of it were a little different, but I would say it was substantially the same thing.

Q. How did you remove it?

A. We ran a wall plate—the first tunnel was, the first drift through was a bottom drift on the first cave-in, and on this one we ran the wall plate drift through first and then took the distance from the wall plate down to the floor of the tunnel, where the concreted side wall was caved, and drove spiling down on 6-foot sections and took that out and put the posts [1551]in so we could get our concrete forms in clear up to the full width of the side walls, and that was carried on—the excavation being taken out alongside of the plumb posts was done in about 6-foot sections, with spiling driven all the way around on three sides of it. [1552]

Mr. Marrin: Q. If I understood you correctly, in referring to Diagram "H" on Plaintiff's Exhibit 42, you drove the wall plate through first?

A. Yes.

Q. Then that was all timbered?

A. Yes, that was all timbered.

(Testimony of Victor G. Hindmarsh.)

Q. Then, from that point, you drove spiling down to the bottom grade of the tunnel?

A. Yes.

Q. Then did you take this material out?

A. We drove spiling on both sides of that long drift there.

Q. Down this side and down the inner side?

A. Down this side and also on this side.

Q. Then you took the material out?

A. Then we took the material out, and concreted the side wall plate, yes, for possibly, I would say, 4 or 5 feet above the wall plate.

Mr. Tinning: How high would that be, approximately, from the floor of the tunnel?

A. Oh, I think that was about 19 feet, if I remember right, Mr. Tinning.

Mr. Marrin: Q. Did you take out the drift all the way through the excavation before you concreted? A. Yes.

Q. You opened this entire——

A. Opened this entire drift up.

Q. On both sides?

A. On both sides of the tunnel.

Q. Then placed the concrete in there?

A. That's right.

Q. After you did that, what did you do?

A. Then we started in from the east side of the drift, and drove spiling around the ring and took the ring out from the east end towards the west. The reason for that was: when the tunnel caved in, sev-

(Testimony of Victor G. Hindmarsh.)

eral sets of the timbers right next to—adjacent to the slide, had come down about a foot and a half, so they intruded into the concrete.

Q. That was toward the portal from the slide?

A. Toward the portal from the slide.

Q. That was on the west end?

A. On the west end; and made it [1553] almost impossible to get up high enough to still remove these timbers and drive lagging or spiling for taking out the rings. On the east end, it was all clear, because that timber had not been disturbed, so we were able to get in and start that spiling from that end, and drove spiling all the way around the circle, and took that circle out and put these timbers in; completed the timbers which were then down here, just back of the concrete.

Q. In other words, you drove your drift through, and then you started back out with your rings?

A. That is right.

Q. And you concreted the ring as you came out; or did you complete the ring, first?

A. No; we completed the ring, and then concreted it.

The Court: We will take a recess.

(Recess)

Mr. Marrin: Q. Mr. Hindmarsh, you stated, before the recess, that no work was carried on following the cave-in. Do you want to correct your testimony in that respect?

(Testimony of Victor G. Hindmarsh.)

A. Yes; I had forgotten, at the moment, that our concrete in the south tunnel was probably 250 feet back of the core, due to the fact we were changing our steel forms from modified section to standard section; and, inasmuch as we had that much space that was not concreted, we were allowed to continue the concreting up to the face of the tunnel.

Q. In the south tunnel?

A. In the south tunnel.

Q. But you did not place any concrete in the north tunnel? A. No.

Q. How long did it take to remove the cave-in material from the north tunnel?

A. From the time we were shut down, and we were able to resume operations again, it was about 75 days.

Q. The date of this letter of April 16, 1936: was that the date you completed concreting in the caved in section in the north tunnel?

A. As I recall it, that was just about the time we finished [1554] the concreting.

Q. Thereafter, you had to remove the core?

A. Yes, we had to wait a certain length of time for the concrete to set after it was concreted. I have forgotten just about how long—Probably 10 or 11 days.

Q. You could not remove the core until after that time? A. No.

Q. So, you were not in a position to resume excavation on the face until about May 9, 1936?

(Testimony of Victor G. Hindmarsh.)

A. About May 9th was as soon as we could do it.

Q. What did you do for a shovel in that tunnel?

A. Well, I was unable to secure any more electric shovels of the type that would work under the spreaders; but I had a little three-eighths yard air shovel that we had purchased to take out the former slide, and that had worked in between the concrete walls; and I used that as best I could; it was too small to handle the work and make progress, but it was the only thing we could get.

Q. You could not get another shovel similar to that which you used in the south tunnel?

A. No; there was not any more shovels available, and I contacted the manufacturer, as I remember it, to find out how soon we could get a new one,—which was about four or five months for delivery.

Q. Several places in your testimony, Mr. Hindmarsh, you used the term "timber intrusion." Would you explain what you mean by that?

A. What I mean by that is the amount the timber had encroached into the neat concrete line.

Q. For instance.

The Court: Q. It had moved into the area where the concrete was to be placed; is that it?

A. Yes.

Mr. Marrin: May I have Defendant's Exhibit G-4 and H-4?

Q. Mr. Hindmarsh, I refer you to the photograph whichs are [1555] Defendant's Exhibits H-4

(Testimony of Victor G. Hindmarsh.)

and G-4, consisting of four photographs. Was the work represented on these photographs done under your supervision?

Mr. Smith: Three photographs, I believe, instead of four.

Mr. Marrin: Three photographs, yes.

The Witness: A. No. I think this was the concrete that was on the first 100-foot section.

Mr. Marrin: Q. I mean: Was the work of removing the bad concrete done under your supervision?

A. I don't know just where this is. Is this the roof?

Q. The station number is on the back.

A. Yes, that was done—It was taken out under my supervision.

Q. In what part of the tunnel was that located?

A. That was in the first 100 feeet; it was placed with a Hackley gun.

Q. The first 100 feet on the west portal?

A. Yes.

Q. That was placed with a Hackley gun?

A. I think those are in the north tunnel.

Q. Will you state about how many square feet of that concrete in the west portal section had to be removed and treated in this manner?

A. Oh, as I remember it, there was probably a surface of maybe 250 square feet.

Q. Were you required to chip or remove any of

(Testimony of Victor G. Hindmarsh.)

the concrete in there which had been placed by Pumpcrete?

A. No; we did not. Well, there was—I think there was one place, as I remember it now, where it was placed with wooden forms, and the forms had bulged, and that had to be chipped off.

Q. That was in the caved-in area?

A. That was in the caved-in area of the first cave-in.

Q. I have here two photographs of the concrete in the tunnels, which I would like to show you; and I would like to offer these as plaintiff's exhibit next in order.

(The photographs were marked "Plaintiff's Exhibit No. 93.")

[Set forth in the Book of Exhibits at page 317.]

[1556]

Mr. Marrin: Q. I show you Plaintiff's Exhibit No. 93. Are those photographs of some of the concrete placed by you in the tunnel? A. Yes.

Q. That was placed by the use of the Pumpcrete? A. Yes.

Q. Do you know which tunnel that shows?

A. It is pretty hard to tell; I don't know which tunnel it is. I think it is the south tunnel; but it may be either one of them.

Mr. Tinning: Isn't one of them in the north tunnel and one in the south tunnel?

A. That might be; it is pretty hard to tell.

(Testimony of Victor G. Hindmarsh.)

Mr. Tinning: The straight one is in the north tunnel; and the curved, in the south tunnel.

A. Well, there are curves in both tunnels. One picture is taken from the portal, looking in; this is from the inside, looking out; so it is hard to identify or to be positive which tunnel each is.

Mr. Marrin: Q. Well, it was taken in one of the tunnels? A. That's right.

Mr. Wittschen: Can you identify the station?

A. There are no stations on there.

Mr. Marrin: It shows quite a number of stations, Mr. Wittschen.

The Witness: It shows a long distance of the tunnel.

The Court: What is the purpose of this?

Mr. Marrin: Just to show the concrete,—the placing of concrete.

Q. Mr. Hindmarsh, did you ever have any discussion with Mr. Boggs concerning an extension of time for the completion of the contract?

A. Yes, I did.

Q. Will you state when you had your first discussion with him, on the time?

A. The first one I remember was November 19th.

Q. 1935? A. November 19, 1935.

Q. Where was the discussion had?

A. It was held in the Six [1557] Companies' office at the tunnel.

Q. Who was present?

(Testimony of Victor G. Hindmarsh.)

A. Mr. Boggs, Mr. Smith, Mr. S. D. Bechtel and myself.

Q. What was said at that conversation?

Mr. Wittschen: Objected to as incompetent, irrelevant and immaterial and hearsay, and not binding on the District.

The Court: Objection overruled.

Mr. Wittschen: Exception.

The Court: Q. Proceed.

A. Why, we met there, I think some time in the middle of the forenoon; and the discussion was started in by a discussion of the general condition of the tunnels; and Mr. Boggs wanted to know about when we would be able to get the north tunnel cleaned up from the cave-in, and resume operations again; and there was other discussion at the time. We were working 48 hours, as I remember it, on catching up on the driving and concreting on the tunnel that had been—

Q. You mean you were working the men 48 hours?

A. We were permitted to work the men 48 hours while we caught that work—that part of the tunnel up; and we discussed then if that same order would allow us to go through that work on the new work at 48 hours, or whether we would go back to 40 hours; and I think, in the discussion there, that we decided that the order did not intend to go into new work, and we went back to the 40-hour work. At that time, as I recollect it, Mr. Boggs asked me how

(Testimony of Victor G. Hindmarsh.)

much time the Contractor thought he was entitled to, on an extension, for the August cave-in; and I told him I thought about 90 to 120 days would be fair. Mr. Boggs stated he did not know whether we would be entitled to that much time or not, but he would rather study it a little further before he would commit himself as to the amount of time. Then Mr. Boggs asked if I could make out a schedule showing the different operations [1558] in the tunnel and about when we thought we could complete the full project. I told him I did not want to do that, at that time, because I had not driven any of the tunnel yet, and I would rather wait until I got under operation to see what I could do, and I thought I could have him a schedule by the first of the year, showing the amount of time it would take; and, at that time, would also show the amount of time beyond our contract time that would be necessary to complete the project; and I asked Mr. Boggs, at that time, when I made out the schedule and determined the amount of time that was necessary to complete the project, whether he would be willing to sit down with me and draft a letter for an application to the Board of Directors for an extension of time; and he said when I got the schedule up he would be very glad to sit down and draft with me such a letter, so that, when it came up to him, he would know all about it and would be able to recommend it to the board of directors. [1559]

(Testimony of Victor G. Hindmarsh.)

Q. Did you thereafter prepare a construction schedule?

A. Yes, about sometime along the first of January, the latter part of December or the 1st of January I prepared a schedule showing the time necessary to compiete the whole project.

Q. Did you thereafter present that to Mr. Boggs?

A. I presented it to Mr. Boggs or took it up to Mr. Boggs' office on the 22nd of January, with a rough draft of a letter application for an extension of time.

Q. That was on January 22, 1936?

A. January 22, 1936.

Q. Did you show Mr. Boggs the revised construction schedule?

A. I showed Mr. Boggs it; we went over the schedule together.

Q. Did you show him the draft of the letter requesting an extension of time?

A. Yes, I showed him the draft of the letter that accompanied the schedule.

Q. Mr. Hindmarsh, is this a copy of the revised construction schedule which you presented to Mr. Boggs at the meeting with him on January 22, 1936? A. Yes.

Mr. Marrin: I offer that in evidence as Plaintiff's Exhibit next in order.

Mr. Wittschen: Objected to as immaterial, and not having been left and received by the District,

(Testimony of Victor G. Hindmarsh.)

and not in any way binding upon the district. I would like to call your Honor's attention to the fact that neither the letter nor the schedule were left with us.

Mr. Marrin: They were presented, however, to the District Engineer, and discussed with him, and as we will show by this witness' testimony the District Engineer advised against making the application at that time, and suggested that he make it later. We want to show the action of the District Engineer with respect to our proposed request for an extension of time at this time.

Mr. Wittschen: Neither of these will prove that.

[1560]

Mr. Marrin: They would show the discussion between this witness and the District Engineer, and what they discussed.

The Court: I will give you a record on it. I have already indicated my state of mind with relation to that testimony. You have understood that.

Mr. Marrin: Surely.

The Court: I will allow it.

Mr. Wittschen: Exception.

(The proposed construction schedule was marked "Plaintiff's Exhibit 94.")

[Set forth in the Book of Exhibits at page 319.]

Mr. Marrin: I will now offer the form of letter which was presented to Mr. Boggs by Mr. Hindmarsh.

(Testimony of Victor G. Hindmarsh.)

Mr. Wittschen: The same objection, on all of the grounds previously stated.

The Court: So that the record is clear, I understand they were offered but they were withdrawn. What was the fact?

A. Yes, I went up and discussed these with Mr. Boggs in his office and during the discussion Mr. Boggs said that he did not think it was wise to put in the application at that time so I withdrew the letter and took it back to my office.

Q. You had a discussion as to this letter?

A. Yes.

Mr. Marrin: Q. Did he read the letter?

A. Yes.

Mr. Marrin: I offer the letter.

Mr. Wittschen: The same objection, on all of the grounds previously stated.

The Court: Overruled.

Mr. Wittschen: Exception.

(The form letter is marked "Plaintiff's Exhibit 95.")

Mr. Marrin: This form of letter, if your Honor please, reads as follows: [1561]

(Testimony of Victor G. Hindmarsh.)

PLAINTIFF'S EXHIBIT No. 95

January 10th, 1936

W. B. Boggs,
District Engineer,
1448 Webster Street,
Oakland, California.

Dear Sir:

I have prepared a revised schedule for construction on the Broadway Tunnel Job, and beg to submit same to you herewith. It will be noted that completion date in the north, or down-grade tunnel is estimated to be about the 5th of October, 1936; and at the south, or up-grade tunnel, about the 18th of October, 1936.

I trust that this schedule will meet with your approval, and the present completion date under the contract can be extended by you to conform to the times fixed in the schedule. At present the completion date is provided to be May 24, 1936; but under Section 4 of the Specifications, you have the power to extend same with the approval of your directors for the causes set forth in the Specifications, which are classified principally as Acts of God, stormy or inclement weather, or any reason which in your judgment unavoidably delays the work.

I believe you will agree that the contractor has been unavoidably delayed in the performance of the work for many reasons, including

(Testimony of Victor G. Hindmarsh.)

stormy and inclement weather, particularly in the winter of 1934-1935, and other reasons, including difficulty in handling and obtaining labor, which have unavoidably delayed the work.

I will be greatly pleased to have you indicate to me whether or not you will treat this as an application for the necessary extension and submit same for approval to your Board of Directors.

Very truly yours,
V. G. HINDMARSH.

[Endorsed]: U. S. Dist. Ct. N. D. Cal. No. 20101-R. Plff's Ex. No. 95. Filed May 5, 1938. Walter B. Maling, Clerk. By J. A. Schaertzer, Deputy Clerk.

Q. Mr. Hindmarsh, you said that Mr. Boggs told you that he did not think you should present the application at that time. Did he give any reason for that statement? [1562]

Mr. Wittschen: I will object to that question on all of the grounds previously stated.

The Court: I will allow it.

Mr. Wittschen: Exception.

A. Yes, when he read the letter over in the first place, he said he did not think that that was the kind of letter that he thought we should put in, and that he wanted a letter giving all of the reasons why we were asking for an extension of time, and

(Testimony of Victor G. Hindmarsh.)

on each item to show the amount of time which we would want for each cause, so that when the letter came in to him and he brought it up to the Board they could strike out parts of it that they did not think we were entitled to an extension of time on, and allow other parts, that that would give him a complete record to go over.

Mr. Marrin: Q. Is that all he said?

Mr. Wittschen: The same objection.

A. No, there was other discussion in regard to the matter.

Mr. Marrin: Q. Give us everything he said.

Mr. Wittschen: I will make the same objection.

The Court: The same ruling.

Mr. Wittschen: Exception.

A. He said he thought I was a little bit optimistic in the schedule that I placed, but if I thought I could do it it was all right with him, but he said there was another reason why he did not think that we should ask for an extension of time at that particular moment, and that was in the spring of the year, it might be a late fall, and the outside work, all of the paving, which they did not want, to place on a wet fill, would be delayed, and if it was we would be entitled to an extension of time on whatever delay was necessary.

Mr. Marrin: Q. Is that all you recall of the conversation?

A. He also told me that if at such time as I presented or wanted [1563] him to accept that as an

(Testimony of Victor G. Hindmarsh.)

application for an extension of time, that it would only be a matter that the Board would reject, as they did not want to give any extension of time until their May meeting, just prior to our contract time being up, and that if we put it in then, presented it to them, they would reject it on those grounds.

Q. He advised you to delay the filing?

A. He asked me to delay it and make an application for an extension of time late in April, so they would have it before the Board of Directors on their first May meeting just prior to our contract time.

The Court: What was that date?

A. May 24.

Mr. Marrin: Q. Mr. Hindmarsh, you know, do you not, the work which had to be done by Six Companies of California at the time it stopped work on June 13, 1936 on the tunnels?

A. Yes, I know just exactly what had to be done.

Q. Will you describe briefly the work that remained to be done in connection with the tunnels?

A. Well, there was about 450 feet of excavation to complete in the south tunnel, and about 962 feet of excavation to complete in the north tunnel; the concreting was up within 125 feet of the excavation, and we would have to complete the ventilating plant, there was some of the roadway to be completed, and the outside work, none of it was completed, it all had to be, parts of the work, done on all of them.

(Testimony of Victor G. Hindmarsh.)

Q. Have you made an estimate of the time it would have taken Six Companies of California from June 13, 1936 to complete the work under the contract? A. Yes, I have.

Q. And have you shown that estimate on this graph which I show you? A. Yes.

Mr. Marrin: I will offer that as Plaintiff's Exhibit next in order.

(The graph was marked "Plaintiff's Exhibit 96.") [1564]

Q. According to your estimate, Mr. Hindmarsh, how long would it have taken Six Companies of California from the 13th of June, 1936 to complete the work under the contract? A. 204 days.

Q. And you would have completed it on January 3, 1937, according to your estimate?

A. Yes.

Mr. Wittschen: Might I ask a question?

Mr. Marrin: Yes.

Mr. Wittschen: Q. Paving on there means paving in the tunnel, doesn't it?

A. That is right. This schedule is based on the north tunnel, because at that time that was the point in connection with the completion; all of the rest of the work would be going on concurrently, and would be completed before the north tunnel would be completed.

Mr. Marrin: Q. The north tunnel would have been the last tunnel to have been completed?

(Testimony of Victor G. Hindmarsh.)

A. Yes.

Q. That would control the time? A. Yes.

Q. Now, Mr. Hindmarsh, in your experience have you driven any tunnels by the full face method?

Mr. Wittschen: Objected to as immaterial, irrelevant, and incompetent. The District is not bound by what is done in other tunnels.

Mr. Marrin: We are offering, your Honor, to show that the method proposed was a reasonable and proper method known to construction engineers.

Mr. Wittschen: The fact that other tunnels may have been driven by the full face method in other places proves no issue in this case. You might drive them in the Sierras and not drive them in the Coast Range; you would have to show the conditions were identical, and to go into the construction of other tunnels is utterly immaterial as far as this case is concerned.

Mr. Marrin: If your Honor please, on cross-examination of Mr. [1565] Larson, Mr. Price, and I believe Mr. Bechtel the defendant, itself, has gone into that matter extensively, and into other tunnels, in an effort to show that apparently that driving tunnels by the full face method is something that is rather unknown and unusual.

The Court: Limit yourself to the conditions existing here and I will allow it.

Mr. Wittschen: Take the Coast Range and this vicinity.

(Testimony of Victor G. Hindmarsh.)

Mr. Marrin: You might limit it to this vicinity.

The Court: Conditions existing here. What tunnel have you in mind with relation to the geology of this, if any?

A. We drove the Pulgas Tunnel; I drove that tunnel, myself.

Q. Where is that?

A. Down near Redwood City, right here in the Coast Range.

The Court: Proceed. I will limit it.

Mr. Wittschen: That was a water tunnel.

A. That was a water tunnel 13 feet in diameter.

The Court: Proceed.

Mr. Marrin: Q. Did you drive any other tunnels in this vicinity by that method, Mr. Hindmarsh?

A. No, I did not right here in this vicinity; I did not drive any more; I have driven through the Coast Range, however, further north.

Q. Where?

A. On the Willamette Pacific Railroad.

Mr. Wittschen: I think we are pretty far away.

The Court: Q. Did the conditions compare with the conditions here in any way?

A. This was softer ground, your Honor. As it turned out to be, it was softer ground.

Q. Were they timber-supported? A. Yes.

The Court: I will allow it.

A. There were six tunnels on the Willamette Pacific; there were nine, six were driven full faced,

(Testimony of Victor G. Hindmarsh.)

fully timbered, and three of them [1566] in my division full faced and fully timbered, and that was in 1915 and they are still timbered and operating.

Mr. Marrin: Q. You have in mind other tunnels driven under similar conditions, that is, where the ground was not hard rock?

Mr. Wittschen: I object to that question as immaterial and not dealing with conditions here.

The Court: I have tried to limit the testimony to conditions existing here, the Coast Range. Without knowing very much about it, does the Coast Range extend from San Dieg- up to Oregon?

A. Yes.

Q. The formation? A. Yes.

Mr. Wittschen: I do not thi-k he claims the formation is the same.

Mr. Marrin: One of the issues is this, they represented to us at the time when we bid on this contract that this was good self-supporting ground, and we, relying upon this representation, adopted the full face method.

The Court: We will go into that at the proper time. I think I indicated I have a state of mind on that subject. If it would be helpful I will disclose it now; if it is desired by either side I will do so. I want both sides to get a record.

Mr. Marrin: Surely. We simply want to show if we were of the opinion that the ground was self-supporting that the method of driving that was

(Testimony of Victor G. Hindmarsh.)

adopted, the full face method was a reasonable method to adopt.

Mr. Wittschen: If your Honor please, I think there are quite a few cases that go to the point that you cannot ask an expert witness what he would have done in some other tunnel. Now, the fact that the Coast Range may geographically extend from some distance in the South and be bordered by the Willamette Valley on the west, it does not prove that conditions in Oregon are the [1567] conditions here. The witness, himself, said that the conditions were different in the north tunnel and south tunnel, only 100 feet apart.

The Court: The thing I had in mind was, if my memory serves me, on cross examination you developed as to all of the tunnels, and I wanted to allow the same latitude to the other side. That is the only reason. I want to limit it. I think we have wasted some time.

Mr. Wittschen: That was on cross examination of the witness. You can test a witness by asking him these questions.

The Court: But I allowed considerable latitude under those conditions, and I am inclined to consider the balancing of it.

Mr. Wittschen: Evening it up, but this is not cross examination. This is direct examination of another witness. If you kept on with that you could drag every immaterial thing in the witness may have said.

(Testimony of Victor G. Hindmarsh.)

The Court: Here is what I have in mind, I think it was developed before, one of the tunnels he dug up there is still up there, the timbers are holding.

A. That is right.

The Court: So far as the conditions there are concerned, they are not the conditions here, as they did not hold here six months. What do we accomplish?

Mr. Marrin: We accomplish only this, we show that in bidding on this tunnel it was not unreasonable in assuming that it could be excavated by the full-face method, that the method of excavation adopted in making our estimate was a reasonable one, upon the assumption which the plaintiff made from the geological report and the specification.

The Court: I am trying to limit the testimony. What other tunnels comparable to this have you in mind on the Coast Range, [1568] aside from the one you have indicated?

A. There are the Hetch Hetchy tunnels, part of them, I think, were dug with the full-face method.

The Court: I think I indicated to you yesterday I inspected that, myself, at the time.

Mr. Wittschen: That was a small tunnel, the size of the drift in one of these.

A. The Claremont Tunnel was driven by the full-face method.

The Court: Where are we now? What is before the Court?

(Testimony of Victor G. Hindmarsh.)

Mr. Marrin: I think the question perhaps has been answered, as far as your Honor will permit it, under the limitation.

The Court: Let us proceed.

Mr. Marrin: Q. Are the Parker Dam tunnels in the Coast Range?

Mr. Wittschen: No, they are up on the Colorado River.

Mr. Smith: That is a continuation of the Coast Range.

Mr. Wittschen: That is pretty far away.

The Court: That is sort of a wide jump.

Mr. Wittschen: I thought it was a hop.

Mr. Marrin: Q. Did the Parker Dam tunnels require timbering before driving?

Mr. Wittschen: Objected to as immaterial, and too far away.

The Court: The objection will have to be sustained. Let us proceed.

Mr. Marrin: Q. Mr. Hindmarsh, did you have anything to do with making the estimate which the plaintiff estimated for this contract?

A. I did not have anything to do with the details or estimate of the tunnel, itself; I estimated all of the grading work, outside of the tunnel, but I did go over the estimates in conference at the time just before the letting of the whole tunnel estimates.

Q. Had you read the specifications?

A. Yes, I had read the [1569] specifications.

(Testimony of Victor G. Hindmarsh.)

Q. Did you know the statements in the geological report?

A. Yes, I knew them.

Q. And you knew of the driving method proposed in the estimates?

A. Yes, I knew them.

Q. Is it your opinion that the driving methods proposed in these estimates were or were not reasonable, in view of the statements in the specifications and the geological report?

Mr. Wittschen: Objected to as immaterial, and not binding upon the defendant in any way, how they proposed to build the tunnel.

The Court: I will consider this during the lunch hour. We will take a recess until two o'clock.

(A recess was here taken until two o'clock p. m.)

[1570]

Afternoon Session

VICTOR G. HINDMARSH

Direct Examination (continued)

Mr. Marrin: I think there was a pending question, your Honor, and an objection to it that was made just before the noon hour.

The Court: Read the question.

(Record read.)

Mr. Wittschen: We objected to that, and we will also object as calling for his opinion.

(Testimony of Victor G. Hindmarsh.)

Mr. Marrin: If the Court please, I am calling for his opinion as to the reasonableness of the estimate which was made. He has testified that he participated in the conference at which the estimate was arrived at, that he was familiar with the specifications and knew of the geological report, and he knew, also, of the driving methods which were proposed. I am asking his opinion, as an expert, as to whether he considered those proposed driving methods in the bid to be proper, in view of the statements in the specifications and the geological report.

Mr. Wittschen: In the first place—

The Court: This is off the record.

(Discussion, off record.)

The Court: I will allow the question; but I will confess at this time it does not impress me on the merits here. I say that so that you are not misled by anticipating the state of mind I may or may not have.

Mr. Marrin: Surely.

The Court: I will give them a record. Objection overruled.

Mr. Wittschen: Note an exception.

The Witness.: Would you read the question, please?

(Pending question read by the reporter.)

[1571]

The Witness: A. Yes, I think they were very reasonable.

(Testimony of Victor G. Hindmarsh.)

Mr. Marrin: Q. If you were estimating this work again on the basis of this case, would you estimate the same method of driving?

Mr. Wittschen: Object to that as immaterial and calling for an opinion and conclusion, and not binding on the defendant.

The Court: Objection sustained.

Mr. Marrin: Q. Will you give your reason for the previous question which you answered?

Mr. Wittschen: Objected to as immaterial and calling for a conclusion and opinion of the witness on an immaterial matter. Whatever the reasons were, they were reflected in the prices that appeared in the bid.

The Court: The objection will be sustained.

Mr. Marrin: If the Court please, he has stated his opinion—

The Court: I have listened to testimony here for the last—how many days?

Mr. Wittschen: About twelve.

The Court:—and I suppose that would be another recital of that for his reasons. Do you follow my state of mind?

Mr. Marrin: I want him to give his reasons for the last answer. He answered the question, and I wanted him to give his reasons for it.

The Court: Briefly, he may state his reasons.

Mr. Wittschen: Note an exception.

The Witness: A. Well, the reasons for driving a tunnel by full face method—

(Testimony of Victor G. Hindmarsh.)

Mr. Wittschen: Q. We cannot hear you, Mr. Hindmarsh.

A. The reasons for figuring or planning to drive the tunnel by the full face method, wherever you have got self-supporting ground, it is the fastest and most economical way to drive any tunnel; and it is also figured that way; the Contractor figures if the ground is [1572] self-supporting—and that is the reason this one was figured that way.

Mr. Marrin: Q. Mr. Hindmarsh, you knew that the estimate upon which the bid was submitted by plaintiff to the defendant in this case provided for driving a tunnel from the west end, did you not?

A. Yes.

Q. In your opinion, was that a proper method of driving a tunnel?

Mr. Wittschen: Objected to as immaterial. It was entirely within the control of the Contractor, and the last answer of the witness shows the vice of this method of testimony. Mr. Larson said he did not intend to drive by full face until he got in 760 feet. This witness concluded he would drive full face from the start.

Mr. Marrin: No; I don't think so. I asked him about the driving method contemplated in the estimate.

Mr. Tinning: He said "full face method was the most economical."

Mr. Wittschen: Probably the witness misunderstood you, and we both assumed you were talking

(Testimony of Victor G. Hindmarsh.)

about full face, because he said that was the most economical and indicated it would be entirely full face.

The Court: In any event, it is well to keep in mind the District was not bound by any method.

Mr. Marrin: This last question does not go to full face, your Honor. It goes to the question of driving the tunnel from the west end, alone.

Mr. Wittschen: Well, they could have driven it from the east end if they wanted to. There was nothing to prevent it.

Mr. Marrin: I want this witness to testify in his opinion as to whether it was reasonable, in view of the information the plaintiff had, to plan to drive it entirely from the west end.

Mr. Wittschen: I submit there is no issue on that. They could [1573] have driven it from one end or both.

Mr. Marrin: It goes to the question of time, if the Court please.

The Court: What relation has that to time?

Mr. Marrin: Well, if it should be contended that the tunnel should—

The Court: Are you anticipating the defense, now?

Mr. Marrin: No; I am not anticipating it. I am simply attempting to show the reasonableness of the method the plaintiff proposed. In other words, the plaintiff did not go to the east end with any of this work until June, 1935.

(Testimony of Victor G. Hindmarsh.)

The Court: Well, in any event, he was not bound by what he might or might not think of that matter; that was a matter for him entirely.

Mr. Wittschen: By the same token—

Mr. Marrin: It is a matter for the plaintiff, yes; but I think it is up to the plaintiff to show that the method adopted was reasonable, in view of all the circumstances.

The Court: He already testified it was, without indicating what end of the tunnel he might or might not be working on. However, I will allow you a record on it; but I must indicate to both sides that I am going to be severe on my rulings, or we will be here until the rains fall again.

Mr. Wittschen: Note an exception.

The Witness: Will you read the question, please?

(Pending question read by the reporter.)

The Witness: A. Yes; I considered it was a very proper method of driving it. In all short tunnels, wherever—There are only two reasons for driving a tunnel from both ends: one of them is the limit of time; and the other is distribution of material. In this instance, if the tunnel had been—or, if the material had been [1574] as represented, there was plenty and ample time to drive the tunnel from the west end.

Mr. Wittschen: Pardon me. I ask that the part, "if the material had been as represented," go out.

The Court: It may go out.

(Testimony of Victor G. Hindmarsh.)

Mr. Marrin: Q. Have you stated all your reasons, Mr. Hindmarsh?

A. No; first, the distribution of material: in this case, they figured the only place to deposit it was on the west end of the tunnel; there were a few places on the east end that possibly it could have been hauled to,—but a long-distance, expensive haul, to dispose of it on the east end. The logical place was the west end; and, if you are figuring on driving from both ends, it would be a duplication of very heavy, expensive equipment, which naturally would have raised the Contractor's price, if he intended to do it.

The Court: Q. Well, the main fact there would be economy, wouldn't it?

A. Yes, very much economy.

Mr. Marrin: Q. Mr. Hindmarsh, of what does the timber in a tunnel consist?

A. The main timber in a tunnel is the posts and segments, which are generally, as a rule, 12 by 12. This is lagged with, as a rule, from 3 by 3's to 3 by 12's, all around the perimeter of the tunnel wherever it is necessary. That is also the case except in places where there is liable to be considerable spiling and your crown bars above your rings.

Q. What part of the timbering consists of the lagging, in percentage?

Mr. Wittschen: Objected to as immaterial and too vague and indefinite. I take it, some tunnels

(Testimony of Victor G. Hindmarsh.)

are lagged entirely, and some are not lagged at all; and you cannot say, unless you know the exact case. The term "timbering" is defined in the specifications, in any event.

Mr. Marrin: Q. What part of the timbering in the Broadway Tunnel would be lagging, Mr. Hindmarsh? [1575]

A. Well, I would say about 40 per cent.

Q. In ground which is not self-supporting, can the lagging be removed? A. No.

Q. In ground which is not self-supporting, is it good practice to remove any of the timbering?

A. No; it is not good practice. In the last 20 or 25 years, there are very few engineers who will allow you—

Mr. Wittschen: I submit the question has been answered, and that is a voluntary statement.

Mr. Marrin: Q. In your experience during the last 20 years, have engineers, generally, permitted the timbers to be removed from tunnels in which the ground is not self-supporting?

Mr. Wittschen: Objected to as immaterial, and calling for an opinion and conclusion of the witness upon a matter which is not in issue in this case. What is done in other tunnels is not a criterion for what should be done here,—what other engineers do; and I am prepared to submit to your Honor a line of authorities excluding all this line of testimony, if your Honor cares for it.

(Testimony of Victor G. Hindmarsh.)

The Court: On what theory is the removal or necessity for removal of the timber here—how does that bear upon the issue?

Mr. Marrin: Well, if the Court please, in these specifications—

The Court: I have in mind, under the plans and specifications.

Mr. Marrin: Yes. Under the plans and specifications, it stated that the general intent of the specifications was that the timbers shall be entirely removed. Upon the cross examination of Mr. Larson and some of the other witnesses, the defendants themselves have gone extensively into the question of whether the timber was removed from other tunnels,—for instance, the Hollywood Tunnel and the Bayshore Tunnel.

The Court: That has no relation to the issue here. Here, [1576] the Engineer permits some of the timbers to remain; under the plans and specifications, he could have designated that that be removed.

Mr. Marrin: He could have, yes.

The Court: If I am in error about that, correct me.

Mr. Wittschen: He not only could have, but the testimony is they could have left it, or taken it all out, or they could have evolved a different method of driving the tunnel, and leaving the core in, and stulling against it.

(Testimony of Victor G. Hindmarsh.)

Mr. Marrin: I think the testimony goes to show what might be reasonable practice, from experience in the contracting industry, on reading the specifications.

The Court: Have you indicated, for the purpose of the record, the purpose of the offer? I have in mind the issues in this case.

Mr. Marrin: The purpose of the offer, if the Court please, is to show that, where ground is not self-supporting, the timber is not usually permitted to be removed; and these specifications provide for its removal. It shows they indicate that the ground would be self-supporting.

Mr. Wittschen: Mr. Larson gave his direct testimony on the Bayshore Tunnel, and testified in that Tunnel No. 3 they took all the timbers out. He was asked if it was self-supporting, and he said "No." Then, on redirect examination, he was asked if that were done in this tunnel,—could it have been done? Yes. How much more would it cost? A million dollars more, was his answer. Now, what they do in other tunnels and what their conclusions are, as to what would have happened in other tunnels, is entirely immaterial here. These specifications are neither ambiguous nor uncertain. They state it is the general intent that timbers shall be removed; if it is impracticable to remove them, they shall remain in, or, wherever practicable, they should remain in.

(Testimony of Victor G. Hindmarsh.)

The Court: The Court has allowed considerable latitude in [1577] this case, and the reason I did it was: when you outlined your case at the beginning, you indicated that time was of the essence here, and that was the issue as it appeared. For that reason, I allowed considerable latitude on both sides, but finally this case must be determined from the plans and specifications, and no matter what may or may not have occurred in other ground, or in other tunnels, will not finally determine the issues in this case.

Mr. Marrin: I appreciate that, your Honor; but I think the plans and specifications, when they are drawn and presented to the contractors, a contractor would be entitled to read them, in the light of the general practice in the construction industry; and that is the point at issue, if your Honor please.

Mr. Wittschen: That would be changing the contract by parole evidence.

The Court: In any event, the Court cannot make another contract in this case, and has no thought of making another contract. I try to point these matters out, now, so I will not lull either side into security as to what I may or may not do. I am trying to give you a proper record here; so, if I am in error, either side will have the record to comfort them. That is one reason why, if I am in doubt about any testimony, I will allow it to come in. Now, if you want to submit the matter, I will rule.

Mr. Wittschen: I will submit it.

(Testimony of Victor G. Hindmarsh.)

Mr. Marrin: Surely.

The Court: Read the question.

(Pending question read by the reporter.)

The Court: Objection will be sustained.

Mr. Marrin: Note an exception, please.

Mr. Alexander: We join in the exception, your Honor.

Mr. Marrin: Q. Mr. Hindmarsh, you have heard all the testimony [1578] in this case up to date, have you not? A. Yes.

Q. Would you state whether, in your opinion. the Contractor, the plaintiff in this case, was delayed in the construction work, by reasons beyond its control?

Mr. Wittschen: Objected to as asking the witness to weigh the testimony, and not a proper hypothetical question, and immaterial, because that is a matter for the Court to determine, in any event; so, therefore, to the objection we add it invades the province of the Court.

Mr. Marrin: If your Honor please, this witness is familiar with all the testimony, and also is familiar with the work which was done, and the conditions of work; I think he is entitled to express an opinion on that subject.

The Court: He has already testified as to every detail, as the other witnesses have. From that record, the Court must finally try to determine that issue, after you determine all the facts in relation to any delay, if a delay occurred, through the acts

(Testimony of Victor G. Hindmarsh.)

that you may or may not have had control of. You have got a record on that; and I must determine, from that record, finally, an answer to the question that you addressed to this witness.

Mr. Marrin: I appreciate that, in the end, your Honor, you are the one who has to express an opinion.

The Court: I can anticipate the answer of the witness on the stand. The objection will have to be sustained.

Mr. Marrin: Note an exception.

Mr. Alexander: We also except, your Honor.

Mr. Marrin: You may cross examine. [1579]

Cross Examination

Mr. Tinning: Q. When you set the timbers in the portions of the tunnel which you excavated how much clearance did you allow on the plumb posts at the side of the tunnel?

A. 3 inches minimum.

Q. 3 inches? A. A minimum of 3 inches.

Q. A minimum of 3 inches? A. Yes.

Q. Was that at the top and bottom?

A. Yes, that was top and bottom.

Q. Was your wall plate also set 3 inches in the clear?

A. Yes, it was set 3 inches in the clear.

Q. That applied to all work? A. Yes.

Q. The segment above the wall plate, that was also set clear 3 inches?

A. That was set 3 inches in the clear.

(Testimony of Victor G. Hindmarsh.)

Q. Isn't it true, Mr. Hindmarsh, when you drove the tunnel and you found that the ground appeared to be moving, that you frequently set the crown or top timber at the top as much as 9 inches in the clear? A. That is right.

Q. All of the segments of the various sizes, for instance, all A segments, B segments, and C segments were of the same size, were they not?

A. 12 by 12, you mean?

Q. The same length, they were all cut out in the lumber yard, were they not?

A. No, there were individual sets set; when it was necessary there were no segments cut.

Q. Isn't it true that most of the segments were brought in cut to size? A. Yes, most of them.

Q. When you set your segments 9 inches at the top isn't it true that you used the same pieces and simply shortened up the curve on the wall plate?

A. No.

Q. Did you cut extra sets?

A. We cut extra sets, many times.

Q. The timber diagram, Plaintiff's Exhibit 79 for one tunnel, and [1580] Plaintiff's Exhibit 80 for the other, apparently commenced at a station somewhere above where—that is east of where the slide actually occurred on August 28, 1935? You know what I am referring to?

Mr. Marrin: You mean the timber survey?

Mr. Tinning: Yes. A. Yes.

(Testimony of Victor G. Hindmarsh.)

Q. Do you remember where you started that survey or the portions of the north tunnel that you surveyed—would you like to look at this—I think we can find them there so big.

A. We started just about the slide, the cave-in.

Q. The cave-in was at 114?

A. 114, and extended to about 114+96.

Q. Close to 115+00? A. Yes.

Q. You went on with that survey up to about the point that I am indicating here, did you not, about 122? A. 122.

Q. It is true, is it not, that there had been movement in the timbers west toward the portal of the west tunnel before you made the survey?

A. I believe right there in the cave-in there had been movement.

Q. The cave occurred while the workmen were setting back timbers, at that point where the cave occurred?

Mr. Marrin: Now, Mr. Tinning, he did not testify to that. This witness testified he did not come onto the work until after that.

Mr. Tinning: Is there any question about the fact?

Mr. Marrin: No, there is not any question about the fact, but this witness is not the proper witness to ask that question, because he does not know the fact.

(Testimony of Victor G. Hindmarsh.)

Mr. Tinning: Q. You know the timbers were reset there, don't you?

A. I don't know what happened there, at all.

[1581]

Q. You have not been over the records?

A. I do not think that our record shows that the timbers were reset; there are none that I have seen.

Q. But you do know that there had been some movement because you have already told me.

A. Yes, I knew they were working; I understood they were working there at the time on the timbers when they caved in. That is all I know.

Q. In the south tunnel is it likewise true that there had been some movement of the timbers west of the point where your survey commenced?

A. That I don't know, whether there was any movement, at all, there or not.

Q. You do know, however, that it was possible to put the concrete lining into the westerly portion of the south tunnel without resetting any substantial amount of timbers; you went right through there after the slide, didn't you, up to the adit?

A. You mean in the north tunnel?

Q. In the south tunnel.

A. In the south tunnel, yes, we went very close to the adit with the concrete.

Q. And the adit is the first adit as you enter the tunnel, the most westerly of the three in the completed structure, located at the place where the

(Testimony of Victor G. Hindmarsh.)

Wildcat fault is indicated on Dr. Louderback's report? A. Approximately that.

Q. In that area? A. Yes.

Q. And was the modified section installed from the adit on up to station 122? A. Yes, it was.

Q. So that there was pressure in the north tunnel along through that area on the righ-hand side of the tunnel, that would be the south side of the north tunnel? A. On both sides.

Q. On both sides? A. Yes.

Q. The timber diagram will show at the time the measurements were [1582] made the extent to which timbers had intruded into the section that you have just referred? A. Yes, they would.

Q. And likewise would show where intrusions occurred in the south tunnel?

A. That is right.

Q. How much closer up to the excavated face of the tunnel while you were driving it did you keep your concrete than when Mr. Price was on the job?

A. When I caught up with the concreting I tried to keep it up to 125 feet, or close thereto.

Q. When you came to the tunnels there were several hundred feet of unlined excavated tunnel there? A. That is right.

Q. Now, that square setting which you used in preventing the movement of timbers and holding the tunnel is not a novel method of holding timbers that are moving, or moving ground, is it?

(Testimony of Victor G. Hindmarsh.)

A. No.

Q. It is a usual method?

A. It is the usual method.

Q. And it is true, is it not, that square sets such as you used provided very much stronger support in a long tunnel arch than is provided by the ordinary timber that was used in this tunnel?

A. That is true.

Q. The wood forms which were built in this tunnel in the square-setted sections were normal forms for the type of construction you had to do where you had a square set?

A. Yes, I built many of them.

Q. When you started the excavation of these tunnels, yourself, after you caught up with the concrete and started driving, how long were the drill holes that you used in the core, on the average?

A. That depends on what part of the core you are talking about that varied all the way from 6 feet to 12 feet.

Q. Let us start with the longest ones. What part of the core were those in?

A. They were in the lifters, in the center of the core.

Q. At the ground level? A. That is right.

[1583]

Q. Where were the 6-foot holes?

A. Along the edges.

Q. Near the timbers?

(Testimony of Victor G. Hindmarsh.)

A. Yes, under the wall plate.

Q. Did you run about the same length of the drill holes used as you continued the driving?

A. Yes, that was practically the practice right straight through.

Q. It was about the same all the way through?

A. Yes.

Q. How many drill holes did you have in the face of the tunnel, in general average practice, as you went up the core?

A. That varied very much, that I don't know; sometimes we would shoot the core with three or four holes, and other times it would take ten or fifteen of those holes right in the center of the core. It all depends on the formation of the ground, how hard it was; some did not need any powder at all; the shovel took it out without any powder.

Q. In other places you had to drill these holes 12 feet long? A. Yes.

Q. Did you ever run into as many as 40 holes in the space of one blast?

A. We might have, yes. I would not doubt that we had.

Q. When you had a 12-foot hole how many sticks of powder did you have in it?

A. Well, that varied; it varied with the ground; I don't know just how many sticks of powder we had in each hole, because each hole was different.

Q. I understand that there was varying material,

(Testimony of Victor G. Hindmarsh.)

but when you had a 12-foot hole what was the minimum amount?

A. The length of the hole did not mean anything about how much powder you put in it; you might put as much powder in a 6-foot hole as you would in a 12-foot hole.

Q. What was the minimum you would put in a hole? A. 4 or 5 sticks.

Q. A stick weighed about half a pound?

A. I think it takes three sticks, as I remember it, for a pound of powder.

Q. What would be the most powder you put in one of these drill holes?

A. Well, it averaged about three-quarters of a pound [1584] to a yard; I think you could get it easier that way.

Q. You cannot tell me how many pounds you put in a given drill hole, as a maximum?

A. No; I don't know of any hole that I took the exact amount and found out how much powder was in there.

Q. I think there was approximately 35.6 yards of earth in each lineal foot in a section. Does that conform to your memory of the situation?

A. That was the full tunnel face, yes.

Q. And the overbreak was six or seven yards more, was it not? A. Yes.

Q. So that if you used three-quarters of a pound per yard you would have used about how many pounds to each lineal foot?

(Testimony of Victor G. Hindmarsh.)

A. You would have three-quarters of 45, whatever that is.

Q. It would be somewhere around 33 pounds?

A. Yes.

Q. So that if you used 12-foot drill holes you would have twelve times as much powder as that?

A. Well, no, that was scattered in a good many places, not only in the core; the drift was all shot separate on both sides of the tunnel, the wall plate drift, and the rings were all shot separate, and the core was shot separate.

Q. Do you mean at separate times?

A. At separate times, yes.

Q. Do I understand then when you were shooting up one of these drifts ahead that firing was done at a different time than the firing in the face?

A. Oh, yes, lots of the time, most of the time.

Q. Sometimes they were all fired together, were they not?

A. Well, they might be.

Q. It was not the practice, though, to fire them at once? A. No, it was not.

Q. Isn't it a fact that as you progressed with the work, Mr. Hindmarsh, that you began to shoot more heavily than you had when you started?

A. No, I don't think that is the case. [1585]

Q. Did you receive a letter from Mr. Boggs on January 30, 1936, with respect to heavy shooting?

A. Yes, I remember receiving a letter.

Mr. Tinning: If your Honor please, we offer in

(Testimony of Victor G. Hindmarsh.)

evidence a letter dated January 30, 1936, addressed to Six Companies of California, Berkeley Office, a copy of which went to Six Companies, 155 Sansome St., San Francisco. Is that the copy?

A. Yes, that is a copy.

Q. Is it the letter that you received?

A. Yes.

Mr. Tinning: We offer it in evidence as Defendant's Exhibit in proper order.

(The letter was marked "Defendant's Exhibit I-4.")

Mr. Tinning: It reads as follows:

DEFENDANT'S EXHIBIT I-4

January 30, 1936

File: Broadway Tunnel
Blasting

Six Companies of California,
P. O. Box 120,
Berkeley, California.

Gentlemen:

On January 28, 1936, at about 11.00 A.M., very heavy blasting was done in the Downgrade Tunnel.

The District Engineer was standing in the West Portal Building more than one-quarter of a mile from the location of the blasting and noted extremely heavy shocks and vibration resulting from the shooting.

Your attention is directed to provisions of

(Testimony of Victor G. Hindmarsh.)

the Specifications with respect to the use of explosives, and you are advised that you will be held responsible for any damage occurring to the building or tunnel lining, or other structures, which may result from your blasting operations.

Very truly yours,
(Signed) Wallace B. Boggs
District Engineer

WBB/VE
CC to Six Companies of California, 155 Sansome St., S. F.

[Endorsed]: U. S. Dist. Ct. M. D. Cal. No. 20101-R. Deft's Ex. No. I-4. Filed May 5, 1938. Walter B. Maling, Clerk. By J. A. Schaertzer, Deputy Clerk.

Q. The downgrade tunnel was the north tunnel?

A. Yes. [1586]

Q. Following your receipt of that letter, Mr. Hindmarsh, did you diminish the charges of powder that you were using at a given time?

A. No, I did not.

Q. You proceeded about the same way?

A. About the same way.

Q. Driving forward and making the best time you could with the excavation?

A. Yes, that is what I was there for.

Q. Do you remember that on February 4, 1936, a heavy shot was fired in the left wall plate drift in the north tunnel at station 126+35, which broke the

(Testimony of Victor G. Hindmarsh.)

ground ahead from station 126+35 to 126+43—that would be a distance of 8 feet—in the left wall plate drift of the north tunnel, that would be the north drift of the north tunnel. Do you recall that incident, at which time all of the timbers in seven sets back of the drift face, that is, from station 126+35 back to station 125+92, a distance of 43 feet, were blown out of the drift? A. No, I do not.

Q. You don't recall that? A. No, I do not.

Q. You would not say it did not happen?

A. I do not think it happened.

Q. You do not think it happened?

A. No, I do not.

Q. And that later on the same day, or February 4, while clearing up the wreckage of this thing the mucking machine pulled out three more sets back of 125+92?

A. The mucking machine pulled out some sets, this Bagley pulled out some sets.

Q. Did the hill fall in on you then?

A. No.

Q. Do you remember that the day following, on February 5, 1936, when the core was shot at station 125+12 in the north tunnel, two complete rings were shot out, including the segments and the spreaders at station 124+94, that is 20 feet back from where the shot was fired?

A. Yes, I remember that. That is nothing unusual in any tunnel. [1587]

(Testimony of Victor G. Hindmarsh.)

Q. The ground was sufficiently good there that you never put these sets back, did you?

A. That is right.

Q. Defendant's Exhibit H, which is in evidence here, shows these rings that you shot out? I will show you Defendant's Exhibit H. Your Honor has already seen this exhibit, which is the one looking up at the ceiling of the tunnel. Does that represent the condition as it was?

A. That is right. The lagging was clear across the roof, so it protected the roof from caving; there was no danger there as long as the concrete was coming in close by.

Q. And that was the reason it was left standing in that position? A. Yes.

Q. Now, Mr. Hindmarsh, a few days later, and on February 6th, do you remember that in the left wall plate drift at station 126+50 to station 126+56 a shot was fired and that nine sets in that drift were shot out, all of the timbers in nine sets in that drift were shot out back to station 125 plus 82?

A. No.

Q. You don't remember that? A. No.

Q. Would you say that it did not occur?

A. Yes.

Q. Do you remember that on February 15, 1936, in the down-grade tunnel between station 126 and 126+10 a run occurred under the left wall plate that started at midnight and was stopped at 4 a.m.,

(Testimony of Victor G. Hindmarsh.)

with a power shovel? Do you remember that incident?

A. Why, we had that on several occasions; we had several small runs that were stopped; I don't remember that.

The Court: What do you mean by small runs?

A. Well, material right back of the timber would start coming down. This happens most any place in the tunnel where the ground is broken.

Q. Running material?

A. Running material in behind the timber, and sometimes you have to put in some more lagging to keep it from running. That is not unusual in any tunnel.

Mr. Tinning: Q. And that at the place where the run occurred [1588] there was 15 feet of unsupported wall plate between the post that was nearest to the core in the wall plate drift. Do you remember that condition?

A. Well, that might have happened. I know on several occasions we had 15 feet of wall plate unsupported.

Q. You did not consider that that was treading close to danger to have 15 feet of wall plate not supporting those rings that are holding up the roof?

A. That depends on the condition where you are. That is a common thing to let a 14-inch wall plate stand that distance.

(Testimony of Victor G. Hindmarsh.)

Q. When that wall plate is sagging down two inches in the middle of the span won't it loosen up the rings above?

A. If it sags down, but that is not unusual. It might sag before it ever came in the core at all.

Q. If it sags that way it loosens the rings above?

A. That is true, if they are not tightened up.

Q. And the rings are supporting the roof in unsupported ground?

A. Yes, but these segments lots of times with the wall plate will settle, because in our drift the ground, as you know, was soft, and when we put these wall plates in on mud sills, if any load comes on it, as a rule, these wall plates at times may sag, but that was all caught up before it ever came off the wall plate drift, and the segments retightened.

Q. I am talking now about a condition where you have 15 feet of wall plate that is unsupported between the posts, the last plumb post or batter post, and the place where it is supported on the ground in the wall plate drift, if you have a sag of two inches there won't that loosen it?

A. That depends on where it sags. It might have been in that condition before it ever got out of the wall plate drift.

Q. In other words, it was a warping of the timber and it had all been taken care of by bracing?

A. Yes. [1589]

Q. And checking in such a way you had a stable condition? A. That is right.

(Testimony of Victor G. Hindmarsh.)

Q. But if it sagged, after you had taken the support out from underneath the wall plate it would follow that the rings above were not supporting the roof at that place, wouldn't it?

A. No, that does not always follow, because if you have got heavy ground there enough to sag your wall plate your roof will follow the timbers, the timbers will be sticking up the side and your timbers set.

Q. If you have not gauged it right it may come right down and follow down to the bottom of the tunnel?

A. That is possible in any tunnel.

Q. Mr. Hindmarsh, this is a diagram made from the records of the District of the locations of all of the timbers in the north tunnel from station 122, where you started your driving, through to the place that Six Companies ceased doing work on the 13th of June, 1936, and shows on the bottom the posts on the south side of the tunnel and on the top the posts on the north side of the tunnel, the left side, and in the center space between the wall plates or between the caps where you did not have a continuous wall plate; it shows the segments. Does that appear to represent to you the locations of the timbers in the portions of the tunnel that are referred to, as you remember them?

A. Yes, it looks something like it; I guess it is approximately what it was. It is pretty hard for me to tell, just looking at that diagram, at that particular station you state it was.

(Testimony of Victor G. Hindmarsh.)

Q. Well, do you remember this timbering that we were discussing, that was shot out at 124+90 a little while ago?

A. If that is the station I don't know.

Q. The station appears.

A. I don't know what your diagram shows [1590] there, what it is.

Q. What do you mean?

A. I don't know if that is the place that the timber was shot out, or not.

Q. You can see station 124+90? A. Yes.

Q. I asked you a short time ago if it was not a fact that the timber was shot out of there, and you said you didn't know.

A. What I meant by that is I didn't know the exact station. I know there was some shot out, but I don't know the station.

Q. You did not see any other timbers shot out in that tunnel that was not replaced? A. No.

Q. You said this morning with respect to a letter from the Industrial Accident Commission and a diagram that was sent, that you had difficulty about your batter posts. You use batter posts frequently, don't you? A. Yes.

Q. And you use those to advance ahead under the wall plate as you drive ahead to get support as far ahead as you can? A. That is right.

Mr. Marrin: Pardon me. I think you misquoted the witness' testimony. I do not recall his testifying he had any difficulty about the batter posts.

(Testimony of Victor G. Hindmarsh.)

Mr. Wittschen: He said the Industrial Accident Commission suggested that batter posts go in, and he indicated it was a novel method. We might have misunderstood him.

A. You must have misunderstood me. I did not intend to say that.

Mr. Tinning: Q. You have used batter posts?

A. Yes.

Q. You used them during a good part of the work that you did in the north tunnel?

A. That is right.

Q. You used them for the purpose of getting support under the wall plates as far ahead as you could, so that when your wall plate was in the drift you could get a space between that and the next vertical [1591] post support as near as you could to take care of the weight of the timbers that ran from the roof of the tunnel? A. Yes.

Mr. Marrin: Identify the document. That is not in evidence yet.

Mr. Tinning: I wanted to see if he recognized what it was, and then I propose to offer it in evidence.

Mr. Marrin: You may mark it for identification, or you may put it in subject to check.

Mr. Tinning: It is made from our records and I think it is correct.

Mr. Marrin: Is that to scale?

Mr. Tinning: Yes.

(The diagram was marked "Defendant's Exhibit J-4.")

(Testimony of Victor G. Hindmarsh.)

Mr. Marrin: We do not admit the accuracy of it.

Mr. Tinning: No. It is formed the same as your timber record.

Q. Now, referring to this timber diagram, Defendant's Exhibit J-4, I will ask you, Mr. Hindmarsh, to examine the portion between stations 126 and 127, which is the area where your slide of February 22, 1936, occurred. I believe you stated that that slide, as you remembered it, occurred at 126+50. A. I think that is right.

Q. In making that statement are you sure of that, or is that your best recollection?

A. No, I am not sure of it. That is my recollection, as I remember, of the station it was at that time. It might have been one way or the other.

Q. It might have been 25 or 30 feet either way?

A. Yes.

Q. Was the ground, as you approached the place where this cave-in occurred, increasingly better, or was it getting worse?

A. Well, it varied all the way through, the ground generally, most every round; the condition of the ground you could not predict at any time, what it was going to be. [1592]

Q. You notice on this diagram it shows that you had your plumb posts and batter posts closer together around station 124 than you had when you got up near station 127, where this slide occurred.

A. Well, there were ample posts under there at any time to hold anything that the wall plate could stand. It would have held with half that many.

(Testimony of Victor G. Hindmarsh.)

Q. If you had half that many as you actually installed there you could have held that wall plate?

A. It would have crushed the wall plate before it would break the posts.

Q. For that reason you were able to put two and three timbers over the ring at the top of the tunnel, on top of the wall plate, and then support the wall plate?

A. That is right. The reason for two or three timbers above the wall plate was due to the shape of the rings. You could hardly get any strength in that design, where it was so flat on the sides, and your posts took more of a down weight.

Q. When you got up to station 126+50 or 126+75, according to this gland or kidney that you referred to, as I understand it that was what you would call an intrusion, was it not, of some other material? A. Yes.

Q. Into the cherts? A. Yes.

Q. I think you said on one side of the tunnel as you passed through you passed through a lens of this material that was only two, or three or four inches thick, I don't remember what.

A. On the north side of the tunnel.

Q. On the north side of the tunnel. That would be on this diagram there?

A. Yes, as I remember it.

Q. And on the south side it was a couple of feet thick? A. Yes.

Q. It went through at an angle? A. Yes.

(Testimony of Victor G. Hindmarsh.)

Q. Is that correct? A. Yes.

Q. Something about like this, was it?

A. It followed along the [1593] tunnel on an angle, probably 30° slope, or something like that; it ran along the tunnel.

Q. Were the two places where you had the two inches wide and two feet on the other about opposite each other at the floor of the tunnel?

A. No, it was further along in the tunnel; it followed that lens quite a little ways in the tunnel, in the bench, before it went out of the tunnel.

Q. But where you crossed it at that time was the ground on the north side, was that nearer the west portal than the south side was?

A. As I remember it was.

Q. So that the general trend of this would be something of an angle like I am pointing here; I suppose that is a 25 or 30 degree angle, is it not?

A. I suppose so.

Q. It also tipped back so that the tip of it—I don't know which way it tipped—what do you know about it? A. It ran easterly.

Q. That is, the top was farther away than it was to the ground? A. Yes.

Q. And do you remember how high the lens was or how wide the lens was at the top of the tunnel in the center?

A. I don't remember the lens showing at the top of the tunnel; it may have, but I don't remember it.

Q. You would not say that it did not show?

(Testimony of Victor G. Hindmarsh.)

A. No, I would not say so.

Q. And after it caved in you found some material that you had seen in these veins as you passed through the formation, you found a piece of that, I think you said you left some boulders up in there?

A. Yes, that followed up higher in the tunnel, 40 or 50 feet. [1594]

Q. Was there anything about that material, as you went through, that suggested to you that you should take different steps to support that than you had at some other part?

A. No; not particularly. In fact, I had had just as bad, if not worse, ground further back in the tunnel where I had stopped the progress at the face of the tunnel for a week, while I concreted it, because the posts were moving. The posts were not moving as rapidly at this section as they were further back.

Q. But there was some moving here?

A. There was always movement in all the posts.

Q. The material you found there did not cause you to change your method of timbering or your method of holding the ground at that point, in any respect?

A. We put in some, I believe, 14 by 14's in the ring there,—stiffened those up a little.

Q. Made them larger?

A. Made them larger; made them larger than what we had been using.

Q. That is, to support the roof where this material lay? A. Yes.

(Testimony of Victor G. Hindmarsh.)

Q. You cannot say now what width this kidney had in the roof?

A. No; I could not tell you.

Q. Mr. Hindmarsh, I am going to ask you to look at these two diagrams. The one I am pointing to now is a diagram of the right portion of the tunnel,—the right side of the tunnel,—showing from the center line of the portion of the tunnel on the right-hand side from Station 126+50 to Station 127+75, showing the heading of the drift as it was on February 21, 1936; and the other diagram showing the other side of the tunnel,—similar diagram. If these two diagrams were taken and folded over a glass tube—

A. I understand.

Q. I am trying to explain this to the Court— If these two diagrams were taken and folded over a glass, so the edges came together, the top of the drawing of the tunnel would represent the entire [1595] interior of the tunnel, showing the timbers in the tunnel, and the other matters that are shown.

The Court: What is this side?

Mr. Tinning: That is the north side of the tunnel, coming up this way; the north side; and this is the right side, or south side, going up the tunnel.

Q. Mr. Hindmarsh, this diagram is made from the District's notes and measurements of timber taken to 7 a. m. on February 21st; and the man who made the measurement was in the tunnel at 3

(Testimony of Victor G. Hindmarsh.)

o'clock that afternoon, and that was apparently about 5 or 6 hours before you left the tunnel; I think you said you left about 8 or 9 that night?

A. Yes.

Q. Would you look at the diagram, and see whether,—referring now to the right-hand side—whether it appears to represent the location of the plumb post, with respect to the core face, as you remember it, at the time you last saw it?

A. Yes, it is probably approximately correct, so far as I can see now—nothing unusual about it.

Q. There is nothing unusual at all, you say? And, likewise, is that true of the left-hand side?

A. Yes, I believe so.

Q. That would be the north side of the tunnel?

Mr. Marrin: May I ask, Mr. Tinning: Was this blueprint made on the date it appears to have been made there,—February 21, 1936?

Mr. Tinning: No; it is the timber location. This has just been made from our notes, for demonstrative purposes and for this testimony, and for no other purposes; but the data that is on there, except as it appears upon some other date—for instance, there is "Approximate surfaces of the muck pile": that was put on,—the data from the morning of the 22nd; but the timbers are as they stood the last time it was measured by the District before the slide. They were measured on the morning of the 21st of February, at 7 a. m. [1596]

(Testimony of Victor G. Hindmarsh.)

Mr. Smith: The face of that core is an estimated position, is it?

Mr. Tinning: Yes. In other words, the face is taken from the measurement, and the bottom is run down, in about the same manner as the other cores that are actually put on there.

The orange line, which is marked "Core 7 a. m. February 19," indicates the line of the core at the time stated, on the 19th of February. The yellow line, which is next easterly, represents the core at 7 a. m. on the following day, February 20th; and the red line most easterly represents the position of the core as measured at 7 a. m. on February 21st; and these are all centers.

The Witness: They were approximate stations, also.

Mr. Tinning: Yes; taken in the tunnel as approximations; and this diagram shows that, at the time this measurement was taken, or after this measurement was taken, there was further excavation on the right-hand side of that tunnel, was there not, from the point where the core was, on the morning of the 21st, and where it was estimated to be on the morning of the 22nd? A. Yes.

Q. These dotted lines, which appear on the diagram, running from the floor line to the top, are the lines taken by the man who measured this—at which he saw the boundaries of the lens; and you will notice that it was marked at 126+85, and is leaving the tunnel at the top, 126+54, on the west-

(Testimony of Victor G. Hindmarsh.)

erly end, and toward the east at 126+71. Does that represent the conditions, or does that refresh your recollection as to the conditions, with respect to the position of the lens of material that you have referred to?

A. No; I don't think the lens runs that way. It did not extend so far in the crown. My remembrance of the lens was it went practically outside the tunnel at this point; and there was a long distance right here, where it caved in, that there was no sign of any of this muck. It may have come back up into the roof; I am not sure. [1597]

Q. Well, Mr. Hindmarsh, I am calling your attention, to get "this" into the record—you pointed to the area above the wall plate? A. Yes.

Q. You stated, as you recollected, the material you could discern had disappeared in the roof of the tunnel above the wall plate?

A. The material on the side. Like in here: it may have come out again in the roof; I am not sure. I did not notice whether it was up there in the roof or not; whether it was or not, I cannot definitely say.

Q. At any rate, it is your testimony that, above the wall plate and for some distance on the side of the tunnel, you believe it disappeared?

A. Yes.

Q. You could not see it; it was not visible? Now, on the other side of the tunnel,—the left-hand side, or the north side, of the tunnel—also, we have

(Testimony of Victor G. Hindmarsh.)

indicated by dotted lines, in the same manner, the lens of material which intersects the floor at about 125+97 or 98—was that about a fair estimation?

A. One hundred what?

Q. 125 plus— A. 125 or 127.

Q. Then I have made a mistake on that, because it is 126-plus about 48. A. Yes.

Q. 126+48.

A. I don't know what the scale is on that map.

Q. Past the most easterly portion of the lens, as shown on the map,—that was 126+71; and the most easterly portion of the top of the tunnel was 126+54. Would you say that those dotted lines are reasonably accurate representations of the appearance of that material on the north wall of the tunnel?

A. Yes, if it showed up there on the north wall of the tunnel at all, except down in—right in here on the bench,—this point here,—it went diagonally across.

Q. What do you mean by "the bench"?

A. This is the bench here.

Q. You mean where the plumb posts are below the wall plate?

A. Yes. As I remember, it started about there, —a very small lens,— [1598] and went directly across the face of the tunnel on about an angle, I would say, of 30 degrees.

Q. Well, it shows here at 126+48 on the north side, and 126+ about 80—isn't it? A. Yes.

(Testimony of Victor G. Hindmarsh.)

Q. That would be about 32 feet, wouldn't it?

A. More than that— Yes, that is right.

Q. About 32 feet?

A. A 45-degree angle, practically.

Q. About a 45-degree angle. So, the south side of that lens would be about 32 feet further toward the east end of the tunnel than the north side?

A. Yes.

Q. But you, again, are unable to recollect that there was anything that you could discern above the wall plate?

A. There was nothing there to indicate any trouble at all, that I remember of, on that side; it was very hard.

The Court: We will take a recess for a few minutes.

(Recess)

Mr. Tinning: If the Court please, we will offer in evidence, as Defendant's Exhibit K-4, the diagram which we have been using in discussing this matter with Mr. Hindmarsh, as being the right-hand side of the tunnel, and also as L-4, the diagram of the left side of the tunnel.

Mr. Marrin: Those will go in, of course, subject to our check?

Mr. Tinning: Subject to your check.

(The diagrams were marked, respectively, "Defendant's Exhibits K-4 and L-4.")

Mr. Tinning: Q. Mr. Hindmarsh, in order that we may understand exactly what this diagram is

(Testimony of Victor G. Hindmarsh.)

attempting to elucidate, I would like to show you what I have done here during the recess. I have drawn, on a piece of flat paper, something similar showing one of these dotted lines, — what these dotted lines show.

The Court: Isn't there a photograph here, showing that? [1599]

Mr. Marrin: Yes.

Mr. Tinning: Yes, your Honor. What I am trying to do with this— If turned over like this, we have one side of the tunnel; and the top line of the tunnel is the center line. If we put those two together, we would have, what I am showing here—

Q. That is a fair representation of what these two diagrams would do, if joined together in that manner, isn't it, Mr. Hindmarsh?

A. That would be probably what it indicates.

Q. Yes. Now, the photographs that your Honor spoke of are here, ready, as the next matter to be taken up.

I show you a photograph, looking west of Station 127+08.

The Court: Would that be looking down the tunnel?

Mr. Tinning: Yes, that would be looking down the tunnel.

Q. That was a photograph taken some time after the slide, and shows some of the intrusive material to which you have referred, does it not, Mr. Hindmarsh?

(Testimony of Victor G. Hindmarsh.)

A. I think it is—the white material is down here.

Q. Yes; and shows the cherts at the top of the tunnel,—one edge of this slide,—does it not?

A. As I view this photograph, I think it shows the easterly end of the cave-in. Is that right?

Q. Yes, I think so.

The Court: Pardon me. This is off the record.

(Discussion, off record.)

The Witness: That was taken some time after the slide.

Mr. Tinning: Q. At the time that you were getting ready to remove this material? A. Yes.

Q. After you had caught up your concrete wall? The point of the photograph, if the Court please, is that it shows the white lens of material in the roof of the tunnel.

The Witness: On the left-hand side.

Mr. Tinning: Q. Yes. Now, I will show you a photograph taken [1600] on the same day; and ask you if you are able to say where that was taken, Mr. Hindmarsh. It was taken on April 8, 1936.

A. It looks like it was taken practically from the same place. What is the date?

Q. April 8, 1936. It shows the space, does it not, in between the top of the slide and the roof, at that point?

A. Well, it shows— This is taken where this measurement is being shown—that is on the slope of the slide.

Q. Yes; the easterly slope of the slide?

(Testimony of Victor G. Hindmarsh.)

A. Yes.

The Court: They are identical, aren't they, only from the point taken?

The Witness: It looks to me as though they are taken at practically the same spot.

Mr. Tinning: The purpose of the measurement was to get distance, your Honor. We offer these two photographs, taken on April 8th, of the slide area at Station 126+95, as defendant's exhibit next in order. I think it is "M4-1 and 2."

Mr. Marrin: Which one is No. 1?

Mr. Tinning: The one without the measuring rod.

(The two photographs were marked, respectively, "Defendant's Exhibits M4-1 and M4-2.")

[Set out at pages 467 and 468 of the Book of Exhibits.]

Mr. Tinning: Q. Mr. Hindmarsh, when this cave-in occurred, you described how it occurred early in the morning and it continued throughout the day to fill in the tunnel; you said you thought it went up 35 or 40 feet into the top. You did not remove the material—all of the material out of the caved area; you drove— You put your spiling across there, and put in concrete, and then grouted in there, did you not?

A. No; we did not grout there, Mr. Tinning.

Q. What did you do, to fill that void?

A. Well, the void was filled; the cave filled the void; it caught itself up, and we tunneled [160] right through it, and left the loose ground above us.

(Testimony of Victor G. Hindmarsh.)

Q. Those boulders,—the white material you saw in the roof,—indicated they were some of the intrusive material above the top of the roof of the tunnel?

A. Yes, I think there was. I think the cave followed that.

Q. Followed that intrusive material up?

A. Yes.

Q. So, as you had driven through your tunnel, you would cut off the top of this kidney that was hanging up there in this cherts?

A. Well, I don't think that we did; I don't think we did that. I don't remember, but it may have shown some, in the roof; I am not sure whether it did.

Q. You stated you found boulders and white material?

A. Well, that came further up, after the cave-in. I don't know how far up in the tunnel; the kidney may have been 40 feet up above the tunnel, so far as I know, because those kidneys come in at any angle or any place.

Q. You ran into a good many similar formations as you went along, as you had gone along through the tunnel, before you came to this point?

A. Lots of them.

Q. So, it was nothing surprising or new to you by that time? A. No.

Q. When you were studying this estimate and the other matters which you have referred to, in

(Testimony of Victor G. Hindmarsh.)

1934, when you were with the W. A. Bechtel Company, you had knowledge of the geologist's report, did you not? A. Yes.

Q. At the time you were driving this tunnel, I suppose you had that same information in your mind?

A. Well, no; I had forgotten all about the geologist's report by that time.

Q. Did not pay much attention to it?

A. No; I didn't pay much attention to it.

Q. When you were driving?

A. No; because the ground was so much [1662] different than the geologist's report showed, I paid no more attention to it.

Q. Well, I am going to read you the first paragraph on page 16 of the geologist's report—it is Exhibit 22:

> "In driving through the cherts, the combination of crushed zones and water often present difficulties. The crushed rock (with or without water) may flow out into the tunnel almost like quicksand, or, if it holds together better, it may develop considerable pressure, until the water pressure is relieved by free flow into the tunnel. In the Claremont Tunnel the careful driving forward of spiling was necessary in the more broken and the crushed portions of the chert. In certain cases where a broken or crushed mass of rock lies within intersecting fault planes, and thereby loses its bond to surround-

(Testimony of Victor G. Hindmarsh.)

ing rock, it may slump down into the open working, leaving a chamber in the wall or roof."

Isn't that what happened here?

Mr. Marrin: Where are you reading on that page, Mr. Tinning?

Mr. Tinning: Page 16; the first paragraph. I read from the first of the paragraph down to the next to the last line.

The Witness: A. Yes. He said they might drop down. If they did, we should let them come down. We did, in this case.

Q. Intentionally? You left the boulders up there?

A. Well, we held some of them up there afterward.

Q. You changed your practice after you discovered what to do in the tunnel?

"If such unsupported blocks or masses are met, it would probably be best to let them down or remove them, before placing the concrete of the completed structure."

Well, from your last remark, do I understand, Mr. Hindmarsh, that you were trying to comply with Dr. Louderback's report?

A. No; I wouldn't say that. I was trying to hold it up. [1603]

Q. You made no change in your timber, at this point, other than, as I understand you to say, you placed 14 by 14's in this area, in the roof?

(Testimony of Victor G. Hindmarsh.)

A. Yes, as I remember it, we placed 14 by 14's in there; placed them in there for some little distance.

Q. And these matters which we discussed a short time ago, about shooting out sets in drifts at 126+50, 125+12, 126+35, do you think they had nothing to do with loosening the material in the roof of that tunnel?

A. No; I do not, because that was in the wall plate drift, and did not come anywhere near the roof.

Q. Well, Mr. Hindmarsh, it might have been in the wall plate drift; but the wall plate drift runs under a part of the roof? We will look at Plaintiff's Exhibit 42. Take the wall plate drift; that was pretty close to the roof,—the outside, upper corner of those drifts—aren't they?

A. I would say that is quite a ways from it, with solid dirt over the top.

Q. Well, I am referring just to the roof. I have always thought it was any part above the eaves.

A. I was taking the wall plate and the eaves, and going on up.

Q. What do you mean by the "roof"?

A. Well, it is from the face of the wall plate just about where it hits the top of the wall plate.

Q. Well, one side of a wall plate drift forms a part of the roof that we are talking about?

A. Well, it forms a part of that segment section.

Q. It is true, if explosions were permitted in a

(Testimony of Victor G. Hindmarsh.)

wall plate drift at Section 125+35 and Station 125+50, that they were in close proximity,—within 20 feet, or so, of this material shown on the diagram; isn't that true?

A. Well, the stations seem to coincide. That is all I can go by.

Q. Well, that is what we are working on at this time. And those [1604] explosions in this tunnel were sufficient so that the District Engineer wrote you, on the 28th of January, and called your attention to the fact that they seemed to be extremely heavy; he felt, from the report of the shots, that——

A. No; I don't think that had anything to do with it.

Q. How would you explain that?

A. That would be very easy to explain. Mr. Boggs's anxiety over the reports of the shots that he heard—that is not an unusual thing in a tunnel; the cause of it is never dangerous; that kind of explosion is never dangerous to a tunnel.

The Court: We can all agree it is not helpful, can't we?

A. Well, it does not hurt it. The reason for a loud report is, in driving a tunnel, you use delayed——

The Court: Yes, I understand.

A. —and one part of your first shot is required to take the load off the other shot; and when you get a loud report, it is the same in any tunnel, it

(Testimony of Victor G. Hindmarsh.)

causes a lot of air vibration, which causes the powder to explode in the air, first, and causes a lot of vibration; it does not hurt a tunnel at any time.

Q. Is this vibration all in the air?

A. It is all in the air, because the powder explodes in the air.

Q. A quarter of a mile away, it may shake the earth?

A. The earth doesn't shake, your Honor; when you have a tunnel, it is like inside a rifle barrel, you cause a heavy concussion of air there, and it comes out the face, and if there is anything like windows around there, it will shake them.

Q. It won't interfere with the earth?

A. Not a bit.

The Court: I am glad you corrected me on that.

The Witness: The shot really that does the damage in a tunnel——

The Court: I follow you; I don't disagree with you, but I [1605] would have been laboring under a delusion that the earth might shake——

A. No; it would not, in that kind of a job. It is like throwing a fire cracker up into the air; it makes a concussion, but it don't shake the earth. The thing that would do the damage in there is the dull thud——

Mr. Tinning: Q. What was it that blew the sets out in these drifts,—the air?

A. That may happen in any tunnel, because you may get a boulder right in front of a shot, which

(Testimony of Victor G. Hindmarsh.)

will take the whole load; and it will come out like a rifle ball; but that is not an unusual thing. That happens thousands of times in a tunnel. You can shoot timber out of some types of rock which come from behind and take the whole charge. [1606]

Q. It would not blow out all of the timbers in seven sets back of the draft face?

A. No, it does not take a big piece of rock to do that. That was only a temporary section, and that was before the permanent timber was put in.

Q. What about the ring sets that were blown out, was that air?

A. No, that was rock, a rock or boulder that had been taken out that was lying possibly over the charge that went off and that one boulder went up and happened to strike some segments and knock them out.

Q. Have you inspected the record of the explosive that was used within forty minutes before this cave-in occurred in the tunnel on the night of February 21 and the morning of February 22?

A. No, I have not.

Q. Would it surprise you to know that there was some 225 pounds of powder fired off in that tunnel about forty minutes before this collapse?

A. I don't know to that effect. If all of the rings in all of the drifts were shot and all the benches were shot, 220 pounds of powder would not be——

Q. (Interrupting) Would not be out of the way? A. Would not be excessive.

(Testimony of Victor G. Hindmarsh.)

Q. If there were 30 holes in the core face that night when that shot was fired about forty minutes before the collapse, would that have anything to do with it?

A. I don't know if there were 30 holes; I don't know how much powder was put in there. I was not there at the time of the shot, and I have not any record of just how many of the holes there were, because these holes changed on every round.

Q. If the inspectors of the District had a record of thirty holes would you think that was accurate or out of the way?

A. I would not know whether it was accurate or not.

Q. You know they kept a record?

A. I don't know whether he kept a record of the number of holes that were drilled, or the amount of [1607] powder. In fact, I am very doubtful if you have got any record of the amount of powder used.

Q. Would you like to see it?

A. You may have a record, but how it was kept is another proposition.

Q. Do you know a man named Hartwell?

A. Yes, I knew Hartwell.

Q. An inspector for the District. There was a man continuously in the tunnel at all times while the work was going on, Mr. Hartwell at times and Mr. Belcher at times?

A. Yes, there was an inspector on the job at all times somewhere around on the job.

(Testimony of Victor G. Hindmarsh.)

Q. You are not certain whether they kept a record of the holes that were drilled in the ground?

A. I doubt very much whether they did.

Q. Would you say that 30 was an unreasonable amount? A. No.

Q. You have already stated that 225 pounds of powder was likely to be the right amount?

A. No, I said that was used in drifts and in the rings and in the bench, if they shot all of those places at that time 220 pounds of powder would not be very far out of line.

Q. Mr. Hindmarsh, this morning there was introduced here as Plaintiff's Exhibit No. 92 a letter addressed to the Six Companies of California, dated April 16, 1936, which accompanied the diagram which you showed to Judge Roche, and discussed about wall plates, and rings, and wall plate drifts, etc. This was a letter from the Industrial Accident Commission to Six Companies, and I believe you said you received this letter. I would like you to consider the matters in the terminating paragraph of this letter: "Provision must be made against undermining the wall plates by the Bagley system of excavation, and also against over-shooting the side walls directly under the wall plates." It is true, is it not, that at various times the Industrial Accident Commission people had been in conference with you about the shooting under these wall plates?

A. No, that is not true. [1608]

Q. It is not true? A. No.

(Testimony of Victor G. Hindmarsh.)

Q. What was it that occasioned that letter of April 16, 1936, in which they warned you against over-shooting the side walls?

A. It was just a natural warning. I was in conversation with Mr. Reinhardt all through that job and I don't think he ever mentioned at one time to me that I was shooting too heavy.

Q. You think that when he put in about overshooting the side walls directly under the wall plates it was just out of an abundance of caution and that nothing had happened before that led him to put that warning in the letter?

A. I think that is right, it was a natural thing for him to write about.

Q. Mr. Hindmarsh, if I remember your testimony this morning you said at the time that this slide occurred that you thought the concrete was about 125 feet back. Was that from the core or from the place where the slide took place?

A. That was from the core. The reason I said that was because that was about the distance I kept the concrete at all times.

Q. Have you checked your record on it?

A. No, I have not.

Q. Would it surprise you to know that the distance from the core to the concrete was 234 feet on February 21 in the north tunnel?

A. I would doubt that very much unless the record showed it.

Q. Will you examine the document, Plaintiff's Exhibit 58 for identification, and perhaps one of

(Testimony of Victor G. Hindmarsh.)

your engineers can check that with you; but that is what an observation of that record shows, the face of the core, the total core was 127+07, and the concrete was, the easterly end of the concrete was at station 124+66, 234 feet. Have you got that?

A. If the record shows that that is true.

The Court: The witness testifies if the record shows that that is true.

Mr. Wittschen: Will it be stipulated that the record shows that fact? [1609]

Mr. Marrin: He is examining it.

A. The record seems to.

Mr. Tinning: Q. In other words, the record which Mr. Wilde is showing you indicates it was 225 feet from the toe of the core to the end of the concrete: is that correct?

A. Yes, the record seems to show that.

Q. Now, with respect to the concrete that was placed in the east portal, Mr. Hindmarsh, that was done during your administration of the work, was it not? A. Yes.

Q. You know there were two rings poured sometime after September, 1935.

A. Yes, I had charge of the pouring.

Q. What method did you use for pouring that concrete?

A. A Hackley gun, that is, we poured—most of it was poured with buggies, and there was a section right in the roof of the tunnel that was let out that was poured with a Hackley gun.

(Testimony of Victor G. Hindmarsh.)

Q. Did you ever see that concrete after the forms were stripped?

A. You mean at the westerly end?

Q. The westerly end of the concrete.

A. No, I could not see that, because it was buried.

Q. There was a bulkhead at the end of the form?

A. There was a bulkhead there.

Q. Would it surprise you to know it looked the way it shows in this photograph, at about 12 feet of the tunnel it ran from 4 inches thick at the westerly end back up to two feet?

A. That was right——

Q. Right in the top of the core.

A. Right in the roof, right up against the bulkhead?

Q. Yes.

A. That might have been the case, I don't know.

Q. That would not be what you would call good concrete, would it, 12 feet?

A. Yes, as far as the concrete was concerned, it was good concrete, but it is the presence of the hole that is not good.

Q. So when you have voids in concrete such as you had at the westerly [1610] end it was good concrete except where there was no concrete?

A. Yes, but a hole of this kind would not bother any because you catch it in the next pour in.

Q. If the earth did not catch it in the meantime?

A. If you poured right along you would catch it.

Q. You poured this in September?

(Testimony of Victor G. Hindmarsh.)

A. That was excavated for the first time at that point, the form was right against the earth.

Q. It was poured in September, 1935, and when you left the work on June 13 it was still remaining in that condition?

A. Well, it just had been excavated.

The Court: I want to clear this up. When was the next operation with relation to this?

A. There was not anything more done there until the tunnel came from the west end, with the excavation. This was right up against the excavation.

Q. The next part of this operation, the next pour.

A. Came right there.

Mr. Tinning: Q. That was from some other contractor when *he through* a year or more later?

A. Yes.

Mr. Tinning: We offer this photograph in evidence, if your Honor please, as Defendant's Exhibit in proper order.

(The photograph was marked "Defendant's Exhibit N-4.")

[Set forth in the Book of Exhibits at page 469.]

A. (Continuing) It is nothing unusual to leave a hole like that when you are using a Hackley gun; I used to do it all the time and shoot right into it on the next operation.

Mr. Tinning: No further questions.

Redirect Examination

Mr. Marrin: Q. Mr. Hindmarsh, the sagging in of the wall plates before the wall plate left the wall

(Testimony of Victor G. Hindmarsh.)

plate drift, that is before the core was excavated up to that point, would it do any harm?

A. No, it would not do any; when it came off the bench in the open [1611] it would just mean that you would shorten the plumb posts, but as long as the timber was properly wedged up against it it would not do any harm whatever.

Q. Your segments would be longer and your posts would be shorter, isn't that true?

A. No, it would not lengthen your segments, because if the wall plate settled it was due to pressure from the top, and the whole roof would probably come down; it might not even loosen a wedge——

The Court: It might come down uniformly?

A. It might come down uniformly and the weight on that wall plate would sag it.

Mr. Marrin: Q. Was the shooting used in these tunnels light or heavy shooting?

A. It was all light shooting as far as tunnels go, very light shooting.

Q. Much lighter than is often used?

A. Oh, yes.

Q. Now, as to the shape of this lens of material, Mr. Hindmarsh, I don't know that it was clearly brought out, but you said, I think, on your direct and cross-examination that it was about two feet wide at the wall plate line where it left the tunnel.

A. That is what I remember.

Q. And after the cave-in occurred did that appear to have widened out of the tunnel?

(Testimony of Victor G. Hindmarsh.)

A. Yes, this face of the tunnel where you could look back into the cave, you could see that it widened out into a kidney formation.

Q. That widening out was discovered when you were excavating the earth that was covered?

A. Yes, that was correct.

Q. Now, Mr. Tinning referred you to the paragraph in the geology report which said that the material might resemble quicksand. Did this material have any resemblance to quicksand?

A. No, none of the intrusion did.

Q. And at the point where the cave-in occurred did the material [1612] flow out into the tunnel?

A. No, the lens was quite hard; in fact, when it caved it caved in large boulders.

The Court: Wasn't there a running formation of some kind?

A. Well, when it caves, of course the cherts is laminated, anyway——

Q. But I mean the material away from the cherts, this white material that shows in the photograph.

A. It came out in big chunks, your Honor, in large boulders. You can see these boulders lying there.

Q. What is that?

A. That is in place. That is what is left after it caved. That is a cross section of the lens that is shown in place. That is not moving.

Q. Is that what you have in mind, material like that? A. Yes, like that.

(Testimony of Victor G. Hindmarsh.)

Mr. Marrin: It was in place, as shown on this photograph.

The Court: You mean in place, in the natural way? A. That did not move, it was hard.

Mr. Marrin: Q. You stated in answer to some of Mr. Tinning's questions on cross-examination that so far as you know some of the sets might have been blown out in the wall plate drift. Were those simply temporary sets?

A. Yes, those were temporary sets.

Q. And would the blowing out of those sets, if it happened, have any effect on the strength of the permanent tunnel timbering?

A. No, none, whatever.

Q. They were subsequently all replaced with permanent sets? A. That is right.

The Court: Q. Do I understand that those that were blown out were temporary sets?

A. Going through the drift, every six feet we put in a temporary set and we follow behind that with a permanent set, in between each one of those.

Q. That is where the temporary sets were blown out the permanent [1613] sets were not in?

A. No, they were not in.

Mr. Marrin: Even if 240 pounds of powder was used in the shot a short time before this cave-in would you consider that was heavy shooting?

A. No, I would not. It depends, of course, on the size of the shot, how much ground you are moving.

The Court: And the material?

(Testimony of Victor G. Hindmarsh.)

A. And the material. As a rule, this ground only took about three-quarters of a pound of powder—as the record shows, about three-quarters of a pound per yard, which is very light shooting in any tunnel that has to be shot at all.

Mr. Marrin: Q. I think you said that the length of the hole had nothing to do with whether the shooting was heavy or light? A. No.

Q. These six-foot holes were the holes that were used next to the outside perimeter of the tunnel, were they? A. Yes, under the wall plates.

Q. And the 12-foot lifter holes were placed under the core after the rings and wall plates had been excavated? A. Yes, after that.

Mr. Marrin: I think that is all, if your Honor please. It may possibly be that after we have checked these exhibits over we would like to ask Mr. Hindmarsh a question or two further on redirect examination.

The Court: Very well.

HOMER MERRITT,

called for Plaintiff; sworn.

The Court: Q. Where do you live?

A. 9923 Beach street, Oakland.

Q. What is your business or occupation?

A. Well, at that time I was working at the tunnel, at this time I am in a coal yard in Oakland.

[1613A]

(Testimony of Homer Merritt.)

Q. In business for yourself? A. Yes.

Mr. Marrin: Q. Mr. Merritt, at the time of the cave-in on February 22, 1936, you were employed by Six Companies of California, were you not?

A. Yes.

Q. And in what capacity, what were you doing?

A. I was chuck tender.

Q. Were you on duty at the time this cave-in occurred? A. Yes.

The Court: You might find out what a chuck tender is.

A. That is a miner's helper, that does everything.

Q. He is a handyman around? A. Yes.

Q. He does the heavy work for the miner?

A. Yes.

Mr. Marrin: For the purpose of making the record clear, I would like to offer for illustration purposes a diagram which is on the easel, as Plaintiff's Exhibit next in order.

(The diagram was marked "Plaintiff's Exhibit 97.")

Q. Now, referring to this diagram, Plaintiff's Exhibit 97——

The Court: Q. Do you understand the diagram? Can you see that diagram there? A. Yes.

Q. If there is anything you do not understand about it you ask the attorneys and see that they do not confuse you after you get started.

Mr. Marrin: Q. You have seen this diagram before? A. Yes.

(Testimony of Homer Merritt.)

The Court: The only thing I have in mind is, a witness is many times called to the stand and shown a diagram and does not understand it, and I thought it well to ask him if he understood it.

A. I think I understand it.

Q. You are in doubt about it?

A. This would be the face of the core, here, and this would be the drift.

Mr. Marrin: Q. Yes, and this is the shovel, and the hoist jumbo you see. A. Yes.

Q. Will you show us, Mr. Merritt, on this diagram where you were [1614] standing at the time the cave-in occurred?

A. I was standing right there.

Q. What were you doing there?

A. I was flagging the Bagley.

Q. That is the scraper?

A. That pulls the dirt out of the drift, and drops it over the core, and the man that operates it was out on here, and I was flagging this man out here when to stop here and drop the dirt and when to send the Bagley back in again at the time of the cave-in.

Q. Will you state what happened, what you did just before the cave-in?

Mr. Tinning: Which drift is that shown on the diagram?

Mr. Marrin: Is that the drift on the south side of the north tunnel?

A. The south side of the north tunnel.

(Testimony of Homer Merritt.)

Q. I will mark with an "X" on Plaintiff's Exhibit 97 the place where Mr. Merritt said he was standing. Now, what operation was being carried on at the time the cave-in occurred, Mr. Merritt?

A. Well, the crew was going off and another crew was coming on, I went on at 11:30, and we were taking the dirt out into—this would be an open space here, just ahead of the rings, and we could not drop the dirt over at the time because they were putting certain new posts under the wall plate face, and we could not drop any dirt over that face, so we pulled the dirt back and piled it in here while they were setting these posts, and they had hollered "O. K." down, and I had kicked the dirt down, and they called for slack, they loosen the cable from the Bagley, and the steam shovel was setting in here getting ready to muck the dirt and put it over when all at once I could not see anything between here, in fact, it came just like that at the time.

Q. Did it come without any warning?

A. It came without any warning, as far as I could see, it came just like that. I immediately [1615] ran back in and told the shift that the cave came down.

Q. As far as you could observe prior to the cave-in, did the timbers appear to be in good shape?

A. As far as I observed I saw nothing wrong with them; I was practically looking at them between the spot where the cave was and where the jumbo set up, practically all the time.

(Testimony of Homer Merritt.)

Q. There was nothing prior to the cave-in to warn you that it might be going to cave?

A. Not a thing.

Q. Now, then, I am going to extend in pencil the coming out of the wall plate, just about that way, as I have drawn in pencil there. As I understand you, just prior to the cave-in the posts under the wall plate had been set up close to the core?

A. That is where we piled the dirt up, waiting for them to set the post.

Q. That operation had been completed prior to the cave-in?

A. They had hollered "O. K." and I had mucked the dirt down in the bottom to be taken out by the steam shovel and loosened the Bagley, when the cave-in came.

Q. How did you get out of there?

A. Well, it did not come back, there was a slope, plenty of room back over the core, it was open where the cave did not come, and I immediately ran out, my boy was working in the drift on the opposite side, and I ran over the top of the core, that is where it had not fallen, and warned him to stay in the drift, and a lot of them did run out through the fallen rock, and then I stayed in there and there were two boys walking on the catwalk, two muck boys that came in on the catwalk, in the middle of the tunnel, just as the cave came; one of them made a lunge and landed on the core, and the other one went down with the timbers and went under there,

(Testimony of Homer Merritt.)

I judge, about seven feet deep, down under this mass of timbers and rock, and we could hear [1616] him hollering down there, you could see his legs, he was just hemmed in, he was not hurt very bad, and was just pinned in so he could not get out, and we proceeded to throw big timbers from this side, on the back side of the cave, and, of course, more crew came in, and we pulled big timbers in, and Mr. Garrett and my boy and I were down trying to dig him out from underneath these timbers, and we had him just about ready to carry out when there was a big segment which dove right down over his breast, and I went to pull it out, and in backing out from under this, that is when I got the scar which is on my head when I got hurt and I was carried out. That is about all I remember from then on.

Q. Referring to the diagram which is on the right part of Plaintiff's Exhibit 97, this place where I will mark the "X" is the drift in which you were standing, is it, Mr. Merritt, just before the cave-in?

A. On the right-hand, right in the mouth of the drift.

Q. The cave-in came at about a point opposite the shovel?

A. Between the jumbo and the mouth of the drift. The shovel set just a little bit to the side of the wall plate.

Q. And you jumped down here and came out around this side?

(Testimony of Homer Merritt.)

A. Well, I finally came out, but I just went over the ring to the other drift, but I did not go out until they carried me out.

The Court: Q. Did your boy get hurt?

A. No, he was not hurt. He was under these timbers.

Mr. Marrin: Q. You went on duty that night at 11:30 p.m.? A. Yes.

Q. Was there any shooting done while you were on that shift?

A. The shooting, if I remember, was done by the crew coming off and then we went on, as I remember it; I don't remember that there was any shooting while I was on shift.

Q. Your recollection is, then, that the last shot was fired before 11:30?

A. The crew coming off usually always shoot and the [1617] crew coming in do the mucking up.

Q. This cave-in occurred about 2:30 in the morning? A. Well, about 2:30 in the morning.

Mr. Marrin: You may cross-examine.

Cross Examination

Mr. Tinning: Q. How do you fix the time?

A. Well, I know it was getting pretty near time to eat.

The Court: Q. What time was it you went on?

A. At 11:30.

Mr. Tinning: Q. At 11:30 you went on, and you figured it was about meal time the time this accident occurred?

(Testimony of Homer Merritt.)

A. It was just a little bit before lunch.

Q. Did you have a watch with you?

A. No, I did not have a watch with me at the time.

Q. Did you hear any shooting in the other tunnel while you were working there that night?

A. I could not recall that I heard any in the other side because they were shooting. I did not pay much attention to that. [1618]

Q. You did not pay much attention, during the different operations? A. Yes.

Q. In feet, how far back from where—from the toe of the slope, or from where you were standing in the drift, was it to the place you say you saw the cave come in?

A. Oh, I should judge it would be back about—from the first I seen, I judge it would be back about 20 feet to as near as I seen it occur, you know, between the Jumbo and the face. The Jumbo was next to the face——

Q. Well, was it about opposite the shovel?

A. Well, it come just a little bit toward the face from the shovel, as near as I could judge.

Q. In other words, somewhere about where I am pointing now?

A. Yes, somewhere about in there, I judge; about where it come from; I judge it come from about the "B" posts.

Q. That would be the "B" segment; that would

(Testimony of Homer Merritt.)

be the two sections,—the second section over the wall plate?

A. Yes; somewhere up in that corner; looks like it come to me.

Q. That was the first thing you saw here, was this segment, say, 6 to 8 feet above the wall plate?

A. I didn't see any segment in at all; all I saw was a mass of rock coming like that.

Q. You heard no cracking of timbers; your attention was attracted to it by the dust and turmoil you saw coming out of the side of the south—the south side of the tunnel, 6 or 7 feet above the wall plate?

A. No. It would be more than that. The "A" post was——

Q. 7 feet, was it? A. I could not tell you.

Q. Well, approximately?

A. Well, approximately around that; and the top of the "B" post——

Q. The top of the "B" post; that was two segments up?

A. Then it would be the one that goes over to the cap; somewhere in that area in there, where it looked to me like it come from.

Q. Did it drop down and cover the shovel over right away?

A. Well, I couldn't see, from my side; it was covered when I could see it; the side I was on was covered.

(Testimony of Homer Merritt.)

Q. In other words, immediately after the first run of material came, then the timbers cracked all the way around, falling down in there?

A. Well, the timber practically came ahead, with the dirt; it all come just together.

Q. Did the timber, all the way across to the north side of the tunnel, come down?

A. Well, now, I didn't look at the other side exactly to see what it did, because I left right there.

Q. I imagine this was a pretty exciting moment. There was nobody seriously hurt there?

A. Well, I don't know how seriously you call it, right at the time of the cave.

Q. Well, you were injured, as you have described; but you recovered completely?

A. No; I was not—it was the other boy that was covered. I was down, coming out, when I got hit. I was not covered there. A big rock come down and cut me across the head.

Q. You did not understand me. I say: You have recovered completely?

A. No; I have not; I am rather hard of hearing.

Q. You receive compensation from the Contractor?

A. I received a settlement from the insurance company.

Q. The other man recovered—has he?

A. Well, so far as I know; I have never seen him from that day to this.

(Testimony of Homer Merritt.)

Mr. Tinning: Thank you.

The Court: Q. How long have you followed tunnel work?

A. Oh, I have been, off and on, at it ever since I was eleven years old; I worked in the coal mines down South when I was a boy.

Q. Down South where? A. West Virginia.

The Court: We will take a recess until tomorrow morning at ten o'clock.

(Thereupon, an adjournment was taken until Friday, May 6, 1938, at 10 o'clock a. m.) [1619]

Friday, May 6, 1938
10 o'Clock A. M.

The Court: You may proceed, gentlemen.

E. F. HALL,

called by plaintiff; sworn.

Direct Examination

Mr. Marrin: Q. Where do you reside, Mr. Hall? A. Burlingame.

Q. What is your occupation?

A. I am an engineer right now.

Q. You have done surveying work? A. Yes.

Q. When did you first commence doing surveying work?

(Testimony of E. F. Hall.)

A. When I attended college, I would do it in my summer vacations; about 1923, I think, I started.

Q. You have followed that work, have you, since?

A. Intermittently, except for a period of about four or five years.

Q. Were you engaged or employed by Six Companies of California in connection with the construction of the Broadway Low Level Tunnel?

A. I was.

Q. When did you go to work with Six Companies of California?

A. It was the latter part of April or first of May, I think, 1935.

Q. How long did you continue in the employ of Six Companies of California, Mr. Hall, thereafter?

A. Until the tunnel was closed down in June the following year, I believe.

Q. What were your duties with Six Companies of California?

A. To furnish lines and grades for driving the tunnels.

Q. There is, on the easel, a line drawing from which I would like to have you illustrate your testimony, for the purpose of getting it in the record.

The Court: Q. Are you familiar with that diagram? A. Yes.

Q. What is it? Describe it, for the purpose of the record.

(Testimony of E. F. Hall.)

A. It is a plan showing the section of one of the tunnels, with the wall plate drift system. [1620]

Mr. Marrin: May I offer that as plaintiff's exhibit next in order, so that we may have an exhibit number on it?

Mr. Tinning: No objection.

(The diagram was marked "Plaintiff's Exhibit No. 98.")

Mr. Marrin: The witness is referring to Plaintiff's Exhibit 98, in his testimony.

Q. Would you go ahead and explain to the Court, Mr. Hall?

A. This is just a plan of a tunnel, with two wall plate drifts, and showing about where the core would be.

Q. This part of——

A. This is the drawing——

Q. This part of the drawing represented by the part marked "Core," Plaintiff's Exhibit 98, is a complete tunnel; the excavations have been completed? A. Yes.

Q. The part to the right of that point would be the wall plate drift? A. Yes.

Q. Would you take the pencil, Mr. Hall, and draw in there, to illustrate to the Court, just the operations you performed in setting the lines and grades?

A. Well, we put our lines and grades in there every day. In order to get those in, it necessitated

(Testimony of E. F. Hall.)

going back in the tunnel from two to three hundred feet back of the core.

The Court: Q. What is the center line?

A. From the core. The District had monuments in; and I had to go up, on these monuments, bring that line up and then offset again up on the drift, and keep the points and the headings up on the monuments.

Q. There is one thing that confuses me. In going ahead in those drifts, could you tell which way you were going? How could you tell that?

A. Well, that is where the surveying comes in.

Q. That is what I do not understand. Will you tell me about that?

A. Well, you set the instrument up on that monument, and backsight on another monument, and plunge a line in, and put in a hub; then—I forget the distance there; but, say, 12 feet: you turn right [1621] angles and put another one, and then back in the tunnel and put another one over here, and then set up here and look back and you could plunge that line ahead.

Q. What do you use—your eye?

A. No; with an instrument; a transit; set the transit up here.

Q. What does the transit do?

A. It is a surveying instrument,—an instrument used in surveying.

Q. Well, when you drift and you drift ahead, say, 50 feet, how do you get your center?

(Testimony of E. F. Hall.)

A. By using these lines; you use parallel lines; you set up here; and when you sightback here—the transit—you clamp this on here, and then just turn it over and you have it in the same place.

Mr. Tinning: Q. At the same angle?

A. At the same angle.

Q. So you get a straight line? A. Yes.

The Court: Q. Follow out that line you made,—a straight line.

A. Yes; offset here, and the drift would be up here; it would be——

Q. Yes, I follow that now. Proceed.

Mr. Marrin: Q. If I understand you, you have set the transit on this point, and come back here and get the transit in a straight line?

A. You set the transit here, and then you sight on this point; and then you move over.

Q. Then you swing your transit over, and that gives you the same line? A. Yes.

Q. That is set up here?

A. It requires another setup; you necessarily set up here, and set up near the face of the tunnel—not the face, but just at the start of the drift.

Q. If I understand you correctly, Mr. Hall, each day, on the drift, you come back to these monuments. How far were those monuments, from the face of the core?

A. I believe they run from two to three hundred feet.

Q. In the fully excavated part of the tunnel?

(Testimony of E. F. Hall.)

A. Yes. [1622]

Q. Then, each day, you would run this line up here two or three hundred feet to about the core; run it over to each side, and then project those lines ahead in the drift?

A. Well, it did not require it each day.

Q. Not every day?

A. No. Every other day.

Q. Every day. How long were those drifts usually ahead of the core?

A. Well, I should say around 100 feet.

Q. Then you set a line here, as a result of that work, which would indicate the line along which the drifts should be constructed ahead of that?

A. That is true. That was my work: on the line and grade, and to furnish that in the drifts.

Q. Those lines and grades which you set were at the end of the drift?

A. To the timber set line behind the drift, yes.

Q. Did you also set a grade in there?

A. The grades were all set, each day; timber sets.

Q. In the drifts? A. Yes, sir.

Q. It was necessary for the men to use those lines and grades, in order to know how to proceed with the construction of those drifts, was it not?

A. Absolutely.

The Court: Q. The beginning point is the monument? Who furnished the monument.

A. The District furnished the monument.

Q. That was your starting point?

(Testimony of E. F. Hall.)

A. Yes, sir.

Mr. Marrin: Q. The District furnished these monuments; but they did not furnish anything except those monuments; is that correct?

A. Yes.

Q. All the rest of this work was done by the Contractor? A. That is true.

Q. How many people were in your surveying party? A. I had two assistants.

Q. Besides yourself? A. Yes.

Q. You did part of the work yourself?

A. I ran the instrument [1623] and did all the calculations.

Q. How many times were you in the drifts—I mean, on the average, a day?

A. Well, I was in each drift each day, and sometimes twice a day.

Q. The lines and levels were run in each drift, were they not? A. Yes.

Mr. Marrin: You may cross-examine.

Mr. Tinning: No questions.

Upon Appeal from the District Court of the United States for the Northern District of California, Southern Division.

PARKER PRINTING COMPANY, 545 SANSOME STREET, SAN FRANCISCO

DeLANCEY C. SMITH,

called by the plaintiff; sworn.

Direct Examination

Mr. Marrin: Q. Mr. Smith, when were you first employed as an attorney by Six Companies of California?

A. In March of 1935.

Q. Did you represent the Company in negotiations with the defendant District?

A. Yes, I did.

Q. In connection with your representation of the Company, did you have a conversation with Mr. Boggs, on April 3, 1935?

A. I had several conversations with Mr. Boggs at different times, and my notes show that one of them was on April 3rd.

Q. Where was that conversation held?

A. At the office of the District, in Mr. Boggs' private room.

Q. Who was present?

A. Mr. Boggs and myself.

Q. No one else? A. That is correct.

Q. What was said at that time?

Mr. Wittschen: Objected to as immaterial and calling for hearsay, and attempting to bind the District by statements which are not binding upon it.

Mr. Marrin: If the Court please, this is the same type of testimony that has been objected to before,

(Testimony of DeLancey C. Smith.)

and, if the Court please, our purpose in showing this is to show that the decision regarding [1624] the extension of time was not based on bona fide judgment of the Engineer. We have a case which is directly in point on the admissibility of this kind of testimony. It is the case of Mayor and City Council of Baltimore versus Ault, cited in 94 Atlantic, page 1044. In that case, there was a question of whether the decision of the engineer on the extension of time and the deduction of penalties was made in good faith; and the contract in that case contained a provision to the effect that to prevent disputes and litigation the harbor engineer shall in all cases determine the amount, quality and acceptability of the work which is to be paid for under the contract, and shall determine all questions in relation to the work, and the performance thereof, and shall in all cases decide every question which may arise relative to the fulfilment of the contract on the part of the contractor. His estimate and decision was to be final and conclusive; and in case any questions arise between the parties touching the contract, such estimate and decision shall be a condition precedent to the right of the contractor to receive any monies under the contract.

The Court will remember we have a very similar clause in this contract.

> "Time Required.—Bidders must state the number of consecutive working days required to complete the work. A working day shall

(Testimony of DeLancey C. Smith.)

consist of eight hours of each and every day except Sundays and holidays as set aside by the national government, the Governor of Maryland, or the Mayor of Baltimore. If it is raining too hard at 8 a. m., in the judgment of the Engineer, to permit work, such day shall not constitute a working day. In computing the lapsed number of working days, no allowance for bad weather or other delays not covered by the preceding clause, will be made, unless claim for exemption has been made within 48 hours of the time the delay occurs. The Contractor must begin the work within 15 days [1625] after notice to do so, and must complete the work within the time specified. Should the Contractor fail to complete the work within the time specified, he shall forfeit to the City as liquidated damages, and not as a penalty, the sum of $25 for each and every day which may elapse between the limiting date and the completion of the work."

Deductions were made because the contractor failed to complete the work. The Contractor contended it was impossible, without an extension of time, and the Engineer's decision was not made in good faith. In connection with that contention, the Court said:

"In the case now under consideration the specifications, in order to prevent disputes and

(Testimony of DeLancey C. Smith.)

litigations, provided that the harbor engineer 'shall determine all questions with relation to said work, and the performance thereof, and shall in all cases decide every question which may arise relative to the fulfillment of the contract on the part of the contractor.' One of the provisions of the contract to be fulfilled by the contractor was that the work was to be completed within 150 working days; and it is clear that the harbor engineer was authorized to decide whether that provision had been complied with, and, in doing so, to determine the number of days for which they were entitled to credit, in order to decide on how many working days they were engaged in the work. He could not, of course, deprive the city of the benefit of the stipulation in regard to liquidated damages, or withhold from the contractors credit for any delays for which they were not responsible. These rights were secured to the city and to them by the contract. But he was authorized to decide what delays the contractors were subjected to and the extent of those delays, otherwise he would be unable to decide whether the contractors had fulfilled the contract." [1626]

The Court then goes on to state his decision may be set aside for bad faith and no intent to defraud need be shown,—simply bad faith. In that connection, the Court says:

(Testimony of DeLancey C. Smith.)

"To constitute bad faith it is not necessary, however, that the decision of the person to whose judgment the matter is submitted shall be the result of a malicious and deliberate purpose to defraud or deprive a party to the agreement of the benefit of the contract. The agreement in this case was to submit the matters within the terms of the submission to the decision of the harbor engineer, and not to the judgment of any other person. His honest decision, however erroneous, would be binding upon the parties, because the contract makes it so, but nothing short of that would gratify the terms of the agreement, and any decision which was not his judgment, but the mere expression of his views, or the influence, whether intentionally or innocently exercised, of others, would be outside of the contract and without force."

Then the Court said, in reviewing the evidence:

"While it does not contain any evidence of collusion, corruption, or fraud on the part of the harbor engineer or other city officials, it was sufficient to go to the jury upon the question whether the estimate made by the harbor engineer of the number of working days the completion of the work was delayed was in fact his decision."

(Testimony of DeLancey C. Smith.)

Furthermore, the Court held that statements of the engineer on the question of delay were properly submitted. On page 1054 of the decision, the Court said:

> "In the first, second, sixteenth, seventeenth, and eighteenth exceptions the witnesses were asked to state conversations they had with the harbor engineer. The evidence elicited by these questions was admissible as tending to show the opinion of the engineer as to the fact, extent, and causes of the delays claimed by the [1627] plaintiffs, and as reflecting upon the question whether his estimate of the number of working days the plaintiffs were engaged in the work was his decision of the matter."

Now, our position here, if the Court please, is simply this: That the decision, turning us down on the extension of time, was not the decision of the Engineer at all; did not reflect his judgment, but was made because of the fact that the plaintiff in this case had presented claims for damage against the District, and it asked for an adjustment, and that the District did not grant the extension of time, perhaps because it feared, by admitting those claims, or for some other reason—but that we were entitled, regardless of any controversy or any claims existing between the parties, to the unbiased and honest judgment of the Engineer in this case as to whether we were entitled to an extension of time; that we

(Testimony of DeLancey C. Smith.)

did not get that honest and unbiased judgment; and we think we are entitled to show, by expressions made by the Engineer, that it was his opinion that we were entitled to an extension of time in this case, and that he did not exercise an unbiased, fair judgment, which is necessary to sustain a decision of any arbitrator or any engineer that has the powers conferred upon him by this contract; and it is for that purpose we offer this evidence.

Mr. Wittschen: It is not a question of the Engineer acting as an arbitrator. It is a question as to whether, in his opinion,—his honest, sincere judgment,—an extension of time should be recommended. The contract in this case provides an extension of time shall be made by the contracting parties, not by the Engineer; and you remember the clause that, where they were delayed by stormy or inclement weather, or any other matter which, in the opinion of the Engineer, produced delay on the work—I assume they would have a right to show that; and, if that is the purpose, if the [1628] Court please,—to show that the Engineer acted arbitrarily—in other words, I think that is within the issue. If that is the purpose,—to show they were arbitrary acts,—I take it I should not press the objection at this time.

Mr. Wittschen: Exception. [1629]

The Court: Q. You had a conversation with the engineer?

(Testimony of DeLancey C. Smith.)

A. I think the question was directed to the first conversation.

Mr. Marrin: Yes, the first conversation of April 3, 1935.

A. Yes, at that conversation it was principally a matter of my getting acquainted with Mr. Boggs; I had never met him before, and I called at his office for the purpose of getting acquainted with him, and advising him that I would be somewhat in touch with the performance of the contract from that date forward, and that we had several problems which we hoped to work out mutually with him as the engineer. I told him, for one thing, that I had not finished my examination of all the facts yet, but it did seem to me that the contractor was entitled to an extension of time, based on the rainy season which had delayed outside work, and based on difficulties which I understood had been encountered in handling the job at the west portal. We also discussed other matters which are not now here involved in this case. I told Mr. Boggs that if after a further investigation it seemed to me that the contractor was entitled to an extension of time I would like to file an application for such an extension, and he said in substance, in reply to that, that he did not think that it was advisable for the contractor to ask for any extension of time at that particular time, because of the fact, first, that it was premature, because the contractor would not know until further on in the performance of the contract

(Testimony of DeLancey C. Smith.)

whether or not he could complete the contract within the time called for by the terms of it. Secondly, he said he did not approve the granting of an extension of time to a contractor as a general matter if it could be avoided, because the contractor would perhaps then, if he was given time, dilly-dally and play along with the job and not work as hard as he should. I pointed out to him that I considered it was a rather foolish [1630] presumption, because the contractor must work as hard and fast as possible in order to make any money, the sooner he gets through the more money he makes. The discussion was friendly in tone and that was about all that was said then.

Q. Did you have any other conversation with Mr. Boggs shortly thereafter?

A. Within two or three weeks thereafter, I think the exact date was about the 15th or 16th of April.

Q. Where was that conversation held?

A. It was likewise held at his office.

Q. Who was present?

A. Mr. Boggs and myself.

Q. Will you state what was said?

A. Well, in substance I told him that I had further examined the question of time; we discussed some other matters which are not here involved—and that I felt the contractor should file an application for an extension of time based on what I discovered, and he said that while he thought the contractor was entitled to some time based on the

rainy season, that he would not feel that he should file an application for extension of time at that time. That was the sum and substance of what he said. I told him at any rate, I would have to advise the contractor to do it, as perhaps it might be argued that he was waiving his claim for an extension if he did not.

Q. Did you, on or about November 19, 1935, have a further discussion with Mr. Boggs concerning an extension of time?

A. Well, I had a later conversation before November with him about the same subject, at the meeting of the directors of the District, on June 10, 1935, when I was present, and I wrote an application to the directors for an extension of time, and after the meeting Mr. Boggs told me that the District would deny it, but that the denial would be purely on the ground that it was premature, and that while he felt we were entitled to some extension, he was not [1631] going to pass on the question then.

Q. What was the next conversation you had with Mr. Boggs respecting an extension of time?

A. The next conversation I had with him was in November, at the tunnel office, and there were present Mr. Bechtel, Mr. Hindmarsh, myself and Mr. Boggs, as I have already testified.

Q. What was said at that time?

A. Well, the meeting lasted probably an hour and a half or two hours; I did not do much talking at the meeting. Some other questions were dis-

(Testimony of DeLancey C. Smith.)

cussed that are not involved here, but one of the principal questions that was discussed was the question of an extension of time. Mr. Hindmarsh told Mr. Boggs that the contractor should be given an extension of time by reason of the cave-in of August 28, and the delay that had resulted to the work. Mr. Boggs stated in substance that he agreed with that position, but he did not know how much time he would feel that the contractor was entitled to. Mr. Hindmarsh said he thought probably 90 or more days, perhaps 120 days. Mr. Boggs stated that he did not think that perhaps it was that much, but perhaps 60 days would be about right, but he would have to look into the matter before he would fully agree on it. We then worked out a program with Mr. Hindmarsh, by conversation, which provided that Mr. Hindmarsh would furnish him, Mr. Boggs, with a completely new schedule of work sometime after the first of the coming year, and that that new schedule would give Mr. Hindmarsh's best judgment as to how long it would take to complete the entire job in the contract time. Mr. Hindmarsh and Mr. Boggs agreed by interchange of words that when that construction schedule was submitted that Mr. Hindmarsh would then prepare a letter, filing it, and asking for the necessary time to complete the job, and Mr. Boggs said he would be prepared [1632] and try to agree on that feature.

Q. Is that all you recall of that conversation?

A. No, there was another element in it, and it

(Testimony of DeLancey C. Smith.)

was this: Mr. Boggs said in so many words that any letter which was submitted should be put on non-controversial grounds, that he did not want any issue raised that might cause friction between the Board of Directors and the contractor, and he also said that he felt the contractor might need some time that was not now known about, because there might be heavy spring rains in 1936 that might further delay the work, particularly the outside paving work, and therefore it would be advisable to try and agree on a program early in the coming year.

Q. Is that all you recall of that conversation?

A. That is the sum and substance of it.

Q. Now, Mr. Smith, who was Mr. H. L. Hinman?

A. He is one of the directors of the district.

Q. And also treasurer of the district?

A. Yes. The district has three directors, Mr. Stow, who recently died, Mr. Hinman, and Mr. Caldecott.

Q. Did you ever have any conversation with Mr. Hinman about the matter of extension of time?

A. I had several. I have known Mr. Hinman for a good many years, and he came to my office four or five times in the summer of 1935.

Q. Can you state the date of the first conversation with Mr. Hinman, where it was held, and who was present?

A. I took a memorandum off of my office record

(Testimony of DeLancey C. Smith.)

of calls that gives those dates, if I may be permitted to use it.

Q. Surely.

A. The first time he came to see me was on April 2, 1935.

Q. And just the two of you were present?

A. Yes, in my office.

Q. What was said at that time?

Mr. Wittschen: Objected to as immaterial, and calling for hearsay, [1633] and not binding on the District, being matters beyond the control of a director, to be determined by the engineer and not by the treasurer of the district. The action of the Board could only be the action of the Board as it appeared in the minutes.

Mr. Marrin: There has been an issue raised in this case which is stated very clearly in Mr. Wittschen's opening statement to the effect that plaintiff in this case, by not rescinding when the application of June 10, 1935 was filed, waived the right to rescind on account of the denial of the application for the extension of time. We propose to show by this testimony that Mr. Hinman, the treasurer and director of the district, told Mr. Smith that that denial was simply a formal denial and meant nothing, and that later the district would grant sufficient time to complete the work, and I think that that has a very strong bearing on that issue.

The Court: As a matter of law, how could an

(Testimony of DeLancey C. Smith.)

individual, he being the treasurer and one of the directors, bind the other two directors of the District?

Mr. Marrin: Perhaps he could not legally bind the District acting as an individual, but I think that the statement of the officers of the district which tended to mislead the plaintiff in its decision are entitled to be shown here, particularly where the defendants are taking the position that by not properly rescinding when that application for extension of time was made that the plaintiff lost any rights.

The Court: I will give you a record on it.

Mr. Wittschen: I can give your Honor a case squarely on that point, that an individual treasurer or individual director could not legally bind the district.

The Court: The reason I have indicated that is I want both [1634] sides to have a record. I do not want to mislead either side. I will allow a record on it. Note an exception.

Mr. Wittschen: Note an exception.

A. Very little was said at the very first meeting that I had about the question of time. We had a friendly discussion, I had known him for many years. The discussion was more general than specific about the tunnel project. However, I did mention to him that I would like to talk with him further, and he said that he would be glad to talk with

me, although he was not sure it was a proper thing, and I told him he was a public official, and we had a perfect right to talk to him as a public official, because he was acting in his capacity as such when I was talking to him, and I was not trying to prejudice his actions in any way. I saw him later in June, on the 5th of June, and in July, on the 15th of July, and in August, on the 7th.

Q. Who was present at those conversations?

A. All three conversations that I have just mentioned were held in my office in the Balfour Building in this city. Mr. Hinman came to see me—

Mr. Tinning: What were the dates of those three last conversations?

A. They were June 5, July 15, and August 7.

Mr. Marrin: There were four, April 2, June 5, July 15 and August 7, all in 1935.

A. Yes.

Q. At all of those conversations just you and Mr. Hinman were present?

A. Yes, they were held in my own office and he came into my office alone. As a matter of fact, once or twice he came on a legal matter that I was handling for a group of which he was a member.

Q. Will you state what was said at that conversation?

Mr. Wittschen: The same objection, on all of the grounds stated.

The Court: The same ruling.

Mr. Wittschen: Exception. [1635]

(Testimony of DeLancey C. Smith.)

A. The sum and substance of them—it is difficult for me to recall what was said at any specific conversation in exact words, but the sum and substance of the three conversations was that particularly, the one of July 15, that the communication that the Board of Directors had sent to the contractor denying their application for an extension of time was solely on the ground it was premature and that later in the event Mr. Tinning and Mr. Boggs recommended he would vote to grant us time, as he felt we were entitled to it. That was the sum and substance of it.

Q. That was the substance of the conversation?

A. Yes.

Mr. Marrin: You may cross-examine.

Cross Examination

Mr. Tinning: Q. Mr. Smith, when Mr. Hinman came to your office did you state that you were representing him in connection with a group of other men?

A. I had been doing some work for a committee of which he was a member.

Q. In connection with the reorganization of the Merchants Express Company, of which he had formerly been chief owner?

A. No, at the time I speak of he was no longer connected with that.

Q. But it was in connection with a Merchants Express matter, was it not, that he was seeing you?

(Testimony of DeLancey C. Smith.)

A. No, it was in connection with another matter of which that was a purely collateral matter.

Q. What was the matter?

A. He was a member of the Bondholders' Committee of the United American Utilities, Inc., and I was attorney for the Bondholders' Committee.

Q. The United American Utilities was the company that purchased the Merchants Express?

A. Many years before that.

Q. Mr. Hinman had taken some of the securities to pay for his interest in the Merchants Express? A. To his sorrow.

Q. And all of the rest of the bondholders?

A. Yes. I was representing [1636] the Bondholders' Committee. I want that to appear in the record. I had nothing to do with the organization of the company or with the taking of these securities by Mr. Hinman.

Q. We will accept the exoneration clause. The point that I have in mind here, now, Mr. Smith, is that Mr. Hinman was not going to your office to discuss the district matters with you, he was going to your office to discuss a business matter in which you represented a committee of which he was a member?

A. No, that is not entirely true. I can clarify your mind on that very quickly. The matter had been cleaned up by the time that 1935 rolled around, except for the possibility that what he had taken

(Testimony of DeLancey C. Smith.)

for the bonds that he had exchanged in the reorganization might be changing status as to value; he wanted to keep posted, and would come in and ask me a question; that would take five minutes.

Q. So that he did not come there to call upon you and discuss district business as the district representative? A. Once he did.

Q. What was the date?

A. I would say that was the next to the last time I have testified to.

Q. By that you refer to July 15, 1935?

A. That is correct, so far as I can remember.

Q. Are you sure of that?

A. I could not be absolutely positive that we did not mention the other business, but he came, and I am positive that he came to me once, because he wanted to talk to me about the problem of the contractor on the Broadway Tunnel.

Q. He knew from sometime in June, at least June 10, 1935, that you were representing the contractor? A. He knew it in April.

Q. He knew it in April? A. Yes.

Q. At the time of your first conversation of April 2? A. That is correct.

Q. I believe you said that the second conversation you had with Mr. [1637] Boggs was about the 16th or 17th of April, in Mr. Boggs' office.

A. My memorandum diary from our office records shows it was on the 16th of April.

(Testimony of DeLancey C. Smith.)

Q. Have you any memorandum of the conversation? A. No.

Q. That is, your office diary has a note that you were at Mr. Boggs' office on April 16, 1935?

A. That is correct.

Q. You are testifying from memory as to what was said? A. That is absolutely correct.

Q. Does your office diary show that on the 10th of April, 1935, you had a conversation with Mr. Boggs and myself, in your office in the Balfour Building, at which time Mr. Marrin was also present?

A. It probably does, but I think that was at Mr. Marrin's office, I think that the meeting was at his office.

Q. Do you remember that we came down to your office, and at that time there were three matters under discussion, one the matter of wage scale, reclassification of labor, reclassification of the wage scale in an attempt to meet the same situation that the Six Companies or some constituent company had experienced on some other job where there had been some confusion, and you desired to have it more specific, what you might call an intermediate scale?

A. That is not an exactly correct statement, but it is approximately correct. The fact is that the definitions in the wage schedule provided by the dis-

(Testimony of DeLancey C. Smith.)

trict were not accurate for the proper compensation of the men in accordance with their duties, and we desired to reclassify them.

Q. In your opinion?

A. Well, we established we were right, because you altered the scale to conform to our request.

Q. Kindly stick to the facts, we did not give you a letter in the form requested. At the same conversation, Mr. Smith, do you remember the matter of extension came up, and Mr. Boggs told you [1638] that the answer was no on engineering and extension?

A. My recollection of the conversation, is fairly clear, and as I recall it one of the subjects was classification of the labor, and the second our point on running lines and grades; I do not recall any discussion of an extension of time at that conversation.

Q. You have no memorandum?

A. I have no memorandum of the conversation. I have a memorandum of the date.

Q. But not of the conversation? A. No.

Q. You stated that the conversation that occurred on the 19th of November, 1935, at the west portal building, was—at which Mr. Hindmarsh, Mr. Price——

A. (Interrupting) I did not say Mr. Price was there.

Q. You are correct, Mr. Hindmarsh and Mr. Bechtel and yourself and Mr. Boggs were present?

A. Yes, that is right.

(Testimony of DeLancey C. Smith.)

Q. That was on the 19th of November?

A. That is correct.

Q. You say you did not say very much? That is correct, too, is it not?

A. Well, I tried not to.

Q. Mr. Smith, is it not a fact that you asked what had happened in regard to the 48-hour wage authorization?

A. I might have. I do not say that I did not.

Q. Isn't it a fact that you received an authorization the next day, the day following?

A. I may have. That is not here involved.

Q. Well, I am going to get the full conversation, Mr. Smith, if I can, to refresh your recollection. Isn't it a fact that Mr. Boggs told you at that time that he had notified Mr. Price by telephone immediately upon receiving the authorization from Mr. C. H. Sweetser, the District Engineer of the Bureau of Roads, and that he would send a copy of the letter of Mr. Sweetser at once directed to the Six Companies?

A. That is very possibly correct, I would not say it is not. [1639]

Q. It is a fact, it is in evidence here as one of the exhibits, a letter that was addressed to Six Companies by Mr. Boggs on the same day, November 19, 1935, that was received on the 20th by Six Companies. A. I don't know.

Q. You don't remember the record? A. No.

(Testimony of DeLancey C. Smith.)

Q. Do you remember, then, that Mr. Bechtel and Mr. Hindmarsh then discussed the reopening of drift excavation and the question was then discussed as to whether the 43-hour week would apply in driving further in the tunnel?

A. I remember there was a discussion about resumption of operations, both as to the method, manner and time.

Q. And at that time Mr. Boggs stated that he understood the orders from the P.W.A. office authorized the 48-hour week on the recovering of the tunnel, and when that was done and the concreting was done all other work would have to be done under the 40-hour week?

A. I wouldn't say that last part, but I want to say it was generally understood, and if it was discussed at that meeting it was substantially correct; I have not a clear recollection that it was mentioned at that time.

Q. Then do you remember that Mr. Bechtel said to Mr. Boggs an application for an extension of time would be necessary by the Six Companies and you said that Mr. Boggs said last spring that the application was premature and an extension might be necessary, and asked if Mr. Boggs still held that opinion. Do you remember that?

A. Well, that question includes too much. I remember a portion of it.

Q. What do you remember?

(Testimony of DeLancey C. Smith.)

A. I remember that it was mentioned, by whom I do not recall.

Q. Whether you said it or someone else, that is a correct statement?

A. I do not recall who said it, but the way it came up was substan- [1640] tially this. Mr. Boggs said during the earlier part of the year that we were premature in asking for an extension of time at that time, because we did not know then how long it might take us to complete, and that was the reason why they had turned us down.

Q. And that an extension might not be necessary?

A. And if that were true an extension would not be necessary to enable us to complete within the time fixed, or the extended time which might be granted.

Q. And do you remember whether you or Mr. Bechtel asked Mr. Boggs if the opinion that he at that time had was still held by him?

A. I imagine it might have been said, I would not say it was or was not said. But this conversation lasted quite a long time, from about 10 a. m. to noon, and a lot of talking was done.

Q. Do you recollect that in response to that question Mr. Boggs replied that he still considered that an application at that time would be premature and further, for the information of the contractor, that any application for an extension of time must be approved by the P.W.A.?

(Testimony of DeLancey C. Smith.)

A. No, I do not recall that being said, and in that connection my recollection of what was said is quite different, because there was a specific understanding reached that Mr. Boggs would cooperate with Mr. Hindmarsh in the filing of an application based on a new construction schedule to be submitted in January, and on an agreed form of letter which they would draw and on which we agreed in connection with the handling of that schedule.

Q. You told us that before. Now, with respect to the particular matter that I have just referred to, do you remember at that time Mr. Boggs stated that he still considered that an application for an extension of time was premature, and that any such applica- [1641] tion must be approved by the P.W.A.?

A. He might have said that, but in saying it, if he did say it, he also said he would have no difficulty in getting cooperation from the P.W.A. on anything that he put in.

Q. So if he said that, he said something else, too, that I have not asked?

A. He supplemented it with the comment I have just made.

Q. Do you remember that you then asked Mr. Boggs whether his recommendation would probably be followed by the P.W.A.?

A. That is bringing out the point I just mentioned.

Q. Did he say that to you?

(Testimony of DeLancey C. Smith.)

A. It probably was said; it might not have been said in those words; I did not put down in detail what was said by A, B, C or D.

Q. Then did you state to Mr. Boggs that in view of the erroneous geology, unforeseen difficulties in the ground, that the request might easily be granted?

A. Yes, I recall, now that you mention it, that I did state that the fact that we had different ground conditions than were represented alone justified an extension, and Mr. Boggs, in reply to that, suggested that we avoid asking for an extension on that ground, because it would create a dispute between the contractor and the district, probably, and he thought he could get it through without raising that point.

Q. Did you at that time and place, in that conversation, following your statement that Mr. Boggs —do you remember that Mr. Boggs said to you that such matters had already been discussed and acted upon and that his recommendation was still no?

A. He did not say any such thing. He said just the opposite of that. At no time did he say that.

Q. Isn't it then true that you then stated to Mr. Boggs that you realized his technical decision might be no, but that it might [1642] be possible to change that decision?

A. No. Mr. Boggs and Mr. Hindmarsh conducted 99 per cent. of the conversation about extension of

(Testimony of DeLancey C. Smith.)

time, and the sum and substance of it was just as I stated it.

Q. Did you send any company memorandum through that you thought the district engineer was weakening at this time?

A. I do not quite understand that question.

Q. Do you remember Mr. Price's memorandum saying he was softening at this time?

A. I do not remember the Price memorandum. If you will show it to me, I will tell you.

The Court: Softening up, was it not?

Mr. Tinning: Yes.

The Court: I thought I remembered something to that effect.

Mr. Tinning: I think it is the memorandum of December 26th.

Q. Did you write a memorandum to the company on this conversation?

A. I don't recall whether I did or not. It was discussed fully orally. Mr. Bechtel and I left the conference and came to San Francisco and Mr. Bechtel showed me the letter that he wrote Mr. Hindmarsh the following day.

Q. Was there anything in the letter about the District Engineer softening or weakening?

A. No. I think that letter was offered here in evidence.

Q. That is the one that is in here.

Mr. Marrin: The letter, I think, is not an ex-

(Testimony of DeLancey C. Smith.)

hibit. I think it was read into the record. That is my recollection.

Mr. Tinning: It is in evidence at any rate.

Mr. Marrin: It had to do with lines and grades.

Mr. Tinning: It had nothing to do with the extension.

Mr. Marrin: That is right.

A. Well, the colloquy between counsel is not concerning the matter that Mr. Tinning asked me about. I have referred to a letter writ- [1643] ten by Mr. Bechtel to Mr. Hindmarsh after this particular conversation.

The Court: The following day?

A. Yes, the following day.

Mr. Tinning: That is in evidence, and it has been testified that Mr. Hindmarsh was instructed to prepare a schedule of proposed work.

A. But it says nothing about lines and grades which was just discussed between counsel.

Q. It says nothing about time, either?

A. I think it does, read in the light of what had been said the day before between the parties involved, it certainly refers directly to the time.

Q. Did you state to Mr. Boggs at the time that you realized that his decision, his technical decision, might be no, but it might be possible to change his decision?

A. I never said any such thing. He did say he was in accord with the right of the contractor for an extension at that time, but said he could not

(Testimony of DeLancey C. Smith.)

agree on the exact time. That was the only limitation he placed on his answer.

Q. Didn't he state to you at that time and place from all possible viewpoints his answer was still no for any reason that had been suggested?

A. He did not say any such thing; he said exactly contrary thereto.

Q. Isn't it true that Mr. Bechtel said to Mr. Boggs he thought Mr. Boggs ought to be able to cooperate with them in fixing up some good reason for an extension?

A. Well, Mr. Bechtel and Mr. Boggs both discussed that any application for an extension which might be filed after January 1st, as was discussed earlier, should be upon grounds which they would have to figure out were proper, which avoided the issue which he, Mr. Boggs, felt was to be controversial, namely, the deviation of the ground condition from that represented, and it was along that line that that subject was mentioned.

Q. Do you remember that after the commencing of the discussion of [1644] this proposed letter requesting an extension Mr. Boggs stated to you that there were enough representatives in the Six Companies organization to prepare their own letter?

A. No, Mr. Boggs was not taking a supercilious or saucy attitude; he was very much of a gentleman. I think that would have been an offensive remark.

Q. You would think that suggestion was saucy?

A. If he said that it would have been, but he

(Testimony of DeLancey C. Smith.)

did not say it; he said it in a joking way, it was perfectly harmonious.

Q. Didn't Mr. Boggs then state that he thought that a new schedule of operation should be prepared by the contractor, and that he would probably write a request for one?

A. Does your question bear the implication that that exact language was used?

Q. I am asking in substance and effect.

A. Well, in substance and effect it was agreed that a new construction schedule would be submitted. I do not recall any mention that he would write and ask for it, but it was agreed that it would be submitted.

Q. Mr. Smith, I asked you if Mr. Boggs did not suggest that a new construction schedule be submitted?

A. I would not want to say who was the author of the suggestion; it might have been Mr. Boggs and it might have been Mr. Hindmarsh, or it might have been Mr. Bechtel.

Q. Then didn't Mr. Bechtel state the Six Companies would file one about January 1, after they had resumed driving, and knew about what rate of progress they could make?

A. I think in substance that was said, but it was said by Mr. Hindmarsh, as I remember.

Q. Isn't it true that Mr. Bechtel then told Mr. Boggs that Six Companies would start in driving drifts ahead in the tunnel in the next few days?

(Testimony of DeLancey C. Smith.)

A. I do not think it was said by Mr. Bechtel; if it was said I think it was said by Mr. Hindmarsh.

Q. And as soon as the debris was cleared out the down-grade tunnel [1645] they would start in ringing out in the other tunnel?

A. I don't remember the exact detail of what was said as to the next move in construction.

Q. Isn't it true at that time Mr. Bechtel advised Mr. Boggs that Mr. Hindmarsh was in charge of the tunnel work, and requested Mr. Boggs to address all of the letters with respect to tunnel work to Mr. Hindmarsh?

A. Well, I knew that was a fact. I don't know whether it was said or not, it might have been said.

Q. That Mr. Price was still project manager, but would be absent from the work from time to time?

A. That might have been said. I do not say it was not.

Q. And then that Mr. Boggs requested a letter from Six Companies authorizing the District to address communications to Mr. Hindmarsh, in view of the previous letter as to who was in charge of the work that had been sent to him by Six Companies?

A. That might have been said. I do not say it was not. [1646]

Mr. Tinning: Q. Isn't it true that Mr. Bechtel stated that he thought Mr. Boggs should write di-

(Testimony of DeLancey C. Smith.)

rectly to Six Companies, Incorporated, and let them route their mail as they saw fit?

A. I did not hear your question.

(Pending question read by the reporter.)

The Witness: A. No; Mr. Boggs never said any such thing.

Mr. Tinning: Q. Then, is it true Mr. Hindmarsh discussed some of the details of construction with Mr. Boggs, and Mr. Boggs asked him to take them up with the resident engineer,—Mr. Gelston?

A. There was some discussion of the construction details; but I did not pay a great deal of attention to that, because they were talking about something I did not know much about.

Q. Then, isn't it true Mr. Boggs drove you and Mr. Bechtel to the Key Route train at 40th and Broadway? A. Well, I think he did.

Q. During the drive down with him, Mr. S. D. Bechtel stated to Mr. Boggs that they hoped,—Six Companies hoped he would discuss freely with them any problems which might arise? Do you remember that part of the conversation?

A. He may have said that; but I don't think——

Q. During that——

A. (Continuing) —it wouldn't be noteworthy, and I wouldn't have made much note of what we were talking about in the automobile.

Q. By "making note," you mean in your head, in your memory?

(Testimony of DeLancey C. Smith.)

A. Well, I have a clear recollection of what occurred. We were talking about the big football game on the following Saturday, going down in the car.

Q. By "making note," you mean things that you have kept and paid attention to, and remembered; or did you keep written notes?

The Court: Mental notes.

The Witness: A. Mental notes I am talking about.

Mr. Tinning: Q. Do you recollect that, as the conversation [1647] closed and you were leaving the car, Mr. Boggs asked Mr. Bechtel as to what status Mr. O. W. Peterson would have on the job, in view of Mr. Hindmarsh having charge of the tunnel?

A. I don't recall Mr. Peterson's name was mentioned in any of the conversation, except at the tunnel office; it came up in connection with some of the suggestions he had made as to construction methods.

Q. Mr. Smith, how long have you been Mr. Bechtel's attorney?

A. How long have I been Mr. Bechtel's attorney?

Q. Yes.

A. I have never had that distinction.

Q. Have you ever represented the W. A. Bechtel Company?

A. I represented them once, about ten years ago,

(Testimony of DeLancey C. Smith.)

in the absence of Mr. Thelen and Mr. Marrin—a small matter.

Q. How long have you represented, prior to the 3rd of April or the 2nd of April, 1935, any one of the constituent companies or individuals who form the constituent companies of the plaintiff in this action,—Six Companies of California?

A. I represented Mr. Charles A. Shea, who was an individual at the time I represented him—or, rather, a member of a partnership, which later became a corporation; and I first began to represent him in the summer of 1925, in connection with the construction of the East Bay Municipal Utility District, for which he and another concern got a contract as to a large portion of the work.

Q. The evidence here shows, Mr. Smith—I will try to shorten this—that, when the conversation that you say occurred on August 7, 1935, between yourself and Mr. Hinman, Six Companies had already written its letter to the District dated July 26, 1935, in which it made various claims with respect to the work and extension of time.

A. Yes. I don't think there is any question about that.

Q. You knew about that?

A. I think I wrote the letter.

Q. Yes. I thought so. So, when you say Mr. Hinman had been in [1648] your office on the 7th of August, 1935, it was at a time when the District had already received your letters which stated that

(Testimony of DeLancey C. Smith.)

if they did not receive a reply—the Contractor did not receive a reply by the 7th of August, that you were going to take legal action against the District?

A. That was only on the question of lines and grades; and that legal action would possibly have been declaratory relief, which we were considering filing at that time.

Q. It was not so mentioned in the letter?

A. Well, certainly legal action includes declaratory relief.

Q. Yes, I will agree with you on that. But the words "declaratory relief" were not mentioned in the letter? You had no reply from the District on August 7, 1935?

A. The letter was signed by the Company. Whether the Company got a reply, I don't know.

Q. Well, you have been here for some time; you have not seen any reply to that letter, have you?

A. My recollection of the record is that no reply has been made and the testimony so shows.

Q. And there was no action?

A. No action; no.

Mr. Tinning: That is all.

The Court: We will take a recess.

(Recess)

Mr. Smith: Your Honor, I am sorry I did not get a chance, before the recess, to state to the Court that the plaintiff in this case comes to a logical

(Testimony of DeLancey C. Smith.)

pause in the nature and character of its testimony to be hereafter produced, which I was expecting to put in through my questioning. The remainder of our witnesses are semi-expert in character; they are experts, but they are also on facts; and we did not anticipate they would be reached this week, and they are not available; and, if it is agreeable to your Honor, we would appreciate an adjournment, so long as you are going to [1648] adjourn, anyway, for a couple of weeks until you return from your proposed Sacramento trip. I understand the defendant has no objection.

The Court: How many witnesses have you?

Mr. Smith: We have probably four more, your Honor; and we will gain time by this adjournment, because their testimony will be shortened by the fact that we will have time to consult with them before they testify; and we would like, therefore, to suggest an adjournment at this time until after your return from Sacramento.

The Court: Well, then, the case will go over until the 24th.

Mr. Smith: The 24th of May at ten o'clock a. m.

The Court: Yes.

(Thereupon, an adjournment was taken until Tuesday, May 24, 1938, 10 o'clock a. m.) [1649]

(Testimony of DeLancey C. Smith.)

Tuesday, May 24, 1938;
10 o'clock a. m.

The Court: You may proceed, gentlemen.

Mr. Wittschen: In this matter, if the Court please, a few days ago we were served with a printed copy of a memorandum of points and authorities by the plaintiff entitled "First Supplemental Brief." For the convenience of the Court, we have made a reply thereto, but having made our authorities in looseleaf form we felt it would be more convenient if we merely added some supplemental pages to that so your Honor's secretary could insert them in the proper place, and we have also redrafted the last page of the index because of that change in the brief.

J. PAUL ST. SURE,

called by the plaintiff; sworn.

Direct Examination

Mr. Marrin: Q. What is your occupation, Mr. St. Sure? A. Lawyer.

Q. Were you employed in that capacity by the plaintiff in this case,—Six Companies of California? A. I was.

Q. About when were you employed?

A. Beginning in February of 1936.

Q. Have you been continuously in the employ of the Company since that time? A. I have.

(Testimony of J. Paul St. Sure.)

Q. Did you ever discuss with Mr. A. B. Tinning, one of the attorneys for Joint Highway District No. 13, the defendant here, the subject of the District granting to plaintiff an extension of time within which to complete the performance of the work under the contract between plaintiff and defendant for the construction of the Broadway Low Level Tunnel? A. I did. [1650]

Q. When did you discuss this matter with Mr. Tinning?

A. My recollection is it was either the 5th or 6th of May, 1936.

Q. Where was the discussion held?

A. At Washington, D. C.

Q. Who was present?

A. I believe, just Mr. Tinning and myself.

Q. Will you state what was said by you and by Mr. Tinning at that time?

Mr. Wittschen: Objected to as immaterial and calling for a conversation which does not bind the District, or at least does not tend to disclose any arbitrary acts of the Engineer. It is specifically provided in the contract that extensions of time may be granted by the Board of Directors and that they shall be granted for certain reasons which are set out, or any other acts or circumstances which, in the judgment of the Engineer, would delay unnecessarily the work. A conversation between two attorneys representing the parties would be immaterial.

(Testimony of J. Paul St. Sure.)

Mr. Marrin: We offer this to prove, by the witness, that prior to the filing of the last application for extension of time Mr. St. Sure discussed the matter with Mr. Tinning, and Mr. Tinning told Mr. St. Sure in advance that the application would be denied; and we offer it for the purpose of proving that the Engineer in this case never exercised any judgment or discretion at all with respect to this application, but that the defendant's attorney had stated, in advance of making the application, that it would be denied.

Mr. Wittschen: What the defendant's attorney stated if the Engineer were not present would not bind the Engineer. If he had a conversation with the Engineer, I would not object to it.

Mr. Marrin: It would be binding on the District.

Mr. Wittschen: Not necessarily.

The Court: It may go to the representative's state of mind [1651] and subject to correction that it could not legally bind the Engineer; there may be some question as to the judgment of the representative of the District. I will allow it subject to a motion to strike out and over the objection of counsel.

Mr. Wittschen: Note an exception.

The Witness: May I have the question read?

(Pending question read.)

The Witness: A. Well, I stated to Mr. Tinning that we had received a communication from California, calling to our attention the fact that it might

(Testimony of J. Paul St. Sure.)

be necessary to apply for an extension of time before the 24th of May, 1936; that I felt we should make such application for extension; that I should advise him of it since he was on the ground in Washington. My recollection is he stated to me we could make such application or do whatever thing we felt would necessarily amply protect our rights, but the application would be denied. He stated that he felt the Six Companies were entitled to an extension of time, but just what that extension would be he did not know; he felt it best, from the District's point of view and his point of view, to deny the application in its entirety, that we should not be concerned with the fact of denial, because there would not be deductions made for extensions beyond the time but that the matter could be adjusted at the conclusion of the work, or the conclusion of the relationship, and he felt the District was amply protected by the withheld percentages without the necessity of any determination being made immediately, or determining at that time the question of how much of an extension should be granted. That, as I recall it, was the conversation, or the substance of it.

Q. I show you, Mr. St. Sure, a copy of Exhibit "SSS," which has been introduced in evidence in this case, and which is the application for an extension of time dated May 8, 1936. Did you prepare [1652] that application? A. I did.

Q. Following your conversation with Mr. Tinning? A. Yes.

(Testimony of J. Paul St. Sure.)

Q. The application is for an extension of 600 days. Will you state, according to your best recollection, how that amount was arrived at?

Mr. Wittschen: Objected to as incompetent and immaterial and in no way binding on the District and as self-serving. The exhibit speaks for itself. They asked for 600 days.

The Court: The ultimate fact is they asked for 600 days.

Mr. Marrin: Is the objection sustained?

The Court: The objection will be sustained at this time.

Mr. Marrin: Note an exception. You may cross-examine.

Cross Examination

Mr. Tinning: Q. Mr. St. Sure, where did this conversation that you referred to occur?

A. My recollection is that it was at the Shoreham Hotel.

Q. In Washington, D. C.? A. Yes, sir.

Q. As a matter of fact, it was on the last day that I was in Washington, was it not?

A. I think that is true, yes.

Q. That was the 8th of May, 1936?

A. I would not be sure of the date. It was just before you left, as I recall it.

Q. At that time, who was present at the conversation?

A. My recollection is that you and I were together; nobody else was there.

(Testimony of J. Paul St. Sure.)

Q. Mr. Boggs, the District Engineer, was not present? A. He was not.

Q. Was any other representative or employee of the District, or any officer of the District present? A. No, sir.

Q. They were all in Oakland; I was the only one in Washington?

A. I assume they were in Oakland. You were the only one there [1653] that I remember.

Q. I was the only representatve of the District in Washington at that time?

A. So far as I know.

Mr. Wittschen. We, at this time, make a motion to strike out the conversation as related by Mr. St. Sure with Mr. Tinning in Washington, D. C., on the ground it is not binding on the Engineer, who was not present, and it was not binding on the Board of Directors of the District, who were not present and who were at home. Assuming the conversation took place, Mr. Tinning was not authorized to make any such statements on behalf of the Board of Directors or the Engineer.

The Court: I will allow the record to stand at this time. You may renew your motion if it becomes necessary.

Mr. Wittschen: Exception.

Mr. Tinning: Q. Mr. St. Sure, isn't it a fact that we were in Washington at that time on the basis of an effort made by yourself,—representing Six Companies of California, and Mr. Kaiser, who was president of the Company at that time, at the time in question,—and the District, to work out some

(Testimony of J. Paul St. Sure.)

method that would be mutually agreeable and also that could be worked out for the settlement of the claims of the Contractor which had been made in July and August, 1935, wherein they claimed additional compensation for what they claimed to be extra work? A. Yes.

Q. There were numerous conferences after you became the attorney for Six Companies in February, 1936, between yourself and myself and representatives of the District and Mr. Kaiser and other representatives of Six Companies?

A. That is correct.

Q. And that, at the time that you have referred to, Six Companies had stated that they had a claim in excess of a million and a half dollars against the District for extra work?

A. I wouldn't [1654] recall the figure, but I recall there was a claim.

Q. Do you recall a document that was printed, with photographs and a suede cover and a dramatic story of the difficulties of the Contractors, and that was delivered to Mr. Thomas MacDonald, Chief of the Bureau of Public Roads, after we arrived in Washington? A. Yes, sir, very well.

Q. Also to Colonel Westbrook of the WPA?

A. Yes.

Q. Also to Mr. Berlew, the Assistant Secretary of the Interior under Mr. Ickes, who was Administrator of the PWA? A. Yes.

(Testimony of J. Paul St. Sure.)

Q. That book embodied a statement in which there is a claim up to that time——

A. Yes; right.

Q. One million, seven hundred seven thousand odd dollars?

A. If it was stated, I assume it is. I don't recall it exactly. In the appendix, the statement appears that the original estimated cost was $4,195,000, and the probable cost was $6,630,100. I assume that is what you refer to.

Q. Yes.

A. That statement appears in the booklet.

Q. Yes.

Mr. Tinning: Mr. Marrin, may I ask you this question—maybe my understanding was not accurate: There were actually two parts to this document. I do not care to put it in evidence, or offer it, gentlemen, as I think it will simply clutter the record, but if you wish——

Mr. Marrin: No; I don't think it is necessary.

Mr. Tinning: Q. You wrote a part of this, did you not, Mr. St. Sure?

A. Yes; I assisted in the preparation of it, Mr. Tinning.

Q. This conversation that was had with respect to the extension of time occurred after the statements of Mr. Kaiser to Mr. MacDonald in connection with this claim made to Mr. MacDonald at the time that [1655] Mr. Kaiser was seeking to see if there would be additional Government funds to take care

(Testimony of J. Paul St. Sure.)

of the claim of the Six Companies, that the claim of Six Companies was somewhere in excess of one million seven hundred thousand dollars?

A. You say my conversation with you was after the statements that Mr. Kaiser made to the Government?

Q. Yes.

A. I do not recall the statement you refer to. I do recall that the statement was made to Mr. MacDonald and others that there was a claim which was in the neighborhood of two million dollars or thereabouts. The conversation I had with you was probably after those statements were made, yes, because you have recalled to me it was the last day you were in Washington that I talked with you about the extension of time.

Q. And it was at the time that we had our conversation,—about the time we had our conversation; there were no further meetings or conversations between yourself and myself after this instance that you have referred to?

A. Only one telephone conversation that I recall while I was still in Washington and after you had returned.

Q. So, there were no further conferences at which I was present when Mr. Kaiser made any statements to any Government officers or bureaus represented by any Government officers in which he sought to get more money for the claim of Six Companies from some Government body?

(Testimony of J. Paul St. Sure.)

A. After you left Washington, you were not present at any further conversations in Washington.

Q. The object of Mr. Kaiser going to Washington and you going to Washington was an effort to get additional money from the United States to pay the claim of the Contractor if that could be worked out?

The Witness: Would you repeat the question?

(Pending question read by the reporter.) [1656]

The Witness: A. That was a portion of the reasons for going, yes.

Mr. Tinning: Q. Isn't it a fact, during the conversation you have referred to, that you stated to me that someone in California had sent on word at that time the contract time for completion would expire shortly and they were suggesting an extension of time be requested?

A. I believe it was suggested, yes.

Q. And I told you at that time I could see no reason one way why you should prepare any extension of time if your claims were justified, and if they were not, you would be taken care of anyway?

A. My recollection is, Mr. Tinning, that the statement was made that undoubtedly we were entitled to some extension of time.

Q. Well, of coure, there is a sharp conflict of memory on that.

A. I assume there is. You asked me to restate my conversation with you?

(Testimony of J. Paul St. Sure.)

Q. No; I have not asked you to restate it. I am cross-examining you, Mr. St. Sure.

A. Pardon me.

Q. Isn't it true, at that time, that I stated to you that I thought the District Engineer would not recommend an extension of time; that undoubtedly it would be denied?

A. I don't recall the District Engineer being mentioned. My recollection is you stated the application would be denied.

Q. Do I understand your testimony to be that I told you that you were entitled,—Six Companies was entitled to the extension of time?

A. My recollection is you stated undoubtedly we were entitled to a portion of the time. Just what that portion would be, you did not know.

Q. In connection with what was that statement made?

A. Well, in connection with the statement I had made to you that we were applying [1657] again for an extension of time, to protect our rights.

Q. While I was representing the District and Six Companies was then attempting to secure two million dollars or approximately that amount from the United States to pay its losses based on a claim the District had misled the Contractor and that the geological report specifically constituted constructive fraud and, at the same time we were taking that position, I told you that you were entitled to an extension of time?

(Testimony of J. Paul St. Sure.)

A. I don't know about all the arguments as to all these things being made at that time; I am giving you my best recollection of the conversation as I remember it.

Q. Mr. St. Sure, you will remember that, after the slide and cave-in that occurred on the 22nd of February, 1936, you came into the case as an attorney for Six Companies? A. Right.

Q. You knew, at that time following your employment, there had been claims made over a period of six or seven months before the date of your employment; you knew that, too? A. Yes.

Q. And you knew that those claims were based upon the alleged constructive fraud of the District in the preparation of its plans and specifications and its geological report?

A. I knew about claims for those amounts.

Q. Well, we had discussed it, had we not?

A. Yes, I think we had.?

Q. So, you knew, from some of the conversations that you had prior to the trip to Washington, it had been stated that Six Companies had a claim which they were attempting to satisfy and which was denied en toto by the District; that was all clearly understood before we went to Washington?

A. Yes.

Q. And still, after we got to Washington, you state, now, that I told you that you were entitled to an extension of time? A. Yes.

Mr. Tinning: That is all. [1658]

(Testimony of J. Paul St. Sure.)

Redirect Examination

Mr. Marrin: Q. Mr. St. Sure, this claim that the Six Companies had at the time you were employed and which was advanced in Washington was not for extra work, was it?

A. No; it was not. That is, it was for the delays and the result of the ground conditions and various changes and other matters which were all included within the total claim.

Q. Now, the Six Companies was not attempting to get the money directly from the Federal Government at that time, was it?

A. They were trying to find a means, by Government grant or otherwise, to provide further funds to meet the claim. Six Companies, as a contractor, could not make application for those funds, so we found.

Q. Who would have to make the application?

A. The District.

Q. And the District declined to do so?

A. Yes.

Recross Examination

Mr. Tinning: Q. You were in Washington in August, 1936, were you not? A. Yes.

Q. Again, in connection with the same matter?

A. Yes.

Q. At that time, there was no representative; when you arrived in Washington, there was no representative of the District there; and Mr. Wittschen, who was employed in this matter by the District as associate counsel in connection with this claim, was

(Testimony of J. Paul St. Sure.)

in Boston at the meeting of the American Bar Association, was he not? A. I believe so.

Q. And Mr. Wittschen came down; you wired Mr. Wittschen, didn't you, that you were there?

A. Yes.

Q. At that time, isn't it true that Mr. Wittschen stated that the only basis upon which the District would consider making any application to any Government body was that Six Companies would put a [1659] dismissal of this action in escrow to be delivered if the application was granted, or denied?

A. I recall that suggestion being made, or those conditions being made; but just when and where, I do not remember,—whether it was made in Washington or before or after.

Q. Wasn't it made both in Oakland and in Washington, Mr. St. Sure?

A. It may have been.

Q. You have no specific recollection as to the time; but you know that that condition was imposed as a basis for the District going in and as any consideration for any effort to secure the additional funds?

A. I recall Mr. Wittschen stated that that was his plan and any arrangement that might be made would have to be on that basis, and he would so recommend.

Q. And he was representing the District in Washington while the negotiations were going on?

A. I understood that.

Q. Do I understand, from your reply to Mr. Marrin, that you said that it was not a fact that Six

(Testimony of J. Paul St. Sure.)

Companies claim which was being advanced in May of 1936 was not based upon the fact that you had been misled?

A. I do not recall giving any reply or any question being asked of me.

Mr. Marrin: The question was directed simply to this: that it was not simply a claim for extra work as extra work is ordinarily meant; the claim was based on other conditions.

Mr. Tinning: Well, extra conditions due to doing more than you expected to do, and your original idea of it, whether it be extra timbers, extra excavations, extra concrete,—all of those things were added to your claim.

Mr. Marrin: But I did not want the implication left that it was due to something the District had ordered us to do which was outside the contract.

[1660]

Mr. Tinning: Mr. Marrin, I understand the basis of the claim against the District has always been that there was a vast additional amount of work that was actually performed in excess of that which was contemplated by the Contractor when he undertook this contract, and, roughly, that that vast extra amount of work was extra excavations, extra timbering and extra concrete.

Mr. Marrin: That is true; and, also, of course, that the conditions under which the work as described in the contract was done were very much more difficult.

(Testimony of J. Paul St. Sure.)

Mr. Tinning: Q. You so understood Mr. Marrin's question, Mr. St. Sure?

A. Well, frankly, I had in mind the more technical distinction or definition of extra work as distinguished from additional work. We made that distinct in our thinking. I had in mind, when he asked the question, that he referred to extra work as such.

Q. You understood, by his question, that it meant additional work in addition to that contemplated by the contractor when he understook the contract?

A. I would ask you to go back to the question and answer. Now that I have listened to your argument——

Q. Well, Mr. St. Sure, I think we are probably quibbling over something; we both probably mean the same thing. You thought extra work meant something that was ordered by the District as an extra under the contract, and you explained you meant additional work, that is, work in addition to that contemplated by the contract?

A. I meant the claim of Six Companies was based, as I understood it at that time, upon this additional work which they were required to do,—additional construction, additional equipment, additional man hours and additional work necessary by the ground conditions which had not been disclosed, and all the other matters which [1661] were asserted.

Mr. Tinning: No further questions.

Mr. Marrin: No further questions.

(Witness excused) [1662]

VICTOR G. HINDMARSH,

Recalled for Plaintiff.

Mr. Marrin: Q. You testified, Mr. Hindmarsh, on your direct examination at page 1096 of the transcript, in answer to the question "Q. What was the condition of the timbering as you observed it?" —the answer as it appears in the transcript is "The timber was in bad condition." That should be "The timber was not in bad condition," should it not?

A. That is right.

Q. Further on, on the same page, appears the statement, "Some of it showed weight from crushing in of the adit rather than anything else." That should be "crushing in at the adit"?

A. At the adit.

Q. The adit never crushed in? A. No.

Q. On page 1101 I asked a question with respect to an exhibit and the transcript now reads in this manner: "Whereas it shows on page 17, with reference to the cross in the square outside the word 'tape' "—the word "outside" should be "opposite"? A. Yes.

Q. On page 1106, in the question appearing about two-thirds of the way down, it now reads: "Take here between 170+55 and 122+05, there is a date 10/1 to 10/7, 1935." The station should be 117 instead of 170, should it not? A. Yes.

Mr. Wittschen: I think we could sit down and agree on such things, we have already had that understanding.

(Testimony of Victor G. Hindmarsh.)

Mr. Marrin: Very well, I will not correct any more of these minor matters.

Mr. Wittschen: I think we will save time by agreeing on the record.

Mr. Marrin: Q. Mr. Hindmarsh, there is one matter, however, which I would like to have you testify to. At page 1201 of the transcript appear the following questions and answers: [1663]

"Mr. Marrin: Even if 240 pounds of powder was used in the shot a short time before this cave-in would you consider that was heavy shooting?

A. No, I would not. It depends, of course, on the size of the shot, how much ground you are moving.

"The Court: And the material?

A. And the material. As a rule, this ground only took about three-quarters of a pound of powder—as the record shows, about three-quarters of a pound per yard, which is a very light shooting in any tunnel that has to be shot at all."

To what part of the tunnel shooting were you referring when you said that the average amount was three-quarters of a pound?

A. We were talking about the bench at that time; that is what I had in mind.

Q. By "the bench" you mean the core?

A. Yes.

(Testimony of Victor G. Hindmarsh.)

Q. Your statement of three-quarters of a pound was not intended to apply to the average amount of powder used in blasting the entire tunnel?

A. No; the drifts and rings took a little more powder than the bench did, always do.

Q. Could you state what was the average amount of powder used generally in the entire tunnel?

A. As I remember it, it was one and a quarter pounds to the neat yard.

Q. About one and a quarter pounds?

A. About a pound and a quarter.

Q. You previously testified as to a conversation that you had with Mr. Boggs on January 22, 1936, concerning the question of extension of time, at which time you presented to him a construction schedule and form of letter. Did you thereafter at any time discuss with Mr. Boggs the subject of extension of time of doing the work?

A. No, I did not.

Q. I show you Defendant's Exhibit SSS, which is the application for [1664] an extension of time dated May 8, 1936. Did Mr. Boggs ever discuss that application with you? A. No, he did not.

Q. Did he ever request you to furnish him data in support of it? A. No.

Q. Now, Mr. Hindmarsh, you testified that you set the timbers a minimum distance of 3 inches outside of the area in which the concrete lining was to be placed. Where you set the timbers three inches outside of that area in which the concrete was to

(Testimony of Victor G. Hindmarsh.)

be placed and contemplated leaving the timbers in, how far was it necessary to excavate the ground beyond the concrete line in order to so set the timbers? A. Approximately 21 inches.

Q. Will you explain what that 21 inches consists of?

A. There is three inches for clearance on the inside of the timbers, they are 12-inch timbers, three inches of lagging and then practically 3 inches for working space in order to put your lagging in, making a total of 21 inches.

Q. How much reinforcing steel, as specified in the original plans, was to be placed in the Type A section?

A. As I remember, it was one curtain, with 24-inch centers.

Q. During the time you were in charge of the work did the District order this amount increased in any part of the tunnel?

A. Yes, it did considerably.

Q. In about what proportion to the amount of work constructed under your supervision?

A. I would say at least 50 per cent.

Q. How was the increase made?

A. It was made both by less spacing on the inner curtain and also putting in a second curtain, two curtains instead of one.

Q. Would you describe what you mean by a curtain of steel?

(Testimony of Victor G. Hindmarsh.)

A. Well, the plans called for one row of steel in 24 inches over the arch and then the second curtain would be another row over the top [1665] of that one, probably 18 inches apart.

Q. Did this increase in the amount of steel in anyway cause additional difficulties?

A. It always does; it takes twice as much time to put the steel in as originally planned, and it increases your difficulty in putting in your concrete, you have got to work in between two layers of steel instead of on top of one. The biggest delay is in the transportation; one of the biggest troubles you have is in congestion of transportation, especially where you are excavating and lining the tunnel with concrete at the same time; any additional tonnage that it is necessary to take into the tunnel slows up the whole operation.

Mr. Marrin: No further questions.

Cross Examination

Mr. Tinning: Q. Mr. Hindmarsh, you, of course, are familiar with the provisions of the specifications that accompanied the contract with respect to concrete lining? A. Yes, I am.

Q. Do you remember this provision of the specifications, Section 32, about half way down in paragraph 6 in Concrete Lining, on page 61:

> "Reinforcing steel, as shown on the plans, is the minimum requirement and the District Engineer shall have the right and authority to

(Testimony of Victor G. Hindmarsh.)

increase the amount of reinforcing steel in accordance with his judgment as to necessity; the contractor shall furnish and place such additional reinforcing steel at no additional cost to the District, other than the price per pound bid for reinforcing steel in place. Reinforcing steel shall conform in all respects to requirements contained in Section 14, Reinforcing Steel, of these specifications."

A. Yes.

Q. In my preceding question Mr. Wittschen calls my attention to the fact that I misstated the paragraph to Mr. Hindmarsh, it is in paragraph 7, and it appears on page 61 as part of Section 32 [1666] of the Specifications. Now, it is true, is it not, that as this steel that you have referred to was ordered and that additional amount of steel was placed, the amount of steel that was placed was paid for by the District in accordance with the price fixed by the contract? A. That is right.

Q. So that while you had, as you say, transportation and placing difficulties, it was part of the job that the Six Companies undertook, was it not?

A. Yes, it was part of the job, of course, but the tonnage ran over a great amount, which would slow up operations more than anything else.

Q. That is true, but you were being paid for the cost of placing that steel under a price that was bid by Six Companies as a part of its contract?

(Testimony of Victor G. Hindmarsh.)

A. We were paid the unit price, yes.

Q. That was the price that was bid, was it not?

A. Yes.

Q. You never objected to putting in the steel, did you? A. Not that I recollect.

Q. Isn't it a fact, Mr. Hindmarsh, that this provision was put into the specifications for the purpose of giving some flexibility to the placing of the structures?

Mr. Marrin: I object to that question on the ground it is argumentative and improper cross-examination. This witness cannot testify as to the purpose in putting it in.

Mr. Tinning: He is a tunnel expert.

The Court: If he knows he may answer.

A. I do not know what they had in mind; I presume that is what they had in mind so that it could be flexible.

Mr. Tinning: Q. You were not ordered to put this steel in in all places in the tunnel that you constructed, were you?

A. No, I testified about 50 per cent.

Q. Where the District Engineer, in his opinion, and judgment, thought that additional steel was necessary he ordered you to put it in? [1667]

A. That is correct, yes.

Q. And you did it? A. Yes.

Q. And you never protested?

A. Not that I remember.

Q. Did you have a sub-contractor on the steel?

(Testimony of Victor G. Hindmarsh.)

A. Yes, that steel was sub-contracted, but we had to pay the sub-contractor more money.

Mr. Tinning: We ask that that go out.

The Court: It may go out.

Mr. Tinning: Q. The sub-contractor on the steel did not delay the work of the tunnel, did he?

A. Yes, a certain amount; whenever he had more steel to put in it was bound to delay.

Q. Did he fail to supply the steel when you ordered it?

A. No, it was not a question of the supply of steel, it was putting it in.

Q. It was work that was required in putting in the steel? A. Yes.

Mr. Tinning: No further questions.

Redirect Examination

Mr. Marrin: Q. Did the District pay for all of the steel that was placed?

A. No, I do not believe it did.

Mr. Tinning: Q. Did you ever protest that you were not paid for any steel that you put in?

A. No, I did not protest; I don't know whether the company did, or not.

Mr. Tinning: Mr. Marrin, I am somewhat surprised at some of the questions this morning because of matters that occurred in September, 1935. I assume what you are referring to now is the fact that in recovering the break-in, the cave-in which occurred on August 28, 1935, that the Six Com-

(Testimony of Victor G. Hindmarsh.)

panies agreed to do certain work without charge. Is that what you refer to?

Mr. Marrin: No, the District refused to pay for the lapped steel, and they did state, you put the steel in in the south tunnel opposite the cave-in, that you refused to pay for. I simply [1668] asked that question in answer to the question you asked, if they paid for all of the steel. As a matter of fact they did not.

Mr. Tinning: Q. Did you ever present any bill to the District for steel which was not paid?

A. I don't know as we presented any bill at all.

Q. Did you make any protest in writing to the District? A. No, I did not.

Q. Did the Six Companies at any time protest any estimate that was prepared by the District Engineer upon which progress payments were made in this case? A. Not that I know of.

Q. Counsel referred to tie rails and splices——

Mr. Marrin: No, that was lapped steel.

Mr. Tinning: Q. Are you familiar with the provisions of Section 14 of the specifications, Mr. Hindmarsh, appearing in paragraph 8, on page 22 of the specifications,

> "only reinforcing steel in place and covered with final concrete will be paid for, and the poundage will be calculated for straight line lengths, no splices included, except where splices are specifically detailed or called for on the plans"?

(Testimony of Victor G. Hindmarsh.)

A. Yes, I remember that.

Q. That is the way you obtained your pay for the steel that you put in?

A. Yes. The only steel that I know of that was not actually paid for was that space in the cave-in.

Mr. Tinning: That is all.

Mr. Marrin: No further questions.

CLARK RANKIN,

Recalled for Plaintiff.

Mr. Marrin: Q. Mr. Rankin, you testified on your direct examination that you were in charge of the tunnel operations from about June 1, 1935 up till the time the operations were shut down, ex- [1669] cavation operations were shut down on August 21, 1935. At the time that you were in charge of the operations of excavation, the excavation was being carried on by the drift method. Now, in performing the excavation in the two tunnels under the method used by you, in what place was it necessary to perform blasting operations?

A. It was necessary to perform the blasting operations in each of the four drifts and one ring drift, and the core.

Q. Was the blasting done on each of those places at the same time?

A. No, it was not, not necessarily.

(Testimony of Clark Rankin.)

Q. Will you explain why?

A. Well, each drift, including the ring drift, that would make five drifts, the core would make a sixth operation, is a separate and distinct operation. During that time these drifts, due to the great variance in formations we were going through—we were going through probably several different types of rock or ground; one drift might be proceeding ahead in a fairly hard rib probably of short duration, while another drift was in very soft material, and therefore it was necessary to carry on different drilling procedures to meet the ground encountered, and each time a shift had drilled the ground we shot the ground as soon as it was drilled.

Q. When you shot the ground in one drift what was done with the tunnel crew that was working.

A. It was necessary to remove all of the men in the vicinity of the heading and for some distance back at the time any shot was fired, whether it was a plug shot, that is, a single shot, or a round in a drift, or in several drifts, or the core; that included all the excavation crew, that is, the shovel crew, motor and transportation units, etc.

The Court: We will take a recess for five minutes.

(After recess):

Mr. Marrin: Mr. Reporter, would you read the last question [1670] and answer?

(The record was read by the reporter.)

(Testimony of Clark Rankin.)

Q. How long, on the average, would the crew be out while the shot was being fired?

A. I think the average would be somewhere about half an hour, twenty minutes or half an hour, varying on the distance that they had to go out and back to the heading.

Q. How frequently did this occur in a twenty-four-hour period?

A. It occurred quite frequently during the time when I was there, due to the fact that we had these many drifts and the core, and I would say that probably five or six times a day would be a good average.

Q. When the operations were carried on under the full-faced method at what place was the blasting done?

A. The blasting was done at the face, the point of the operation, and it would amount to practically the same amount of time that was required for one drift.

Q. About how often did the crew have to be removed when the operations were carried on under the full-faced method?

A. All depending on the length of the round, and the time that it would take to muck out. It depended on the cycle that you would set up.

Q. What is the usual cycle?

A. Well, if you were shooting a twelve-foot round you would probably be able, if you had the equipment lined up for it, to shoot twice in a 24-hour day.

(Testimony of Clark Rankin.)

Q. The crew would have to be removed only twice under that method, and five or six times while the operation was carried on by the drift method?

A. I would correct that by once or twice, it is all relative to the amount of the pull and the amount of muck.

Q. How much muck was there in the space you had charge of when you were operating under the full-faced operation?

A. Practice taught us it is not advisable to shoot any further, that is, to drill and remove muck any further into the heading than the dimensions of the [1671] drift, that is, the cross dimensions of your drift; say they were 6 by 6, you would pull in the vicinity of a 6-foot round.

Q. I think there may be some confusion because I asked you first with respect to the full-faced method, and you answered with respect to the drift method.

A. In the full-faced method it is the same as in the drift; the size of the tunnel has an absolute bearing on the length of the round that you can pull; that is necessary because of the choking action of the round, when the round is shot, if you try to pull too long a round the blast chokes itself and you do not get the efficiency of your powder.

A. As I understood you, when you are operating under the drift method the length of round you can pull in one shot is limited by the diameter of the drift? A. That is right.

(Testimony of Clark Rankin.)

Q. The sizes at the drift that you were driving were what?

A. They were a little over, they averaged a little over six feet in core section; that pulls a little over a six-foot round.

Q. And your length of six feet was limited by the diameter of the drift? A. That is right.

Q. So that in excavating under the drift method as compared to the full-faced method, considerably more delay was caused from shooting alone in the excavation under the drift method: is that correct?

A. Yes, I might clarify that point; whereas you could pull a six-foot round in a drift, if you were shooting the full face in the tunnel you could probably pull up to a 20-foot round.

Mr. Marrin: You may cross-examine.

Mr. Tinning: No questions.

STANFORD H. WILDE,

Called for the Plaintiff; Sworn.

Mr. Marrin: Q. Mr. Wilde, were you employed by the plaintiff, [1672] Six Companies of California? A. I was.

Q. About what date?

A. January 31, 1935.

Q. Did you remain with the company thereafter until it ceased work on the contract that is in litigation? A. I did.

(Testimony of Stanford H. Wilde.)

Q. Were you familiar with all of the records of the company? A. Yes.

Q. On this matter of the amount of powder used, there is a little confusion about it, and I want to clear that up by our records. Will you state what the records of the Six Companies of California show as to the amount of powder which was used in these tunnels, both with respect to the cross excavation and the neat?

Mr. Wittschen: Objected to as immaterial. I do not think in this case it is necessary to go into minute detail as to how many sticks were used and how many holes drilled. They were obviously building a tunnel, and not a lath house in the back yard, and they needed powder; how much they used is immaterial; they agreed to use all that was necessary.

Mr. Marrin: If your Honor please, I think the last witness, Mr. Hindmarsh, was slightly in error in his answer, and we simply want this record to be accurate.

Mr. Wittschen: You can call Mr. Hindmarsh and correct it.

Mr. Marrin: This witness knows the exact amount and we want to offer to the Court in good faith to show the exact amount as shown by our records.

The Court: He may answer the question. I will give you a record on it.

A. The amount of powder for the gross excavation was 1.24 pounds of powder per cubic yard of

(Testimony of Stanford H. Wilde.)

gross excavation and 1.57 pounds of powder per neat yard of excavation.

Q. By "neat yard of excavation" you mean what?

A. That is the amount inside of the neat concrete lining, in other words 35.61 [1673] cubic yards per lineal foot of tunnel.

Q. And by "gross excavation" you mean what?

A. That is the total amount of excavation we took out per lineal foot of tunnel.

Q. I show you here a document which is marked "Reinforcing steel," and if there is no objection before having the witness explain it I will offer it and give it an exhibit number, so as to refer to it in the testimony.

Mr. Wittschen: I am going to object to its offer as entirely immaterial, so that the Court may have the matter before it, so that it may rule. It is your estimate of the amount of steel that was required to be placed in the tunnel. We are not objecting to the document for the reason that it is a copy and not the original record, or anything of that kind; our objection is not technical, but in view of the fact that they agreed to put in all of the steel that was required and were paid for at the bid price, what difference would it make if they had used blank or blank pounds, whether it was 1 or 1000 pounds more or less; their contract was that they put in a certain minimum of steel, and so much more as the Engineer required as they went along. It is imma-

terial how much went in, they were paid for it.

Mr. Marrin: I think you misunderstood what this shows. It does not show anything about the pounds of steel; it shows the stations at which the steel was placed and the lineal feet between those stations, and it contains copies of the maps or diagrams which were delivered by the District Engineer to the plaintiff in this case, directing it to put that steel in at that particular place.

Mr. Wittschen: I misunderstood it to that extent, but the principle is the same.

The Court: In reference to this document is there anything in that document which has not already been gone over?

Mr. Marrin: There is nothing in the record about the amount [1674] of steel or how the steel was placed, or the design of steel that was ordered to be placed in the tunnel. The point is this, in the original plans the Type A section shows one curtain of steel placed in the tunnel. As a matter of fact the district ordered in a great deal more steel, and the testimony of Mr. Hindmarsh shows this increased the difficulties of work and slowed up the operations. On the question of unavoidable delay we think this evidence is pertinent as showing not that the District did not have the right to order it in,—we do not question that, but we did put in all the additional steel and it delayed the operations; it was a thing over which the contractor had no control. We simply want to show what the facts are with respect to the steel.

(Testimony of Stanford H. Wilde.)

The Court: What facts are you going to present to prove that?

Mr. Wittschen: Mr. Hindmarsh has already stated——

Mr. Marrin: We are going to present this document, which will show the steel that was placed, which will be in contrast to the amount of steel as shown on the original plans, which are in evidence.

Mr. Wittschen: Might I observe, putting in the record how much was placed does not show where it was placed, and Mr. Hindmarsh has already said he put in 50 per cent. more than the minimum required.

The Court: Whatever the facts may be, both sides are acquainted with the facts, and the amount of steel, and the stations; we are consuming time here. I have other work, other cases, and I am being pressed on them, and it is my purpose now to bring this thing to an end.

Mr. Marrin: I have tried to make clear to your Honor the purpose of our offer.

The Court: How long will it take to take care of this document?

Mr. Marrin: If there is no further objection it will take about thirty seconds to dispose of this witness, maybe a minute. [1675]

Mr. Wittschen: Might I observe reinforcing steel did not delay the excavation work; that is where they were delayed. This is entirely immaterial.

(Testimony of Stanford H. Wilde.)

The Court: Counsel may get some comfort out of it. That is not the difficulty I find myself in. I do not want to mislead him to his injury, however. When finally we come to meet these matters definitely there is much of the matter that we wont need here that we are wasting some time on. With that admonition you may proceed with the hope that we will come to the conclusion of this testimony.

Mr. Wittschen: I assume, your Honor will admit the exhibit?

The Court: Yes.

Mr. Wittschen: Note an exception.

(The document was marked "Plaintiff's Exhibit 99.")

Mr. Marrin: Q. Mr. Wilde, referring to Plaintiff's Exhibit 99, will you please explain briefly to the Court what that shows, just put it up there and explain it to his Honor.

A. This starts with the portal section of the north tunnel at station 111+42.55 and carries through consecutively with each station, showing the lineal feet and showing the type—referring to the District order appearing in the back—the type of steel which was placed in the arch, in the left footing and right footing.

Q. Now, will you refer to one of the diagrams?

A. In other words this A-3, which is the District sheet showing the steel which should be placed in this given section.

(Testimony of Stanford H. Wilde.)

Mr. Tinning: Q. When you say "District sheet," so that we will have the record clear, each time that there was any change in the way in which the steel was to be placed in this lining the District gave an order to the contractor and this sheet proved the detail of that order?

A. Yes; that is where these stations are broken down—each time we received a new order we broke them down this [1676] way.

Mr. Marrin: As far as you know, that is a correct record of the steel and the design of the steel that was placed in the tunnels? A. Yes.

Mr. Marrin: That is subject to your check. That is all.

Mr. Tinning: No questions.

BEN M. PAGE,

called for the Plaintiff; sworn.

Mr. Smith: Q. Where do you reside, Mr. Page?

A. 3800 West Adams Boulevard, Los Angeles.

Q. What is your present occupation?

A. Instructor in geology at the University of Southern California.

Q. Are you a graduate of any university on the subject of geology? A. I am.

Q. Where?

A. I graduated from Stanford University in 1933.

(Testimony of Ben M. Page.)

Q. What degree did you receive for that?

A. Bachelor's degree, Bachelor of Arts.

Q. Did you do further studying on the same subject?

A. I did. I returned and received a Master of Arts degree in 1934.

Q. What experience did you have during the time you were studying geology at Stanford University or thereafter up to the present time in handling geological work in the field, commercially or otherwise?

A. I did not do commercial geology, but I had field work during the four summers, during which time I did geology mapping, involving the recognition and the massing of geological features. I also visited various mines.

Q. Where were they located?

A. I was underground at Tonopah, at Virginia City, Mill City, Ione, Edgemont, and various other places I do not recall. [1677]

Q. Did you undertake to examine ground conditions for the purpose of observing the nature of the ground in those drifts?

A. I did in a casual manner. I did not make any detailed investigation.

Q. You are familiar with the practice of geologists in making a detailed examination?

A. Yes, I am.

Q. Were you employed by the Six Companies of California, the plaintiff in this case?

(Testimony of Ben M. Page.)

A. Yes, I was.

Q. When were you so employed?

A. I was employed on September 25, 1935.

Q. And what were your duties after your employment, how long did it last, and just describe them generally, will you please?

A. I was employed to make an exact observation of the geological conditions in the Broadway Tunnels and to prepare myself to describe them accurately. That work lasted until about September 24, 1936; and part of that time was spent in plotting and accumulating the material I had gathered.

Q. What was your practice with regard to taking observations? Did you make notes of what you took?

A. I did. I think I can describe that best by describing first my work during the first three months of my employment, when there was no excavation in the tunnel; the excavation had been shut down following the cave-in, and during that first three months it was my purpose to see as much as I could of the ground that had been opened up already; and in doing this I went from place to place, systematically along the tunnel wall, wherever there was an opening between the timbers or between the lagging, I carefully noted the location of that opening, both its horizontal location and its elevation between the tunnel floors. In many cases I noted also the dimensions of that exposure, and

(Testimony of Ben M. Page.)

the next step was to examine carefully the material that could be seen at this noted locality; the material was identified as to variety, [1678] its physical condition was noted, whether it was hard or soft, or strong or weak; this work occupied the first two months of my employment, till I had covered the tunnel walls as they had been opened up, and I started to carry out the same system with the tunnel arch, and did so wherever it had not been concreted or gunited in the meantime.

Q. You are referring in that answer you have just given to the time when you first went to work in the fall of 1935, and there was no excavating being done: is that correct?

A. Yes. That period lasted until late next November.

Q. In the north tunnel was it November or December?

A. I think it was November—no, in the north tunnel it was December; in the south tunnel it was November.

Q. Now, during the time that you were making this observation did you limit your examination to purely looking at the ground, or did you do further than looking?

A. During my employment, during my work in the tunnels I collected samples of the material that had been encountered. Another aspect of the work applies to the period during which excavation was going on, excavation was resumed.

(Testimony of Ben M. Page.)

Q. Just a minute, I will come to that in just a moment. Before excavation was resumed and when you were making the observations you have described you made in the tunnels which were already excavated, or in the portions which were already excavated, did you make a systematic practice of obtaining samples throughout the length, as far as you could?

A. Yes, I did. I did not obtain them at definite intervals, but wherever it seemed advisable.

Q. You tried to get a representative condition, is that it? A. Yes.

Q. Mr. Page, after resumption of excavation what was your practice?

A. After excavation was resumed I spent most of my time in the tunnels again, and I made daily rounds and visited all along the head- [1679] ing; in the heading I observed the ground as it was being drilled, after it had been blasted, during the barring down, during mucking and during timbering, and I tried to acquire first-hand knowledge of the character of the material.

Q. Was your employment during this period that you have mentioned, from December, 1935, until approximately one year later, a full-time employment? A. Yes, it was.

Q. You devoted all of your time to it? A. Yes.

Q. Did you upon the conclusion or during the period of time between the June 13 date of 1936, when the plaintiff in this case ceased work on these

(Testimony of Ben M. Page.)

tunnels and the close of your employment at that time, cause a model of the tunnel to be made which would reflect your observation? A. I did.

Mr. Smith: We have here, your Honor, a model.

[1680]

Mr. Smith: For the purpose of identifying this, I will ask that it be called "Plaintiff's Exhibit 100 For Identification."

Q. Pointing at Plaintiff's Exhibit 100 For Identification, Mr. Page,——

If there is no objection, I will offer it at this time.

Mr. Wittschen: You better proceed. I don't know how far that goes.

Mr. Smith: Q. —Plaintiff's Exhibit 100 For Identification is the model that you prepared as you mentioned a moment ago? A. Yes, that is.

Q. Will you state how you prepared that and what it purports to represent? In case you wish to go to the model, don't hesitate to leave your chair.

A. This model represents the materials surrounding the Broadway Tunnels, the materials immediately adjacent to the tunnel concrete; and it was prepared from the materials I gathered, myself, underground, with the exception of a very small portion near the west portals.

Q. Was it done under your direction?

A. Yes, it was.

Q. Did you do the work yourself?

A. I plotted the geology myself. It was colored by technicians.

(Testimony of Ben M. Page.)

Q. Do you understand the scheme of the coloring as described?

A. Yes. If you care to have me, I will explain that scheme.

Q. Well, I am pointing at the plaque standing on the easel behind the model, Exhibit 100 for Identification. Will you explain what the colors purport to show, naming the colors?

A. The colors merely represent the variety of materials, much the same way as the colors of a map represent political divisions. The ground was not actually this color. I will read the legend—at least, a portion of it: "Brown on this legend indicates a formation of stream deposit, hill wash and creep. Red on this legend [1681] indicates diabase and altered diabase."

Mr. Tinning: Q. I think you better spell each geological term because the reporter cannot interfere or interrupt by looking up.

A. I will do that. "Green represents the orindan formation. Violet represents a formation of cherts and shale."

Q. Will you point out what you mean by "violet"?

A. Yes; this is violet. It appears here. Blue is such as this portion.

Mr. Smith: The witness is pointing with a pointer to portions of the model marked in that color.

(Testimony of Ben M. Page.)

The Witness: In other words, sandstone and grey which appears in the west portals of the tunnels indicates a formation of sandstone, shale and shaley sandstone.

Mr. Smith: Now, we will offer the model as Plaintiff's Exhibit 100 in evidence.

Mr. Tinning: Well, Mr. Smith, we don't want to be technical about it. However, I understand this gentleman said he personally inspected the tunnels when he was first employed in September, 1935.

Mr. Smith: Yes.

Mr. Tinning: At that time, the west end of the tunnel had been concreted.

Mr. Smith: Yes.

Mr. Tinning: And his model indicates——

Mr. Smith: His testimony will so disclose in just a moment.

Mr. Tinning: Well, it is a fact that portions of the model, at least, are taken from other information; it is not what he was able to observe.

Mr. Smith: That is correct. There is no suggestion he claims it is an accurate reflection of anything behind the concrete which was already installed when he was there. [1682]

Mr. Tinning: Will you have him show what the situation was?

Mr. Smith: Q. Will you point out, and define each station number, Mr. Page, the extent of the west end of the tunnels that was already concreted when you arrived there?

(Testimony of Ben M. Page.)

A. May I refer to some notes? In the north tunnel, the following portions were concreted prior to my arrival: from Station 111 plus 42,—that was the portal,—and to 113 plus 31; in the south tunnel, the following portions were concreted: from the portal at 111 plus 53 to 114 plus 90; and further in a few feet were concreted: from 119 plus 24 to 119 plus 43.

Q. That was in the south tunnel?

A. Yes. The total in the north tunnel was 188 feet of concrete; and the south tunnel, 356 feet.

Q. As to the concrete portion, you don't purport to represent the geological conditions of the ground behind the concrete?

A. Of course, I could see no geological exposure in those portions. I have simply indicated those portions on the model for completeness; and all my data was derived from the company records and from certain rock samples which had been taken prior to my employment.

Mr. Smith: We now renew the offer of the model in evidence.

The Court: It may be admitted and marked plaintiff's exhibit next in order.

(Thereupon, the model was marked "Plaintiff's Exhibit No. 100.")

Mr. Smith: Q. Now, Mr. Page, addressing your remarks first to the question of the status of the work when you arrived there. will you just point out on the model and describe the station numbers

(Testimony of Ben M. Page.)

of the excavation already made when you started, just briefly, so we will know just where you started?

A. A portion of the tunnel was fully excavated as follows: in the north tunnel from 111 plus 42 to 122 plus 11; the south tunnel, from 111 plus 53 to 124 plus 57. [1683]

Q. Were there any drifts ahead of that south excavation that you just mentioned?

A. Yes, the drifts went on beyond the fully excavated portion in the north tunnel. The eastbound drift on the north side went 128 feet, from 122 plus 11 to 123 plus 39. The eastbound drift on the south side of that same north tunnel, from 122 plus 11 to 123 plus 40; and from the other portal of that north tunnel drifts had been driven westward, on the north side of the tunnel from 140 plus 18——

Mr. Smith: The witness is now pointing to the east portal end of the model.

A. —132 plus 23; and on the south side of the north tunnel, the westbound drift had been driven from 140 plus 18 to 131 plus 92. The following are the drifts in the south tunnel as they existed upon my arrival: North side of south tunnel, eastbound drift extended 91 feet, from 124 plus 57 to 125 plus 48. The south side of the south tunnel, the eastbound drift went 130 feet, from 124 plus 57 to 125 plus 87. The westbound drift in that same south tunnel——

Q. The westbound drift: you mean by that the drift driven from the east portal south?

(Testimony of Ben M. Page.)

A. Yes.

Q. Eastbound drift: you mean drifts driven from the west portal?

A. Yes. The westbound drift in the south tunnel extended on the north side from 140 plus 97 to 131 plus 30; on the south side of the south tunnel, from 140 plus 97 to 131 plus 31.

Q. All the figures that you have mentioned or used in the answer as to location of drifts or of the full excavation, refer to the station numbers on the engineering station lines of the tunnels?

A. Yes, they do.

Q. You made yourself familiar with those station numbers and knew what they were?

A. I did. [1684]

Q. In connection with this particular model, have you got a line or legend on it which reflects the station numbers that you have been mentioning in general?

A. Yes. The model includes station numbers at intervals of 100 feet, alongside each tunnel.

Q. What were you pointing out then?

A. I was pointing to one of the station numbers.

Q. Well, you are in general pointing out a white strip which is alongside the line of the north tunnel?

A. Yes. There is a similar one alongside the south tunnel.

Q. What is the character of the information contained on these white strips which are tacked down on the floor of this model?

(Testimony of Ben M. Page.)

A. In addition to the station number, there is a white strip alongside each tunnel which makes comments on the physical condition of the rock or ground, and, furthermore, across that, the quantity of data that was available for me during my studies.

Q. And in making that comment, does the comment itself have a defined area as to the part of the tunnel that is covered by the comment,—the tunnel ground?

A. Yes. This description alongside of each tunnel indicates the extent of each comment as it applies to each tunnel line.

Mr. Tinning: In other words, is this your vertical line?

The Witness: Yes.

Mr. Smith: Q. The vertical line, in other words, projected up, covers that? A. Yes.

Q. For the benefit of his Honor, you might point out what you were just saying.

A. These are the station numbers. This strip indicates, in blue letters, certain physical conditions of the ground, and likewise, in black letters. The green letters indicate the source of my data, so the data can be evaluated. For instance, in the west portal, here, is a comment that this portion was [1685] concreted prior to my arrival.

Q. Show his Honor the place where the August cave-in is shown there.

A. The August cave-in is indicated on this white card alongside the north tunnel. The vertical red

(Testimony of Ben M. Page.)

line indicates the extent. There is a similar card for the other cave-in, namely, the cave-in of February 22, 1936, and the cave-in of February 11, 1936.

Q. Pointing to the cave-in which occurred in the east end of the north tunnel? A. Yes.

Q. The last remark you made? A. Yes.

Q. Will you state, for the benefit of the Court, what this geological model shows as to the condition of the ground in the north tunnel, beginning at the west portal? A. Yes, I will do that.

Q. And, in making your comments, you might call attention to any remarks that are contained in the white strip there as illuminative of what you are saying.

The Court: He wants to get a record of that; so you describe it.

The Witness: A. I will do that. Beginning with the west portal of the north tunnel, from that point to about 113 plus 70 the north tunnel lay within the sandstone, shale and shaly sandstone, which is indicated in grey on the model.

Mr. Smith: Just one moment. May I interrupt you? Counsel for the District asked me:

Q. What is the scale of this model?

A. This is 15 feet to the inch.

Mr. Tinning: Q. Is the height the same both horizontally and vertically,—the scale the same?

A. Yes. [1686]

Mr. Smith: Q. You may proceed.

(Testimony of Ben M. Page.)

A. The sandstone, by the way, consisted of consolidated, or partly consolidated, sand. The shale consisted of more or less consolidated silt and clay, and the shaly sandstone is an intermediate rock.

Q. What do you mean by intermediate rock?

A. It is midway between the two compositions I just gave. It contains some silt and clay and some sand.

Q. Midway in characteristics, you mean?

A. Well, at least in constitution.

Mr. Tinning: There seems to be a difference of opinion between counsel and the witness.

The Court: I trust the witness won't be interfered with. You go right ahead and give us your answers, right down the line.

A. This first formation I have referred to was a mass which, according to the Company reports, was weak and locally soft and damp, and it required support throughout. I only saw, myself, a portion of it. Beginning at 113 plus 31, my own observation showed that the material I saw was weak, and it was badly fractured and it required timber support. From about 113 plus 70 to about 114 plus 15, the north tunnel penetrated a formation of cherts and shale which I had better describe. The cherts is a rock consisting mostly of silica. It is a hard rock, a brittle rock, with some of the characteristics of glass. In other words, it is rock that will shatter under stress, and the strength depends not at all

(Testimony of Ben M. Page.)

upon its hardness but upon the degree to which it has been fractured, or upon the degree to which it has been recemented. In this instance, and, in fact, throughout the tunnel area, the cherts occurred in thin layers perhaps an inch or an inch and a half in thickness on the average. Between these layers were layers of shale which was [1687] thinner in general. The whole of this cherts and shale from 113 plus 20 to 114 plus 15, approximately, was such that the rock was very badly crushed in places, or was pulverized; so it had a tendency to slump or run into the tunnel, and it was practically devoid of strength. It was within this cherts and the adjacent sandstone just to the east of it that the August cave-in occurred in 1935. I was not present during that cave-in but the debris was still in the tunnel upon my arrival, and that debris had been penetrated by drifts which afforded exposure of the material along the tunnel walls. The tunnel walls had not caved in, so I was able to get a picture of the geological conditions at the site of that cave-in. From about 114 plus 00 to approximately 114 plus 45, the north tunnel lies in sandstone which on the whole was harder than the sandstone that had been penetrated prior to this point, but it was crushed locally and was fractured throughout, and a portion of it caved in with the cherts during that August cave-in. This sandstone I refer to required timber support throughout.

Following this, going east, there is another belt of

(Testimony of Ben M. Page.)

cherts and shale from about 114 plus 45 to about 114 plus 60 or 70. That cherts and shale was again badly fractured and weak, but it was not as weak as the material that had caved in. It, too, required timber support.

From about 114 plus 70 or 80 to about 117 plus 50, the north tunnel lies within a sandstone formation. This sandstone was hard and the sand grains—that is, in places,—the sand grains being cemented to each other by natural cement, but in many spots the apparent strength of this material was invalidated by fractures that occu ied throughout. About 80 feet of this sandstone was the best material penetrated by the western part of the tunnel. Superficially, that 80 feet looked li.e substantial material, but close [1688] inspection revealed that it contained in places a network of fine grey lines, like pencil lines, which represented incipient fractures. A microscopic study of that material showed that the sandgrains had in many cases been crushed. Fortunately, some had been recemented by natural processes. With the exception of the 80 feet I mentioned, the remainder of this sandstone was not particularly strong, even superficially, and the whole mass, including the 80 feet, required timber support for safety.

After about 115 plus 90, an oblique crushed zone crossed the tunnel and rendered that portion of the arch very weak, so it was supported with square sets as well as with the usual timber.

(Testimony of Ben M. Page.)

At about 116 plus 90, diabase,—which I have indicated in red—diabases enter the north tunnel at the south side, and run obliquely across to the center line; and this diabase should now be described.

A diabase occurs in other parts of the tunnel. Its character varies widely, depending on the location. In some cases, the material was very hard; in other cases, it was almost devoid of strength. I think it is necessary, in this instance, to mention the origin of diabase. A diabase is an igneous rock, with a characteristic texture. That is a loose definition. By "igneous rock" is meant generally what is formed from a molten material,—a melted material,—which has cooled and consolidated. These diabase bodies came up from below, from the depth of the outer earth and filled cracks in the very rocky material and consolidated there. Bodies of this sort are termed "dikes," so I will refer to them as "diabase dikes." [1689]

Mr. Smith: Q. This is one shown in red?

A. Yes. This first diabase dike was partly black and firm, but many of the other diabase dikes throughout the tunnel varied widely from this, from that which had been altered; and, by alteration, I mean that the material has been changed by chemical processes so that in many cases the original hard constituents have been rendered soft and weak. In fact, some of the dikes were almost completely altered so that their original nature was obscured.

The diabase which entered the tunnel near 116 plus 90——

(Testimony of Ben M. Page.)

Q. Referring to the north tunnel?

A. —extended to the center line of the tunnel. Throughout part of this area it was firm. Throughout other parts it was very soft. In every portion, it had been crushed and fractured and the soft qualities near the center line were accentuated by the presence of much water at that point and by the presence of an adjacent body of rock, which I will describe in a few moments; so that that portion of the north tunnel was weak.

At about 117 plus 60, and from then onward for a few feet, that portion was partly gunited as well as supported by timbers.

From about 117 plus 50 to about 129 plus 90 in the north tunnel, much of the material was cherts and shale, although, as you can see from an inspection of the model, it was not a continuous cut of cherts and shale; possibly some rock. The same statements I have made regarding cherts and shale in this first belt that was encountered applied to the rest of the material except that the amount of crushing varied from place to place. In general, it was not crushed quite as badly as it had been at the site of the August cave-in. Here again the cherts and shale occurred in alternating layers, and in general throughout this area those layers trended almost at right angles to the tunnel line and they dipped or sloped [1690] rather steeply toward the west portal. This situation was an advantage to the Engineer.

Q. When you say they sloped toward the west

(Testimony of Ben M. Page.)

portal, in what direction did they slope; was the bottom of the slope toward the portal?

A. Yes.

Q. And the top away from it?

A. Yes. The general structure that I have indicated is only a generality. In most places, it bent. However, some bent so they were no longer planes; and in some places that bending was inclined quite acutely. The bending of the cherts strata involved a certain amount of fracturing, since that cherts is a very brittle material, and the fracturing was present wherever those layers were bent. It was also present in other situations.

I will continue now with some of the details of the north tunnel: The first part of this cherts and shale that was encountered was rather badly crushed and weak, as you can see. The first portion contained diabase dikes, indicated in red; and these dikes in most instances were very soft. They were almost completely altered. In place, they were plastic,—actually plastic, like modelling clay,—so the material could be grabbed out with the fingers and squeezed between the fingers. It was affected by water. Its plastic nature was most apparent when it was moist.

All the dikes except those I will mention otherwise were very largely altered and were soft. They were not all plastic, but they were all weak. The cherts and shale, with the diabase that was inspected from Station 118 plus 00 to 119 plus 00, was quite

(Testimony of Ben M. Page.)

heavy ground; by that, I mean ground exerted pressure on the proximity of the tunnel.

From 119 plus 00 to about 122 plus 35, the cherts and shale were here, again, badly fractured in places, —very weak. Here, [1691] again, there was some very soft diabase dikes; and at least two or three of those dikes were well exposed on the face of the core during the long suspension of excavations following that first cave-in; so many visitors to the tunnel saw those diabase dikes.

The Court: We will now take a recess until two o'clock.

(Thereupon, an adjournment was taken until two o'clock p. m., this date.) [1692]

Afternoon Session

BEN M. PAGE,

recalled.

Direct Examination (Continued)

Mr. Smith: Q. Mr. Page, will you resume, substantially, where you stopped at the adjournment for noon, and continue with your description of the north tunnel?

A. Yes, I will. I was describing the territory between Stations 119 plus 00 and 122 plus 35 in the north tunnel. I had called attention to a soft, altered diabase dike that occurred intermittently in that area. The cherts and shales themselves were locally

(Testimony of Ben M. Page.)

in a shattered condition and in themselves, in places, they were unstable also. The cherts and shales were not only penetrated by the diabase bodies but also by certain bodies of sandstones which had the physical character of the sandstone that I described between 115 and 117, approximately; so that has been indicated in this case by the same color that was used for that other sandstone shown in blue on the model.

One portion of the sandstone in the area under discussion near 120 plus 00 was better ground than the adjoining material. However, in some cases the sandstone bodies were not so favorable. I will say more about those in a few minutes.

From 122 plus 35 to about 123 plus 82, the cherts and shale were again locally crushed and they were again penetrated by bodies of altered diabase which assumed an amazing variety of forms and positions in the tunnel. These diabase dikes did not run in general parallel to the layers of cherts and shale. On the other hand, in most cases they cut across these layers at various angles and the haphazard arrangement of these bodies, in itself, was a hazardous feature. For instance, where these bodies more or less followed the tunnel line, they rather effectively removed the bond between the several portions of the arch, or between the walls and the arch. [1693] Between the wall and the arch—a case in point occurred between 123 plus 00 and 123 plus 80 or 90, where one of these bodies followed the tunnel wall

(Testimony of Ben M. Page.)

in an extremely irregular position. The diabase in that particular instance was not as plastic as some of the other diabase; it was not as soft; but it was weak, and that, coupled with its position in the tunnel, made that area very unstable. During my employment, excavations had to be stopped while the movement of the timbers into the zone was checked with gunite and with concrete.

From about 124 plus 00 to 126 plus 00 there was only one diabase dike. It was a soft one. At about 124 plus 25 or 30 was where it was located, and it ran almost parallel to the tunnel line. Except for this, the cherts and shale were comparatively good in that area. The layers were not particularly distorted; in fact, they were almost planes; and the crushing was not so pronounced. Although there were many fractures, altogether that section was the best cherts and shale that was penetrated in the entire north tunnel.

Mr. Tinning: Q. Mr. Page, do I understand that you are referring now to the section between 123 plus 00 and 123 plus 80?

A. No. I have gone on to another area; this is between 124 plus 00 and 126 plus 00. I have called attention to the fact that in those cherts and shale were locally affected by the presence of a soft diabase dike. Throughout this better portion of cherts and shale, the ground did require timbering for safety. It was not extremely heavy ground; but I

think it did require timbering from a safety standpoint.

At about 126 plus 00, a faulted condition was encountered in the cherts and shale, which persisted intermittently to about 128 plus 00. [1694]

At this point, I had better explain a fault, briefly:

A fault can be roughly defined as a fracture along which displacement has occurred; and the displacement, by the way, usually involves some granulation of the rock on either side of the fault. Sometimes rocks are merely badly crushed, and sometimes they are drastically crushed,—reduced to a pulverized mass. In some cases, the fault produces somewhat of a mechanical rock flour, which is plastic when wet. It is called a fault gouge,—a claylike material.

In the tunnel area, there were two main classes of faults: one of them ran parallel to the beds of cherts and shale; and, in this variety of fault, there was no granulation of material to speak of. This fault gouge was developed in thin layers, perhaps only half an inch or an inch or two inches. On the other hand, some of the faults ran across the cherts and shale, and, in this situation, they had a more disastrous effect. We have more granulation of the cherts and shale. The faults on this model are indicated by heavy black lines, as explained on the legend. Near one of these faults, at about 126 plus 00, a run occurred during which this shattered cherts poured into the tunnel. I was not present at the time that it happened; it happened at night; but that was during my employment.

At about 126 plus 70, a portion of this faulted area was partly occupied by a diabase dike of particular importance, and the diabase was largely altered material. On the other hand, it was not a plastic material; it was largely brittle; it was not as soft as many of the other dikes that had been penetrated in the previous part of the tunnel, but in spite of its apparent local brittleness, this material forced the timber in and gave rise to the cave-in on February 22, 1936, and that diabase and the adjoining or adjacent cherts and shale fell into the tunnel and filled it up.

By the way, I was present during part of this cave-in, and it [1695] was witnessed by me, although I missed the first stages; I came to the scene of the cave-in about two hours after it had started, and it was still in progress. At that time, there was a huge pile of debris on the south side of the north tunnel; this debris being largely the altered diabase. It was very light-colored,—almost white, in comparison with the cherts and shale; and a large part of the debris consisted also of a pulverized cherts and shale.

I did not detect any water in that material. Apparently, it had the usual moisture that is encountered underground. Shortly after my arrival—the cave-in continued from time to time, perhaps at intervals of 15 or 30 minutes; tons of material would crash down, temporarily stopping the work of building a bulkhead; and finally, after more arch timbers had crashed and after the debris had filled the tun-

(Testimony of Ben M. Page.)

nel up beyond the normal walk, or the normal roof of the tunnel, the tunnel filled up, and from that time on the caving was more spasmodic, although it continued off and on for many hours,—for more than a whole day.

Beyond that point, the cherts and shale were in better condition. From about 128 plus 00 to about 129 plus 00, it was better, although there were a few faults. From about 129 plus 00 to about 130, the ground was again cut by a soft diabase dike, which, in this instance, was largely very soft, although it was smaller than the previous one. This dike had a most irregular shape. It has been carefully plotted on the model. In addition to it, sandstone bodies occurred in the shale and cherts; and these sandstone bodies were also irregular,—assumed various shapes and various positions.

At this time, I want to explain the nature of those sandstone bodies which occurred off and on throughout the western part of the tunnel. I will refer to it as "sandstone dikes," although the term "dike" is usually confined to an igneous rock; but occasionally [1696] sedimentary rock assumes the same relation as an igneous dike, and they are then called sedimentary dikes.

These sandstone dikes, like the diabase, in many cases cut across the surrounding strata. They were not necessarily parallel to the cherts and shale; some of them went almost parallel to the tunnel and at right angles to the cherts and shale. In this area,

(Testimony of Ben M. Page.)

as I mentioned, from 129 to 130 in the north tunnel, some of those sandstone dikes followed the arch and had the effect of dividing the arch in half. The dikes themselves were not always an obstacle. In many cases, they had no perceptible effect upon the tunneling. In some cases, they are hard and brittle. In other cases, they were well fractured; but, more important, they lacked a good bond with the surrounding material,—a good contact between the surrounding material and the sandstones, which were often focal points of weakness, and often they were focal points of dampness, since, in so many cases, water drips occurred along them.

The orindan formation was encountered in the north tunnel at about 129 plus 00. The contact there between the cherts and shale and the orindan formation, however, had been offset by a fault about 14 or 15 feet. That fault added to the instability of the ground. A portion of that ground was gunited by the Highway Department after the Six Companies withdrew from the job. Further on in the orindan formation was an area of locally heavy ground where the ground gave pressure upon the timbers; that occurred between about 133 plus 50 and 134 plus 30. In this locality, there were many steep fractures that occurred in the rocks which ran about parallel to the tunnel, or made an acute angle with the tunnel.

Further on, at 134 plus 60 to about 134 plus 90, there is more diabase in the north tunnel. In this case, however, the diabase was not thoroughly al-

(Testimony of Ben M. Page.)

tered. It was a hard rock and a brittle [1697] material, and I suppose its only detrimental effect was its position just about parallel to the tunnel wall.

In addition to those points that I have referred to, the orindan formation, there was another locality in that formation that was wet at least part of the time and soft and weak while in that condition. I will mention some of those localities: from about 131 plus 30 to 131 plus 55; from 133 plus 10 to 133 plus 25; from 135 plus 50 to 136 plus 15; from 137 plus 00 to about 137 plus 15; from 137 plus 85 to 137 plus 95; and from about 138 plus 55 to about 139 plus 40.

Mr. Smith: Q. Those stations you have just mentioned are the locations of the wet places you spoke of?

A. Yes; those are the spots which were wet at least a part of the time, and were soft and weak while in that condition. At this latter spot I mentioned, near 139 plus 40, a portion of the orindan formation softened during heavy rains of February in 1936, and caved in to the timbered drift, filling up a small portion of the drift,—about 12 or 13 feet.

Aside from those designated portions of the orindan formation, the formation on the whole was not particularly bad ground; that is, relative to some of the other materials that had been penetrated. However, throughout, it did require timber support, and the wet places and unstable places that I enu-

(Testimony of Ben M. Page.)

merated were extended during those heavy rains so that large portions of the drifts in that formation showed signs of timber strain during the storms of the winter of 1936. Shall I proceed to the south tunnel?

Mr. Smith: Q. Have you concluded your observations on the north tunnel? A. Yes.

Mr. Tinning: May I ask Mr. Page one question?

Mr. Smith: Certainly. [1698]

Mr. Tinning: Q. Mr. Page, with respect to the winter of 1936, you mean the winter of 1935 and '36?

A. Yes; the storms I refer to, I think, started at the end of January and continued into February, 1936.

Mr. Smith: Q. Have you concluded your running description— Is that all you wanted to ask, Mr. Tinning?

Mr. Tinning: Yes.

Mr. Smith: Q. Will you proceed to give us the same review or resume of your model for the south tunnel?

A. Yes, I will. This will be briefer, because we have already discussed many of the materials that were encountered in both tunnels.

One of the materials that was met with on the south tunnel—

Q. You are starting at the west portal of the south tunnel?

(Testimony of Ben M. Page.)

A. Yes. One of the materials which occurred in the south tunnel was deposited stream material and hill wash and creep which I did not see personally but its presence I gathered from the progress report. That material occurred in the roof of the south tunnel from about 111 plus 52 to 112 plus 90. I know nothing at first hand about that material, although it was referred to in the progress report as "mud." The reason for its presence is the occurrence of a stream channel overlying the south tunnel. This stream channel slopes down toward the west portal and intersects a portion of the south tunnel roof. The bedrock underlying these stream deposits and extending beyond there, from 111 plus 53 to 114 plus 15, approximately, was the series of sandstones and shale and shaly sandstones which had been penetrated in the north tunnel at a similar position. Again, I did not see this material at first hand. By the absence of any details on my model, it is not meant to imply that no details existed there. [1699]

From 114 plus 15, approximately, to 114 plus 25 or 30, the south tunnel penetrated the first belt of cherts and shale. Although I did not see it myself, the progress report states that that material was pulverized; that spiling had to be driven, and breastboarding had to be maintained throughout that belt.

The next formation I did see, I studied carefully, was sandstone, indicated in blue. That occurred

(Testimony of Ben M. Page.)

from about 114 plus 25 to about 117 plus 50. This sandstone was similar to the sandstone that was indicated in blue on the north tunnel; but, on the whole, it was more highly fractured than the similar area in the north tunnel. On the whole, it was not even superficially as good ground as the corresponding ground in the north tunnel where they had these 80 feet of good sandstone.

One element that led to the weakness of this material was the presence of numerous soft seams of claylike material which occurred here and there in the arch. These seams are not everywhere on my model, because some of them I only saw in one spot and did not know where they went from there. Another element that led to the instability in this area was a very large, or comparatively large, diabase dike that ran down the center line more or less and left the tunnel at the north side. Fortunately, that dike was not thoroughly altered. It was not soft material; it was firm and brittle; but, on the other hand, in many places it did not have a good bond with the surrounding rock. It had the effect in some spots of cutting the arch into two parts. Also, it was more or less fractured. [1700] All of these materials in this area required timber support. The diabase required about the same support that the sandstone did. From about 117+50 to approximately 130+70 a large portion of the ground was cherts and shale, although here, again, the cherts and shale were not in a continuous body. I

(Testimony of Ben M. Page.)

will subdivide it and deal with each portion. From about 117+50 to 119+00 this cherts and shale was locally very badly crushed and in places it was wet; it was unstable ground, quite weak, required timbering, and it was gunited as well as timbered. It was largely supported with square sets and with gunite as well as the usual timber. From 119+00 to 120+00, a small part of that had been concreted before I came, but the remainder was timbered so the exposures were very few. In those exposures I did see the material was very badly crushed, it looked like a weak material. From 120+00 to about 120+75 sandstone was encountered, this sandstone being better than the other nearby rock, although it required timber support, this whole belt of cherts and shale, about 20 or 30 feet in thickness, then more sandstone from about 121+00 to about 121+50. In this sandstone and in many of the other sandstone bodies there is a peculiar phenomena, although the sandstone was solid, that is, it was at least firm, it contained fragments of cherts and shale that were isolated in it, as though these fragments had been held back in the emplacement of the sandstone. From about 121+15 to 122+15 a diagonal fault crossed the south tunnel. This fault was bordered and followed by a soft diabase dike, making that portion of the tunnel rather weak. From 122+15 to about 123+20 the cherts and shales were in slightly better condition. Locally there was heavy ground there. All of this required

(Testimony of Ben M. Page.)

timber support. From about 123+20 to 123+90 a very serious weakness occurred in [1701] the tunnel, due largely to a diabase dike that again was soft and rather plastic, and that area was so weak that it was not only timbered but was gunited as well. From about 124+00 to 125+90 the cherts and shale were in slightly better condition, but here again diabase bodies occurred at various angles and various positions, and in various degrees of consolidation. Parts of these bodies which were very soft were well exposed in the face of the core in the south tunnel during the long suspension of excavation that followed that first cave-in. These bodies were seen by many visitors to the tunnel. It might be well at this point, since I think that is really the first showing of diabase, to state that it is a difficult rock to recognize, because the alteration is not very commonplace, at least not that variety of alteration, and when I first saw the material I thought it was fault gouge, since you could stick your fingers in it; it was just like a stiff mud which could be molded in the hand.

Q. When you say "altered," what do you mean with reference to the character of alteration over a period of time?

A. I see your point. The alteration of the diabase has occurred during unknown years, perhaps 100, or 1000, or a million years, by chemical processes that had gone on in the outer part of the earth. This is a very slow process.

(Testimony of Ben M. Page.)

From about 125+00 to 125+80 or 90, one of these diabase bodies follows the south wall of the south tunnel. In most parts it was not a plastic material, it was a weak material, considerably sheared and fractured, and its position alone in that tunnel weakened the whole structure. The effects of these bodies of diabase are not confined to the diabase, itself, the effect extends into the surrounding rock. The effects of the fracture are greatly out of proportion to the size of the dikes, themselves, so a small dike, if it has an unfavorable [1700] position or if it has an unfavorable consistency, can weaken an entire area of the cherts and shales; the irregularity of these bodies was one element of their hazardous nature. It could never be prophesied when they would be encountered during the driving and sometimes one tunnel would go through diabase and the other tunnel would not; these bodies could not be prophesied from one tunnel to the next; sometimes the left wall of the tunnel would go through diabase and the right wall would not, or sometimes the left wall of the drift would go through diabase and the right wall of the same drift only six or eight feet away would be in another material.

From about 126+00 to 126+40 the cherts and shales were crushed and rather weak, although they are not pulverized; the bed, superficially, did not look much disturbed, but a close inspection showed that the cherts were fractured to a considerable degree.

(Testimony of Ben M. Page.)

From a point about 126+40 to about 128+60 the cherts and shales were not as highly fractured as hitherto in the south tunnel, and the beds were not as highly deformed, and that on the whole was the type of area of cherts and shales that was penetrated in the south tunnel. That area required timber support for safety, although it is impossible to prove whether or not they would have stood without the timbers; they certainly without doubt did require timber for safety, even in the best portion.

It is my intention to give a fair picture of this cherts and shale, and I do not intend to over-emphasize the weakness that occurs in them, but there is a fracture, at nearly every point, it is a degree of fracture that occurs along the layers of cherts; in many places these are divided into a series of small prisms by fractures that go at right angles to the layers, and these prisms may be half an inch across the juncture or an inch across, or there may be five or ten of them to the square inch. The strength of the rock depends largely upon that degree of fracture; also it depends upon the condition of the intervening layers of shale that usually alternate with the cherts. The shale, on the whole, is not as badly fractured as the cherts layers, but where it is the whole mass lacks sufficient strength.

[1703]

At about 128+80 there is soft altered diabase crossing the south tunnel in extremely irregular condition; that diabase weakens the arch. It was a soft mass in most places, although in spots it was brittle.

(Testimony of Ben M. Page.)

The irregularity of that body suggests this fact, since that body varies in width from a few inches to several feet, it suggests that many of these bodies may expand and bulge out just above the tunnel or just to one side of the tunnel, and by that means affect the whole structure of the tunnel, although this body, itself, appeared small within the excavation, itself; and that, coupled with the irregular distribution of the dikes suggests another fact, in many places where there was pressure on the timber in the cherts and shales for all we can tell there might have been diabase bodies outside of the excavation that were never penetrated, but which lent their effect to the rock that was penetrated. Some of the masses were so soft and so plastic that they had this additional effect, they could be regarded as surfaces of lubrication upon which the surrounding rock could skid or slip. By the way, that last portion there where the diabase dike occurred at 128+90, was gunited as well as timbered.

From about 129+00 to about 130+70 the cherts and shale were cut by several sandstone dikes which in this case were distinctly unfavorable, at least most of them; the sandstone in places was crushed, and, more important, the adjacent cherts very often was crushed and had no cohesion to these sandstone bodies, and some of these masses of sandstone were literally almost plastered against the wall [1704] of the tunnel, running almost parallel to the tunnel rather than across it, as normally sandstone layers

(Testimony of Ben M. Page.)

would; sandstone layers normally would occur interbedded between cherts and shales. In addition to these facts, another feature comes here of a fault which runs obliquely across part of the south tunnel; that fault, added to the unsafety of the ground, and along it there are several persistent water drips.

Q. What is the approximate station of the fault?

A. The fault is in the vicinity of 129+50. And entering the tunnel on the north side at about 130 plus 70 the Orindan formation was encountered, and that juncture between the Orindan and the cherts and shales was rather an unstable contact; some movement had occurred between those two formations in the geological past and there is not much cohesion between the two formations, and at that locality there is a very persistent, although rather small, flow of water that continues right up to the pouring of the concrete. This area was gunited as well as supported with timbers. Further on in the Orindan formation of the south tunnel, from about 135+20 to 136+00 there was an area of local heavy ground with steep fractures made at an acute angle with the tunnel. That area was partly gunited by the Highway District after the Six Companies quit and was partly gunited by the contractors who finished the tunnel.

Again, in the south tunnel there were portions of the Orinda formation that were wet, at least a part of the time, and were soft and unstable while in that

(Testimony of Ben M. Page.)

condition. I will enumerate some of those areas. From about 131+80 to 132+25; from about 133+00 to 133+30; from about 133+70 to 133+85; from about 134+15 to 134+30; from about 135+00 to about 135+15; from about 135+20—I have already mentioned that area, pardon me. I mentioned it in connection with the steep fracture. From about 136+30 to about 136+55; from about 137+50 to [1705] about 137+65; from 138+15 to about 138+30; from 139+5 to about 139+40; and from 139+80 to about 139+90.

During the heavy rains I previously mentioned that occurred in January and February of 1936 the areas of wet spots and the areas of heavy ground were not confined to those portions I have just enumerated. Except for these designated parts of the Orinda formation the material was not particularly bad in the south tunnel, at least in comparison with the cherts and shale which had already been penetrated, but throughout this formation timber support was required.

Q. Have you concluded your description of the south tunnel? A. I believe I have.

Q. You can resume your seat there if you wish. To ascertain the accuracy of your observations upon the character of the material, did you make any laboratory studies of the materials and specimens?

A. Yes, I did; some of the more important rocks were examined under the microscope and where necessary my field identifications were altered and in other cases they were confirmed.

(Testimony of Ben M. Page.)

Q. With reference to the diabase dikes, it is my understanding of your testimony that they had a marked effect upon the surrounding structural rock, on its strength, etc.?

A. Yes. I think perhaps in many respects they were most significant and the most important geological feature in the tunnel area. Their effects were very widespread.

Q. What effect did they have on the adjoining cherts where they were in the cherts?

A. If I may use the blackboard I think I can indicate that with a sketch. The effect of these dikes is not confined to the fact that many of them were weak and soft in themselves. Their effect extended to adjoining bodies. I am drawing now a cross section, a hypothetical cross section along the center line of the tunnel at no particular spot, and I am drawing [1706] two horizontal lines here to represent the cross section of the roof of the tunnel and cross section of the floor of the tunnel. I am now drawing parallel lines to show the bedding of the cherts and shales that adjoin that excavation. That was inclined chiefly, as I have shown. The diabase dikes in general did not follow a bedding between the cherts and shale; on the other hand, a more typical case was this; this illustrates no particular part of the tunnel, it is merely a generality. A diabase dike might occur in this fashion, an extremely irregular shape.

(Testimony of Ben M. Page.)

Q. The witness has drawn some irregular lines crossing the straight lines that he had previously drawn.

A. It might pass through this cherts and shale, like appears in this white area. In such a position a small dike a few feet in thickness might affect a large area here where cherts and shale had left virtually very little actual support. All of this mass of rock is removed from any bond with the surrounding rock.

Q. When you say "all of this mass of rock" what are you referring to?

A. I was referring to the cherts and shale underneath the diabase. The diabase is inclined and some cherts and shale will be underneath. Now, if I may draw another sketch I can illustrate another effect by showing a cross section of the tunnel. This represents a profile cross section of one of the tunnels at no specific point. Cherts and shale extend across the tunnel, dipping toward a course which cannot be indicated, but the diabase in many cases runs parallel to the tunnel, across these layers of cherts and shale, and in some cases these dikes occur in this position, extending outward at right angles to the blackboard, and assuming that dike was a soft dike or of less cohesion than the adjacent cherts; with those whole mass of cherts and shale over the arch of the tunnel has very little natural support on that particular side [1707] of the tunnel. Those are a few of the cases that occurred.

(Testimony of Ben M. Page.)

Q. I believe you said in your description of this material diabase, as you were going through the description of the model a few minutes ago, that you were going to say something about the origin of that material. I do not think you did.

A. I did in a brief way. I said that the diabase was a material which had originated from a molten mass, from a melted mass which cooled and consolidated and prior to its consolidation, this molten material had forced its way into the cracks or fissures in the surrounding rock.

Q. Continuing with your comment upon the model Exhibit 100, you did not give any description of the nature of the Orinda formation. You just mentioned it without describing it. What was its general nature?

A. The Orinda formation consists largely of clay silt stone, which is more or less consolidated mud without very apparent laminations. It consists also partly of sandstone and partly of conglomerates which is more or less consolidated gravel. The Orinda formation has very little cement between the particles that compose it. It has very little natural cement, and it contains a little clay, in places quite a bit of clay, and for those reasons it is very subject to the effect of moisture, it tends to soften when it is wet.

Q. I show you, Mr. Page, Plaintiff's Exhibit 87, Subdivision 1, in evidence in this case, which is a photograph which has been put in the case before

(Testimony of Ben M. Page.)

you testified or attended this hearing, and I will ask you if the lighter colored material in the center of that photograph is the diabase material that you have been describing? A. Yes.

Q. Is that the material which you saw in that particular shape and formation at the point of the cave-in of February 22, 1936?

A. Yes, that is exactly what I saw when I got to the cave-in. [1708]

Q. You recognize it as a photo of that?

A. Yes.

Q. Was there any mention made in the geological report of Dr. Louderback of the presence of diabase dikes?

Mr. Wittschen: Objected to as immaterial, and calling for the opinion and conclusion of the witness, a matter that speaks for itself. The report is in evidence and he is not the one to interpret it. It has to stand or fall on what is in it.

Mr. Smith: Technical terms technically used are subject to definition by people that understand them, and it is undoubtedly perfectly proper for a witness skilled in geology to testify as to whether or not there is any mention made in a report, which is geological in character, of the existence of different materials.

Mr. Wittschen: The Court will be able to interpret the report, I take it; it is in English that can be understood.

The Court: Read the question.

(Testimony of Ben M. Page.)

(Question repeated by the reporter.)

Mr. Wittschen: I want also to add to my objections previously made that under no circumstances is the report of Dr. Louderback part of the contract in this case.

Mr. Smith: The report is in evidence and the witness is entitled to testify as to whether the language of that report states the presence of this material, because of the fact that it is a technical report upon a technical subject, and the witness is qualified to explain it.

Mr. Wittschen: I do not think so. The report needs no explanation, it is readable.

The Court: The report will have to speak for itself. However it may be, aside from the fact that the Court may have to struggle with it with reference to the language indulged in on the geological side, to my mind it will not be helpful on the merits of this case. [1709] The geological report of Dr. Louderback is here. What can this witness add to the fact that will assist the court? However, he may answer subject to the objection, and a motion to strike.

Mr. Wittschen: Exception.

A. No, the diabase was not mentioned.

Mr. Smith: Q. Was the presence of sandstone dikes which you have described mentioned?

A. No, it was not.

Mr. Wittschen: Just a moment, Mr. Witness. I make the same objection on all of the grounds

(Testimony of Ben M. Page.)

previously stated. The report is in. It mentions certain things, it mentions fractures, it mentions formations, and I do not think that report can be picked to pieces by any particular witness. It will have to stand or fall by itself.

The Court: The Court has so indicated.

Mr. Smith: The very way that counsel frames his objection it appears that he may contend that the report does. This witness is entitled to testify as a person trained in this subject-matter which is described in the report, as to whether it is mentioned or indicated in there; he can interpret a scientific report upon a scientific subject and he is able to do so, and can aid the Court in the interpretation by his opinion.

The Court: I do not think it is so vital to the case or the issues or merits of it as would be indicated here. That is the Court's view. I want to acquaint you with that. I have allowed considerable latitude in this case. There has been considerable preparation for the case in anticipation of coming to court; that is obvious. I want to give both sides a proper opportunity, but I do not want to mislead you. I am inclined to convey to counsel on both sides that much of the matter that has gone in here will not affect the merits of this case. [1710]

Mr. Smith: So that your Honor will have the record clear as to the exact purpose in offering the testimony, I would like to make a brief summary of the chain of proof that we feel is made by this sort of testimony.

(Testimony of Ben M. Page.)

The Court: Proceed.

Mr. Smith: In the first place, they called for bids, and held out information to the bidder, and among the information held out the report compiled by a man who is undoubtedly qualified to make such a report, and the attention of bidders is directed to such report, and it is furnished to them by the District.

The Court: Will you pardon me just a moment? The answer to that is it is not a part of the contract.

Mr. Smith: Will your Honor allow me to finish the statement?

The Court: Yes.

Mr. Smith: I had hoped that we might convince you that it is a very material element on two angles of the case, as we are seeking to present it to your Honor, and perhaps from our lack of ability to present it properly you have not got our viewpoint.

The Court: Don't waste your time on lack of ability.

Mr. Smith: The situation is this, the plaintiff comes in and gets this report, and it is in evidence that the report was used by the men who estimated the job for the plaintiff, and the job being estimated on the basis of the report, it was offered as one of the pieces of information, including the specifications, and a pertinent document which influenced the plaintiff's bid; on that theory the plaintiff planned the work and went ahead. On the theory of misrepresentation alone it would be ad-

(Testimony of Ben M. Page.)

missible. We have another theory which makes it admissible also, upon which we stand. We certainly, even if you hold or would assert that the geological report is not a proper part of the proof in this case, because it is not a proper [1711] part of the contract, nevertheless it would be admissible for the purpose of showing that a condition was expected from the standpoint of execution of the contract in the contract time, a positive representation.

The Court: I can see where there are phases of this that the Court can consider it. I limited my answer to you on the contract. It is not a part of the contract.

Mr. Smith: While conceding it is not part of the contract, it certainly is a representation that induced the making of the contract. There is ample authority that it becomes a warranty.

The Court: You can argue that at the proper time.

Mr. Smith: The evidence has to be in in order to argue it.

The Court: But we have the geological report here in its entirety. Now, going beyond that it seems to me it does not serve any purpose.

Mr. Wittschen: We did not object to the physical questions. They all went in with this witness and others, but we do strenuously object to this witness construing that report. We object to it on two grounds, one that it is not part of the contract, as the Court said, and, secondly, it never was a repre-

(Testimony of Ben M. Page.)

sentation. At the proper time we will be prepared to answer Mr. Smith's statement that this amounted to a warranty. It did not amount to a warranty, because warranties have to be in the contract, and I stand on the objection, that what this report contains is a matter for the Court to interpret. The Court can read the report and determine whether it mentions sandstone or not. It does not need this witness to state whether sandstone or diabase was mentioned. Those are all susceptible to anyone who understands the English language, who reads the report.

Mr. Smith: I think the geology report is one of the things [1712] that you can receive information about.

The Court: As I have said, I do not think it serves any useful purpose.

Mr. Smith: Has the Court ruled?

The Court: Read the question.

(The record was here read by the reporter.)

The question was answered. Let it stand.

Mr. Wittschen: Exception. [1713]

Mr. Smith: Q. Was the ground, as you observed it, in the tunnels of such character as to require support throughout?

A. Yes, it was.

Q. Regarding the cave-in of February 22, 1936, which I believe you stated you arrived at a few hours after it occurred, have you approximately the measurements of the diabase at that point?

(Testimony of Ben M. Page.)

A. Yes. I have measured that dike at several places. The north walls of the tunnel where it was first encountered——

The Court: Q. He had in mind this cave-in—the quantity of this cave-in.

Mr. Smith: I asked him if he had measured the diabase at that point.

The Court: The point of the cave-in.

The Witness: Yes.

Mr. Smith: Q. Will you state the measurement of it at that point, approximately?

A. Well, I will have to begin from the beginning. The dike varied throughout in width.

Mr. Tinning: Mr. Smith, may I ask Mr. Page a question? Isn't it a fact the diagram that Mr. Page has put on to this model, —that can be determined from the scale here of the dimensions of the dike, as he observed it?

Mr. Smith: Well, I would think the Court would not stop to measure it with that scale.

The Court: Have you the measurements there?

A. Yes, I have.

Q. What are they?

A. The dike was about 3 or 4 feet wide, when it left the tunnel on the south side. It was about 12 feet thick on the right side of the core. On the north side of the core, it was 4 feet thick or thereabouts. On the north side of the tunnel, it was from 1 to 2 inches, —the north side of the tunnel. [1714] It varied greatly throughout; it was extremely irregular.

(Testimony of Ben M. Page.)

Mr. Smith: Q. Did it traverse the tunnel at right angles to the center line?

A. No; it did not. It traversed the tunnel obliquely——

The Court: Q. That is indicated there on the model? A. Yes, sir.

Mr. Smith: Q. And it was at its widest width at the point on the north side of the south drift?

A. It was. It became narrower again where it intersected the roof of the tunnel.

Mr. Smith: That is all.

The Court: We will take a recess.

(Recess)

The Court: Proceed, gentlemen.

Cross Examination

Mr. Tinning: Q. Mr. Page, you said that your employment for Six Companies commenced, I think it was, on September 23, 1935, within a month after this slide of August 28th; and it extended to September 24, 1936; that was several months after the work stopped there when the Six Companies left the job? A. Yes.

Q. Were all of your observations over the portions of the tunnel which were not excavated, not fully excavated, by Six Companies, made in the drifts; or did you go back there after September 24, 1936, when the other contractor was finishing driving the tunnels?

A. They were all made in the drifts. That is indicated on the description on the model.

(Testimony of Ben M. Page.)

Q. Then, where you traced lines and faults or other formations that may have been, or that are, indicated on this diagram, they are simply approximations of locations taken from what you could observe in the two wall plate drifts?

A. Yes, that's right. I would like [1715] to add that the legend makes that clear, because there are certain conventions regarding the contacts and the faults that show whether I saw those types of contacts or whether they are inferred.

Q. Well, I thought I understood that; that is why I was asking you the question. Would you mind stepping down and looking now at Plaintiff's Exhibit No. 100. At Station 131 plus 00, we have two lines that are roughly parallel, and the one which I first see on the model—it seems to be a dotted line; and I see it was extended at least across the top of the tunnel, —the crown of the tunnel?

A. Yes, that's right.

Q. The line immediately next to it is a fault shown in detail? A. That is correct.

Q. Was the tunnel constructed to 131 plus 00 at the time that Six Companies stopped?

A. Yes, it was.

Q. On the south tunnel? A. That's right.

Q. Now, these faults that you show on the crown of the tunnel, under the legend, "Positions Inferred"—Have I read that correctly? A. Yes.

Q. I am now referring to the fault shown at the crown of the tunnel between 135 plus 00 and 136

(Testimony of Ben M. Page.)

plus 00. How were you able to locate that fault at the top of the tunnel?

A. I saw a fault at several places, and projected it in between, —which is a very conventional geology practice.

Q. Was this portion of the tunnel shown at 136, or between 135 and 136, excavated by Six Companies?

A. The arch was. The walls were not entirely. About half of that area was entirely excavated by the Six Companies.

Q. So you projected it from the reports and the information that was available there?

A. Yes.

Q. Now, to go further toward the east, between Stations 138 and 139, [1716] you have a fault shown in dotted line, which apparently has a solid line at the point where it passes the drift?

A. Yes. That was my intention. It shows I saw it in the drift.

Q. How did you see these gravel glands that are shown in the portions of the tunnels that were not excavated by Six Companies?

A. I saw those in the drifts also.

Q. Are those approximations through the rest of the area?

A. Yes. I merely saw them in the drift; and that is so indicated on this description.

Q. Let's look, for a moment, at the fault or dike between 126 and 127, which is the fault that was in-

(Testimony of Ben M. Page.)

volved in the slide of February 22, 1936: You were able to take careful measurements of that, —the location of those lines as you have shown them here; and that is generally a representation of the exact position of that fault?

A. Yes, it is.

Mr. Smith: Do you mean "fault"? You mean "dike"?

Mr. Tinning: It says "fault" on the side.

The Witness: Assuming certain lines, the dike and associated fault.

Mr. Tinning: Yes.

A. That is correct.

Q. When you commenced to gather the data, from which this model is made, in September of 1935, when did you first report your findings to anyone in the Six Companies' employ?

A. I have no idea. From time to time, I made casual remarks about what I had seen. I don't remember when I gave any formal report.

Q. Well, Mr. Page, to whom did you communicate your casual information?

A. Many people, including Mr. Tom Price and Professor Tolman at Stanford University.

Q. Professor Tolman was employed by Six Companies as consulting geologist prior to your going on the work on September 24, 1935?

A. That is my understanding. [1717]

Q. You were selected by him when you reported to Six Companies? A. Yes.

(Testimony of Ben M. Page.)

Q. To make these tests. Whom, besides Mr. Price, did you communicate what you found there in your geological examination?

A. From time to time, I talked with Mr. Peterson about the observations I had made.

Q. Mr. Otto Peterson?

A. I don't know Mr. Peterson's first name.

Q. The gentleman who is here in court?

A. That is right.

Q. And he was also employed by Six Companies at that time? A. I believe he was.

Q. And in making your report to him, you were making it to a man who was working for the Six Companies on their problem, were you not?

A. Yes.

Q. Your geology work,—the method of survey and the records that you kept,—were matters on which you received directions from Professor Tolman? A. May I have that question?

(Pending question read)

A. Yes, sir; that is correct.

Q. When did you make your first written report on this survey which you made?

A. As I recall, my report was not formally handed in to Six Companies until the fall of 1937.

Q. When did you make it?

A. I had written a report from time to time throughout the work. I redrafted it at least once or twice.

(Testimony of Ben M. Page.)

Q. Then you did not give any written report to Six Companies or to Professor Tolman until some time in the fall of 1937?

A. That is my recollection, yes.

Q. Have you ever made an examination of the geological formation in other—in any other tunnel in the Bay region? A. No, sir; I have not.

[1718]

Q. When did you graduate, Mr. Page?

A. 1933, in June.

Q. This is the only tunnel geological report that you ever made? A. Yes, sir.

Q. Were you familiar with the geological conditions encountered in the Claremont Tunnel?

A. Not at the time of my employment.

Q. Have you studied them since you were employed?

A. Only in a casual way,—an indirect way. I was not in the tunnel; I did not see the ground for myself.

Q. Have you read documents or publications that recite the geology formations encountered in that tunnel?

A. I read portions of the geological report on that tunnel.

Q. As compared with the Broadway Tunnel, do you know whether or not the quantity of water encountered in the Claremont Tunnel was larger or smaller?

(Testimony of Ben M. Page.)

A. I am fairly sure that it was larger in the Claremont Tunnel.

Q. You have stated that there were certain wet areas encountered in the orindan formation in the Broadway Tunnel. Do you know how the water or wet areas in the Claremont Tunnel compared with those in the Broadway Tunnels?

A. No; I do not.

Q. Isn't it a fact, Mr. Page, that the formations that were encountered in the Claremont Tunnel were a similar type of formation,—the so-called Monterey and cherts and Orindan—were generally similar to those encountered in the Broadway Tunnel?

A. The Claremont Tunnel went through the cherts and shale and through the Orindan. It also went through other formations that were not involved.

Q. Yes. Well, I am only referring now—

A. Yes.

Q. —to those that were comparable.

A. Yes, that is correct.

Q. And it is true, is it not, that in the Claremont Tunnel there was very much more water encountered than in the Broadway Tunnel? [1719]

A. That is my general impression.

Q. That would make the conditions more difficult in the Claremont Tunnel than they were in the Broadway Tunnel, would it not?

A. Not necessarily.

(Testimony of Ben M. Page.)

Q. Do you think that there would be any condition in which water,—larger quantities of water,—would not have increased the difficulties in tunnels in comparable formations?

A. Yes, I do, to a certain extent. I will have to qualify my answer.

Q. What do you mean?

A. That I think even within the same formation different portions of it behave differently in regard to water, and that in one situation a slight amount of water is just as bad as a great volume of water in another situation.

Q. Well, it would be highly desirable, from a standpoint of tunnel driving, to find a formation where there was no moisture,—no water,—wouldn't it? A. Not necessarily.

Q. It would not. How about the Orindan?

A. In the Orindan, that holds perfectly true.

Q. In granite, it would not make much difference, would it?

A. Well, granite varies like any rock; just the mere name "granite" does not necessarily mean that it is a strong material.

Q. Well, apparently I am not quite technical enough for you, Mr. Page. You talk about some hard rock that did not require any support?

A. Well, I can think of situations where water would not make much difference.

Q. That was what you meant when you said it did not make much difference in the case of the Claremont Tunnel or this tunnel?

(Testimony of Ben M. Page.)

A. That was part of my intention. May I add that there are other cases where a certain degree of moisture is an advantage?

Q. Is it ever an advantage in the Orindan?

A. Not to my knowledge; I think not. [1720]

Q. And it is characteristic of Orindan, when there is a presence of moisture, that you have a weakness of the structure? A. Yes.

Q. That was true in the Claremont Tunnel and it was true in the Broadway Tunnel?

A. It was true in the Broadway Tunnel. I do not know about the Claremont.

Q. Is there any advantage in finding water in the cherts?

A. There is, under some situations; but by "water" in this case I refer to "moisture." Where the cherts are fractured in a certain manner, the presence of a slight bit of moisture causes more cohesion than the fragments would have if they were dry. That just applies to certain situations, not for any part of the cherts.

Q. Mr. Page, in the case of the Broadway Tunnels, do you know, while you were there, what the largest quantity of water per minute was that was produced in, say, the north tunnel in the cherts?

A. No; I don't. I do recall that, in the south tunnel, one of the District men, whose name slips my mind, mentioned that he had measured a flow of 120 gallons a minute in the south tunnel.

Q. How long did it last?

(Testimony of Ben M. Page.)

A. I have no idea; that is, on any certain determination; but I think it did not last more than a few weeks at the most, and then it dwindled.

Q. In other words, it was water when the tunnel was driven through one of these areas of broken cherts, was it not?

A. No; it came out of one of the best portions of the cherts.

Q. Came out of solid cherts?

A. It came out of a fault which is indicated on this exhibit.

Q. Was the fault in broken——

A. No. The fault was between the bedding planes of the cherts and the cherts itself was in better condition than most of that formation was.

Q. This was one of those faults where there had been movement without a grinding up or pulverization? A. Yes. [1721]

Q. And at that place there was this considerable flow of water which your memory now indicates may have run for several weeks? A. Yes.

Q. Was there sufficient water flowing out of that fault to cause the floor of the tunnel to have water flowing over the entire floor of the tunnel?

A. I don't recall. I do recall that, for the most part, within, say, a week or two after that flow was encountered, all the water was kept in the drainage ditches.

Q. Did you see the tunnel immediately following the time that water was encountered?

(Testimony of Ben M. Page.)

A. Yes, I did.

Q. Did you see it when it was flowing over the floor of the tunnel at any time?

A. Yes; but I cannot remember the depth.

Q. How large an area was it flowing over on the floor; what was the spread?

A. As I recall it, 6 or 8 feet wide; and my recollection is that for a time that floor was covered by water to a slight depth; it was not deep. [1722]

Q. What do you mean by a slight depth, an inch, or two inches, or a foot, or two feet?

A. The water, as I recall it, did not go over the tops of the rails.

Q. How deep would that be?

A. Less than a foot.

Q. Considerably less than a foot? A. Yes.

Q. About three or four inches?

A. Yes, something in that order of magnitude, perhaps six inches.

Q. Now, you mentioned at considerable length sections in the Orinda in which there was wetness at various places, and you have indicated on the diagram what they were. What would be the flow of water, the largest amount of water that was coming out of any of these areas that you have described in the Orinda?

A. I don't know. It was collected in sumps and pumped out. The engineers could probably tell you but I could not.

(Testimony of Ben M. Page.)

Q. Are you referring now to the east portal of the tunnel?

A. Yes, the drift driven from the east portal.

Q. Did you ever see any slides in the east portal of the tunnel?

A. I saw a small slide in the north drift of the north tunnel.

Q. That was on February 11, 1936?

A. Yes.

Q. At that time the north tunnel had been excavated from the east portal toward the west a distance of some 40 or 50 feet, had it not?

A. Does your question apply to the drift or to the completed tunnel?

Q. To the tunnel.

A. As I recall, the core was still in place; the rings had been taken out for 40 or 50 feet.

Q. And the concrete put in? A. Yes.

Q. And there was a slide on that face, was there not, on that same day, the slide that you have described on your model?

A. A slide on the face?

Q. On the face of the core?

A. I don't know about that.

Q. Didn't you see that?

A. No, I did not. [1723]

Q. Were you only observing in the drift?

A. I spent a large part of the time during that period on the west side, because that is where the excavation was in progress. I did most of my

(Testimony of Ben M. Page.)

study in the east portal, when the excavation was suspended.

Q. On the date that you have indicated the slide in the wall plate drift of the north tunnel, on February 11, 1936, did you observe the condition at the east portal in the north tunnel?

A. I suppose I did, but I can't remember what I saw.

Q. Isn't it a fact that the slide that you saw was a part of the slide that occurred when the pumps broke down at the east portal and when the face of the tunnel, in the north tunnel, was submerged with water to a depth of 10 to 12 feet by rainstorm?

A. I don't remember that. I do remember the rainstorm, and that there was a general wet condition in the drift, but I don't remember the condition of the core.

Q. Was the wall plate drift where you have described this slide occurred entirely closed by the slide?

A. Yes, it was for a distance of perhaps thirteen feet.

Q. Could you see both sides of the slide, both the east and west sides?

A. No, I did not. I merely took the measurement of the concrete for the east limit of that slide. I do not recall ever going around the east side of the slide.

Q. How did you fix the location of the east side of the slide, then?

(Testimony of Ben M. Page.)

A. By the fact that none of that concrete had caved in, according to some of the engineers.

Q. Somebody else told you it had not caved in, so you took that as the location? A. Yes.

Q. Now, these dikes that you have referred to, I think you said the sandstone was a sedimentary rock and that it was not usual to call the sandstone intrusion a dike, but for the purpose of clarity [1724] you were using that term in this tunnel?

A. I think it is usual to call them dikes when they occur in these situations.

Q. What do you mean by "these situations"?

A. Where the material cross cuts the surrounding rock instead of being interbedded.

Q. In other words, a dike, if I understand you, then, is something that is interjected into other material? A. Yes.

Q. Cutting into and separating it?

A. Yes.

Q. If the sandstone laid free in the natural strata of other material it was something laid down by nature and not by intrusion?

A. Yes, in generality that would be true; it is conceivable that it might be intruded between layers but that would be difficult to ascertain.

Q. What causes sandstone to intrude between layers of other material as it did in this Broadway tunnel in the formations you saw in the Broadway tunnel?

(Testimony of Ben M. Page.)

A. That is an unanswered question, no one knows; I should not say it is entirely unanswered, because there have been some theories, but they are not generally accepted by all geologists.

Q. You have given us some theories here on a number of matters. Would you mind giving us your theory about a sandstone intrusion into other material?

A. Yes, I would object to giving a theory on it. The fact is that I hesitate to try to explain their presence.

Q. You would not have the theory that the District put them there, would you?

A. No, I would not pull that theory.

Q. I suppose in regard to the diabase dikes you would also agree that the District did not put them there?

Mr. Smith: I object to the question as silly and argumentative.

Mr. Tinning: Q. Your answer would likewise be the District did not put the sandstone there, or the diabase there? A. Yes.

Q. How about the diabase dikes, what explanation can you give for those?

A. There is a generally accepted explanation for the [1725] diabase. The material arrived in a molten condition which filled the cracks or fissures, in many cases apparently widening the cracks or the fissures.

(Testimony of Ben M. Page.)

Q. In other words, it came in under pressure while molten? A. Yes.

Q. And expanded and then cooled in that location? A. Yes.

Q. Where does that molten material come from?

A. Nobody has ever seen the material in its native haunts, so to speak. The material, it is believed, comes from local areas of melting at depths, and only at depths in the outer part of the earth; in other words, I do not mean that they come from the center of the earth.

Q. It is like a volcano, is it not?

A. Not necessarily. If the material ever reached the surface a volcano might result.

Q. You find similar material reaching the surface through volcanic formation, do you not?

A. To a certain extent you do, yes, although I have never seen the alteration that I have described in the case of any surface lava flows.

Q. Mr. Page, the alteration is something that occurred after the material arrived and was put into place where it came to rest? A. Yes.

Q. Now, we are talking about how it got there and not what happened to it afterward. What I am trying to get clear in my mind is where it came from. It came from hot rock which was pushed up there by pressure from below? A. Yes.

Q. You also find a like condition in a volcano, do you not? A. Yes.

Q. Now, this rock not reaching the surface was

(Testimony of Ben M. Page.)

acted upon by something. Do you know what it was that acted upon it, water, or what?

A. No, I do not think so. I know that the reagent was some sort of a chemical solution.

Q. That would be something that was carried there with the water?

A. If that is so I assume that would be correct.

Q. You did not see any other liquid in these rocks except water, [1726] did you, when you were looking at them?

A. Not in the diabase.

Q. So it would be a fair assumption that whatever it was that caused their alteration it was carried to those rocks by water? A. Yes.

Q. And over the years, whatever they were that were carried into contact with this intrusion of diabase, were the chemical constituents of the diabase altered, or was the physical formation altered by it?

A. The chemical constituents which, of course, involved a lot of physical properties.

Q. I think you told Mr. Smith earlier when you first saw it you had some doubt of what it was, you thought it was a gouge?

A. That is true.

Q. I presume you put it under a microscope and studied it to see what that material actually was?

A. Yes, I realized that if it was a gouge it was very peculiar gouge, because it occurred in such irregular bodies.

(Testimony of Ben M. Page.)

Q. Did you make a chemical analysis of this material?

A. No, I did not. I made a petrographic study under the microscope.

Q. You determined what the constituent parts of this material were by visual inspection through a microscope?

A. To a large degree I did determine.

Q. You did not determine it in any other way except by a visual inspection through a microscope?

A. Only in this sense, that I tested the material with acid to see if it contained carbonates.

Q. Did it? A. Yes.

Q. Is that a characteristic of diabase?

A. It is not.

Q. What is a diabase?

A. A diabase loosely defined is an igneous rock with a characteristic texture.

Q. What are the chemical constituents of a diabase?

A. A diabase consists largely of various silicates, silicates of sodium, calcium, [1727] aluminum, iron, magnesium, various other chemical elements.

Q. Was this material that you saw acted upon by something that changed the chemical formation?

A. Yes, and it changed the chemical constituents.

Q. And gave it some carbonate qualities?

(Testimony of Ben M. Page.)

A. Yes.

Q. What, in your judgment, would bring the carbonate components to that chemical mixture that you speak of?

A. In my judgment it came from a rising solution, it came up from the earth.

Q. What were the things then that bore the carbonates into the diabase? Coal is a carbonate, is it not?

A. No, it is not.

Q. What is? A. What is coal?

Q. No, what is a carbonate?

A. Carbonate is a chemical compound which contains a certain radical expressed by CO_3 and certain chemicals.

Q. What was it that formed the CO_3 in this mixture that you found?

A. That, again, takes us into the realm of theory; undoubtedly the solution that— I should not have said "undoubtedly," but probably the solution that performed that result contained carbon dioxide or some other reagent that could convert the minerals into carbonates.

Q. What is the common name that laymen, like most of us here, would know—what name would you give to those things that would bring that carbonate deposit?

A. I do not know of anything that would not be technical.

(Testimony of Ben M. Page.)

Q. We will pass that. Now, your diabase dikes are intrusions, and your sandstone dikes are intrusions. Do you know whether those formations were characteristic of the hills that lay on the east side of San Francisco Bay through which other tunnels have been driven? A. No, I do not.

Q. Then when you say heavy material, that the ground required support, [1728] you are referring particularly to this ground that you saw there in these tunnels? A. Absolutely.

Q. You have no knowledge, whatsoever, of what conditions were encountered in the driving of other tunnels in the general area of the Broadway Low Level tunnels?

A. Yes, in a general way I have.

Q. How, if at all, did the material through which the Broadway Tunnel was driven differ in general from those through which other tunnels were driven?

A. Since I was not in the other tunnels I can only rely upon reports about them, but those reports make no mention of altered diabase; they make no mention of sandstone dikes.

Q. Do you, from that, draw the conclusion that this tunnel was the only tunnel in which those formations were encountered?

A. I did not draw any conclusion regarding that.

Q. You don't know, do you?

A. No, I don't know.

(Testimony of Ben M. Page.)

Q. And if it was a fact that in the Claremont Tunnel, in driving through the Orinda formation they found pieces of cherts, pieces of sandstone, sort of isolated in the formation, you would find a condition that would be the same as you had in portions of the Broadway Tunnel, would you not?

A. That does not exactly portray the conditions in either place, from what I heard of the Claremont Tunnel, and what I know of the Broadway Tunnel.

Q. I have tried to follow you, and I understood you to testify that in the Orinda at places you found isolated bulges of other material. I am not talking now about what you call Dikes, but I am talking about pieces of sandstone and pieces of cherts that you said apparently had been moved into the Orinda when it was laid down.

A. No, you misunderstood me. I referred to another sandstone formation, the sandstone that is indicated in blue on this exhibit No. 100. [1729]

Q. Where were these isolated globules or particles of material found isolated in other material, in what part of the tunnel?

A. A great deal of the sandstone that occurred within the westernmost half of the Broadway Tunnel, that sandstone was contained here and there with various fragments of cherts and shale, which were isolated entirely and surrounded by the sandstone.

(Testimony of Ben M. Page.)

Q. In your opinion were those pieces of foreign material laid down in the sandstone when the sandstone was laid down by the water that formed it?

A. Not in my opinion.

Q. How did it get there, in your opinion?

A. In my opinion they got there during the emplacement of the sandstone, whatever that emplacement was.

Q. What do you mean by that?

A. I mean that the sandstone occupies an abnormal position in relation to the surrounding rock, and that instead of being deposited in layers between the beds of cherts and shale with sandstone, it reached its present situation in some other way.

Q. You mean pressed up there by some internal force? A. That would be one theory.

Q. What other way could it get there?

A. It might have dropped down from above, but I do not hold that theory.

Q. United Air Lines were not running then. How could it drop down from above?

A. In some situations where sandstone overlies another rock the inconsolidated sand has filtered down into cracks in underlying rocks and there solidified through cementation.

Q. Would pieces of cherts and pieces of this other material isolated in the sandstone be formed in the way you have just referred to?

A. It is very doubtful.

(Testimony of Ben M. Page.)

Q. Then why go into it, if it doesn't happen that way? What, in your opinion, was the reason for these pieces of broken material you [1730] found in the sandstone?

A. I can give you a theory which I considered but I never drew any definite conclusion about these sandstone dikes.

Q. Mr. Page, if you don't know, if you have not any theory that you believe is correct, I do not want to go into it. Have you an explanation that you think is a correct explanation of that condition?

A. I have an explanation but there are defects in it.

Q. Then we will go on to something else. Now, the faults which you referred to, as I understand it, are planes in which there has been movement of some kind? A. Yes.

Q. And sometimes these faults are formed in such a way that there is broken material at the point of contact, I think you used the words "rock flour"? A. Yes.

Q. That is a form of gouge? A. Yes.

Q. When you find fractures such as you have shown in this tunnel formation you have always had a movement at the point where the fractures occurred, have you not?

A. Yes, at least, if you are referring to fault.

Q. I am referring to what you said here were faults. A. Yes, that is correct.

Q. That you have shown? A. Yes.

(Testimony of Ben M. Page.)

Q. So that those indicate wherever they are to be found in this model, that in the hills at the point where those were encountered there had been movement in the material? A. Yes.

Q. And it is likewise true throughout the San Francisco Bay region that you find broken sections of material throughout those hills, is it not?

A. In many places in the hills that is true.

Q. And it is characteristic of those hills on the east side of San Francisco Bay, that you find this broken, fractured material?

A. I don't know that it is characteristic as to all of them, because [1731] I have not visited every part of the hills on the east side of the Bay.

Q. You have heard of the Wildcat Fault, the Pinole Fault, and San Andreas Fault, and Hayward Fault, haven't you? A. Yes.

Q. Those, with the possible exception of the San Andreas Fault, are all in the student books about the East side of San Francisco Bay, the very hills through which this tunnel passes?

A. They may be in some of the student books, some of the faults you have mentioned are well known and others are not.

Q. You do not mean that Professor Tolman hasn't them in his book?

A. That he has them?

Q. Hasn't them in his book?

A. I have never seen any of Professor Tolman's books.

(Testimony of Ben M. Page.)

Q. You do know, as an expert geologist, that there are a number of faults in the area in which these tunnels are built, and that the tunnel, itself, passes through a well-known fault on the geological map published by the United States, known as the Wildcat Fault?

A. Yes, they go through that, at least one is designated as the Wildcat Fault on the map you refer to.

Q. You know what that fault is, don't you?

A. I do not.

Q. Don't you believe in the United States Geological map?

A. I have no reason to believe it or to not believe it, but geologists are usually skeptical.

Mr. Tinning: That is all.

Mr. Marrin: No further questions.

The Court: We will take an adjournment now until tomorrow morning at ten o'clock.

(An adjournment was here taken until tomorrow, Wednesday, May 25, 1938, at ten o'clock a.m.)

[1732]

Wednesday, May 25, 1938;

10:00 o'Clock A. M.

THOMAS L. PHILLIPS,

called by the plaintiff; sworn.

Direct Examination

Mr. Smith: Q. Where do you reside, Mr. Phillips? A. 983 Park Lane, Oakland.

Q. What is your business or occupation or profession, Mr. Phillips?

A. I am a civil engineer, employed by the Western Pacific Railroad Company. My title with the Railroad Company is Principal Assistant Engineer.

Q. Are the duties of that position similar to Chief Assistant?

A. It is in fact Assistant Chief Engineer.

The Court: That means that the assistant does the work, I suppose? A. Yes.

Mr. Smith: Q. Mr. Phillips, will you state, for the benefit of the Court, your experience as an engineer, commencing with the first engineering work that you had anything to do with; state it in general?

A. My first work in the engineering profession, I might say, was in the beginning or early part of 1902. I was employed on an engineering party that was running a survey up the Klamath River, and I started in as an ax man and finished up as instrument man on that job, in November of the same year.

(Testimony of Thomas L. Phillips.)

Q. What followed?

A. The following winter I was on a survey from Livermore through Dublin Canyon to the waterfront in Oakland; that work was supposedly for the advance surveys of the Western Pacific.

Q. That was at the time of the construction of the original Western Pacific Railroad?

A. That was considerably in advance of that time.

Q. In advance of that. Proceed.

A. The following spring,— [1733] the spring of 1903,—I was on surveys in Mendocino, Sonoma and Humboldt Counties, California, for the Atchison Topeka & Santa Fe. I was instrument man on that work. During the next two years, I was on various work, including the construction of a section of the Albion Lumber Company's Railroad and the extension of the McCloud River Railroad Company, which is a part of the McCloud River Company.

Q. Where was the Albion Lumber work situated?

A. In Mendocino County.

Q. Where was the McCloud work?

A. In Siskiyou County, California.

Q. In what year was that?

A. That was in 1904.

Q. What next occurred in your experience?

A. In the early part of 1905, I was employed as engineer for the Eel River Power and Irrigation

(Testimony of Thomas L. Phillips.)

Company. They had a project in Mendocino County some 25 miles northeast of Ukiah. This project comprised quite an extensive dam across the main South Eel River and a tunnel through a section of the Coast Range Mountains into Potter Valley.

Q. What type and size of tunnel was that?

A. The tunnel was about 9 by 9; approximately 5800 feet in length.

Q. Was that your first experience on tunnel construction? A. Yes, it was.

Q. What year was that?

A. That was in 1905.

Q. What were your duties?

A. My duty was engineer of surveys, primarily to lay out the work. I did not do any of the designing work. I did a great deal of inspection, however.

Q. After that employment and work, what was your next assignment or duty?

A. That work closed down, or nearly closed down, in November; and I, at that time, got employment with the Western Pacific Railroad Company.

Q. In what capacity?

A. As instrument man.

Q. Where and what were your duties?

A. The section of work it [1734] was on was between Livermore and Hayward, California; and my duties were that of instrument man.

(Testimony of Thomas L. Phillips.)

Q. What were they doing,—surveying or constructing,—at that time?

A. Both surveying and constructing, largely constructing. It was building the section of the Western Pacific between Livermore and Hayward.

Q. Was any tunnel work involved in that work?

A. Yes; there were two railroad tunnels and a water tunnel for the Spring Valley Water Company in Niles Canyon, Alameda County.

Q. Will you describe the character of the tunnels, as to their size and length,—the general nature?

A. The railroad tunnels,—one of which was approximately 4300 feet in length; and the other, approximately 400 feet in length,—they were standard tunnels, the excavation for which was approximately 21 feet wide by 25 feet high. The water tunnel was nearly 900 feet in length, and the excavation for that was about 9 feet by 9 feet.

Q. What was the approximate location of those tunnels; were they in Alameda County?

A. Yes, they were in Alameda County, some 3 or 4 miles northeast of Niles.

Q. How long were you engaged working at those tunnels, or for that railroad on which those tunnels were located?

A. I was there about two years and a half.

Q. What duties did you have, if any, in connection with the tunnels?

(Testimony of Thomas L. Phillips.)

A. My duties were to see that the work was done according to the established lines and grades and plans and specifications, and to make inspections and make recommendations as to how much timbering and the spacing it should be placed in the tunnels.

Q. Were they timbered tunnels?

A. Yes, they were.

Q. Throughout?

A. Not throughout. One of the portals was concreted; and there was a section of concrete installed under the [1735] point where the Spring Valley Water tunnel passed over.

Q. Which tunnel was that?

A. That was in the longest tunnel, known as Tunnel No. 1,—Western Pacific Tunnel No. 1.

Q. That is on the mainline of the Western Pacific now? A. That's right.

Q. That is its present number on the main line?

A. That's right.

Q. Outside of the sections of that tunnel that you say were concrete, was the entire balance timbered or not timbered?

A. It was all timbered except the section concreted.

Q. What specific duties did you have inside the tunnel, if any, in the discharge of the general duties that you just described; what did you actually do, yourself?

(Testimony of Thomas L. Phillips.)

A. I actually ran the line and grade to establish the points for the contractor to set the linings, whether they were timber linings or concrete linings.

Q. Were those tunnels built by company forces of the owner or by private contract with outside parties?

Mr. Wittschen: Objected to as immaterial. I think, under the guise of qualifying the witness, counsel is about to go into the situation of how they ran their lines and grades in those tunnels.

Mr. Smith: No; that was not the purpose at all. I was just going to show his duties.

Mr. Wittschen: It is immaterial, in any event.

Mr. Smith: It is not immaterial at all. I want to show the experience of the witness in handling work: whether he handled construction work for the owner entirely or—

The Court: Read the question.

(Pending question read.)

The Court: Proceed. [1736]

Mr. Wittschen: Note an exception.

The Witness: A. They were largely built by contractor. However, I should say approximately one-half of the longest tunnel, or Tunnel No. 1, was finished by company forces.

Mr. Smith: Q. After you finished working, or when you finished what you were doing there, what did you next do; what were your next duties?

(Testimony of Thomas L. Phillips.)

A. I was promoted to assistant engineer and transferred to San Francisco, where I completed the freight terminal of the Western Pacific in this city.

Q. What was the general nature of that work?

A. The work comprised a wharf, railroad yards, freight terminal and a tunnel 1625 feet in length.

Q. Where is that tunnel located?

A. It is in the Potrero Hills, San Francisco.

Q. Approximately what streets?

A. About 22nd and Mississippi on one end, and 18th and Mariposa, I believe, on the other; it runs diagonally through the city blocks.

Q. Is that a timbered tunnel?

A. Yes, it is timbered throughout.

Q. Is that tunnel approximately the same size as the mainline tunnels?

A. It is; the standard mainline tunnel construction.

Q. It is designed and built for the passage of railroad trains? A. Yes.

Q. What were your duties on the construction of the terminal, including the tunnel, in general, as assistant engineer in charge?

A. To supervise the work, make inspections and see that it was carried out in accordance with the plans and specifications.

Q. In particular, with regard to the tunnel, what were your duties? Were they the same as you have just mentioned? A. Yes.

(Testimony of Thomas L. Phillips.)

Q. Was that tunnel built by company forces or by private contract? [1737]

A. It was built by contract let to the Western States Construction Company.

Q. You were acting for the owner of the tunnel?

A. That's right.

Q. During what years and for how long a time did that employment run; what was the date?

A. I started there in 1908, and construction work was finished in the latter part of 1909.

Q. After you had finished your duties in the construction of this terminal, including that tunnel, what did you next do, Mr. Phillips?

A. The Western Pacific started operations, and my duties were spread over the Western Division of the Western Pacific, and covered many things.

Q. What is the geographical extent of the Western Division?

A. From San Francisco to Gerlach, Nevada, including various branch lines.

Q. Were there any tunnels, aside from the tunnels you have mentioned, in Alameda County and in San Francisco, in that division?

A. Yes. All told, there are, as I now recall, 36 tunnels.

Q. What were your general duties as division engineer, particularly in connection with the tunnels?

A. I made frequent inspections of tunnels in regard to the position of the lining of the tunnel

(Testimony of Thomas L. Phillips.)

to the center line of the track, to insure that there was sufficient clearance for safety for the passage of trains, and also had a great deal to do with the company forces, or company gangs, that were doing any necessary repair work in these tunnels.

Q. Generally in charge of maintenance of these tunnels then; is that correct?

A. Yes, I had a great deal to do with the maintenance of the tunnels.

Q. How long did your duties consist of the character you just described?

A. Along the lines that I have just described, until about the beginning of 1916.

Q. Approximately 8 years?

A. 7 or 8 years.

Q. What did you next do? [1738]

A. Beginning with the spring of 1916 I was engineer in charge of concrete lining for the Western Pacific tunnel in Plumas County known as Spring Garden Tunnel. Part of this tunnel had previously been concrete lined, but it was desired to complete the job, so we spread the work over a period of three years, and I was in charge during those three years, and in that time concrete-lined 6600 feet of the tunnel.

Q. That was a standard railroad tunnel?

A. Yes.

Q. And had previously been timbered?

A. That is right.

The Court: Q. Was it timbered in its entirety?

(Testimony of Thomas L. Phillips.)

A. It was originally, yes.

Mr. Smith: Q. What was the total length of that tunnel?

A. The total length is 7335 feet.

Q. During that same period that you were doing that lining job on the Spring Garden Tunnel were you in charge of the other work?

A. Yes, in the early part of 1917 I located and started the construction of a branch line from the easterly end of the Western Pacific, Chilcoot Tunnel, to Reno, Nevada. This line is 32 miles long.

Q. That work, as I understand you, you did while you were also doing this work at the Spring Garden Tunnel? A. Yes, that is correct.

Q. Following that period, which lasted two or three years, what did you next do and where, and how long a period?

A. In 1918 I was appointed Division Engineer of the Western Division of the Western Pacific. The line, as I described, was between San Francisco and Gerlack, Nevada. A division engineer's duties are having full charge of the maintenance of way for the railroad company over their respective divisions, and referring particularly to tunnels it was my duty to see that all of the tunnels under my jurisdiction were in [1739] proper shape and in safe condition for the passage of trains.

Q. That division is the same as you mentioned previously, from San Francisco to Gerlack?

A. That is correct.

(Testimony of Thomas L. Phillips.)

Q. How long did your duties continue as you have just described when you resumed them in 1919?

A. I was in that position for two years, until July, 1920.

Q. Then what did you do?

A. I located and constructed a line up the middle fork and south fork of the Feather River for the Hutchinson Lumber Company.

Q. You say you located and constructed a line. What do you mean, a line of railroad?

A. A line of railroad, standard gauge railroad.

Q. You were not then employed by the Western Pacific, you had left that employment?

A. I was on leave of absence for a short time and later in that year went back in the employment of the Western Pacific and constructed a portion of this line which is now owned by the railroad company, the Western Pacific Railroad Company.

Q. Where was that line located, in what county?

A. In Butte County.

Q. Any tunnels in it? A. No tunnels.

Q. As I understand it, it connects with the Western Pacific and is now part of the Western Pacific?

A. Part of it is part of the Western Pacific and the other part is still in the ownership of the lumber company.

Q. But the whole line is connected? A. Yes.

Q. After you went back to the Western Pacific what was your next title and duties and for how long?

(Testimony of Thomas L. Phillips.)

A. My title when I went back with the Western Pacific in 1921 was Assistant Engineer, but my duties and position were somewhat extended. I covered the entire system.

Q. Where did the system run from?

A. From San Francisco to Salt [1740] Lake City, including the various branch lines.

Q. What was the general nature of your duties?

A. General engineering work covering any subject I might choose to take up, as well as such other duties as the Chief Engineer might delegate to me.

Q. For how long a period did you discharge this particular office? A. Until June, 1927.

Q. That is a period of approximately six or seven years? A. Yes.

Q. Did you have charge of any construction work during that time?

A. Well, I had charge of all of the construction work the company had during that period. I do not recall just now of anything of major importance. I did, however, perform the same duties as I had theretofore in regard to the inspection of various structures, including bridges, tunnels, or any other features.

Q. But you did not construct any tunnels during that period?

A. No, I did not construct any tunnels.

Q. You said 1927 was the end of that particular time. What happened then, and what have you done since?

(Testimony of Thomas L. Phillips.)

A. The reason I mentioned June 1927 was I was promoted at that time to Principal Assistant Engineer.

Q. The same office you now hold?

A. The same office I now hold.

Q. During that period, since June, 1927, have you had charge of any construction work?

A. Yes.

Q. Including any tunnels? A. Yes.

Q. Just state to the Court what that work was, what you had to do with it.

A. In the early part of 1929 I started the location of a railroad between Keddie, in the Feather River Canon, to Bieber, a distance of 112 miles.

Q. Where is Bieber, is it north, south, east or west of Keddie?

A. Almost due north of Keddie. Keddie is in Plumas County and Bieber is in Lassen County, California. [1741]

The Court: Is that the line through Modoc?

A. No, that is not, that is the Southern Pacific.

Mr. Smith: This line that you mentioned is a line that was supposed to connect with the Great Northern?

A. It does connect with the Great Northern at Bieber.

Q. It was constructed for that purpose?

A. Yes.

Q. How many tunnels are there on that line of railroad? A. Nine tunnels.

(Testimony of Thomas L. Phillips.)

Q. What is the approximate length of the nine tunnels, taken together? A. About 3500 feet.

Q. What kind of tunnels are they, in general?

A. They are standard railroad tunnels. However, on this line we built the tunnels on the curve section a foot wider than is generally built.

Q. That is because of the curve? A. Yes.

Q. Were they hard ground tunnels, or were they soft ground tunnels?

A. They were all soft ground tunnels with the exception of one, which would probably be classified as a hard ground tunnel, because it was in hard lava formation.

Q. With the exception of the one that you mentioned, did the others require timber support or other support, artificial support? A. Yes.

Q. What period of time was embraced in your duties in the construction of that line between Keddie and Bieber?

A. The construction started in August, 1930, and was completed in November, 1931.

Q. Was that work done by an arrangement with private contractors or was it done by company forces?

A. It was done by a contract with the Utah Construction Company and W. A. Bechtel Company.

Q. The same two companies that have been mentioned in this case as part of the Six Companies?

A. Yes. [1742]

Q. After you concluded the construction of that

(Testimony of Thomas L. Phillips.)

line what further construction work did you have to do with, if any?

A. In 1932 I had charge of reinforcing the concrete lining of tunnel No. 32 on the Western Pacific. This tunnel is near Keddie.

Q. How long a tunnel is that?

A. About 500 feet. The reinforcing work, however, covered somewhere in the neighborhood of 200 feet of the tunnel.

Q. What other construction work did you have anything to do with during that same period, including the planning of tunnels, or estimating the same, or constructing the same?

A. I have had various construction work, such as extending side tracks, some of which involved heavy work.

Q. Regarding the Dotsero Cut-off, did you have anything to do with that?

A. Well, in 1932 I made a study and report of the Dotsero Cut-off Line.

Q. Where is that line of railroad located?

A. It is located in Colorado.

Q. Are there any tunnels on that line?

A. Yes, there were four or five tunnels.

Q. Did you recommend the way that those tunnels should be lined up and constructed?

A. Yes, I made a report on that line and in regard to the location and the approach to the tunnels, and length of tunnels, and the line was built substantially along my recommendations.

(Testimony of Thomas L. Phillips.)

Q. That, however, was not built by the Western Pacific?

A. No, that was built by the Denver & Rio Grande Railroad Company.

Q. Was there any other construction particularly with reference to tunnels that you had anything to do with since 1932?

A. No out and out construction. I have had a good bit to do with the maintenance of tunnels, and inspection of the various tunnels along the Western Pacific. [1743]

Q. When did you first hear of the Broadway Tunnel? A. August 5, 1935.

Q. What happened then?

A. I went through that tunnel, starting in the afternoon of August 5, and spent the entire balance of the afternoon and the evening going through the entire workings of the tunnel.

Q. Were you employed by the plaintiff in this case at that time?

A. Yes, I was employed by Mr. Bechtel, President of the Six Companies, the contractor on that tunnel.

Q. What duties were given you?

A. I was employed in an advisory capacity to see if I could make any suggestions or recommendations to help the contractors solve some of the problems they had met in this construction work.

Q. Did you consult with any other engineers at that time?

(Testimony of Thomas L. Phillips.)

A. Yes, I consulted with Mr. Tibbitts, particularly, also with Mr. Peterson, and various other ones.

Q. You went over there on August 5, as I understand it. A. Yes.

Q. What did you observe as to the construction on the first visit? By the way, was that your first visit to the tunnel?

A. That was my first visit to the tunnel.

Q. What did you observe concerning the condition of the construction at that time?

A. I observed that the ground through which the tunnels were being driven was very blocky in places, and had a variable condition; that the tunnels, so far as the workings were open, were timbered, and that the timbering in places was taking a very heavy ground load.

Q. The contractor was engaged in excavating at the time when you first went there, was he?

A. Yes, the excavation was going on.

Q. Did you visit the tunnels in connection with your employment upon occasions after the date you have mentioned? A. Yes, many times.

Q. How frequently until June, 1936 did you visit the tunnels? [1744]

A. I visited them on an average of about once a week until the end of March. I made one additional visit to the tunnel in the early part of June. As I recall, I made a total of about 37 or 38 visits to the tunnel during the time that I mentioned, between August 5, 1935 and the end of March, 1936.

(Testimony of Thomas L. Phillips.)

Q. Those visits, were they casual, or did you make it a point to go over the entire work?

A. I went there for the purpose of making a full inspection of the tunnel on each visit.

Q. What was your habit, did you go into the headings on those visits?

A. Yes, I went through all the work, as a general rule. There might have been some occasions where I did not see the extreme points, but I went into the drifts and into the top headings and visited the east end of the tunnels on several times; but the west end of the tunnel is the one that I was particularly interested in and at each of these visits I always visited the west end.

Q. Then, as I understand it, you visited the west end every time and the east end most of the time on those visits, is that correct?

A. I would say I visited the west end every time and the east end many times, I don't know just how many times I visited it.

Q. You were in the drift where the men were working? A. Yes.

Q. Mr. Phillips, speaking of the month of August, 1935, upon how many occasions during that month did you visit the tunnels in addition to your first visit, which you stated was August 5, if you know, just approximately?

A. Five or six times.

Q. Six times in addition?

A. Five or six times.

(Testimony of Thomas L. Phillips.)

Q. How frequently were those visits spaced after August 5, upon what dates, approximately?

A. I could not recall exactly. I remember I was there on the 11th, and I remember I was there on the 28th, the forenoon of the 28th.

Q. That was the forenoon of the day on which later the cave-in [1745] occurred?

A. That is correct.

Q. Were you there in August after the cave-in?

A. Yes, I was there the next day after the cave-in.

Q. What time did you arrive after the cave-in, the next morning, or the same evening?

A. The same evening; I arrived at about 8 or 8:30.

Q. In other words you were twice on the 28th of August, before the cave-in and after the cave-in; is that right? A. That is correct.

Q. Now, Mr. Phillips, on these visits were you accompanied by others, other engineers, or did you meet with other engineers, including any engineers of the District, or the contractor?

A. Well, very often I went through the tunnels with others. I went through several times with Mr. Tibbetts, I think several times with Mr. Peterson, with Mr. Hindmarsh and Mr. Price and others.

Q. If you observed anything did you communicate the same and make recommendations as an engineer to the contractor? A. Yes.

Q. During the month of August, 1935, did you

(Testimony of Thomas L. Phillips.)

meet with Mr. Boggs, the engineer for the Joint Highway District, the defendant in this case?

A. Yes.

Q. Upon how many occasions, if more than one?

A. On two occasions.

Q. What were the dates of those meetings, if you remember?

A. On August 16 and August 19, if I recall correctly.

Q. Who was present when you met with him, if anybody else?

A. Mr. Tibbitts and Mr. Barkley.

Q. Who was Mr. Barkley?

A. I understand Mr. Barkley is Mr. Boggs' assistant.

Q. Where were these meetings that you had with Mr. Boggs, were they at the tunnel or elsewhere?

A. At Mr. Boggs' office——

Q. In downtown Oakland?

A. Yes, on Webster street, I think.

Q. What was the sum and substance of the discussion between you and Mr. Boggs? [1746]

Mr. Wittschen: Objected to as immaterial, and calling for hearsay testimony, and conversations which are not binding on the District.

The Court: I will allow it so that he will have a record.

Mr. Wittschen: Note an exception.

A. We discussed the matter of——

Mr. Tinning: Mr. Smith, I think for the purpose

(Testimony of Thomas L. Phillips.)

of clarity, as there were two conversations, that the question should go to one and then the other.

Mr. Smith: That is perfectly proper.

Q. Directing your attention, Mr. Phillips, to the first meeting that you had with Mr. Boggs, as I understand you stated the date of it was approximately what—the 19th of August?

A. The 16th and 19th.

Q. Directing your attention to the 16th of August, 1935, did you see Mr. Boggs on that day?

A. Yes.

Q. Who was present?

A. Mr. Tibbitts and Mr. Barkley.

Q. You and Mr. Boggs, the four of you?

A. Yes.

Q. That was held at Mr. Boggs' office?

A. That is right.

Q. What was the sum and substance of what was said and discussed between you and Mr. Boggs upon that occasion?

Mr. Wittschen: If your Honor please, for the purpose of the record I make the same objection heretofore made on all of the grounds.

The Court: The same ruling.

Mr. Wittschen: Exception.

A. Our discussion that day was in regard to the concrete lining section and the engineering that the contractor was called upon to do in setting lines and grades in the tunnels, that is, the surveying of the lines and grades. We recommended — I say we, Mr. Tibbitts and I recommend to Mr. Boggs that he

(Testimony of Thomas L. Phillips.)

strengthen the con- [1747] crete Section, that is Section A, by adding reinforcing steel and installing a strut at the point over the highway section and under the ventilating chamber, and also installing an invert.

Q. You mean by an invert an additional section at the bottom, underneath?

A. Yes, an additional section across the tunnel at the bottom of the concrete.

Q. Will you proceed and state what was said by Mr. Boggs in respect to this recommendation?

Mr. Wittschen To which we make the same objection, on all of the grounds heretofore stated, and the further ground that this was a gratuitous volunteer offer upon the part of the contractor that we had not called for, and upon which we are not bound, and it was not in the contract; nobody asked him to come in and tell him how much he wanted.

The Court: For the purpose of the record indicate the purpose of this testimony.

Mr. Smith: The purpose of the testimony is to show that the contractor had met problems in the construction which were causing the contractor concern, and he employed outstanding engineers to come in and consult as to the best handling of the problem, and they took the question up with the District and its representative, Mr. Boggs, and as a result of their taking up the matter with Mr. Boggs he immediately began to strengthen and reinforce the concrete lining and put in additional steel.

(Testimony of Thomas L. Phillips.)

The Court: There is no one complaining here about that, is there?

Mr. Smith: Yes, your Honor, it greatly increased the cost, increased the cost and the time.

The Court: All of which is provided for in the contract and specifications? [1748]

Mr. Smith: No, it is not, your Honor, I beg your pardon. The contract does not provide that we are not entitled to an extension of time for doing it. We have a right to show that that took more time, to do that thing, and in addition it will show that the contractor advised the district that the ground condition was of such a character that it was highly dangerous to work in, and that nevertheless the District took the attitude that they would do nothing about it, and let the contractor go ahead and bear the full responsibility for any trouble that might arise.

The Court: The purpose of this offer, you say, is to show the time. Is it limited to that?

Mr. Smith: Yes, to show that it added to the difficulty of the job, so that the contractor could not physically complete the job in the time fixed, and they arbitrarily denied an extension of time.

The Court: I am willing to give you a record on a reason for the time, but we have built this tunnel now three times, and if we build it three times more——

Mr. Smith: I am not trying to prolong this case, at all.

(Testimony of Thomas L. Phillips.)

The Court: The ultimate fact is, though, and it is apparent that we are going along very slowly here; I have allowed you a great deal of latitude here, and I did so so that both sides would have an equal opportunity. The time has come now to check that. There are other cases just as important to try as this case. I have been generous in giving you time. With that admonition we will proceed again, with the hope that we will get to the merits. I am willing to give you a record on any theory that you have in relation to time, but if we are going into the matter of the construction of steel and the details thereof we are just wasting time.

Mr. Smith: There is no desire to go into detail, at all. [1749] It is purely preliminary, and the testimony will not take more than five minutes.

Mr. Wittschen: We will take an exception to the ruling. [1750]

The Court: I told you before the only thing you would have to comfort you is the record; so both sides are entitled to that. Proceed.

Mr. Smith: Q. What was Mr. Boggs' answer to your recommendations?

Mr. Wittschen: Same objection.

The Court: Same ruling.

Mr. Wittschen: Exception.

The Witness: A. Mr. Boggs stated he was satisfied that the concrete lining the section "A" as designed was adequate to hold the ground loads, however, he would call in his consultants and lay the matter before them.

(Testimony of Thomas L. Phillips.)

Mr. Smith: Q. That was the first conversation, —the sum and substance of the first conversation; is that right? A. That is correct.

Q. You said you had a second conversation in that same month, or second meeting, with Mr. Boggs?

A. Yes. We had the second meeting,—that was August 19th.

Q. What was the sum and substance of what was said at that meeting?

Mr. Wittschen: Same objection on all grounds previously stated.

The Court: The same ruling.

Mr. Wittschen: Exception.

The Witness: A. Mr. Tibbetts and I made further investigation of the tunnel; and felt it our duty to call the attention of the Contractor as well as the District Engineer to the serious condition of the tunnel; that is, the serious condition that might happen to the tunnel.

Mr. Wittschen: Pardon me. I might state the question was [1751] —I believe the witness answered the question. He was asked what he stated to Mr. Boggs.

The Court: The "serious condition" is a conclusion.

Q. Just repeat the conversation; what you said.

Mr. Smith: Q. What was the sum and substance of what you said to Mr. Boggs?

Mr. Wittschen: Same objection.

(Testimony of Thomas L. Phillips.)

The Court: Same ruling.

Mr. Wittschen: Exception.

The Witness: A. We told Mr. Boggs that the tunnel was taking very heavy ground loads, and the matter of hewing the timber sets out to a point where it would seriously weaken them, or the matter of entirely removing the sets, digging up the lagging and setting the timbers back to clear the designed concrete lining, was a very hazardous operation; and we urged him to permit the intrusion of some of the timbers into the outer line of the concrete section and to compensate for strength, as we had previously talked to him on the 16th, to add reinforcing steel and install a strut over the highway section at the foot of the concrete lining.

The Court: Q. Did you know how long those timbers were there,—the supports? A. Yes.

Q. How long were they there?

A. Some of those timber supports were there as long as 6 or 7 months before they were concreted.

Q. They indicated, at that time, that they had a heavy load and were intruding?

A. Yes. Some had a very heavy load.

The Court: Proceed.

Mr. Smith: Q. Have you concluded with what you said or recommended? A. Yes.

Q. In sum and substance, what, if anything, did Mr. Boggs say?

Mr. Wittschen: Same objection.

The Court: Same ruling. [1752]

(Testimony of Thomas L. Phillips.)

Mr. Wittschen: Exception.

The Witness: A. Mr. Boggs said that he did not think he could possibly permit the intrusion of any of the timbers; however, he would take the whole matter under advisement.

Mr. Smith: Q. How long did these two interviews last, approximately, in length of time?

A. I think the one on the 16th lasted from about 9:30 or 10 o'clock until some time after 12.

Q. That is, in the morning?

A. In the morning; and the one on the 19th was in the late afternoon,—probably a two or two and a half hour discussion.

Q. On August 28th, you testified you were in the tunnels on the morning of that date?

A. Yes; I was there all forenoon.

Q. Did you notice the timbering situation in the north tunnel, particularly? Did you notice it?

A. Yes, I did.

Q. What was your observation, if any, as to the condition of the timbers that morning at the point where the cave-in occurred later in the day?

A. Well, I noticed a timbering, or a retimbering gang, I should say, working at that particular location. I don't recall the number of men in the gang; but there were probably about 8 or 10. They were working from a Jumbo, and were taking out the timber sets,—taking out the lagging behind the sets, and excavating sufficiently into the natural ground to permit the installation of the new sets so that it

(Testimony of Thomas L. Phillips.)

would clear the designed neat lines of the concrete lining.

Q. What did you observe as to the method being pursued by the Contractor and the workmen?

A. The work they were carrying on was along the general lines that are used by tunnel retimbering gangs.

Q. You observed or saw nothing unusual or out of the way in what [1753] they were doing?

A. No. Because of my acquaintance with such a vast amount of work of that kind on the Western Pacific, I was naturally looking to see if they had some new method, and they were following approximately the same method that we have used for several years.

Q. You went there, also, I believe you said, on the same day after the cave-in?

A. Yes. I heard about the cave-in, as I recall, about 7 o'clock, and I went directly over there.

Q. What did you observe, if anything, then,—just in a few words, generally?

A. I observed the tunnel was full of muck for a distance of 100 feet or more,—the floor of the tunnel; and it was apparent there was an opening 30 or 40 feet wide at the roof.

Q. Were you in the tunnel after August 28th, and particularly during the few weeks immediately following that date when the operations were suspended in the north tunnel as has been testified to in this case? A. Yes.

(Testimony of Thomas L. Phillips.)

Q. Was some of the concrete work installed in the tunnel during that period on a similar suggestion for modification of the arch to that which you had made to Mr. Boggs in August? A. Yes.

Mr. Wittschen: Just a moment. May the answer go out pending an objection?

The Court: I may go out.

Mr. Wittschen: Objected to as immaterial and calling for an opinion and conclusion of the witness, and on the further ground that the suggestions of the witness were not not part of the contract.

Mr. Smith: I asked him what he saw, and he has already said he saw the same thing being done which was recommended to Mr. Boggs. That is all I wanted to show by that answer.

The Court: I will sustain the objection. [1754]

Mr. Smith: Q. Mr. Phillips, how many times were you in there later,—in the tunnels,—during the month of February, 1936, if you recall?

A. I do not recall just how many times. I recall, however, that I was in there on February 19th.

Q. You have examined such records as you keep to ascertain that fact, have you? A. Yes.

Q. You have heard of this cave-in, testified to here, on the 22nd of February? A. Yes.

Q. That was approximately three or four days before the cave-in, then—three days? A. Yes.

Q. Did you observe the conditions at the point where the cave-in occurred on the 22nd of February?

A. Yes. I recall distinctly of going into all of the heading drifts in the north tunnel on the eve-

(Testimony of Thomas L. Phillips.)

ning of the 19th, and also going up on the catwalk and into the top heading.

Q. What did you observe of the work being done upon that occasion?

A. Well, the work looked about the same as it had theretofore. There was spotty ground, and the timber was taking weight in places in the tunnels. I observed various places where it was taking weight. However, I did not see anything that was alarming at all in that immediate vicinity, not any more than in the usual driving of a tunnel.

Q. Did you go into the tunnel later, after the cave-in, that month?

A. Yes. I was there about 4 or 4:30, right after the cave-in; I think about two hours or so after the cave-in occurred.

Q. You mean in the morning of February 22nd?

A. Yes, in the morning.

Q. What did you observe then, just briefly?

A. Well, I observed that several of the timber sets had fallen down, and a great cave [1755] had formed on the right-hand side of the north tunnel, approximately at Station 126 plus 75. This cave, or cavern, was still visible; and the material was falling in chunks intermittently down into the lower section of the tunnel.

Q. Was the material of a different character than the ground more generally met with going through?

A. Yes; the material was white and dark mate-

(Testimony of Thomas L. Phillips.)

rial mixed in places and some of the pieces that came out were almost all white; seemed to be kind of a brittle material; it was dry; had no apparent strength; it just seemed like it was in an area on the right-hand side of the tunnel and it was very hard to tell how far it extended.

Q. Had you seen the excavation being made at that point where this cave-in occurred shortly before it occurred, or right near it?

A. Well, right near it; I wouldn't say I saw it exactly at that spot.

Q. How long before the actual cave-in occurred, if you know, was the excavation made there; a few days, or a long time?

A. Oh, yes, it was made several days before that; in fact, that section of the tunnel where the cave-in occurred was fully timbered when I was in there on the 19th; I am satisfied of that; I checked that up, however, from the records, to find out that.

Q. How close was the concrete lining of the tunnel to the caved-in portion?

A. Well, it was more than 100 feet; I could not say exactly how far that was, but I would say probably 150 feet back.

Q. Did you see the timbers that had fallen down, after the cave-in, that came out? A. Yes.

Q. Had they apparently been defective, or was it any fault of the timbers, as you noticed them?

A. No; there was not any broken timbers that I saw.

(Testimony of Thomas L. Phillips.)

Q. When did you next go in the tunnels after the cave-in, after the [1756] first visit you made shortly afterwards; did you stay there or around there?

A. I stayed around there until about noon, as I remember it; and I think, if I recall correctly, I was there the next day.

Q. Was the work of the Contractor delayed as a result of the August cave-in? A. Yes, it was.

Q. About how long?

A. At least, 60 days, and probably considerably more.

Q. Was the work of the Contractor unavoidably delayed as a result of the February cave-ins?

Mr. Wittschen: That calls for his conclusion,—the word "unavoidably." That is for the Court to determine. I object to that particular question as asking for a conclusion that is not a matter of expert testimony to be construed by the contract. I have no objection to him stating how long in his opinion there was a delay.

The Court: "Unavoidably" will go out.

Mr. Smith: Q. Was the Contractor delayed as a result of the February cave-ins? A. Yes.

Q. What delays was he put to and for how long?

A. He was delayed because of the cave-in. It was necessary to squareset the tunnel.

Mr. Wittschen: The question was: "How long?"

Mr. Tinning: This is February; there was no squaresetting——

Mr. Smith: I will withdraw the question.

(Testimony of Thomas L. Phillips.)

Q. For how long was it delayed, Mr. Phillips, as a result of the February cave-ins, so far as you could observe?

A. My opinion is he was delayed at least 60 days.

Q. Going back to the August cave-in: what reasons delayed the work of the Contractor as a result of the cave-in?

A. The necessity for opening up the cave-in and concreting that section and [1757] allowing the concrete to thoroughly set before the forms and the squaresets could be removed so that the normal working conditions of the tunnel could be resumed.

Q. You saw what was done after the cave-in during the month of September and thereafter until the work of excavation was resumed, did you?

A. Yes.

Q. In stating the Contractor was delayed 60 days and possibly more, did you include the delay incidental to what was done afterwards before excavation was resumed further on in the tunnels; or do you attribute it directly to the work done at the point of the cave-in?

A. No; I attribute the estimate I have given you as the time delayed at each of the separate cave-ins, resulting in a considerable amount of anxiety from the Industrial Accident Commission.

Mr. Wittschen: I think the witness is going past the question. The anxiety of the Industrial Accident Commission will have to speak for itself in its letters and orders and not just a statement of that character. I ask it go out.

(Testimony of Thomas L. Phillips.)

Mr. Smith: It is not directly responsive; it may go out.

Q. Mr. Phillips, were there other delays indirectly resulting to the work, in addition or separate from the delays you mentioned as a result of the cave-ins? A. Yes.

Q. What were those delays and how long?

A. The squaresettings of the tunnels through the heavy ground section and the necessity for using wooden forms in concreting those sections.

Q. For how long did that delay the work, in your opinion?

A. That was somewhere between 30 and 60 days' delay.

Q. That is, in addition to the other delays you mentioned, which you attribute directly to the spot of the cave-in? A. Yes.

Q. Have you read the geology report, and examined the plans and examined the contract and the specifications, in this case? [1758]

A. Yes, sir.

Q. When did you do that?

A. I first saw the specifications and the geologist's report on August 5th. I made a trip——

Mr. Wittschen: Q. 1935?

A. 1935—I made a trip to Elko, Nevada, and, going and coming on the train, I went over the specifications and the geology report.

Mr. Smith: Q. You have kept yourself familiar with them since then? A. Yes.

(Testimony of Thomas L. Phillips.)

Q. Are you familiar with the clauses in the specifications concerning timbering and other clauses regarding the construction of the tunnel portion of the work? A. Yes.

Q. You are familiar with the time fixed in the contract for the completion of the work by the terms of the contract? A. Yes.

Q. Based on your knowledge of the facts, as you have testified, and on the documents themselves which you testified you were familiar with, what, in your opinion, was the progress which the Contractor could expect to make in tunnel excavation in the construction of these tunnels?

Mr. Wittschen: Objected to as immaterial and calling for the opinion and conclusion of the witness; and I particularly call the Court's attention that the rate of progress that he could make is not a matter of expert testimony. We further object to the injection of the geological report into the question, since it is no part of the contract. The Contractor was not required to bid on that. He took a contract to complete within 720 days. The evidence shows he was going to do it in 18 months, according to the first schedule. The opinion of the witness as to the progress that he should make is entirely beside the contract and immaterial.

Mr. Smith: The objection is not good, under the theory on which the plaintiff is presenting its case here, your Honor, and we [1759] would like to argue the objection to the Court, if your Honor desires

(Testimony of Thomas L. Phillips.)

argument upon it, because it is a matter involving expert opinion, in our judgment.

The Court: I am about to sustain the objection. Read the question.

(Pending question read.)

The Court: The Court is prepared to sustain an objection to that question.

Mr. Smith: Are you willing to permit us to discuss the matter with you before you rule upon it?

The Court: Certainly. I am only giving it to you so you can prepare yourself.

Mr. Smith: If it please the Court, this goes back to a position which the plaintiff takes in this case——

The Court: I have in mind the form of this question. Just let the reporter read the question again.

(Pending question reread.)

Mr. Smith: Well, there was no objection made as to the form by counsel.

The Court: Well, I had the question read for that reason.

Mr. Smith: It is a matter, your Honor, of asking for the opinion of this man who is certainly qualified as an expert on tunnels.

The Court: Q. Can you answer that question?

A. Yes, your Honor, I feel confident I can.

The Court: I am going to allow you to answer. I want to finish this.

Mr. Wittschen: Note an exception.

The Court: What is the answer? [1760]

(Testimony of Thomas L. Phillips.)

The Witness: A. About 10 feet per day in each tunnel.

The Court: "About 10 feet per day in each tunnel." Well, we got past that. Proceed.

Mr. Smith: Q. What are your reasons for making that statement?

Mr. Wittschen: Object to that as incompetent and immaterial and asking the witness to pass an opinion upon and construe a document which is for the Court to construe and not the subject of expert testimony, and also tying the geological report in, which is not part of the contract.

The Court: Read the question.

(Pending question read.)

The Court: Sustained. I have listened to reasons here for the last four or five weeks.

Mr. Smith: You have not heard the reasons given by this witness, your Honor.

The Court: Can he add anything to what has already been said?

Mr. Smith: I think your Honor is familiar with the code section which says an expert is entitled to give the reasons why he has expressed an opinion.

The Court: Oh, I am familiar with that.

Mr. Smith: And I think he will, your Honor.

The Court: In doing that, would it not be a repetition of what we have heard before?

Mr. Smith: No; I don't think anybody has stated what the anticipated progress would be, except Mr. Larson, who estimated the tunnels.

(Testimony of Thomas L. Phillips.)

The Court: I will let him answer.

Mr. Wittschen: Note an exception. [1761]

The Witness: A. That will take a rather lengthy explanation.

The Court: I anticipated that. Proceed.

A. In order to first make an estimate of the amount of progress that might be made in a tunnel, it must be first determined the kind of material or the character of the ground which may be encountered. After that is made, then, of course, comes the matter of organization, the matter of equipment and various other things.

The Court: We will all concede this tunnel could be dug more efficiently in the light of the experiences that we have all had since this work.

A. No; I don't think that is true, your Honor.

Q. You do not think that is true?

A. I think——

Q. I would like to ask you a question, myself; it may be helpful to me.

Now, after these cave-ins, they retimbered and they cemented the tunnels? A. Yes.

Q. At that very point and at that very time?

A. Yes.

Q. Why wasn't it done four months before?

A. It is customary to do all of the excavating through a tunnel before the concreting work is started.

Q. Yes. I am aware of that; but we had to have a disaster, and immediately when that occurred then

(Testimony of Thomas L. Phillips.)

we retimbered and then we see the necessity for finishing that off at that point.

A. Well, of course, that material had to be removed and so much additional timber put in as was necessary to concrete at that point immediately.

The Court: Yes. Proceed. [1762]

A. The most important thing in determining anticipated progress of the tunnel is to first come to a conclusion in your own mind as to the kind of material you expect to encounter and the rate of progress you can probably make in such material. Therefore, in this particular case, as I see it, the ground was represented to be self-supporting; this is borne out in the geologist's report, and in my opinion borne out in the specifications, and the contractor had a right to believe that he would encounter such ground; in other words, he had a representation of something that he did not find, and that is not a customary thing.

The Court: Do you think the geologist's report deceived him? A. Yes, it did deceive him.

Mr. Wittschen: I move to strike out the answer of the witness, particularly where he states the contractor was deceived by the geologist's report. The contract and the specifications provide that that is not to be considered in any way as a representation or an excuse for avoiding the contract or asking for additional compensation.

The Court: I am going to allow that to stand.

Mr. Wittschen: Exception.

(Testimony of Thomas L. Phillips.)

Mr. Smith: Q. What portion of the specifications do you have in mind?

Mr. Wittschen: Objected to as asking the witness to construe the specifications.

Mr. Smith: I am asking him to point out the part in the specifications.

Mr. Wittschen: It is invading the province of the court.

Mr. Smith: I am asking him to point out what portion of the specifications he had in mind. That is not invading the province of the court, at all.

[1763]

Mr. Wittschen: Let his Honor rule on that.

The Court: How is that subject to expert testimony?

Mr. Smith: I am just asking what portion of the specifications he had in mind.

The Court: He may answer.

Mr. Wittschen: Exception.

A. The one in particular in regard to the timber.

Mr. Smith: Q. Did those clauses regarding the timbering cause you to form the opinion that the ground would be self-supporting?

A. Yes, they helped to support that conclusion.

Q. That, in turn, was the basis of your conclusion as to the time the contractor would make?

A. Yes.

Q. Have you made an examination of the records of the company as to the progress that was made in the excavation on an average per day as against

(Testimony of Thomas L. Phillips.)

the 10 feet that you said the contractor should have made? A. Yes.

Q. How much was made, approximately?

Mr. Wittschen: Objected to as immaterial; the contract provides that the contractor shall do all of the work, and what he made has no bearing on this case.

The Court: I will allow him to answer with the hope that we will get through.

Mr. Wittschen: Exception.

A. About 4 to 5 feet.

Mr. Smith: Q. Your answer in that respect, does that include the time that the contractor was delayed? A. No.

Q. Was the 4 to 5 feet per day reduced by the delay? A. Particularly in the north tunnel.

Q. To what point was it reduced?

A. It was reduced to about 3 1/3 feet per day.

[1764]

Q. As I understand your testimony, then, the contractor would have made, would have had a right to make 10 feet per day and could only average 4 to 5 feet per day?

Mr. Wittschen: You repeat the answer in the question, and I object on the ground it has been asked and answered, and on the grounds previously stated.

Mr. Smith: I will withdraw the question.

Q. Was any delay suffered by the contractor as the result of the installation of reinforcing steel, in your opinion?

(Testimony of Thomas L. Phillips.)

Mr. Wittschen: Objected to as immaterial. The specifications provide that all the reinforcing steel that the District wanted might go in, and if they suggested their doing it they had no right to take advantage of the suggestion.

The Court: The objection will be sustained.

Mr. Smith: I would like, your Honor, to withhold your ruling until I suggest the purpose of the testimony.

The Court: I have listened to the purpose of the testimony heretofore. The Court has ruled.

Mr. Smith: Note an exception.

Mr. Alexander: We join in the exception.

The Court: Note an exception.

Mr. Smith: We offer to prove—I have a right to make an offer of proof, I assume, in connection with this?

The Court: Save your record.

Mr. Smith: We offer to prove by the question and the answer which the witness will give, the testimony which the witness will give in answer thereto, that the fact that the District greatly increased the amount of steel delayed the contractor; the testimony is not offered for the purpose of showing that the District did not have a right to increase the amount of reinforcing steel in the [1765] tunnel. The testimony will show that the District called for work done by the plaintiff, in approximately 10 per cent, of the work, installation of 300 per cent, as much steel, and in 50 per cent. of the work done by

(Testimony of Thomas L. Phillips.)

the contractor 200 per cent, as much steel, twice as much in 50 per cent, of the work and three times in 10 per cent. of the work. So as to make the illustration particularly appropriate, suppose they had ordered ten times as much steel, there could be no question that the contractor would have had to install it, we are not questioning that, nor are we offering to submit this testimony for that purpose, but we offer to prove that the contractor was necessarily delayed in the work as a result of putting in the steel. If there had been ten times as much steel installed that would certainly show the contractor suffered delay.

The Court: How much steel did they put in?

Mr. Smith: In 50 per cent, they put in twice as much, and in 10 per cent. they put in over three times as much.

The Court: Let us get the quantity. How much steel did they put in?

Mr. Tinning: That was testified to yesterday.

The Court: How much?

Mr. Tinning: Mr. Hindmarsh testified that in 50 per cent. of the tunnel extra steel was put in.

The Court: Of the entire tunnel?

Mr. Tinning: Of the entire tunnel, that is what he said.

The Court: If you have got a record on that what other record do you want?

Mr. Smith: We want to show how it would delay the work in the opinion of Mr. Phillips, who is an expert.

(Testimony of Thomas L. Phillips.)

Mr. Wittschen: The contractor agreed to put in whatever steel the District wanted. It must be assumed that was figured in the [1766] contractor's bid.

Mr. Smith: How could the contractor figure on the steel when the contract only called for one curtain, and they put in two curtains? They had the right to put in two curtains, but as we shall urge they must give us time. You cannot build a four-story house in the same time as a two-story house.

Mr. Wittschen: The delay was caused by the excavation. The steel went in and the concrete was within 125 feet of the excavation, so that only in 125 feet of tunnel would there be any delay. On top of that they subcontracted it.

Mr. Smith: That is not true. The work was delayed in fact and the witness will so testify.

The Court: I am concerned about one thing, no matter what this Court may do in this case, should there be an appeal, as I indicated at the outset, I want to give both sides a record, I want to be liberal, and I have got to keep that in mind. What is the question?

(Question read by the reporter.)

He may answer.

Mr. Wittschen: Exception.

Mr. Smith: You may answer the question. Did the installation of the additional steel delay the work. A. Yes.

Q. How much was the delay, in your opinion, and how was it delayed by that?

(Testimony of Thomas L. Phillips.)

A. It is pretty hard to tell how much it was delayed, but it is evident it was delayed, because it took a great deal longer to install the additional steel, and it took longer to place the concrete in the forms after the double curtain of steel was installed.

Q. How much timbering, in your opinion, was the contractor entitled to estimate was necessary to construct these tunnels under the plans [1767] and specifications, in ground of the character represented?

Mr. Wittschen: The same objection that was made on all of the grounds previously stated to a similar question on the excavation.

The Court: In the ground represented?

Mr. Smith: In the ground as represented.

The Court: Who represented the ground?

Mr. Smith: The District represented the ground.

The Court: I do not follow that.

Mr. Smith: Well, your Honor, the District gives notice to bidders inviting them to make a bid on a job. The bidder's attention is directed to the contract and specifications.

The Court: Yes.

Mr. Smith: To the proposed form of contract.

The Court: Yes.

Mr. Smith: And to the blueprints and drawings.

The Court: No doubt about that.

Mr. Smith: And to the geological report, which it states in the specifications is on file in the office of the District .

(Testimony of Thomas L. Phillips.)

The Court: Yes.

Mr. Smith: The contractor examines all of those matters, all of those documents, and forms an opinion as to what he is going to do in building these tunnels with that situation; he is invited also to make his own examination of the ground to the extent he could make it, which Mr. Larson did.

The Court: Wasn't he in the same position as the geologist who made the report?

Mr. Smith: Absolutely not, not at all.

The Court: Why?

Mr. Smith: I will tell you why, because the geologist's report is given to the owner, the District, and the District puts out that information for the purpose of guiding bidders as to the condition [1768] they will meet. That has been held in this Circuit.

The Court: I am clear on that.

Mr. Smith: And in the Passaic Valley Case it was held in the Second Circuit that even though the owners claimed that the contractor must not act upon it, that it does bind the owner; therefore, it becomes pertinent at this point and proper for Mr. Phillips to testify how much timber he would be justified in estimating he would use.

The Court: That is what I wanted cleared up. I may be in error. That is the reason I was inquiring. We have a geologist's report here that has been discussed from time to time. What would preclude the contractor from making a geological examination?

(Testimony of Thomas L. Phillips.)

Mr. Smith: 100 things, the first of which is the major obstacle; it would take months and longer to complete.

The Court: I can understand that.

Mr. Smith: And it would take long study, in addition to field work, which the contractor would not have time to do.

The Court: Is that all you have in mind?

Mr. Smith: That, I think, is sufficient.

The Court: I had that difficulty in mind.

Mr. Wittschen: Might I say the Passaic Case, nor the Sartoris Case that counsel says held the report as binding on the District, does not hold anything like that, and at the proper time I would like to argue it. I add to my objection that if it is a hypothetical question that it does not embody all of the things that should go into it. There is no representation as to any ground.

The Court: I will sustain the objection. Reframe the question.

Mr. Smith: Q. You stated, Mr. Phillips, that you have read the geological report.

A. Yes.

Q. And you are familiar with the conclusions therein stated? A. Yes.

Q. And you have read the specifications?

A. Yes.

Q. Examined the blueprints and plans?

A. Yes. [1769]

Q. And read the contract form?

(Testimony of Thomas L. Phillips.)

A. Yes, I have.

Q. And all of the pertinent documents that are mentioned in the contract? A. Yes.

Q. And you personally saw the tunnels during the time they were under construction, as you testified? A. Yes.

Q. You know the form of the bid that the contractor was required to make? A. Yes.

Q. Based on the information contained in the specifications and plans and the contract, and the geological report, how much timber was the contractor justified in estimating it would require to use in the construction of the tunnels?

Mr. Wittschen: Objected to as immaterial, and calling for the opinion and conclusion of the witness, asking the witness to construe documents that are not part of the contract, attempting to change the contract by parole, and invading the province of the court.

The Court: He may answer the question.

Mr. Wittschen: Exception.

A. Not more than one-fifth as much as was used.

Mr. Smith: Q. How much was used, do you know?

Mr. Wittschen: The same objection, on all of the grounds heretofore urged.

The Court: You may answer.

Mr. Wittschen: Exception.

A. I think there was in the neighborhood of seven million feet.

(Testimony of Thomas L. Phillips.)

Mr. Smith: Q. That was five times as much as should have been estimated, in your opinion?

A. Yes.

Q. You have estimated work in connection with the duties you have performed as an engineer, have you? A. Yes.

Q. What do you estimate in estimating for the construction of a tunnel, what elements do you consider?

Mr. Wittschen: Objected to as immaterial, and not aiding the [1770] Court in deciding any issue in this case. I have not tried to call your Honor's attention to any law, but if counsel is going to I am prepared to.

The Court: The objection will be sustained.

Mr. Smith: Q. Mr. Phillips, in duties which you have performed as an engineer have you exercised the powers of an engineer similar to those contained in the contract involved in this case?

Mr. Wittschen: Objected to as immaterial, and I have cases squarely in point that go to that very question. It is not a question of what was done by him in some other case, but what was done in this case, and that is for the Court.

Mr. Smith: That is what I am going to ask his opinion about.

Mr. Wittschen: I know you are, and that is why I am objecting on all of the grounds.

The Court: I am prepared to rule. The objection will be sustained.

(Testimony of Thomas L. Phillips.)

Mr. Smith: Would your Honor permit argument upon it?

The Court: No, I have ruled. You can ask him about something done in this case, not in other cases.

Mr. Smith: I was not going to ask him about other cases.

The Court: Your question did embody other cases. You asked him about other cases.

Mr. Smith: I will withdraw it and reframe the question.

Q. Have you had experience with the function of an engineer on a contract containing clauses conferring powers upon the engineer similar to those conferred in this case?

Mr. Wittschen: I object to that as entirely immaterial, and not binding upon this defendant in any way, and proving no issue.

The Court: What is the purpose of the offer?

Mr. Smith: It calls for merely a "Yes" or "No" answer as to [1771] whether he has had experience and is preliminary in laying a foundation for asking him what the practice is in connection with the facts of this case.

The Court: What facts?

Mr. Smith: The facts of this case concerning the right of the contractor to obtain an extension of time.

The Court: I will sustain the objection.

Mr. Smith: Note an exception.

Mr. Alexander: We join in the objection and exception.

(Testimony of Thomas L. Phillips.)

Mr. Smith: We offer to prove by the testimony of this witness that he has had experience in——

The Court: Now, wait just a minute. The Court has ruled; I want you to have a record, but I do not encourage the method of what you offer to prove. You have assigned your reasons, and the Court has ruled.

Mr. Smith: There has been nothing as to what the opinion would be. We offer to prove what the witness will testify to.

The Court: Proceed with your question.

Mr. Smith: With a statement of what he would testify to?

The Court: No, proceed along the line suggested. You ask the question and I will rule at the proper time.

Mr. Smith: Q. Mr. Phillips, have you exercised the powers of an engineer under contracts for construction work with clauses in them similar to those contained in the contract involved in this case?

Mr. Wittschen: Objected to as immaterial and calling for his conclusion as to whether or not the clauses are similar, and invading the province of the Court, and we are bound by what took place in this case and not in other cases.

The Court: The objection will be sustained.

Mr. Smith: Note an exception.

Mr. Alexander: We also join in the exception.

[1772]

Mr. Smith: Q. Mr. Phillips, have you read the clauses in this contract concerning the powers and

(Testimony of Thomas L. Phillips.)

duties conferred upon the engineer? A. Yes.

Q. You are familiar with them? A. Yes.

Q. Have you acted as an engineer under other contracts in a similar capacity to the engineer in this case?

Mr. Wittschen: Objected to on all of the grounds previously stated.

The Court: I want to give counsel a record. If he has some particular clause in the contract that he is relying on he can call attention to it.

Mr. Smith: I call the attention of the witness particularly to the language of Subdivision (e) of Section 6 of the General Provisions of the specifications found on page 5, regarding disputes, which reads as follows:—or is your Honor sufficiently familiar with it?

The Court: You may read it for the purpose of the record.

Mr. Smith: It has already been read into the record several times, unless your Honor wants it to be re-read.

Mr. Wittschen: Might I ask a question?

Mr. Smith: Yes.

Mr. Wittschen: Do you want to ask this witness if in his opinion as an expert he could settle the dispute in some other way?

Mr. Smith: Yes.

Mr. Wittschen: That is what I thought.

Mr. Smith: Not in that form.

Mr. Wittschen: I though that was the intention.

(Testimony of Thomas L. Phillips.)

Mr. Smith: I did not want to ask him the question in the form that you were putting it, no, of course not.

Mr. Wittschen: Go ahead and I will object.

Mr. Smith:

> "Disputes. To prevent disputes and litigation [1773] the District Engineer shall in all cases determine the amount, quality and acceptability of the work and materials which are to be paid for under these specifications. He shall determine all questions in relation to said work and materials and performance thereof, and all questions which may arise relative to the fulfillment or interpretation of these specifications on the part of the Contractor. His estimate and decision shall be final and conclusive, and in case any question shall arise between the Contractor and the District pertaining to the contract, the District Engineer's estimate and decision shall be a condition precedent to the right of the Contractor to receive any moneys under the contract."

Are you familiar with that clause, Mr. Phillips?

A. Yes, I am.

Q. Are you familiar with the clause which reads, in the same section, Subdivision (h):

> "Interpretation of Plans and Specifications. Should it appear that the work to be done or any matters relative thereto are not sufficiently detailed or explained in the plans and specifica-

(Testimony of Thomas L. Phillips.)

tions, the Contractor shall apply to the District Engineer in writing for such further details and explanations as may be necessary, and he shall conform to the same as part of the contract insofar as they may be consistent with the original specifications and plans. In the event of any doubt or question regarding the true meaning of the specifications, the decision of the District Engineer shall be final. In the event of any discrepancy between any drawing and figures written thereon, figures shall be taken as correct."

Are you familiar with that? A. Yes.

Q. There is one more, subdivision (c) of Section 4, subject "Time", found on page 3 of the specifications, reading as follows:

"Extension of time. The time during which the Contractor is delayed in said work by Acts of God, or by stormy or inclement weather, or by any reason which, in the judgment of the District Engineer, [1774] unavoidably delays the work, shall be added to the aforesaid time for completion, provided that the Board of Directors approve in advance the written application therefor, which must be made by the Contractor for such an extension, before the expiration of the time limit fixed herein, or a duly granted extension thereof."

Are you familiar with that? A. Yes.

(Testimony of Thomas L. Phillips.)

Q. Now, basing your statement on those clauses which I have read, have you exercised the functions of an engineer under similar clauses?

Mr. Wittschen: I make the same objection, on all of the grounds previously stated.

The Court: I am going to allow it.

Mr. Wittschen: Exception.

A. Yes, I have.

Mr. Smith: Q. What, in your opinion, was the duty of the engineer here in connection with the granting of an extension of time to the plaintiff?

Mr. Wittschen: Objected to on the ground it is immaterial, irrelevant, and invading the province of the Court, and calling for the opinion and conclusion of the witness.

The Court: This may assist the Court. On some of these matters this witness may assist me. I have some definite thought about it, but he may change my view. I wil allow him to answer.

Mr. Wittschen: Can I finish the objection?

The Court: Yes.

Mr. Wittschen: t invades the province of the Court, and asks the witness to construe the contract, and to make a different contract between the parties. I do not care to argue it, but there is a line of authorities that hold that that is improper.

The Court: He may answer.

Mr. Wittschen: Exception. [1775]

A. In my opinion it was the duty of the District Engineer to grant an extension of time for the

(Testimony of Thomas L. Phillips.)

reason that conditions were not found as they were expected to be found, and certainly over a period of two years there are a few days of inclement weather and other things that may be credited to the time of the contractor.

Mr. Smith: Q. Was the contractor unavoidably delayed, in your opinion?

Mr. Wittschen: I renew the objection on all of the grounds previously stated to the last question.

The Court: The Court will sustain the objection.

Mr. Smith: Q. In connection with the delays in connection with your handling of similar functions under other contracts what was the practice when the contractor asked for an extension of time?

Mr. Wittschen: Objected to as entirely immaterial.

The Court: The objection will be sustained.

Mr. Smith: Note an exception.

Mr. Alexander: Also an exception.

Mr. Smith: I offer to prove by this witness that in the exercise of similar functions which he has testified he does and has done that it is customary for the engineer to call in the contractor and to review the conditions on the ground with the contractor, consider the contractor's reasons, discuss the subject fully with him, and make a recommendation based on careful examination of all of the evidence concerning the subject, which was not done in this case, and the evidence shows it was not done.

(Testimony of Thomas L. Phillips.)

The Court: Proceed. The Court has ruled. The objection will be sustained.

Mr. Smith: Exception.

Mr. Alexander: Exception.

Mr. Smith: Q. What is the definition of overbreak as that term is [1776] used in a contract for excavation of a tunnel, Mr. Phillips?

Mr. Wittschen: Objected to as immaterial, calling for the opinion and conclusion of the witness upon a matter which is not ambiguous, and stated in the agreement.

Mr. Smith: It is purely a preliminary question,

The Court: You may answer.

Mr. Wittschen: Exception.

A. Overbreak is the amount of material that is removed from outside of the lines of necessary excavation.

The Court: We will take a recess now until two o'clock.

(A recess was here taken until two o'clock p. m.)

[1777]

Afternoon Session

THOMAS L. PHILLIPS,

recalled.

Direct Examination (continued)

Mr. Smith: Q. During the morning, Mr. Phillips, the Court asked you a question about why the

(Testimony of Thomas L. Phillips.)

concrete had not been kept no closer in connection with the cave-ins. Did you have something you wanted to add to your answer to the Court's question?

A. Yes. I would like to add that it would not have mattered when the concreting was done before the cave-in of August 28, 1935, because the timbers would have to have been moved back, anyway, and, from good authority, I have been informed that the settling of that timber into the concrete area occurred directly after it was placed.

The Court: Q. To be frank with you, the thing I had in mind was the method and manner of proceeding with the work. The methods employed here, I take it, were the most economical methods, under the conditions; is that true?

A. Yes, I believe it was, probably.

Q. If other methods had been employed, it follows that it would have been more costly than the methods here used?

A. No; not that it would have been only more costly, but would have retarded the operation of the work. Further, your Honor, the second cave-in occurred at a point about 35 or 40 feet back of the face and right directly over where the shovel and excavated material was being worked. It could not have been concreted at that point.

The Court: Proceed.

Mr. Smith: Q. Under the contract and the specifications here, was the Contractor justified in driving the tunnels from the west end only?

(Testimony of Thomas L. Phillips.)

Mr. Wittschen: Just a moment; object to that as immaterial and calling for a conclusion and opinion of the witness. It proves [1778] no issue.

Mr. Smith: The testimony is offered for the purpose of showing, your Honor, the Contractor was justified in estimating and figuring and planning that the contract could be performed and performed well within the time limit and properly under the representations contained in the specifications by driving from the west end only.

Mr. Wittschen: Could I add to my objection: it is argumentative? It is certainly apparent he could have driven from either end if he wanted to. There is nothing here to inhibit him in that; he was not prevented; and later on, he did drive from the east end.

Mr. Smith: The testimony will show, your Honor, that if the contract was submitted to any person skilled in the art of building tunnels he would have estimated to do the work in the manner in which the plaintiff in this case estimated to do it, namely, by driving from the west end only, because of the conditions that were held out and represented. We are entitled to have the opinion of an expert that that was the proper way to estimate these tunnels. That is the purpose.

The Court: Was it because it was the most economical way?

Mr. Smith: No. Because it was the intelligent way to do it.

(Testimony of Thomas L. Phillips.)

The Court: What would you base that intelligence on?

Mr. Smith: That is what the testimony will show: if any tunnel builder would have figured to do it——

Mr. Wittschen: There is nothing physically impossible about driving from either end.

The Court: It seems to me the answer to that is they were at liberty to construct the tunnels from either or both ends.

Mr. Smith: Your Honor, the specifications provided for muck [1779] disposal at the west end. Your Honor is familiar with that testimony. The facts are that the tunnels had a grade rise of four per cent commencing at the west end and going to the east end. The facts are that driving uphill from the downgrade side is the way to do it for getting proper drainage, particularly where the muck to be taken out of the tunnels is to be used in the embankments which are located at the end where the muck will come out,—the downgrade end. We want to show, in the opinion of this witness, the Contractor was justified in concluding that that was the intelligent way to tackle the job from the information furnished.

The Court: I don't know how the Court is going to measure that intelligence.

Mr. Smith: Well, the opinion of an expert is proper testimony upon which your Honor could base his conclusion.

(Testimony of Thomas L. Phillips.)

The Court: What is the question, Mr. Reporter?

(Pending question read by the reporter.)

Mr. Wittschen: It is not a question of justification. He could have done it that way; he could have done it any way he desired; and he did do part of it at the east end.

The Court: He attaches to that question "under the plans and specifications."

Mr. Wittschen: Well, he was not required to drive it——

The Court: I understand it fully. I will allow him to answer the question.

Mr. Wittschen: Exception.

The Witness: A. According to the location of the——

Mr. Smith: Q. Answer the question "Yes" or "No," and then give your reasons.

(Pending question reread by the reporter.) [1780]

The Witness: A. Yes. According to the location of the center line and the established grade, there was no room for the disposal of any of the material at the east end of the tunnels, because the grade and the center line connected up with the existing highway. The disposal area provided for material was all at the westerly end of the tunnel. The drilling of a tunnel from the lower end, or downgrade end, is a customary thing to do when there appears to be a sufficient amount of time to do the work in that manner.

The progress schedule, as filed by the Contractor in February, 1935, showed that this tunnel would

(Testimony of Thomas L. Phillips.)

be all driven from the west end; and this progress schedule,—there was not to my knowledge or from my inquiries any objection made by the District——

Mr. Wittschen: I ask that go out as not an expert's opinion, and argumentative.

The Court: It may go out.

The Witness: A. If the Contractor had chosen to drive the tunnel from both ends, it would have duplicated the amount of machinery and the equipment; and the topography of the locality was such that there was very little room for the establishment of such machinery and equipment at the easterly end. There was no space for disposing of the material; and, had the Contractor excavated a considerable amount of tunnel from the easterly end, to dispose of that large amount of material it might well have been that there would not have been enough suitable material from the westerly end to make the roadway embankments. Therefore, he would have had to have found enough material to make up the difference. If the material in the tunnel had been as represented, there is not any question in my mind but what the progress,—sufficient progress could have been made to have completed the tunnel from the west end within [1781] the time allowed in the contract.

Mr. Wittschen: I ask that the part beginning "if the material had been represented" go out.

The Court: It may go out.

(Testimony of Thomas L. Phillips.)

Mr. Smith: It is entitled to remain in, I think, as one of the reasons; he stated he read the documents.

The Court: The language "as represented" may go out.

Mr. Smith: The words "as represented"?

The Court: Yes.

Mr. Smith: Q. Does the effect of water have any bearing in your experience?

A. Yes; water has a great deal of bearing. If water had been encountered, as it usually is in tunnels,—it is not a constant flow; it fluctuates,—and it may well have been that more water would have been encountered in places than the pump installation would have taken care of. Therefore, there is a very great likelihood of flooding the tunnel, which would not only have been a delay to the Contractor but might have caused serious injury to the structure through which the tunnel passes.

Q. You are referring to water at the east end?

A. If the driving is done from the upgrade end.

Q. If the driving is done from the upgrade end. I think we were asking you a question about overbreak just at the beginning of the noon recess; and you had defined overbreak. In a tunnel of this size, what was the necessary amount of excavation that you observed had to be done under the conditions that were encountered and that you saw when you were in the tunnels from August of 1935 to June, 1936?

(Testimony of Thomas L. Phillips.)

A. The necessary excavation would extend to a line 3 inches, or approximately 3 inches, back of the lagging.

Q. How much would that be outside of the line of the designed concrete section?

A. 1 foot and 9 inches. [1782]

Q. Have you made a computation of what the yardage is in the neat section and in that extended section? A. Yes, sir.

Q. In approximate figures. Did you also compute the actual excavation that was made by the Contractor? A. Yes.

Q. What percentage of excavation beyond the necessary excavation was made by the Contractor, compared with the total excavation?

Mr. Wittschen: Objected to as immaterial. The Contractor had control of his own work, and presumably he excavated as far as he had to in order to set the timbers.

Mr. Smith: The testimony, of course, your Honor, is directed to showing by the amount of work the Contractor had to do in order to construct the tunnel, in order to show what was necessary for the Contractor to do, and the time that it did take them to do it. The design contained in the plans and specifications submitted by the District called for the installation of a neat section of concrete lining, with no design shown for the installation of any timbers outside of that line. In addition to putting a concrete lining in, the Contractor had to

(Testimony of Thomas L. Phillips.)

put, throughout the tunnel, permanent timbering, which took, as the witness said, a minimum space of 21 inches in width outside of the circumference or outside line of the designed concrete section. In addition to that, 3 inches is allowed behind the lagging, according to the answer the witness just gave; and it makes a total of about—well, that is in the 21 inches. In addition to that, there would be what is called "overbreak," as he defined it; and we want to show the percentage of overbreak in this case was normal and in accordance with good tunnel practice, and that is all.

Mr. Wittschen: That is just what I objected to: and he said that was good tunnel practice, or anything of that kind. The Contractor had full control of his work. If he wanted to break over [1783] 6 inches or 21 inches or 30 inches, that was his privilege. He agreed to build a tunnel that had a concrete section of a certain width. The question of overbreak, what is normal in other tunnels, or whether it was abnormal or otherwise, is no concern of ours. They agreed to do it.

Mr. Smith: The point is: they did it as fast as could be done; and it tends to prove we were entitled to the time,—further time,—to do the job.

Mr. Wittschen: Well, let us suppose they met with flood control work: they agreed to do it in an impossible time; that is their business and nobody else's. They did not have to take the contract. So, I think all this evidence is immaterial.

(Testimony of Thomas L. Phillips.)

Mr. Smith: But the evidence shows what this amounts to in the specifications and plans and drawings and the geological report——

Mr. Wittschen: Are you claiming now that some drawings misled you, too?

Mr. Smith: Certainly.

Mr. Wittschen: That is the first time I heard of that.

Mr. Smith: Mr. Larson so stated. Mr. Larson stated there was no design for any timber layout in the drawings, and that customarily where timbers are——

Mr. Wittschen: No. He stated——

Mr. Smith: He certainly did.

Mr. Wittschen: If there was no design there, there was nothing that misled them.

Mr. Smith: That is the point. Where there is no design, it is no indication that permanent timbers will be installed; so the design confirms the——

Mr. Wittschen: I don't agree with Mr. Smith that the absence of a design has misled him. [1784]

The Court: There is much I do not agree with Mr. Smith about, and I am trying to protect this record. I indicated to both sides that would probably be the only comfort that one side would have when we are through. I know something about the practice here. When these matters go to the Circuit Court, there are offers of proof and rambling stories that never impressed me from the standpoint of any

(Testimony of Thomas L. Phillips.)

controversy. However, I have some definite ideas about those matters myself, all of which an Appellate Court or anybody else may not have, but I still retain them until my mind is disabused of them. I am striving to get a full hearing and give a full opportunity to both sides; and I want to allow every reasonable latitude, and I have tried to indicate, without doing violence to anybody's rights, my state of mind without divulging on that point where our task seems useless here. Do I make myself clear?

Mr. Wittschen: Possibly.

The Court: With that admonition, again we will try to proceed and get the merits of this case.

Q. You may answer the question. Proceed.

The Witness: Would you read the question, please?

(Pending question read by the reporter.)

The Witness: A. About 8 per cent.

Mr. Smith: Q. Is that a normal amount of overbreak? A. Yes, it is.

Q. Referring to the shooting methods employed by the Contractor, did you observe them at all during the times you were in the tunnel?

A. Yes; a few times.

Q. Were the shooting methods adopted and pursued by the Contractor, so far as you know, entirely sound and in accordance with the usual practice?

A. Yes, I believe they were.

Mr. Smith: That is all. [1785]

(Testimony of Thomas L. Phillips.)

Cross Examination

Mr. Tinning: Q. Mr. Phillips, this morning I understood you to say that it was customary in tunnel construction to do all of the excavating and then follow through and put in the permanent lining?

A. That is customary in many places, and has been done in many tunnels.

Q. It has not been done in many other tunnels, has it, Mr. Phillips?

A. Well, a good many other tunnels.

Q. Well, what has been the usual practice in the San Francisco Bay region? Would you say it was customary to construct those tunnels by driving through the excavation and completing the excavation and then putting in the permanent lining?

A. Well, I am not fully familiar with all the tunnels in the San Francisco Bay area.

Q. Are you familiar with the Yerba Buena Tunnel on the San Francisco Bay Bridge?

A. No; not fully familiar with it.

Q. You were quite familiar with the Broadway Tunnels. Didn't you know anything about the Yerba Buena Tunnel that was being constructed at the same time? A. Not very much; no.

Q. You know, as a matter of fact, that tunnel was not fully excavated before the lining was placed? A. That might be true.

Q. Well, that is one exception to the custom that you testified to?

(Testimony of Thomas L. Phillips.)

A. I do not know anything particularly about the Yerba Buena Tunnel, as I testified to.

Q. Well, you are testifying, as to custom, as an expert; and I assume, from that, that you have in mind the custom throughout this vicinity where the Broadway Tunnel was built.

A. No; that is not my answer. I said it was customary in some tunnels to do that, and I know of several tunnels where such work has been performed.

The Court: Q. Tunnels that they had to support?

A. Yes, tunnels that they had to support. [1786]

Q. In this vicinity here? What one have you in mind?

A. Your Honor, I don't know of any tunnels in this vicinity where they were entirely driven before they were concreted. However, the Oakland Antioch Tunnel, which is in this vicinity, was driven and timbered and is still standing timbered about half of its length. The concrete was placed in there,—the major part of the concrete that was placed in there was several years, or a few years, after it was built.

Mr. Tinning: Q. Is it customary to have collapses, cave-ins, in tunnels during construction?

A. Well, it occurs occasionally.

Q. Would you say it was a customary and usual thing in the construction of a tunnel?

A. No; I wouldn't say it was.

(Testimony of Thomas L. Phillips.)

Q. They had a cave-in in the Oakland Antioch Tunnel, did they not, during construction?

A. I understood they had, yes.

Q. A cavity was in the roof, and had to be filled up? A. I heard of that, yes.

Q. I believe that tunnel was constructed about 1910 or '11,—somewhere in that vicinity. Since that tunnel has been constructed, it required a great deal of maintenance in the timber, did it not?

A. I think it does, yes.

Q. And it had to be concreted, in part?

A. Well, it has been concreted at least in part.

Q. And in a number of the tunnels that you referred to, that you directly had to do with, both during construction and during maintenance, you have concreted tunnels in ground that was difficult, heavy ground?

A. You refer to the tunnels in Alameda County?

Q. No; I was thinking particularly of some of those that you referred to up in the Western Pacific, in your work as the assistant [1787] engineer; I think you mentioned one called the Spring Garden Tunnel, where you concreted?

A. That is correct.

Q. So it is customary in tunnels that are timber lined in ground that has weight upon it, where you are able to do it, and it is safe to do it, to keep it safe for construction, to put a permanent lining in it?

(Testimony of Thomas L. Phillips.)

A. That depends on whether it is an economical thing to do or not.

Q. Entirely on whether it is economical; not on safety?

A. Well, the safety feature would probably be one of the considerations.

Q. Isn't that the primary feature, so the trains can go through and the tunnel won't fall on them?

A. Well, railroad tunnels are carefully inspected. I would judge, if it came to the point where it was figured that the tunnel timber lining was not safe to operate through, why, of course, some other lining could be constructed.

Q. If the maintenance of the timber comes to a point where it makes it justified putting in a permanent lining, that is an economical feature, is it not?

A. Yes; that is the proper thing to do.

Q. Do you know the Waldo Tunnel which is on the north approach to the Golden Gate Bridge?

A. I know where it is.

Q. Have you been through it, Mr. Phillips?

A. I have driven through it since it was completed.

Q. Did you know that that tunnel was lined before it was fully excavated?

A. Yes, I understood it was.

Q. Was that done in the customary manner?

A. I did not refer to all tunnels being held open and not concreted until they were completed as a

(Testimony of Thomas L. Phillips.)

customary manner. I said that was customary to do that in some instances. [1788]

Q. Well, I think, in fairness, Mr. Phillips, your statement was that it was customary to do all of the excavation and then put in the lining. Those are the words of your testimony.

A. I did not say in all the tunnels.

Q. Well, what tunnel were you referring to when you made that statement?

A. That was the custom on some of the tunnels that I know of, and that was our custom on the Western Pacific.

Q. Was the Western Pacific tunnel that was driven in 1903 and 1904, in Niles Canyon, driven all the way through and then the lining put in afterwards?

A. With the exception of the concrete at the west portal and a section of concrete under the point where the Spring Valley Water Tunnel crossed over it.

Q. There was considerable difficulty encountered in the construction of that tunnel, was there not? A. Yes, there was some difficulty.

Q. The contractor left the work before it was completed, did he not?

A. Well, the contractor left the work with an understanding of the company.

Q. On 15 minutes?

A. No. The contractor felt that he did not want to complete the work, and the company agreed

(Testimony of Thomas L. Phillips.)

that they would take it over. There was not any radical dispute or any trouble over it.

Q. What was the name of the company that constructed that tunnel?

A. E. B. and A. L. Stone Company.

Q. Were any of the Bechtels in that work for the E. B. and A. L. Stone Company? A. No.

Q. Were any of the Bechtels employed by the Western Pacific in the completion of the tunnel after the contractor left? A. No.

Q. Now, with respect to your statement regarding customary methods [1789] of driving a tunnel to do all of the excavating and then put in the lining: Do you know the Stockton Street Tunnel here in San Francisco?

A. May I call your attention that I did not say that.

Q. Will you answer the question and then call my attention to your explanation?

A. Yes, I know the Stockton Street Tunnel; but I did not testify that that was the customary thing to do in all tunnels.

Q. Do you know the vehicular tunnel at Point Richmond that parallels the Santa Fe Railroad Tunnel? A. Yes, I know where it is.

Q. Isn't it a fact that that tunnel,—the lining was put in before the excavation was completed?

A. I don't know.

Q. Do you know that? A. No.

Q. Do you know the Figueroa Tunnels, built in Los Angeles, on Figueroa Boulevard, in 1931 and 1932? A. I have heard of them.

(Testimony of Thomas L. Phillips.)

Q. Do you know, in those tunnels, that the lining was placed before the excavating was completed?

A. No; I do not know.

Q. And that the tunnel was supported against the core while the lining was being placed?

A. No.

Q. Those tunnels are tunnels somewhat larger than the Broadway Tunnels involved here. You don't know anything about that?

A. Well, I know it is quite a good-sized tunnel, but I don't know anything in particular about the construction or the construction methods.

Q. Do you know the construction methods of the Hollywood Tunnel? A. No.

Q. In Los Angeles. Do you know the Sepulveda Tunnel in Los Angeles? A. No; I don't.

[1790]

Q. Do you know about the Southern Pacific Bayshore Tunnel No. 4 here in San Francisco?

A. I know a little something of that, because that tunnel was just about finished at the time I came to San Francisco.

Q. Well, you know that that tunnel was lined before the excavation was completed.

A. I think probably you are right about that.

Q. Isn't it also true that Southern Pacific Bayshore Tunnel No. 1 was lined before the excavation was completed?

A. I am not so sure that I know about that.

Q. In arriving at your conclusion as to the customary and proper methods of driving the Broad-

(Testimony of Thomas L. Phillips.)

way Tunnel, didn't you make a study of the manner in which other tunnels in the Bay area had been driven?

A. Yes, of course I have done a good bit of thinking and reading about tunnels; and the tunnels that I have referred to as being driven through, and fully timbered where timber was necessary, was because I classed them by the kind of a tunnel it was. This tunnel was expected, or evidently expected, to be, from the geological report and the specifications, to be built through self-supporting ground. [1791]

Q. Will you please give us now a list and the dimensions of each of the tunnels which you used as a criterion in arriving at your statement that it was customary to do all of the excavation before putting in the lining, give us the location, the name of the tunnel, and the size?

A. A great many of these tunnels, in fact the major portion of them, as I understand it, on the Metropolitan Water District, in Southern California, were driven and timbered where necessary before concreting.

Q. What is the size of those tunnels?

A. I think they are about 16-foot tunnels, something of that kind, in size.

Q. Do you figure those comparable with a tunnel 35 feet in breadth and about 30 feet high?

A. Well, I would not make very much distinction in the size, so long as you expect to find the ground self-supporting.

(Testimony of Thomas L. Phillips.)

Q. You do not think the size has much effect upon the problem of how a tunnel should be driven?

A. Not a great deal, if you have good ground.

Q. You differ from Mr. Larson and some of the other experts who testified here earlier in the case?

A. I don't know that I differ from them.

Q. What about the character of materials through which the Metropolitan Tunnels were driven, were they comparable with these—there are some ninety miles of tunnels in the Metropolitan project. Have you seen the tunnels?

A. No, I have not seen the tunnels.

Q. Now, we have got the Metropolitan and you have not seen them. So your knowledge of what it might be is based upon reading, and from your reading did you ascertain that a very large proportion of these tunnels were through hard rock?

A. The character or hardness of the rock has very little to do with the driving of the tunnel, that is the supporting feature of the tunnel; it is the self-supporting feature that I am referring to.

[1792]

Q. Wouldn't you say that if a tunnel was driven through hard rock it was self-supporting?

A. If it was driven through hard rock?

Q. Yes.

A. Not necessary. Hard rock is sometimes very blocky and will not hold up any better than soft stone.

(Testimony of Thomas L. Phillips.)

Q. Then in the plans and specifications, would you say that the fact that no support was required indicated to you that any particular kind of material was going to be encountered by you?

A. It would not make much difference, so long as it was supposed to be and estimated to be self-supporting ground.

Q. Whether it was hard or soft, if it was self-supporting that would be sufficient?

A. That is correct.

Q. As a matter of fact, the Metropolitan Water District tunnels are largely driven through hard rock, are they not?

A. I presume they are, some in hard and some in not so hard.

Q. And much of the Metropolitan District water tunnels did not require any timbering?

A. I think the major portion of them required timbering.

Q. Did you ever see the White Water tunnel?

A. No.

Q. Right at Banning? A. No.

Q. Isn't it a fact that there is a tunnel some three miles in length in which there is not one piece of timber? A. I don't know.

Q. Do you know the San Jacinto Tunnel?

A. I have heard of that tunnel.

Q. Is there timber in that tunnel?

A. I understand that a great deal of that tunnel is not timbered.

(Testimony of Thomas L. Phillips.)

Q. Name one of the tunnels on the Metropolitan Water District that is timbered?

A. I am not familiar with the names in my mind at the present time, but I think probably it is a fact that a greater portion of the Metropolitan District tunnels were timbered to some extent before they were concreted. [1793]

Q. You are not able to name one of them?

A. No, I am not.

Q. Can you name one of them that was not driven from both ends? A. No.

Q. You do know they were driven from both ends, do you not? A. No.

Q. You apparently have a rather vague idea of the details of that operation?

A. That is right.

Q. Now, name us some other tunnels upon which you base your opinion that it was customary to drive through before placing the permanent lining?

A. The P. G. & E. drove a tunnel at their Pit plant No. 3 in Shasta County—I cannot tell you the length of the tunnel but as I remember it was 19 or 20 feet in diameter.

Q. In the Sierras?

A. In the Sierras. And as I remember it some three miles in length. I have been informed, and I believe correctly so, that that tunnel was driven its full length fully timbered before it was concreted.

Q. Were the timbers taken out before the tunnel was concreted?

(Testimony of Thomas L. Phillips.)

A. No, the timbers I think were concreted in.

Q. Through what type of material was that tunnel driven?

A. That was a variable type of material.

Q. Granite?

A. No, I do not think it was through any granite.

Q. What kind of material was it driven through?

A. Well, it was commonly called soft ground tunnel, or largely soft ground tunnel.

Q. You don't know the names of any of the types of material?

A. No; that does not matter much in tunneling.

Q. Was that tunnel driven from both ends?

A. I think it was driven from both ends and probably some side adits.

Q. Was it necessary to pump out from the adits, pump water?

A. I think it would be if they drove down hill from the adits, I think they would have drained on the uphill side.

Q. Was there water encountered in the tunnel in driving?

A. I don't know whether there was or not.

[1794]

Q. What other tunnels did you base your statement on as to the customary method?

A. That is customary with the tunnel work done on the Western Pacific.

Q. So that your custom that you refer to is based on your operations on the Western Pacific?

(Testimony of Thomas L. Phillips.)

A. Largely.

Q. And not around San Francisco Bay?

A. Except the tunnels of the Western Pacific that are around San Francisco Bay.

Q. Now, let's go back to some of these tunnels around here. Is there any tunnel on the Western Pacific that has a width equal to the width of the Broadway Tunnel? A. No, there is not.

Q. Is there any tunnel on the Western Pacific that has a height equal to the height of the Broadway Tunnel? A. No.

Q. Do you consider that there is any tunnel on the Western Pacific that is driven in comparable material to the Broadway Tunnel?

A. Yes, I think probably the two tunnels in Niles Canon are fairly comparable.

Q. Were those tunnels in Niles Canon driven from one end or both ends?

A. They were driven from both ends.

Q. When you said that there was no space to place the material being excavated if the Broadway Tunnel had been done from the east end, did you have in mind that some 25,000 yards of material was placed in the gulch along the Fish Ranch Road by Six Companies during construction?

A. Yes, I remember that.

Q. Under the terms and specifications in this case the contractor had a right, if he wanted to have some place to put the material, all he would have to do would be to build a highway in accordance with the plans and specifications?

(Testimony of Thomas L. Phillips.)

A. Yes, but my answer to that was that the District did not provide any space.

Q. The plans and specifications state that the contractor must find a place to waste all of the dirt that he was unable to waste on the District right of way, and it was up to the contractor, was it not? [1795] A. I think that is correct.

Q. He did do that on the west side of the project, did he not, with a large amount of waste?

A. Yes, but the contractor at that time was apparently trying to, if possible, meet his completion date; therefore he started to work on the easterly end and went to the trouble and expense of finding a place and hauling the material to the place of disposal.

Q. Now, with respect to delay, you apparently made a study of the contractor's records in this case, although you did not come into contact with it until August, 1935; you talk about delay, do you know anything about the time that the contractor started underground on this tunnel?

A. Yes, I know something about that.

Q. And that he stopped his work for three or four weeks in August of 1934 while the subcontractor finished the foundation of the west portal building? A. That was ahead of my time.

Q. Did you consider that when you were discussing delay? A. No, I did not.

Q. Did you consider the fact that when the contractor poured the west portal rings, the first ap-

(Testimony of Thomas L. Phillips.)

proximately 100 feet of permanent lining in this tunnel in October, 1934, that he had no concrete plant on the job?

A. That was before my familiarity with this work.

Q. Now, do I understand that all of your considerations of delay and all of this testimony with respect to contractor's delays on this job are from the time you first knew it?

A. That is correct.

Q. So that prior to the time that you came on the work, or took the work up, which I think you said was August 5, 1935—

A. That is correct.

Q. When you were going on a trip over to Nevada, you took up the [1796] plans and specifications and made a study and then you came back and inspected the tunnel on August 8, 1935?

A. I do not think it was the 8th, I think it was the 11th or somewhere along there.

Q. Your memory is probably better than mine. You have not considered in your estimate of delay anything prior to the time you took up the study of the project? A. That is correct.

Q. You say the placing of the steel delayed the excavation of the tunnel?

A. The tunnel work was closed down because the timbers were showing weight, and in order to catch up with the concrete work and the placing of the steel did not necessarily delay the excavation,

(Testimony of Thomas L. Phillips.)

but it delayed the catching up of the concrete with the excavation so that the excavation could not proceed.

Q. If the contractor had followed along with the orderly procedure of placing the concrete lining and keeping it at approximately a uniform distance behind the excavated face, there would have been no delay attributable to the cause that you have just stated, would there?

A. That is true, but that needs a little explanation. The schedule submitted by the Six Companies to the District in February, 1935 provided for the concrete lining to start six months behind the excavation schedule. This schedule was submitted to the District and apparently no objections were raised, therefore the contractor figured that the schedule was satisfactory to the District.

Mr. Tinning: We ask, if your Honor please, that the witness' answer go out as a conclusion and not responsive to the question.

The Court: It may go out.

Mr. Tinning: Q. Mr. Phillips, if the contractor had followed the excavation with concrete lining in an orderly manner, 100 feet, or 200 feet, or any given distance, the placing of the steel would not have delayed the completion of the work, would it?

[1797]

A. I am not so sure about that.

Q. How could it have delayed the completion of the work?

(Testimony of Thomas L. Phillips.)

A. Well, the necessary time to place the forms, place the steel and the concrete might have taken as much time or more time than the actual driving.

Q. Well, do the records of the contractor show at any time when he was proceeding with the concreting in an orderly manner following along behind that he had any difficulty in keeping up with the excavation? A. No, I think that is true.

Q. It is true he had a 27-foot form, and when he kept his concrete up he was always able to keep his pour so that he would keep his form within approximately the same distance of the excavated section?

A. I think after the concreting was caught up that is probably about correct.

Q. How much longer would it take to place two curtains of steel in the concrete forms than it would to place one, in hours?

A. Well, that is problematical, because in the first place it depends entirely on how much steel is in each curtain, or how much more curtain there would be in two curtains than in one curtain.

Q. Of course, I am only a lawyer, but you said that there were two curtains placed; how much longer did it take on any of these places, I am not talking about where there had been a cave-in, but I am talking about a place of normal operation with forms, steel forms, and where there were two sets of reinforcing steel. As I understand it, I may be getting in deep water, but the plans provided for a

(Testimony of Thomas L. Phillips.)

standard integral reinforcement of a lining or curtain that was placed just inside of the lining over the tunnel and that where extra reinforcement was put in that it was raised about 18 inches above it, so that it was near the outside surface of the concrete. Am I correct about that?

A. Yes, you are correct. [1798]

Q. Take what was actually done in the tunnel at some place you have given this as a source of delay; tell me how many hours in placing one of these forms, placing the additional reinforcing steel in that manner, occupied?

A. Well, I could not tell you how many hours. The only thing I could possibly do to answer your question is to say that if the curtains were to be of the same make-up it would probably take at least twice as long to place two curtains that it would one.

Q. How long did it take to place one?

A. I don't know.

Q. How, then, if you don't know how long it would take, can you say it caused delay?

A. I know that it would take more time to place two curtains than it would one, and not only that, it would take more time to put in the concrete.

Q. Why does it take more time to put in two curtains than one?

A. Because there is twice as much work.

Q. Couldn't you put twice as many men on?

A. No, I doubt if you could work twice as many men under those confined conditions.

(Testimony of Thomas L. Phillips.)

Q. How many men did the Six Companies use in placing the steel?

A. I don't know how many.

Q. You don't know? A. No.

Q. So you don't know, Mr. Phillips, whether or not it would take them twice as long to place two curtains as one?

A. Yes, I am satisfied I do know.

Q. You think you do, although you don't know how many men they had on it, or whether or not they could have put additional men, or whether they did put additional men on?

A. No, I don't know, but I have had experience in placing steel in confined places, and I am satisfied it would take longer.

Q. You said a few minutes ago that the schedule furnished by the Six Companies on February 9, 1935, under which they planned to have the concrete follow the excavation by a period of six months. Will you [1799] show us what you mean on this, Mr. Phillips? I am showing you my copy of Defendant's Exhibit O.

A. This is substantially correct. That is what I had reference to.

Q. In other words, you referred to the schedule which was furnished which showed they planned to commence concreting on the 1st of May, 1935?

A. No, the 1st of June.

Q. The 1st of May?

A. I was off a line. That is correct.

Q. My memory was not clear on it and I was

(Testimony of Thomas L. Phillips.)

trying to be sure that we were talking about the same thing. What does this chart signify to you, Mr. Phillips, with respect to the word "concrete"? Where does excavation show on this chart? I guess that must be it started November 1, doesn't it?

A. I think that is correct.

Q. When you were talking about six months you were referring to May 1, as shown on this chart, and it is a fact that the excavation was started about November 1 after these first rings were put in? A. Yes.

Q. When you went into this tunnel in August did you inspect the tunnel timber in detail?

A. Yes, I looked over the tunnel timber very carefully.

Q. Was the tunnel timbering system similar to the timbering system in the Western Pacific Railroad tunnels? A. Yes, very similar.

Q. What was the difference in the system of timbering in the north tunnel from the standard system used by the Western Pacific Company in its tunnel timbering?

A. It was the same as had been used a great deal with the exception that a large portion of that wall plate was not continuous.

Q. And in the Western Pacific tunnels you used a continuous wall plate?

A. When we used a wall plate system we used a continuous wall plate.

(Testimony of Thomas L. Phillips.)

Q. For instance, in this Spring Garden Tunnel, did you have a continuous [1800] wall plate?

A. Yes, that was built, originally built with a continuous wall plate.

Q. Now, you went in the south tunnel and inspected the timbers, did you? A. Yes.

Q. At the same time? A. Yes.

Q. What system was used there?

A. Well, that system varied some; largely, however, it was with the sections of wall plate.

Q. That is, short pieces of wall plate under which there were three timbers, plumb posts, and that would support only the two rings?

A. Yes, substantially that.

Q. Did you find when you inspected the timbers in the Broadway Tunnel that they were tightly packed against the surrounding rock?

A. Yes. However, they were not always tightly packed down at the lower sections of the posts.

Q. You found those posts were in at the bottom in a good many places?

A. In some places the posts were in at the bottom.

Q. You found some places that the mud sills or mud blocks at the bottom of the posts were higher than the excavated floor of the tunnel, did you not?

A. Not higher than the excavated floor of the tunnel, as I remember.

(Testimony of Thomas L. Phillips.)

Q. Don't you remember finding that in any place?

A. No, not higher than the floor of the tunnel.

Q. How would you compare the workmanship, the quality of workmanship of the timber that was in the tunnel when you inspected it on August 5 or August 8, whichever it was, whichever date you went there, and the workmanship in the timbering in the tunnel that was done after driving was resumed in November, 1935? Was it the same?

A. Yes, I think it was substantially the same.

Q. You think it was the same?

A. Except that there was a different type of timber used in the south tunnel. [1801]

Q. We are discussing the quality of the workmanship.

A. Yes, the quality was about the same.

Q. How did the workmanship compare with the workmanship in the Spring Garden Tunnel?

A. In general the workmanship was about the same with the exception of possibly the solid backing of the lagging. Of course, in a finished timber-lined tunnel there is more attention paid to the appearance of the lagging in order to make it a complete job.

Q. Where lagging is used in a permanently timbered tunnel, I assume it is rather regularly placed, so that you get a better effect in the timbers?

A. Yes, that is right; they are probably more careful than they would be in temporary lining.

(Testimony of Thomas L. Phillips.)

Q. In your tunnel work that you did on the Western Pacific did you have your rings, entire timber rings, vertical, so that the segments of the arch are vertical, on the same plane with the plumb posts? A. Yes, that is right.

Q. So that the rings and the segments above the wall plate are practically above the plumb posts?

A. That is right.

Q. Did you find any timbers in this tunnel that the segments were not vertical above the plumb posts?

A. Oh, yes, I found some that were probably somewhat out of line.

Q. Did you find any that were as much out of line that the caps were entirely outside of the projection of the plumb posts of the roof?

A. No.

Q. You did not find any? A. No.

Q. Did you find any places where the joints of the segments of the arch were open as much as one inch or two inches?

A. Yes, some of them were open. I could not tell you whether they were open that much or not.

Q. Did you find any places where the aggregate opening between the [1802] various joints of the seven segments of the arch were in excess of six inches? A. No.

Q. If there had been such timbering as that in the tunnel it would have been weak timbering, would it not?

(Testimony of Thomas L. Phillips.)

A. It would probably have shown a great deal of pressure, that is, if the arch had come down to a point where the points of the segment were carrying the load.

Q. That would not be a good condition of the timber, would it?

A. It would not be a good condition of the tunnel, it would show very heavy ground.

Q. When you went in there inspecting that tunnel did you find any place where the mud sills were above the actual excavated bottom of the tunnel?

A. No, not to my knowledge.

Q. Did you find that the bottom of the plumb posts were placed on a uniform grade?

A. No, they were not on a uniform grade.

Q. It is not good practice, is it, to place plumb posts, the bottoms of the plumb posts on different elevations?

A. I do not think it makes any difference so long as they are going to be encased in concrete.

Q. You don't think that it makes any difference if you have to excavate a foot wall trench below them to have some of them standing up above the top of the foot wall trench?

A. Of course, that would make a difference if you had to go too deep below the posts for a trench.

Q. You studied the construction of this tunnel, Mr. Phillips, and you know, don't you, that it was necessary, where the mud sill was placed above the bottom of the designed section of the pavement to

(Testimony of Thomas L. Phillips.)

go down with a trench to place the foot wall for the concrete lining?

A. Yes, and that was actually done.

Q. You also know that in many places the plumb posts were installed above this excavation and at varying elevations above it? [1803]

A. Yes, they were not uniform with the grade of the tunnel in all instances.

Q. It is also true, is it not, that when you visited the tunnel on the morning of the 28th of August, 1935, that there were some 900 feet of foot trench standing open in the tunnel?

A. There was a considerable amount.

Q. With water in them?

A. Some of it had water.

Q. And in some places the plumb posts were actually hanging over the edge of the trench, a portion of it?

A. No, they were not hanging; they were over, but they were braced so that they could not come in.

Q. Braced by having a diagonal brace four or five feet above the bottom against the railroad track ties, or something else on the floor of the tunnel?

A. They were thoroughly braced against the ground.

Q. Do you think that was a safe condition?

A. It probably was not the very best practice, but however no posts came into the trench when it was in that condition.

Q. None of the posts came in? A. No.

(Testimony of Thomas L. Phillips.)

Q. The contractor had some luck. I am going to show you Defendant's Exhibit J-4, which is the timber diagram of the timber installed in the north tunnel from station 122 to station 130, approximately, and I will ask you to examine that timbering and ask if in your judgment that timbering is comparable to the kind of timbering that was placed in the Western Pacific Railroad tunnels, as to alignment?

A. I think it is a good timber job.

Q. You think it is? A. Yes.

Q. For instance, let us look at a set here at 125+12, where you have segments running around—the segment isn't over the plumb posts, is it?

A. That is not necessary. [1804]

Q. That is not necessary? A. No.

Q. You think that is good practice?

A. That is all right; the wall is built strong enough to hold it.

Q. Even in the area of a heavy ground?

A. With an exceptionally heavy load it might be different.

Q. If you had a heavy load on these timbers placed as I have shown them to you at this point they would not sustain when they are placed in that manner the maximum load that the same sized timbers placed vertically above the plumb posts would sustain, would they?

A. There would be very little difference.

(Testimony of Thomas L. Phillips.)

Q. There would be very little difference?

A. Yes. [1805]

Mr. Smith: Q. What station were you referring to?

Mr. Tinning: I think, 125 plus 10.

Mr. Smith: 125 plus 10?

Mr. Tinning: Yes.

Mr. Smith: And which tunnel is that in?

Mr. Tinning: North tunnel.

Q. We have here, apparently, all of the different varieties of timbering that were used in the tunnel. We have the three plumb posts under the short wall plate. I am now pointing to 123 plus 30. That is what you stated was in the south tunnel?

A. Yes, there was some of that in the south tunnel.

Q. Is that comparable in strength to timbering which is put in by the wall plate?

A. Yes, I think it is.

Q. Equal? A. It is probably equal.

Q. Why was the wall plate put in the rest of the tunnel?

A. Because of the convenience in driving.

Q. It is a matter of method, not of strength?

A. I think so. I think the timbers would be of equal strength.

Q. Would you say, referring now to Station 123—well, between 123 plus 00 and 123 plus 10, the set I am showing you here now, which indicates that the segments were out of line toward the west

(Testimony of Thomas L. Phillips.)

portal, would you say that that was a good piece of timbering? A. Yes, that is all right.

Q. That is all right. You allow that in your Western Pacific tunnels?

A. Yes. We don't install them that way, if we can possibly help it; but, however, it happens sometimes. We make no exception about the timbers.

Q. When you come to 123 plus 70, the timbers that show there where we find a segment starting on the wall plate, a short wall plate [1806] above cross adit No. 2, and swinging out of line and back again; do you consider that that is good timbering?

A. Yes, that is temporary timbering in the tunnel.

Mr. Smith: Were those last named stations in the north tunnel?

Mr. Tinning: They are all in this exhibit, yes.

Q. Now, I understood you to say this morning that as a result of the advice that Mr. Tibbitts and you gave Mr. Boggs in this conference on August 16th and 19th that he increased the steel that was being installed in the concrete lining

A. No. I did not say "as a result"; at least, that was not my intention. But the amount of steel in the lining was increased immediately after our visit to Mr. Boggs.

Q. Your visits were on August 16th and August 19th, were they not, Mr. Phillips?

A. Yes, that's right.

Q. Isn't it a fact, after—Isn't it a fact that the

(Testimony of Thomas L. Phillips.)

first pour with the steel forms which were brought on the job about July 1st was made in the upgrade tunnel on July 20th?

A. I don't know the date.

Q. Have you gone into these records?

A. Well, I wouldn't have them right at the tip of my tongue.

Q. Then, if there was a pour made on July 20th, and a pour made on July 27th, and a pour made on August 5th, and a pour made on August 10th, in the tunnel, those were the first four settings in steel forms in the south or upgrade tunnel, and isn't it a fact, Mr. Phillips, that in each one of those pours there was a double curtain of reinforcing steel? A. I don't know.

Q. You don't know. Then, why did you say the steel was increased after you gave this advice on the 16th and the 19th of August to Mr. Boggs?

A. That was my understanding from the records I examined. [1807]

Q. Isn't it also true that the first pours that were made in the north tunnel with the steel forms, —I am referring to the first pour made after the rings were put in at the west end,—were made on August 8th, August 13th, August 19th and August 23rd? A. I don't know the dates.

Q. Isn't it a fact that the pour made on August 8th and the pour made on August 13th, which was before you saw Mr. Boggs, were both made with the double curtain of steel?

A. No; I don't know.

(Testimony of Thomas L. Phillips.)

Q. You don't know. But, if that be a fact, then it would not be true that the steel required by the District Engineer was increased following your visit to see Mr. Boggs?

A. I wouldn't say that, because the amount of steel may have been increased.

Q. Well, you don't know that it was, do you? You apparently don't know what went on before at all, Mr. Phillips? A. Before August 5th?

Q. Before the time that you talked to Mr. Boggs, you don't know how much steel was used?

A. Well, that is perfectly true.

Mr. Tinning: No further questions.

The Witness: I have probably been misinformed on that. My understanding was that the steel was increased after that certain date.

The Court: Is that all from the witness?

Mr. Tinning: No further questions.

The Court: We will take a recess.

(After Recess)

Redirect Examination

Mr. Smith: Q. In cross examination, in answer to a question about a tunnel that had been fully driven without permanent concrete lining being installed, you mentioned the only one you knew [1808] of, in this vicinity, was over in Niles. Do

(Testimony of Thomas L. Phillips.)

you know of another one that you forgot to mention?

A. Yes; on the Western Pacific tunnel through the Potrero Hills in San Francisco.

Q. That is the tunnel you mentioned on your direct examination this morning as work you had been doing? A. Yes.

Q. Was that tunnel timbered throughout?

A. It was timbered throughout by the wall plate system, and stood for many years without the necessity for any retimbering.

Mr. Smith: That is all.

Mr. Tinning: No questions.

OTTO W. PETERSON,

Called by the plaintiff; sworn.

Direct Examination

Mr. Smith: Q. Where do you reside, Mr. Peterson? A. 6209 Rockwell Street, Oakland.

Q. What is your present occupation?

A. My present occupation is construction engineer with the Pacific Gas and Electric Company.

Q. You are connected with that concern on a permanent basis? A. Yes, sir.

Q. Will you state to the Court when you first engaged in engineering work, and, particularly with reference to tunnel work, state your experience in connection with tunnel work from the beginning to

(Testimony of Otto W. Peterson.)

the present time, and, where you mention that tunnel work that you have had anything to do with, will you state your function or duty and the way the work was handled by you, and what the tunnels were, and their dimensions? You heard the testimony of Mr. Phillips this morning? A. Yes.

Q. More or less along the same lines.

A. My first practical experience was in the summer of 1932. I was—— [1809]

Q. 1932?

A. 1902. I worked as a rod man and chain man in Fresno County, California, for the Division of Agriculture—the Department of Agriculture, rather. Following that, I went to Southern California. I worked for Mr. J. B. Lippincott, and for the United States Geological Survey for one year's time, mainly on underground water tests and measurements, and on surface water measurements. Following that, I attended the University for a final year of civil engineering.

Q. What university?

A. University of California; graduating in May, 1904. I then spent a year's time on field work, making measurements of surface waters in the State of California for the United States Geological Survey. Following that, I went to Yuma, Arizona, on surveys and general office work, locations, designs and so forth, connected with the Yuma Irrigation Project.

Q. Who was the owner of that?

(Testimony of Otto W. Peterson.)

A. That work was for the United States Reclamation Service. Mr. Lippincott was the supervising engineer, at the time, of that division.

Q. In what years was that?

A. That was in 1905 and 1906. I resigned from that employment to work for a contractor,—the Spring Construction Company,—in about the spring of 1907; and was engaged on street and sewer and general improvement work mainly in Berkeley for a period of about 5 months. I was then offered employment as construction engineer for the California Development Company on work connected with the closing of the Colorado River break; and I went down to the Mexican border and was the engineer on the levee construction in Mexico connected with the closing of that break for a period of about the better part of one year. I also did some other incidental work connected with river control in Lower California during that period, or the lower part of the Delta region below the Imperial Valley. [1810]

My next employment was with the Orland Irrigation District in Glenn County in 1908, where I was in charge of their first construction, building a diversion dam, as engineer and superintendent and in various works of estimating future construction.

Q. Was that work done—

A. That work was done directly by the United States Reclamation Service with their own forces.

Q. How long were you there?

(Testimony of Otto W. Peterson.)

A. I was there about one year. I then went with the City of Los Angeles on construction of the original Los Angeles Aqueduct in 1909, at least as a foreman or general foreman, or superintendent, of one of their camps, and doing steam shovel excavating and concrete lining for the covered conduit sections for a period of several months. I was then moved to a similar division or section of work, mountainside work,—somewhat more difficult; steam shovel work and concrete lining construction. Following that, I was placed in charge of two divisions of work,—a section of 40 miles, steam shovel excavation and concrete lining along the easterly slope of the Sierra Nevadas in Inyo County. I was on that work a total of four years' time.

Q. That work was for the account of the City of Los Angeles?

A. That work was for the account of the City of Los Angeles; and, except for very incidental features, was built entirely by City forces and employees.

My next employment in the spring of 1913 was with the Pacific Gas and Electric Company, as superintendent in charge of the Drumm Power Project in Placer County. I was superintendent of this particular project, and also acted as an assistant to the general superintendent of the Company, and was engaged at the time in the building of Lake Spaulding Dam and the Spaulding Tunnel and other work. This project involved the building of

(Testimony of Otto W. Peterson.)

about 7 miles of mountainside [1811] canal, various flumes, a reservoir on top of a hill, a forebay on which we used a great number,—some 500 mules or so, in scraping and moving of dirt, pipelines, a power house; and, in connection therewith, there were two tunnels,—two soft ground tunnels: one about 500 feet, 12 by 12 in size, timbered, and not concrete lined at that time; and the second tunnel, of about 10 by 10 in size, through soft ground, several hundred feet long, also only timbered at that time.

The Court: Were those tunnels cemented later?

A. About 15 years later, those tunnels were concreted. In addition, we were, at that time, building a hard rock tunnel about one mile long from Spaulding Dam to the head of Bear Valley, this tunnel being about 12 by 12 in size. Following the completion of that work, I was employed by the Eastbay Water Company to make a valuation of the properties in the early part of 1914. This was mainly a valuation job, with a staff of some 50 or 60 assistants, covering the physical properties of the Company,—a valuation being made at that time for refinancing purposes, or to give information to be used for refinancing purposes.

Leaving that work after about 6 months' time, I was employed by the United States Reclamation Service and the State of California jointly, to make a final investigation and report on the Pit River area in northeastern California, covering the possi-

(Testimony of Otto W. Peterson.)

bility of development in irrigation, power and so forth. In connection with that work, I made estimates on several dams and incidental structures, and made a report. I was next employed, for a period of about 1½ years—

Mr. Smith: Q. Commencing in what year?

A. Commencing in,—I think, in 1915, and running into 1916, by the Modesto Irrigation District as a construction engineer in charge of the [1812] reconstruction of their major works, their canals, reconstruction of two dams, the replacement of a number of flumes,—timbered flumes,—by hydraulic fills, the enlargement of a tunnel. A large part of the canal was lined with concrete, and over these hydraulic fills we built reinforcing concrete flume structures. The tunnel on that particular project was unlined,—an unlined tunnel through a hardpan formation. The size originally was about 12 by 12 feet; the tunnel, being about 2,000 feet long, was enlarged without the use of any timber. It was arched and stood unsupported.

Q. Was that work done under your supervision by forces—

A. No. Most of that work,—practically all of the work on the project, or all of it—there may have been minor exceptions—was done by various contractors; and I acted as the clearing agent for the district in the dealings with those various contractors.

Q. What were your particular duties in connection with the tunnel: merely supervisory; or did

(Testimony of Otto W. Peterson.)

you have physical duties in connection therewith?

A. Well, the enlargement work was done by a contractor. I had charge of the plan for the enlargement and supervised handling the work for the district in the dealings with the contractor and in executing the work.

Q. What followed that?

A. Next, I returned to the Pacific Gas and Electric Company about the end of 1916, I think, or the first part of 1917, mainly for the reason for the addition to the Spaulding concrete Dam and the building of three supplemental dams required at that place. After the work on these dams was completed, I had charge of the building of two tunnels in the vicinity of Auburn, with a total length of about one mile or 1½ miles. These tunnels were, in part, driven through soft ground and, in part, driven through very hard material. A considerable portion of the tunnels [1813] was lined with timber at the time and subsequently have been concrete lined.

Mr. Tinning: May we have the size of the tunnels?

A. The size of the tunnels was about 9 feet. They were small tunnels.

Mr. Smith: Did you ask a question, your Honor?

The Court: I was going to ask for the size.

Mr. Smith: Q. Was that work done, including the tunnels, by company forces?

A. All of that work was done by contract. The raising of the dam was done by Twohy Brothers,

(Testimony of Otto W. Peterson.)

and the work on the tunnel was done by a contractor who is no longer in business in this locality. Also, in connection with that period of employment with the Pacific Gas and Electric Company, I maintained the headings of a proposed 7-mile tunnel through the Big Bend of Pit River. That property had been purchased from a company called the Mount Shasta Power Company, and it was proposed, at the time, to carry a 7-mile tunnel through the Big Bend of Pit River for power development purposes. These particular tunnels were in very heavy ground,—swelling ground; and we maintained them and also drove them forward a distance of probably 1,000 feet each, maintaining the timbering during that time.

Q. They were not constructed, at that particular time, in full?

A. No. The major tunnel was not constructed at that time. I then took a leave, or was permitted to leave the Pacific Gas and Electric Company for a consulting job in Korea, which was supposed to take about a month's time in the early part of 1918. I went over there to look over a power project for the Oriental Consolidated Mining Company, commonly known as the American Mining Concession in Korea; inspected a proposed dam site, a tunnel, a power project; [1814] tested the feasibility of this proposed development, and made plans and designs; and, as these things, developed, they necessitated that I stay out there, so I continued to obtain the

(Testimony of Otto W. Peterson.)

necessary permits from the Japanese officials and proceeded with the construction of the work, with the assistance of several men that I obtained from the mines,—several young men who acted as assistants, and some Koreans who were able to assist; and I carried on that work with about 500 Korean workmen, about 500 Chinese, and built a masonry dam over one of their torrential rivers, and a hard-rock tunnel about 14 by 14 feet in size and about 2,000 feet long; and the other features of this power development, finishing the work in the summer or early fall of 1919, after 1½ years' time. Also, during my stay in Korea, I did consulting work for the French Mining Concession on a proposed power development involving estimates for tunnels and other purposes of construction, and for some Japanese associated on a government irrigation project, the main feature of which was a high concrete dam. [1815]

I returned to the United States in the fall of 1919, reentered the employ of the Pacific Gas & Electric Company, and started the work of building Pit 1 tunnel, which was a two-mile tunnel, carrying water from the Fall River, a tributary of Pit River, in Shasta County, through a mountain divide, this tunnel being about 14 feet in diameter inside of the concrete lining, and two miles long. The tunnel was driven through volcanic material in the main, all of which required timber support. The tunnel was built under a contract with the Orlandi Com-

(Testimony of Otto W. Peterson.)

pany, and at the completion of that job we had a settlement to make which was accomplished without going into court, which was satisfactory to the company and to the contractor. I did not remain following the finish of that work but left the Pacific Gas & Electric Company for a period of five months, and started in the summer of 1920 to accept employment with the Shattuck Construction Company, on a contract which they had just taken to complete the building of Tunnel No. 1.

Q. Is this the same tunnel No. 1 you mentioned?

A. No, this tunnel No. 1 is located in Plumas County, and was under construction for the Western Power Company, to carry water for power purposes from Lake Almanor to Butte Valley. This tunnel had four main shafts on it, the deepest of these shafts being 400 feet. During the period I was there I completed the sinking of one shaft, which was the source of a great amount of trouble; the lower end of that shaft was completed in what appeared to be an old river channel in sand formation, and we carried on the driving of the other headings, about six in number, from the west portal, from C shaft. After this shaft was finished I went over to B shaft about 350 feet deep, and over to A shaft, which was about some 200 feet deep. This particular tunnel was an unusually wet one, containing the very wet ground, in fact at that time it was considered to [1816] be the wettest tunnel so far driven in California; after a period of eight

(Testimony of Otto W. Peterson.)

years it still has leakage in excess of 6,000 gallons coming into it after standing empty without having water flow through it for a period of seventeen years.

Q. Can you give us the dimensions of that?

A. The dimensions of that tunnel finished inside of the timbers is about 7 feet in the width of the floor and about 7 feet between the floor and the timber lining at the top. It is almost entirely timber lined. In addition to the usual timber it had timber side walls inside of the timber sets and timber lines, so it is in effect an underground system.

Mr. Tinning: Q. Did you say 6,000 gallons an hour?

A. 6,000 gallons a minute, is the normal leakage that still comes into that tunnel after a period of about eighteen years.

I was then offered employment by the Pacific Gas & Electric Company about the first of 1921 to take charge of all of the major construction work of the company. They wished particularly to have me take charge of the Pit River construction which was just getting under way on a large basis, so I returned to the Pacific Gas & Electric Company and carried through the completion of the Pit 1 tunnel. We contracted for the actual construction, and I represented the company. We built the Pit 1 power plant and two power plants on Hat Creek, initially, and then in 1923 we proceeded with the building of Pit 3 power plant, which involved the

(Testimony of Otto W. Peterson.)

building of a dam and tunnel of four miles in length, 19 feet diameter inside of the finished concrete.

Q. How large was the excavation?

A. The excavation of the tunnel being about 23 feet by 23 feet inside, the tunnel being entirely timbered and subsequently lined inside of the timbering; and also in connection with the project the usual pressure pipe lines and [1817] power house, etc. While this work was going on we also had other construction involving the addition to the Lake Spalding Dam, and plant construction, etc. About 1926 we had other construction come along, one of the tunnels being the Melones Tunnel in Tuolumne County, which was about a mile in length, the lower end of the tunnel being on a steep incline. This tunnel was in hard rock formation about 14 feet by 14 feet in size, inside of which the concrete lining of which was placed with the use of very little timber, and we enlarged Spalding Tunnel, and the hard rock tunnel, and also built several small tunnels in Placer County, short tunnels of a quarter of a mile or less in length, and some were gunited and some concreted; and one tunnel under the reservoir in Placer County at a place called Drum. This tunnel was about one mile long, fully timbered, in soft ground; we lined that by moving in sections of precast pipe about five feet in size, I believe they were, joined them together, and we also enlarged about six other tunnels in Placer County

(Testimony of Otto W. Peterson.)

which were about 12 by 12 size, and outside in the neighborhood of 16 feet size, and lined them in the main with a reinforced gunite. In 1928 we undertook power development work on the Mokelumne River, involving in the main a large rock fill dam, 20-mile conduit, power house, pipe lines, etc. Incidental to this work there were constructed an outlet tunnel from the reservoir of about 20 feet or 22 feet in size, lined with concrete, to a diameter of 19 feet, about 6 small tunnels aggregating about a mile in length and about fourteen feet by fourteen feet in size, some through hard rock and some through rock which was hard granite, but blocky and fractured, and requiring timber support; some through slide material, requiring quite heavy timbers; and in addition one two-mile tunnel of about 11-foot size, which was driven through hard rock and did not require concrete lining. About two [1818] years ago we undertook the building of an eleven and one-quarter mile tunnel in Stanislaus River which was 11 feet in size through hard rock formation. That tunnel has been under way for something less than two years time and is now one-half finished.

In addition to the work which I have described I also had charge of steam plants, sub-station construction, and in the last seven or eight years all construction of the company, including pipe lines, pole lines, power lines, miscellaneous work, a lot of maintenance of tunnels and dams and water conduits.

(Testimony of Otto W. Peterson.)

Mr. Smith: Q. During the construction of these various tunnels for the Pacific Gas & Electric Company which you handled as chief construction engineer for them, were they built with company forces or were they built by contract?

A. Well, in the main they were built by company forces. The Pit 1 tunnel which I have described was built by contract, and about four of the tunnels on the Mokelumne project were built by the W. A. Bechtel Company and an associate and a part of the Pit No. 3 tunnel was built by Bates & Boreland Company, of Oakland. Do you wish me to go on?

Q. I was going to ask you what your specific duties were in connection with the construction of all of these tunnels, take Pit No. 3, what were your specific duties?

A. I was in charge, in complete charge of the construction of the tunnel, supervising it from the San Francisco office, had charge of the construction. That had to do with all features of the work of the building of the tunnel, making the estimates and carrying through the complete construction of the work.

Q. Did you physically go upon the work frequently?

A. Yes, usually once a week or at least three times a month I would be on the work during the progress of construction.

Q. Did you exercise the duties or function of an engineer on the [1819] job under the contract during the course of construction? A. Yes.

(Testimony of Otto W. Peterson.)

Q. In behalf of the owner? A. Yes.

Q. During the last few years I understand you have been in the employment of the Pacific Gas & Electric Company. During the period since you went back there in the '20s, and continuing down to the present date, have you done work for other than the Pacific Gas & Electric Company?

A. Yes.

Q. Would you relate any of them particularly with relation to tunnel work?

A. I have made estimates on a number of tunnels for contractors. One of those was an estimate for the Owyhee Tunnel, I believe, in Idaho, on the Owyhee Irrigation Project, which involved about four miles of tunnel work, two miles of about 16-foot size and two miles of smaller tunnel of about 8-foot size, largely through volcanic formations.

Q. What year was that, approximately?

A. That was about five or six years ago. I have not the exact years in mind.

Q. What did you do with that? Did you estimate that for the contractor?

A. I made a detailed estimate of the time required to complete the job, the cost, the necessary equipment, and of course, preliminarily to that I obtained such information and reached such conclusions as I considered proper of the type of ground that would be encountered and the physical conditions.

Q. Who did you do that for, what contractor?

(Testimony of Otto W. Peterson.)

A. I did that for McDonald & Kahn, contractors, of San Francisco.

Q. Did you have anything to do with the construction of the Duboce or the Sunset street railroad tunnel here in San Francisco?

A. Yes. This was along about 1926 or 1927; I was associated with the Utah Construction Company of San Francisco, and in the preparation of estimates and in the construction of the Sunset Tunnel in this city; we of course had to prepare estimates of the work, determine [1820] the method by which the tunnel would be built, and I followed through as a consultant with that company during the construction of the tunnel, until its completion, and until some claims which were incurred were settled and the entire work finished.

Q. What were the approximate dimensions in length and size of that tunnel?

A. That tunnel was about 25 feet wide, 20 feet high, being a double track railroad tunnel about 4,260 feet long, full diameter, and fully concrete lined.

Q. As I understand your remarks, you made the pre-bid estimate for the successful bidder, which was the Utah Construction Company?

A. I won't say I made it for them, I made a bid; others were associated with the firm, who also checked on the bid that we arrived at.

Q. You helped estimate? A. Yes.

(Testimony of Otto W. Peterson.)

Q. And then after the bids were in they got the job? A. Yes, and built the tunnel.

Q. What function did you perform with them after they received the award of the job?

A. I acted as an associate in the firm, a consultant in all of the work, construction, physically visited that work, usually several times a week. The other work involving tunnels was an estimate for the Boulder Dam canals. I spent about one month's time, made several trips to Boulder Dam before work started, to arrive at a determination of the conditions under which that project would be built, the method which should be followed, and worked on estimates for the building of the dam, and particularly of the excavation work for the dam, and the diversion tunnel. That work was done for the contractor, but was not low, he was next to the low bidder.

Q. In other words, the estimate that was made on that was not the estimate on which the final bid was awarded? A. No.

Q. During the same period that you have just mentioned did you have [1821] anything to do with the Wawona Tunnel?

A. Yes, I made estimates for the contractor on the Wawona Tunnel in Yosemite National Park, a highway tunnel about, I should judge, ¾ of a mile in length, about 20 feet wide, and for the Newcastle Tunnel, another highway tunnel about 25 or 30 feet wide and about 20 feet high.

(Testimony of Otto W. Peterson.)

Q. Where is that located?

A. The Newcastle Tunnel is located in Placer County adjacent to the town of Newcastle; it is about 1000 feet in length, of the dimensions given, largely timbered, and also was estimated for a contractor who was not the low bidder.

Q. How about the Hetch Hetchy tunnels?

A. I made estimates for the completion of a portion of the Foothill Division of the Hetch Hetchy System, which the City of San Francisco had built by contract, that involved several miles of tunnel in the main hard rock tunnel, I believe about 12 by 14 in size. I made estimates for the work of completing the Hetch Hetchy Tunnel through the Livermore Hills, and that involved several miles of tunnel of about 12 feet, 10 to 12 feet in size in very heavy, difficult ground. The city later decided to complete that work, itself. I also made estimates for a number of tunnels on the Metropolitan Water District for at least two groups of contractors, three groups of contractors, in fact, that is, various bids were made for various contractors; altogether I estimated about ten of these contracts that came up on that work, the largest of the project or tunnels being the San Jacinto Tunnel, 13 miles in length, driven in the main from two shafts and also the sinking of two shafts from those two shafts, and from the westerly portal, the size of that tunnel being about 16 feet inside of the concrete lining. The contracting group for

(Testimony of Otto W. Peterson.)

whom I made that particular estimate proved to be the low bidder, but subsequently the district, in working out a supplementary contract, required conditions which they did not desire to meet, so they did not go through with the construction. [1822]

Q. So you had nothing to do with the construction?

A. I had nothing to do with the actual construction of the work, although I visited the tunnel during the period of its construction, as well as other tunnels in the Metropolitan District. I also made an estimate on the Yerba Buena Island tunnel connected with the San Francisco Oakland Bay Bridge.

Q. The same as Goat Island tunnel?

A. Commonly called the Goat Island Tunnel. I believe that in the main covers the tunnels. There were probably four or five others that I have not mentioned.

Q. Did you have anything to do with any tunnels in connection with San Gabriel No. 1 dam?

A. Yes, there were tunnels connected with San Gabriel No. 1 and 2 dams, those dams being built for the Los Angeles flood control district, also dams built for the City of San Diego involving diversion tunnels. Those tunnels were generally 1000 to a quarter of a mile in length and were about 20 to 30 feet in size. I did not actively participate in the construction work which was carried on subsequently. In connection with and along the same lines I advised the contractor on San Gabriel No. 1 dam, a

(Testimony of Otto W. Peterson.)

large structure, on methods to be followed by him in quarrying and shooting operations in the production of rock for the building of San Gabriel No. 1 dam.

Q. Have you ever been called in to umpire or to arbitrate engineering controversies?

Mr. Wittschen: I object to that as immaterial.

Mr. Smith: I just want to show he has also exercised that function.

The Court: Do you know of anybody that has covered the territory that you have?

A. I guess there are others, I imagine there are others.

Q. I did not ask for your imagination. I asked if you knew of [1823] anybody.

A. I don't know of anybody who has covered as wide a geographical area.

The Court: We will take an adjournment now until tomorrow morning at ten o'clock.

(An adjournment was here taken until tomorrow, Thursday, May 26, 1938, at ten o'clock a.m.)

[1824]

(Testimony of Otto W. Peterson.)

Thursday, May 26, 1938;
10 o'Clock A. M.

OTTO W. PETERSON,

recalled.

Direct Examination (continued)

Mr. Smith: Q. You have been present in the court during much of this trial, haven't you, Mr. Peterson? A. Yes.

Q. And you have heard about the Broadway Tunnels that have been discussed here?

A. Yes, sir.

Q. You have heard or read the testimony of all the witnesses? A. Yes, sir.

Q. When did you first hear of the Broadway Tunnels, Mr. Peterson?

A. In the spring of 1934.

Q. Did you visit the site of the Broadway Tunnels at that time, and thereafter?

A. My first visit was in the summer of 1934.

Q. Was construction work in progress at that time? A. Yes, sir.

Q. Upon how many occasions did you visit the Broadway Tunnels after that first visit, approximately? A. About fifty times.

Q. Did those visits occur more or less frequently, commencing with the summer of 1934?

A. Yes, sir.

Q. Referring to the times when you first went over there, will you state, in general, what you ob-

(Testimony of Otto W. Peterson.)

served of the operations of the Contractor upon those visits in the summer of 1934?

A. Starting with my first visit?

Q. Yes, commencing with your first visit, just briefly describe the work that was being done by the Contractor and the problems he was dealing with.

A. My first visit was made July 21st. I happen to remember the first date. That was July 21, 1934.

Q. Have you made a memorandum, as nearly as you can from your records, of the dates when you visited there?

A. Yes, I made a [1825] brief summary of those dates. The first visit was July 21, 1934, at which time the Contractor was excavating the open cut at the west portal. At that time, the Contractor was having difficulty with the overbreak on the slopes of the cut, and he wished my advice on what he should do in the way of further removal of the material, or just at what point I thought he should discontinue that sloping, or excavation on the slopes; and this was being done with a power shovel and the material—they were endeavoring to hold the material on the slope of one-half foot vertical to one horizontal,—what we call a "half to one slope"; and it was very apparent that that slope was too steep and that it was necessary to excavate back to approximately one to one slope, to make the banks safe for the workmen below and for the equipment working in the area below those banks.

(Testimony of Otto W. Peterson.)

I observed the conditions. The open cut excavation had been substantially completed at that time. I next visited the site of the west portal on the 5th of August, 1934. They had done considerable sloping in the intervening three weeks—two to three weeks; but the banks were still unstable in places, and they were still excavating to make the banks safer; and I recall that. These visits, other than the first visit, were purely personal; in fact, the first one was a personal visit. I was asked by one of the contracting firms to go up with him and take a look at the portal at the time of the first visit.

Q. How long did you stay on that occasion?

A. I was there probably two hours.

Q. It was all outside work that was in progress?

A. All outside work at that time. I again went up to the tunnel on August 11th or 12th.

Q. 1934?

A. 1934. I might refer to this list of dates here [1826] if I may be permitted to do that.

Mr. Smith: I presume there is no objection to him referring to that list of dates.

The Witness: A. I went up again on September 2nd. I frequently went up there on Sunday mornings or on Saturdays, to make these personal visits; and, at that time, it is my recollection they had discontinued entirely the excavation of the slopes and had started the first drift work into the south tunnel.

(Testimony of Otto W. Peterson.)

I visited there with Mr. Larson some time. He was superintendent in charge of the tunnel work. I then went over to the office, and looked over the plans,—some of the plans,—to get a general idea of the project, with Mr. Fontaine, the manager, and Mr. Orselli, the engineer for the Contractor, who had formerly worked for me. That was about the first time that I looked over the plans for this tunnel in any detail, although I knew, in a general way, what they proposed to do.

Q. Did you examine the specifications at the same time?

A. No— Well, just in a preliminary way; just got a general idea at that time what the nature of the plan was, and the nature of the job, so far as I could observe.

I again visited the tunnel on October 14th,—which was Sunday,—with Mr. Sedgewick, a geologist from Southern California, who happened to be visiting with me at the time; and, on that visit, I recall that the drifts had advanced probably 40 feet or so into the south bore particularly, and that they were in very heavy ground. They had done some concrete work in the meantime for the west portal structure, and were bracing the portals of this tunnel against that structure. They were also finding it necessary to use some intermediate sets and braces in the drifts, to hold the ground; and, [1827] generally, it was heavy, difficult ground to hold.

(Testimony of Otto W. Peterson.)

On that visit, we went into the drifts; looked them over quite thoroughly and looked over the ground at the portal, and rode around the area surrounding the tunnel.

Q. Did you observe the Contractor's methods and workmanship on that visit? A. Yes.

Q. And upon your preceding visits?

A. Yes, on all of these visits I did that. I also visited with Mr. Larson, whom I had known for some years, and was very much interested in his problems and in discussing his problems with him.

The next visit I made was on December 23, 1934. It was something over two months later. At that time, they had completed the excavation of these circumferential drifts, and had concreted about 95 feet of both tunnels, and were waiting for the time for the concrete to set,—the time they would be permitted to remove the forms before they could advance further the tunnel driving.

Q. The forward excavation was not in progress at that time?

A. No; the forward excavation was not in progress. I think, in fact, on that particular visit, Mr. Larson was away for a short time.

On January 19, 1935, about a month later, I visited the tunnel and spent a good part of the forenoon there visiting with Mr. Larson, who was then in charge of the north tunnel, and Mr. Whitmire, who was in charge of the south tunnel; and, at that time, they were advancing the drifts, driving two

(Testimony of Otto W. Peterson.)

bottom drifts forward on each side of the south tunnel; and Mr. Larson was following the wall plate system. Whitmire had two bottom drifts, as I recall, on the south tunnel, and top heading; and Larson was using the wall plate and top heading method. They had gone about some 90 feet [1828] further, I think, ahead of the concrete lining.

Q. That is, ahead of what has been testified to here as the west portal section?

A. Yes. The ground in the south tunnel was heavy and broken. In the north tunnel, it was drier, but not good supporting ground. They were using heavy timbers in both the tunnels.

My next visit was on March 24th, about two months later, on a Sunday morning. They had carried the excavation possibly another 100 feet or so further. I do not remember the exact amount. They were in some better ground, although the conditions were still difficult,—quite difficult,—in the south tunnel; and it was moderately difficult in the north tunnel.

Q. Did you observe the timbering work that was being done by the Contractor?

A. Yes. I observed the timbering at that time. I believe it was about at that time that I had a discussion or a talk with Mr. Price. He wanted to know what advice I might offer him, and I cautioned him particularly—

Mr. Wittschen: I don't think conversations between the witness and Mr. Price are admissible.

(Testimony of Otto W. Peterson.)

Mr. Smith: No.

Q. Just confine it to your observations.

A. I observed the timber work being done. They were timbering in what would be considered heavy ground, and were using heavy timber supports to hold it.

My next visit was, I believe, on April 24th, or May 24th—I have so many dates here—

Mr. Smith: What was the date of the last visit the witness mentioned, Mr. Reporter?

(Record read.)

A. On April 14th, I again visited the tunnel on a Sunday morning, [1829] and went over the work with Mr. Larson and Mr. Whitmire, in a personal way.

Q. Had you known Mr. Whitmire before?

A. Yes; I had known Mr. Whitemire for a number of years. He was, at one time, superintendent for the San Joaquin Light and Power Company on one of their tunnel projects, and for a number of years was the tunnel superintendent for the Southern California Company on an extensive program of tunnel work in Big Creek on the headwaters of the San Joaquin River, and also on a tunnel for the Utah Construction Company; possibly Bechtel was associated in the job; it was on the summit of the Sierras. On that visit, Whitmire was in ground that required breastboarding on the south drift, particularly heavy ground; and I don't believe there was any breastboarding elsewhere but the other

(Testimony of Otto W. Peterson.)

drifts generally were in rather heavy ground. It was all timbered tunnel.

The next visit was several months later, on August 5th.

Mr. Tinning: Q. Mr. Peterson, a few moments ago I thought you said May 24th?

A. No; April 14th and then August 5th.

I visited the tunnel late in the afternoon and in the evening with Mr. S. D. Bechtel and Mr. Phillips. I accompanied them and looked over all the headings of the tunnels quite thoroughly; and, at that time, I observed they had passed through some ground that was very difficult, and some portions that were more favorable, all timbered, and were in the vicinity, or had just passed the first cross adit, and were in quite heavy ground in the forward end of the tunnel; in fact, the driving at that time was in heavier ground than in some of that which they had passed through, considerably heavier ground than that which intervened.

Mr. Smith: Q. That was just east of the first cross adit? A. Yes. [1830]

Q. Or about at that location?

A. Yes. I again made a visit to the tunnel on Sunday, August 11th, in the afternoon, with Mr. S. D. Bechtel and Edgar Kaiser. All of these were personal visits. I observed the conditions at the headings and in the tunnels generally, and the ground was becoming quite heavy and quite difficult in the forward end of the tunnel; and, at that

(Testimony of Otto W. Peterson.)

time, they were also concreting, particularly concreting the footings in the sides of the tunnels; were excavating the footing trench and some of the concrete work of the arch was in progress. They had their steel forms in, and, I believe, had done some concrete work, had got it under way some weeks previously.

The next visit was on the night of August 28th, the night of the cave-in, in the north tunnel. I was asked then to go and observe the conditions and see what I might offer in regard to the problem that the Contractor had to deal with. I spent several hours looking over the site of the cave-in, both from the exposure toward the west portal, and also by going around through the cross adit and observing the conditions at the east portal. I also looked over the headings of the two tunnels, generally; and attended a safety meeting which Mr. Fry, secretary of the California Industrial Accident Commission, asked me to attend; and I was asked by Mr.——

Q. I think rather than secretary he was in charge of safety?

A. He was the manager, I assume. He is in charge of safety work for the Commission; that is, whether he is the manager or the superintendent, I don't know just what his exact title is. I returned to the tunnel the following morning, August 29th, and went in and observed conditions again, to attend another safety meeting, and spent the entire forenoon there. I believe that it was in the after-

(Testimony of Otto W. Peterson.)

noon of that day that I was asked to go to the office— Shall I stay right with the visits to the tunnels, or shall I state what occurred?

Q. No; state what you did.

A. That afternoon, I was asked to go with members of the Six Companies and their engineers to the Highway District office for a meeting, which I did; and, at that meeting, I—

Q. Who was present at the meeting?

A. There were quite a number who were present. There was Mr. Kaiser and Mr. Bechtel, Mr. Barlow of the Utah Construction Company, Mr. Hackley, Mr. Tibbitts, Mr. Phillips, Mr. Price, Mr. S. D. Bechtel, and there we met Mr. Boggs, Mr. Lippincott,—who had just come up from Los Angeles, as an engineer for the District,—and Mr. D. W. Albert, who had been retained by the District; Mr. Barclay, the assistant to Mr. Boggs; I believe that is about all who were present. There were quite a number there.

Q. What was the nature of the conference, engineering or—

A. Yes, it was essentially an engineering conference to try to reach some decision as to what should be done to meet with the conditions that had been encountered in the tunnels, and particularly in the south tunnel in the area of the cave-in, and with the problems generally in the materials that had been encountered.

(Testimony of Otto W. Peterson.)

Mr. Alexander: Q. Would you give me the date of that meeting, again?

A. The date of that meeting was the 29th of August.

Mr. Wittschen: I think he said the south tunnel; he meant the north tunnel.

The Witness: The cave-in was in the north tunnel,—I beg your pardon,—and about 250 feet, as has been stated, from the west portal. The outcome of the meeting was that it was suggested there should be engineering representation on the part of the District and by the Contractor to see what could be done to get at the problems; and Mr. Lippincott made the suggestion— [1832]

Mr. Wittschen: Just a moment. He was not asked for any conversations.

Mr. Smith: Not yet. No.

Q. What did Mr. Boggs say at that time, if anything, about—

Mr. Wittschen: Objected to as immaterial and not proving any issue in the case.

The Court: I will allow it.

Mr. Wittschen: Exception.

The Witness: A. Mr. Lippincott, did you say?

Mr. Smith: Q. No; Mr. Boggs.

A. Mr. Boggs, I think, stated that the plan that had been proposed by one of the consultants of the District was acceptable to him, and that we should proceed in accordance with that plan.

Q. What was that plan?

(Testimony of Otto W. Peterson.)

A. That plan was one suggested by Mr. Lippincott, that he and a party that he might wish to take with him and myself, representing the Contractor, should go up to the tunnels, look over conditions on the ground, and decide what was best to do in dealing with the problem at that place; and that was agreed to by Mr. Bechtel and Mr. Kaiser, representing the Six Companies, and Mr. Boggs, representing the District; so we went out.

Q. Who went out?

A. Mr. Lippincott, Mr. Albert, Mr. Barclay, Mr. Bogg's assistant and myself, went to the tunnel and went through the various points of work and observed again the status of the work, to proceed with the problem of deciding what was the proper thing to do.

Q. Was anything decided on between the District representatives and yourself?

A. Nothing——

Mr. Wittschen: Just a moment. I want to interpose an objection.

The Court: There was nothing done.

Mr. Wittschen: There was nothing done; so there is no objection. [1833]

The Witness: That was the main purpose: to get the facts as nearly as we could; to determine the physical conditions, which we did; exchange views and make observations. That was the main thing accomplished on that date. There were considerable conversations.

(Testimony of Otto W. Peterson.)

Mr. Wittschen: I think the question has been answered.

Mr. Smith: Q. Just recite what next occurred, —what you next did; what you observed at the tunnel, or in connection with what you started out to do.

A. Well, we observed——

Mr. Wittschen: Pardon me. If you are calling for a conversation, will you ask for it so I may interpose an objection?

Mr. Smith: Yes. I asked him what was done.

The Witness: We observed that the timbers— We observed there was a considerable amount of footing trench open that they were actively engaged——

The Court: Q. You say "we"?

A. I observed; pardon me. I believe "we" is correct; but I observed there was considerable footing trench opened,—about 900 feet; and they were actively proceeding with the concreting of that trench; that the timbers had moved into the concrete section in a considerable portion of the tunnel, particularly in the heavy ground,—moved somewhat in and downward; and we observed the places where the ground was heaviest and where the timbers, the timber movement, was the heaviest; and it was my observation that the timbers adjacent to the west portal just forward of the concrete that had been poured had moved in just subsequent to the time that that portion of the tunnel,—the two

(Testimony of Otto W. Peterson.)

bores,—had been driven, and had remained substantially stationary since that time; that the timber forward of that was generally clear of the neat concrete section except for two local areas in the north tunnel; the greatest difficulties being encountered were in the vicinity of the [1834] first cross adit and forward of that where they were in the so-called cherts formation.

Q. In your observations about the timber movement just east of the installed concrete, you made that observation on earlier visits, I take it.

A. Yes. I had looked over that rather critically, and I had been observing that from the time of my first visit. [1835]

Q. What day was that?

A. That was August 31. I remained home the entire morning.

Q. This was all in 1935?

A. 1935. I remained home that entire morning and looked over the plans and specifications with particular reference to the tunnel construction and the geological report. The afternoon of that same day, about two o'clock, I went to the tunnel, to look over the tunnel again to see how the work was progressing, and I was to see Mr. James Sanborn, an engineer who had been called out from New York by the Six Companies, to act as a consultant, to go over the job, and I spent a good part of the afternoon in going over, going over thoroughly again with Mr. Sanborn the job, and again observed

(Testimony of Otto W. Peterson.)

the tunnel conditions. On the next day, Sunday, September 1, I again went over the tunnel during the forenoon with Mr. Sanborn, looking at the timbering and ground conditions, and I observed on that visit a group of the district engineers, Mr. Lippincott, Mr. Van Norman, also an old friend of mine, Mr. Boggs, and Professor Derleth, who were consultants for the District, retained by Mr. Boggs, and at 3:20 we looked over conditions together to some extent, that is, I did with the consultants of the District, and in the afternoon of that same day I went to the home of Mr. Derleth and there consulted further with the District's consultants, Mr. Lippincott and Mr. Van Norman and Professor Derleth—Mr. Boggs was also present—on the problem of what should be done to concrete those portions of the tunnel that were then excavated and unlined. I might state that on or about, at the time of my visit on August 28th, all excavation of the tunnel had been stopped and that only concrete work and timbering work was then in progress.

Mr. Wittschen: You asked him what he had seen in the tunnel and that is what he was answering.

Mr. Smith: No, I asked him what he did. [1836]

A. On August 30, on the afternoon of August 30, following up this conversation with the consultants of the District, I went to the Hotel Oakland and there consulted with Mr. Lippincott, and

(Testimony of Otto W. Peterson.)

I believe it was there—it might have been at Professor Derleth's house—there are so many visits—I started in the discussion as to what we might do in making plans with a view of working out a plan initially of permitting the timber to encroach into the concrete section with a view of minimizing the amount of timber removal that might be done, and accomplish the concreting of the tunnel; this same subject was followed up at the time of this visit on September 2nd with the consultants of the District. It was realized—it was my conclusion——

Mr. Tinning: Just a moment, we object to that.

A. I will be glad to get this in in the proper manner.

Mr. Wittschen: The Court will determine what is proper.

The Court: I think the witness is doing the best he can. However, his conclusion at this time may go out.

A. While we were working——

Mr. Wittschen: I submit there is no question pending before the witness.

Mr. Smith: He had been at Dean Derleth's house and he has told us of the meeting at the hotel.

The Court: Proceed.

Mr. Smith: Q. What was the conclusion, in sum and substance, that was reached at the meeting that you had with Mr. Boggs and the consultants of the District at Dean Derleth's house?

(Testimony of Otto W. Peterson.)

Mr. Wittschen: Objected to as immaterial, that matter has already been concluded by the letters which are in evidence to the effect that the section would be dropped 10 inches without cost to the District. [1837]

The Court: Was that the result reached?

A. The preliminary steps finally led up to that arrangement.

Q. All right, proceed from there on.

Mr. Smith: The only thing about that is, the testimony would show in answer to that question that these engineers agreed that this was the thing to do, including the engineer for the District, Mr. Boggs, as early as this date, which was September—was it the 1st or 2nd? A. September 2nd.

Mr. Smith: Mr. Boggs concurred and the District never permitted it to be done until September 28th, and did not give formal approval to it until November, thereby delaying the contractor in the starting ahead of the doing of the thing that they did finally authorize on their own application to be done.

Mr. Wittschen: The letter is in evidence that the District gave this formal approval at the start of it. It is also in evidence without contradiction that they went right ahead and dropped the section and where the delay occurred was in order to get the P.W.A. approval, but pending that approval the contractor did not stop, and that approval came——

(Testimony of Otto W. Peterson.)

Mr. Smith: The fact is the evidence does not show what counsel says. There was never any permission given under which the contractor, by oral permission or otherwise, sought to lower or did lower the arch or change the design of the concrete section until after the last week in September.

Mr. Tinning: On September 24th.

Mr. Smith: In other words, there was no work done until after September 24, so there would be a delay between this date when the District should have authorized it and September 24.

The Court: You are assuming a fact not in evidence, namely, that the District authorized it. The Government was the one. [1838]

Mr. Smith: The Government was not a party to the contract. There is nothing said in the contract about the authority of the P.W.A. to approve or disapprove any design of the structure.

The Court: All right, let us clear that up. What was the purpose of getting that approval?

Mr. Wittschen: The P.W.A. had put a million dollars into the work, they approved the plans and specifications, and your Honor will recall that all through this, even Mr. Bechtel, when he testified, stated it was necessary to get their approval for working conditions, it was necessary to get their approval, and one of the witnesses has testified that they had inspectors on the job, who followed the job. This lowering of the tunnel about ten inches was a material change in the plans. The testimony

(Testimony of Otto W. Peterson.)

is in that the P.W.A. approval would have to be forthcoming, the Industrial Accident Commission approval had to be forthcoming, because they ordered all work stopped; so when the Industrial Accident Commission approved the change, whatever the date was, I think it was September 4, they went right ahead, they did not wait until the formal approval came from the Government; as soon as the formal approval came from the Government, or sometime thereafter, Boggs gave them formal approval, but in the meantime just as soon as the Industrial Accident Commission permitted it they went right ahead and were not delayed.

The Court: All of which this witness knows very little about. Let us get through with this witness.

Mr. Smith: May it please the Court, I want to state that the testimony would show if the question be permitted that Mr. Boggs stated that it was the proper thing to do at this particular time.

The Court: Proceed.

A. I again visited the tunnel on September 4th, on which date I had been given formal authority by the Six Companies to handle all [1839] matters with the District, any problem that might come up affecting engineering and the procedure to be followed at the tunnel in carrying forward the tunnel work.

The Court: September 4, 1935? A. Yes.

(Testimony of Otto W. Peterson.)

Mr. Smith: Q. Was your authority so given communicated to Mr. Boggs by you?

A. Yes, communicated to Mr. Boggs, and to both consultants, whom I contacted. On September 5 I again visited the tunnel and decided that the situation was sufficiently serious so that we should proceed more energetically with the concrete lining. We were without a plan under which we could deal with these areas in which the timber had encroached into the tunnel, and in order to proceed we had to make a decision, and since the decision was not forthcoming from the District I took the initiative and told Mr. Boggs that we were going to proceed with the building of the tunnel of the same size at a slightly lower grade, with the arch of the tunnel lower six inches, that we had to have some plan to proceed with, and we would take our chances and go ahead and proceed with this plan, and I told him that we would start to change our forms and pour.

Mr. Smith: Q. You mean by "forms" the steel forms?

A. Yes, the steel forms, because the work was not going ahead with enough force and enough speed to get the work done as rapidly as it could be done if we had some definite plan to work to. And I called upon Mr. Boggs to let him know what I proposed to do, and he said that he did not approve of that plan. So, shortly after, I called him up again and asked him if he disapproved of the plan and he said that he did disapprove of it very much, and

(Testimony of Otto W. Peterson.)

furthermore was sending out a desist letter, which was received that evening, and in the face of that notice we discontinued all work in that portion of the tunnel where the trimming of the timbers was so great [1840] as to be hazardous, or the moving of the timbers was too serious to be warranted, and confined our operations only to those portions which could be concreted without serious menace to the workmen and to the structure. On the 6th of September Mr. Boggs called me about 5 o'clock p.m. and said he would like to see me. I called at his office the following morning, September 7th, and had a discussion with him, which lasted from 9 o'clock in the morning until sometime after noon, after 12 o'clock noon.

The Court: Q. Did you go to lunch together?

A. I think we went to lunch together, yes, very good friends. There were present at the meeting Mr. Boggs, I think Mr. Earl, another consultant whom I had known for many years.

Mr. Smith: Q. A consultant for whom?

A. A consultant for the District.

Q. When you say "consultant" you mean consulting engineer?

A. Consulting engineer, yes; Mr. Sweetser, an engineer of the Bureau of Public Roads, representing the P.W.A., I believe it was, Mr. Barclay, Mr. Boggs' assistant, and I believe that was about all. I believe before the others came into the room

(Testimony of Otto W. Peterson.)

either on that day or the next day Mr. Boggs talked to me about the problem of the tunnel and made the statement that he was sorry that I did not go ahead with the concreting, that he thought I would ignore the letter and go ahead.

Mr. Wittschen: The witness is not answering the question.

Mr. Smith: The witness apparently is giving his best recollection. He is trying to tell what happened.

Mr. Wittschen: But I would like to have him asked a question. He was not asked anything like this.

Mr. Smith: Q. Proceed and state what you next did. Had you concluded the discussion at that meeting that you had testified to with Mr. Boggs? [1841]

A. We had quite a full discussion—

Q. This is the same meeting?

A. Yes, of September 7.

Q. Was Mr. Boggs present all the time?

A. Yes, he was present; there was quite a full discussion of the conditions of the tunnel and of the things that we could or should do to get the bores fully lined, and Mr. Boggs expressed—I will keep away from that.

Q. What was said?

A. Mr. Boggs expressed a fully cooperative attitude to allow for—he said that he would consider the encroachment, moderate encroachment of the timbers into the tunnel, provided the plan proved feasible on full check and investigation, and we

(Testimony of Otto W. Peterson.)

realized at that time that we had—

Mr. Wittschen: Just a minute. State what was said.

Mr. Smith: Counsel wants you to limit yourself to the sum and substance of what was said by you and Mr. Boggs.

The Court: What you realized, would be a conclusion.

A. I stated that, the conclusion reached by Mr. Boggs and myself—

Mr. Wittschen: What you said and what he said.

Mr. Smith: Q. State the sum and substance.

A. I said we needed to move up with more decision—we seemed to know—we knew what should be done, or approximately what should be done, and it seemed possible to arrive at a decision, but in this case contrary to most others it was difficult, apparently, unusually difficult for Mr. Boggs—Mr. Boggs stated that this was a problem on which he could not proceed directly with an independent decision on the modifications that were necessary for the lining of these tunnels, to meet the conditions which had been encountered.

The Court: Would that change the contract?

A. Not necessarily, this particular thing, so far as the actual concrete lining was concerned; we were trying to work out a method to build the lining, itself, so far the lining itself, was concerned, at a little [1842] different grade from the theoretical position.

(Testimony of Otto W. Peterson.)

Q. Undoubtedly you had in mind the plans and specifications? A. Yes.

Q. That was a departure from them, was it?

A. It was a departure from the plans and specifications strictly and technically.

Q. Possibly Mr. Tinning was making the decision.

A. That became more evident as we proceeded; he was in fact the man who made the decision.

Mr. Wittschen: I ask that that go out.

The Court: That may go out.

A. It was very evident that we needed somebody who could make a decision.

Mr. Wittschen: I ask that that go out and I ask that the witness answer the question.

The Court: Under our court procedure we have the same difficulty that you get into in the engineering field. Under the rule they are entitled to proceed under question and answer so that they may make their objection, and let us try to conform to that rule.

Mr. Smith: Q. Have you concluded your statement of what was said at that particular conversation between you and Mr. Boggs, in sum and substance? If not, give the balance of what was said by you or by him?

A. Mr. Boggs said that he would not consider any plan of arbitration, at least at this time.

Q. Is that all on that day?

(Testimony of Otto W. Peterson.)

A. That was the progress accomplished; nothing was done in the way of a decision.

Mr. Wittschen: The question has been answered. Was that all the conversation?

A. That was not all the conversation.

Q. That is what he asked you.

Mr. Smith: Q. If you have anything more to add to it please add to it, tell us the sum and substance of it.

A. Between Mr. Boggs and myself the sum and substance of the thing [1843] was that Mr. Boggs said that he would continue to study the problem; I had proposed to him a plan of lowering the arch six inches and bringing in the sides of the tunnel—of lowering the arch, of lowering the entire tunnel lining six inches, still giving adequate roadway space and get the tunnel built, and that was the tentative thing under consideration at that time. Mr. Boggs said that he was not going to, that he did not accept that recommendation, but would take it under consideration and give it further thought. On September 9—

Mr. Wittschen: Pardon me, that question has been answered. Now he is going to another conversation.

Mr. Smith: I submit the witness is trying to be fair.

Q. Had you finished that day? A. Yes.

Q. When was the next occasion that you visited the tunnel or had a meeting with Mr. Boggs and his consultants or assistant engineers?

(Testimony of Otto W. Peterson.)

A. Two days after that I again—

Q. That would be what date?

A September 9, 1935, at 9 a.m. I went to Mr. Boggs' office and there, in the presence of Mr. Sweetser, Mr. Earl and Mr. Barclay, we further discussed the matter of a plan for the concreting of these tunnels. No conclusion was reached.

Q. So there was nothing of any importance?

A. Nothing of any particular importance except a great amount of conversation.

Q. Did you go to the tunnels that day?

A. Not that day.

Q. What did you next do by way of activities on the same subject?

A. On the next day, September 10, I went to the tunnel at 7 o'clock in the morning and there had a drawing made showing the tunnel sections with the roof line lowered 10 inches, which was the proposed modification, which I took to Mr. Boggs' office in the same forenoon together with a memorandum which I had written, making a definite proposal for that change in the portions of the tunnel [1844] which could only—making the proposal that that sketch be used in those portions of the tunnel where the timber had encroached into the theoretical concrete lining to such an extent that it was hazardous to hew the timbers sufficiently or to reset the timbers with safety to the workmen, and presented that as a definite proposal to Mr. Boggs.

Q. What did he say?

(Testimony of Otto W. Peterson.)

A. I asked Mr. Boggs if he would not agree to that proposal. I said that the contractor would do the particular work involved in the placing of this concrete section, together with the immediate additional concrete that would be required between this theoretical section and the timber, so far as that particular work was concerned we would do that at the same cost that the theoretical section called for in the plans, or at the same price, or without extra cost, as a substitute for the theoretical section called for in the plans. This, however, did not involve any question as to the claims or charges or costs for the excavation and timbering necessary for building either the theoretical section or this modified section in these particular situations where the modified plan would be used, and I urged Mr. Boggs to agree that we should proceed with this plan, and Mr. Boggs read what I had written, and in the main agreed with the proposal; he suggested that we should also include in this a statement that the Six Companies would modify the hanger rods and make some adjustment in the ventilating chamber which were within the theoretical section of this concrete lining, and I said that I anticipated including this work also and that that as well would be done as a substitute for the theoretical section shown in the plans.

Q. By "theoretical section" you mean the designed section?

A. The designed section.

(Testimony of Otto W. Peterson.)

Q. At the exact location shown?

A. At the exact location shown [1845] in the plans.

Q. Does that conclude your meeting of that day, or have you anything to add to that?

A. Mr. Boggs stated that he was not prepared to give me an answer, that while the plan appeared to have good merit and in general was in accord with his views, he would first find it necessary to consult with the officials of the District, and with the P.W.A., and Bureau of Roads, State Highway District of California, and he agreed that he would proceed immediately to do that. [1846]

(After Recess)

Mr. Smith: Q. Had you concluded? I have forgotten exactly where we were. Had you concluded the meeting on September 10th that you were discussing? A. No, sir.

Q. Was anything further said or exchanged between you and Mr. Boggs at that meeting?

A. In urging on Mr. Boggs that we reach a decision along the lines of this modification, I told him what had been done by Mr. O'Shaughnessy in the building of the Sunset Tunnel in San Francisco, where the contractor went through 300 feet of heavy ground some little distance in from the east portal. We went through this particular area of heavy ground without any unusual occurrences, and shortly after we had gone through the ground, the tun-

(Testimony of Otto W. Peterson.)

nel at that place, the timbers at that place settled a total of 20 inches; the timbers had been placed above grade, but there was a very decided movement, and it was entirely impracticable and unsafe to attempt to reexcavate that tunnel at that place and reset the timbers.

We conferred with Mr. Bartel, who was Mr. O'Shaughnessy's representative on the job, and Mr. Callahan, in Mr. O'Shaughnessy's office.

Mr. Wittschen: Q. Will you tell us what you told Mr. Boggs?

A. I told Mr. Boggs that we consulted with Mr. Bartel and Mr. Callahan, and, inside of about two days' time, we had authorization from Mr. O'Shaughnessy to lower the grade of the tunnel about 10 inches; a slight change was made in the roadbed and a slight change in the railroad grade; that we were immediately at work putting in bracing and concrete rings and proceeded with the concreting of this difficult section; I told Mr. Boggs that I thought that this was, along with other experiences where similar things had been done in tunnels in the way of changing grades as long as the structural strength was retained, a thing which chief engineers frequently have to do, and I thought that he should act on his own responsibility and [1847] give us authority to go ahead. Mr. Boggs said that he thought this precedent would be very helpful to him and he would be very glad to have me give him a full statement of it; which I did, in a letter dated

(Testimony of Otto W. Peterson.)

two days later, giving him the information from the City's official report on this particular heavy section in the Sunset Tunnel.

Mr. Smith: Q. You are referring to Mr. O'Shaughnessy, the San Francisco City Engineer?

A. Yes, Mr. O'Shaughnessy.

Q. Mr. O'Shaughnessy had the same function on the Sunset Tunnel as Mr. Boggs did on the Broadway?

A. Yes. Mr. O'Shaughnessy was the City Engineer, the engineering official,—the executive; and Mr. Boggs was in a similar situation.

Mr. Tinning: Mr. Smith, I don't want to interrupt your examination, but the City Engineer of San Francisco, under the Charter provisions, is entirely different from a legal situation than a district engineer of this District.

Mr. Wittschen: They had no PWA, either.

Mr. Tinning: They did not have the same functions. They might have the same engineering functions; so I am going to object to the question, and ask that the answer go out, on the ground it does not state the facts.

Mr. Smith: The clauses in the contract of the District for the construction of the Broadway Tunnel and the clauses in a similar contract for the construction of Sunset Tunnel confer similar powers on the Engineer; and I take it that is a matter of legal argument. I was just identifying that it was Mr. O'Shaughnessy of San Francisco.

(Testimony of Otto W. Peterson.)

Mr. Tinning: The only objection, Mr. Smith, that I have is it was an attempt to go beyond his engineering functions. I wanted to make that objection. If it is merely for the purpose you have [1848] stated, I have no objection.

Mr. Smith: No; that was solely for the purpose of identifying who Mr. O'Shaughnessy was.

The Court: Proceed.

The Witness: A. Mr. Boggs agreed that he would proceed at once in an effort to obtain approval for this section; and we parted on that day.

Mr. Smith: Q. That was September 10th. Have you concluded September 10th now?

A. Yes. On September 11th——

Q. Let me ask you a question first: Upon what occasion next did you visit the tunnel; or did you have any meeting with Mr. Boggs; and, if so, what was said, or what did you observe at the tunnel?

A. On September 11th, I had a telephone conversation with Mr. Boggs, in which he reported that he was making progress in his contacts with the Bureau of Roads and the State.

On September 12th, I visited the tunnel; went through the entire workings very carefully, and observed particularly the formations in the easterly part of the bores that were open to observation.

Q. You mean the easterly part of the west bore?

A. Yes, the easterly part of the tunnel timbers, from the west portal. I observed the ground was very seriously heavy near the extreme easterly end

(Testimony of Otto W. Peterson.)

of those tunnels, particularly from the first cross adit to the headings; and I went down to Mr. Bogg's office and again urged on him the approval of this plan which he was proceeding with in a thoroughly cooperative way. I spoke to him also, told him that in some special instances it might be difficult to clear all of the tunnel even to comply with the proposed plan of modification of dropping the roof 10 inches, but we might need some tolerance on the timbers, such as I stated to be customary in the building of tunnels, to allow [1849] some encroachment of individual timbers into the section; and he agreed that he would allow about one inch for the segment timbers encroachment or tolerances, and about two inches for the posts.

Q. Did you speak about it?

A. Yes; that was the conversation; he stated that he was agreeable to tolerances of that order, and he stated that he was making good progress with the modification, and thought that it would meet approval at an early date.

Q. Does that conclude that——

A. That concludes that date, except as to this one point: that I stated in part, I was particularly emphatic about the desire to get the worst places in the tunnel concreted at the earliest possible date; in other words, those places from the first cross adit on to the headings. We wanted to do the timber work which was preliminary to the concrete work, and all the other work, so as to speed that up. We were,

(Testimony of Otto W. Peterson.)

in the meantime, going forward with the regular concrete lining in those sections in which the driving or proposed driving did not apply.

Q. Have you concluded your comments upon that date? A. Yes.

Q. Upon what next date did you see Mr. Boggs or did you visit the tunnels?

A. I again, on September 13th, spent the entire forenoon in the tunnels, going over the details of timber position encroachment and with the formulation of plans under which we would proceed with the excavation upon obtaining approval for this modified section.

Q. Was any excavation going on at the particular time forward in the tunnel on the west end?

A. No; no excavation whatever.

Q. Except at the point of the August 28th cave-in?

A. That is all. Also, on this day, September 13th, I telephoned Mr. Boggs to find out what progress he was making in the matter of approval for the modification.

Q. Does that conclude that date?

A. Yes. [1850]

Q. What was your next experience?

A. The next was September 14th. I went to Mr. Boggs' office at 8:40 a. m., and asked him if he was not at that time ready to agree on the modification, or at least on the language of the modification, so that the proposal would be in form for quick ap-

(Testimony of Otto W. Peterson.)

proval, as long as he was authorized already to act. He stated he needed authorization; and I wished to be sure, and I told him it would be highly desirable to have a definite statement of language; and, on this occasion, or some day near this,—I think it was at this particular meeting,—Mr. Boggs showed me what his ideas of the proper language were, and stated then, as he had stated on one or two previous occasions, that he was in substantial agreement with the language that I had used, the conditions that it covered, and that he would release this; he would let me go over the final draft with him as soon as he had approval from Mr. Tinning as to the form of the statements in this paper.

Q. When he referred to the language being similar to his, or his being similar to yours, he was referring to a paper you left with him a few days before, that you mentioned?

A. Yes, a memorandum.

Q. Proceed, if there is anything further to add on that occasion that you are talking about.

A. On September 15th, the next day, in the morning, I went to the tunnel with Mr. Roy Hackley, a tunnel consultant retained by the Six Companies, to go over the tunnel supports thoroughly, and to determine what procedure we should follow in pressing forward more energetically with this work at the various places. By that time, the ground last excavated from the vicinity of the cross adit to the heading had become so heavy that it was neces-

(Testimony of Otto W. Peterson.)

sary to resort to some supplemental support, and we decided that gunite would be the most desirable supplemental, artificial support to introduce in the tunnel. [1851]

Q. I take it, you mean by "supplemental support" supplemental to the timbers which had been supporting it?

A. Yes. Gunite not only has strength in it but serves to bond timbers together. The gunite proposed was a reinforcing steel gunite. We proceeded with the making of plans for that; told the superintendent to get ready, or to proceed with that work; which was done; and quite considerable areas in the forward part of that tunnel were gunited in the next few weeks. I saw Mr. Boggs at the tunnel either—it was either on this day or the day previous. He said that our plan for the modification of this tunnel seemed to reach an unfavorable stage; that, while he himself was agreeable, there were legal complications that had developed between the attorneys of the two parties and Mr. Tinning; he said he was dejected about the situation, and that a decision was very urgent either to go ahead with the modification or go ahead with the job some way or other, with the modification preferably, or to shut the job down.

Q. Have you concluded your conversation with him on that day?

A. No. At that conversation, he told me something of the nature of what these difficulties were.

(Testimony of Otto W. Peterson.)

The conversation, if you wish me to go into that——

Q. Yes.

A. —that was the sum and substance of it: that——

The Court: Q. The lawyers got together and intervened; was that it? [1852]

Q. What was the occasion of your next visit to the tunnel?

A. On the afternoon of the next day.

Q. What date would that be?

A. September 16, I went to the tunnel with an assistant of mine, Mr. Haberkorn, who was a young construction man with a good technical knowledge as well, and on this visit we looked over the conditions in the tunnel to see what places were available for the placing of gunite, and to have him to make designs for gunite beams which would add to the strength of the tunnel. On the evening of the 16th I telephoned to Mr. Boggs about gunite in particular, and urged upon him the advantages of that type of construction, and of its superiority to concrete in strength, and told him of its uses in many other tunnels, and asked him if it would not be permitted to allow that gunite to project into the concrete sections so as to be most effectively used. Mr. Boggs said that he would consider the matter, but off-hand he questioned the advisability of permitting the gunite to project into the sections, as the steel was permitted, steel supports were permitted to project.

(Testimony of Otto W. Peterson.)

Q. Does that conclude your activities on that day?

A. That concludes that day's activities in substance.

Q. Upon what next occasion did you visit the tunnel or have any meeting with Mr. Boggs about the matter?

A. On September 19th I called at the Hotel Oakland for a meeting with Mr. Lippincott, Dean Derleth, Mr. Boggs and Mr. Barclay, and was there informed by Mr. Lippincott that——

Mr. Wittschen: Just a moment. Was Mr. Boggs present?

A. Mr. Boggs was present. And was there informed by Mr. Lippincott that the reason why the negotiations were not completed was due to the fact that the attorney for the Six Companies refused to do this work, were refusing to do this work in accordance with [1853] the plans which I had proposed; in other words, free from any claim so far as this particular piece of work was concerned, as a substitute for the designed section of concrete. I told Mr. Lippincott and the other persons that I was quite sure that he was mistaken, that I had been discussing the matter with Mr. Max Thelen, who was handling the negotiations, and that it was my understanding that the Six Companies gave full support to my proposal but that the difference had to do with extraneous work or work beyond the immediate confines of this particular concrete

(Testimony of Otto W. Peterson.)

ring as a replacement or substitute for the theoretical ring, and that we maintained our right to make claim for the excavation and the timbering which was necessary prior to the time that we placed this particular concrete, but that so far as the concrete ring, itself, was concerned, it would be built as a substitute for the other, with considerable additional amount of concrete involved without extra charge, that extra concrete being just beyond the exterior limits of this modified section and the exterior limits of the theoretical designed section. I said in my opinion that the tunnel was being built under conditions which were entirely different from those which the contractor depended upon when he took the work, conditions which were different from those which were represented, which he felt he had a right to consider a fair representation, and that I did not feel that the contractor should be asked to waive any of his claims, and Mr. Lippincott stated that he was in agreement with that position, in fact he stated that he understood me thoroughly, and apparently there was some misunderstanding which needed to be cleared up about the matter of claims and what latitude they should take.

Q. Was that the sum and substance of what occurred at the meeting at the Hotel Oakland?

A. Yes.

Q. What happened next?

A. On the next day——

Q. Which would be what date?

(Testimony of Otto W. Peterson.)

A. September 20, I had a tele- [1854] phone conversation with Mr. Boggs and Mr. Lippincott, and I told them——

Mr. Wittschen: Pardon me, just a moment. I do not object to what this witness said to Mr. Boggs, but it is obvious he could not telephone Mr. Boggs and Mr. Lippincott at the same time. If he talked with Mr. Lippincott I object to it as immaterial.

Mr. Smith: You will stipulate that Mr. Lippincott was a consultant for the District?

Mr. Wittschen: Yes, but Mr. Lippincott had no right to change the contract, and Mr. Boggs had no right, either. Will you ask about the conversations separately?

Mr. Smith: Q. What was the conversation with Mr. Boggs?

A. I telephoned to Mr. Boggs and told him that I thought that the situation was a useless one for me to continue in; that I had entered into a thing that I did not wish to enter into initially, and I had entered into it because I thought I could do something constructive, and I felt that I was wasting my time, the recommendation had been made, and when we could arrive at a point that something constructive could be done I would be ready to continue in my position with the contractor, but it was my disposition to tell the Six Companies that I was finished with this particular assignment and wished to be relieved, and he said he thought that the situation looked more hopeful, and urged me to continue on, and, substantially, I telephoned to Mr.

(Testimony of Otto W. Peterson.)

Lippincott, and he said the situation with regard to the consummation of these modifications looked more hopeful, and thought something was going to be worked out.

Q. Does that complete your statement?

A. Yes.

Q. What happened next?

A. I went to the tunnel on the next day, [1855] the 21st, and spent several hours there, and then went down to Mr. Boggs' office with Mr. Hindmarsh, and we discussed details of timber work and concrete work, and clearances, and tolerances of timber and gunite, and about this time I told Mr. Boggs—Mr. Boggs told me, or I told Mr. Boggs, that my study of the gunite proposed would not accomplish all I thought that it would in the way of a design and that I would not press that any further except as a general means of support, but that I did not press it as a full substitute for the concrete lining, but only as a construction support, supplementing the artificial timber support. In the afternoon of that day I went over the work at the east tunnel very carefully with Mr. Hindmarsh.

Q. Did you note the work there and what had been done by the contractor?

A. Yes, I observed the work, the same general ground conditions as those encountered at the west portal, although not quite so heavy.

Q. Requiring timbering support?

A. Requiring timbering support.

(Testimony of Otto W. Peterson.)

Q. What next occurred, Mr. Peterson? When did you next visit the tunnels, or meet with Mr. Boggs?

A. I visited the tunnel next day and went over——

Q. What day would that be?

A. September 2? and went over the tunnel timbering very thoroughly with Mr. Price, working up data and a graphical diagram showing the position of each of the timbers and laying the basis for the timber survey that was later made of all of the timbers in the tunnel.

Q. Which is in evidence in this case?

A. Which is in evidence in this case.

Q. Does that complete your activities for that day? A. Yes.

Q. Upon what next occasion did you visit the tunnels or see Mr. Boggs?

A. I visited the tunnels on the afternoon of the 23rd [1856] of September, the next day, taking with me Mr. Harry Scott, a tunnel superintendent whom I had obtained from Mr. Hindmarsh, the general superintendent, with a view of having Mr. Scott handle the work of square-setting that was to be done or was in progress and which was to be done to a much greater extent in the portions of the tunnel where the ground was very heavy and where something further than regular timber sets and gunite was required, and where it was clearly evi-

(Testimony of Otto W. Peterson.)

dent that it would be necessary to give this additional support.

Q. Was there any excavation in progress at this time?

A. No, no excavation in progress.

Q. Were they removing the cave-in material then?

A. They were going ahead with the removal of the cave-in, and they were going ahead with all of the concrete work in both tunnels, doing as much as could be done working energetically in the standard sections of the tunnel.

Q. You mean by standard sections where it was not necessary to make any change in the designed section? A. Yes.

Q. What next occurred?

A. On September 24th I attended a hearing of the State Accident Commission at which the question of safe procedure in the Broadway Tunnel was heard, and where it was agreed by the District and the Six Companies that substantially the same recommendation which had previously been made to lower the arc ten inches, with a view of minimizing the disturbance of timber supports should be followed.

The Court: We will take a recess now until two o'clock.

(A recess was here taken until two o'clock p. m.)

[1857]

(Testimony of Otto W. Peterson.)

Afternoon Session

The Court: You may proceed.

OTTO W. PETERSON,

recalled.

Direct Examination (continued)

Mr. Smith: Q. Just before the luncheon recess, Mr. Peterson, you had spoken about events of the 24th of September, 1935, and, I believe, had completed your statement about that date? A. Yes.

Q. What next occurred, as far as your going through the tunnels, or meeting with Mr. Boggs, is concerned, and when?

A. My next visit to the tunnel was on October 1st, at which time all construction activity except driving the bores ahead from the west end was proceeding energetically there, with a large crew of men, especially on the square-setting work, and on the work of preparing the sections in which the lining section of the tunnel was to be placed.

Q. You mean the modified concrete section?

A. Yes, the modified concrete section.

Q. That was October 1st?

A. October 1st, yes.

Q. Have you concluded your remarks about that date? A. Yes.

Q. What next occurred, and on what date?

A. On October 2nd, I made a visit to the tunnel with Mr. Bright and Mr. Sweetser of the Bureau

(Testimony of Otto W. Peterson.)

of Public Roads, and Mr. Barclay of the Highway District also went along. We looked over the work that was in progress in preparing the tunnel for the modified section, and also some additional problems,—special problems,—where it was uncertain as to whether or not we might even have difficulty in moving a few special timbers to meet the requirements of the modified section.

Q. Were they installing the modified section by this time?

A. They were putting up the forms, and I believe they were actually pouring concrete at this time on the first portion of the modified [1858] section, by the use of wood forms. I saw Mr. Boggs at the tunnel, and spoke to him about solving additional difficulties that might arise in which it might be necessary to use a somewhat thinner substitute section than the 24 inches specified in the modified section by introducing structural steel, or by other methods which would give the required strength should that become necessary. Mr. Boggs stated that he would have these thinner sections analyzed and be prepared to make a decision if it became necessary to do so.

Q. Is that all for that date? A. Yes.

Q. What next was the date upon which you went to the tunnels or met with Mr. Boggs?

A. I had a brief visit with Mr. Boggs on the afternoon of October 5th, following a Highway Dis-

(Testimony of Otto W. Peterson.)

trict meeting; spoke to him very briefly about the same subjects that had been discussed on October 2nd.

Q. Did you go to the tunnel on that date?

A. No, sir.

Q. Either at the west or the east portals?

A. It is not my recollection that I did.

Q. Did you go to the tunnels shortly after that?

A. On October 6th, I spent the morning at the tunnels, and again saw Mr. Boggs there; but, at that time, it looked as though we would be able to accomplish all that was required in the modified section that had been accepted except for an interference of possibly two inches; and Mr. Hindmarsh, the superintendent, stated to Mr. Boggs that he thought he could get the full 24 inches, but would do so if it was at all possible to accomplish that result. I might state here I think that was fully accomplished, and that we were simply dealing with contingencies that might arise, and with a view of being prepared to meet them, if they did arise.

Q. Did you observe the work being done by the Contractor in the [1859] tunnels on that date?

A. Yes, sir. I observed the work being done at that date, particularly the work of squaresetting, on which they had quite a large organization and in which I was particularly interested.

Q. What occurred next after October 6th?

A. On October 9th, I went, with Mr. S. D. Bechtel and Mr. Boggs, to Mr. Sweetser's office, where

(Testimony of Otto W. Peterson.)

the language to be used with regard to the description of what would be done or what would be included in the modified section, the design of the modified section, was further reviewed and passed on.

Q. Where was that meeting?

A. That was at Mr. Sweetser's office, as I recall.

Q. Where is his office?

A. In San Francisco, at the office of the Bureau of Public Roads.

Q. Have you concluded your observations on that date? A. Yes.

Q. Upon what next occasion did you go to the tunnels?

A. Well, either on the 9th or the 10th; I believe it was on the 9th, I anticipated that there would be continuing problems developing in regard to the tunnels, and also I felt that we had gotten over our principal hurdle, and spoke to Mr. Boggs about the advisability of settling all of the problems between the Contractor and the District to see if it would not be possible to clear up these problems, determine the merits of the claims of the Contractor——

Mr. Wittschen: Any conversations going toward arbitration and claims would be entirely immaterial here, and could not bind the Board of Directors. That was not within the scope of Mr. Boggs' authority, and I object to anything of that kind, on the ground that they were not consummated, and, not having been consummated, they cannot be gone into.

(Testimony of Otto W. Peterson.)

Mr. Smith: If it please the Court, the testimony seems to me to be testimony that should be developed to establish what was done [1860] by the Contractor and the efforts that were being made and the delays that resulted, in general, to give the Court all the facts concerning the situation.

The Court: What delay have you in mind now?

Mr. Smith: I don't know what the answer will be.

The Court: You don't know what the answer will be?

Mr. Smith: The exact answer on this particular subject.

The Court: The exact answer. What delay have you in mind?

Mr. Smith: The Contractor was engaged in negotiations, through Mr. Peterson, with the District, in an effort to speed up the work and to arbitrate any dispute——

Mr. Wittschen: Well, arbitration of claims is not involved.

The Court: Arbitration is not in issue. It has no place in the case on the merits.

Mr. Smith: Q. Proceed, Mr. Peterson, and delineate the conversation you had, omitting reference to arbitration.

A. On my next visit—there was no particular conversation on those two dates except that which referred to arbitration,—nothing of consequence.

(Testimony of Otto W. Peterson.)

Q. What was the next occasion when you went to the tunnels?

A. My next visit was on October 13th. I spent several hours there in looking over the work carefully,—the timber work, particularly,—with Mr. Hindmarsh.

Q. What was the condition of the work at that time; was excavation in progress?

A. No. The timber work and concrete lining were the classes of work which were in progress.

Q. What was the next occasion of your visit to the tunnels?

A. On October 20th, I went over the tunnel work with Mr. Hindmarsh and Mr. Havis,—Mr. Havis of Mr. Kaiser's office,—to check over the amount of work that remained uncompleted, and to see that we had everything ordered and all plans were prepared to go ahead with [1861] excavation just as soon as the concrete was finished; reviewing the work generally.

Q. Did you observe the ground conditions in the workings at this time?

A. Yes; not so particularly on that day more than others, though.

Q. When was the occasion of your next visit to the tunnel——

A. The next visit was on the 31st of October. I went carefully through the second cross adit, and looked particularly at some of the formations that were in that area, because it gave a very good cross

(Testimony of Otto W. Peterson.)

section of the hill between the two tunnels, gave better exposures than were generally observable in the tunnels themselves; and I was particularly interested in the soft puttylike deposit that ran like a faulted gouge, and was interested in determining the extent of these deposits, and also in observing their similarity with other whitish deposits that were in evidence in the easterly part of the two bores that to that time had been excavated from the west portal. It was a type of intrusion which cut across the formation and greatly weakened the structure of the chert particularly, and I was interested in trying to determine the nature of it and what the probable extent of that might be, and the work that remained to be done.

Q. You heard the testimony of Mr. Page here the other day, I believe you said? A. Yes.

Q. Was that the same material that you mention that Mr. Page described as a diabase dike?

A. That was the same material, yes.

Q. Did you see some of that material on this particular occasion,—on October 31st,—when you were there?

A. I saw some at that time in the cross adit, and also particularly in the forward part of the headings, as they excavated from the west portal.

Q. Have you concluded your observations on that day? A. Yes. [1862]

Q. Upon what next occasion did you go to the tunnel?

(Testimony of Otto W. Peterson.)

A. I next visited the tunnel on November 2nd. Nothing of any particular import on that day, other than——

Q. Did you see Mr. Boggs on either one of these last visits you mentioned, or any occasion prior to that?

A. I visited Mr. Boggs all of the forenoon of October 31st. Our discussion had to do, in the main, with matters which are not under discussion at this time, I guess.

Q. When did you next go to the tunnels or see Mr. Boggs?

A. I saw Mr. Boggs, again, on November—Mr. Boggs and Mr. Tinning on November 1st. That was a conversation at Mr. Boggs' office.

Q. Thereafter, when was the next occasion?

A. On November 2nd, I was in the tunnel during the forenoon, looking over all work very carefully; going ahead with timber surveys and checking up on the progress,—the activities of the various crews; going over the work with the superintendent.

Q. Had excavation been resumed as yet?

A. No, sir.

Q. What was the occasion of your next visit and the date?

A. The next visit was on November 8th. I went through the slide area on that date, with Mr. Larson; and the work was pretty well along toward completion, as I recall.

Q. The next date?

(Testimony of Otto W. Peterson.)

A. I was there on the next day, also, November 9th; and again looked over the area of the first cave-in quite carefully.

Q. And they were still working there?

A. Yes.

Q. The Contractor's forces. What other work were they doing on this occasion, as you recall, in general?

A. Well, they were carrying on the concrete lining work and footing work and timber work, square-setting. [1863]

Q. What was the occasion of your next visit, or the date of it?

A. On November 17th, I made a visit and went over all of the work with the superintendent, Mr. Hindmarsh.

Q. What was the Contractor doing at that time?

A. Well, about that time, it is my recollection that he resumed tunnel driving in the south tunnel, proceeding with the side drifts and carrying that work forward. The main excavation,—the concrete had at that time advanced to a sufficient point in the south tunnel, in both tunnels, in fact, so that work could proceed,—excavation work could proceed in the south tunnel.

Q. Did you observe the methods being employed by the Contractor?

A. Yes; the bottom drift system.

Q. Were they in accord with standard tunnel practice? A. Yes.

(Testimony of Otto W. Peterson.)

Q. Upon what occasion did you next go to the tunnels?

A. Next visit was on December 11th. I went through the tunnel with Mr. Price, and checked over all of the work being done, particularly the heading work proceeding in the south tunnel.

Q. Were you at the tunnel on November 30th?

A. Yes, I was at the tunnel on November 30th, also; also went over the work with Mr. Hindmarsh, the superintendent.

Q. Did you observe the ground conditions at that time in the south tunnel?

A. Yes. The work of squaresetting and putting the tunnel in shape had been well advanced to completion. The tunnel was particularly heavy; the north tunnel, near the heading, right where the last work was completed. I noticed particularly, on this and other visits, that some of the heaviest ground in the tunnel was right over and immediately forward of the shovel where it further excavated at the toe of the core in the north tunnel; and a similar condition was—— [1864]

Q. Had the Contractor resumed excavations in the north tunnel on this date?

A. I do not recall just when he resumed excavations. It was some time in the month of December; about the middle of December, as I recall.

Q. After November 30th, or, I believe, you stated December 11th, what was the next date of a visit to the tunnels?

(Testimony of Otto W. Peterson.)

A. On December 21st I visited the tunnel headings, with Mr. Hindmarsh; and I think that at this time, as previously stated, the work of excavating was also resumed in the north tunnel headings.

Q. Did you observe the working conditions and the work that was being done by the Contractor on those visits?

A. Yes, sir; in the north tunnel, they proceeded with the wall plate drift system and top heading.

Q. Was the work being done in accordance with standard tunnel construction practices as you understand them? A. Yes, it was.

Q. What was the date of your next visit to the tunnels?

A. My next visit was on December 28th. I again went over the various headings, through the various headings and over the work with Mr. Hindmarsh. The work was actually in progress,—excavating the headings and bench and so on, in both the north and south tunnels.

Q. When did you next go to the tunnel?

A. On the 29th of December, I also went through the tunnel with Mr. Hindmarsh.

Q. And the Contractor was excavating in both tunnels by that time, as I understand it; is that correct? A. Yes.

Q. Did you observe the ground conditions encountered in the headings and the timbering methods employed by the Contractor? A. Yes.

Q. What observations did you make?

(Testimony of Otto W. Peterson.)

A. Well, the work was being carried forward in a good, workmanlike manner, with as much energy as possible.

Q. When did you next visit the tunnels?

A. My next visit was on [1865] January 25, 1936.

Q. 1936? A. 1936.

Q. All the visits you have testified to ending in December were in the preceding year?

A. Yes, sir.

Q. Now, this is 1936?

Mr. Tinning: What date was it, Mr. Smith?

The Witness: January 25th.

Mr. Smith: Q. What did you observe on that date, if anything, Mr. Peterson, as to the ground conditions and the work being done, and the manner in which it was being done?

A. Well, they were excavating in chert formation in both tunnels. There were quite a number of diabase dikes in evidence. The work was going forward as rapidly and in as workmanlike manner as possible.

Q. Did you observe any effect of the diabase dikes on the work?

A. Yes; there were places—there was very heavy ground where these dikes had cut across the formation and broken the bond overhead, or permitted these disjointed masses to slide on the lubricated diabase planes, exert pressure toward the tunnel excavation.

(Testimony of Otto W. Peterson.)

Q. Was there any trimming of timbers necessary at that time in order for the Contractor to install the concrete section as designed?

A. There was trimming of timbers required at all times. There were special places where the timber was forced in.

Q. Was there any resetting of timbers or replacement of these timbers necessary? A. Yes.

Q. Was that work proceeding at that time?

A. Well, the major part there was—— Yes, that was still going forward.

Q. Was that in the new excavating?

A. Some of it was in the new excavation, yes.

Q. How long had the timbers that were being reset, or replaced, been in place?

A. Some of those timbers had been placed just a very short [1866] time,—a week or ten days.

Q. They had moved to the extent necessary to require replacement?

A. Occasionally, yes.

Q. When was the next visit,—the occasion of your next visits, Mr. Peterson; and who was with you?

A. I next visited the tunnel on February 10th. Mr. Boggs, Mr. Lippincott, Dean Derleth and Mr. Hindmarsh, as I recall, were present in the tunnel at that time, and we looked over particularly the work of advance driving in the tunnel and the type of construction in progress.

(Testimony of Otto W. Peterson.)

Q. Did you have any conversation with Mr. Boggs at that time?

A. It is my recollection I did. [1867]

Q. Will you state what the conversation was?

Mr. Tinning: Will you have him state who was present?

Mr. Smith: I think he has stated who was present.

Q. Who was present at the conversation you mentioned—all of the gentlemen you have named?

Mr. Tinning: Who was within hearing.

A. They were all about.

Mr. Smith: Q. Who was within hearing, or do you know?

A. I don't know. I had a conversation with various ones of the party, I think several of them, but particularly with Mr. Boggs, and discussed the progress and the way the work was proceeding, and Mr. Boggs expressed approval of the way the work was being carried on, and then my recollection is Mr. Lippincott also expressed approval of the way the work was being carried on by the contractor.

Q. Does that complete your statement as to that particular day? A. Yes.

Q. Upon what occasion did you next visit the tunnels?

A. On February 15 I made a visit to the tunnel; Mr. Boggs, Dean Derleth and Mr. Van Norman were there. We looked through the tunnel work and discussed the manner in which the work was

(Testimony of Otto W. Peterson.)

being conducted and the progress, and again it is my recollection I spoke with Mr. Boggs and also Mr. Van Norman, too, if they had any criticism, or suggestion, or advice, and they expressed themselves as—expressed satisfaction with the progress and the manner in which the work was being carried forward.

Q. Were you referring in any way in what you said to the timbering methods that were employed at that time? A. Yes.

Q. The comments that were made included comments on the timbering?

A. That is what I was particularly interested in covering in the discussions. [1868]

Q. When did you next go to the tunnels, Mr. Peterson?

A. The next visit was early in the morning of February 22 of 1936.

Q. That was on the day of the cave-in of that date? A. Yes.

Q. Had you been at the spot where the cave-in occurred during your last preceding visit on February 15, which you testified to, as far as you know?

A. It is my recollection that I was in the headings, but I do not believe, I am quite certain that the main bore excavation had not been completed at the time of my visit the week previously, but that the wall plate drifts were excavated.

Q. It is your recollection that on February 15, when you were there at the spot where the cave-in

(Testimony of Otto W. Peterson.)

occurred on February 15 that the drifts were under construction?

A. That is my recollection.

Q. What did you observe concerning the February 22 cave-in as to, in your opinion, its cause?

A. I arrived while the material was still caving, and noticed it came in mainly from the area above the south wall plates, and in the arch in the north tunnel; it came in about, above the arch, some five or six feet—several feet—and developed laterally up to the south, to the sides and upwards, and kept expanding, and I noticed the type of material, there was a considerable amount of white material, that diabase, white diabase, which came down at this place in lumps of considerable size, varying from large lumps to finer products.

Q. Had the timbers been broken or snapped in the part of the cave-in as far as you observed?

A. No, the timbers were not broken, but had come in bodily; it appeared that a thrust had caused this cave-in, the thrust coming from the upward and from the south side of the arch.

Q. At what point on the line of the arch did you form the opinion the cave-in started?

A. I would roughly say a quarter of the way from the wall plate up to the crown, or just above the wall plate, [1869] and developed upward in both directions, forward and backward, as the cave expanded.

Q. It is your opinion it began—you observed and formed the opinion that it began at the first or sec-

(Testimony of Otto W. Peterson.)

ond segment above the wall plate?

A. I would say about the second segment would be the locality.

Q. That would be on the south side of the north tunnel? A. Yes.

Q. What else did you do on the day of the cave-in when you were there, if anything?

A. I observed the bulkhead which was being thrown up; I went up on the catwalk adjacent to that and viewed it from all angles as closely as I could, to observe it as much as possible.

Q. Did you return to the tunnel after February 22nd?

A. Yes, I returned the next day, on the 23rd, and looked over the area of the cave-in further. At that time the debris had come down so that one could not see as much of the area from which the cave had started, and the debris had come down sufficiently to fill the tunnel and block the area of the roof pretty generally adjacent to the cave.

Q. After February 23 did you go to the tunnel at all?

A. I went to the tunnel on February 24 and attended a Safety Commission hearing which was held on that date.

Q. You mean the Industrial Accident Commission?

A. The Industrial Accident Commission hearing.

Q. Where was that hearing held, at the tunnel?

A. It was at the tunnel, yes.

(Testimony of Otto W. Peterson.)

Q. What was the occasion of your next visit, if any, to the tunnel?

A. The next visit was on the 26th of February; I went over the tunnel work again with Mr. Hindmarsh, the superintendent.

Q. After that did you make a visit to the tunnel again, and when? [1870]

A. The next visit was on March 3, 1936, that was the last visit.

Q. You visited the tunnel during construction for the last time?

A. The last time that the Six Companies were engaged in this contract.

Q. In other words, after March 3, 1936, you did not again go to the tunnel prior to June 13: is that it? A. Yes.

Q. 1936? A. Yes.

Q. From your observation of the conditions as you saw them in the tunnel did you form an opinion as to whether or not the ground in which these tunnels were being driven was or was not self-supporting? Did you form such an opinion?

A. Yes, I did; it was not self-supporting.

Q. It would require timbering?

A. Yes, throughout.

Q. Throughout? A. Yes.

Q. And during your visits to the tunnels did you form any opinion as to whether or not the timbering methods pursued by the contractor were in accord with standard tunnel practice? A. Yes.

(Testimony of Otto W. Peterson.)

Q. Were they?

Mr. Wittschen: Objected to as immaterial.

The Court: I will allow it.

Mr. Wittschen: Exception.

A. They were.

Mr. Smith: Q. Was the work of the contractor delayed by anything you observed while you were at the tunnel on these trips of inspection? A. Yes.

Q. For what reason?

A. There were delays, first of all, at the West Portal excavation, due to caving of the banks, difficulty of gaining access to the portals until the excavation was completed. In my opinion, the work of driving the tunnels, themselves, was substantially delayed because of the ground conditions which were encountered, the reason being that the ground was very much heavier [1871] and more difficult to excavate in than the contractor anticipated.

Mr. Wittschen: Just a moment.

The Court: What the contractor had anticipated may go out.

Mr. Wittschen: He may state the nature of the ground and we won't object to that.

A. May I have the question again?

Mr. Smith: Q. The reasons for delay, I asked you the reasons why the contractor was delayed.

A. He was delayed because of the fact, the major reason was because of the fact that the tunnels were very much more difficult tunnels to build and excavate and timber than it was estimated they would be.

(Testimony of Otto W. Peterson.)

Mr. Wittschen: I ask what was estimated to be go out.

Mr. Smith: I think that is a perfectly proper answer. It is an opinion as to why they were delayed.

The Court: What was estimated may go out.

Mr. Smith: Q. Was the contractor delayed by the cave-ins? A. He was.

Q. In your opinion for how long a time?

A. For a period of 90 to 120 days, because of the first cave-in; that covers not only the time of actually clearing up the cave-in, but to complete other work or to do other work in a different way because of the cave-in, square-setting, and the modification of the tunnel lining, and various things that arose out of that occurrence.

Q. Have you finished your answer?

A. The refusal of the Accident Commission to permit timbers to be moved, the general change in the construction procedure, all revolving around that occurrence.

Q. As far as the February, 1936, cave-in was concerned, was there any delay occasioned by that?

A. There was.

Q. How long was that delay?

A. That was a delay of about 60 days.

Q. How long a delay was occasioned by the causes that you mentioned a [1872] few moments ago at the west portal, and outside of the west portal, in the approach?

(Testimony of Otto W. Peterson.)

A. From one to two weeks' delay was occasioned at the west portal in excavating the approach cut and getting started on the tunnel work.

Q. And in the west portal section of the tunnel that you mentioned, the same question.

A. There there was probably a delay of about one to two months because of the plan that had to be followed to excavate and build these particular tunnel sections, and the special difficulty of the ground at those places.

Q. In your opinion what progress would have been normal progress for the contractor to make as you observed the contractor's forces and equipment in the construction of these tunnels, in the excavation of the tunnel bore in feet per day, if the ground had been self-supporting?

Mr. Wittschen: Objected to as immaterial and argumentative, and calling for his conclusion.

The Court: I will give him a record. I will allow it.

Mr. Wittschen: Exception.

A. Nine to ten feet a day.

Mr. Smith: Q. Had you made an examination of the progress which the contractor had made in the main excavation east of the west portal work, from the west portal in? A. Yes.

Q. What actual progress was the contractor able to make?

A. He was able to make an actual over-all progress, including the delays encountered, of approxi-

(Testimony of Otto W. Peterson.)

mately 3⅓ feet per day. During the time they actually drove, eliminating the delays his progress was approximately 4½ feet per day.

Q. Was the progress of 4½ feet per day made apart from the delays occasioned by the cave-ins and from special causes, in your opinion, a normal and fair rate of progress in the ground encoun-

[1873] tered? A. It was.

Q. What, in your opinion, was the total delay experienced by the contractor, in days?

Mr. Wittschen: I can add it up for you. It would be a maximum of 180 and 14 and 60, or 254, and a minimum of 50 or 60 less.

Mr. Smith: I do not think the computation is right.

A. I would say about 300 days.

Q. Mr. Peterson, I will show you Defendant's Exhibit G-4, which as I understand it purports to be a correct representation of the timber in the north tunnel, a portion of the north tunnel, toward the west end, having the station numbers thereon, and I will ask you to state to the Court whether, in your opinion, that exhibit correctly portrays the timbering as you examined it in the tunnel?

A. It appears to portray a certain part of the timbering, the posts and wall plates and segments.

Mr. Tinning: That is all it is intended to represent.

Mr. Smith: Q. It does not include the collar bracing or lagging, does it? A. No.

(Testimony of Otto W. Peterson.)

Q. Did you check to see whether it correctly illustrates the timber as far as you could find it?

A. I have not attempted to make a detailed check.

Q. Is collar bracing an important part of the tunnel timbers? A. Yes.

Q. What was its function?

A. Well, the collar bracing is put in between the segments, particularly to give them lateral bracing and make them more effective as columns to support the lagging.

The Court: I should say the tunnel has been braced up sufficiently for all purposes of this case, as far as construction is concerned. We have had diagrams and maps and figures, and it goes without saying that it was braced up in this heavy ground that [1874] you are talking about.

Mr. Smith: Q. Mr. Peterson, did you observe the blasting methods and shooting methods employed by the contractor? A. Yes.

Q. When you were on the work? A. Yes.

Q. Were those methods, in your opinion, in accord with standard and customary tunnel construction practice? A. They were.

Q. In connection with the estimate for the construction of this tunnel, Mr. Peterson, was the contractor justified in estimating that he would drive this tunnel entirely from the west end without going to the east end?

Mr. Wittschen: Objected to as calling for the

(Testimony of Otto W. Peterson.)

opinion and conclusion of the witness on a matter that is not the subject of expert testimony.

The Court: Someone developed that in this case, that tunnels were driven on both ends. This testimony, I take it, is in answer to that. Who developed that, I think it was you, was it not?

Mr. Wittschen: No, we did not.

The Court: If my memory serves me you indicated that construction ought to have been going on at both ends.

Mr. Tinning: If I remember, your Honor, some witness testified it was not possible to drive from both ends, and on cross-examination we developed certain ideas in connection with it.

The Court: I will allow you to go into it briefly in the matter of time.

Mr. Smith: Q. Do you know the question?

A. Yes.

The Court: It is conceded it would be the most economical.

Mr. Smith: There are many other reasons.

A. The first thing for the contractor to determine was the type of ground and for this particular tunnel the time of 720 days was an ample time to drive the tunnel, this particular tunnel, as the [1875] ground conditions were indicated from one end only. Here he had two parallel bores approximately 3000 feet long in which progress of 9 to 10 feet per day could be made except for very short special sections. Secondly, the material from the

(Testimony of Otto W. Peterson.)

tunnel which was suitable for road purposes was all to be used in the low westerly portal of the tunnel; the contractor was required to place such suitable material as the District might direct in these roadway fills, and in order to deliver the good material he likewise had to haul, or would logically haul the poor material to the same westerly heading so as to be sure that he would be prepared to meet that requirement. That was the reason, there was ample time and there was the reason that the material was logically to go to the roadways at the west end. Aside from that, naturally a contractor would prefer to drive the tunnel from the west heading for economic reasons, because of the driving up hill and handling of water; also for the reason that there was ample construction space at the west end and that it was possible to drive only part of this tunnel from the east end, but the contractor had no reason to feel that he should spend money for additional plant to drive downhill on a steep grade of 4 per cent., which is quite unusual grade for tunnels, not unusual for some highway tunnels, but it is out of the ordinary for tunnels; then there were reasons of economy, as well, that justified him to do all of his work from the west end as long as he was sure he could complete the job within the required time.

Mr. Smith: Q. Mr. Peterson, are you familiar with the amount of profit that is customary for the

(Testimony of Otto W. Peterson.)

contractor to estimate in the construction of tunnels? A. Yes.

Q. What is the customary amount?

Mr. Wittschen: Objected to as being conjectural and speculative and no bearing on this case, and proving no issue, and immaterial.

The Court: The objection will be sustained unless it is dis- [1876] closed how much profit was made in the Boulder Dam. I think that would be helpful.

Mr. Smith: May it please the Court, the evidence is addressed to the proposition, of course, that in this case the plaintiff is suing to recover a reasonable value of the work done, which includes, on our theory, a reasonable cost thereof plus a reasonable profit, and this witness is qualified to state what the normal and customary profit is in tunnel construction. I think he is fully qualified in that department.

Mr. Wittschen: Aside from that, I have innumerable cases which I would like to present that on a question of quantum meruit you have to take the cost without a profit.

Mr. Smith: Of course, we have cases to the opposite.

The Court: I think I can express my view to you. I have it in mind and will do so if you wish.

Mr. Smith: I would like the witness to be permitted to answer the question.

(Testimony of Otto W. Peterson.)

The Court: I will give you a record on it in any event, so if I am in error I will have an opportunity to check it.

Mr. Wittschen: Note an exception.

A. The usual profit figured by a contractor on tunnel work is 17½ per cent.

Mr. Smith: That is all.

The Court: We will take a recess for a few minutes. [1877]

(After Recess)

Mr. Tinning: At this time, if the Court please, the defendants in this action offer in evidence the grant agreement between Joint Highway District No. 13 to the State of California and the United States, which contains the provisions with respect to the obligations of the District as to the modified form of plans and specifications in the construction of its project.

Mr. Smith: The offer will be objected to on the ground it is incompetent, irrelevant and immaterial; has nothing to do with the contract between the plaintiff and the defendants in this action; was not referred to or made a part of it in any way or mentioned in the contract between the plaintiff and the defendants in this action. As a matter of fact, it was never directed to the attention of the plaintiff, and the plaintiff was unable to obtain a copy of same until about a year after the contract was entered into. It is absolutely immaterial and has no bearing

(Testimony of Otto W. Peterson.)

on the issues in this case whatever. There is no privity of contract whatever between the PWA and the plaintiff in this case.

Mr. Alexander: The cross defendant surety companies make the same objection, your Honor.

Mr. Tinning: If the Court please, the specific supplement and amendments to January 9, 1934, contain a provision with respect to this contract that the obligation of the Contractor under the contract with the District to comply with all of the regulations of the PWA then in effect and thereafter promulgated and this specifically is already in evidence. The provision that I have in mind reads as follows:

"The attention of all bidders is hereby——"

[1878]

Mr. Smith: What page are you reading from?

Mr. Tinning: Page 3 of the first supplement.

Mr. Smith: Of which supplement?

Mr. Tinning: I have already referred to it, Mr. Smith.

Mr. Wittschen: The first one. There is a first and second supplement.

Mr. Tinning: January 9, 1934:

(Reading:) "The attention of all bidders is hereby specifically called to Bulletin No. 2 of Federal Administration of Public Works entitled 'General Information and Instructions for the Guidance of State Advisory Boards and State Engineers (P.W.A.)' A grant of thirty

(Testimony of Otto W. Peterson.)

(30) per cent of the cost of labor and material used in the project of the District has been made by the Public Works Administration of the United States under the terms of said National Industrial Recovery Act, and all bidders are hereby advised that the Directors of the District will cooperate with the Public Works Administration and all its officers and employees in the enforcement of all of the provisions of said National Industrial Recovery Act and the rules and regulations heretofore and hereby promulgated applicable to the performance of the work on the project of the District." [1879]

There are certain provisions in the contract between the District and the PWA of the United States which require the structure to be constructed in accordance with the plans and specifications with such minor alterations or modifications may be from time to time approved by the second party,—that is, the United States.

Mr. Smith: It is very obvious, from the reading by counsel, in the clause, notice to bidders, which he read aloud to your Honor, that it refers entirely to labor conditions under the National Industrial Recovery Act, or the NRA as it was known at that time. In other words, there is no question about the performance by the Contractor of this contract; it had to be pursuant to the conditions laid down by the regulations of labor and the conditions of labor by the Act involved in accordance with regulations

(Testimony of Otto W. Peterson.)

put out by the PWA; but that is totally different from a long agreement between the District and the PWA, by which the District borrows money, and copies of which were never furnished to the bidders or the Contractor. We renew our objection.

Mr. Tinning: Your Honor, the offer is made because of the fact that it was necessary for the District to secure authority to make any modification or change in its plans or specifications.

The Court: Their answer to that is they had no knowledge or notice of it.

Mr. Tinning: We think, however, the specific provision for it——

The Court: I will give you a record on it. I will allow it subject to a motion to strike and over your objection.

Mr. Smith: Note an exception.

Mr. Alexander: Exception, your Honor.

(Thereupon, the document was marked "Defendants' Exhibit O-4.")

[Set forth in the Book of Exhibits at page 471.]

Cross Examination

Mr. Tinning: Q. Mr. Peterson, when you came on this work, were [1880] you employed as an expert when you first came in contact with the Broadway Low Level Tunnel?

A. When I first came in contact with this work, my visits were personal.

(Testimony of Otto W. Peterson.)

Q. Well, you said that this morning. Were you employed as an expert or were you going out voluntarily to help a friend?

A. No; I did not go out to help anyone. I just went out to visit this tunnel project.

Q. You mean to inspect it for your own purposes?

A. No; not— Just personal visits with Mr. Larson and Mr. Whitmire and Mr. Fontaine and Orselli, and others that I knew out there.

Q. When you made those visits, you observed the work? A. Yes.

Q. When you went out there on August 5, 1935, did you go as an employed consultant, or did you go as a friend of S. D. Bechtel and Mr. Phillips?

A. I went primarily as a friend of Mr. Bechtel and Mr. Phillips; I was not actually employed at that time.

Q. When were you first employed by Six Companies, the plaintiff in this case?

A. Beginning at the time of the first cave-in, when I was called upon to go up and inspect the cave-in in the tunnels.

Q. When you went out there on the morning of the 29th of August, 1935, where you spent all morning and then went with engineers of Six Companies to the Joint Highway District office, were you employed by Six Companies at that time?

A. I considered that I was, yes. I was asked by Mr. Bechtel specifically to go out there and do that. There was nothing further said than that he wished

(Testimony of Otto W. Peterson.)

to have me join as one of a group of engineers to consult on the job.

Q. Did you afterwards receive compensation?

A. No, sir.

Q. For that visit?

A. No; I did not, at that time. I figured I would get it.

Q. Did you receive it? A. Yes. [1881]

Q. But none prior to that time?

A. Not that I recall.

Q. Were you employed by any one of the constituent companies that form the plaintiff in this action,—Six Companies of California,—during the period referred to, prior to August 29, 1935, and after June 4, 1934? A. Prior to August 29th?

Q. The time of your employment in this matter?

A. Yes, I have done work previously for some of the companies.

Mr. Smith: He limited it to one year.

The Witness: One year. Within a period of one year, I had done work for some of the companies.

Mr. Tinning: Q. For how long prior to June, 1934, had you worked for any of the companies?

A. For how long prior?

Q. Yes, Just generally, Mr. Peterson.

A. Oh, possibly 5 years; some incidental things that were done.

Q. Starting from a time in 1927 and 1928 up to the present date, you have been continuously employed as an engineer by the Pacific Gas and Electric Company? A. Not continuously; no, sir.

(Testimony of Otto W. Peterson.)

Q. From 1927 up to now, how long have you been away from your employment with the Pacific Gas and Electric Company?

A. I have not been away; but my pay has not been continuous,—if that is the test.

The Court: Q. You got a leave of absence?

A. Yes, sir.

Q. Covering a period of time?

A. Oh, just a matter of a few weeks or possibly a month or two in the aggregate.

Mr. Tinning: Q. Were you on a leave of absence from the Pacific Gas and Electric Company when you were in charge of the work of recovering the Broadway Tunnel?

A. I was not on a formal leave of absence at that time; no.

Q. Were you receiving compensation from them at that time?

A. Well, it is my practice not to charge for work that I don't do. [1882]

Q. Well, Mr. Peterson, if you would answer the question, we would get along faster. Were you receiving compensation from the Pacific Gas and Electric Company at the same time that you were doing this work on the Broadway Tunnel?

A. During the same period, yes.

Q. When you inspected these tunnels shortly after the slide on August 28, 1935, one of the things you recommended was the immediate concreting of old portions of the timber in the unconcreted tunnel, was it not? A. Yes.

(Testimony of Otto W. Peterson.)

Q. The slide on that date was caused by the workmen while the workmen were removing timbers which had intruded into the tunnel section?

A. Yes.

Q. At a place where the timbers had been standing unsupported by the permanent lining for some 6 or 7 months?

A. That is approximately correct; I do not know the exact time.

Q. Did you recommend, at any of your visits prior to the 29th of August, 1935, that Six Companies place the lining in the tunnel?

A. No, sir; I did not make recommendations to the Company.

Q. Well, you had friends working in the Company? A. Yes.

Q. You never discussed that with them?

A. I discussed their concreting plans with them, in a personal way, and they said they were doing all they could to go ahead with the concreting of the tunnels. I did not feel that it was my province to be too inquisitive as to the details of their particular arrangement.

Q. Did you think it was good practice to leave those timbered sections unlined for this period of time?

A. Yes, if I may give my full reasons.

Q. Well, the point is you thought it was good practice? A. Yes.

Q. Go ahead and give your reasons.

(Testimony of Otto W. Peterson.)

A. I observed the ground that they were going through, and I discussed the type of ground which both Mr. Larson and Mr. Whitmire expected to encounter; and they ex- [1883] pected to go into very much better ground, into chert, and it would be self-supporting, and everyone was very optimistic about the stability of the ground which would be encountered later; and, with that expectation and with the practice that I have had of driving tunnels, excavating tunnels, either completely or to a substantial extent before concrete started, I saw no reason why they should not proceed along the same lines in this particular tunnel.

Q. The ground, you say, though, was heavy that they had passed through when you got there?

A. Portions of it were; largely at the portal and immediately adjacent to the portal section.

Q. You were out at the tunnel on the 14th of April? A. Yes.

Q. You said the tunnel was all in heavy ground?

A. Yes; it began to look discouraging at that time, and along, possibly the latter part of that period, as August approached, I felt, particularly in the latter part of August, at that time that concrete should follow along energetically; but it is customary to allow excavation to proceed about 5 to 6 months in advance of concreting, providing the ground is ground as it was in this tunnel, the area of the Monterey sandstone, and with the expectation of better ground, to follow up with the lining.

(Testimony of Otto W. Peterson.)

Q. Well, had you ever seen a tunnel driven in Monterey sandstone before, Mr. Peterson?

A. I have seen tunnels driven in—I don't know that I have seen the Monterey sandstone. I am not a geologist. I have seen sandstone. They have some Franciscan sandstone in the Islands that may be related to it.

Q. You just stated it was customary to leave Monterey sandstone tunnels open for 6 months?

A. No; I did not intend to make that statement.

Q. Well, we will get to that.

Mr. Smith: I believe he said ground like the sandstone. [1884]

Mr. Tinning: Q. Mr. Peterson, did they leave the Franciscan sandstone, the Yerba Buena Tunnel, open for 6 months?

A. I don't know just how long that tunnel was left open. That was a different type of a job entirely.

Q. Well, you referred to it?

A. Yes; it was a different type of construction entirely; different methods.

Q. You say it was a different method?

A. Yes.

Q. And they left the core in, supporting the tunnel against the core until the lining was placed; then took the core out? A. Yes.

Q. Steel beams? A. Yes.

Q. Do you believe that the Franciscan and Monterey sandstones are comparable?

A. Well, I don't think—I would rather not go into a geological discussion. My observations were

(Testimony of Otto W. Peterson.)

mainly to the suitability of formations and not to the technical geological terms.

Q. Then, what we are discussing——

A. Well, the Franciscan can be a very unstable formation and a very sound one; likewise, the Monterey.

Q. Let's take the one you refer to?

A. Well, then you have to go to the type.

Q. Well, Mr. Peterson, if your will listen, we will get to that. A. All right.

Q. The type we are referring to is the Franciscan, to which you referred on the Yerba Buena Tunnel. I am asking you whether you considered material in that tunnel comparable to the material in the Broadway Tunnel as to suitability; and I am referring to material in the Monterey sandstones to which you referred.

A. I don't think you can compare those two tunnels at all by the material; they were in part the same, and there was some very bad material in the Yerba Buena and some very good material; and the material was all grouted before the tunnel was built, and it was all in its natural state. It is an entirely different type of tunnel, [1885] and I don't think you could compare——

Q. Then you wish to withdraw your comparison?

A. Yes, I will withdraw it, if I made one.

Q. Well, I thought you did. You stated that, in your conferences that you had after you were employed by Six Companies, you were seeking to find

(Testimony of Otto W. Peterson.)

a solution of the problems that you found in the tunnels? A. Yes, sir.

Q. Which included timbers which were hazardous? A. Yes.

Q. You told about seeing the heavy ground in the tunnel. Did you have any other object, when you were discussing this matter with the District——

A. None whatever, when I entered the employment.

Q. —did you have any object or intention to try to cause the District to change its design of the tunnel lining?

A. No; not when I started the work.

Q. How soon after you started the work did you obtain that object?

A. I don't know; I don't think that I obtained that object at any time. I made some suggestions before I realized that it was the province of the District to determine the design; but any suggestions that were made were made purely as suggestions.

Q. Did you entertain the idea in your own mind at that time that the design of the lining of this tunnel should be changed and strengthened?

A. If I were the Engineer——

Q. Will you answer "Yes" or "No," please, and then explain? A. In my own mind?

Q. Yes A. Yes, I did. [1886]

Q. When did you first conceive that idea?

A. When I saw the type of ground that the tun-

(Testimony of Otto W. Peterson.)

nel was being driven in and the force of the formations acting there.

Q. You studied the plans and specifications and you knew there were to be B sections provided for with an invert? A. Yes.

Q. Did you ever recommend in any of your conferences with the District representatives that the inverted sections should be installed in heavy rising ground? A. No.

Q. You were present at some meetings with some of the District representatives, at least with Mr. Sanborn, were you not? A. Yes.

Q. Mr. Sanborn was an associate professor from Columbia University, of New York?

A. Well, I think he was at one time. I do not believe he was at this particular time. I do not know what his connections were.

Q. He made recommendations in your presence, did he not, to the District's representative?

A. Yes, he did.

Q. What were they?

A. He thought the tunnels should be very substantially strengthened in several respects, that a substantial invert should be added, that it should have a good drainage system, and he thought that the side walls and arch should be strengthened.

Q. Should be thickened? A. Yes.

Q. With additional concrete?

A. That was his idea.

Q. That required a complete change in the design of the tunnel under which the contractor was

(Testimony of Otto W. Peterson.)

proceeding with the work, did it not? It would be at the same location but it would be an entirely different structure, would it not?

A. Well, it would be a similar structure, it would not be entirely different. I would say it would be very much the same.

Q. You think it would?

A. Yes, much the same, except it was more [1887] substantial in thickness and dimensions.

Q. Dimensions of walls? A. Yes.

Q. How thick did he want the side walls?

A. I don't remember his exact dimensions. He was telling his own story.

Q. You were listening to it?

A. I listened to it.

Q. You listened to a lot of other things he had to say, did you not? A. Yes.

Q. Didn't you pay much attention to what he had to say? A. I listened with interest.

Q. Didn't you arrange to have Professor Derleth listen to it?

A. Yes, he wished to have an opportunity to present his views and I arranged for a conference between the two, but it was Mr. Sanborn's presentation that was being made.

Q. You did not object to it?

A. No, I was an auditor.

Q. That was on September 4, 1935, was it not?

A. That is correct, I believe.

Q. And it was at the tunnel where Mr. Price and Mr. Sanborn and yourself and Professor Derleth had the conference? A. No.

(Testimony of Otto W. Peterson.)

Q. Where was it? A. It was at the tunnel.

Q. What is wrong about what I said?

A. Your surroundings, your attendance is wrong.

Q. Tell me who was present.

A. Just Professor Derleth, Mr. Sanborn and myself.

Q. Mr. Price was not there? A. No.

Q. I was 25 per cent. wrong. Mr. Sanborn at that conference stated in substance and effect, did he not, that he wanted to change the design of the tunnel lining sections by constructing an invert floor three feet in thickness, he wanted to add to the thickness of the section of the walls throughout the arch, and in his plans he entirely eliminated any consideration of the effect on the ventilation [1888] system, did he not?

A. I don't remember the details, Mr. Tinning.

The Court: Whose money was he spending?

Mr. Tinning: Q. Do you remember that in that conversation that after Mr. Sanborn had read his report and explained it to Mr. Derleth he asked Professor Derleth what he thought of the report?

A. I don't remember his reading a report, Mr. Tinning. I do not think he had a written report.

Q. You don't think he had one?

A. He might have had some notes, but I certainly didn't notice any written report.

The Court: Where was this meeting?

A. This was the meeting in the office of the Tunnel, the Six Companies' Office.

(Testimony of Otto W. Peterson.)

Mr. Tinning: Q. That you arranged between Professor Derleth and Professor Sanborn?

A. I asked Professor Derleth to give Mr. Sanborn an opportunity to present some views that he wished to discuss with Professor Derleth, and that was the outcome of the interview. Mr. Sanborn was not reporting to me.

Q. You were an expert and you heard what he said, that is the fact I wanted evident, and you remember then that after he had stated the essential elements of his plan to Professor Derleth, he asked Professor Derleth what he, Professor Derleth, thought of the plan?

A. I think Professor Derleth expressed his views without being asked.

Q. You do not think Mr. Sanborn asked for them?

A. I don't know whether he did or not. But I know Professor Derleth expressed his views.

Q. Did Professor Derleth tell him at that time he did not think that Mr. Sanborn had gone far enough and that he thought that his plan was defective because he had not filled the holes completely with concrete?

A. That is correct. That is one thing that is correct. [1889]

Q. We agree on one thing. Do you remember visiting Professor Derleth's home on September 3, 1935, in the evening, with Mr. Henry Kaiser?

A. Well, I did not visit with Henry Kaiser.

(Testimony of Otto W. Peterson.)

When I was visiting with Professor Derleth Mr. Kaiser came in.

Q. You were both working for the Six Companies that night, weren't you?

A. Well, I presume so; he was one of the Six Companies; I don't know as he was working for them.

Q. Then Mr. Steve Bechtel came in later?

A. No.

Q. This was just the evening before the Professor said what he thought about Professor Sanborn's plan?

A. It did not have any influence—I would not try to influence Professor Derleth.

Q. Do you remember on that occasion that Mr. Kaiser said that he wanted to discuss some method of expediting the authority from the P.W.A. and the State of California to secure a modification of the design? A. No.

Q. You don't remember that? A. No.

Q. Do you remember at the same time that Professor Derleth told you and Mr. Kaiser that the trouble with the tunnel was entirely due to not having proceeded promptly with the concreting after the excavation? A. No, I don't remember that.

Q. You don't remember that? A. No.

Q. Have you got any notes of these conferences?

A. Well, I may have some notes of my various conferences, but I don't recall any mention of those particular items.

(Testimony of Otto W. Peterson.)

Q. The book that you had with you this morning would show that? A. I have that book, yes.

Q. Is that your original memorandum book?

A. That has just a list of those specific dates that I made visits to the tunnels, and sometimes there are initials there of the persons that were at the tunnel at the time of my visit. [1890]

Q. I take it from your answer that is something that you have prepared to refresh your memory from from your original notes?

A. To serve as a guide from my original notes.

Q. And there is no reference in your note-book to your conference with Professor Derleth at which Mr. Kaiser and you and Professor Derleth were present on September 3, 1935?

A. Well, I may have a reference to that.

Q. Would you mind looking at your notes?

A. I will see if I have a reference in the diary that I have here.

The Court: What is the date?

Mr. Tinning: September 3.

A. September 3, 1935. I do not know whether this book carries any particular notation about that. There is no mention of any conversation. I was at the office and various other places, and also I called at Professor Derleth's house, and I believe I did on that occasion ask him if he would see Mr. Sanborn. That is the only note that I have.

Q. When you were in college Professor Derleth was one of your professors, was he not?

A. He was.

(Testimony of Otto W. Peterson.)

Q. And you have been closely associated and friendly with him all of these years since you left college? A. I have.

Q. And have visited at his home on occasions?

A. Yes.

Q. One of your first positions when you left college was with Mr. Lippincott, was it not?

A. Yes.

Q. You were also on terms of confidential relationship with him over many years, were you not?

A. Yes.

Q. And you also knew Mr. Van Norman, one of the District consultants, very well? A. Yes.

Q. For many years? A. Yes.

Q. When you entered into these negotiations and discussions looking toward a solution of the physical problem that you had at the tunnels, [1891] where you were representing the Six Companies, those negotiations were made on the basis of the relationship of confidence that existed between you and these other gentlemen? A. Yes.

Mr. Smith: I submit that question is objectionable as to the basis of them. He testified what they were. That is not proper cross-examination.

The Court: He testified he was in school and there was a friendship going on for years, and social visits at home.

Mr. Smith: If there is an imputation in the question that he took any advantage of the relationship I think the question is objectionable.

(Testimony of Otto W. Peterson.)

The Court: I do not think there is. Frankly, I did not think about that. Proceed.

Mr. Tinning: Q. When these conferences were going on, Mr. Peterson, you never had in your mind in discussing these matters, in what was said between you engineers, in trying to solve this physical problem at the tunnel, that it was something later to be testified to in court, did you?

A. I had no such expectation whatever.

Q. So anything that was said by either of you back and forth in these discussions, it was not said with the expectation of being used as an admission against the party for whom such consultant was working at that time? A. That is correct.

Q. I understood you to testify this morning in substance and effect that Mr. Lippincott told you in one of these conferences that he thought that the conditions which the contractor had met in this tunnel had been misrepresented to him?

A. That he made that statement?

Q. Yes.

A. No, I did not intend to convey that idea.

Q. You did not intend to make that statement?

A. No. [1892]

Q. You did not intend to make that statement?

A. No.

Q. So there can be nothing construed from anything that you testified here that Mr. Lippincott at any time in all of these negotiations said in substance and effect that he believed that the Six Com-

(Testimony of Otto W. Peterson.)

panies had been misled or that the conditions on this work had been misrepresented to them?

A. No. I might clarify that if you desire.

The Court: You may.

A. All we were endeavoring to do was work out this modification, and Mr. Lippincott's statement that I did not quite fully understand the situation, and I maintained that in doing this particular thing the contractor should not be required to waive any proper claims that he might have, and Mr. Lippincott said that the contractor had a perfect right to reserve such claims as he might have in the building of the tunnel, but he indicated no doubt as to the reasonableness of any claims that the contractor might then have, or later have, just a legal position that he spoke of, just a legal opinion from an engineer.

Mr. Tinning: Q. In other words, he recognized, as everybody else did, that the contractor had claims and he had a right to make them?

A. And reserve the right to present claims such as he might have, that is all.

Q. And whether or not the claims of the contractor were valid or not was not a matter of discussion? You were discussing the physical problem that confronted you? A. At that time, yes.

Q. Did you ever discuss with Mr. Lippincott, and I mean now in these conferences at any time discuss with Mr. Lippincott whether or not he believed that Six Companies had——

A. (Interrupting) No, I did not try to press

(Testimony of Otto W. Peterson.)

anything like that on Mr. Lippincott or anybody else. All that I endeavored to do was to suggest [1893] that such claims as the contractor might have be reviewed in arbitration, if possible, rather than being carried into court.

Q. That was another matter and you took that up directly with the District? A. Yes.

Q. When you spoke about the desired, hurried lining decision in September, when you took hold of this thing, did you have in mind the proposed dropping of the section 10 inches?

A. Not immediately. I didn't know what the solution would be. I had no definite plan in mind at that time.

Q. I understood that you desired to get a decision promptly from the District Engineer?

A. By the 10th of September, I felt that that was the proper thing to do, very definitely.

Q. You knew in your talks with Mr. Boggs that it would be necessary to secure the approval from the State and P.W.A. to such modification?

A. Mr. Boggs informed me of that, that he would have to consult them.

Q. In working that design out did you give consideration to the fact that by dropping the top of the tunnel 10 inches, as was actually done, and bringing in the walls six inches, as was actually done, that 10 per cent. of the designed area for the air ducts in the tunnel was cut off?

A. I knew there would be some reduction provided the same roadway space was held, but there

(Testimony of Otto W. Peterson.)

were various ways in which that change could be accomplished. That was the particular solution which the district decided to make.

Q. So that there was 10 per cent. of the area——

A. (Interrupting) I did not consider that of any moment.

Q. Just a moment, let me finish, so that there was actually, under the modified design that was authorized, after the Industrial Accident Commission letter of September 24, 1935—the area in the air ducts was cut, where you had a modified section, was cut [1894] down 10 per cent.?

A. I don't know what that amount was, Mr. Tinning.

Q. You do not quarrel with that, do you?

A. I do not think it is a serious matter, myself. I thought the air duct space was rather ample. I think it would have been a little cheaper project.

Q. You are volunteering now, passing on some other engineering work.

A. That was caused by this particular comment.

Q. Do you know that the cutting down of the air ducts has cut down the capacity for air to be driven through those ducts 5 per cent.? A. No.

Q. Do you know that during the discussion that the P.W.A. engineers requested the District to require the contractor to pay the capitalized value on that cost?

A. Some other solution that would have been

(Testimony of Otto W. Peterson.)

more favorable to the District might have been worked out under those conditions.

Q. You have in mind at the time this was being worked out, do you, the exhibits in this case, the letter of Six Companies, Exhibit OO, in which they offered to do certain things on September 1, 1935, in connection with the safety of the tunnel, the trimming of timbers, completing the concrete lining in the unlined portions of the excavated tunnels with a crown height 6 inches lower than the crest of the present theoretical crown height?

A. No, I do not have that in mind.

Q. You do not have that in mind?

A. No. That was the preliminary plan we were all working on, and later went on to a plan which we realized was a better and more proper plan, as regards the amount that the arch should drop.

Q. Defendant's Exhibit OO, offering to do this work, contained no clause with respect to any claims or reservation of rights by Six Companies, but Defendant's Exhibit PP, a letter of September 3, 1935, written at the very time that you were negotiating and dis- [1895] cussing these matters with Professor Derleth and Mr. Lippincott and Mr. Boggs, stated,

> "Under date of September 1st, we wrote you a letter concerning changes in plans and specifications for concrete lining of the excavated portion of the Broadway Tunnels. By this letter we advise you that our letter of September 1st, above mentioned, was written and shall be con-

(Testimony of Otto W. Peterson.)

sidered by you subject only to the following further conditions:

"1. That in making the suggestions contained therein, we assume no responsibility or liability of any kind or character for any design suggested by us or the safety thereof, in the event you direct us to carry out the things stated in our letter."

A. Yes.

Q. Then:

"That we reaffirm and state our position to be as stated in our letters to the Board of Directors of your District dated, respectively, August 23rd and August 28th, 1935."

You knew about those letters?

A. I think those letters were written by an attorney.

Q. Yes, I think so.

A. That particular letter.

Q. Would you like to change the design of those letters?

A. This is purely a preliminary effort to arrive at a solution of this problem, just like other things were, and we finally arrived at a good plan; we were all impatient to get something decided, and this was a preliminary and probably a useful step in seeking that conclusion.

Q. In developing the crystallization. A. Yes.

Q. You have in mind the District letter of September 5, I think, Mr. Peterson, "You are advised

(Testimony of Otto W. Peterson.)

to cease and desist" pouring tunnel concrete in the forms which you were proposing to cut down?

A. I remember that.

Q. Will you answer the question, do you remember the letter? [1896] A. Yes, I do.

Q. And it was a fact, was it not, that you stopped the effort to pour the tunnel lining on the unauthorized section after you received this letter?

A. Yes, I did.

Q. Then you remember another letter of September 5, Defendant's Exhibit QQ, in which the Secretary of the District advised Six Companies that the District considered that it was the duty of the Six Companies to proceed to construct the tunnel in accordance with the plans and specifications?

A. Yes, we decided we would do that at one time.

Q. And that was at the same time or one day after you were up talking to Professor Derleth with Mr. Sanborn about trying to change the design?

A. I was not trying to change the design at any time.

Q. You entertained ideas that it was advisable?

A. I did, personally. You asked me my personal views, but otherwise I would not have expressed them. I was suggesting my own personal view, and I did not advertise it, I did not write any letters about it; I have never written a letter or made any expression in that regard.

Q. During that time, the early week of September, all of the time Six Companies was placing con-

(Testimony of Otto W. Peterson.)

crete in the portions of the tunnel where you could do so to standard sections? A. Yes.

Q. How many feet of steel forms did you have in the tunnel at that time?

A. What time, Mr. Tinning?

Q. On September 5.

A. I don't know the exact footage.

Q. Well, approximately.

A. I should judge we had about four forms, I don't know the exact number of lineal feet.

Q. Weren't there two forms of 27 feet in length and was not one of them cut down in half?

A. I am not positive about that.

Q. There were four 18-foot forms, were there not? A. I think that is correct. [1897]

Q. You were using all of those, were you not, during that period in the tunnel, placing concrete?

A. As effectively as possible.

Q. So you were not delayed during that period in placing concrete by the difficulty of working out this modified section?

A. We were working to a very limited capacity, that was just a start.

Q. You only had those four 18-foot sections?

A. At that particular time, but we had plenty of work in which we could use similar forms.

Q. How long would it take to get additional forms?

A. We could get additional forms, or if the ground was better we could have moved very much faster; it was a very restricted operation.

(Testimony of Otto W. Peterson.)

Q. Mr. Peterson, let us get right to the matter. You had four 18-foot forms and you used them all through this period, did you not, pouring?

A. Yes.

Q. How were you delayed in pouring this concrete lining by the delay of the district in giving you authority to pour the modified section?

A. We were not delayed in that very restricted area, but it was because of the way in which we could work, it was so restricted that we were delayed on the job as a whole.

Q. What did the District have to do with the timbers being in the tunnel?

A. I don't know, unless, I think certainly the contractor was not responsible for the ground encountered as much as the owner.

Q. That is your opinion. The District did not put the ground there, did it?

A. They selected the site and they made the representation.

Q. And they made a bad job of it?

A. No, I do not criticize the selection of the site. I am not critical of the design or the geology. [1898]

Mr. Tinning: That is all.

The Court: We will take a recess for a few minutes.

(After recess:)

Mr. Tinning: No further questions. [1899]

Mr. Smith: Just a few more questions, your Honor, on redirect.

(Testimony of Otto W. Peterson.)

Redirect Examination

Mr. Smith: Q. You spoke of the Yerba Buena Tunnel being a different type of tunnel from the Broadway Tunnel. In what sense did you use the word "type" when you said that?

A. That is a wide tunnel,—wide between the sides; some 70 feet wide, from spring line to spring line across the width of the tunnel.

Q. Where does the spring line occur, approximately; the wall plate line in most tunnels?

A. Well, about what would be the wall plate line in most tunnels.

Q. Well, you are referring, then, to the width of the tunnel at that point where the wall plate line would be in the Broadway Tunnel?

A. In a tunnel of that size.

Q. Where do you differentiate the two types you speak of as being very wide and those being wider in the same type?

A. Well, generally, I would say tunnels up to 35 feet wide are in one type,—that is, tunnels from 20 to 35 are in one class,—large tunnels; and the tunnels of over 35 feet and particularly over 40 and over 70 are very broad tunnels,—tunnels of great magnitude; in fact, Yerba Buena Tunnel has the biggest cross section of any tunnel in the world, so far as I know. It is a very, very different tunnel from the Broadway Tunnel.

Q. How large is the Broadway at that point that you mentioned between the wall plates?

A. 33 feet.

(Testimony of Otto W. Peterson.)

Q. How wide is the Sunset Tunnel at that point?

A. 30½ feet.

Q. How wide are some of the vehicular or highway tunnels that you know of at that point?

A. The Stockton Street Tunnel is about 55 feet wide. The Richmond Vehicular Tunnel is 41 feet wide. The Figueroa Street Tunnel is approximately 50 feet wide between the steel or timbered supports at the outside of the excavation. In [1900] other words, about 50 feet wide. In other words, the Twin Peaks Tunnel, the Sunset Tunnel and the Pit Three Tunnel and the Broadway Tunnel are all large tunnels; but they are tunnels that are of the type that would be excavated,—fully excavated,—before concreted. A tunnel such as Stockton Street Tunnel, Richmond, Figueroa and Yerba Buena are of the very broad type, where it is not practicable or feasible or safe to support them with segmental arches without support on the core; and, for that reason, the core must be left in. Those are very different type tunnels. Also, most of them have a flat arch, which is flatter than the semicircular type.

Q. That differentiation, then, is in tunnels of much greater width than the approximate 30 to 35 foot width?

A. Yes; and it is a different type entirely,—different type of construction.

Q. At the Sunset Tunnel, or Duboce Tunnel, did you keep behind the excavation several thousand feet?

A. We started concreting about 5 months after

(Testimony of Otto W. Peterson.)

the excavation of the core, starting at the east portal.

Q. How much of that tunnel was excavated from the east portal?

A. 3000 feet of that tunnel was excavated from the east portal; that is, of the core; and about 1200 feet of the core was excavated from the west portal.

Q. Where was it concreted from?

A. Well, all of the concreting was done from the east portal.

Q. How long were the sections that were excavated from the west portal open; how long had they been open at the time that it was concreted from the east portal? A. About 9 months.

Q. How long was that section that was excavated at the west portal? A. 1200 feet.

Mr. Smith: 1200 feet. I think that is all.

The Court: Is that all of this witness?

Mr. Tinning: That is all.

The Court: We will take an adjournment until tomorrow morning at ten o'clock. [1901]

(An adjournment was here taken until tomorrow, Friday, May 27, 1938, at ten o'clock a. m.) [1902]

Friday, May 27, 1938;
10 O'Clock A. M.

GEORGE T. SLOAN,

called by the plaintiff; sworn.

Direct Examination

Mr. Smith: Q. Mr. Sloan, where do you reside?

A. Oakland, California.

Q. What is your address?

A. 5616 Kales Avenue.

Q. What is your occupation?

A. I am bookkeeper for the Six Companies. I believe I would have the title as of office manager, probably.

Q. When were you employed by Six Companies of California, the plaintiff in this action?

A. June 19, 1934.

Q. Have you been employed by them since that time? A. Continuously.

Q. What were your duties?

A. Originally, just the disbursing of funds for payrolls and for supplies, and adjusting costs, and reporting to stockholders as to the various figures; after February 1, 1935, I took on the duty of purchasing agent along with my former duties and have been, you might say, office manager.

Q. Did you cause to be kept, yourself or under your supervision, a record of the costs of the plaintiff Six Companies of California in connection with its performance of the contract involved in this case

(Testimony of George T. Sloan.)

with the Joint Highway District? A. I did.

Q. Have you prepared a summary of the costs kept by you,—the costs incurred by the plaintiff in this action? A. I have.

Q. I show you a document entitled "Costs Adjusted to September 30, 1937; Construction Costs as of June 13, 1936," entitled in this case, and ask you if that is the document you refer to.

A. Yes, that is it.

Mr. Smith: We offer this in evidence, if it please the Court, as a summary of the true costs incurred by the plaintiff in this case, [1903] in connection with its performance of the contract involved in the action.

The Court: What do they total?

Mr. Smith: Q. Will you explain to the Court?

A. I would be glad to.

Mr. Wittschen: That is what I was going to object to, if your Honor please, on the ground that on the issue of their right to rescind this matter would be immaterial. I do not argue that it would not be material on the main case, but I would like to call your Honor's attention that until such time as the plaintiff has proven its right to rescind, the matter of costs would be immaterial. I venture that Mr. Smith will state,—because we have discussed this matter privately,—that he merely intends to introduce the summary; and then, in the event your Honor holds that they had a right to rescind, at some future date we could examine it and cross-examine.

(Testimony of George T. Sloan.)

On the other hand, if your Honor holds they have no right to rescind, then this would be immaterial. If it comes in, we ought to cross-examine on it, and it would obviously take some days. We would have to look it over, and we dispute very materially costs. If you will recall, at the beginning of the trial we had a suggestion that we confine the preliminary trial to the right to rescind. There is ample precedent for that, your Honor. Your Honor, I am told, in admiralty cases, where you determine liability and then, later, damages, that is the practice. In a very recent case,—I think it was decided within the month,—in Southern California, where the contractor had a disagreement with the Metropolitan Water District upon one of these matters and the District ordered the contractor off the work, it was the converse of ours; but the legal principle is the same; Judge Yankwich there decided that the District had a right to order them off, and, having decided that issue in the District's favor, no evidence [1904] was received in regard to damages, and the case terminated without any determination as to damages; and I am now moving the Court, as part of my objection, that the proof which the plaintiff presents will be limited to the issue of its right to rescind the contract and that any issue as to damages be postponed until the Court has passed upon that issue.

Mr. Smith: Well, we offer the summary of the costs upon the theory, your Honor, as part of our case in chief, for the purpose of proving, as of

(Testimony of George T. Sloan.)

necessity we must, the exact amount which was disbursed in connection with the contract and its performance by the plaintiff, and also for the purpose of showing and establishing that the cost incurred was greatly in excess of the amount which was involved in the original contract, as proof tending to show the contract was vastly different from the contract which the parties executed. However, Mr. Wittschen has made a correct statement of the discussion which we had prior to offering the evidence in question, and that statement is satisfactory to us.

The Court: Are you in accord with his legal position, namely, up to the point where I have to determine whether you were justified in walking off the work?

Mr. Smith: Well, I think your Honor first has to determine the issue that the plaintiff has the right to rescind on the theory——

The Court: Of the right to rescind.

Mr. Smith: Yes.

The Court: For that limited purpose, I will allow it to come in.

Mr. Wittschen: I don't quite understand its purpose, because it does not prove anything on the right to rescind.

The Court: Well, read the statement of counsel.

Mr. Wittschen: He stated the cost was excessive.

The Court: The cost was excessive. [1905]

Mr. Wittschen: Yes; and I take it that the evidence to date has shown that the Contractor's claim

(Testimony of George T. Sloan.)

to be,—and he has put in proof,—that he had to excavate more dirt.

The Court: I had in mind the amount; that was all.

Mr. Wittschen: Yes.

Mr. Smith: That is the extent of the offer.

Mr. Wittschen: I take it the amount would be immaterial.

The Court: I will give you a record on the amount. What is the total?

Mr. Wittschen: Note an exception, please.

The Witness: Just the total amount, or the total cost?

Mr. Smith: Q. The total costs, yes.

A. Well, I thought you might want to explain that to the Court.

Mr. Wittschen: If you put the document in, as Mr. Tinning suggests to me, we will have to cross-examine. The Court has stated he would permit you to establish a total cost.

The Court: I said that, of course, as it was only for the record, since he agreed to the legal view, namely, as to whether we would dispose of this matter of rescinding the contract——

Mr. Wittschen: Yes; I appreciate that.

The Witness: We have two figures.

The Court: Q. Well, give them to us.

A. A figure of total costs before any adjustments, $3,872——

(Testimony of George T. Sloan.)

Mr. Smith: Q. That is, after crediting payments?

A. No; that is before: $3,872,168.86. Then we have drawn up an adjustment figure which takes into account any rentals of plants, or sales of equipment, and so forth, which results in a net credit adjustment of $43,170.02; that leaves a figure that we call adjusted costs, $3,828,998.84.

Mr. Wittschen: May we have an understanding and stipulation [1906] with counsel that these figures being in we need not, at this time, cross-examine on the reasonable costs that you have put in, which you claim to be reasonable costs; and, in the event the Court decides that you have a right to rescind, that then we may go into that matter at a later date?

Mr. Smith: That is satisfactory.

The Court: The record will so show.

Mr. Smith: That becomes plaintiff's exhibit what, Mr. Clerk?

Mr. Wittschen: I did not think the document was in. The document, as I understand it,—the details you put in were total costs; you have a contract price, so the Court can get the difference.

The Court: Yes.

Mr. Smith: That is all.

Plaintiff rests. [1907]

Mr. Wittschen: In order that your Honor may understand our position, it is our purpose to call just one or two witnesses on the issue of the right to rescind. We will call perhaps two witnesses, not to exceed that, and then submit that issue to your Honor on the merits, rather than move at this time for a nonsuit, because we prefer you to pass on the merits, and we will confine our proof to that particular issue. Then after the Court has indicated its ruling upon that issue such other steps will be taken as may be proper. If the ruling is in our favor we will then proceed to put in our proof as to the damages. Before, however, putting on our case there are certain motions relative to striking out certain exhibits which were reserved which I would like to make at this time.

Defendant moves first that there be stricken from the record in this case certain evidence introduced during the trial of the cause, namely:

(a) Plaintiff's Exhibit No. 22, the so-called Geological Report, and all testimony of the witness Larson and any other witness with reference to the reliance of such witness upon the statements of such report, particularly the statement of any witness that such witness relied upon such report in forming a conclusion that the ground through which the tunnel was to be driven would be self-supporting, and any reference that the bid of the plaintiff was based in whole or in part upon reliance upon such report.

(b) Plaintiff's Exhibit 23, map or chart copied from a map or chart on such Exhibit 22, and all testimony of any witness with reference to the same or that such witness relied upon such map or chart in forming any conclusion as to underground conditions or as a basis for the bid of plaintiff.

Said motion is made and based on the ground that the same is [1908] wholly incompetent and immaterial, and on the further ground that the Geological Report and any maps thereto attached are expressly excluded from consideration as a part of the contract, and by the introduction of said report and map plaintiff is attempting to vary the terms of the written agreement between the parties.

The grounds above stated apply to each of the motions above referred to.

I do not desire at this time to argue that matter, unless your Honor desires. I think we are correct in our legal position and it is all covered in the Points and Authorities which I have handed to your Honor.

The Court: You submit the motion?

Mr. Wittschen: Yes, your Honor.

Mr. Marrin: If your Honor please, it is our position that the Geological Report and the testimony with respect to reliance thereon, and all of the information which has been furnished by the defendant to the plaintiff is relevant and material and admissible in this case upon the following grounds:

1. There is in this case the issue raised of fraud, constructive fraud, and mutual mistake, and the

plaintiff in connection with that is entitled to show any representations which were made to it as an inducement to enter into the contract. It does not make any difference whether those matters are part of the contract at all, as it is clearly held by the authorities that on such issues any matter of inducement leading a party to enter into a contract is clearly admissible.

In the case of Ferguson v. Koch, 204 Cal. 342, the Supreme Court of this State said on this issue:

> "Parole evidence is always admissible to prove fraud, and it was never intended that the parole evidence rule should be [1909] used as a shield to prevent the proof of fraud. Hence, the fact that the sale of an automobile is evidenced by a written contract will not prevent the purchaser from proving by parole evidence that the sale was induced by fraud. And this is true, even though the contract recites that all conditions and representations are embodied therein. There is no such sanctity surrounding a writing that parties may not be permitted to go back of it and show that there was such fraud practiced in the procurement of the same as to vitiate the writing. The law never countenanced a rule which would deny to one the right to prove that fraud had been practiced upon him. In actions for rescission on the ground of fraud the statutory provisions that when the terms of an agreement have been reduced to writing such writing is to be considered as containing all the

terms, and that the execution of a contract supersedes all prior negotiations or stipulations, have no application and do not control. Appellant has cited us to certain earlier cases in our reports which he claims make a distinction between fraudulent representations going to induce the making of a contract and representations in the nature of warranties. There is no reason why any such distinction should exist, and, in fact, none does exist."

Now, in the line of Federal cases, also, if your Honor please, which we have cited in our opening brief, there are a number of cases where judgment was rendered in favor of the plaintiff contractor because of representations which had been made in drawings and borings which were outside of the contract but which were referred to and relied upon by the bidders in making their bid.

In the case of Passaic Valley Sewerage Commissioners v. Holbrook, Cabot & Rollins Corporation, the reference was to certain drawings purporting to set forth the result of certain borings, and [1910] there was no question but that those borings were admitted in evidence in that case, but the judgment turned on the fact that the borings which were not a part of the contract did not show the true conditions. Also in that case there was attached to the drawings the following note:

"The borings, soundings contour lines, profile, and indications of rock outcroppings, sub-

surface materials, pipes and other underground structures are supposed to be approximately correct, but should they be found to be otherwise the contractor shall have no claim on that account, it being expressly understood that the Commissioners do not warrant the plot to be approximately correct."

In reply to that, in replying to the contention of the defendant that because of such statement in the contract the defendant was not bound by the result shown on the map or on the drawing which purported to show what the results of the borings were, that court reviewed certain prior decisions of the United States Supreme Court as to the effect of the self-exonerating clause, and in that decision the Court said:

"The last case on the subject, and one containing facts which resemble closely those of the instant case, is United States v. Atlantic Dredging Co., where the self-exonerating clause in the contract there in question was similar to and just as strong as the clause here in question. In that case the Supreme Court, citing its previous decisions, announced the law that, when a governmental body has asked for bids for excavation work and has represented the condition of the material to be excavated, and in its representations had misstated facts, or has failed to state facts, within its knowledge, it cannot escape responsibility by a clause of

the contract in which it required bidders to examine the work for themselves and in which it said that its statements of facts were but expressions [1911] of its opinion and that it did not guarantee them. This, in effect, was a holding that representations made in such circumstances import a warranty, and also that, in consonance with familiar law, a person cannot contract against his own fraud."

The Court: For your comfort I will adopt that as the law for all purposes of this case.

Mr. Marrin: Yes, I would like to have you do so.

The Court: I will without any hesitancy.

Mr. Marrin: There is another point on which we think this evidence is admissible, if your Honor please, and that is on the question of extension of time. We have shown in this case that before entering into this contract the plaintiff made all of the examinations which it could reasonably be expected to make to determine the nature of the ground through which these tunnels would be constructed. As a part of the examination which the plaintiff made and as showing the diligence with which it went into the matter, it procured a copy of and studied the geological report which was prepared by the District and which was mentioned in the specifications, in addition to doing other things, such as specifically examining the ground, examining the test pit and other matters of that kind. Now, if the plaintiff has done everything reasonably possible to

attempt to ascertain the character of the ground here and the plaintiff was not able to, by such examination, determine the character of the ground, then that is part of the proof that the plaintiff was unavoidably delayed in driving the tunnels, and we also think that this evidence is admissible upon that proposition; whether or not the Court finds that the defendant in this case has been guilty of fraud or guilty of mistake, or whatever the decision of the Court may be, nevertheless the documents, themselves, are admissible as evidence tending to prove those facts. And upon [1912] those grounds we submit, if your Honor please, that this evidence which the defendant has moved to strike out should be left in the record.

The Court: As to constructive fraud I take it that is the geologist's report, for that reason your clients were misled?

Mr. Marrin: Yes.

The Court: What, if any other fraud?

Mr. Marrin: The geologist's report and the provisions of the specifications we contend led this plaintiff to believe before submitting its bid that the ground through which these tunnels were to be constructed would be self-supporting ground, which would permit of a certain method of construction.

The Court: I am just trying to crystallize the problem that I have to determine, namely, self-supporting ground and the geologist's report. Now, that is what we are discussing as to constructive fraud.

Mr. Marrin: And the specifications.

The Court: The specifications in what respect?

Mr. Marrin: In respect to the removal of timbers.

The Court: Removal of timbers. Have you anything else in mind?

Mr. Marrin: No, we have nothing else in mind than those matters.

The Court: Very well, that is clear. Now, with relation to your motion, does the matter stand submitted?

Mr. Wittschen: Yes. Does your Honor care to hear argument?

The Court: No.

CHARLES DERLETH, JR.

Called for the Defendant; sworn.

The Court: Professor, I have never had the pleasure of meeting you before, but I have observed you in court. Do you see the [1913] trouble that you have made in this Court by producing men in years gone by? A. I hope you will forgive me.

Q. However, you will feel comfortable and feel at ease.

A. I shall not do it very much longer.

Q. Some of them do not agree with you though all of them have profound respect for you.

A. They are very generous.

Mr. Tinning: Q. Professor Derleth, you were employed as a consultant by the District before any

(Testimony of Charles Derleth, Jr.)

plans were drawn for the project by the District, were you not?

A. Yes, I have been associated with the project from the very beginning.

Q. Were you present at a conversation held on or about the 21st of May, 1935, near the west portal of the tunnel, at which S. D. Bechtel, Mr. T. M. Price and District Engineer W. B. Boggs were present? A. I was.

Q. Will you state what, in substance and effect, was stated at that conversation?

A. Well, I had been in the tunnel during the morning with Mr. Boggs and sometime between 11 a. m. and 12 noon we came out from the west portal and were walking toward the offices of the Six Companies, and very close to the steps leading to their office, with Mr. Boggs, I met Mr. Stephen Bechtel and Mr. Price and I took at that time occasion to say to them that I was concerned that they were not proceeding promptly with the lining to follow the excavation in the two bores, that I thought it was a hazard not to proceed.

Q. What did you mean by the lining?

A. I meant the reinforced concrete lining in the horseshoe-shaped portion of the sides and the roof, the archway, of the excavation.

Q. Did you at that conversation hear anything said with respect to an extension of time?

A. No, I think not.

Q. Did you leave before Mr. Boggs?

(Testimony of Charles Derleth, Jr.)

A. I left shortly before noon, [1914] because it was my intention that morning to examine some of the approach structures, the concrete approaches on the Oakland end.

Q. When you left did you leave Mr. Boggs there with Mr. Bechtel and Mr. Price?

A. Yes, Mr. Boggs excused himself from me and I think I went with Mr. Barkley or Mr. Gelston—I left Mr. Boggs with Mr. Bechtel and Mr. Price.

Q. Do you know Mr. De Lancey Smith, one of the attorneys for the plaintiff in this case?

A. Yes, I know him very well.

Q. Did you know him in 1935?

A. Yes, we met frequently for many reasons.

Q. In connection with the Broadway Tunnel matters, or in connection with other matters?

A. I think it was about that time that we also met on questions concerning the Golden Gate Bridge.

Q. Did you meet with him respecting the Broadway Low Level Tunnel?

A. Well, Mr. Smith and I often meet while going to the City, we used to get on the Key Route train at Webster street and Claremont, or adjacent stations from Berkeley on usually Mondays or Wednesdays, when I was going to the City, Mondays to the Bay Bridge and Wednesdays to the Golden Gate Bridge, and we were friends, we used to talk together.

Q. Did you have a conversation with Mr. De Lancey Smith on June 15, 1935, and, if so, where did it occur?

(Testimony of Charles Derleth, Jr.)

A. At between 8 and 9 o'clock in the morning I boarded the Key Route Claremont train at Webster street and Claremont Avenue in Berkeley and Mr. Smith either was on the train or got on at that same station, and he came to me and he spoke to me about some of the problems that were worrying the contractor.

Q. When you refer to the contractor you refer to the Six Companies?

A. The Six Companies.

Q. Was there anyone else present at that conversation between Mr. Smith and yourself?

A. No, there was no one intended to be [1915] present; there were other people, of course, sitting nearby in the train or on the ferry boat.

Q. Now, will you state in substance and effect what Mr. Smith said to you and what you said to Mr. Smith respecting anything in connection with the Broadway low-level tunnel?

A. It is my clear recollection that Mr. De Lancey Smith told me that they felt that Mr. Boggs was not sufficiently cooperating with them on two counts, one that they wanted extensions of time, and the other that in their judgment he was not giving them sufficient engineering or lines and grades for the excavation of the two bores of the tunnel, and that he felt that something ought to be done whereby Mr. Boggs would be more cooperative.

Q. Did he state to you in that conversation that Mr. Boggs had promised an extension of time to the Six Companies?

(Testimony of Charles Derleth, Jr.)

A. No, it was my impression from that conversation that he hoped he would do so, and I thought, because of my friendship with the contractors, I assume that is clear, that I always wanted to help a contractor in his difficulties, that in my capacity as a consulting engineer I would do whatever was just to them and to the owner, in accordance with the contract and the specifications and plans.

Mr. Tinning: You may cross-examine.

Cross Examination

Mr. Marrin: Q. Mr. Derleth, you say that this conversation occurred on May 1, 1935?

A. The first conversation occurred near noon on May 21.

Q. May 21? A. May 21, 1935.

Q. And you had been in the tunnel with Mr. Boggs during the morning? A. Yes.

Q. When you came out you met Mr. S. D. Bechtel and Mr. Price at the [1916] steps of the job office?

A. That is correct.

Q. That was about eleven o'clock?

A. It was near noon, I think.

Q. Near noon? A. About 11:30, say.

Q. To whom did you make the statement that you were concerned about the concrete not proceeding?

A. The statement was intended to be made directly to Mr. Stephen Bechtel, who was the presi-

(Testimony of Charles Derleth, Jr.)

dent of the company, and Mr. Price was present, and heard what I said.

Q. Did you ever talk to either Mr. Bechtel or Mr. Price about this subject at any other time?

A. Yes, I think so; I began to think seriously about this question as early as, we will say, the 10th of March, 1935.

Q. I am not asking you when you thought about it, I am asking when you said anything to Mr. Bechtel or Mr. Price, and if you did will you please state the place, and who was present, and what was said?

A. Beginning in October, 1934, I made frequent visits to the tunnel.

Q. Will you just confine yourself, Professor Derleth, to answering the question I have asked you, and state any statement that you made to Mr. Bechtel or Mr. Price about keeping the concrete up?

A. All right, sir. Well, then, in February, and March, and in April, I met Mr. Price at least twice every month in the tunnel and he used to ask me frequently, particularly beginning in April, when would they get into better ground, and in those conversations I used to usually say, "I think you will get into much better ground in the cherts, and when are you going to begin the concrete lining?"

Q. That was the extent of the conversation?

A. Usually; we were very good friends, and I hope we are still. We always used to joke together.

Q. Why did you think they would get into better ground in the cherts?

(Testimony of Charles Derleth, Jr.)

A. In the months from October to, say, December, 1934, they had had soft ground in the portal, and it was their obvious hope to go to [1917] the full faced excavation, and as they proceeded through the Monterey sandstone they did finally get into much better ground, when they had more overburden, and they were approaching into the cherts, and it was my judgment and it has been settled in my own mind I was right, that they would reach better ground in the cherts, very much better ground.

Q. You stated you thought you had this conversation with Mr. Price in February of 1935. Do you recall how much ground was excavated in each tunnel in February, 1935?

A. My previous answer stated that the impression—when I stated we started in April, that I had begun to talk with him about the excavation in February.

Q. You did not have any particular comment on the concrete up till April, 1935?

A. No, I did not expect them to do the impossible, although you will recall that much earlier the construction program of the contractors had definitely stipulated that it was their intention to not be much more than six weeks at the most behind the excavation with their concrete.

Q. Which construction program are you referring to now, Professor? A. There are two.

Q. Which two do you refer to?

A. Just a moment. I made a memorandum from my daily records of these dates. I understand you

(Testimony of Charles Derleth, Jr.)

have already in evidence Exhibit N, which was the Six Companies' construction schedule of August 9, 1934; you proposed to start excavation on July 15, 1934 and your schedule shows that you intended to begin the concrete lining following the excavation on September 4, 1934, an interval, say, of six weeks; and the second schedule is Exhibit O, where you modified that program, dated February 12, 1935, and you extended your time particularly for completion.

Q. Now, I show you, Professor—I assume I may use our copy of the exhibit—a copy of Defendant's Exhibit O, which has been offered in [1918] evidence.

The Court: That was the last one?

Mr. Marrin: That was the one that was presented in February, 1935. I should like to ask you, Professor, after Exhibit N, the construction schedule of August, 1934, was given to the District, difficulties developed at the west portal, did they not?

A. Well, yes, if you call them difficulties.

Q. And the excavation in December of 1934 was obviously far behind what was projected on the construction schedule in August, 1934?

A. Yes. You were working on the excavation for a ventilating building instead of going into the tunnel.

Q. In December, 1934?

A. You started in October, 1934 and you went into the tunnel, in the portal in those last months of

(Testimony of Charles Derleth, Jr.)

1934, but you started your contract in July or June preceding; you were working all of that time, not on the tunnel, but on the area for the ventilating building. You were losing time there.

Q. You did not answer my question. What was the status and condition of the tunnel on December 5 of 1934?

A. Well, you had hardly started on the tunnels, you were working on the approach of the tunnels.

Q. As a matter of fact, Professor, the south tunnel had been excavated and concreted a distance of 92 feet, had it not?

A. Yes, about 100 feet.

Q. 92 feet, and the north tunnel had been excavated and concreted a distance of 110 feet?

A. That is about right, 100 feet.

Q. And the excavation was not ahead of the concrete at any point in the tunnels on that date?

A. Of course not, that is correct.

Q. So that obviously by that time the construction schedule, Exhibit N, could have no application, and the intention of the contractor as to the distance he was going to keep the concrete ahead of the [1919] excavation would have no bearing on the situation as it then existed?

A. That is true, but your construction schedule was in August, and at that time you were working on the ventilating building, and apparently it would seem to me you were changing your plan. That is all right. Therefore, later, when you did delay be-

(Testimony of Charles Derleth, Jr.)

tween July, 1934 till December, 1934 with prosecuting the tunnel excavation, you naturally changed your program. That is all right.

Q. That is your conclusion, that we delayed. However, I am simply bringing out the situation.

A. I did not say you delayed, but you changed the program. You had six months in which nothing was done in excavating the tunnel.

Q. Very well. Now, the next construction schedule was Exhibit O, which was submitted——

A. In February.

Q. In February. A. 1935.

Q. Will you point out on that construction schedule, Professor, the date upon which it says concrete lining was to start in the walls and arch.

A. Here, this one, May 1, 1935. That is correct.

[1920]

Mr. Marrin: Q. The excavation was resumed in the tunnel about the first part of December of 1934, was it not? A. Yes.

Q. So, the period shown on that construction schedule, the difference between the time of the recommencement of the excavation and the time when it was contemplated the concrete lining would start, was a period of 5 months and not of 6 weeks; isn't that correct?

A. Yes, that is all true; but you could not even begin your concrete lining; you did not have the concrete equipment in your bunkers until July 1, 1935.

Q. That may be true; but you mentioned a while

(Testimony of Charles Derleth, Jr.)

ago the time schedule which showed that the Contractor contemplated keeping the concreting up within six weeks of the excavations?

Mr. Wittschen: He was speaking of the other one.

A. That is from the schedule "N," I think. The fact is, to be explicit, that in the early part of your work, starting, say, with July, to December, 1934, it was a general understanding between the Contractor and the Engineer of the owner that you were going to keep your concrete lining promptly back of your excavation.

Mr. Marrin: Q. As a matter of fact, that was the plan of the Contractor to keep the concrete line up within about 300 feet of the face of the excavation?

A. Yes, that is correct, for the Contractor himself, I said, intended to keep his lining close to his excavation; but he never did it; and so, on May 21, 1935, I took it upon myself, as a friend, to say to Mr. Stephen Bechtel, as has already been testified, that I was becoming concerned that the linings were not being placed, and you were leaving the large bores of the tunnel open with just the timber holding the material.

Mr. Marrin: No further questions.

Mr. Tinning: Thank you, Professor.

The Court: They were not near as severe on you as I thought they would be. [1921]

The Witness: Well, I thank them and I thank you.

Upon Appeal from the District Court of the United States for the Northern District of California, Southern Division.

PARKER PRINTING COMPANY, 545 SANSOME STREET, SAN FRANCISCO.

WALLACE B. BOGGS,

called by the defendants; sworn.

Direct Examination

Mr. Tinning: Q. Mr. Boggs, when were you appointed District Engineer of Joint Highway District No. 13? A. September, 1932.

Q. Have you continued in that position ever since that date? A. Yes, sir.

Q. Were you present at a conversation at the District office on pril 3, 1935, when Mr. DeLancey Smith, Mr. T. M. Price and yourself were the only persons present? A. Yes, sir.

Q. At that time and place, was there any discussion of an extension of time, between yourself and Mr. Smith and Mr. Price? A. No, sir.

Q. Were you present at a conversation at either Mr. DeLancey Smith's office or Mr. Paul Marrin's office in San Francisco on April 10, 1935, at which Mr. Smith or Mr. Marrin and Mr. Boggs and myself were present? A. Yes, sir.

Q. Was there any discussion of an extension of time at that meeting? A. There was.

Q. Who addressed the assembled gathering on behalf of the Six Companies?

A. Mr. DeLancey Smith.

Q. In substance and effect, what did Mr. Smith say to you with respect to an extension of time, or any other matters respecting the project?

A. Mr. Smith stated that it was probably the intention of the Contractor to present a request for

(Testimony of Wallace B. Boggs.)

an extension of time. I told Mr. Smith, at that time, that I did not think it was a proper time to present such a request, and, further, I knew of no reasons [1922] why the Contractor should be granted any extension of time.

Q. Was there any discussion of engineering at that meeting?

A. Yes. Mr. Smith brought up the matter of engineering, which had been the subject of some discussion prior to that time, and asked me what my thoughts were on that matter. I told him that that had been ruled upon before, and that my decision was still "No."

Q. Did you have any conversation with Mr. Smith at your office on April 15th or 16th, 1935?

A. No, sir.

Q. Did you have a conversation at any other place, in addition to your office, on or about April 15th or 16th, 1935?

A. No, sir.

Q. Were you present at a conversation held near the west portal of the tunnel on May 21, 1935, at which Professor Derleth, yourself, Mr. S. D. Bechtel and Mr. T. M. Price were present?

A. Yes, sir.

Q. At that time, what, if anything, was said with respect to an extension of time? Please give us, in substance and effect, what was said.

A. Mr. Steve Bechtel—

(Testimony of Wallace B. Boggs.)

Q. Mr. Boggs, in fairness, I think I should first state: you have heard Professor Derleth testify. It is true, is it not, that, before any discussion of extension of time came up, Professor Derleth had left the conference? A. Yes.

Q. Will you proceed with respect to discussing the conversation stating, in substance and effect what was said by the persons present,—Mr. Bechtel, Mr. Price and yourself,—at that time and place?

A. Mr. Steve Bechtel told me that he felt it was necessary for the Contractor to apply at this time for an extension of time. He stated that they were behind schedule and that he wanted to place an application for an extension of time before the District. I told Mr. Bechtel that I considered the placing of any request for an extension of time before the District at that time,—which was a year before the date of completion,—as being entirely premature, and, further, [1923] that I knew of no reason why the Contractor should have such an extension of time as that; I believed that I would recommend against it, if the Contractor filed such a report.

Q. What did Mr. Bechtel say to that?

A. Mr. Bechtel stated that he considered it necessary to apply at this time, at least to get the matter on record before the District.

Q. Do you recall a conversation between Mr. S. D. Bechtel, Mr. Kenneth Bechtel and yourself that occurred at the west portal,—at or near the west portal of the tunnel, a few days after Six Com-

(Testimony of Wallace B. Boggs.)

panies had submitted its request for an extension of time on June 10, 1935? A. Yes.

Q. Do you know the date of that conversation?

A. No; I do not.

Q. What was said at that conversation? Describe the circumstances under which it was held.

A. I met Mr. Kenneth Bechtel and Mr. Steve Bechtel near the west portal of the tunnel; I believe they were coming out of the tunnel, and I was on my way in to make an inspection; Mr. Kenneth Bechtel asked me if action had been taken upon their request for an extension of time; and I replied, in substance, that the request for an extension which had been filed a few days before was somewhat embarrassing to me.

Q. Did you have a conversation on November 19, 1935, in the office of Six Companies near the west portal of the tunnel, at which were present Mr. S. D. Bechtel, Mr. V. G. Hindmarsh, Mr. DeLancey Smith and yourself? A. Yes, sir.

Q. Will you state, in substance and effect, what was said at that conversation?

A. Well, that was a rather long conference, and there were quite a few matters discussed. I had been up into the tunnels, and, returning to my field office, I found a message there that Mr. Hindmarsh would like to see me at the Six Companies office,—their field office at the west portal. I went to the office, and [1924] I found there, in addition to Mr. Hindmarsh, Mr. DeLancey Smith and Mr. Steve

(Testimony of Wallace B. Boggs.)

Bechtel. Mr. Smith asked me what action had been taken upon their application for a 48-hour week for the employment of labor in the tunnel. I told Mr. Smith that the matter had been approved by the Bureau of Roads at some short time in the past, and that I had advised Mr. Price by telephone as to that action. Mr. Smith asked me if I would furnish a letter to the Six Companies advising them to that effect, which I told him I would do. There was then some discussion as to when this 48-hour week permit expired. I might say that, at that time, the Contractor was approximately at the end of the work for which that permit had been granted.

Q. That was the emergency work?

A. That was the emergency work.

Q. Catching up the cave-in of August 28th?

A. And catching up to the face of the excavation before new excavation could proceed.

Q. That is, catching up the concrete,—bringing it up?

A. Yes. This subject was discussed generally, and it was agreed that the Contractor would go back to the 40-hour week in the south tunnel, which was caught up, or would be caught up within a few days, and that, as soon as the north tunnel had reached some designated point, that they would then go back to the 40-hour week in that tunnel.

There was some further discussion as to the classes of employees coming under this designation of the 40-hour week which had been granted

(Testimony of Wallace B. Boggs.)

about a year before, and it was agreed that Mr. Bechtel, or that the Six Companies, at least, would write a letter to me designating just which employees were to be carried upon the 40-hour week as distinguished from the 30-hour week which applied to the outside work, and that I would submit that list to Mr. Sweetser of the United States Bureau of Roads, who represented the PWA, for his approval. [1925]

Mr. DeLancey Smith then brought up the matter of an extension of time, stating that the Contractor felt he should apply again for an extension of time; he said to me that he understood that, at the time the previous application was made, I had given as a reason for rejecting the same that the application was premature and asked me if I was still of the same opinion. I told him yes, and, further, that any new application which was submitted would have to be approved by the PWA, and should carry again a sufficient reason for any extension. Mr. Smith then asked me if I did not consider that the Contractor's difficulties experienced in driving the tunnel, the cave-in, the wet weather of the previous winter, might not change my opinion. I told him no, I did not consider that any of those matters were reasons for an extension of time for the Contractor. Mr. Smith said that he understood that that was my technical position, but perhaps that my position in this matter might be changed. I told

(Testimony of Wallace B. Boggs.)

Mr. Smith that I knew of no reason for granting an extension of time to the Contractor at that time.

Following that discussion—No; to go back: I also told Mr. Smith that inasmuch as the Contractor was behind again on the schedule which he had submitted in February, and I had in mind writing a letter requesting a new schedule, Mr. Bechtel, I believe it was, said that they would submit such a schedule shortly after the first of the year.

The Court: Q. That would be the third schedule?

A. That would be the third schedule, yes. They wanted to wait until that time because Mr. Hindmarsh, who was then superintendent of the work, had not performed any driving operations of the main tunnel, and they wanted to see what progress he could make.

Mr. Bechtel also said that they would like to submit their [1926] request for an extension of time at the time they submitted that schedule, and he asked me if I could not help them in preparing such a schedule and in thinking up some reasons which would not be controversial, by which I could possibly recommend an extension. I told him that I thought they had sufficient brains in their organization to think up their reasons, but that I would be very glad to cooperate in any way that I could.

There was then some discussion of actual construction problems, which I suggested Mr. Hind-

(Testimony of Wallace B. Boggs.)

marsh, the superintendent, take up with Mr. Gelston, the resident engineer, upon the work.

The Court: We will take a recess for five minutes.

(After Recess)

Mr. Tinning: Q. Had you concluded your discussion respecting the conference and conversation of November 19, 1935, Mr. Boggs?

A. No. There were a few other matters that were discussed. I asked Mr. Bechtel the status of Mr. Hindmarsh and Mr. Price, who had been project manager; and Mr. Bechtel told me that Mr. Price was still project manager but that Mr. Hindmarsh would be in charge of the actual field operations. I asked that a letter be given me so advising me and advising me how I should address my correspondence with the Six Companies. I think it was agreed that I would simply address it to the Six Companies direct, and that they would route their mail as they saw fit.

Following that, I took Mr. Bechtel and Mr. Smith —I drove them down to the train, and, on the way down and while waiting for the train, I asked as to the status of Mr. O. W. Peterson, who had been quite active formerly on the job and had frequently consulted with me. I was told by Mr. Bechtel that Mr. Peterson would continue in a supervisory or consulting capacity. [1927]

Q. Is that the end of the conversation?

(Testimony of Wallace B. Boggs.)

A. Mr. Bechtel told me that the Contractor desired to cooperate in every way to get the job finished as expeditiously as possible and that he hoped, if there were any questions or matters which arose between myself and members of the Contractor's organization, that I would not hesitate to take those matters up with him directly. I think that was practically all of the conversation.

Q. Did you have any conversation at that time, in December, 1935, with Mr. T. M. Price of the Six Companies, in which he discussed with you the question of the Six Companies requiring an extension, or, specifically, as to the grounds therefor, the time required for paving? A. No, sir.

Q. Did you have a conversation on or about January 22, 1936, with Mr. Hindmarsh at your office?

A. Yes.

Q. At that conversation, who was present besides yourself and Mr. Hindmarsh, if anyone?

A. Mr. Barkley, my chief assistant engineer.

Q. Was Mr. Ferneau present at any time while Mr. Hindmarsh was there?

A. Yes; Mr. Ferneau came in during the latter part of the conversation.

Q. Mr. Ferneau—what capacity did he have in this matter?

A. Mr. Ferneau had a somewhat dual capacity in that he represented the United States Bureau of Roads,—that would be the PWA,—as their inspector; and he also represented, or reported to, the

(Testimony of Wallace B. Boggs.)

Department of Public Works of the State of California.

Q. Will you now state what was said, in substance and effect, by Mr. Hindmarsh to yourself and, if Mr. Barkley participated in the conversation, what Mr. Barkley said?

A. Mr. Hindmarsh brought in a draft of a letter submitting a new schedule of operations for an estimated time of completion. It was a time schedule. Also included [1928] in that letter was a request for an extension of time to coincide with the date of completion shown upon the submitted schedule. I told Mr. Hindmarsh it was not in the form which I felt I could give consideration to an extension of time, in that it did not outline any detailed reasons but was substantially a blanket request such as had been submitted in the previous spring, without outlining any detailed reasons, and that I felt that, in order to properly consider—to have an application which I could consider, that they should outline, in detail, the reasons for which they considered they were entitled to such an extension, and that those reasons should set forth both the reasons for delay and also the amount of time upon each of the various reasons for such delay.

Q. Was such a letter, in accordance with your suggestion, later submitted by the Six Companies?

A. No; no such letter was ever submitted.

Q. Was anything more said in that conversation?

(Testimony of Wallace B. Boggs.)

A. Yes. Mr. Hindmarsh said that some of the reasons were the cave-in, the ground difficulties which they had encountered, the rainy weather of the previous winter and of the present winter; and he also asked me if the paving could not be completed due to a late spring—whether that would not be a good reason to put in. I told him that I was not going to pass verbally upon any reasons at this time, in view of the fact that some of my remarks in the past had apparently been misconstrued, and that I did not want to have any misunderstanding of my position; but that any application which was submitted would be carefully and conscientiously considered; and I suggested that he bring such an application in some time in April, prior to the time of the contract's date of completion in May of 1936.

Q. Mr. Boggs, at any time, from the commencement of the work by Six Companies under this contract up to the time that they left the [1929] work on June 13, 1936, did you state to any representative of Six Companies that you thought they were entitled to an extension of time?

A. No, sir; I did not.

Mr. Tinning: You may cross-examine.

Cross Examination

Mr. Marrin: Q. At the conversation which you held with Mr. Hindmarsh, Mr. Barkley and Mr. Ferneau, on January 2, 1936——

A. January 22nd, I think it was.

(Testimony of Wallace B. Boggs.)

Q. —January 22, 1936, you stated that Mr. Ferneau came in later? A. Yes.

Q. I understand, from that, that you and Mr. Hindmarsh and Mr. Barkley were present throughout the conversation? A. Yes.

Q. And Mr. Barkley was in hearing of the conversation? A. Yes.

Q. But Mr. Ferneau did not hear all the conversation?

A. No. I think he heard very little of it, if any.

Q. Did you state, at that time, to Mr. Hindmarsh, that you considered an application which would be made in January, 1936, would be premature, or words to that effect?

A. No. I told him I thought the proper time to put in such an application would be probably in April, shortly before the date of completion of the contract, which was the latter part of May.

Q. You recommended that he withhold filing an application until that time?

A. I did not recommend. I simply told him that I thought that that would be the proper time to put such an application in.

Mr. Marrin: No further questions.

Mr. Tinning: No further questions. [1930]

Mr. Tinning: We now submit our case on the issue of the right of the Contractor to rescind the contract.

Have you gentlemen anything further in testimony?

Mr. Marrin: In rebuttal on this issue?

Mr. Tinning: Yes.

Mr. Marrin: No. [1931]

Mr. Wittschen: The defendant now moves the Court for a judgment in its favor on the issue of the right of the plaintiff to rescind the agreement between plaintiff and defendant dated June 4, 1934, on the ground that the evidence will not support findings in plaintiff's favor and that there is no evidence sufficient to sustain a judgment in favor of the plaintiff on any of the two counts stated in plaintiff's complaint; defendant further moves the court for special findings of fact in accordance with the allegations of its answer in answer to each of the two counts stated in plaintiff's complaint.

Defendant further moves the court for conclusions of law that plaintiff take nothing by count one of the complaint and that plaintiff take nothing by count two of the complaint. Defendant further moves for judgment in favor of defendant separately on count one and separately on count two.

Defendant moves the court separately for judgment in its favor on the issues raised by the second separate and further defense to the first count of plaintiff's complaint, and for judgment in its favor separately for the issues raised by the second separate and further defense to the second count of plaintiff's complaint.

Defendant requests special findings on each and all of the issues raised by count one and count two

of plaintiff's complaint and of the answer of defendant thereto, which findings will hereafter be prepared and presented prior to the conclusion of the trial and will embody not only findings requested on the issue of the right of the plaintiff to rescind but upon each and all of the other issues raised by the pleadings.

Does your Honor care for any argument on that?

The Court: If counsel desires to argue it.

Mr. Marrin: I might say, if your Honor please, that this matter [1932] has taken us a little bit by surprise. In other words, the defendant said they would take eight or ten days in their case, and under the Federal procedure I rather take it that this, being a motion for judgment upon one of the issues after the evidence has been taken on both sides, that we should make a motion for judgment, ourselves, in order to make a record. Now, I have not prepared a written motion because I had not anticipated that that matter would come up for about two weeks.

Mr. Wittschen: Mr. Marrin, I did not mean to mislead you, but I think you misunderstood us. We think it will take about eight days to present our cross-complaint evidence if this issue is decided in our favor.

Mr. Marrin: I misunderstood counsel and I did not realize that the matter would reach this point at this time. Now, I can present the motion orally, but I would like the privilege of preparing the motion during the noon hour and submitting that.

Mr. Wittschen: I am frank to say, myself, I do not think this is necessary; it is the procedure fol-

lowed, but a very late case has come down reversing the Circuit Court of this Circuit just a little while ago, in which Mr. Alexander was counsel, stating that the case was still open until the Court signed the judgment, and even the direction of findings isn't a conclusion of the trial; but I certainly have no objection to your doing what we have done, and if you wish to make it orally you may do so.

Mr. Marrin: And it is stipulated that a written motion may later be made and substituted for it?

Mr. Wittschen: Yes.

Mr. Marrin: We would like to make a motion for judgment and request findings in order to protect our record.

At this time, if your Honor please, the plaintiff moves the [1933] court for judgment upon the following grounds:

1. That the evidence in this case shows that the defendant failed to make the progress payments when and as due, entitling the plaintiff to rescind the contract.

2. That the retention from the progress payments of the money which was due was a material breach of the contract which entitled the plaintiff to rescind.

3. That the plaintiff was entitled to an extension of time as of right and that the decision of the engineer in this case in denying an extension of time in view of the evidence in the record, was arbitrary, capricious, and wrongful, and that the evidence shows that the amount of the deduction was substantial and material, when coupled with the fact

that it would have amounted to the sum of $112,000 before the contract had been completed.

The plaintiff also moves for judgment in its favor upon the ground that it was misled in entering into the contract and that the defendant was guilty of representations amounting to fraud, actual or constructive, and further on the ground that the contract was entered into under a mutual mistake of facts as to the ground conditions, and that upon the evidence in this case the plaintiff was entitled to rescind, and is entitled to judgment, for the reasonable value of the work done. And we will, of course, present and request the Court to make special findings.

The Court: Is it now the wish of both sides that the Court rule?

Mr. Wittschen: It is the wish of the defendant.

The Court: Do you want to submit it on the record?

Mr. Wittschen: Yes.

Mr. Marrin: How does your Honor desire to handle it, by oral argument or briefs? [1934]

The Court: As to the procedure, I am of the present state of mind, if it will be helpful, that counsel go forward with his proof, whatever it may be. Unless I change my view, which is subject to change always, I will say there is not sufficient evidence in this record to respond to actual or constructive fraud, and I will so declare unless I am persuaded otherwise. Is that clear?

Mr. Marrin: You say there is not sufficient evidence?

The Court: I so declare now without ruling finally upon it, unless you want argument on it; if you want time to discuss that I will give you time.

Mr. Marrin: I think we should discuss the matter, if your Honor please.

The Court: Very well, proceed and discuss it.

Mr. Wittschen: Whom does your Honor wish to argue?

The Court: The one who has the laboring oar, your opponent.

Mr. Marrin: If your Honor please, this is the situation; I do not think that, and I am frank to admit, that we have shown any intentional misrepresentation in this case. I do think, however, that the record is sufficient to show that there was a situation here in which the facts as they were presented to the plaintiff when it submitted its bid were contrary to the facts as they actually existed.

The Court: It may be helpful, I will offer this suggestion, keeping in mind the evidence and law thus far gone into, where did the District fail to do its duty or measure up to its legal obligation, either on the factual side or the law side? I am saying that in order that it may be helpful.

Mr. Marrin: This is the view we take of it, if your Honor Please, the District in the specifications upon which they asked the contractor to bid, called attention to the geological report. [1935] Now, the apparent contention of the defendant in this case is that the plaintiff should have known, because of all the tunnels which had been built in this area,

that the ground at this point might be bad. However, the defendant apparently felt that it was necessary to make a particular examination of the specific ground at this site, and there is evidence in this record to the effect that the ground conditions in one tunnel, even though it may be only a short distance away, are not controlling of the ground conditions that may exist in another tunnel. The District did make an examination—it caused a geologist to make that—it had a report made, and that report said that for the most part the ground through which the tunnels would be built would be good from an engineering standpoint and would be self-supporting. The District had some purpose in having that report made, and in having that examination made. It had some purpose in drawing that report to the attention of prospective bidders, and while it disclaimed any guarantee of it or any liability for it at the same time it caused the information to be gathered, caused a report to be made and filed in its office, and it drew the attention of the contractor in this case to that report, and it was examined, and the evidence is that it was relied upon. Now, I think that from the specifications in this case the District probably also relied upon that report, although there is no direct evidence of it. The District provided in the specifications for the removal of the timbering and stated that the general intent of the specifications was that all of the timbering would be removed. This was a verification

of the facts which are set forth in this geological report. The District also provided for an A type and a B type of tunnel construction. It also provided for a tunnel which in its design had a very flat arch above the spring line [1936] or wall plate line which would withstand very little pressure from the outside at that point while excavation operations were being carried on. It also provided on the plan for batter posts, which indicated that no underground pressure was expected. These matters, if your Honor please, were representations which were made by the District to the contractor as to the conditions that would be encountered, and on that proposition we feel that if those representations were not true that under the decisions the defendant is responsible for them, notwithstanding any exonerating clauses which it might put in or any statement to the effect that it does not guarantee the representations. It is on that point, if your Honor please, that we feel that the District did make representations which make it responsible for any result.

Now, as to the ground, we have proved, and, as your Honor said, we built the tunnel twice—we have proved, I think without doubt, and it is not questioned, that the ground which was encountered was very different from anything involved in the geological report, diabase dikes, sandstone dikes, crushing, faulting and other conditions were encountered which were not mentioned or even intimated, which caused a great deal of difficulty in the

excavation and made the excavation much slower than it otherwise would have been. There is not any doubt in our mind, at least, that the statements made by Professor Louderback, while possibly not made with any intention to deceive, and we do not charge him with that, perhaps not made by the District with any such intention, we do not charge them with that, but they were nevertheless statements of fact which were contrary to the facts which were actually developed.

Now, it is our position that when the owner makes a statement of fact and the contractor submits a bid in reliance upon that, and that fact develops to be untrue, and it turns out that it injures the contractor, the contractor has a right of action for the [1937] damage which results therefrom; in other words, the owner assumes the liability.

It has been intimated here, and I think Mr. Wittschen stated if they had not disclosed the geological report they would have been liable. I do not agree with that, for the reason if the owner makes no representation at all and has in its possession information which indicates conditions more favorable than actually existed it could not be held liable for any concealment, because it has not concealed anything which would be detrimental to the contractor. But as the Circuit Court of Appeals said in this Circuit in the Sartoris Case, when an owner makes such statements, the owner makes them for a purpose, and the implication is that it is to influence

the bid, and having influenced the bid the owner is responsible for the results thereof.

That, briefly, if your Honor please, is our position with respect to the issue of constructive fraud, or mutual mistake, or whatever it may be, and whether it is constructive fraud or whether it is mutual mistake plaintiff, who is injured, is entitled to rescind on that ground.

The Court: I will say I realize how important a ruling is at this time, and for the reasons I have indicated my state of mind it was so that we would go forward with the trial.

Mr. Marrin: My associates draw my attention to the fact that I did not argue the extension of time ground, but I understood that your Honor wanted the argument simply on the question of the issue of fraud, but I would be glad to argue the other.

The Court: That is a factual situation, is it not?

Mr. Marrin: The extension of time?

The Court: Yes.

Mr. Marrin: Our position on the extension of time, if your [1938] Honor please, is, in the first place, that the engineer——

The Court: Pardon me, I want to be helpful to both sides. I have indicated my present state of mind. We can allow the record to stand and I will give you full opportunity to meet anything you have in mind in any reasonable time.

Mr. Smith: I suggest that we postpone this matter until two p. m. and then we will proceed.

The Court: I will do that, but my thought is to disclose my mind at this time, it would be better to go on with this case. From the standpoint of the record what is the immediate necessity for a ruling?

Mr. Wittschen: There is not any immediate necessity, except that we could not go on with our case, unless you ruled that the right to rescind is not present. Under the ordinary procedure I suppose they would go ahead now and prove their damages in some detail, and we would cross-examine on that report, that is, not on that report, but on that figure they put in evidence; in other words, they really have not concluded their entire case. They have concluded their case on what we think is decisive.

The Court: I was about to declare, both under the facts presented and the law as presented, you have not a right to rescind.

Mr. Smith: We have been here quite a while, and there is quite a bit of evidence that might have escaped our minds, and I think it would be helpful to review the evidence to you.

The Court: I do not want to deprive you of that opportunity.

Mr. Marrin: If I understand Mr. Wittschen's position correctly, it is this, that they have presented all the evidence which they intend to present at this time in defense to the plaintiff's case, with the exception that if we go ahead with our proof on the amount which we may be entitled to recover they, of course, reserve the [1939] right to cross examine and put in counter evidence on that issue.

Mr. Wittschen: That is partly true. I am going further than that. I made a motion earlier in the case and repeated it again in substance that there is no use of spending another week, at least, upon your damages if you have no right to rescind, because then that is immaterial, and that is precisely the way the case was tried, so that if the Court rules that you have no right to rescind I think that we would then try the cross complaint.

The Court: That is my present state of mind. I do not want to dispose of that without giving you a full opportunity to present it.

Mr. Marrin: I feel, if your Honor please, that if this matter is going to get down to an argument on the real merits of this matter that we should have over the week-end, at least, to prepare the argument and present the matter fully. It is very important. I do not quite appreciate Mr. Wittschen's position or the Court's position on the matter.

The Court: To be frank with you, I do not know the method or manner—I do not want to mislead anyone—probably counsel, here, are better acquainted with the situation than even the Court is. I usually meet any matter which is submitted to me after both sides have had a full opportunity to be heard. This case is important, and since I have declared my state of mind I still will leave it open only with the view that I want you to have a full opportunity to present the case.

Mr. Wittschen: What the Court suggests, as I understand it, Mr. Marrin, is this, that its present

state of mind is you have no right to rescind, but that is merely what you might say is a preliminary statement. It is not a ruling.

The Court: It is to arouse you to a great effort, so that if [1940] I am in error you will arouse me to withhold my present state of mind and change it, if possible.

Mr. Marrin: That is what we want to do.

Mr. Wittschen: I did not mean to spring any surprise. I thought that was understood. As you recall, on the first day—

The Court: I suggested, or I think I inquired when we first started in with the proof—I think counsel answered it—what was it you said?

Mr. Smith: I stated to your Honor I thought the case should first be disposed of on the complaint and answer before proceeding any further.

Mr. Wittschen: I do not object to your taking time to consider it until this afternoon or whatever time the Court wants to give you.

Mr. Marrin: It seems to me the matter has arrived at a stage now where the defendant has closed its case and your Honor's decision may entirely and probably will entirely determine the rights of the plaintiff so far as the plaintiff is concerned. Now, this is a long record, if your Honor please, there are some 1,600 or 1,700 pages of transcript. There is a lot of law on the subject, and I had misunderstood Mr. Wittschen's purpose, I thought there would be some two or three more weeks of trial at this time, and it would be my suggestion, in

view of the importance of this matter, to the plaintiff and to the defendant also, in view of our desire to present a complete argument on the law and the facts, that the matter be adjourned for some time and then if the Court decides we are entitled to rescind, I take it that it is useless for the defendant to go ahead with the cross complaint. If the Court decides, on the other hand, that we are not entitled to rescind, then there won't be any issue on the matter of damages, which will save about a week of the Court's time, and it will leave the matter clear for them to go ahead with their cross complaint. [1941]

The Court: Since I have declared in this case that I did not think you were entitled to rescind, with that thought in mind I will give you full opportunity to change my views.

Mr. Wittschen: I have no objection to your Honor giving them time until Tuesday, but as to its going over beyond that I personally am in this position. Miss Phillips, of the United States Attorney's Office, has been in two or three times to see me. The Judge who is coming from Illinois has a case of mine set which is going to take some time to try, and the understanding was that we would try it at the conclusion of this case, because they are bringing an assistant from Washington on it.

The Court: They are bringing one in a case I am to try.

Mr. Tinning: I have one other suggestion, it may not be pertinent, but it is very important, we have a very large force of District men whom the

District will have to hold until the remaining testimony is disposed of. Many of these have work they can go into, and we are having to hold them, and we desire very much to conclude the case.

The Court: That does not impress the Court very much.

Mr. Marrin: We are more or less in the same position.

The Court: Might I inquire, is there any hope of getting together if I dispose of this matter?

Mr. Tinning: We have been so far apart in the amount involved up to this date we have never discussed anything.

(After discussion.)

Could we have this program: Can counsel for plaintiff be ready to go forward on Tuesday, and if they desire to discuss any matters with us this afternoon we will be very glad to devote that time to it.

The Court: I think that will be satisfactory. I will continue the case until Tuesday morning at ten o'clock. [1942]

(The further hearing was thereupon continued until Tuesday, May 31, 1938, at ten o'clock a. m.) [1943]

Tuesday, May 31, 1938

Mr. Marrin: If your Honor please, at this time I should like to present a motion to strike.

Plaintiff moves to strike from the Record Exhibit "WWW," introduced by the Defendant (Transcript page 804) [page 1409 this printed record], being purported letter of regulations of Federal Emergency Administration of Public Works, containing Administrative Order of Federal Emergency Administration of Public Works Number 54, together with a letter from the Chief of the Bureau of Public Roads transmitting same, and also, a letter from one C. H. Sweetser transmitting same all of said documents having been introduced as one exhibit.

Also, Plaintiff moves to strike from the Record Defendant's Exhibit Number "0-4" (Transcript page 1458) [page 471 Book of Exhibits], being Grant Agreement between the United States of America and Joint Highway District No. 13 for a grant of money to construct the project of the Defendant District.

This motion is made upon the ground that the said exhibits have no relationship of any kind or character to the Plaintiff or to its relations with the Defendant under its contract with the Defendant, and on the ground that there was and is no privity of contract between the Plaintiff and Federal Emergency Administration of Public Works and said exhibits are not binding on Plaintiff, and upon the ground that Plaintiff had no notice of any kind

or character of the existence of any contract between the District and Federal Emergency Administration of Public Works until long after the contract between Plaintiff and Defendant was made; and that for these reasons the said exhibits were and are irrelevant, incompetent and immaterial and tend to prove no issue in the case." I should like to file that.

Mr. Alexander: The cross defendant surety companies make the same motion and upon the same grounds. [1944]

Mr. Wittschen: As far as the two letters are concerned which accompanied the regulations of the Public Works, that order that was promulgated, we only introduced those because counsel said "If you are going to introduce the order you might as well introduce the letter." We have no objection to the letters being stricken, as long as the order of the Department which stated how liquidated damages should be handled remains; in other words, it came to us in the form of a letter to Mr. Sweetser, who was representing them; it was accompanied by another letter, the exact tenor of which I do not now recall, to the effect that this order had been promulgated. We are only concerned with the order.

Mr. Marrin: The letter on its face shows the date on which it was received by the District.

Mr. Wittschen: We received that order before we exacted any penalties.

Mr. Marrin: You received the order in March, I believe, 1936.

Mr. Wittschen: And exacted penalties in June.

Mr. Marrin: Yes.

The Court: I suggest for the purpose of the record that the matter be submitted for determination.

Mr. Wittschen: Very well.

Mr. Marrin: If your Honor please, you recall I made an oral motion for judgment, and I would like to follow it with a formal written motion.

MOTION OF PLAINTIFF

for Special Findings of Fact and Conclusions of Law and for Judgment in its favor.

Plaintiff moves for judgment in its favor for such sum or amount as the Court shall find upon the evidence to be the reasonable value of the work and labor performed and contributed by Plaintiff prior to the date of rescinding the contract on June [1945] 13, 1936, on the following grounds:

I.

That the undisputed evidence in this case establishes substantial breaches of both express and implied conditions of the contract by the Defendant, causing great loss and damage to the Plaintiff in that Defendant failed to make payment to Plaintiff on June 10, 1936, of the money due Plaintiff from Defendant under the contract for work done by Plaintiff during the month of May, 1936, and by deducting from the money due Plaintiff the sum of $500 per day for each day after May 24, 1936, and thereby declaring its intention to continue to

breach said contract by failing to pay Plaintiff the amount due it under said contract if Plaintiff continued to perform same by further deduction of the sum of $500 per day until the work under said contract was completed on about the 3rd day of January, 1937, or a total deduction of $112,000.00, from money justly due Plaintiff under the terms of the contract, to Plaintiff's great injury and damage, thereby justifying its rescission of the contract.

II.

That the undisputed evidence establishes that the Defendant failed and refused to give to Plaintiff any extension of time within which to complete the performance of the work under the contract, and that such refusal was wrongful and illegal because Plaintiff had been unavoidably delayed in the performance of the work under the contract for a period of 300 days, or more, and had also been delayed in the performance of the work under said contract by reason of stormy or inclement weather, and had been delayed by operation of law, and Plaintiff was thereby justified in rescinding the contract. [1946]

III.

That the undisputed evidence in this case establishes a substantial breach by the Defendant of the contract in that the materials through and under which the tunnels were to be constructed were substantially different from those shown, or predicted, or represented in the geological report furnished to bidders, in the plans and specifications furnished to bidders, and in the contract and the specifications

forming a part thereof entered into; and made the performance of the work much more difficult and expensive than it would have been had the materials corresponded with the materials predicted and represented by and in the geological report and the contract, plans and specifications; and thereby the warranty contained in the contract and relied upon by Plaintiff in making same, as to the materials to be found through which the tunnels would be built, was breached to Plaintiff's great injury and damage.

IV.

That the undisputed evidence in this case establishes constructive fraud on the part of the Defendant in inducing Plaintiff to enter into the contract.

V.

That the undisputed evidence in this case establishes capricious and arbitrary conduct by the District Engineer of the Defendant in failing and refusing to determine and adjudge that Plaintiff was unavoidably delayed in the doing and performance of the work.

VI.

That the undisputed evidence in this case establishes that a gross mistake was made by the Engineer of the Defendant District in failing and refusing to determine and adjudge that Plaintiff was unavoidably delayed in the doing and performance of the work.

VII.

That the undisputed evidence in this case establishes that the [1947] Defendant breached the contract by failing and refusing to give Plaintiff proper lines and grades to work to in the construction of the tunnels.

VIII.

That the undisputed evidence in this case establishes that a mutual mistake was made by the Plaintiff and Defendant in entering into the contract in that Plaintiff and Defendant both believed that the ground through which the tunnels would be driven would be of self-supporting character for about 2,000 feet of the length of each of the tunnels; and both parties relied upon this fact in entering into said contract; and in truth and in fact the ground through which said tunnels were driven was entirely nonself-supporting, but required artificial support throughout before and during the lining of the tunnels with concrete to the extent that it was impossible to remove such artificial support, thereby causing Plaintiff great injury and damage.

IX.

That the undisputed evidence in this case establishes that Plaintiff relied upon the information contained in the various documents furnished to it by Defendant prior to bidding, including particularly the geological report, plans, and specifications, and planned the doing of the work covered by the contract in reliance upon the information so furnished that the ground through which the tunnels

would be driven would be found to be self-supporting for the most part; and by reason of the fact that none of said ground was self-supporting, Plaintiff was unable to construct the tunnels in accordance with its plans made in reliance upon the information furnished by the Defendant, thereby causing great injury and damage to Plaintiff.

Plaintiff moves for such judgment upon each of the two counts stated in its complaint and further moves the court for special [1948] findings of fact in accordance with the allegations of Plaintiff's complaint and each count thereof.

Plaintiff further moves the court for conclusions of law that Plaintiff is entitled to judgment on each count of its complaint for the reasonable value of the work and labor performed for, and material furnished to, Defendant under the contract between the parties dated June 4, 1934, and prior to the date of rescinding said contract on June 13, 1936.

Plaintiff requests special findings on each and all of the issues raised by count one and count two of its complaint and the answer thereto, which findings will hereafter be prepared and presented prior to the conclusion of the trial and will embody not only findings requested on the issue of the right of Plaintiff to rescind, but upon each and all of the other issues raised by the pleadings.

Mr. Alexander: I just want to say the cross defendant surety companies make similar motions and upon similar grounds.

Mr. Marrin: If your Honor please, with respect to the findings and the rather technical nature of the proceedings, I suggested the matter to Mr. Wittschen, and I believe we are in agreement—neither one of us wants to cut off any right—I would suggest the following stipulation, if it is agreeable to Mr. Wittschen, that it is stipulated that the trial shall be deemed to continue and be in progress until findings of fact and conclusions of law are presented by the parties and signed and filed by the Judge, as provided by Rule 42 of this Court, and that any opinion or order of the Court previous thereto shall be considered as merely preliminary, and as not terminating the trial, and that the cause shall not be deemed finally submitted for decision until such findings of fact and conclusions of law are so signed and filed by the Judge.

Mr. Wittschen: Except I would like the Court to make an interlocutory [1949] decree. In other words, we do not know how otherwise to proceed. I have no desire to impale one side or the other on any technical finding. We are willing to stipulate that in view of the fact that issues are still open on the cross complaint under my theory, that findings of fact and conclusions of law may be filed at any time after the Court has ruled on the cross complaint, but obviously we could not go ahead on the cross complaint unless the Court should conclude that Plaintiff had no right to rescind. If you have a right to rescind there would not be any cross complaint.

Mr. Marrin: My purpose in that is this. I understand that you desire the Court to make what you call a temporary interlocutory order, and I want to be certain that we are not precluded from thereafter presenting special findings.

Mr. Wittschen: I will so stipulate that you will not be precluded by any order the Court may make.

Mr. Marrin: That is satisfactory. With respect to the cross complaint, I spoke to Mr. Wittschen about this yesterday, and I think that the evidence which has been adduced on the complaint would automatically apply to the cross complaint, but both sides are agreeable that that be done, so that there will be no necessity of reintroducing a lot of evidence here, and I would suggest this stipulation on that, if agreeable, it is stipulated that the entire record already made in this case may be considered as applicable to the trial of the issues on the cross complaint and the answers thereto, as well as the issues on the cross complaint and answers thereto, subject to all motions, objections, and exceptions.

Mr. Wittschen: As I understand, that is agreeable. I suppose you mean by all the evidence you mean all pertinent evidence, because some might not be material to the latter issue. As I stand [1950] here I cannot think of any.

The Court: If there is any such, and both sides may present any further evidence.

Mr. Marrin: Any further evidence.

Mr. Wittschen: It is my understanding that any evidence that your Honor has heard is applicable to all the issues in the case wherever it is material.

Mr. Marrin: Is that agreeable, Mr. Alexander?

Mr. Alexander: That is agreeable to the cross defendant surety companies.

Mr. Wittschen: Your Honor, while I am before the Court might I make a request? When we set up our figures in our counter claim and cross complaint we had to set them up on the work already completed. Since then we have had an audit, and rather than file a new document, which I think would be confusing, I would like, with the consent of the Court, to take the original cross complaint and change the figures on the face, with counsel, and have the clerk initial the changes that we have made.

Mr. Alexander: I would feel, before acceding to that request, something should be said. If counsel proposes to make just little trivial changes, as a matter of courtesy, of course, that would be acceded to, but if it is something substantial I do not think it will be.

The Court: You would object to a couple of hundred thousand dollars?

Mr. Wittschen: It is $42,000.

Mr. Alexander: I want to have something to say about the $42,000, and we think that showing of $42,000 ought to be brought along the usual lines.

The Court: They may indicate how the figures are made up. [1951]

Mr. Wittschen: I will illustrate what I mean. For instance, we state the reasonable cost of completing the work agreed to be done was $1,725,000

even. Now we find that it is $1,751,611.74. We just want to put in the actual figures. In one or two places we have reduced them, but the net result is there is an increase of substantially $40,000 in the figures.

Mr. Alexander: Your Honor, as far as the original cross-complaint is concerned I do not think it states a cause of action under the contract or on the bond. It is a suit brought, among other things, for reasonable value, and the contract, itself, specifies in particularity how the amount of their damages, if any, are to be ascertained, and before your Honor makes a ruling on this, I would like to present that matter formally.

The Court: There is only $42,000. Both sides will have an opportunity to meet that. The only thing is instead of wanting to file a new cross complaint he wants to insert those figures.

Mr. Alexander: I do not think it is so simple. The filing of a new cross complaint will invite a formal attack upon it. This is not a case of a little courtesy, there is a substantial sum involved.

Mr. Wittschen: I am not asking for any courtesy. You have got me all wrong. I think we have a right to amend to conform to the proof after we put the proof in. What I was suggesting was that practically every figure that we have put in our cross complaint is changed, because we put them in more than two years ago, while the work was still in progress, for instance, we state in one that the cost of running the District was $288 a day, while

it is $278, and certain figures like that, we have had to change as time has gone on. For instance, we overlooked crediting the doing of certain work which had not gone far enough to be included in the [1952] estimate, this $2,800 they are credited with; in other words, instead of putting in a complete whole they put in a half whole, and that had to be finished. I am not changing a single principle. I am just striking out one figure and substituting for that figure another one. There are no changes made. I am perfectly ready and willing to meet Mr. Alexander on his claimed defense that it does not state a cause of action against the sureties at any time, and suggest that if you want to set it down for argument for two o'clock this afternoon we will be ready.

Mr. Alexander: It would be quite agreeable if some issue was presented.

Mr. Wittschen: There is no change of issues presented in any way. I was just trying to save time.

The Court: Your objection is not to the figures, then?

Mr. Alexander: No, but the substance of the entire cross complaint, and by acquiescing or being silent I might waive very substantial rights.

Mr. Wittschen: I understand you have a special defense in, to the effect that it was the District's obligation under its contract to do this work, itself, and not let it to rebidding, and also that you claim that the action was prematurely brought, because it

should have brought the cross complaint after the job had been finished, and on each of these special defenses we are prepared to argue at any time.

The Court: There is nothing at this time before the Court.

Mr. Wittschen: Shall this go over, then?

The Court: Yes, it may go over. There is one fact the Court has in mind, namely that this $42,000 in addition should be limited to the prayer of your complaint.

Mr. Wittschen: You mean by the prayer of the complaint? [1953]

The Court: Yes, this present pleading is an additional $42,000.

Mr. Wittschen: But this is not on any additional item. We are simply substituting other figures, we do not change any of the language. In one case we found, for instance, that we were deducting or attempting to deduct penalties twice; we had already retained 20 days penalties, so instead of charging them 433 days it should be 413 days; that is a reduction in their favor. It is just things like that, in checking over the complaint, that the figures should be changed.

Mr. Smith: As I understand it, the matter is over. You are not offering the suggested change now

Mr. Wittschen: Yes, I would like to do it. I would like to do it during the noon hour, change your complaint and change the one the Court has, if there is no objection, and substitute new figures.

Mr. Alexander: I certainly object to substituting new figures, in view of the fact that I do not think the cross complaint should be amended at all.

The Court: Are you prepared to argue that now?

Mr. Alexander: I would be glad to, but in order to argue it we have got to have something before the Court. I had assumed counsel would present a serious matter of that kind, involving $42,000, in new figures to which we could raise objection. $42,000 is a lot of money.

Mr. Wittschen: I will be glad to retype this whole thing over.

Mr. Alexander: I do not want to cause trouble to anybody, and the purpose of my objection is not to cause additional typewriting, because that entails work on my part, but I do want to reserve my rights.

Mr. Wittschen: Your rights will be all reserved, because I take it when we offer evidence of our damage you are going to object [1954] that the figures in the complaint were different from the ones we now put in. I am willing to put the evidence in and amend to conform to the proof.

The Court: The only thing we are concerned with for the moment is figures.

Mr. Wittschen: If you want to go to the merits I think that is all right. I assumed we were to go ahead with our cross complaint at this time, and counsel has indicated that they want to argue the matter, and if they are ready I presume that should be taken up now.

The Court: Very well.

Mr. Smith: We understood your Honor you did not care to hear argument on that, and therefore you were going to proceed with your cross complaint.

The Court: I indicated to you, if I remember, that both sides had been associated with this for the past two or three years. If you wish to argue this matter we can dispose of the matter.

Mr. Wittschen: I would like to have it disposed of.

Mr. Smith: We both said we did not feel we could do our clients and ourselves justice in preparing an argument between Saturday and Tuesday, in view of the length of the record, and the importance of the subject-matter, and the various exhibits, and your Honor, as I understood it, suggested that you did not desire to hear argument before the conclusion of the cross complaint, anyway.

Mr. Wittschen: I did not so understand it, because our time would be wasted.

The Court: The truth of the matter is if we are going to proceed here under the rule the Court must rule before I can entertain the cross complaint.

Mr. Wittschen: That is my understanding.

Mr. Smith: There is not any rule on it. [1955]

The Court: There is not any rule.

Mr. Smith: It is a matter of procedure, that is entirely discretionary with the Court.

The Court: It would seem reasonable that we could not proceed in the manner that you suggest before the major thing is taken care of, namely the

breach of this contract, and before we can proceed with the cross-complaint we must take care of that matter.

Mr. Wittschen: Unless there was a breach of the contract there could be no cross complaint.

The Court: If I thought otherwise there would be no need of wasting any further time.

Mr. Smith: We are in this position, that we tried to ascertain carefully from your Honor on Saturday—that was the purpose of our visit to you—the visit was suggested by Mr. Marrin and myself, and we advised counsel that we were coming up to see you for the purpose of finding out what your Honor's desire was as to further procedure, and also for importuning your Honor to give us a reasonable time in which to prepare for argument, if you would listen to argument.

The Court: I think I answered that by saying that no one at any time was ever denied an opportunity to be heard.

Mr. Smith: That is correct.

The Court: I think that was my language.

Mr. Wittschen: Now is your opportunity to be heard.

Mr. Smith: But we have made it very clear we could not in justice to the case present an argument in view of the length of the record this morning.

The Court: That would be true if you had not been wrestling with your problem for two or three years, the nature of the case, and the preparation for it during that period of time, with a full [1956]

day before that time; as to the facts and the law it seems to me that is a reasonable time. Now, is there any case in addition to those that you have cited that you have in mind that would change the situation?

Mr. Smith: Might I be permitted to confer with my associate? We will submit the matter without argument at this time.

Mr. Wittschen: We will submit the matter also.

The Court: What is the matter now before the Court, for the purpose of the record?

Mr. Wittschen: I take it the Court should rule upon a motion for judgment in the District's favor on the issues raised by the complaint and answer, that is to say, the right of the plaintiff to rescind the contract, if the Court rules in favor of the defendant in that matter then we should be ordered to proceed with the cross complaint.

The Court: Let the record show a ruling in favor of the defendant.

Mr. Wittschen: On the issues raised by the complaint and answer?

The Court: By the complaint and answer.

Mr. Smith: To which we except.

The Court: Note an exception.

Mr. Alexander: We also join in the exception. I don't know as we have to, but we do.

The Court: Let the record so show.

Mr. Smith: Will it again be stipulated as previously stipulated between you and Mr. Marrin that the time for presenting findings shall be in accordance with the rules of this Court, under Rule 42?

Mr. Wittschen: I stipulated it a little differently; in other words, that findings could be prepared after the Court had decided the issues raised by the cross complaint and your answer thereto.

[1957]

Mr. Smith: Yes.

Mr. Wittschen: And that you need not prepare findings now upon the matter upon which the Court has just ruled, on either side.

Mr. Smith: You have not prepared any?

Mr. Wittschen: I have not submitted any. I intend to submit them all at once. With that understanding I make a request for special findings.

The Clerk: Motion for judgment in favor of the defendant granted upon special findings to be presented and filed in accordance with Rule 42?

Mr. Wittschen: Yes.

Mr. Smith: The preparation of special findings is included in that order?

Mr. Wittschen: Yes, but the Court has directed the preparation of special findings.

The Court: Yes.

Mr. Wittschen: And submit them to the other side.

The Court: Yes, and give them an opportunity to amend.

Mr. Wittschen: I told Mr. Marrin that the State procedure in the matter would be agreeable to me, that is to say, we would prepare and serve them on you and file them with the Court. Is that agreeable?

Mr. Smith: Yes, we will have an opportunity to check them and present our findings.

Mr. Alexander: We wish to ask for special findings on all issues involved in the future proceedings as well as in the past proceedings.

The Court: So ordered. In other words, I do not want either side to waive any of their legal rights.

Mr. Wittschen: No. [1958]

The Court: You must keep within the rule, but if there is anything of any substance that either side has omitted, it may be brought up.

Mr. Wittschen: I think that stipulation covers it.

The Court. I think so. Proceed with the cross complaint. [1959]

WALLACE B. BOGGS,

Recalled, by cross complainants; previously sworn.

Mr. Tinning: During the three-day holiday, the certified public accountant's report which had been prepared during the last two weeks was served upon Mr. Boggs and myself; we only had an opportunity to examine it on Friday night, and it contains some matters that were not proper under our pleadings; in other words, the accountant apparently misunderstood our instructions and included in the cost of operating the District all of the costs of operating the District even though they were attributable to litigation; and, since we discovered that on Friday night, we put him to work and were promised

(Testimony of Wallace B. Boggs.)

a final report at one o'clock today,—the detailed schedules to support those items. I have here a copy of the final figures which I obtained at eleven o'clock last night, and I can proceed with this, but I cannot bring you his certificate to the schedules that support these figures until two o'clock this afternoon. I am ready to proceed with the schedules that I have here now but I cannot give you the certified public accountant's certificate.

Mr. Smith: Would it expedite matters to adjourn until two p. m.?

Mr. Tinning: Perhaps we can go ahead, and we can qualify Mr. Boggs. There are a number of things we can go right on with, and I think we can save time.

Mr. Smith: Well, we were hopeful of stipulating on some items there.

Mr. Wittschen: We have those items that you said you would stipulate on; but now we have Mr. Alexander's objection—

Mr. Smith: His objection does not go, if I understand it, to the fact; it goes to the right to receive the fact.

Mr. Wittschen: Yes, I understand that. [1960]

Mr. Smith: Is that correct, Mr. Alexander?

Mr. Alexander: Yes.

Mr. Marrin: From your own statement, Mr. Tinning, you could not very well proceed without the certified public accountant's findings.

Mr. Tinning: These figures are all based on his findings; it is the final work of getting his support-

(Testimony of Wallace B. Boggs.)

ing files. There are, of course, hundreds of items that have been used and we did not get those figures until last night. We will go ahead and if there is anything we cannot agree on, then we will ask for an adjournment until two o'clock.

Direct Examination

Mr. Tinning: Q. Mr. Boggs, you testified, on Friday, that you had been District Engineer of Joint Highway District No. 13 of the State of California since September, 1932, continuously up to this date?

A. Yes.

Q. It would follow, from that, that you were in charge in the preparation of the plans and specifications for the project of the District?

A. Yes.

Mr. Alexander: May I ask that the answer go out for the purpose of making an objection, your Honor?

The Court: Yes.

Mr. Alexander: At this time, your Honor, I think the objection should be raised that we were previously discussing, namely, that the cross complaint does not state a cause of action and cannot be maintained by the cross complainant. I am a little uncertain whether the question should be addressed to the particular issue before the Court, but I don't want to take any chance of waiving it.

Mr. Wittschen: Your Honor, we were about to qualify the witness to show he could have an opinion as to the reasonable value of [1961] completing the

work; and when we ask the ultimate question, I take it your objection will be timely.

Mr. Alexander: I thought that was what you were doing, but I did not want to take any chance. I might state, your Honor, our objection runs to the entire cross complaint and consequently runs to the taking of any evidence under it.

The Court: Very well. I think we should dispose of the question for the purpose of the record now. Proceed.

Mr. Alexander: Very well, your Honor. At this time, your Honor, we not only object to the question upon the grounds that I will state, but we move to dismiss the cross complaint of the cross complainant, Joint Highway District No. 13 of the State of California, the motion being made, so far as I am concerned, on behalf of the cross defendants surety companies. No doubt the other defendant will make an appropriate motion.

Mr. Smith: Yes.

Mr. Alexander: Along the same lines. The grounds of the motion are as follows:

That the cross complaint does not state a cause of action;

Secondly, that the cross complaint was prematurely filed in that the District's claim for damages and right to recover is based upon Paragraph 5 of the contract, Section 6Q, Subdivisions 1, 2 and 3 that I will specify. Paragraph 5 of the contract—it contains really two paragraphs, but I will refer

to them from time to time as Paragraph 5—or maybe I have not the right word—

Mr. Smith: "Article," I think.

Mr. Alexander: —Article 5 or Section 5 or Paragraph 5, reads as follows—

The Court: Pardon me. What page is that on? [1962]

Mr. Alexander: In the complaint?

The Court: Yes.

Mr. Alexander: It will be in the exhibit attached to the cross complaint.

Mr. Wittschen: Paragraphs XI and XII of your answer to the cross complaint.

Mr. Alexander: Your Honor, I was just referring to the contract itself, and a copy of it is attached to the cross complaint.

The Court: Yes.

Mr. Alexander: Have you the cross complaint there, your Honor?

The Court: Yes.

Mr. Wittschen: Mr. Alexander, not to interrupt your argument, but for the Court's information, Paragraphs XI and XII of your answer are typewritten out there.

Mr. Alexander: Reading Article 5 from the Contract:

> "That the second party—" that would be the Contractor (reading:) "—further agrees that if the work to be done under this contract and agreement shall be abandoned, or if this contract shall be assigned by the second party,

or if at any time the District Engineer shall be of the opinion, and shall so certify in writing to the said first party that the said work or any part thereof is unnecessarily or unreasonably delayed, or that the said second party is wilfully violating any of the conditions or covenants of this contract, or is executing this contract in bad faith, the said first party shall have the power to notify the said second party to discontinue all work or any part thereof under this contract, and thereupon the said second party shall cease to continue said work or such part thereof as said first party may designate, and the said first party shall thereupon have the power to place such and so many persons, and to obtain by contract, purchase or hire, such animals, carts, wagons, implements [1963] tools, material or materials, by contract or otherwise, as said first party may deem advisable, to work at and be used to complete the work herein described, or such part thereof as the agent authorized to superintend the same may deem necessary, and to use such material as they may find upon the line of said work and to charge the expense of such labor and material, animals, carts, wagons, implements and tools to the second party, and the expense so charged shall be deducted and paid by the first party out of such moneys as may be either due or may at any time thereafter become due

to the said second party under and by virtue of this contract or any part thereof.

"In case such expense is less than the sum which would have been payable under this contract, if the same had been completed by the said second party, the said second party shall be entitled to receive the difference, and in case such expense shall exceed the last said amount, then the said second party or its bondsmen shall pay the amount of such excess to the first party on notice from the said first party of the excess so due."

The Court: You have in mind a demand for that amount?

Mr. Alexander: It is not, your Honor, a case of a formal demand, just a formal demand, but if I can digress just a moment, I can give the authorities later on. It has been said a number of times that when the parties stipulate in their contract for the method of ascertaining the loss, if any, either way, —either a profit or a loss, —that that must be followed; and until there is an audit on the completion of the work and a determination of the amount and which way the balance lies, one way or the other, no cause of action has accrued to either of the parties—or, no cause of action has accrued, rather, to the owner. [1964]

Now, in connection with the provisions of the contract which I read, I want to read a portion of Section 6Q of the specifications. You will find it on

page 7; and passing over Sections 1 and 2, we will get to the pertinent part, Section 3, or Subsection 3 of the section of the specifications, which reads—There are provisions in the specifications somewhat similar to those which I read to your Honor which are in the contract, and then this:

> "In case such expense is less than the sum which would have been payable under this contract at the unit prices bid, as calculated from the District Engineer's final estimate if the work had been completed by the Contractor, then the Contractor shall be entitled to receive the difference, but in case such expense shall exceed the last said amount then the Contractor and his bondsmen shall be jointly and severally liable to pay the amount of such excess to the District on notice by the District of the amount of excess so due."

Now, we see from that this is not an ordinary contract where if there is a breach a cause of action arises. There is a specific provision in the contract of how the loss to the owner, if any, shall be ascertained, and it is specifically provided in the specifications and the contract that the owner shall go ahead, shall complete, shall determine the final estimate, and when all the work is done and, —then using the language of the contract, —"give notice to the second party or its bondsmen" which way the balance lies.

Mr. Wittschen: May I ask you a question, Mr. Alexander? The provision in the specification and the provision in the contract are substantially identical. You are not making any point on any difference of language——

Mr. Alexander: No, no; they are substantially identical. I [1965] read the portion of the specifications because that shows what is to be done: go ahead and get the final estimate and then determine which way the balance lies; if the District has made a profit, they must send a check to the Contractor; on the other hand, —which is the case here, —if the final estimate shows a loss, then give notice to the sureties or the Contractor, and, at that time, a cause of action arises, but not before.

Until the work was completed and the expense estimates as provided in the section of the contract and specifications, and until the plaintiff in this action, or the cross-defendant surety companies, were given notice by the District of the amount of the excess in excess of what it would have been if the Contractor had completed the work, no cause of action accrued to the District against the cross-defendant surety companies, or against the cross-defendant Contractor.

Another ground that I want to address to the Court at this time—I am not certain if it comes up just at this point, but it may facilitate matters later on if I make the point now: Section 4D of the specifications provides for liquidated damages at the

rate of $500 a day for delay in completing. That, we submit, is in conflict with Paragraph 5 of the contract. Paragraph 5 of the contract specifically provided how the amount of damages shall be ascertained if there is an abandonment of the contract, and I read, your Honor, just how it is to be calculated.

Now, Section 25 of the contract signed by the parties provides that in case there is a discrepancy or conflict between the specifications and the contract that the contract shall control. Here, the contract provides the particular means of ascertaining the damages, and therefore supersedes in a case of this kind the provisions for liquidated damages. The cross-complaint in this case, as your Honor [1966] will note, is based upon the reasonable cost of completing the work; and we submit cannot be maintained in this case. If it were a case of a contract that had been breached by a contractor, upon the breach such damages as the party sustained, the District in this case, it would give a right of action; but when we have a particular means of ascertaining the amount of damages, we are not interested in reasonable costs of completion at all, because the contract itself provides how the damage is to be ascertained, namely, go on and complete, get your final estimate of the Engineer, and then find where the balance lies.

I want to say, in passing, also, that the cross-complaint contains items of alleged claims for dam-

age, and claim that the District is entitled to liquidated damages. It is not entitled to these items They have put them both in, but it is quite apparent if they are entitled to liquidated damages—I don't think they are—they are not entitled to the other and vice versa.

Another ground which I want to call to your Honor's attention is this: that there has been a breach of the contract by the District in its method of completing. The District was given authority to complete on an abandonment, if there was an abandonment; I don't concede there was one, but for the purpose of my argument I am using that term; the District may proceed as provided in Paragraph 5, or Article 5, of the contract, and when that is analyzed it means that it must proceed with its own labor and not, as I understand from what has been said, by contracting the work to others. Let us read the pertinent part. Now, there is not any question that if the contract itself provides a method of completing, it is a breach of the contract on the part of the District to proceed otherwise; and if there is such breach, it precludes the District from recovering [1967] damages. I think when you analyze this paragraph it means that the District may by contract obtain materials and tools and vehicles, but the work is to be done by its own labor and not, as I understand, by contracts. This particular phase of the argument may be a bit premature, but I will

follow it up, because we will meet it later on, I am sure.

(After Recess)

Mr. Alexander: Continuing, your Honor, with the grounds of the motion, I have noted that in setting forth my grounds I have interspersed a bit of argument from time to time, but I know you will forgive me. At the conclusion of stating the grounds, I will proceed to the argument and refer to the authorities.

The Court: Very well.

Mr. Alexander: I want to say one thing in passing and in stating my grounds: The point I stated in regard to prematurity, when there is a specific provision in the contract, has been commented on in the Circuit Court of Appeals of this Circuit; and it points out that a clause of that kind is to make the contract definite and certain and to rescue the case from the uncertainty and speculative control of expert witnesses.

Mr. Wittschen: You did not give us the case.

Mr. Alexander: I will give it to you presently; I will give you them all afterwards. I mean to say there is a real reason for a clause of that kind. Everybody knows where they stand; and we do not have to have testimony of experts to determine the reasonable cost, what is or what is not reasonable cost; but we have a fixed standard.

Passing on the next ground of the motion, there is another reason why, under the contract, the Dis-

trict may not prevail on this [1968] cross-complaint, and, namely, it is the District, as I understand the proof that it tends to offer, completed the project by independent contracts; they made contracts, —a number of contracts; whereas the provision here, as I read to your Honor, means, as I understand it, that the District shall complete with its own labor; contracting to get tools and implements, —using the language that they have used, —and to charge the expense of such labor, materials, animals, carts, wagons, implements and tools to the second party. When you analyze the provision on which they made that, you will see the only thing that they could contract to complete the job is for the obtaining of materials, tools and equipment; but the balance is to be done by, —using the peculiar language, —"placing such and so many persons" on the job.

Now, I want to call your Honor's attention to abandoning, and the points that I have been making in that regard, particularly the first point, the prematurity point, the contract providing how the measure of damages shall be ascertained, and, until the contract is completed and until under the specific provision the final estimate is made by the Engineer and the balance struck, no cause of action arises. Now, we have here a cross-complaint on file in December, 1936. The project was not completed until twelve months after that time, showing that a whole year the action was premature.

I also point out another reason why the cross-complaint cannot be maintained: The cause of action had not matured at the time the cross-complaint was filed; but the cross-complaint was chucked in, —pardon me for that expression, —and they had some seventeen parties defendant: the District and 16 sureties on this, their independent cause of action against the sureties and against the Contractor, that we are about to proceed on. [1969]

An analysis of the complaint will show there is no jurisdiction in this court to entertain a cross-complaint against two of the defendants who are residents of the State of California, —the Fireman's Fund and Pacific Indemnity Company; so the Court is lacking in jurisdiction to entertain the cross-complaint.

Another provision that I am urging, which, of course, is only on behalf of the sureties; the provision for liquidated damages does not apply to the sureties.

Paragraph 5 which I read before provides that after the balance is struck, then the second party, —that would be the Contractor or its bondsmen, —shall pay the amount of such excess. In other words, they contemplate that, on abandonment of the contract, the damages shall be estimated or ascertained in this way: the sureties shall be notified and, —according to the language, —they shall pay the excess but not liquidated damages.

I want to urge further, in support of grounds for these motions, all of the grounds that were urged heretofore in support in our joining the motion of the plaintiff for judgment.

Here follows the argument of Mr. Alexander in support of his motion which has been omitted by stipulation. [1970]

Mr. Smith: We wish to join in the position and all of the positions taken by counsel for sureties, except one, but before doing that it occurs to us that several points in the record are not clear at this time, that we think should be cleared up. There has been no determination by the Court upon the motion made by plaintiff to strike certain evidence of the defendant. The motion was merely submitted, and, as I understand it, there was likewise no ruling by the Court upon a similar motion made by the defendant as to certain evidence introduced in behalf of the plaintiff, so that the record is not clear as to the Court's action on either of those motions at this time. Also there was no determination or ruling by the Court upon the motion that we made, both on Friday last and this morning, asking the Court for a declaration of judgment in our favor and for a declaration of law in our favor, and the record shows no action taken upon those matters, so I think the record should be cleared up in that respect before I discuss this objection that Mr. Alexander has made.

Mr. Wittschen: Mr. Smith, don't you think when the Court directed judgment for the defendant on the main issue that that was a denial of your motion on the main issue?

The Court: No, the record does not disclose it. The Court is prepared to rule. There is a denial of the motion now so that the record will be clear.

Mr. Smith: To which we note an exception.

Mr. Alexander: May we also except?

Mr. Smith: With regard to the motion to strike, they call for a separate and independent ruling.

The Court: Yes. Have you summed them up? [1983]

Mr. Smith: Yes, we filed a written motion to strike.

The Court: I want an opportunity to check it and I will rule at two o'clock on that, unless there is some particular thing you want to call the Court's attention to.

Mr. Wittschen: All you want is as to the P.W.A. contract?

Mr. Smith: Also we want a ruling upon the motion made by you in an attempt to strike some of the evidence.

Mr. Wittschen: We moved to strike out. There has been no ruling. I don't care whether the Court rules on it. In other words, it was a motion to strike out the geological report, Exhibit 22, as I recall it, and a map that immediately followed, which was a tracing that the witness Calhoun made therefrom,

Exhibit 23; my memory of those exhibits may be faulty, I think they are correct, and I will check them.

The Court: Check on them. I will take up any motions at two o'clock either side may want to make.

Mr. Smith: We also desire to present some further argument on the objection which Mr. Alexander made.

The Court: We will be in recess until two o'clock.

(A recess was here taken until two o'clock P. M.)
[1984]

Afternoon Session

Mr. Smith: The Court indicated just prior to the 12 o'clock adjournment that it would rule on the various motions to strike, on which there has been no ruling as yet, and we think that that ruling should be made so that the record will be clear.

The Court: Have you checked up?

Mr. Wittschen: Those are exhibits 22 and 23, the only two that we made any motion with reference to.

The Court: Those are the two that you had in mind, the geologist's report, and what is the other?

Mr. Wittschen: And the map that was attached to it, from which the tracing was made.

The Court: For the purpose of the record I will grant the motion.

Mr. Smith: To which we note an exception.

Mr. Alexander: We also except.

The Court: Note the exception.

Mr. Smith: Then there is a motion by the plaintiff to strike certain of the defendant's evidence.

The Court: That is so general I do not recall what it was.

Mr. Smith: If your Honor please, it concerns the P.W.A. regulation which was sent by Washington to the District two years after the contract was entered into.

The Court: Pardon me, but didn't you make a typewritten statement?

Mr. Marrin: I made a typewritten statement.

The Court: Get it for the record.

Mr. Smith: Plaintiff moves to strike from the record Exhibit WWW, introduced by the defendant (Transcript page 804). [Page 1409 this printed record.] [1989]

The Court: Let us check that, what was that?

Mr. Smith: Being a purported letter of regulations of the Federal Emergency Administration of Public Works, containing Administrative Order of Federal Emergency Administration of Public Works No. 54, together with a letter from the Chief of the Bureau of Public Roads transmitting same, and also a letter from one C. H. Sweetser transmitting

same, all of said documents having been introduced as one exhibit.

Mr. Wittschen: Let us take that up.

Mr. Smith: Our ground on both of these is the same. Both of these are in the same category, as I understand the motion, so I would like to have it extend to both of them.

The Court: There is no privity of contract, here, is there?

Mr. Wittschen: There is in this way, the specifications, the supplemental specifications state that the contractor would agree to all of the rules and regulations heretofore or hereafter promulgated. Then in addition to that we have shown it by the testimony of Mr. Price, showing it with the testimony of Mr. Stephen Bechtel, and in fact it is in evidence that the P. W. A. inspectors were always present at all of these conversations. So we contend that in the face of their acquiescence all the way through to P. W. A. inspection, to asking us to get the P. W. A. to change the hours of labor and to change other matters, and particularly in view of the fact that our specifications provide that they would be bound by the P. W. A. regulations, that that regulation of the P. W. A. which referred to the withhold penalty was a regulation by which we were bound and they were bound; and that there is privity of contract by reason of the reference to it in our specifications. What I did say when we made the offer was that we did not care anything

about the letter of transmittal nor the letter of Mr. Sweetser. [1990] There was a letter from Washington to Sweetser and a letter from Sweetser to us. We do not care anything about those. Mr. Smith asked if we would not put the letters in too because they fixed the date.

Mr. Smith: The merits of the motion are not directed to those two letters.

The Court: The record is here and I suggest you indicate for the purpose of the record the purpose of the offer, so that it will be cleared up.

Mr. Smith: Also plaintiff moves to strike from the record Defendant's Exhibit No. 0-4 (Transcript page 1458 [Page 471 Book of Exhibits], being grant agreement between the United States of America and Joint Highway District No. 13 for a grant of money to construct the project of the defendant District.

This motion is made upon the ground that the said exhibits have no relationship of any kind or character to the plaintiff or to its relations with the defendant under its contract with the defendant, and on the ground that there was and is no privity of contract between the plaintiff and Federal Emergency Administration of Public Works and said exhibits are not binding upon plaintiff, and upon the ground that plaintiff had no notice of any kind or character of the existence of any contract between the District and Federal Emergency Administration of Public Works until long after the

contract between plaintiff and defendant was made; and that for these reasons the said exhibits were and are irrelevant, incompetent, and immaterial, and tend to prove no issue in the case.

Mr. Alexander: The cross-defendant surety companies make the same motion upon the same grounds.

Mr. Wittschen: The purpose of the offer of these exhibits in each case is to show and rebut the claim of the plaintiff that the District acted arbitrarily in deducting the penalties, and that the [1991] District also delayed the work in refusing to give permission to the changes, particularly with reference to the dropped sections, and those two documents show that the United States Government was interested in the project, that it had contributed a certain sum thereto in excess of one million dollars, that no changes could be made in design without the consent of the P. W. A. authorities, which were being administered locally through the Bureau of Public Roads and the documents were admitted to show that the District acted as it did by reason of those matters and things, namely, that the Government was interested and also that their introduction is justified by a provision in the specifications, an amendment and supplement to the final specifications dated January 9, 1934, which reads as follows:

> "Attention of all bidders under these specifications is called to the fact that since the adoption of the final plans and specifications for the project of Joint Highway District No.

13 on the 30th day of March, 1933, and the approval thereof by Earl Lee Kelly, Director of the Department of Public Works of the State of California on the 5th day of April, 1933, the President of the United States has approved the National Industrial Recovery Act and in accordance with law has created a Public Works Administration and a special Board for public works, and that said National Industrial Recovery Act and the rules and regulations approved by said special Board for public works required consideration by bidders in submitting proposals under said plans and specifications.

"The attention of all bidders is hereby specifically called to Bulletin No. 2 of Federal Emergency Administration of Public Works entitled 'General Information and Instructions for the Guidance of State Advisory Boards and State Engineers (P.W.A.).' A [1992] grant of thirty (30) per cent of the cost of labor and material used in the project of the District has been made by the Public Works Administration of the United States under the terms of said National Industrial Recovery Act, and all bidders are hereby advised that the Directors of the District will cooperate with the Public Works Administration and all its officers and employees in the enforcement of all of the provisions of said National Industrial Recovery Act, and the rules and regulations heretofore

and hereafter promulgated applicable to the performance of the work on the project of the District."

And it is by reason of that provision that we claim that these are tied in.

Mr. Smith: At the time the offer of these documents in evidence was made by the defendant through its counsel and the witness we objected on the ground that there is absolutely no privity of contract between Six Companies of California, the plaintiff in this case, and the P.W.A., and that these clauses which counsel has directed to the attention of the court have to do entirely with labor conditions on the work, and the reference that he has made is to the National Industrial Recovery Act and the conditions of employment of men and things of that sort were involved, and we concede that they were, but there is absolutely no mention of any kind or character at any place in the testimony in this case, or in the exhibits in this case, of any facts which drag into the case any document exchanged between the District and the Bureau of Public Roads as agent for P.W.A., or P.W.A. advice, and that on the P.W.A. the objection is presented on the ground that the evidence is all hearsay as to this plaintiff, not binding upon it in any manner, not within any issue framed by the case, and therefore is absolutely immaterial, irrelevant, and incompetent. [1993]

Mr. Wittschen: These rules not only cover the rules for labor but the rules and regulations heretofore and hereafter promulgated applicable to the performance of the work on the project of the District.

Mr. Smith: The performance of the work has to do with labor.

Mr. Wittschen: The Six Companies recognized the P.W.A. authorization was necessary for this dropped section, and in fact they were told if they went ahead with the dropped section it would be at their own risk, in the event the P.W.A. did not approve it, so I think the P.W.A. control is pretty well sticking out throughout this case.

Mr. Smith: We do not concede the accuracy of the statement made by counsel as to the effect of the evidence, without impugning his statement as being what he thinks the evidence shows. We did not at any time admit the P.W.A. had any jurisdiction over anything in this case, except hours of labor, and the mere fact that the District saw fit to run over to the P.W.A. to get permission to do anything does not bind us at all; if they wanted to do it it was because they wanted to do it for their own purpose, and not for anything with respect to us.

The Court: The Court is prepared to rule if both sides are satisfied with the record.

Mr. Wittschen: Yes.

The Court: The Court will allow this testimony and limit it to the offer which is disclosed by coun-

sel, and it may or may not measure up to the privity of contract of Six Companies. It is my present thought, however, when it was admitted it was for the purpose that counsel has indicated and with that limitation the court allows it.

Mr. Smith: I take it your Honor's statement amounts to a statement of a denial of the motion to strike the evidence. [1994]

The Court: The motion will be denied.

Mr. Smith: To which ruling we take an exception.

Mr. Alexander: We also except.

Mr. Smith: Now, referring to the cross-complaint which is before your Honor at this time, the situation procedurally is this, the cross-complainant District, defendant in the principal case, is now seeking to establish by proof its right to recover on the allegations made by its cross-complaint. The cross-defendants, the surety companies represented by Mr. Alexander, have made to your Honor a motion for a dismissal or at least a motion equivalent to dismissal of that cross-complaint. We join in that motion.

We move for a dismissal of the cross-complaint on the ground that it was prematurely filed and there is nothing before the Court in connection with same, and that the filing cannot be cured at this time.

We further move for a dismissal of the cross-

complaint upon the jurisdictional point that there is no diversity of citizenship thereunder.

The Court: As to two of the sureties.

Mr. Smith: Two of the sureties are alleged in the cross-complaint to be residents of the State of California, and that creates no diversity of citizenship.

Then we also desire to supplement the argument made by Mr. Alexander upon the objection raised that the cross-complaint does not state a cause of action under any consideration. [1995]

Here follows the argument of Mr. Smith in support of his motion and the argument of Mr. Wittschen for defendant and cross-complainant in reply to the arguments of Mr. Alexander and Mr. Smith, which arguments have been omitted by stipulation. [1996]

The Court: Is the matter submitted?

Mr. Wittschen: It is submitted.

The Court: With the exception of the two sureties, which have not been covered, the Court at this time is prepared to deny the motion on the cross-complaint.

Mr. Alexander: Would your Honor wait for the authorities that Mr. Smith is going to present?

The Court: The authorities that you spoke of?

Mr. Alexander: That Mr. Smith spoke of in regard to jurisdiction.

The Court: I have indicated that I would not rule on the two sureties, that is to say I have not

decided in relation to jurisdiction as to the two sureties. I will hear you tomorrow as to that.

Mr. Smith: Then it is understood that none of the matters have been denied?

The Court: The motion to dismiss will be denied with that exception. You can present any argument or any authorities on that tomorrow morning. I am indicating that ruling now solely that we can go forward. Here we have spent another day. I realize it is important to both sides, but I am going to warn you now that unless I change my views, unless there is something in the jurisdictional question, if I have not acquired jurisdiction over those two it follows that I have no jurisdiction over them. They are jointly and severally liable is my own thought, and at least I have jurisdiction over those. As to whether the two other sureties are liable [2045] I am not prepared to rule.

Mr. Tinning: I understand you do not object to presenting authorities with reference to the question of jurisdiction?

The Court: No.

Mr. Tinning: Otherwise you are ready to rule?

The Court: Yes.

Mr. Smith: I suggest for the clarity of the record that you withhold your entire ruling on the matter.

The Court: Very well. I wanted to warn you so that you will know my state of mind.

Mr. Alexander: There is no ruling?

The Court: There is no ruling as to those two. I want argument. You requested time until tomorrow morning to present argument on that. On the case as presented it is my present thought that on the proceeding here that I have jurisdiction of the non-resident foreign corporations, and I am in doubt about the two. The only reason I am in doubt about that is if I have not jurisdiction over those two I have no jurisdiction over any of them.

Mr. Smith: That would be the rule in the State Court, and I take it it applies to a cross-complaint here.

Mr. Wittschen: Might I make this observation, even though the motion was granted we could cross-complain against the Six Companies and you would have to hear the evidence on that, even if all of the sureties went out.

Mr. Smith: If all of the cross-defendants are subject to the ruling you cannot cure it by a dismissal as to resident defendants.

Mr. Wittschen: No, but if we have no jurisdiction over them we have jurisdiction over you.

Mr. Smith: If you had limited the filing of the cross-complaint in that manner, yes, but in view of the fact you have not, no. [2046]

Mr. Wittschen: We will look that up, because I don't know anything about it now.

The Court: We may make some headway here so that we won't spend any time on it tomorrow.

Mr. Smith: I take it your Honor has kept open your ruling on all of the features of these motions.

The Court: Yes.

Mr. Smith: And the objection that the cross-complaint does not state a cause of action?

The Court: I have only indicated what I have so as to warn you of what I am going to do tomorrow morning, for the purpose of being able to go on. My present state of mind is that I shall deny the motion to dismiss.

Mr. Smith: Also in addition to the motion to dismiss there was objection made to the introduction of evidence on the ground that the cross-complaint does not state a cause of action.

The Court: I will rule on that tomorrow morning. The only thing I am in doubt about is the jurisdiction of the two sureties, and then I may be in error, but you will have a record, as I have indicated to you previously, that you can comfort yourself with. We will take an adjournment now until tomorrow morning at ten o'clock.

(An adjournment was here taken until tomorrow, Wednesday, June 1, 1938, at ten o'clock a. m.)

[2047]

Wednesday, June 1, 1938
10 o'Clock A. M.

The Court: You wanted an opportunity to be heard this morning, if my recollection is correct.

Mr. Smith: Your Honor, the point we were discussing when we closed last evening was the question of jurisdiction.

The Court: Yes; and you asked for more time, if my memory is correct, for a search of the authorities.

Mr. Smith: We are satisfied our point is well taken, but we will submit it on the statements made yesterday.

Mr. Wittschen: Don't you agree, Mr. Smith, after that search of the authorities, that if there is a severable proceeding against citizens of the state they may be dismissed from the case and the action proceed as to the others?

Mr. Smith: I wouldn't say that I would agree to it.

The Court: I have thought about it almost up to sunrise this morning. I suggest this, if agreeable to both sides and in order to protect the record, I will deny the motion at this time with the understanding you may renew it at the conclusion of the case and then we will have the evidence in the record.

Mr. Wittschen: Put the evidence in, and then at the conclusion of that evidence such motions as——

The Court: You may renew your motion, if that is agreeable. If you insist on it, I will rule upon it now.

Mr. Smith: Well, the procedure of it is entirely up to your Honor. We raised the point, and we submit it to the Court.

The Court: Very well.

Mr. Wittschen: I looked into the matter, and it is my present view,—I did not know much about it last night,—that so far as the two California defendants are concerned, if they impair the [2048] Court's jurisdiction, they may be dismissed from the case, and as long as all the other parties are noncitizens of this state the action may proceed as to them. I call your Honor's attention that the bond specifying each surety takes a separate share of the liability, one for 4 per cent and one for 7 per cent; so undoubtedly the action could proceed as to the others. By reason of the press of time, I am not so sure we have exhausted the authorities on the subject, and I am still having those looked up; so, if your Honor does proceed with it, I don't think anything will be lost, because I feel we could make a motion at any time before the close of the case to drop those two out.

The Court: It is my present opinion that I have jurisdiction. However, in spite of that, I will retain jurisdiction with the understanding that I will determine it after all the facts are in.

Mr. Wittschen: Yes, your Honor.

The Court: That is, if it does not burden either side or interfere with the record.

Mr. Wittschen: No. The only possible impairment there could be would be as to the two California defendants; and I am satisfied, from our present search of the authorities, if they stand in the way they could be dismissed out without impairing the others.

Mr. Smith: We don't wish to be put in the position of consenting to it, your Honor.

The Court: Very well.

Mr. Smith: Your Honor has proceeded and, if there is no jurisdiction, you cannot acquire jurisdiction, and we raised the point and we insist upon it.

The Court: No; if I have not jurisdiction, I cannot acquire it. There is this to be considered in this case that is peculiar: [2049] Under the cases I have heard and searched for, keeping in mind the nature of the case, I think with safety this court could acquire and hold jurisdiction, and, if I fail to do that, then you see the situation and the multiplicity of suits, and this case then is to be tried all over in the state court.

Mr. Wittschen: That is right as to the two that would be possibly impaired.

The Court: I think, if the record is protected, I have no doubt about obtaining jurisdiction to dispose of it on equitable grounds.

Mr. Wittschen: Well, in an equity case, your Honor could——

Mr. Alexander: Mr. Wittschen, I do not like to interrupt you, but we want to hear what you are saying back here and we are having great difficulty.

Mr. Wittschen: Very well. It is a law case, if the Court please.

The Court: It is a law case, and there is no doubt about the equity.

Mr. Wittschen: No. In 117 Federal, there is a case from this Circuit, the equity side, and some United States cases; they are cited in Simpkins Federal Procedure. The trouble is this is a law case. If we make an error, it is also held that it cannot be corrected on appeal; so, before the case is over, we can dismiss as to the two California defendants.

The Court: The reason I am taking the view that I am, I thought possibly—we have the peculiar condition here, both sides would be served in any event, and if you find that you are satisfied with your position you can renew your motion and I will dispose of it in that way.

Mr. Smith: Well, we shall never renew the motion, your Honor, [2050] because we made the motion to save our record on any proceeding.

The Court: Well, if you insist on the ruling, the Court will rule.

Mr. Smith: Yes, I think we can only protect the record.

Mr. Wittschen: Well, I would like to ask your Honor to defer it, in view of the fact we have only had last night and such time as we could crowd in this morning, and my present view is that, to be very frank, as long as this is a law case, we may not want to take a chance and hold in the two California defendants; but we can proceed as to the others; but, as long as we are to proceed anyway and it does not add to the burden one way or the other, I would not like to make a dismissal until I have had a little more time.

The Court: Today is Wednesday. I will have the matter up on Tuesday.

Mr. Wittschen: Very well; and we will exhaust the authorities.

The Court: So, both sides can have the record protected.

Mr. Tinning: It may be possible, your Honor, we will conclude the taking of testimony, in view of certain discussions that we have had. I don't know whether we will proceed that long. There may be a stipulation of facts.

The Court: My only purpose is trying to assist both sides.

Mr. Smith: It is not a matter of assisting, your Honor. We are merely suggesting to your Honor that the law provides the Court is without jurisdiction. If it is without jurisdiction, the Court is powerless to act in passing on the motion on jurisdiction——

Mr. Wittschen: It is only without jurisdiction as to those two defendants.

Mr. Smith: Let me finish, please, Mr. Wittschen.

Mr. Wittschen: Certainly. Pardon me.

Mr. Smith: This is not the kind of a matter that is arguable [2051] on the merits of the facts of the case at all. It is a matter that is either right or wrong as to the principle of the Court's power to proceed.

The Court: Don't misunderstand me. The only thing I am trying to do is serve both sides.

Mr. Smith: Well, we would like to have the matter passed on. We think it is a primary motion.

The Court: What percentage have those two surety companies?

Mr. Wittschen: 7 per cent for one and 4 for another; so that we could proceed against all the others. I have looked that much up. I am satisfied on that. Your Honor may retain jurisdiction as to the others; there is no doubt about that; and, if we have to act now, we can dismiss those two; we have the dismissals ready; but, as long as no one will be hurt in postponing that until the conclusion of the evidence, the same evidence will come in as to the others, I am asking your Honor merely to defer your ruling so that I can have another chance at the authorities.

The Court: Very well.

Mr. Smith: We will suggest the continuing of the other two defendants in will be error, and make

a motion that, if you feel they should be dismissed, they be dismissed immediately.

Mr. Alexander: I join in that motion.

The Court: You wish to let the matter stand open?

Mr. Wittschen: Yes, your Honor.

Mr. Smith: May we have an exception?

The Court: I already ruled it may be submitted at this time. I will ask counsel who has asked for time to renew his motion after he has had an opportunity to make a search.

Mr. Smith: We ask the Court's action in submitting the matter be excepted to; that we be allowed to except to your Honor's ruling [2052] in submitting it.

The Court: Very well.

Mr. Smith: It is the kind of a motion that must be passed on immediately.

Mr. Alexander: We also make an exception, your Honor, to protect the record.

Mr. Wittschen: Do you prefer to wait until the proof is in?

The Court: No. They insist on a ruling.

Mr. Wittschen: Well, your Honor does not have to accommodate them unless you want to. I asked that you put it over until the conclusion of the case.

The Court: Very well. Proceed.

The Clerk: What was the ruling on the motion, your Honor?

The Court: The motion to dismiss the two sureties— You better name them, for the purpose of the record.

Mr. Smith: The two which he has in mind—I assume you have in mind the two California defendants?

Mr. Wittschen: Yes; the Pacific Indemnity and the Fireman's Fund. If I conclude before the case ends that their presence in the suit jeopardizes the jurisdiction, we will file a dismissal.

The Court: Very well. Let the matter stand submitted.

Mr. Smith: We again except to the Court's order submitting the matter.

Mr. Alexander: We also except, your Honor.

Mr. Wittschen: On these amendments to the figures, to get them out of the way, do you prefer that we wait until we put our proof on and then amend to conform to the proof? I want to say in one or two cases we will have to make amendments because we are giving you a credit for some $2800 on work that did not go into any [2053] estimate because it was not so far finished that it could, or because we have moved some figures up and some down. They only involve the counterclaim, or the cross-complaint and the prayer, and it may be done in ten minutes or so: take the figures that they are insisting on and inserting them. Do you object to that being done now? If so, we will put our proof on and then ask leave to amend to conform.

Mr. Smith: We don't object to the mechanical method of doing it, but our objection goes to the proposition that we do not want to waive another objection.

The Court: That the Court has no jurisdiction?

Mr. Smith: Not only that; but based on the fact you have no right to proceed along the lines that you have because the action is prematurely brought and because the cross-complaint has no status, and these provisions outlined in the contract——

Mr. Wittschen: I understand. Subject to the objection that Mr. Alexander expressed to the Court, the fact of the prematurity and the fact that the exact provisions, as you claim, of the contract were not followed, and subject to the further objection you think the entire cross-complaint should be dismissed, you have no objection to the amendments?

Mr. Smith: No objection to the manner in which you are making it.

Mr. Alexander: I want to state that Mr. Wittschen, with all his niceness, has not stated our position. We would accord any courtesy to him, but, I think, to accept that very nice little suggestion of his would be to waive rights, which we cannot do.

Mr. Wittschen: There is no objection to my making it subject to all the objections that you have heretofore made? Is that [2054] correct?

Mr. Alexander: I cannot agree to anything. I am going to make it as easy as I can; but I am not going to put in— He knows; we discussed this off the record, outside of court; he knows what we have

said; but I am not going to make any statement in court indicating that I agree to a plan that may waive valuable rights.

Mr. Wittschen: Then, I suggest,—and I would ask your Honor's permission,—when that is in, to amend to conform.

WALLACE B. BOGGS,

recalled, by cross-complainant;

Direct Examination (resumed)

Mr. Tinning: Q. Mr. Boggs, what was your university training?

A. I graduated from the College of Civil Engineering at the University of California in 1912.

Q. Are you a member of the American Society of Engineers?

A. I am a member of the American Society of Civil Engineers.

Q. Since you have graduated from the University of California, have you continuously engaged in the practice of engineering?

A. Yes, except for the period when I was in the Army during the World War.

Q. What has your experience been as an engineer, commencing with the time that you left college; making it very brief, Mr. Boggs, what was your first work?

A. Upon graduation, I was employed by Haviland and Tibbitts, a firm of consulting civil engi-

(Testimony of Wallace B. Boggs.)

neers. My work was in connection with street work, drainage work and reclamation work. I was with them from 1912 to 1915. In 1915, I left their employ and became employed by Bondy and L'Hommedieu, a firm of civil engineers in Oakland; and I was with them for about one year. I [2055] was the chief assistant engineer of the firm, and the work was primarily reports on irrigation, reclamation work and subdivisions and street work in the Eastbay area.

Q. How long were you with Bondy and L'Hommedieu? A. Approximately a year and a half.

Q. What did you do next?

A. Following that, I was employed by the Eastbay Water Company on the San Pablo Dam and Tunnel project. This work was just starting in the fall of 1916. I was the field engineer. I was assistant to the project engineer, and had charge of the inspections and the survey work upon that project which at that time consisted of the building of a diversion dam on San Pablo Creek, and of a tunnel,—waste water tunnel,—approximately 1400 feet in length and excavated about 18 feet in diameter.

Q. That is not what has been referred to in the evidence in this case as the San Pablo Tunnel that runs from the Dam westerly into Berkeley or El Cerrito?

A. No; that is not. That is the waste water tunnel; it was designed to take care of the surplus waters from the dam; the small tunnel which you

(Testimony of Wallace B. Boggs.)

refer to was started shortly before I left that project.

Q. How long were you in the Army; during what period?

A. I was in the Army from October, 1917 to July, 1919.

Q. Were you in the Engineering Corps?

A. Yes; I was a second lieutenant of Engineers.

Q. During the period you were in the Army, did you engage in engineering work and construction?

A. Yes; I did. During my war service, we constructed roads immediately back of the front line work, but following that I was sent on up into Germany and had charge of approximately three or four hundred men in the construction of barracks and supply depots for the Army of Occupation.

[2056]

Q. After you left the Army in 1919, where were you employed?

A. I was employed by P. A. Havilland who was county surveyor of Alameda County, and also engaged in practice as a civil engineer. I was employed as chief draughtsman in the office in Oakland.

Q. How long did you continue in the county surveyor's office of Alameda County?

A. I continued in the county surveyor's office of Alameda County until January, 1931. Upon Mr. Havilland's death in 1921, he was succeeded by Mr. George A. Posey, and I became Mr. Posey's chief

(Testimony of Wallace B. Boggs.)

assistant in charge of all the office and field work, inspections on all the work done by the county which consisted primarily of highway construction projects and the Oakland-Alameda Tube which was built during that time, and, in addition to that, he did private work upon which I was associated. The private work consisted of reports on reclamation work and also street and sanitary designs and construction in the Eastbay area.

Q. Prior to your leaving the county surveyor's office in 1931, did any part of your duties include work in connection with the project of this district?

A. Yes, sir. From the start of that project, approximately 1928, up to the time I left, why, that work was under my general supervision.

Q. Under your general supervision, you being a subordinate to Mr. Posey?

A. A subordinate to Mr. Posey, —his chief assistant.

Q. When I say Mr. Posey had charge of it, it is true, is it not, up to the time of Mr. Posey's death, that both he and the county surveyor of Contra Costa County, R. Arnold, were working jointly for the two counties? A. Yes, sir.

Q. Mr. Posey's office was the office from which they employed engineers for the District, the draughtsman, people working up what was to be done, actually occupying space in Mr. Posey's office?

A. Yes, sir. [2057]

(Testimony of Wallace B. Boggs.)

Q. You have already testified that you became District Engineer in September, 1932, and continued to this date?

A. Yes.

Q. It is a fact, is it not, Mr. Boggs, that the project of this District which is involved in this action is located within the boundaries of Contra Costa County and Alameda County and is known as Joint Highway District No. 13 of the State of California?

A. Yes, sir.

Q. How much did the State of California contribute to this project?

A. The State of California contributed a total of $700,000.

Q. How much did the United States contribute to this project?

A. $1,095,000.

Q. At any time after the District deducted $3500 for delay from estimates from the amount paid the Contractor, Estimate No. 24, did Six Companies of California ask the District Engineer of this District, in writing or otherwise, to determine whether or not the District had properly deducted the liquidated damages?

Mr. Smith: Just a moment. The question is objected to on the ground it is incompetent, irrelevant and immaterial for the reason that the question elicits an answer which has nothing to do with the issues of the case, and, further, that the testimony cannot be received because the cross-complaint does not state facts sufficient to constitute a cause of action.

(Testimony of Wallace B. Boggs.)

Mr. Alexander: We make the same objection, your Honor.

Mr. Wittschen: There is aprovision in the specifications that requires all disputes that in any manner touch on those specifications or that contract to be submitted to the District Engineer, and I have here, your Honor, two or three cases that point to this very fact: the deduction of penalties for delay from a similar clause is done and was thereupon submitted to him for decision. We are merely asking him if they ever asked him—— [2058]

Mr. Smith: I will add to that objection, in view of counsel's statement, that the estimate which is involved shows on its face that the witness in question exercised his alleged judgment, although we question he had any in the premises, and did deduct the penalty over his signature; so it is immaterial.

Mr. Alexander: I urge the same objection, if your Honor please.

The Court: Read the question.

(Pending question read)

The Court: You had better reframe the question.

Mr. Tinning: Very well, your Honor.

Q. At any time after Estimate No. 24. —which was issued by the District on the 9th day of June, 1936, from which estimate $3500 was deducted for liquidated damage for delay, —did Six Companies of California request the District Engineer, in writing or otherwise, to determine whether or not the District had fairly deducted the liquidated damage?

(Testimony of Wallace B. Boggs.)

Mr. Smith: I make the same objection.

Mr. Alexander: We make the same objection.

The Court: The objection will be overruled.

Mr. Smith: Note an exception, please.

Mr. Alexander: We note an exception.

The Witness: A. No.

Mr. Tinning: Q. After Estimate No. 24 was issued by the District Engineer and the check in payment of the amount shown by that estimate was sent to the Six Companies of California on or about the 10th day of June, 1936, did Six Companies of California request the District, in writing or otherwise, —the District Engineer, —to determine any of the questions raised or set forth in the notice of purported rescission dated June 13, 1936? [2059]

Mr. Smith: To which we make the same objection as heretofore made.

Mr. Alexander: And I will make the same objection.

The Court: Objection overruled.

Mr. Smith: Exception.

Mr. Alexander: We note an exception.

The Witness: A. No.

Mr. Tinning: This is a preliminary question, gentlemen.

Subsequent to June 13, 1936, when Six Companies of California, the plaintiff in this action, ceased work on the project of the District, was it necessary for the District to measure the work that had been completed, for the purpose of determining the work which remained to be done?

(Testimony of Wallace B. Boggs.)

Mr. Smith: We object to the question on the ground it calls for a conclusion of the witness and on the same ground the objection was made to the previous questions.

Mr. Alexander: We make the same objection, your Honor.

The Court: I will allow it as a preliminary question.

Q. You may answer it.

The Witness: May I have the question read?

(Pending question read by the reporter.)

Mr. Smith: The question is particularly vicious; the question says: "Was it necessary?" The purpose is not indicated, and the question of necessity has nothing to do with it.

The Court: The Court has ruled.

The Witness: A. Yes.

Mr. Smith: I already noted an exception.

Mr. Tinning: One moment, your Honor, there has been so much discussion here.

The Court: We will take a recess.

(Recess) [2060]

(After recess)

Mr. Alexander: Your Honor, before proceeding, for the record, I was not clear, and am not clear yet, as to whether your Honor had denied the motion to dismiss the cross-complaint, or had reserved your ruling.

The Court: I denied it.

(Testimony of Wallace B. Boggs.)

Mr. Alexander: Then if that is so, if we have not already reserved an exception we ask to do so at this time. Note an exception.

Mr. Smith: Note an exception.

Mr. Tinning: Q. Mr. Boggs, subsequent to June 13, 1936, at the time the Six Companies of California quit the work, did the Joint Highway District No. 13 of the State of California advertise for bids for the project as a whole, the bids to be tendered on the 11th of September, 1936?

Mr. Smith: I object to the question on the same grounds previously stated.

Mr. Alexander: And we join in the objection.

The Court: The objection is overruled.

Mr. Smith: Exception.

Mr. Alexander: Exception.

A. Yes.

Mr. Smith: I do not like to be a chronic objector, but in view of your Honor's ruling, under the Federal practice it is necessary to object.

Mr. Tinning: I understand. You are in the same position as we were in connection with protecting the record. We cannot make a general stipulation that will cover the whole line of it. I will try to keep that in mind.

Q. Were any bids received by the District on September 11, 1936?

Mr. Smith: The same objection.

Mr. Alexander: I think we may gain time if we state at this [2061] time the grounds of the objection

(Testimony of Wallace B. Boggs.)

to the question and then later on we can simply say "The same objection" if that will be in order.

The Court: Very well.

Mr. Alexander: We object to that question on the ground it is immaterial, irrelevant, and incompetent, that no cause of action was stated in the cross-complaint, that the cross-complaint was filed prematurely and before the amount of expense was determined as provided in Article V of the contract, and Section 6(Q), Subdivisions 1, 2 and 3 of the specifications, and that the cross-complaint is based upon an attempt to recover a reasonable cost of completion and not to recover damages as provided in the contract; that the contract provides the district must complete with its own labor as provided in Article V, and not with other contracts or subcontracts.

Mr. Wittschen: Might I call your attention, if you stand on the ground it is incompetent we will have to prove this by original records.

Mr. Alexander: We are not raising the point that the original records are not here.

Mr. Wittschen: Or that summaries are used?

Mr. Alexander: Or that summaries are used.

Mr. Wittschen: You are waiving that?

Mr. Alexander: That is not the point of the objection. We do not make those two objections.

Mr. Smith: We are in the same position as Mr. Alexander, and in addition I want to add to the objection that proof of reasonable cost or reasonable

(Testimony of Wallace B. Boggs.)

expenditures made is not proof or proper proof of damages under this cross-complaint.

Mr. Alexander: We add that to our objection

The Court: The objection will be overruled.

Mr. Smith: Note an exception.

Mr. Alexander: Note an exception. [2062]

Mr. Tinning: Subsequent to September 11, 1936 did the District adopt amendments and supplements to the specifications which were adopted on the 23rd of September, 1936?

Mr. Smith: Objected to on the same grounds, the same grounds of objection made I now repeat.

Mr. Alexander: The same objection.

The Court: Read the question.

(Question read by the reporter.)

Mr. Wittschen: I think, in view of the objection, we had better put in the various contracts that speak for themselves.

The Court: I am thinking about change of contract.

Mr. Tinning: The proof will go to the fact that the work, in other words, the only thing that was done by the supplement was to divide the same work which is described in the original plans and specifications into eight parts; there was no different work of any kind. It followed right along. The proof will show that eight separate contracts were let, one contract for boring the tunnel and putting in the structural lining, another to put in the partitions in the lining of the tunnel, and the pave-

(Testimony of Wallace B. Boggs.)

ment, another man put in the electrical, mechanical and ventilating equipment, another man finished the building, another man finished the pavement, and so on, and the testimony will show and the exhibits will show that it is identical with the supplemental specifications of September 23, it simply divided the work up, and all the work was done under the specifications, the original specifications that Six Companies worked under, that this supplement divided it up.

The Court: The only thing is the record.

Mr. Tinning: I think in view of the way the objection is made we will have to put the records in. I do not think it is safe otherwise to proceed. [2063]

The Court: Very well. In order to have the record clear, if you depart from this original contract you get into difficulties, that is my thought.

Mr. Tinning: The proof that we propose putting in, in view of the fact that counsel do not feel that they can stipulate——

The Court: I understand that.

Mr. Tinning: I think that we ought to put in the documents in the way it was done in the other case or we will have to put in copies. They are agreeable to that, as I understand.

Mr. Smith: Yes.

Mr. Alexander: Yes.

Mr. Tinning: I think we ought to prove each proceeding, so that the record will show what is being done.

The Court: Very well, proceed.

(Testimony of Wallace B. Boggs.)

Mr. Tinning: I offer in evidence, if your Honor please, a resolution of the Board of Directors of Joint Highway District No. 13, approving the supplement to specifications accompanying and forming a part of the final surveys, plans and specifications and detail drawings of the District which were adopted on the 30th of March, 1933, the supplement and resolution referred to being passed and adopted on the 17th day of August, 1936, and I ask that it be marked Defendant's Exhibit in proper order.

The Court: It will be admitted and marked.

Mr. Smith: Why don't you adopt a new series of numbers on the cross-complaint?

Mr. Tinning: We will ask that it be marked X-1.

Mr. Smith: To the offer we object on the same grounds previously stated.

Mr. Alexander: We also make the same objection.

Mr. Wittschen: May it be understood for the record that there [2064] will be no objection because copies are used instead of the original?

Mr. Smith: Yes.

Mr. Alexander: Yes.

The Court: The objection is overruled.

Mr. Smith: Exception.

Mr. Alexander: Exception.

(The resolution was marked "Defendant's Exhibit X-1.")*

---

*See Agreed Statement of Facts set out at page 495 of the Book of Exhibits.

(Testimony of Wallace B. Boggs.)

Mr. Tinning: I offer in evidence the certificate of Earl Lee Kelly, Director of Department of Public Works of the State of California, approving the supplement authorized by the District on the 17th of August, 1936, the certificate being dated the 18th of August, 1936.

Mr. Smith: To which we make the same objection.

Mr. Alexander: The same objection.

The Court: Let it be admitted next in order

Mr. Smith: To which we note an exception.

Mr. Alexander: We note an exception.

(The certificate was marked "Defendant's Exhibit X-2.")*

Mr. Tinning: The defendant offers in evidence supplement to specifications adopted August 17, 1936, as Defendant's Exhibit X-3.

Mr. Smith: The same objection.

Mr. Alexander: The same objection.

The Court: The same ruling.

Mr. Smith: Exception.

Mr. Alexander: Exception.

(The document was marked "Defendant's Exhibit X-3.")

[Set forth in the Book of Exhibits at page 501.]

Mr. Tinning: Defendant offers in evidence the

---

*See Agreed Statement of Facts set out at page 495 of the Book of Exhibits.

(Testimony of Wallace B. Boggs.)

minutes of the Board of Directors of the District for the meeting of September 11, 1936, held at the hour of 12 o'clock noon, the minutes, your Honor, showing that no bids were received on that date.

Mr. Smith: To which we object for the same reasons previously [2065] stated.

Mr. Alexander: The same objection.

The Court: The same ruling.

Mr. Smith: To which we note an exception.

Mr. Alexander: Exception.

(The document was marked "Defendant's Exhibit X-4.")*

Mr. Smith: It would seem to me between now and two o'clock we could make out a statement as to those exhibits to which we did not object and put it in that way.

The Court: The only idea I have in mind is to have a proper record.

Mr. Tinning: Maybe we can work something out. I think it is worth trying. Forty minutes now may save four days. May we have an adjournment now until two o'clock?

The Court: We will take an adjournment now until two o'clock.

(A recess was here taken until two o'clock p. m.)

[2066]

---

*See Agreed Statement of Facts set out at page 495 of the Book of Exhibits.

Afternoon Session

Mr. Wittschen: I have checked the authorities further upon that matter of those two California defendants, and at this time the defendant and cross-complainant Joint Highway District No. 13 of the State of California, a public corporation, hereby dismisses without prejudice its cross-complaint as against cross-defendants Fireman's Fund Indemnity Company, a California corporation, and Pacific Indemnity Company, a California corporation, only, dated June 1st, and signed by the attorneys for the defendant and cross-complainant, and will file that with the clerk.

Mr. Smith: We object to any dismissal of any of the defendants on the ground that the cause cannot be separated for purposes of a dismissal, and on the further ground the dismissal comes too late.

Mr. Alexander: We make the same objection, your Honor.

The Court: Motion will be granted; note an exception.

Mr. Alexander: We except.

Mr. Smith: We except to the order granting the motion.

WALLACE B. BOGGS,

recalled.

Mr. Tinning: Your Honor, in view of the stipulations or understanding that we have had here before, that the plaintiff and cross-defendants would not object to the introduction of copies of documents, I offer, and I make now—every document which I will expect to put in, I make an omnibus offer.

Mr. Smith: Let me understand your statement—copies rather than originals?

Mr. Tinning: Well, I think that is sufficient: copies rather than originals, or the fact that copies of resolutions are not original certified copies.

[2067]

Mr. Smith: Yes.

Mr. Tinning: Copies of certified copies.

The Court: Subject to any correction that may hereafter be made if there is any doubt?

Mr. Tinning: Yes.

Mr. Smith: And we will have an objection to their admissibility which we will state after Mr. Tinning makes the offer.

Mr. Tinning: Yes. For the purpose of permitting the one objection to all of the evidence that is offered, the offer is made in this omnibus form to save time. The last exhibit we had was X-4. The defendant offers the following documents as exhibits in proper order, commencing with X-5*: certified

*See Agreed Statement of Facts set out at page 495 of the Book of Exhibits.

(Testimony of Wallace B. Boggs.)

copy of resolution of board of directors of Joint Highway District No. 13 of the State of California, adopted August 19, 1936, calling for bids for completion of project.

As X-6*, affidavit of publication of notice to bidders in Oakland Tribune, bids that were to be received on September 11, 1936.

As Exhibit X-7*, certified copy of resolution of board of directors of Joint Highway District No. 13 of the State of California adopted August 26, 1936, rescinding resolution adopted August 19, 1936, giving notice to contractors; and giving notice to contractors that bids for completion of project would be received; and directing publication of notice to bidders in Oakland Tribune.

The next Exhibit will be X-8*: Affidavit of publication in Oakland Tribune—bids to be received September 11, 1936.

Next in order is X-9*: Resolution of board of directors adopted September 23, 1936, rescinding supplement to specifications adopted August 17, 1936; and approving supplement to specifications dividing work into Schedules A to H. [2068]

Next is X-10*: Certificate of Earl Lee Kelly, Director of Department of Public Works of the State of California, approving supplement to specifications of September 23, 1936.

Next in order is X-11: Supplement of September 23, 1936.

---

*See Agreed Statement of Facts set out at page 495 of the Book of Exhibits.

(Testimony of Wallace B. Boggs.)

[Set forth in the Book of Exhibits at page 534.]

Next in order is X-12*: Resolution of board of directors adopted September 25, 1936, giving notice to contractors that bids would be received October 16, 1936, for work included within Schedule "A."

Next in order is X-13*: Affidavit of publication of notice to bidders in the Oakland Tribune for bids to be received under Schedule "A."

Next in order are Exhibits X-14a*, 14b* and 14c*, X-14a being the bid of George Pollock Company and R. G. Clifford; 14b being the bid of Mas L-Hanger Company; 14c being the bid of W. A. Kettlewell and W. S. Mead; all of the same being bids on Schedule "A."

Next is X-15*: Resolution of board of directors adopted October 21, 1936, awarding contract to George G. Pollock and R. G. Clifford, for the work included under Schedule "A."

Next in order is Exhibit X-16*: Contract between Pollock and Clifford and Joint Highway District No. 13 of the State of California, dated November 9, 1936, for the work included in Schedule "A."

Next in order, Exhibit X-17*: Bond executed by Pollock and Clifford with the District and the corporate sureties for the faithful performance of the contract under Schedule "A" dated November 9, 1936.

---

*See Agreed Statement of Facts set out at page 495 ot the Book of Exhibits.

(Testimony of Wallace B. Boggs.)

Next in order is Exhibit X-18*: Resolution of board of directors approving bond for faithful performance, the bond being furnished by Pollock and Clifford.

Next in order is Exhibit X-19*: Bond securing material men and laborers, furnished by Pollock and Clifford, which was dated on [2069] November 9, 1936, for the work under Schedule "A."

Next in order is X-20*: Resolution of board of directors approving bond furnished by Pollock and Clifford in connection with material men and laborers' rights.

Next is X-21*: Resolution of acceptance of Schedule "A", the final estimate.

Those documents, gentlemen, include three or four different matters. There is a resolution accepting, a certificate of the Engineer and a letter transmitting the——

Mr. Smith: That is accepting it?

Mr. Tinning: Accepting the completion of the work under this one.

Mr. Smith: What is the date?

Mr. Tinning: I have not got that in my minutes; but it was some time in June, 1937. It shows on the exhibit, and you have a copy of it.

Mr. Smith: Yes.

---

*See Agreed Statement of Facts set out at page 495 of the Book of Exhibits.

(Testimony of Wallace B. Boggs.)

Mr. Tinning: Next in order is X-22*: Resolution of Board of directors adopted November 9, 1936, giving notice to contractors under Schedule "B"; that is for the grouting of the tunnels; bids to be received December 4, 1936.

Next is X-23*: Affidavit of publication of notice to contractors under Schedule "B," publication having been made in the Oakland Tribune.

Next are X-24a* and 24b*, and come in order: the bids received under Schedule "B"; X-24a being the bid of R. G. Clifford; and X-24b being the bid of Case Construction Co.

Next in order is X-25*: Resolution of board of directors adopted December 14, 1936, awarding contract for Schedule "B" grouting to [2070] R. G. Clifford.

X-26* is a contract between R. G. Clifford and the District.

X-27* is the bond for faithful performance furnished by R. G. Clifford under the contract for Schedule "B."

X-28* is a resolution of the board of directors adopted December 24, 1936, approving bond for faithful performance, furnished by Clifford on his contract for Schedule "B."

X-29* is bond securing material men and laborers under Schedule "B".

Next is X-30*: Resolution of board of directors adopted December 24, 1936, approving bond secur-

---

*See Agreed Statement of Facts set out at page 495 of the Book of Exhibits.

(Testimony of Wallace B. Boggs.)

ing material men and laborers, which was furnished by Clifford on his contract for Schedule "B."

Next in order is X-31*: Resolution of acceptance of the Schedule "B" and final estimate.

Again, that comprises two or three documents, and, for the sake of having the subject matter together, it runs on several months, gentlemen.

Next in order is X-32*: Resolution of board of directors adopted November 9, 1936, giving notice to bidders on Schedule C, D, E and G, bids on Schedule C to be received December 9, 1936.

Next in order is X-33*: Affidavit of publication in the Oakland Post-Enquirer of notice to contractors, bids to be received under Schedule "C."

Next is X-34a* and 34b*: the bids received for Schedule C, Fred J. Early and George Pollock & R. G. Clifford.

Next is X-35*: Resolution of board of directors adopted December 14, 1936, rejecting all bids received December 9, 1936, for work under Schedule C; and requesting leave to do the work with District forces. [2071]

Next is X-36*: Resolution of board of directors adopted January 7, 1937, calling for bids under Schedule "C", "D," a second time, calling for bids to be received on January 27, 1937.

Next is X-37*: Affidavit of publication of notice to bidders, Oakland Post-Enquirer, for Schedule "C."

---

*See Agreed Statement of Facts set out at page 495 of the Book of Exhibits.

(Testimony of Wallace B. Boggs.)

X-38a* and X-38b* and X-38c* are the bids received for Schedule "C," on January 27, 1937; "a" being from Fred K. DuPuy; "b" from Fred J. Early, Jr.; and "c" from John F. Knapp.

X-39* is a resolution of board of directors, adopted February 2, 1937, awarding contract to Fred K. DuPuy, for Schedule "C."

X-40* is a contract with Fred K. DuPuy and the District for the work included within Schedule "C."

X-41* is a bond for faithful performance of Schedule "C."

X-41* is a resolution of board of directors adopted February 19, 1937, approving faithful performance bond, Schedule "C."

X-43* is bond securing material men and laborers, Schedule "C."

X-44* is a resolution of board of directors adopted February 19, 1937, approving bond securing material men and laborers on Schedule "C."

X-45* is a resolution of acceptance of Schedule "C," and resolution re Withhold.

The situation, I think, gentlemen, some of you know; I think you have some cases pending; the contractor under Schedule "C" had notices to withhold filed against him which were in excess of the amount of the payment up to that time, and he completed his work,—finished the work; and the matter has been held up by the withhold notices, and, since

*See Agreed Statement of Facts set out at page 495 of the Book of Exhibits.

(Testimony of Wallace B. Boggs.)

that time, all of it has been paid out. There is some $30,000 including the $109,000 that was withheld.

X-46*: Affidavit of publication of notice to bidders, Oakland [2072] Tribune, Schedule "D." This was covered by a resolution which I have referred to before as X-32. This affidavit was in the Oakland Tribune.

X-47a* and X-47b* are the bids received for Schedule "D," on December 9, 1936; "a" being from Fred J. Early, Jr.; and "b" being from K. E. Parker Company.

X-48*: Resolution of board of directors adopted December 14, 1936, rejecting all bids received December 9, 1936, for Schedule D; and requesting authority to do work with District forces.

X-49*: Affidavit of publication of notice to bidders, Oakland Tribune, Schedule D.

X-50a*, X-50b* and X-50c*: Bids received for Schedule "D," January 27, 1937; "a" from E. T. Lesure; "b" being from Fred J. Early, Jr.; "c" being from K. E. Parker.

X-51*: Resolution of board of directors adopted February 2, 1937, awarding contract to E. T. Lesure, Schedule "D."

X-52*: Contract, E. T. Lesure with District, Schedule "D."

X-53*: Bond for faithful performance, Schedule "D."

---

*See Agreed Statement of Facts set out at page 495 of the Book of Exhibits.

(Testimony of Wallace B. Boggs.)

X-54*: Resolution of Board of Directors adopted February 9, 1937, approving faithful performance bond, Schedule "D."

X-55*: Bond securing material men and laborers, Schedule D.

X-56*: Resolution of board of directors adopted February 9, 1937, approving bond securing material men and laborers, Schedule D.

X-57*: Resolution of acceptance of Schedule D, and final estimate.

X-58*: Affidavit of publication of notice to bidders, Post-Enquirer, Schedule "E."

X-59*: Bid received for Schedule E, December 18, 1936, Alta Electric and Mechanical Company, Inc.

X-60*: Resolution of board of directors adopted December 24, [2073] 1936, awarding contract to Alta Electric and Mechanical Company, Inc., for Schedule E.

X-61*: Contract, Alta Electric and Mechanical Company, Inc., with District, Schedule E.

X-62*: Bond for faithful performance, Schedule E.

X-63*: Resolution of board of directors adopted January 7, 1937, approving faithful performance bond, Schedule E.

X-64*: Bond securing material men and laborers, Schedule E.

---

*See Agreed Statement of Facts set out at page 495 of the Book of Exhibits.

(Testimony of Wallace B. Boggs.)

X-65*: Resolution of board of directors adopted January 7, 1937, approving bond securing material men and laborers, Schedule E.

X-66*: Resolution of acceptance of Schedule E, and final estimate.

X-67*: Resolution of board of directors adopted February 9, 1937, calling for bids for Schedules F and H, to be received March 10, 1937.

X-68*: Affidavit of Publication of notice to bidders, Oakland Post-Enquirer, Schedule F.

X-69*: Bids received for Schedule F, March 10, 1937: Alta Electric and Mechanical Company, Inc.

X-70*: Resolution of board of directors adopted March 16, 1937, awarding contract to Alta Electric and Mechanical Company, Inc., for Schedule F.

X-71*: Contract, Alta Electric and Mechanical Company, Inc., with District, for Schedule F.

X-72*: Bond for faithful performance, Schedule F.

X-73*: Resolution of board of directors adopted April 8, 1937, approving faithful performance bond, Schedule F.

X-74*: Bond securing material men and laborers, Schedule F.

X-75*: Resolution of board of directors adopted April 8, 1937, approving bond securing material men and laborers, Schedule F. [2074]

---

*See Agreed Statement of Facts set out at page 495 of the Book of Exhibits.

(Testimony of Wallace B. Boggs.)

X-76*: Resolution of acceptance of Schedule F, and final estimate.

X-77*: is an affidavit of publication of notice to bidders in the Oakland Tribune, Schedule "G", covered again by resolution Exhibit X-32, or the exhibit X-32 under this offer.

X-78a*, 78b* and 78c*: the bids received for Schedule G, on December 18, 1936; "a" being the Heafey-Moore Company bid; "b" being Fredrickson & Watson Construction Company bid; and "c" being George Pollock & R. G. Clifford.

X-79*: Resolution of board of directors, awarding contract to Heafey-Moore Co., adopted December 24, 1936, for Schedule G.

Exhibit X-80*: Contract, Heafey-Moore Co. with District, Schedule G.

Exhibit X-81*: Bond for faithful performance, Schedule G.

Exhibit X-82*: Resolution of board of directors adopted January 15, 1937, approving faithful performance bond, Schedule G.

Exhibit X-83*: Bond securing material men and laborers, Schedule G.

Exhibit X-84*: Resolution of board of directors approving bond securing material men and laborers, Schedule G.

Exhibit X-85*: Resolution of Acceptance of Schedule G, and final estimate.

---

*See Agreed Statement of Facts set out at page 495 of the Book of Exhibits.

(Testimony of Wallace B. Boggs.)

Exhibit X-86*: Affidavit of Publication of notice to bidders, Oakland Tribune, Schedule H.

Exhibit X-87*: Bid received for Schedule H, March 10, 1937, Moore Dry Dock Co.

Exhibit X-88*: Resolution of board of directors adopted March 16, 1937, rejecting bid of Moore Dry Dock Co., received March 10, 1937, for Schedule H, as excessive. [2075]

Exhibit X-89*: Resolution of board of directors adopted March 16, 1937, calling for bids for Schedule H the second time—bids to be received March 31, 1937.

Exhibit X-90*: Affidavit of publication of notice to bidders, Oakland Tribune, Schedule H.

Exhibit X-91*: Bids received for Schedule H, March 31, 1937: Moore Dry Dock Co.,—its second bid.

Exhibit X-92*: Resolution of board of directors adopted March 31, 1937, rejecting bid of Moore Dry Dock Co., received March 31, 1937, for Schedule H.

Exhibit X-93*: Resolution of board of directors, calling for bids for Schedule H the third time,—bids to be received April 12, 1937.

Exhibit X-94*: Affidavit of publication of notice to bidders, Oakland Tribune, Schedule H.

Exhibit X-95a* and Exhibit X-95b*: Bids received for Schedule H, April 12, 1937, under third

(Testimony of Wallace B. Boggs.)

of the State of California, upon recommendation of the State Highway Engineer, do hereby certify that the project of Joint Highway District No. 13 of the State of California, including a highway, highway tunnels and approaches with appurtenant structures, located partly in the City of Oakland, County of Alameda, State of California, and partly in the County of Contra Costa, State of California, all in said Joint Highway District No. 13 of the State of California, the westerly terminus of said project being located at a point near the intersection of Broadway with Keith Avenue in the said City of Oakland, and the easterly terminus of said project being located at a point on the State Highway in Contra Costa County approximately fourteen hundred feet northerly from the intersection of the Fish Ranch Road with said State Highway, which is commonly known as and called the "Tunnel Road", has been fully constructed, improved and completed in accordance with the plans and specifications therefor heretofore adopted by the Board of Directors of said District on the 30th day of March, 1933, and the amendments and supplements thereto adopted by said Board of Directors on the 9th day of January, 1934, on the 3rd day of April, 1934, and the 23rd day of September, 1936, made by Wallace B. Boggs,

(Testimony of Wallace B. Boggs.)

District Engineer, all of which said plans and specifications were approved by me.

In Witness Whereof, I have executed this certificate of completion, this 30th day of November, 1937.

[Seal] (signed) EARL LEE KELLY,
Director of Public Works
of the State of California.

[Endorsed]: Filed December 1, 1937. Harry M. Stow, Secretary, Joint Highway District No. 13 of the State of California.

[Endorsed]: U. S. Dist. Ct. N. D. Cal. No. 20101-R. Deft's. Ex. X-103. Filed June 1, 1938. Walter B. Maling, Clerk, by J. A. Schaertzer, Deputy Clerk.

I may state, with respect to that, your Honor, that under the rule where the state contributes, the road cannot be opened to use until such a certificate is given.

X-104 is a letter from C. H. Sweetser, Bureau of Public Roads, with respect to the completion of Schedules A and B.

Dear Sir:

Reference is made to your letter of June 18, 1937, relative to your intention to recommend acceptance of Schedule A and Schedule B of U. S. Public Works Project, Docket California 2231, Broadway Tunnel at the meeting of the Board of Directors of Joint Highway District No. 13 on Tuesday, June 22, 1937.

Insofar as the Bureau of Public Roads is

(Testimony of Wallace B. Boggs.)

concerned it will be satisfactory for you to recommend acceptance of these schedules.

Yours very truly,
C. H. SWEETSER,
District Engineer.
By (Signed) CHAS. C. MORRIS,

ear Sir:

Schedule H of the Broadway Low Level Tun-
l has been inspected and found satisfactory.
Insofar as the Bureau of Public Roads is

(Testimony of Wallace B. Boggs.)

concerned, this contract may be accepted as soon as you desire.

Very truly yours,

C. H. SWEETSER,

District Engineer.

By (Signed) CHAS. C. MORRIS,

Senior Highway Engineer.

[Endorsed]: U. S. Dist. Ct. N. D. Cal. No. 20101-R. Deft's. Ex. X-108. Filed June 1, 1938. Walter B. Maling, Clerk, by J. A. Schaertzer, Deputy Clerk.

Those are all the exhibits included in this offer.

Mr. Smith: To the offer of those exhibits, we make the same objection that we heretofore made to the offer of the separate exhibits just introduced and admitted by your Honor before, and, in addition to the objection made at that time, we desire to add, because it now appears from the evidence offered that the work was broken up into separate schedules and relet upon several of these contracts, as I understand it, eight in number, which, in our opinion,—and we believe the law fully supports us,—is an improper practice because, according to the statement of counsel themselves, they had a right to do one of two things: they either had a right to call for bids and, failing to get bids, to do the work themselves; that was the statement he made yesterday.

Mr. Wittschen: No. [2077]

(Testimony of Wallace B. Boggs.)

Mr. Smith: In other words, he stated they could not do the work themselves because the Act obligated them to do the work by letting to the lowest bidder and, having attempted to let it to the lowest bidder, and not having received a bid, the other alternative which he stated was the right that they had in order to complete the work probably immediately came into action, namely, that they would have to do the work with their own forces, instead of which, from the evidence, they obviously decided to split the work up to suit themselves; and to all of this we object that it is not proper under the contract, because they were limited to the methods prescribed by Article V, or by the law as he stated it himself.

Mr. Wittschen: May I make a correction? You just stated the law. I said that, if bids came in that were too high, they could be rejected. I merely want to correct Mr. Smith's misapprehension of the District's organic act, so there will be no misunderstanding. If bids came in, the District might reject them if too high, and do the work with their own forces; but the Act is silent with respect to that right if no bid were received.

Mr. Smith: That is what I thought you had said. It seems to me self-evident that if they rejected a bid and receiving no bid they are in the same situation as if they rejected a bid. I can see no difference between receiving a bid which you reject and receiving no bid. They received a bid

(Testimony of Wallace B. Boggs.)

and they rejected it, and do it with their own forces; that is the very point we have in mind. That interpretation which he just made, I add as a ground for objection.

Mr. Wittschen: I don't want to argue it; but we don't make the law.

Mr. Smith: I think one thing is equal to the other. [2078]

Mr. Alexander: On behalf of the cross-defendant surety companies I make the same objection in all details and all particulars that was made by Mr. Smith. In view of the little colloquy that has taken place I would like to recapitulate what the objections have been, namely, we object to the introduction of this evidence on the ground that it is irrelevant and immaterial, that no cause of action was stated in the cross-complaint, that the cross-complaint was prematurely filed, and before the amount of the expense was determined as provided in Article V of the contract, and in section 6(q) subsections 1, 2 and 3 of the specifications; that the cross-complaint, for the reasonable cost of completion, is not justified by the express terms of the contract, that it was incumbent upon the district under the contract, Article V thereof, to complete with its own labor and not to arrange for the completion of it by a contract; that there has been a breach of the contract in that this District did not complete the contract, either by its own labor or by

(Testimony of Wallace B. Boggs.)
a contract, but split up a lot of incompleted work in eight separate contracts.

The Court: The objection will be overruled.

Mr. Smith: Exception.

Mr. Alexander: We also except.

Mr. Tinning: I think before I started this omnibus offer that I had handed Mr. Boggs, for the purpose of this record, a summary of amounts that had been paid by the District on each of the contracts.

Q. Mr. Boggs, have you before you a schedule showing the total amount paid for completing the project under the contract, Schedules A, B, C, D, E, F, G, and H? A. Yes.

Mr. Alexander: May the answer go out just for a moment?

The Court: Yes.

Mr. Alexander: To which we make the same objection, your Honor.

Mr. Wittschen: He has only answered he has it before him. [2079]

Mr. Alexander: We make the same objection.

The Court: The objection is overruled.

Mr. Alexander: We note an exception.

Mr. Smith: Note an exception.

A. Yes.

Mr. Tinning: Q. Were the amounts paid by the District to the contractors under the various schedule as set forth on this sheet that you have?

A. Yes.

Mr. Alexander: May that answer go out?

(Testimony of Wallace B. Boggs.)

The Court: It goes out.

Mr. Alexander: We make the same objection.

Mr. Smith: We make the same objection.

The Court: The same ruling.

Mr. Alexander: And we note an exception, your Honor.

Mr. Smith: We also note an exception.

Mr. Wittschen: Might I ask a question: Your objection does not run that that is a summary of those costs?

Mr. Alexander: No, it does not.

A. Yes.

Mr. Tinning: Q. Was the total amount paid by the District for the contract under the eight schedules listed the sum of $1,751,611.74?

Mr. Alexander: We make the same objection, your Honor.

Mr. Smith: So do we.

The Court: The same ruling.

Mr. Smith: We note an exception.

Mr. Alexander: We note an exception.

A. Yes.

Mr. Tinning: Gentlemen, I think for the sake of the record, probably it will shorten the matter, it would be wise to offer this in evidence. [2080]

Mr. Smith: I think so, too.

Mr. Tinning: We offer then as Defendant's Exhibit X-109 the schedule of payments made under the various contracts to complete the project.

Mr. Smith: Would you add to your offer that X-109 is a document which the witness Boggs had

(Testimony of Wallace B. Boggs.)

in his hand when you asked him the last three or four questions?

Mr. Tinning: Yes.

Mr. Alexander: To which we make the same objection.

The Court: The same ruling.

Mr. Alexander: Exception.

Mr. Smith: We join in the objection and exception.

(The document was marked "Defendant's Exhibit X-109.")

DEFENDANT'S EXHIBIT X-109

Schedule of Total Amounts Paid for Completing Project Under Contracts for Schedules "A", "B", "C", "D", "E", "F", "G" and "H".

Schedule "A"	$736,551.18
Schedule "B"	21,511.36
Schedule "C"	426,262.02
Schedule "D"	43,460.00
Schedule "E"	269,800.00
Schedule "F"	18,893.00
Schedule "G"	216,062.36
Schedule "H"	19,071.82
Total	$1,751,611.74

[Endorsed]: U. S. Dist. Ct. N. D. Cal. No. 20101-R. Deft's. Ex. X-109. Filed June 1, 1938.

(Testimony of Wallace B. Boggs.)

Walter B. Maling, Clerk, by J. A. Schaertzer, Deputy Clerk.

Mr. Tinning: This schedule is a credit that we discovered Six Companies entitled to. I don't know whether they are going to object or not.

Q. Mr. Boggs, I have just handed you a schedule purporting to show certain items for which credit should be allowed to the Six Companies, apparently for work which was not allowed under any estimate because it had not been completed at the time when any estimate was made, but had been partly completed under the contract, no allowance had been made and since this case the work has been completed and you have had an opportunity to go over your books, the District's books, these matters have been discovered, so you have prepared this tabulation. It is in addition to any credits that were allowed in the original cross-complaint and answer filed: that is correct, is it not? A. Yes

Q. That was preliminary. Mr. Boggs, is this schedule an accurate listing of all the work which was done by Six Companies and for which no allowance was made on any estimate?

Mr. Smith: You asked if it was an accurate statement. [2081]

A. Yes.

Mr. Alexander: I think, in order to avoid any confusion, we will make the same objection on all of the grounds.

(Testimony of Wallace B. Boggs.)

The Court: The same ruling.

Mr. Alexander: Exception.

Mr. Smith: He only testified it was a correct statement.

Mr. Tinning: Q. Is this amount, $2806.55 an amount which should be credited to Six Companies?

Mr. Smith: I object to the question on the same grounds as previously stated.

Mr. Alexander: We make the same objection.

The Court: Overruled.

Mr. Smith: Note an exception.

Mr. Alexander: Note an exception.

A. Yes.

Mr. Tinning: We offer this schedule in evidence as Defendant's Exhibit X-110, it being the same document which the witness has just testified to.

Mr. Alexander: We object to that on the same grounds.

The Court: The same ruling.

Mr. Alexander: Exception.

Mr. Smith: We join in both the objection and exception.

(The document was marked "Defendant's Exhibit X-110.")

DEFENDANT'S EXHIBIT X-110

SCHEDULE SHOWING AMOUNTS WITHHELD FROM SIX COMPANIES OF CALIFORNIA AND NOT APPEARING IN ANY ENGINEERS' ESTIMATE UNDER CONTRACT DATED JUNE 4, 1934, FOR UNITS OF WORK PARTLY PERFORMED BUT NOT COMPLETED.

No.	Item	Quantities		Contract Prices	Amounts at Contract Prices
3	Structural Excavation, Class "A"	400	cu. yds.	@ $1.20	$ 480.00
5	Shoulders	1,780	sq. ft.	@ 0.035	62.30
7	Structural Steel	6,931	lbs.	@ 0.05	346.55
8	Concrete Structures, Class "A" Concrete	25	cu. yds.	@ 15.50	387.50
13	Penetration Oil Macadam Pavement	8,762	sq. ft.	@ 0.14	1,226.68
17	Concrete Gutters	54.1	sq. ft.	@ 0.25	13.52
43	Guard Rail	100	Lin. ft.	@ 0.80	80.00
44	Pipe Hand Rail	70	lin. ft.	@ 3.00	210.00
				Total	$2,806.55

[Endorsed]: U. S. Dist. Ct. N. D. Cal. No. 20101-R. Deft's. Ex. X-110. Filed June 1, 1938. Walter B. Maling, Clerk, by J. A. Schaertzer, Deputy Clerk.

Mr. Tinning: Q. Mr. Boggs, I hand you a schedule which purports to be a computation of some costs of the construction of the project based on the unit prices set forth in the June 4, 1934, contract between Six Companies of California and Joint Highway District No. 13, and the units of

(Testimony of Wallace B. Boggs.)

work performed under all other contracts. The purpose of this exhibit, Mr. Alexander, is to arrive at the figure which would have been paid to the Six Companies of California if [2082] the quantities of work that were actually performed were completed. The contract price was on an estimated quantity as it was set up, and this tabulation shows the actual units of work which were performed, both by Six Companies and the people who followed them on the work, for the purpose of arrival at a figure as to what Six Companies would have been entitled to under their contract if they completed all of the units and the quantities of work this table has been worked out. Mr. Boggs, does the figure appearing at the bottom of this schedule, $3,671,785.95 correctly represent the amount that would have been paid to Six Companies of California had they completed the work under the contract and done the units of work that were actually performed by them and all of the other contractors in the completion of the project of the District?

Mr. Smith: We object for all of the reasons stated previously.

Mr. Alexander: We make the same objection, your Honor.

The Court: For the purpose of the record the objection will be overruled.

Mr. Alexander: We note an exception.

Mr. Smith: We also note an exception.

(Testimony of Wallace B. Boggs.)

A. Yes.

Mr. Tinning: Q. That is the amount that would have been received by Six Companies if it had done all of the work at contract prices that was actually performed, both by itself and the other contractors?

Mr. Alexander: We make the same objection.

Mr. Smith: The same objection.

The Court: The same ruling.

Mr. Smith: Exception.

Mr. Alexander: Exception.

A. Yes. [2083]

Mr. Tinning: We offer this schedule in evidence as Defendant's Exhibit X-111.

Mr. Alexander: We make the same objection.

The Court: The same ruling.

Mr. Alexander: Exception.

Mr. Smith: We join in the objection and exception.

(The document was marked "Defendant's Exhibit X-111.")

[Set forth in the Book of Exhibits at page 580.]

Mr. Tinning: Q. Mr. Boggs, I hand you now a schedule which is apparently a computation of the amount claimed by Joint Highway District No. 13 of the State of California from Six Companies of California for the completion of the project, which is a tabulation of the claims of the District, is it not, and how it is computed—this is a preliminary question. A. Yes.

(Testimony of Wallace B. Boggs.)

Q. Does this tabulation correctly show the balance paid by the District for the completion of this project and the amount claimed by the District for excess cost of construction?

Mr. Smith: Just a moment, I object to that question on the same grounds previously stated and each and all of them.

Mr. Alexander: We make the same objection.

The Court: The objection is overruled.

Mr. Smith: Exception.

Mr. Alexander: I note an exception.

Mr. Tinning: We offer in evidence the schedule showing the balance claimed by the District from Six Companies under the cross-complaint for the excess cost of construction in the sum of $108,066.31, and ask that it be marked Defendant's Exhibit X-112.

Mr. Alexander: We make the same objection.

The Court: The same ruling.

Mr. Alexander: Exception.

Mr. Smith: We join in the objection and exception. [2084]

(The document was marked "Defendant's Exhibit X-112.")

DEFENDANT'S EXHIBIT X-112

Schedule, Computation of Amount Claimed by Joint Highway District No. 13 of the State of California from Six Companies of California, for Completion of the Project.

Amount earned by Six Companies of California (Estimate No. 25)	$2,511,499.72
Amount paid to Contractors by District under Contracts for Schedules "A", "B", "C", "D", "E", "F", "G" and "H"	1,751,611.74
Total under all Contracts	$4,263,111.46
Credit to Six Companies of California for retained percentage and checks returned to District	$ 480,452.61
Credit incomplete work not allowed on Six Companies of California estimates	2,806.55
Total paid by District under all Contracts	$3,779,852.30
Computed Construction Cost at Six Companies of California contract prices	3,671,785.99
Balance claimed by District from Six Companies of California for cost of construction	$ 108,066.31

(Testimony of Wallace B. Boggs.)

[Endorsed]: U. S. Dist. Ct. N. D. Cal. No. 20101-R. Deft's. Ex. X-112. Filed June 1, 1938. Walter B. Maling, Clerk, by J. A. Schaertzer, Deputy Clerk.

Mr. Smith: Might I make a point that has been suggested to me by my associate, in order that there be no question about it in the record we desire to add to our objection to this line of testimony that so far, and particularly the last exhibit offered, that the same is at variance with the allegations of the cross-complaint, and not receivable for that reason.

Mr. Alexander: We add the same objection.

The Court: Let me follow that, that it is in variance with the allegations of the cross-complaint?

Mr. Smith: As to the amount.

Mr. Tinning: As to the amount, that is true.

Mr. Wittschen: That is what I want to correct to conform to the proof. We have alleged it in here at $69,000 and now we put it in $108,000 and we intend to correct the figures.

The Court: It would be well to amend it now for the purpose of the record.

Mr. Smith: We shall object to any attempt to amend the pleadings at this time on all reasons we have previously stated, and on the ground that it is an improper variance and also not in keeping with the allegations.

Mr. Alexander: We make the same objection.

(Testimony of Wallace B. Boggs.)

Mr. Wittschen: The only variance that there is is a difference in figures, because the figures in the cross-complaint were gotten up before the work was completed, and that is not a variance, it is just a change from one figure to another; these figures occur probably a dozen times in various items in the counter-claim and in the cross-complaint and if you would like at this time I will move to amend the pleadings in the particulars that I have specified; I have already shown them to counsel and they have got it on their copies, so they are not surprised. Shall I go through the cross- [2085] complaint and read into the record the changes we want?

The Court: If you can agree on a memorandum you have gotten up——

Mr. Wittschen: It is not a memorandum. We just changed it on the face of the pleading.

The Court: Just so it is covered.

Mr. Smith: There are many objections to it. One, of course, is they have a verified cross-complaint and verified answer and counter-claim and they are changing figures ad lib and raising the amount thereof some $40,000, and I do not see how a verification on that kind of a document can stand.

The Court: His explanation for that is that this work was discovered after he obtained the files; nothing else was done under the circumstances.

Mr. Smith: But a man cannot offer an affidavit to a pleading like that.

(Testimony of Wallace B. Boggs.)

The Court: Not always, but under the circumstances here I have no doubt that he can.

Mr. Wittschen: Might I suggest to your Honor that we are not trying to do anything——

The Court: I understand, I want to give the other side an opportunity to object.

Mr. Wittschen: I think their last objection that there is a variance is not well taken, because certainly you can prove the amount of your damage and then amend to conform to the proof. Perhaps that amendment ought to take the form of a new verification; if counsel is getting that technical we will get it for him.

The Court: My thought is you might not if it was a greater sum; of course, there would be no difficulty about it as long as it is a less amount than the prayer of your complaint. [2086]

Mr. Wittschen: We have increased it.

The Court: I want to give the other side a full opportunity, that is all I had in mind.

Mr. Wittschen: On page 19 we allege the State of California had contributed to the project $600,000. Now we want to change that to $700,000, which is the proof. Undoubtedly nobody could be hurt by that change.

Mr. Smith: We are not talking about that particular item.

Mr. Wittschen: In some cases we have given credit and in some cases we have made debits.

The Court: In any event the amount is definite?

(Testimony of Wallace B. Boggs.)

Mr. Wittschen: Yes, and they conform to proof that will come in. There are two ways to do it. One is to let the proof go in and amend the pleadings to conform to the proof, and the other to amend it on its face. Mr. Tinning is an officer of the District, and he says he can initial the changes or, if your Honor thinks that it requires verification, we can have the Secretary.

The Court: There is no question about that.

Mr. Smith: I do not doubt for a minute they could get people to re-verify it, but I am making the point that the amendment is of such a character that it raises the prayer of their complaint, and one of the reasons the law hedges around——

The Court: That is one of the reasons I suggested the amendment now before the proof goes in.

Mr. Wittschen: May I do that, read it into the record, the changes that we wish to make, so that nobody will be surprised?

Mr. Smith: Is your Honor allowing it to be done?

Mr. Wittschen: He has not heard what it is yet.

The Court: I have not heard what it is. Indicate for the record the purpose of your offer. [2087]

Mr. Wittschen: It is our purpose to amend the cross-complaint by taking out certain figures that are contained therein and substituting in lieu thereof figures which I will read. The reasons for that are that the cross-complaint was filed before the project had been completed and before the

(Testimony of Wallace B. Boggs.)

actual cost of various matters had been accurately ascertained and these amendments are offered to conform to what we will now prove.

On page 19, line 17, strike out the figures $600,-000 and insert in lieu thereof $700,000.

On page 20, line 29, strike out the figures $49,-024.65 and insert in lieu thereof $47,944.33.

On page 21, line 1, strike out the figures $4467.08 and insert in lieu thereof the figures $5,134.22, and in each case all of these figures are to be preceded by a dollar sign.

On line 5 strike out the figures $1300 and insert in lieu thereof $1862.45.

The same page, line 14, strike out the figures $8150 and insert in lieu thereof $14,060.85.

On line 16, same page, strike out the figures $62,-941.73 and insert in lieu thereof the figures $69,-001.85.

On page 22, line 4—this is the insertion of several words, because we are allowing that credit of $2,-806.55 that was mentioned by the witness—after the figures 1936 insert the words "As per estimate."

Line 5, same page, after the word "to" insert the words "also a credit for plaintiff of $2806.55 for partly performed work."

Same line, same page, strike out the words "$490,-452.61" and insert in lieu thereof the figures "$493,-259.16."

After the period at the end of line 5, change the period to a comma and insert the words "less $10,-

(Testimony of Wallace B. Boggs.)

000 liquidated damages retained [2088] by defendant." The explanation of that is that we had charged that twice and that is to correct that.

On line 8, page 22, strike out the figures "$1,725,000" and insert in lieu thereof "$1,751,611.74".

On line 11, same page, strike out the figures "$552,568.72" and insert in lieu thereof "$579,180.46."

Line 12, same page strike out the figures "$490,452.61" and insert in lieu thereof the figures "$483,259.16." Immediately after those figures insert parenthesis before the word "the".

Line 14, insert the words after the word "contract," "less liquidated damages of $10,000 retained," with a parentheses.

Line 14, strike out the figures "$62,116.11" and insert in lieu thereof "$108,066.31."

That is all in the counter-claim.

We now come to page 25, line 27, strike out the figures "$82,000" and insert in lieu thereof "$89,832.67."

Page 26, line 2, strike out the figures "$62,914.73" and insert in lieu thereof "$69,001.85."

Line 6, same page, strike out the figures "$62,116.11" and insert in lieu thereof, "$108,066.31."

Line 9, same page, strike out "$216,500" and insert in lieu thereof "$206,500." That is to take care of the $10,000 penalty and reduces the claim $10,000.

(Testimony of Wallace B. Boggs.)

Line 11, strike out the figures "$341,557.84" and insert in lieu thereof the figures "$383,568.16."

Page 33, line 11, strike out the figures "$49,-024.65" and insert in lieu thereof "$47,944.33."

Line 14, same page, strike out the figures "$4,-467.08" and insert in lieu thereof the figures "$5,-134.22."

Line 18, same page, strike out the figures "$1300" and insert in [2089] lieu thereof the figures "$1,-862.45."

Line 27, same page, strike out the figures "$8150" and insert in lieu thereof "$14,060.85."

Line 29, same page, strike out the figures "$62,-941.73" and insert in lieu thereof the figures "$69,-001.85."

On line 17, page 34, after the figures "1936" insert the words "as per estimate."

On line 19, after the word "to" insert the phrase "also a credit for plaintiff of $2806.55, for partly performed work."

Line 19, strike out the figures "$490,452.61" and insert in lieu thereof the following figures and phrase: "$493,259.16, less liquidated damages $10,-000 retained by defendant."

Line 22, page 34, strike out the figures "$1,725,-000" and insert in lieu thereof "$1,751,611.74."

Line 25, on same page, strike out the figures "$552,568.72" and insert in lieu thereof the figures "$579,180.46."

(Testimony of Wallace B. Boggs.)

Line 26, same page, strike out the figures "$490,-452.61" and insert in lieu thereof the figures "$483,-259.16."

After those figures on line 26 insert a parenthesis before the word "the".

On line 28, after the word "contract" insert the words "less liquidated damages of $10,000 retained" and close with a parenthesis.

Line 28, same page, strike out the figures "$62,-116.11" and insert in lieu thereof "$108,066.31."

On page 37, line 29, strike out the figures "$288" and insert in lieu the figures "$272.89."

On page 38, line 9, strike out the figures "$82,-000" and insert in lieu thereof, "$89,832.67."

Page 38, line 16, strike out the figures "$62,-941.78" and insert in lieu thereof the figures "$69,-001.85."

Line 18, same page, strike out the figures "$62,-116.11" and in- [2090] sert in lieu thereof the figures "$108,066.31."

Line 22 of the same page, strike out the figures "$216,500" and insert in lieu thereof the figures "$206,500."

Line 24, same page, strike out the figures "$341,-557.84" and insert in lieu thereof, "$383,568.16."

Last page, page 39, first line, strike out the figures "$341,557.84" and insert in lieu thereof "$383,-568.16."

The same page, line 6, strike out the figures "$341,557.84" and insert in lieu thereof the figures "383,568.16."

(Testimony of Wallace B. Boggs.)

It is understood that all of the figures refer to dollars and cents and all of the amounts are to be preceded by a dollar sign. We now ask, if your Honor please, that our cross-complaint may be amended in the particulars specified in order that the amounts therein originally stated may be changed to the new amounts in order to conform to proof which we will now offer, and that I may make these changes on the original complaint and have them initialed by the clerk.

Mr. Smith: To which we object for the reasons already stated.

Mr. Wittschen: Might I ask do you waive the necessity of our having the re-verification, or do you stand on that?

Mr. Smith: As far as I am concerned I do not think it would add anything. I notice that the man that verified it is dead.

Mr. Wittschen: Don't you think we could have another secretary verify it? As a matter of fact, a public body does not have to verify it.

Mr. Smith: I just mentioned that to show what bad practice it is.

Mr. Alexander: We join in the objection.

The Court: The objection will be overruled.

Mr. Alexander: We note an exception.

Mr. Smith: We note an exception. [2091]

Mr. Alexander: We have here a new complaint radically different, different to the extent of some $42,000, and I think something should be said or

(Testimony of Wallace B. Boggs.)

done to protect the rights of the various cross-defendants. They have put in new figures.

Mr. Smith: How about our answers?

Mr. Wittschen: Your answers may be deemed a denial without further changing your pleadings. You have denied them, anyway.

Mr. Alexander: It is not sufficient that our answers be deemed a denial. We have many special defenses that we are entitled to urge to these as well as originally.

The Court: What is the point of your objection?

Mr. Alexander: The point is this, they have here what is an amended cross-complaint.

The Court: Yes.

Mr. Alexander: Which they have just put in. We have to have a pleading to it, and I think that new matters should be denied and all of the matters urged in our answers should be deemed pleaded to this cross-complaint as amended.

The Court: Would a denial cover it all?

Mr. Alexander: No, a denial would not. We have pleaded a lot of special defenses.

The Court: I am trying to be helpful to both sides here in getting this record up. Have you any suggestions?

Mr. Wittschen: I will stipulate, I thought I had, when Mr. Alexander interrupted me, when I said they might be deemed denied. I will stipulate that the answers as filed by the respective cross-defendants to the cross-complaint before these amendments

(Testimony of Wallace B. Boggs.)

were made may be deemed answers to the cross-complaint as amended.

Mr. Alexander: And that the new matters be deemed denied?

Mr. Wittschen: Yes.

The Court: Let the record so show. [2092]

Mr. Wittschen: May I have the original and make the changes so that the Clerk may initial them?

The Court: You may have it. Now proceed, gentlemen. [2093]

Mr. Alexander: If we can interrupt just a moment—maybe we have taken an exception,—I am not certain; but may the record show we have excepted?

The Court: Let the record show an exception.

Mr. Smith: If there are not enough in there already, I will add one myself.

Mr. Tinning: Q. Mr. Boggs, following your testimony of this morning——

The Court: I think, when the new rules come out, about September, there will be a rule covering it, so this nuisance will be at an end.

(Discussion, off record.)

Mr. Tinning: Q. During the period from June 13, 1936, to and including the 9th of November, 1936, the date that the first new contract was let, to Pollock & Clifford, for the driving of the tunnel, did the District perform any work in the tunnels for the protection of the work?

(Testimony of Wallace B. Boggs.)

Mr. Smith: Just a minute. I make the same objection, your Honor, as made heretofore to this line of questioning.

Mr. Alexander: We join in the objection.

The Court: Overruled.

Mr. Smith: Exception.

Mr. Alexander: Exception.

The Witness: A. Yes.

Mr. Tinning: Q. What did this work include, Mr. Boggs?

Mr. Smith: Same objection.

The Court: Same ruling.

Mr. Alexander: Same objection.

Mr. Smith: Exception.

Mr. Alexander: Exception. [2094]

The Witness: A. This work performed by the District included the furnishing of materials and supplies and the performance of certain work.

Mr. Tinning: Q. What was the work; what did you do?

Mr. Smith: The same objection.

The Court: The same ruling.

Mr. Alexander: Same objection.

Mr. Smith: Exception.

Mr. Alexander: Exception.

The Witness: A. We placed concrete footings in the tunnel from the end of the concrete footings which had existed prior to the stoppage of work on June 13, 1936, and extended those footings to the face of the core excavation.

(Testimony of Wallace B. Boggs.)

Mr. Tinning: Q. Did you gunite the timber rings? A. The timbers—

Mr. Alexander: May I just ask that the objection go the entire line, or may I make a suggestion to Mr. Tinning which won't be a part of the record?

(Private discussion between Mr. Tinning and Mr. Alexander.)

Mr. Tinning: Q. Mr. Boggs, to try to shorten this up: It is a fact, is it not, that the District had to put in concrete footings for the purpose of maintaining the area where timbers were installed and concrete had not yet been placed; that guniting was done; that the timbers had to be maintained in the thousand or more feet of drifts that ran to the east portal; and that watchmen had to be employed, engineers had to be employed, in connection with this work that was being done there, so that the entire tunnel which was left on June 13th could be maintained without danger of falling down and caving in? A. Yes. [2095]

Mr. Alexander: Wait a minute.

Mr. Smith: The question is objected to on the same grounds as previously stated.

Mr. Alexander: We join in the objection.

The Court: Overruled.

Mr. Smith: Exception.

Mr. Alexander: Exception.

Mr. Tinning: Q. What was the cost of the work of protection and maintenance during the period referred to?

(Testimony of Wallace B. Boggs.)

Mr. Smith: Same objection.

Mr. Alexander: Same objection.

The Court: Same ruling.

Mr. Smith: Exception.

Mr. Alexander: Exception.

The Witness: A. $47,944.33.

Mr. Tinning: Q. Did the District, in preparing the new specifications, have to make extensive measurements of the work that remained to be done and procure materials and supplies for doing that work, including preparation of blueprints and specifications?

Mr. Smith: Same objection, on the same grounds as previously urged.

Mr. Alexander: Same objection.

The Court: Same ruling.

Mr. Smith: Exception.

Mr. Alexander: Exception.

The Witness: A. Yes.

Mr. Tinning: Q. What was the cost of measuring the work and completing the specifications after the resumption of work?

Mr. Smith: Same objection.

Mr. Alexander: Same objection [2096]

The Court: The same ruling.

Mr. Smith: Exception.

Mr. Alexander: Exception.

The Witness: A. $5,134.22.

Mr. Tinning: Q. Did the District readvertise for contracts to secure contractors to complete the work?

(Testimony of Wallace B. Boggs.)

Mr. Smith: Same objection; and, in addition, we object on the ground that the items in question could not be in any way charged against us as a cost of doing the work.

Mr. Alexander: Same objection.

The Court: Same ruling.

Mr. Smith: Exception.

Mr. Alexander: Exception.

The Witness: A. Yes.

Mr. Tinning: Q. What amount was paid by the District to readvertise the work?

Mr. Smith: Same objection.

Mr. Alexander: Same objection.

The Court: The same ruling.

Mr. Smith: Exception.

Mr. Alexander: Exception.

The Witness: A. $1,862.45.

Mr. Tinning: Q. Did the District procure fire insurance, explosion insurance, liability insurance, fidelity insurance and Workmen's Compensation Insurance during the period mentioned?

Mr. Smith: Objected to on the same grounds.

Mr. Alexander: Same objection.

The Court: Same ruling.

Mr. Smith: Exception.

Mr. Alexander: Exception. [2097]

The Witness: A. Yes.

Mr. Tinning: Q. What was paid by the District for such insurance?

Mr. Smith: Same objection.

Mr. Alexander: Same objection.

(Testimony of Wallace B. Boggs.)

The Court: The same ruling.

Mr. Smith: Exception.

Mr. Alexander: Exception.

The Witness: A. $14,060.85.

Mr. Tinning: Q. And the total cost of the items which I have just questioned you about is how much, Mr. Boggs?

Mr. Smith: Same objection.

Mr. Alexander: Same objection.

The Court: The same ruling.

Mr. Smith: Exception.

Mr. Alexander: Exception.

The Witness: A. $69,001.85.

Mr. Tinning: Q. This document which you hold in your hand was prepared from the District's records by Mr. Ernest Brotherton, a certified public accountant who had been employed by the District to regularly audit the records from the time the District had any records, or at least from the time the work started? A. Yes.

Mr. Alexander: Same objection.

The Court: Same ruling.

Mr. Alexander: Exception.

The Witness: A. Yes.

Mr. Tinning: We offer the schedule which the witness has just been referring to in evidence as Defendant's Exhibit X-113.

Mr. Smith: To which I will object upon the reasons previously stated. [2098]

(Testimony of Wallace B. Boggs.)

Mr. Alexander: And we join in the objection.

The Court: Objection overruled.

Mr. Smith: Exception.

Mr. Alexander: Exception.

(Document marked "Defendant's Exhibit X-113.)

[Set forth in the Book of Exhibits at page 584.]

Mr. Tinning: Q. In addition to the work of protection which you have just referred to, Mr. Boggs, did the District maintain a staff, following the 24th day of May, 1936, up to and including the time that the work was actually finished?

The Court: Q. You may answer "Yes" or "No."

Mr. Smith: That is a preliminary question.

The Court: That is a preliminary question.

Mr. Smith: That is a preliminary question.

The Witness: A. Yes.

Mr. Tinning: Q. It is a fact, is it not, that under the provisions of the Joint Highway District Act when the project is finished that the jurisdiction of the District, or the power of the District, over the road ceases and it becomes a public highway subject to the county or the state, whoever has jurisdiction?

Mr. Smith: Before the witness answers, I will object to that question as calling for a legal opinion of the witness and calling purely for a conclusion of law.

Mr. Alexander: I join in the objection.

(Testimony of Wallace B. Boggs.)

Mr. Tinning: Your Honor, I think it is within the judicial knowledge of the Court that the Act provides that when the project is completed a certificate by the Director of the Department of Public Works is issued, and the jurisdiction over the road ceases in the District and belongs to the county.

The Court: Is that a fact, gentlemen?

Mr. Smith: Well, we won't concede that, your Honor.

Mr. Tinning: Well, the Act so specifies. [2099]

Mr. Smith: Whatever the law specifies, of course, is a matter of interpretation by the Court.

The Court: Just so we have a record on it.

Mr. Tinning: This is Section 32 of the Joint Highway District Act of 1931 under which this District functions (reading Section 32.)

Q. During the period following the 24th day of May, 1936, did the District continue to employ engineers, an office force, and maintain watchmen, and procure materials and supplies and expense for its operation?

Mr. Smith: I make the objection on all the grounds previously urged; and, in addition, I urge the further objection that the testimony sought to be elicited by the question would be proof or an attempted proof of damages which are speculative and not in any manner within the purview of any theory on which they might recover under this cross-complaint.

Mr. Alexander: We join in the objection.

(Testimony of Wallace B. Boggs.)

Mr. Tinning: The purpose of this offer, your Honor,—we have pleaded as one of the matters in this defense the penalty of $500 per day. We are offering this line of testimony to show, for instance, what the daily cost of operation of the District was. We also expect to offer proof with respect to the bond interest, and also with respect to the loss to the public by the fact they were unable to use this tunnel during the certain period of time. Now, that proof simply goes to the point of the penalty being somewhere within striking distance of the actual loss incurred.

The Court: How is the Court going to measure that?

Mr. Tinning: I don't think the Court does, your Honor. I think, if we are entitled to a penalty, that the thing then is to determine the penalty itself is not unreasonable. [2100]

Mr. Smith: What did your Honor say? I did not hear your remark.

The Court: I inquired how the Court was going to determine any damage for the public using, or the failure to use, this tunnel. He answered that by saying it has to do with the penalty and the imposition of the penalty. The penalty itself is prescribed by——

Mr. Tinning: Yes, by that contract.

Mr. Smith: If they want to call it a penalty, let them accept that as his definition. The law in California provides you cannot enforce a penalty. I un-

(Testimony of Wallace B. Boggs.)

derstood the theory was they were trying to recover on the basis of liquidated damages. They have no right to recover any penalty. The law is as clear as a bell on that, particularly because penalties are absolutely proscribed under our California law. You cannot recover a penalty. The assertion is made, in their cross-complaint, that it is a claim for liquidated damages.

The Court: I think we are confused. I don't think he expects to go beyond the penalty clause here.

Mr. Tinning: We don't expect to go beyond the liquidated damage clause. What we are showing is: it is part of the contract and it is not an unreasonable provision, in view of the situation that exists.

The Court: If you have any argument about it, or any confusion about it, I will let it come in subject to a motion to strike and over the objection of counsel.

Mr. Smith: Exception.

Mr. Alexander: We note an exception.

Mr. Tinning: Q. What was the average cost per day, Mr. Boggs, for operating the District from May 25, 1936, to November 30, 1937?

Mr. Smith: Might I ask you a question, Mr. Tinning, for the [2101] purpose of clearing the record? Is November 30th the day when the project was completed?

Mr. Tinning: Yes.

Mr. Smith: And the work was completed?

Mr. Tinning: We checked out on the 30th.

(Testimony of Wallace B. Boggs.)

Mr. Smith: Your position is, for the record, that the project was completed on that day?

Mr. Tinning: Yes; and we have already stated that; we only expect to run until July 31st; but to give you your average we are taking the whole period.

Mr. Smith: I was interested in November 30th. So, we can consider that an admission by you that that was the date of completion?

The Court: When did you notify the state and county of the completion?

Mr. Tinning: I think, the workmen stopped there on the 1st of December.

Mr. Smith: Mr. Kelly's certificate which you offered in evidence here a while ago is dated November 30th.

Mr. Tinning: I think that is the date. The reason we had that transmitted, as I understand it, or as I remember it, was that November 30th was a Saturday, following Thanksgiving, and then we had to get Mr. Kelly's certificate and bring it down to the State Highway Commission meeting on the 3rd of December and get this thing taken over by the state so we could open it by the 5th, as a state project. Mr. Smith, I don't want to——

Mr. Smith: I just want to get that date.

Mr. Tinning: I think the date was that. It is not an admission, because I am not sure of that.

Mr. Smith: What date do you say it was completed? I would like [2102] to know.

(Testimony of Wallace B. Boggs.)

Mr. Tinning: I think, as a matter of fact, that the actual date of completion of the project was the 30th day of November.

Mr. Smith: Well, that is satisfactory. I will accept that.

Mr. Tinning: That is my recollection.

The Court: He indicates that is the date you notified Kelly.

Mr. Smith: No; that is the date Kelly certified to them that he accepted it as a completed project, according to the statement.

Mr. Tinning: Has the objection been overruled?

The Court: Overruled.

Mr. Tinning: Q. What was the average cost per day? Did you answer the question?

A. $272.899.

Mr. Smith: Another thing: we would like to object to the line of testimony, particularly on this exhibit; we have not had a chance to examine the details included therein, and we don't want any testimony in here without having a chance to——

The Court: The thought struck me a moment ago. That exhibit is available; you can supply them with copies?

Mr. Tinning: I have supplied them with copies. I suppose it goes in subject to check, if there is anything wrong.

Mr. Wittschen: Let us have an understanding: we did this at your suggestion; we don't want you to claim error when we put it in in this way by

(Testimony of Wallace B. Boggs.)

stipulation that we have done something we should not. You can have every opportunity to check. We are doing it along the lines by which you proved your case, with an understanding between us that, in any of these matters, you can go over them if you want to and make any corrections if there are any errors in them. That opportunity is always open to you. That is understood, isn't it?

Mr. Smith: Certainly.

Mr. Tinning: And Mr. Brotherton is in the room; I can put him [2103] on; but it will take a lot of time.

Mr. Smith: I am not trying to have you do that at all.

The Court: It is subject to any corrections hereafter that you desire to make.

Mr. Smith: It has been received subject to a motion to strike, anyway.

Mr. Alexander: No; it has not gone in yet.

Mr. Tinning: The testimony is; and I am just going to put the document in.

The Court: He is laying a foundation.

Mr. Tinning: Q. Mr. Boggs, that document that you have just been referring to is an audit of the District records, with respect to the items which you have just testified to, which was made by Mr. Brotherton, the same man who made the other statement that you have testified to? A. Yes.

Mr. Tinning: We offer in evidence, if the Court please, the document from which the witness has

(Testimony of Wallace B. Boggs.)

just been giving his testimony with respect to $272.899 per day average cost of operating the District.

Mr. Smith: To which we make the same objection.

Mr. Alexander: We join in the objection.

The Court: Same ruling.

Mr. Alexander: Exception.

Mr. Smith: Exception.

(The document was marked "Defendant's Exhibit X-114.")

[Set forth in the Book of Exhibits at page 595.]

Mr. Tinning: Q. Mr. Boggs, has Mr. Brotherton made a computation of the cost per day for interest on the bonds of the District during the period from May 24, 1936 to July 31, 1937?

Mr. Smith: Well—that is a preliminary question? [2104]

Mr. Tinning: Yes.

Mr. Smith: Ask him to answer it "Yes" or "No," so we may make an objection.

The Witness: A. Yes.

Mr. Tinning: Q. I show you a table of interest calculations, Mr. Boggs. You have been over this before. This is the data that was prepared by Mr. Brotherton from the District records?

A. Yes.

Q. What was the amount of interest that was paid on the bonds of the District for the period from May 24, 1936, to June 13, 1936?

(Testimony of Wallace B. Boggs.)

Mr. Smith: Just a minute. We object upon all grounds previously stated and, in addition thereto, on the ground they would have to pay their interest on their bonds no matter what the situation was with regard to any construction work. They have put out their bond issues. The bonds contain a provision for payment of interest and the terms and conditions of the bond issue remain constant no matter what the situation may be with regard to any work they are doing or not. [2105]

Mr. Wittschen: Well, we did not have the use of the tunnel.

Mr. Smith: That would make no difference in the bonds whatever, because they do not depend on the use of the tunnel.

Mr. Tinning: It is a measure of the loss of the value to the public. You rent a house and you use it for a year, or you cannot use it for a year because of some difficulty, maybe the contractor is slow in finishing it for you if you are building a house, and you have to pay rent. That is certainly one of the elements——

The Court (Interrupting): The Court is prepared to rule.

Mr. Alexander: We want to join in the objection, your Honor.

Mr. Smith: We object on the ground it calls for guess-work, speculation, and the thinnest kind of proof as to the allegation of damages.

(Testimony of Wallace B. Boggs.)

The Court: This testimony will go in subject to the objection of counsel and subject to a motion to strike out.

Mr. Smith: Exception.

Mr. Alexander: Exception.

Mr. Tinning: Q. What was the amount of interest for the period from May 24th to June 13th, 1936, paid by the District on its bonds?

A. $4,149.32.

Q. For the period from June 14th, 1936 to November 9th, 1936, what was the interest?

Mr. Smith: The same objection.

Mr. Alexander: The same objection.

The Court: The same ruling.

Mr. Alexander: Exception.

Mr. Smith: Exception.

A. $30,912.40.

Mr. Tinning: Q. For the period from November 10, 1936 to July 31, 1937, what was it?

Mr. Smith: We make specifically the objection that was made to [2106] the first question upon this feature, and on the ground of objections specified in the other testimony on this line.

Mr. Alexander: We join in the objection.

The Court: I will allow it to come in as I have indicated, subject to a motion to strike and over the objection of counsel.

Mr. Smith: Exception.

The Court: That is the testimony on interest on the bond indebtedness.

(Testimony of Wallace B. Boggs.)

Mr. Tinning: Q. The total of the figures which you have here, Mr. Boggs, is $89,832.68.

The Witness: Yes.

Mr. Tinning: We offer this tabulation in evidence, if the Court please, as Defendant and Cross-complainant's Exhibit in proper order.

Mr. Smith: Objected to upon the same grounds as hitherto stated.

Mr. Alexander: We join in the objection.

The Court: It will come in subject to the same ruling.

Mr. Alexander: Exception.

Mr. Smith: Exception.

(The document was marked "Defendant's Exhibit X-115.")

DEFENDANT'S EXHIBIIT X-115

Joint Highway District No. 13 of the State of California

Interest Calculations—Interest on Bonded Indebtedness

Interest becomes due and payable on the 2nd days of January and July of each year. Bonded redemptions made on the 2nd day of January of each year.

Interest from January 2, 1936 to January 2, 1937, amounts to $75,-725.00, or $207.46575 per day.

(Testimony of Wallace B. Boggs.)

Interest from January 2, 1937 to January 2, 1938, amounts to $69,800.00, or $191.23288 per day.	
For 20 days—May 24, 1936 to June 13, 1936, the interest cost is	$ 4,149.32
For 149 days—June 14, 1936 to November 9, 1936, the cost is	30,912.4
For 264 days—November 10, 1936 to July 31, 1937, the cost is	54,770.96
Total	$89,832.68

[Endorsed]: U. S. Dist. Ct. of N. D. Cal. No. 20101-R. Deft's Ex. X-115. Filed June 1, 1938. Walter B. Maling, Clerk. By J. A. Schaertzer, Deputy Clerk.

Mr. Tinning: Q. Mr. Boggs, it appears from the tabulation that the interest per day from the period January 2, 1936 to January 2, 1937, amounted to $202.46 per day.

Mr. Smith: Objected to on the ground the interest appears on the tabulation. I object to it upon that ground and the other grounds.

Mr. Alexander: The same objection.

The Court: Overruled.

Mr. Smith: Exception.

Mr. Alexander: Exception.

A. Yes.

Mr. Tinning: Q. From the period January 2, 1937 to January 2, [2107] 1938 the interest was $191.23 per day.

(Testimony of Wallace B. Boggs.)

Mr. Smith: The same objection.

Mr. Alexander: The same objection.

The Court: The same ruling.

Mr. Smith: Exception.

Mr. Alexander: Exception.

The Witness: A. Yes.

Mr. Smith: I take it those last two questions and answers were subject to your Honor's ruling that it is subject to a motion to strike?

The Court: Subject to a motion to strike, I indicated that before.

Mr. Tinning: Q. Mr. Boggs, do you know what the travel over the Tunnel Road, both ways, both east and west, was according to the traffic count taken by the State of California in the year 1936, the average daily traffic?

Mr. Smith: Just a minute. I will object to that on all the grounds previously stated, and as obviously calling for information which has about as much to do with this case as the amount of traffic, you might say, that went over the road between Salinas and Watsonville, or between Sacramento and Truckee, or any other place.

The Court: Well, I will give you time to argue that. I am allowing this testimony to come in over the objection of counsel and subject to a motion to strike.

Mr. Alexander: May we join in the objection, your Honor? Exception.

Mr. Smith: Exception.

(Testimony of Wallace B. Boggs.)

Mr. Wittschen: In showing liquidated damages you cannot do that without—you have to have a penalty to show——

Mr. Smith: Will it be stipulated there has never been any toll [2108] charged for the use of the highway?

Mr. Wittschen: Certainly.

Mr. Tinning: Well, it is a fact, but we can ask the witness.

Q. This is a free public highway, this tunnel was built by the District, Mr. Boggs? A. Yes.

Q. It is also true that the routes that existed prior to and now exist, that were used prior to the time this project, this Broadway Tunnel project was built, were all free public highways?

A. Yes.

Q. What was the average daily traffic?

Mr. Smith: Objected to on the same ground.

Mr. Tinning: Over the Tunnel Road to which the Broadway Tunnel was available, would it have been available to use if it had been completed in 1936?

Mr. Smith: Objected to further upon the ground it calls purely for a speculative conclusion of the witness. There is absolutely no basis for any witness in the world testifying whether anybody would have used it or not used it in 1936.

Mr. Alexander: I join in the objection.

Mr. Smith: It is pure guess-work.

(Testimony of Wallace B. Boggs.)

Mr. Wittschen: If a man travels upon the roads immediately adjacent to it——

The Court: You better develop the fact, then.

Mr. Tinning: We have a man here from the State, if counsel wants to go into that phase of it. I though Mr. Boggs could testify to it.

Mr. Smith: Well, you have some language in your question, would the traffic available have used this road.

Mr. Tinning: No, I did not say whether it would have used it. I said if it was available for use what traffic——

Mr. Smith: I think if you would read the question, I think it is vicious in its present form.

Mr. Tinning: Q. Mr. Boggs, what was the travel over the Tunnel [2109] Road in 1936 which used the routes that were then available for crossing the hills from Contra Costa County into Alameda County for which the Broadway Low Level Tunnel is a substitute, a present substitute?

Mr. Smith: Objected to upon the ground it assumes something not in evidence, calls for speculative conclusions of the witness, and upon all the grounds previously urged.

The Court: I will allow it to come in subject to a motion to strike.

Mr. Alexander: We join in the objection.

The Court: The objection will be overruled.

Mr. Alexander: Exception.

Mr. Smith: Exception.

(Testimony of Wallace B. Boggs.)

A. 1,911,870 vehicles annually.

Mr. Tinning: Q. That is based upon a daily average of how many? A. 5238.

Q. How much was the saving of distance by the Broadway Low Level Tunnels over the prior existing routes?

Mr. Smith: The same objection.

The Court: The same ruling.

Mr. Alexander: The same objection.

Mr. Smith: Exception.

Mr. Alexander: Exception.

A. An average of 2 miles.

Mr. Tinning: Q. What is the computed value, or cost of the use, or the loss by reason of the fact these 1,911,870 vehicles were unable to use the tunnel in 1936?

Mr. Smith: Objected to on all the grounds previously urged and also on the ground it calls for an opinion and conclusion of the witness, on a subject-matter which is one which is purely within the province of the Court to adjudge if the subject be at all proper [2110] to pass upon in this action; also upon the ground there is no foundation laid and no showing this witness has any knowledge of the subject.

The Court: If they insist on the foundation being laid it is better to do it, gentlemen.

Mr. Alexander: We join in the objection.

Mr. Tinning: Q. Mr. Boggs, as a part of your duties as engineer on this project you made traffic

(Testimony of Wallace B. Boggs.)

estimates upon which the Government or the State of California have acted? A. Yes.

Q. Were those traffic estimates based upon the counts taken by the State of California of vehicles over this route and other routes? A. Yes.

Q. Have those counts been taken annually or semi-annually by the State of California for several years last past?

A. Annually for the last two years and semi-annually prior to that.

Q. This is a state-wide count that was taken by the State? A. Yes.

Q. On this particular route, the Tunnel Road, were those counts taken during the same time the State was taking the other counts? A. Yes.

Q. Under the direction and control of what department, was it the Department of Public Works of the State of California? A. Yes.

The Court: We will conclude for the day, and since we made such rapid headway this afternoon I suggest you remain in session for the next half hour to see if there are not many other things that you can handle in as rapid a fashion as you did today. We will take a recess until tomorrow morning at ten o'clock.

(An adjournment was here taken until tomorrow, Thursday, June 2, 1938, at ten o'clock a. m.) [2111]

(Testimony of Wallace B. Boggs.)

Thursday, June 2, 1938;
10 O'Clock A. M.

WALLACE B. BOGGS,

recalled.

Direct Examination (Continued)

Mr. Tinning: Before we resume the line of questioning of yesterday afternoon, Mr. Boggs, I would like to ask you a question or two about Defendant's Exhibit 114. The schedule referred to is the schedule that was introduced yesterday, Mr. Boggs, to support the figures that you testified to: $272.899 per day as the average cost of operating the District during the period May 25, 1936 to November 30, 1937. I would like to call your attention to the supporting schedules that are attached to this exhibit, and, for the purpose of this question, to the third page of those supporting schedules, which is headed "Description of Charge," and which column appears to contain a short description of the various items of expenditures which were made by the District for the District operation and which were not attributed or listed in the cost of maintenance and protection that were direcly attributable under the District's claim to the Six Companies' cessation of work.

Q. Are all of the charges set forth, for example, some of the charges starting under Voucher No. 1085, "Insurance on Instruments, Plumb Bobs, Office Rent, May Expense," and, with respect to

(Testimony of Wallace B. Boggs.)

May expense, those are the travelling expenses of the various employees of the District which are allowed by the District to those employees during the period referred to; is that correct?

A. Yes.

Mr. Tinning: Just a moment before you answer the question.

Mr. Smith: Just ask a question first, so I can object.

Mr. Tinning: Q. Are those the travelling expenses of people——

Mr. Smith: If you are asking a question, I will object upon the reasons already stated: that the testimony is not admissible, on the same grounds urged yesterday in connection with this line of [2112] testimony concerning which your Honor ruled you would admit it subject to a motion to strike out.

Mr. Alexander: We join in the objection.

The Court: Overruled.

Mr. Smith: Exception.

Mr. Alexander: Exception.

The Witness A. Yes.

Mr. Tinning: Q. All of the items which are listed under "Description of Charges," all of the items set forth in this account, are items which you testified yesterday,—and I again ask you to wait for the answer until I finish,—which are listed in this schedule for the purpose of showing items which were necessary expenses of the District during the

(Testimony of Wallace B. Boggs.)

period it was necessary for the District to run, after Six Companies ceased operations on June 13, 1936 and up to November 30, 1937 when the work was completed?

Mr. Smith: Same objection.

Mr. Alexander: Same objection.

The Court: The objection will be overruled.

Mr. Smith: Exception.

Mr. Alexander: Exception.

The Witness: A. Yes.

Mr. Tinning: Q. Mr. Boggs, is the sum of $272.899 the reasonable cost, in your opinion, for operating the District,—the average daily reasonable cost of operating the District, from the 25th day of May, 1936, to the 30th day of November, 1937?

Mr. Smith: To which we make the same objection.

Mr. Alexander: We join in the objection.

The Court: Overruled.

Mr. Smith: Exception.

Mr. Alexander: Exception.

The Witness: A. Yes, sir. [2113]

Mr. Tinning: If your Honor please, I am going to ask leave to add a few exhibits to those put in yesterday under the omnibus clause, in view of one of Mr. Smith's questions with respect to Mr. Kelly's certificate, and, in fairness to counsel, I will say that, before we knew that Mr. Alexander felt that he would have to take the position he has taken,—which we are not criticizing,—I had understood the

(Testimony of Wallace B. Boggs.)

key document would be satisfactory to these gentlemen. As it has developed there may be some question about that, I desire to put the supporting documents in with respect to the completion of the work, the documents which show the action of the District and the various officers, as required by the provisions of Section 32 of the Joint Highway District Act which I read yesterday.

I offer in evidence, as defendant's exhibit in proper order, the affidavit and certificate of the District Engineer that the Joint Highway District project is completed, which affidavit the record will show, from the exhibits put in yesterday, that Mr. Kelly's certificate was filed with the Director of the Department of Public Works of the State of California on the 30th day of November, 1937, the document now offered being the certificate and affidavit of the District Engineer dated November 29, 1937.

Mr. Smith: Will you add them all together in your offer at the same time, so we can make one objection?

Mr. Tinning: Yes. Counsel states a suggestion that we put in another small omnibus offer.

The Court: Put them in together.

Mr. Alexander: Mr. Tinning, we did not suggest you put them in.

Mr. Tinning: No; but, if they are offered, that is the way it is suggested they be offered.

Mr. Alexander: Yes.

(Testimony of Wallace B. Boggs.)

Mr. Tinning: We also offer the resolution of board of directors of Joint Highway District No. 13 of the State of California which [2114] recites the execution of the affidavit by the District Engineer with the State, the issuance and filing of the certificate with the Director of the Department of Public Works of the State of California dated November 30, 1937, which resolution certifies that the District project is completed in accordance with law, and which resolution was passed on the 1st day of December, 1937.

We also offer in evidence the certificate of C. E. Wade, County Clerk of the County of Alameda, certifying that a certified copy of the resolution of the board of directors of the Joint Highway District last referred to was filed by the Board of Supervisors of the County of Alameda on the 2nd day of December, 1937.

We also offer the certificate of S. P. Wells, County Clerk of the County of Contra Costa, certifying a certified copy of the resolution of the board of directors of the Joint Highway District that the job is complete, which resolution was filed on the 1st day of December, 1937, filed with the Contra Costa County Board of Supervisors on the 2nd day of December, 1937.

I ask that all these documents go in as one exhibit under the proper designation,—Defendant's Exhibit X-116.

(Testimony of Wallace B. Boggs.)

Mr. Smith: To which offer we object on the same grounds that we objected to the admission of Exhibit X-5 to Exhibit X-100, inclusive, namely, that the evidence offered is incompetent because it does not pursue the method which the contract prescribes exclusively in connection with the performance of the work of completing the construction of the project, and upon all the other grounds which we mentioned in objecting to the admission of the indicated number of exhibits.

Mr. Alexander: We join in the objection.

The Court: Overruled.

Mr. Smith: Exception.

Mr. Alexander: Exception. [2115]

(The group of documents was marked "Defendant's Exhibit X-116.")

[Set forth in the Book of Exhibits at page 630.]

Mr. Tinning: Q. Mr. Boggs, referring to your testimony of yesterday, to Defendant's Exhibit X-113, I ask you if, in your opinion, the sum of $69,001.85, the total of the cost of maintenance and protection of the work mentioned, the work of measuring the work to complete the project, readvertising and insurance, as set out on the table forming a part of the exhibit and attached to Exhibit X-113, is the reasonable value of the cost of the protection and maintenance and other items referred to in the question.

Mr. Smith: To which we will object on the grounds—all the other grounds we have heretofore

(Testimony of Wallace B. Boggs.)

urged in objecting to the proof of this particular group of items, and, in addition, that that subject matter is not properly the subject of expert testimony and, therefore, that the question is further objectionable as calling for the opinion and conclusion of the witness on a matter which is not susceptible of opinion and conclusion testimony.

Mr. Alexander: We join in the objection.

Mr. Wittschen: May I ask a question there? Do you object to the fact that we put in one sum total, because probably, if you do, we ought to take up the various figures and make up a table and ask upon each one of those if it is reasonable and so forth? But, if you don't make that objection——

Mr. Smith: No; I have not made that objection; I specifically did not.

The Court: The objection does not go to the form as it is presented?

Mr. Smith: No.

The Court: Objection overruled.

Mr. Smith: Exception.

Mr. Alexander: Exception.

The Witness: A. Yes. [2116]

Mr. Smith: Your Honor, may the record be clear that this particular character of testimony about this subject where you admitted all the basic testimony subject to a motion to strike, I take it your same ruling applies to this?

The Court: Yes; it comes in over your objection and motion to strike. If it develops in argument

(Testimony of Wallace B. Boggs.)

there is something here that I am not satisfied with, why, I will rule it out.

Mr. Tinning: Q. Mr. Boggs, in your opinion was the cost of completing the work under Schedules "A" to "H", inclusive, in the contracts referred to and listed in Defendant's X-109, the total sum being $1,751,611.74, the reasonable cost of completing the project of the District under contracts on the cessation of work by Six Companies on the 13th of June, 1936?

Mr. Smith: To which question we will object on the ground the testimony is immaterial and for the reasons heretofore urged along that same line of testimony.

Mr. Alexander: We join in the objection.

The Court: The objection will be overruled.

Mr. Smith: Exception.

Mr. Alexander: Exception.

The Witness: A. Yes.

Mr. Tinning: Q. I show you Exhibit X-115, simply for the purpose of some figures that appear on here. Mr. Boggs, what is the number of days, from June 14, 1936, to November 19, 1936?

A. 149 days.

Q. What is the number of days from November 10, 1936 to July 31, 1937? A. 264 days.

Q. In your opinion, was the period of 149 days, —the period from and including June 14, 1936 to November 19, 1936,—the reasonable period of time

(Testimony of Wallace B. Boggs.)

for the District to measure the work, readvertise it and [2117] get it under contract again?

Mr. Smith: Just a moment. We will object to the question on the ground it calls for testimony which is inadmissible for the reasons heretofore urged as to this line of testimony.

Mr. Alexander: We join in the objection.

The Court: Overruled.

Mr. Smith: Exception.

Mr. Alexander: Exception.

The Witness: A. Yes.

Mr. Tinning: Q. Was the period of time from and including November 10, 1936 to July 31, 1937 a reasonable period of time for the completion of the work on the project of the District remaining to be done after cessation by Six Companies of California under contract?

Mr. Smith: Same objection.

Mr. Alexander: Same objection.

The Court: Same ruling.

Mr. Smith: Exception.

Mr. Alexander: Exception.

The Witness: A. Yes.

Mr. Tinning: Q. Now, Mr. Boggs, we will return to the matter that we last had under consideration in yesterday's session. In addition to the computation of the traffic count that you referred to yesterday in connection with this particular project, I will ask you if, in your work as an Assistant County Surveyor of Alameda County, you at vari-

(Testimony of Wallace B. Boggs.)

ous times and as part of those duties ever took traffic counts and used the same in engineering and economic problems in connection with road construction. A. Yes.

Q. What average cost per mile in making such computations do you attribute to each automobile or vehicle using the road? [2118]

Mr. Smith: Objected to on the same grounds that we objected to the evidence yesterday, and, in order to shorten it, I won't repeat it, concerning this type of testimony.

Mr. Alexander: We join in the objection.

The Court: Overruled.

Mr. Smith: Exception.

The Court: It will come in subject to a motion to strike and over the objection of counsel.

The Witness: A. Four cents per vehicle mile.

Mr. Tinning: Q. Using those figures, Mr. Boggs, where the annual traffic which you testified to yesterday that used the route in question,—1,911,870 vehicles annually gave an average vehicle use of the road 5,238 per day,—what is the economic value or figure of the use of that route per day?

Mr. Smith: We will object to that upon the same grounds as heretofore urged, and object on the further ground the question is compound and uncertain.

Mr. Alexander: Same objection.

Mr. Tinning: I think the last part of the objection is good.

The Court: That element of economics,—that field you are going into,—be careful about that.

(Testimony of Wallace B. Boggs.)

Mr. Tinning: We will withdraw the question, in view of its viciousness.

Q. Mr. Boggs, multiplying the average number of vehicles by the average cost per vehicle of the saving in distance of the route provided by the Broadway Low Level Tunnel route over the previously used routes, what is the saving per day by the use of the Broadway Low Level Tunnels on the traffic count figures which you have testified to?

Mr. Smith: Just a moment. We will object to that on the ground [2119] it absolutely calls for pure speculative answers and conclusions of the witness, and also it is based on a state of facts not in evidence and has nothing to do with the issues involved, in addition to the objections we made to this whole line of testimony.

Mr. Alexander: Same objection.

The Court: May the Court inquire, at this time: the purpose of this offer is what?

Mr. Tinning: The purpose of the offer is to show, your Honor, the difficulty of estimating the amount of actual damage that will accrue to the District and the public if there is delay on this work; and it is for that purpose that this line of testimony, as stated yesterday, is offered. As we understand the law of liquidated damages, the damages must be reasonable; and we have a right, where it is difficult,—extremely difficult,—to estimate the actual loss, to stipulate in a contract for liquidated damages and, in showing there was a reason for

(Testimony of Wallace B. Boggs.)

such stipulation, we think we have a right to go into these things.

The Court: This is off the record.

(Discussion, off record by direction of the Court.)

[2120]

The Court: Indicate for the record the purpose of the offer.

Mr. Wittschen: As I understand the California rule of damages, while liquidated damages can only be allowed when actual damages are difficult of exact ascertainment, they also must be reasonable. Counsel has made two objections. One is that liquidated damages should not be allowed at all, and I think perhaps they have in their minds that the actual damage could be proved. We offer this testimony not to get a judgment against them for the inconvenience that the public suffers in an exact amount, but to show that there is a real loss and inconvenience and that the damage is difficult or impossible of exact ascertainment. So much for this particular evidence that is in now, to show the difficulty as to liquidated damages. Then on the other item that the District suffers by each day that it must continue in operation beyond the day it would have continued had the contract been completed in time, and in order to show the monetary loss on the bonds, we offer that as proof of the actual loss for the same purpose as the other, to show that the amount of liquidated damages is reasonable, or to show somewhat the difficulty of exact ascertainment.

(Testimony of Wallace B. Boggs.)

but that damage as to those two last items, they are specific and they are accurate, so that your Honor will have that information before you.

Mr. Smith: We renew our objection.

Mr. Alexander: We make the same objection.

The Court: The objection is overruled.

Mr. Smith: Exception.

Mr. Alexander: Exception.

Mr. Tinning: Q. Mr. Boggs, will you answer?

A. $419.04 a day.

Q. 149 days from and including June 14, 1930 to and including November 9, 1936, and the 264 days from and including November 10, 1936 [2121] to and including November 30, 1937, aggregate the sum of 413 days, do they not?

Mr. Smith: The same objection.

Mr. Alexander: The same objection.

The Court: Overruled.

Mr. Smith: Exception.

Mr. Alexander: Exception.

A. Yes.

Mr. Tinning: Q. Your last testimony, or all of the testimony with respect to the traffic is only for the specific purpose of supporting the theory that we have announced here that we are entitled to liquidated damages as we do not think liquidated damages and actual damages are the same item. Mr. Boggs, it is true, is it not, that on or about the 22nd day of May, 1934, after public tender of the bonds of the District by the Board of Directors, that the

(Testimony of Wallace B. Boggs.)

District issued and sold after proceedings duly and regularly had by the District its bonds in the sum of $2,378,000?

Mr. Smith: Objected to on the same grounds that the evidence previously was objected to.

Mr. Alexander: The same objection.

The Court: The objection will be overruled.

Mr. Smith: Note an exception.

Mr. Alexander: Note an exception.

A. Yes.

Mr. Tinning: Q. And those bonds were 15-year bonds consisting of $158,000 in the first fourteen series and $167,000 in the last or fifteenth series?

Mr. Smith: The same objection.

Mr. Alexander: The same objection.

The Court: The same ruling.

Mr. Smith: Exception. [2122]

Mr. Alexander: Exception.

A. Yes.

Mr. Tinning: Those bonds are unconditionally payable by the District irrespective of whether or not the project of the District was completed?

Mr. Smith: The same objection.

Mr. Alexander: The same objection.

The Court: The same ruling.

Mr. Smith: Exception.

Mr. Alexander: Exception.

A. Yes.

Mr. Tinning: Q. And the District has regularly paid those bond maturities that became due in 1935, 1936, 1937 and 1938 on the 2nd day of January?

(Testimony of Wallace B. Boggs.)

Mr. Smith: The same objection.

Mr. Alexander. The same objection.

The Court: The same ruling.

Mr. Smith: Exception.

Mr. Alexander: Exception.

A. Yes.

Mr. Tinning: Q. And also the interest on all of the bonds that were issued on or after May 22nd as the same became due under the terms of the bond issue?

Mr. Smith: The same objection.

Mr. Alexander: The same objection.

The Court: The same ruling.

Mr. Smith: Exception.

Mr. Alexander: Exception.

A. Yes.

Mr. Tinning: Q. After allowing to the plaintiff Six Companies of California all of the credits to which it was entitled, Mr. Boggs, [2123] is the sum of $108,066.31, set forth in the last figure on Defendant's Exhibit X-112 the reasonable increased cost of completing the District's project?

Mr. Smith: To which question we object on the same grounds as we objected to the admission of the said Exhibit X-112.

Mr. Alexander: We join in the objection.

The Court: The objection is overruled.

Mr. Smith: Note an exception.

Mr. Alexander: Note an exception.

A. Yes.

Mr. Tinning: You may cross-examine.

(Testimony of Wallace B. Boggs.)

Cross Examination

Mr. Smith: Q. Taking Exhibit 114, Mr. Boggs, what is the nature of the items Expenses opposite about 1111 under the four items on the third page of the exhibit?

A. Those are traveling expenses authorized by the District to be paid.

Q. Traveling expenses of yourself.

A. Of myself.

Q. What would be the nature of the traveling expenses?

A. That would be mileage from my office to the various parts of the job.

Q. The west end of the job is located in Oakland, where you had your office? A. Yes.

Q. The east end of the job was three or four thousand feet? A. In Contra Costa County.

Q. Just through the tunnel in the other end?

A. Yes.

Q. Then, as I understand it, your answer is that the expense included your running back and forth from your office and house to the work in an automobile?

A. No, not to my house; only from the office, downtown office, to the job.

Q. What is the nature of the item with regard to the three names next appearing, Barkley, Collins and Hunter?

A. Those are the same [2124] type of expenses, traveling expenses between the office and up and down the work on the job.

(Testimony of Wallace B. Boggs.)

Q. What is the nature of the comptroller's bond? Is that an official bond exacted by the Board of Directors from their Comptroller and the payment of the premium on the bond? A. Yes.

Q. What is the expense item E. H. Frisell?

A. Mr. E. H. Frisell was an inspector on the work and he was entitled to traveling expenses.

Q. What is this Alhambra Water Company? Did they serve water to the office? A. Yes.

Q. What did you buy water from the Alhambra Water Company for?

A. For drinking purposes.

Q. What is the nature of the expense items of Campbell, Driggs, Hammer, Hunt, Ray, Riggs, Loomer and Morin?

A. Those also are traveling expenses on the job.

Q. And what is the nature of the item in June of Braun-Knecht-Heiman Co., Chapman Flask? What does that mean?

A. That is for the purchase of a piece of equipment which was used in the testing of some of the material which went into construction work.

Q. Now, does the statement in the column which is the third column from the left-hand side of the page of the exhibit which you have before you, namely, page 3, does that purport to state the general nature of the expenditures involved in the items in question? Does that purport to be descriptive in a general way of the nature of the expenditures?

A. Yes.

(Testimony of Wallace B. Boggs.)

Q. And the name in the second column, there, is the name of the party to whom the expenditure was made: is that right?

A. Yes, in accordance with the voucher.

Q. Wherever in the same exhibit expenses that you have described in connection with any of the individuals whose names I have read, [2125] and about which I have asked you, is the expense of the same kind that you just testified? A. Yes.

Mr. Smith: That is all.

Mr. Alexander: I have some questions.

Q. What changes were made from the original specifications in Schedules A to H?

A. There were no changes made, Mr. Alexander, in the construction of the work. The only change which was involved was the breaking down of the work into 8 schedules and providing for the payment thereof to conform to those schedules.

Q. So, as I understand it, the schedules mean eight different contracts? A. Yes.

Q. And in each case the payment was made to a contractor based on a contract? A. Yes.

Q. The contract included the contract price, profit and whatever else was in it?

A. The contract price.

Q. Now, taking the project, itself, that was finished about what time?

A. December 1, 1937.

Q. That is, the entire project was completed at that time? A. Yes.

(Testimony of Wallace B. Boggs.)

Q. In December of 1936, when the cross-complaint was filed, the project had not been completed, had it? A. No.

Q. How far from completion was it in December, 1936?

A. Mr. Alexander, I do not know just how to answer that. There was work done on all parts of the project and there was practically nothing of the project that was fully completed.

Q. That is a good enough answer. By December, 1936 how much work had been done between June 13, 1936 and December, 1936, when the cross-complaint was filed?

A. There had been no work done by the contractor, by any contractor during that period.

Mr. Tinning: What date in December?

Mr. Alexander: I will get to the exact date when the cross-complaint was filed. The cross-complaint was filed December 16, 1936. [2126] On that date what part, if any, of the eight schedules had you completed?

A. None of those schedules had been completed.

Q. Had any of them been begun?

A. Yes, work on Schedule A had been begun.

Q. How much work was done on Schedule A?

A. The contractor had been working for seven or eight days at that time.

Q. Now, after the contract was completed and all the schedules were completed and the project completed did you make a final estimate of the cost?

(Testimony of Wallace B. Boggs.)

A. Yes.

Q. That was made sometime after November 30, 1937, was it not? A. Yes.

Q. Not before that time? A. No.

Q. Did the District ever give any notice to the cross-defendant sureties companies of that final estimate? A. Not to my knowledge.

Q. Now, taking June 13, 1936, you have that date in mind? A. Yes, very well.

Q. At that time how much of the retained percentage did the District have?

A. 10 per cent, according to the contract.

Q. And how much of the Six Companies' money did the District then have? Can you give us the approximate figure?

Mr. Tinning: I think we had better have the exact figure.

Mr. Wittschen: We put them in.

Mr. Alexander: You have the figures, let us get them.

The Court: We will take a recess for a few minutes. [2127]

(After Recess)

Mr. Tinning: Q. Have you got the figures you need, Mr. Boggs? A. Yes.

Cross Examination

Mr. Alexander: Q. Mr. Boggs, on June 13, 1936, how much did the District hold of retained percentages?

Mr. Tinning: Q. On June 13th, Mr. Boggs.

(Testimony of Wallace B. Boggs.)

The Witness: A. Yes. $251,149.97.

Mr. Alexander: Q. That is explained by the fact that, as Six Companies earned, 10 per cent was withheld? A. Yes, sir.

Q. And that withheld money has never been paid to Six Companies? A. No.

Q. Now, as of the same date, according to your figures, how much had Six Companies earned in May of 1936?

A. I am sorry; I have not that figure in front of me, Mr. Alexander.

Mr. Tinning: I will give it to him.

Mr. Alexander: May I look at that figure? Maybe we can get it the same way. I will reframe the last question.

Q. Now, in addition to the figure of $251,149.97 retained percentages, what other monies have been withheld by the District belonging to Six Companies?

A. The amount of Estimate No. 24, the estimate dated June 10th, of $148,586.98, and the estimate for work from June 1st to June 13th amounting to $80,715.66. These last two items were—the checks were tendered——

Q. Pardon me. Just answer the question.

Mr. Tinning: I think he has a right to explain it.

Mr. Alexander: Q. All right, go ahead.

A. The last two checks were tendered to Six Companies and returned by them.

(Testimony of Wallace B. Boggs.)

Q. Then there is a total aggregate of monies of Six Companies retained by the District amounting to how much?

Mr. Tinning: There was. [2128]

The Witness: A. $480,452.61.

Mr. Alexander: Q. And that has never been paid, except as you stated? A. That is correct.

Mr. Alexander: That is all.

Redirect Examination

Mr. Tinning: Q. Mr. Boggs, when you say, as you stated to Mr. Alexander, it was paid to the other contractors who finished the work and was deducted from the amount of the increased cost and made a figure of $108,066.31? A. Yes.

Mr. Alexander: To which we will object on all the grounds asserted and made to this line of questioning.

The Court: Overruled.

Mr. Alexander: Exception.

Mr. Smith: We join in the exception.

The Witness: A. Yes.

Mr. Tinning: Any further questions, gentlemen?

Mr. Smith: No questions.

JOSEPH BARLOW LIPPINCOTT,

called by the defendant and cross-complainant; sworn.

Direct Examination

Mr. Tinning: Q. Mr. Lippincott, you reside in Los Angeles? A. I do.

Q. You graduated from the University of Kansas in 1887 as a Bachelor of Science, and you are a member of the American Society of Civil Engineers? A. Yes.

Q. And for all the years since 1887 you have engaged in engineering work? A. I have.

Q. Both as an active construction manager and as a consultant? A. Yes, sir.

Q. You were employed for many years by the United States, in its [2129] Reclamation Service, were you not? A. Yes.

Q. You made the first survey of locations of the Hetch Hetchy project for San Francisco?

A. I did that, but not for the Reclamation District. That was private work.

Q. Private work? A. Yes.

Q. You have been employed in the capacity of a consultant on many tunnel projects in the past years, have you not?

A. Yes, I have been actively in charge of the work and also as a consultant engaged in such work.

Q. At the present time, you are a consultant for the City of Los Angeles on its Mono Water Development project, are you not? A. Yes, sir.

(Testimony of Joseph Barlow Lippincott.)

Q. You have been a consultant for the City of Los Angeles in its water development work over a great many years, have you not?

A. Yes, over 35 years.

Q. In the Mono project which is now under construction, as I understand it, there are many tunnels, or many miles of tunnels?

A. No; not on the Mono project proper. There is one very large tunnel, and one small—two small tunnels.

Q. Which is now under construction?

A. Yes.

Q. You were employed by this District,—Joint Highway District No. 13,—in August, 1935, were you not? A. Yes, sir.

Q. And you have made frequent visits to the project of the District since that time?

A. About twenty.

Q. You were familiar with the problems to be met by the District on and following June 13, 1936, at the time Six Companies of California ceased work on the project? A. Yes.

Q. From your experience as an engineer, will you state whether or not, in your opinion, the increased cost after allowing Six Companies the credits for the retained percentages, and other credits, the [2130] sum of $108,066.31 is a reasonable sum?

Mr. Smith: Just a minute. We will object to this question upon all the grounds heretofore urged in objecting to this line of testimony before.

(Testimony of Joseph Barlow Lippincott.)

Mr. Alexander: Same objection.

The Court: Overruled.

Mr. Smith: Exception.

Mr. Alexander: Exception.

The Witness: A. The additions and subtractions to arrive at that $108,000 I am not fully familiar with. I am familiar with a figure of 1,751,000 and some odd dollars which was the cost of completion. The figure that I last referred to was $1,751,-611.74.

Mr. Tinning: Q. That is the cost of the work under the contracts for Schedules A, B, C, D, E, F, G and H? A. Yes.

Mr. Smith: Same objection.

Mr. Alexander: Same objection.

The Court: Same ruling.

Mr. Smith: Exception.

Mr. Alexander: Exception.

Mr. Smith: I ask that the objection and the exception be noted prior to the answer.

Mr. Alexander: May that be done, your Honor?

The Court: It may be done.

Mr. Tinning: Cross-examine, gentlemen.

Mr. Smith: No questions.

Mr. Wittschen: Just a moment, please.

Mr. Tinning: Q. Mr. Wittschen suggests that I did not make my question broad enough. In your opinion, Mr. Lippincott, is the sum of $1,751,611.74 paid to the Contractors by the District under Sched-

(Testimony of Joseph Barlow Lippincott.)

ules A to H, all letters inclusive, the reasonable value of the [2131] cost of completion of the work remaining to be done after Six Companies left the work on the 13th of June, 1936?

Mr. Smith: To which we want to interpose the same objection as heretofore made.

Mr. Alexander: I join in the objection.

The Court: Overruled.

Mr. Smith: Exception.

Mr. Alexander: Exception.

The Witness: A. In my opinion, it is a reasonable figure.

Mr. Tinning: Cross-examine.

Mr. Smith: No questions.

Mr. Alexander: No questions.

H. A. VAN NORMAN,

called by defendant and cross-complainant; sworn.

Direct Examination

Mr. Tinning: Q. Mr. Van Norman, you reside in Los Angeles? A. Yes.

Q. What is your occupation?

A. I am at present the Chief Engineer and General Manager of the Bureau of Public Works and Supplies for the City of Los Angeles.

Q. How long have you been connected with the Bureau of Public Works with the City of Los Angeles? A. Since 1907.

(Testimony of H. A. Van Norman.)

Q. During that time, have you been actively participating in the development of the water system of the City of Los Angeles as an engineer?

A. Yes. I might qualify my first answer to the extent that for a period of about 2½ years, from 1923 to 1936, I was City Engineer of the City of Los Angeles on leave of absence from the Water Department.

Q. During the period of your work, have you had to do with the estimating of the cost of the work done by your Department? A. Yes. [2132]

Q. During that period, have you had experience with the construction of tunnels?

A. Yes.

Q. You were employed by Joint Highway District No. 13 of the State of California in August of 1935, prior to the time that the slide occurred?

A. Yes, just prior.

Q. Since that time, Mr. Van Norman, have you frequently visited the work of the tunnels on the Broadway Low Level Tunnel project?

A. Yes; I made occasional, frequent trips.

Q. Were you familiar with the problems that confronted the District on or about June 13, 1936, with respect to proceeding with the construction of this work after Six Companies ceased work on that date? A. Yes, sir.

Q. Are you familiar with the work that was done by the contractors who completed the project

of the District under Schedules A, B, C, D, E, F, G and H? A. Yes.

Q. In your opinion, was the sum of $1,751,-611.74, paid by the District for the completion to the contractors, for the completion of that work, a reasonable sum?

Mr. Smith: Just a moment. We object to that question on all the grounds heretofore urged to the same type of testimony.

Mr. Alexander: We join in the objection.

The Court: Objection overruled.

Mr. Smith: Exception.

Mr. Alexander: Exception.

The Witness: A. Yes, I consider that figure a reasonable one for the cost of the completing of the work.

Mr. Tinning: Q. Do you consider the sum of $108,066.31, the increased cost of the work to the District, the reasonable figure?

Mr. Smith: Same objection.

Mr. Alexander: Same objection.

The Court: Overruled: [2133]

Mr. Smith: Exception.

Mr. Alexander: Exception.

The Witness: A. If that sum is confined to the construction work only, my answer is "Yes."

Mr. Tinning: Q. Well, I will show you Defendant's Exhibit X-112,—which is a tabulation of the amount that was earned by Six Companies, the amount that was paid to the contractors who finished, and less the credits to Six Companies for the

(Testimony of H. A. Van Norman.)

retained amounts by the District, and a credit for incompleted work appearing on no estimate.

A. With that explanation, my answer is "Yes."

Mr. Tinning: You may cross-examine, gentlemen.

Mr. Smith: No questions.

Mr. Alexander: No questions.

Mr. Wittschen: That is our case.

Mr. Tinning: Any rebuttal?

Mr. Smith: No.

Mr. Wittschen: At this time, if the Court please, the evidence on all issues being closed, the defendant and cross-complainant moves, again, as it did before, and incorporates in this motion, a motion for judgment and special findings as that motion was heretofore made at a session of this Court on Friday, May 27, 1938; and, in addition thereto, the cross-complainant now moves the Court for a judgment in its favor against the plaintiff and cross-defendants, and against each of the other surety cross-defendants that are still in the case, moving for a judgment against the plaintiff for the full amount of its cross-complaint and for a judgment against each of the sureties respectively for that amount [2134] for which they are liable under the

bond which is in evidence in this case; and the defendant and cross-complainant moves separately for a judgment in its favor on each and every and all of the issues raised by the cross-complaint and the answer of the plaintiff and cross-defendant, and also the answers or answer of the respective surety companies, and on each and every one of the separate defenses that are raised in the respective answers.

This motion is made upon the ground that, the Court having decided the plaintiff had no right to rescind the contract but in effect abandoned it, a cause of action for the damages the defendant and cross-complainant sustained springs from that breach, and on the further ground that the defendant and cross-complainant is entitled to damages for the increased cost of completing the work as one item for the cost of protecting and maintaining the work, as those items have been specially pleaded and proven, and also for liquidated damages at the penalty prescribed in the amount of $500 per day. We are not asking for special damages for delay, but rely upon the penalty for liquidated damages.

Findings embodying each of these questions will be prepared and filed, and we ask for special findings and special conclusions of law in our favor on each and every and all of the issues, and ask that judgment be rendered in the amount prayed for in the prayer of the cross-complaint as amended against the plaintiff for the full amount and against

each of the sureties for their proportionate amount respectively.

The Court: May I inquire: What does the record disclose in relation to the sureties?

Mr. Wittschen: The sureties, in their answer, admit the execution of the contract, and, of course, as part of our original complaint, a letter was written to each of the sureties—— [2135]

The Court: That is in the record already?

Mr. Wittschen: Yes; and the surety companies stipulate they did not complete the contract, and they were notified.

Mr. Smith: We will have opposition to the motion, of course; but, before discussing that motion and making a further motion, we desire to make a motion to strike; and, to enable me to make a more accurate statement of the motion, I have written it out but will not file it, but will read it into the record.

Plaintiff and cross-defendant moves to strike from the record in the case the evidence given and offered through the witness Wallace B. Boggs concerning

(a) Cost of employing engineers, office force, watchmen, and procuring materials and supplies for operation of the District after June 13, 1936;

(b) Cost or expense to the District for interest on its outstanding bond issue during any period after June 13, 1936;

(c) Amount of traffic over the so-called Tunnel Road, or evidence concerning alleged damage to public from non-completion of the project of the District on or before May 24, 1936.

The evidence so objected to commences at approximately line 7 on page 1671 of the transcript, beginning with the question: "During the period following the 24th day of May, 1936, did the District continue to employ engineers, etc.?" and continues down to and including the question: "Under the direction and control of what department—was it the Department of Public Works of the State of California?" on page 1682 of the transcript; and this motion is directed to all thereof beginning at the page and place noted and ending at the page and place noted.

Also, to supplement what I have written out, the motion is likewise directed to the testimony adduced here this morning along [2136] the same lines, concerning the same subjects which I have mentioned, and, of course, I am not able to give a page number of the record because we have not yet been furnished with the typewritten record; but this motion is directed to the evidence which I specifically pointed out, as well as to what has been received this morning through the witness Boggs on the same subjects.

The evidence objected to and admitted subject to motion of plaintiff and cross-defendant to strike same is now moved to be stricken out upon the grounds that same is not proof in any manner of damage caused to cross-complainant by cross-defendant; also that the elements of damage sought to be established thereby are too remote and too speculative and not within the purview or rules of damages covering this subject; further that,

had it not been for the breach of the contract by the cross-complainant in improperly deducting penalties against the cross-defendant, all of the work would have been completed not later than January 3, 1937, which would have been the latest possible date when it would have been necessary for any of the elements covered by this evidence to have continued; further, that no matter whether cross-complainant was engaged in constructing its project or not it was liable for payments of its bond interest; that no revenue was derived by cross-complainant from the tunnels or project, and therefore no damage could have possibly been sustained by any delay in completion of same by Joint Highway District or by the public; that the evidence concerning the use of the highways by the public is purely speculative and guess work, and has nothing to do with any issues involved in this case; further, for the reasons stated by me, the evidence is incompetent, irrelevant and immaterial, and should be stricken from this case. [2137]

Mr. Alexander: The cross-defendant surety companies join in the motion to strike out on the same grounds.

Mr. Wittschen: Your Honor, so that the record may be clear, that portion of plaintiff's motion which is directed to the cost of protecting the work and taking care of the project until new bids were called is an element of damage that springs from the breach. The cost of the bond issue, the interest on the bonds, the cost as shown to the traveling

public, and those matters that counsel claims are speculative were not offered and we are not asking for those as specific items of damage. They were merely offered to show two things, one that the liquidated damages were not unreasonable, and also to show the difficulty of the proof of actual damages. The law in California is that where actual damages cannot be proven, or that their proof will be extremely difficult, the parties may agree upon reasonable stiuplated liquidated damages, and as I said before and now repeat we are not asking for double damages, we are not asking for damages in excess of the penalty of $500 a day, but we are asking for damages for that penalty because we think it is reasonable, and because it comes within the rule. And we rely upon the cases that are all in that last brief that I handed to your Honor, which I called "Defendant's First Supplemental Brief"—there are two or three cases in there that are squarely on the point; the latest, perhaps one of the best considered cases, is that City of Reading Case; and I have also put in numerous cases from California which hold that a penalty of this kind is proper or liquidated damages in lieu of the penalty.

Mr. Smith: We have other motions to make, and we think it would be better to get them all in.

Mr. Wittschen: Do you want a ruling on one at a time?

The Court: Do you desire the Court to rule now?

[2138]

Mr. Smith: It is entirely up to your Honor.

The Court: I want to analyze some of the phases in respect to damages, for instance, actual damages. If I follow counsel, the damages do not exceed the $500 a day?

Mr. Wittschen: Yes, if you will take the interest—

The Court: I am interested in the actual work.

Mr. Wittschen: The actual damages in a case of this kind, if your Honor please, cannot be proven. It is obviously true, as Mr. Smith has stated, that the Highway District, as a District—as Mr. Tinning has corrected me, the actual damages, of course, for increased cost can be proved and the actual damage for protecting the work can be proved, and as to those two items, one of which is $108,000 and the other $69,000, those are actual damages, and are proven, and they spring from the breach. The actual damages for delay cannot be proven. Take, for instance, the construction of a city hall, take a school building, it is impossible to show just what the inconvenience and damage would be to the public that want to use a new school building or to the public that wanted to use a city hall. We have merely shown, your Honor, we had several millions of dollars invested in this project, and that the cost on that alone amounted to more than $200 a day. We have also shown, your Honor, that the cost of keeping the District intact amounted to $278 a day. It is perfectly obvious that you cannot get that cost down to exact refinement. The District will have to keep some nominal assistance as long

as the bond issue holds; in fact, there would be no cost if the county would take that over, it is hard to say, the District may have to keep this force going for some days, even after this contract has been completed, to do certain check-up work. That $278 was not offered as an exact item of damage, and we are not asking your Honor to consider it an such, but the people who really lose the benefit of this tunnel [2139] are not alone the people residing in the District who use it, but they are the entire traveling public up and down the State.

The Court: It is my thought on that that we are getting into the realm of speculation.

Mr. Wittschen: That is why you have liquidated damage, because you cannot prove the actual damage; if the actual damages could be proven we would have to prove them, we could not have liquidated damages, and the Code provision provides, I think it is Section 1671 of the Civil Code—I will get it if your Honor wants it accurately.

The Court: I suggest that you submit your motion now, that is, if it does not interfere with what you have in mind.

Mr. Smith: What we had in mind was that the Court stated at the time we made the motion that you would like to pass upon it after argument, at the conclusion of the case. That is what your Honor has indicated, as I understood your Honor. I do not want to get into an elaborate argument, but we do not agree in any manner with counsel's statement that the law is as he says.

The Court: I might say that this case will go forward after I am through with it, and I want to do everything possible for me to do.

Mr. Smith: Your Honor is obligated to decide it in accordance with your conscience and the rules of law, but we have other motions to make, and we think we could make those and then argue the matter after lunch.

The Court: I think that would probably be the better thing to do.

Mr. Smith: Or argue it at a later date, or tomorrow morning. As I understand, it is stipulated now that all of the evidence is closed in the case.

Mr. Wittschen: That is correct.

The Court: On both sides? [2140]

Mr. Smith: Yes.

The Court: Very well, you can make your other motions and I will reserve my ruling on that.

Mr. Marrin: I have two motions to make. There is a counter claim in the answer as well as the cross complaint, and I think we should make the motions in both of those.

Motion of Plaintiff for Special Findings of Fact and Conclusions of Law and for Judgment in its favor on the counterclaims of defendant.

Plaintiff now moves the Court for a judgment in its favor on the counterclaims of defendant and on each of them, which counterclaims are set forth in the answer of defendant as a part of the fourth defense to the first count of the complaint on file herein and as a part of the fourth defense to the

second count of said complaint. Said motion is made on all of the following grounds:

I.

That the undisputed evidence in this case establishes substantial breaches of both express and implied conditions of the contract by the defendant, causing great loss and damage to the plaintiff in that defendant failed to make payment to plaintiff on June 10, 1936, at which time plaintiff was not in default in any manner in the performance of the contract, of the money due plaintiff from defendant under the contract for work done by plaintiff during the month of May, 1936, and by deducting from the money due plaintiff the sum of $500 per day for each day after May 24, 1936, and thereby declaring its intention to continue to breach said contract by failing to pay plaintiff the amount due it under said contract if plaintiff continued to perform same by further deduction of the sum of $500 per day until the work under said contract was completed on about the 3rd day of January, 1937, or a total deduction of [2141] $112,000.00, from money justly due plaintiff under the terms of the contract, to plaintiff's great injury and damage, thereby justifying its rescission of the contract.

II.

That the undisputed evidence establishes that the defendant failed and refused to give to plaintiff any extension of time within which to complete the per-

formance of the work under the contract, and that such refusal was wrongful and illegal because plaintiff had been unavoidably delayed in the performance of the work under the contract for a period of 300 days, or more, and had also been delayed in the performance of the work under said contract by reason of stormy or inclement weather, and had been delayed by operation of law, and plaintiff was thereby justified in rescinding the contract.

III.

That the undisputed evidence in this case establishes a substantial breach by the defendant of the contract in that the materials through and under which the tunnels were to be constructed were substantially different from those shown, or predicted, or represented in the geological report furnished to bidders, in the plans and specifications furnished to bidders, and in the contract and the specifications forming a part thereof entered into; and made the performance of the work much more difficult and expensive than it would have been had the materials corresponded with the materials predicted and represented by and in the geological report and the contract, plans and specifications; and thereby the warranty contained in the contract and relied upon by plaintiff in making same, as to the materials to be found through which the tunnels would be built, was breached to plaintiff's great injury and damage.

IV.

That the undisputed evidence in this case establishes construct- [2142] ive fraud on the part of the

defendant in inducing plaintiff to enter into the contract.

V.

That the undisputed evidence in this case establishes capricious and arbitrary conduct by the District Engineer of the defendant in failing and refusing to determine and adjudge that plaintiff was unavoidably delayed in the doing and performance of the work.

VI.

That the undisputed evidence in this case establishes that a gross mistake was made by the Engineer of the defendant District in failing and refusing to determine and adjudge that plaintiff was unavoidably delayed in the doing and performance of the work.

VII.

That the undisputed evidence in this case establishes that the defendant breached the contract by failing and refusing to give plaintiff proper lines and grades to work to in the construction of the tunnels.

VIII.

That the undisputed evidence in this case establishes that a mutual mistake was made by the plaintiff and defendant in entering into the contract in that plaintiff and defendant both believed that the ground through which the tunnels would be driven would be of self-supporting character for about 2,000 feet of the length of each of the tunnels; and both parties relied upon this fact in entering into

said contract; and in truth and in fact the ground through which said tunnels were driven was entirely nonself-supporting, but required artificial support throughout before and during the lining of the tunnels with concrete to the extent that it was impossible to remove such artificial support, thereby causing plaintiff great injury and damage. [2143]

That the undisputed evidence in this case establishes that plaintiff relied upon the information contained in the various documents furnished to it by defendant prior to bidding, including particularly the geological report, plans, and specifications, and planned the doing of the work covered by the contract in reliance upon the information so furnished that the ground through which the tunnels would be driven would be found to be self-supporting for the most part; and by reason of the fact that none of said ground was self-supporting, plaintiff was unable to construct the tunnels in accordance with its plans made in reliance upon the information furnished by the defendant, thereby causing great injury and damage to plaintiff.

X.

That the undisputed evidence shows that plaintiff did not abandon the contract but rescinded the same for material breaches thereof by defendant entitling plaintiff to rescind.

XI.

That the undisputed evidence shows that under the contract and particularly paragraph 5 thereof, defendant was required, in the case of abandonment of the contract by plaintiff, to complete the work itself and that the defendant did not do so, but caused the work to be completed by contracts which defendant entered into with other parties.

XII.

That the undisputed evidence shows that defendant is not entitled to recover any damages on account of any delay in the completion of the work.

XIII.

That the undisputed evidence shows that the alleged expense [2144] to the defendant was not determined in the manner provided in the contract and specifications and the plaintiff was never notified by the defendant of the excess, if any, so claimed to be due.

XIV.

That there is no evidence which would justify an award of damages in favor of defendant and against plaintiff.

Plaintiff moves for such judgment for each of the reasons hereinbefore stated and further moves the Court for special findings of fact in accordance with the allegations of plaintiff's complaint and each count thereof.

Plaintiff further moves the Court for conclusions of law that defendant take nothing by said counterclaim set forth as a part of the fourth defense to the first count of the complaint on file herein and that defendant take nothing by said counterclaim set forth as a part of the fourth defense to the second count of said complaint, and plaintiff further moves for judgment in favor of plaintiff separately on each of said counterclaims.

Plaintiff requests special findings on each and all of the issues raised by said counterclaims and each thereof which findings will hereafter be prepared and presented prior to the conclusion of the trial and will embody findings upon each and all of the issues raised by the pleadings.

Mr. Wittschen: Mr. Marrin, have you finished with that?

Mr. Marrin: I have finished.

Mr. Wittschen: Might I ask you a question? My theory of that is that the counterclaim is no longer in the case. In other words, a counterclaim is an offset against something which might be recovered by the plaintiff. I would agree with you that could be addressed to the cross-complaint, but don't you think the counterclaim falls unless the plaintiff recovers something against which a [2145] counterclaim could be off-set.

Mr. Marrin: Under the Code section in this State I think the Court has the power to give relief on the counterclaim. About the only difference between a counterclaim and a cross complaint is

you must answer a cross complaint and you do not have to answer a counterclaim.

Mr. Wittschen: May it be stipulated that the motion that we made with respect to the cross complaint may apply to the counterclaim, if you so construe the provision?

Mr. Marrin: You mean the motion you just made?

Mr. Wittschen: The motion I just made on the issues raised on the cross complaint and answers thereto, that it may also be understood to be made to the counterclaim, that we make the same motion with respect to judgment in our favor on the counterclaim?

Mr. Marrin: There is no objection to that. I am simply making these motions because I want to be certain to protect our rights.

Mr. Wittschen: We had not filed our motion, and I think you have filed yours. You make no point that ours was not filed, and the motion may be deemed in proper form without the necessity of that?

Mr. Marrin: My understanding is it is not required that you do file it.

Mr. Alexander: I want to join in that because I have not prepared a motion, and I will have to state mine orally.

Mr. Marrin: It is done for the purpose of accuracy.

The Court: I think the only purpose is, out of an abundance of caution so that you may have a complete record.

Mr. Marrin: I assume your Honor would prefer that I present these motions before you pass on them.

Mr. Wittschen: Your other motion is substantially similar, [2146] I have read it. It might save time if it was deemed read and copied into the record.

Mr. Marrin: It is stipulated it may be deemed read and copied into the record.

The Court: Is it identical?

Mr. Smith: It is identical except for certain changes.

Mr. Marrin: I believe there are one or two grounds at the end that are slightly different.

The Court: It may be deemed read and copied by the Reporter.

(Motion of Plaintiff and Cross Defendant, Six Companies of California, For Special Findings of Fact and Conclusions of Law and for Judgment in its Favor on the Cross-Complaint of Defendant and Cross Complainant.

Plaintiff and cross defendant, Six Companies of California, now moves the Court for a judgment in its favor on the cross complaint of defendant and cross complainant on all of the following grounds:

I.

That the undisputed evidence in this case establishes substantial breaches of both express and implied conditions of the contract by the defendant and cross complainant, causing great loss and dam-

age to the plaintiff and cross defendant in that defendant and cross complainant failed to make payment to plaintiff and cross defendant on June 10, 1936, at which time plaintiff and cross defendant was not in default in any manner in the performance of the contract, of the money due plaintiff and cross defendant from defendant and cross complainant under the contract for work done by plaintiff and cross defendant during the month of May, 1936, and by deducting from the money due plaintiff and cross defendant the sum of $500 per day for each day after May 24, 1936, and thereby declaring its inten- [2147] tion to continue to breach said contract by failing to pay plaintiff and cross defendant the amount due it under said contract if plaintiff and cross defendant continued to perform same by further deduction of the sum of $500 per day until the work under said contract was completed on about the 3rd day of January, 1937, or a total deduction of $112,000.00, from money justly due plaintiff and cross defendant under the terms of the contract, to plaintiff and cross defendant's great injury and damage, thereby justifying its rescission of the contract.

II.

That the undisputed evidence establishes that the defendant and cross complainant failed and refused to give to plaintiff and cross defendant any extension of time within which to complete the performance of the work under the contract, and that such

refusal was wrongful and illegal because plaintiff and cross defendant had been unavoidably delayed in the performance of the work under the contract for a period of 300 days, or more, and had also been delayed in the performance of the work under said contract by reason of stormy or inclement weather, and had been delayed by operation of law, and plaintiff and cross defendant was thereby justified in rescinding the contract.

III.

That the undisputed evidence in this case establishes a substantial breach by the defendant and cross complainant of the contract in that the materials through and under which the tunnels were to be constructed were substantially different from those shown, or predicted, or represented in the geological report furnished to bidders, in the plans and specifications furnished to bidders, and in the contract and the specifications forming a part thereof entered into; and made the performance of the work much more diffi- [2148] cult and expensive than it would have been had the materials corresponded with the materials predicted and represented by and in the geological report and the contract, plans and specifications; and thereby the warranty contained in the contract and relied upon by plaintiff and cross defendant in making same, as to the materials to be found through which the tunnels would be built, was breached to plaintiff and cross defendant's great injury and damage.

IV.

That the undisputed evidence in this case establishes constructive fraud on the part of the defendant and cross complainant in inducing plaintiff and cross defendant to enter into the contract.

V.

That the undisputed evidence in this case establishes capricious and arbitrary conduct by the District Engineer of the defendant and cross complainant in failing and refusing to determine and adjudge that plaintiff and cross defendant was unavoidably delayed in the doing and performance of the work.

VI.

That the undisputed evidence in this case establishes that a gross mistake was made by the Engineer of the defendant and cross complainant District in failing and refusing to determine and adjudge that plaintiff and cross defendant was unavoidably delayed in the doing and performance of the work.

VII.

That the undisputed evidence in this case establishes that the defendant and cross complainant breached the contract by failing and refusing to give plaintiff and cross defendant proper lines and grades to work to in the construction of the tunnels.

VIII.

That the undisputed evidence in this case establishes that a [2149] mutual mistake was made by the

plaintiff and cross defendant and defendant and cross complainant in entering into the contract in that plaintiff and cross defendant and defendant and cross complainant both believed that the ground through which the tunnels would be driven would be of self-supporting character for about 2,000 feet of the length of each of the tunnels; and both parties relied upon this fact in entering into said contract; and in truth and in fact the ground through which said tunnels were driven was entirely nonself-supporting, but required artificial support throughout before and during the lining of the tunnels with concrete to the extent that it was impossible to remove such artificial support, thereby causing plaintiff and cross defendant great injury and damage.

IX.

That the undisputed evidence in this case establishes that plaintiff and cross defendant relied upon the information contained in the various documents furnished to it by defendant and cross complainant prior to bidding, including particularly the geological report, plans, and specifications, and planned the doing of the work covered by the contract in reliance upon the information so furnished that the ground through which the tunnels would be driven would be found to be self-supporting for the most part; and by reason of the fact that none of said ground was self-supporting, plaintiff and cross defendant was unable to construct the tunnels in accordance with its plans made in reliance upon

the information furnished by the defendant and cross complainant, thereby causing great injury and damage to plaintiff and cross defendant.

X.

That the undisputed evidence shows that plaintiff and cross defendant did not abandon the contract but rescinded the same for material breaches thereof by defendant and cross complainant entitling plaintiff and cross defendant to rescind.

[2150]

XI.

The undisputed evidence shows that under the contract and particularly paragraph 5 thereof, defendant and cross complainant was required, in case of abandonment of the contract by plaintiff and cross defendant, to complete the work itself and that defendant and cross complainant did not do so, but caused the work to be completed by contracts which defendant and cross complainant entered into with other parties.

XII.

That the undisputed evidence shows that defendant and cross complainant is not entitled to recover any damages on account of any delay in the completion of the work.

XIII.

That the undisputed evidence shows that the cross complaint was prematurely filed and does not state a cause of action against plaintiff and cross defendant.

XIV.

That the undisputed evidence shows that the alleged expense to the defendant and cross complainant was not determined in the manner provided in the contract and specifications and the plaintiff and cross defendant was never notified by the defendant and cross complainant of the excess, if any, so claimed to be due.

XV.

That there is no evidence which would justify an award of damages in favor of defendant and cross complainant and against plaintiff and cross defendant.

XVI.

That the undisputed evidence shows that the defendant and cross complainant is not a citizen of a different State from all of the cross defendants and for this reason this Court has no jurisdiction of the cross complaint. [2151]

Plaintiff and cross defendant moves for such judgment on all of the grounds hereinbefore stated and further moves the Court for special findings of fact in accordance with the allegations of the answer of plaintiff and cross defendant to the cross complaint.

Plaintiff and cross defendant further moves the Court for conclusions of law that plaintiff and cross defendant is entitled to judgment in said cross complaint and that defendant and cross complainant take nothing by its said cross complaint.

Plaintiff and cross defendant requests special findings on each and all of the issues raised by said cross complaint and the answer of plaintiff and cross defendant thereto, which findings will hereafter be prepared and presented prior to the conclusion of the trial and will embody findings on each and all of the issues raised by the cross complaint and the answer of plaintiff and cross defendant thereto.)

Mr. Alexander: The cross defendant surety companies move for judgment in their favor upon the following grounds. First of all, we adopt all of the grounds urged by the plaintiff in the case. I think they have already indicated there will be special findings in the case. We repeat our request—I think it has already been made.

The following grounds are also made now, that the Court has no jurisdiction of the subject matter of the cross complaint or of the persons of the cross defendants, as two of the cross defendants were and are residents of the State of California and were such at the time of the commencement of this action, and were at the time the cross complaint was filed, and have been ever since, and that the lack of jurisdiction has not been cured by the dismissal of the two cross defendants.

Next, that it has not been proved that the plaintiff abandoned the contract or refused to continue to perform the contract. [2152]

The allegations of paragraph IX of the cross complaint regarding alleged items of damage have not been proved.

Likewise, with regard to paragraphs X and XIII and other paragraphs in which damages are claimed, the allegations regarding damages have not been proved.

That it has not been proved, as alleged in the cross complaint, that the plaintiff was in default in the completion of its work for a period of twenty days, or for any time.

Next, that the alleged ground of granting liquidated damages of $500 for each and every working day that may elapse between the limiting date provided in the contract and the date of the actual completion does not apply to the cross defendant surety companies, nor does it apply to plaintiff.

That in this case there is no justification for liquidated damages.

That the testimony adduced shows that the Court cannot indulge in any presumption of damage, that it has not been shown in what particular if any the cross complainant was damaged by the alleged delay, and there has been no evidence to show legal damage to the cross complainant.

There has been a material breach in the contract on behalf of the cross complainant in that it did not comply with the provisions of Article V of the contract between the plaintiff in this case and cross complainant. That there was a breach of such portion of the contract by said cross complainant in that upon the alleged abandonment of the work by the plaintiff the cross complainant had the work

completed by a number of contractors and did not proceed as in Article V of the contract provided, which among other things, required the completion of the work, not by such contracts, but directly by the cross complainant and by labor employed by it.

That it was provided in the contract between the plaintiff and [2153] cross complainant, in the latter portion of Article V of the contract, that in case the expense specified for completing the work is less than the sum that would have been payable under the contract, if the same had been completed by the plaintiff, the plaintiff would be entitled to receive the difference, and in case such expense shall exceed the last said amount, then the plaintiff or its bondsmen shall pay the amount of such excess to the cross complainant on notice from the cross complainant of the excess so due.

The cross defendant surety companies state that the alleged expense was not determined in the manner provided in the contract, nor was it audited in the manner provided in the specifications, and the cross defendants were never notified by the cross complainant of the excess or any sum due or claimed to be due; in that behalf that the conditions of the contract so specified were not performed by the cross complainant.

That the contract between the plaintiff and cross complainant was rescinded by the plaintiff for good and sufficient reasons upon the ground that plaintiff was entitled to extensions of time pur-

suant to the terms of the contract between plaintiff and cross complainant.

That at the time of the filing of the cross complaint the cross complainant did not have a cause of action against the cross complainant surety companies upon the bond, as at that time the expense of completion of the contract had not been determined as in Article V of the contract provided, nor did the cross complainant give notice to the cross defendant surety companies of the amount of such expense as provided in Article V of the contract, and Section 6(Q), subsections 1, 2 and 3 of the specifications.

That at the time the cross complaint was filed the expenses had not been calculated over the District Engineer's final estimate as provided in Section 6(Q), subsections 1, 2 and 3 of the specifica- [2154] tions and Article V of the contract.

The Court: We will take a recess now until two o'clock.

(A recess was here taken until two o'clock p. m.) [2155]

Afternoon Session

Mr. Alexander: Continuing, your Honor, with our motion for a judgment, the next ground is that the cross complainant violated the provisions of its contract with the plaintiff by completing the contract in a manner contrary to and in violation of the terms, conditions and provisions of the contract,

and thereby released the cross defendant surety companies from any and all liability to defendant and cross complainant. In furtherance of the same ground, that the contract was not completed in accordance with Article V of the contract.

Next ground, that in and by the plans and specifications and the geological report it was represented by cross complainant to plaintiff that the tunnels described therein could be driven through ground which was self-supporting in character, and which could be constructed with the use only of temporary timber supports for the excavation of said tunnels, which would be removed before the installation therein of the concrete lining or permanent structure provided to be built therein under the plans and specifications.

That said representations were untrue in that the entire length of the tunnels to be constructed was in ground which was not self-supporting, and which required permanent timbering or other support until and after the installation therein of the permanent concrete lining or structure thereof, and required all of the support placed therein prior to permanent lining to remain without removal from said tunnels. That by reason of said misrepresentations plaintiff rescinded the contract.

Next ground, that there was a mutual mistake between the plaintiff and cross complainant regarding the nature of the ground to be encountered, and for such reason plaintiff was relieved of any obli-

gation to further perform said contract, and was entitled to and did rescind said contract. [2156]

Next ground, that the contract between plaintiff and cross complainant provided that the District Engineer of cross complainant would give to plaintiff sufficient points and lines to enable plaintiff to construct the project in accordance with said contract. That said Engineer refused to establish said lines and said points, and thereby the contract was breached, and the plaintiff by reason thereof and for other reasons rescinded said contract.

Next ground, that during the performance of the contract plaintiff was unavoidably delayed from performance of said contract by stormy and inclement weather, by a general strike in the San Francisco and Bay region, by orders of the Industrial Accident Commission of the State of California stopping and suspending the work, by reason of the character of the ground encountered, which was totally different from that represented by the contract and geological report, by physical inability to construct the tunnel in the manner contemplated by the contract, by reason of the inadequate and unsafe design of the tunnel, by slides, by cave-ins, by failure of the cross complainant to perform its obligations under the contract, by delays caused by the Engineer of said cross complainant.

Next: That when plaintiff filed with cross complainant requests for extensions of time to which it was entitled they were refused arbitrarily, capriciously and fraudulently, although plaintiff was

entitled to extensions of time; and the Engineer of said cross complainant failed to consider whether plaintiff was entitled to extensions of time, and failed to exercise his judgment as to whether the work was unavoidably delayed, and arbitrarily, capriciously and without basis of any facts or knowledge of the cause of the delays, refused to approve such extensions of time; and said extensions of time were denied without reference to the opinion or judgment of said Engineer. [2157]

Next ground: That cross complainant withheld payments due to plaintiff of large sums of money which should have been paid to plaintiff according to the terms of the contract between plaintiff and cross complainant.

Next ground: That the cross defendant surety companies are not liable for the alleged liquidated damages for alleged delay in completion. Further, that the provisions for liquidated damages do not apply to the case of an abandonment of the contract by the contractor or to the case of rescission.

Next: That under date of June 16, 1936, said cross complainant stated that it would complete the contract in accordance with the provisions of the contract, but that it did not complete the work in accordance with the terms of said contract.

Next: That the cross complainant seeks to recover the reasonable cost of completing to which it is not entitled under the contract and its rights, if any, are governed by Article V of the contract. Furthermore, that the provisions of Article V of

the contract govern, and there is no basis for liquidated damages in a case of this kind.

Finally, by reason of the operation of law, the original contract was made impossible of completion.

On these grounds, we move for judgment for the cross defendants surety companies.

Mr. Wittschen: I take it that all those matters are submitted and need not be argued at this time. Obviously, the Court has passed upon many of them when your Honor ruled that plaintiff had no right to rescind the contract. The other matters that are peculiar to the cross complaint: as to those, your Honor has before you two conflicting motions. Obviously, one or the other cannot stand, either in whole or in part; one takes from the other; and we are [2158] prepared at this time, if your Honor so desires, to argue the points of law that are involved in the cross complaint.

Here follows the arguments of Mr. Wittschen for defendant and cross complainant, the argument of Mr. Marrin for plaintiff, and the argument of Mr. Alexander for the cross defendant surety companies, which arguments have been omitted by stipulation.

During the course of Mr. Alexander's argument the following statements were made by the Court and respective counsel. [2158]

Why? Well, the bond interest, we know they have not sustained any loss on that. The use of the

Tunnel Road. They lost nothing there. The Tunnel Road is still open. They did not pay any rental for it. There was no additional cost to keep it open. Engineering charges. Your Honor will remember from their own testimony the engineering charges were going on before the so-called abandonment, long before. We had evidence that they had Mr. Boggs all the time, they had Mr. Gelston, his assistant engineer, they had Mr. Lippincott long before the so-called abandonment; they had Derleth and they had Van Norman. In other words, things that they have thrown in after the so-called abandonment were items of expense that they had before by their own testimony. All of these gentlemen testified they were serving the district long before June of 1936.

Mr. Tinning: Mr. Alexander, I think for the sake of the record I ought to call to your attention that those exhibits which are placed in evidence do not include any of the expense for the consultants arising out of the difficulties. They are the regular engineering operating cost of the District.

Mr. Alexander: Your Honor, we know they have put those things [2258] in. We know they have also passed up to your Honor sheets containing claims for items of legal expense.

Mr. Wittschen: We are just telling you we have not.

Mr. Alexander: If you will look at Exhibit 114-X you will see you have put in evidence here items including legal expense.

Mr. Tinning: Mr. Alexander, pardon me for interrupting you, I have stated as a fact that all legal expense subsequent to the controversy between the parties was eliminated from that.

The Court: Does this copy go to the home office?

Mr. Alexander: No; you can pan me all you want.

The Court: Proceed.

Mr. Alexander: I say they have put in, they have dished up in this Court things that certainly you can take cognizance of. Why mention legal expense at all?

The Court: If counsel indicates that there is an item of legal expense there and he says that is in good faith, do you question it?

Mr. Alexander: I do not question his good faith, and I do not think he should question mine.

The Court: Where is that $114,000? Let us dispose of it.

Mr. Tinning: Prior to the time of this difficulty I had been attorney for the District and I was paid a certain amount per month, and when this trouble started that payment was doubled, I think on the 15th of June, 1936. There is not one dollar in this statement that has been put in as $114,000, that was not a standard expense of the District before the rescission. In other words, the total is not put in, nor has Mr. Wittschen's employment been put in, it was all eliminated. If counsel now, when they did not ask a single question on cross examination except something about expenses, mean to indicate that we have put in here improper matters, or mat-

[2159] ters that were in variance with our statement with respect to the experts, etc., which ran into a great deal of money and which has been eliminated, I think he did not understand what this statement was.

Mr. Wittschen: If there is any doubt about it we would like to put Mr. Boggs on the stand and let them cross examine him. Otherwise we want our statement accepted as a fact, that none of the costs of this litigation are reflected in Exhibit X-114. It is just the ordinary cost of continuing the District, the running expense of the District's operations. The cost of the engineers and other items of expense would have dropped the moment the job was finished, because the Counties took over the work.

The Court: If there is any question about it, that it is an incorrect statement, if you wish to call him in the matter—

Mr. Smith: I think I can clarify the matter. Wasn't the exhibit offered solely for the purpose of showing that you had an item of expense and not to prove the figures?

Mr. Wittschen: I wanted to straighten that out as soon as I had an opportunity to talk. I was going to then, but I would like to do it now, because Mr. Boggs is here. That item of $278 a day, the cost of keeping the District, is put in for a two-fold purpose. It was put in first to show that there was that actual expenditure as a fact, and if there is anything in the record to the contrary it

is now withdrawn, because the intent was to put that in as a fact. The other item that we intended to put in as a fact was that there was $89,000 of bond interest during this time of delay. Those two things were facts, and when added together they total $500, and they were put in both as factual matters and also to show that the claim for liquidated damages was not unreasonable. The $419 a day which would be the cost of people using the road because [2260] they had to travel two miles more was simply put in to show the difficulty in ascertaining actual damages; but the other two items, the cost per day of the District and the bond interest, were two elements of fact, and Mr. Marrin in his brief has regarded them as facts and has stated them as facts.

Mr. Marrin: Oh, no, just the reverse. I understood they were offered distinctly for the purpose of showing that the amount of damages was difficult to fix, that they were not offered as facts and as a part of the actual damage.

Mr. Wittschen: You have some basis for that because it was stated in the paragraph along with the other items but now that this case is not closed and the controversy has arisen—we do not need to recall the witness—I state to you now we want them considered over your objection as proof of a fact, and if you want to cross examine on them you may.

Mr. Smith: At the time the evidence went in I happened to be conducting the questioning for the

Six Companies, the plaintiff, and I objected to the testimony and your Honor admitted it subject to a motion to strike.

Mr. Wittschen: That is right.

Mr. Smith: On the same subject, there were three matters involved. There was this exhibit regarding the cost and maintenance of the District, which you called Cost maintenance of the District, I understood. Mr. Tinning was putting in the evidence. There was the Exhibit offered for the purpose of showing the amount of alleged bond interest, which they were paying every day, and then there was miscellaneous testimony, not in exhibit form, of the so-called traffic per day, and capitalized into an imaginary figure up into the stratosphere somewhere, and I objected to all of those three items on the ground they were immaterial, and Mr. Wittschen [2261] said in so many words for the record that they were being offered for the sole purpose of showing the difficulty of showing liquidated damages.

The Court: He so stated now.

Mr. Smith: Yes.

Mr. Wittschen: No, I said that that speculative feature, the cost to the general public, was solely to show the difficulty of ascertaining the liquidated damages. I ask your Honor to consider, and if there is any misunderstanding now is the time to straighten it out, that the proof of $272.89 a day is not only for that purpose but it is actual proof

of the loss that the District incurred, because the District, in taking care of this work, had to exist a certain time longer than it would have existed and that all that expenditure related to this work and was not just the work of maintaining the District, because the District had nothing else to do, and I want that showing considered, and if they would like to cross examine further, because they misunderstood it, or even if we did say it before, we now correct it, it was a misunderstanding, and we are willing that Mr. Boggs come back. I also want considered as a fact the interest matter, because whether you agree it is an element of damage or not, it is a proven fact that the bonds carried so much interest, and there were so many bonds, and I would like both of those considered as facts.

Mr. Smith: You bound yourself by your own offer. The Court asked you to state the purpose of the testimony, and it admitted it on the basis of your statement of its purpose, and the record is clear on that.

The Court: Just a moment. It is important to both sides in the final determination of this case. If there is any question about the state of the record we will meet that emergency. If you [2262] cannot stipulate to the facts, whatever the facts may be, you will have to call the witness and he may be cross examined. There is no use of trying to apply the law to a state of facts that are questionable at all.

Mr. Wittschen: May we recall Mr. Boggs and re-offer that testimony, not only for the purpose of

proving the difficulty of ascertaining the damage, or, as I put it, to show the reasonableness of the liquidated damages claim, but also as an independent proof of fact, and then if they want to cross examine him they may; if they do not avail themselves of that privilege I take it that our offer stands and the evidence that is in stands. Mr. Boggs——

Mr. Smith: Just a minute. That stipulation would mean nothing in this case. It was stipulated the evidence was closed at the close of the testimony the other day. Mr. Wittschen so stated for the record twice in answer to my question.

Mr. Wittschen: I have a right to withdraw it with the Court's permission.

Mr. Smith: And if it is withdrawn we will assign it as prejudicial error.

Mr. Marrin: Certainly this offer is not within any of the issues of this case. In their cross complaint they allege the $500 a day and ask for judgment for that amount. They said that it was offered as a justification for $500 a day. They are bringing it in now on an entirely new matter.

The Court: I can see that the atmosphere is getting thick again. We have gotten along so nicely in this case that I thought we could go along that way. After all I can understand how you could enter into a stipulation in good faith with the hope of saving some time. I do not want to penalize either side in that respect, because it is helpful to the Court. I am concerned about [2263] getting the facts in this case. If there is any question about

it at all, we will adjourn until tomorrow morning at ten o'clock, at which time we will proceed to take testimony in the event you cannot agree, yourselves, on a statement of facts, or whatever it may be.

(An adjournment was here taken until tomorrow, Wednesday, June 8, 1938, at ten o'clock a. m.)

[2264]

Wednesday, June 8, 1938

Mr. Tinning: Your Honor please, since the adjournment last night we have given consideration to the matters that were discussed yesterday and we desire at this time to ask leave to reopen the evidence in this case solely with respect to Exhibit 114-X and the matters therein set forth, particularly with respect to the question of whether there is any charge included in the summarization of the District expenses in this exhibit which includes the cost or expenses of the litigation brought about by the Six Companies' attempted rescission on the 13th of June, 1936. Those charges, we felt, were proper charges against Six Companies for the maintenance of the work, and the additional costs are all in in other exhibits, and this offer was brought about by Mr. Alexander's argument that the exhibit showed, or might be construed to show that it included some of the expense of this litigation.

The Court: I think it would be well to have the matter clear so the arguments may proceed.

Mr. Smith: What is the offer now, Mr. Tinning? I did not quite understand your language.

Mr. Tinning: Simply with respect to the fact that this exhibit, 114-X, only covers items of the ordinary expense of the district and not legal expenses, or any other expenses arising from the litigation, or difficulties that commenced with Six Companies on the 13th of June, 1936.

Mr. Smith: I understood that that was the fact originally.

Mr. Marrin: We don't contend it was, Mr. Tinning.

Mr. Alexander: You misunderstood me.

Mr. Wittschen: Well, you brought in Lippincott's expenses and the others.

The Court: Let him take the stand and clear it up. [2265]

Mr. Smith: Just a minute, your Honor. You don't need to put on any evidence as to that, we will stipulate as to that.

Mr. Marrin: You will stipulate to that, won't you, Mr. Alexander?

Mr. Alexander: Yes. I never questioned it, your Honor. You misunderstood me entirely, gentlemen.

The Court: Well, I followed the statements and the record will disclose the language that was used. I may be in error, but there was an inference here that there were attorneys' fees that they were not re-

sponsible for, and the inference would be that they helped themselves, or tried to, by padding up this Exhibit 114.

Mr. Alexander: Oh, your Honor, I am sorry you had that idea. I did not mean to convey that idea at all. I looked over the record and I believe it will bear out my thought.

The Court: I looked over the record, and I think it ought to be cleared up so there is no question about it, at all.

Mr. Smith: Well, we stipulated to the offer made.

Mr. Marrin: The only question that was brought up was that Mr. Alexander mentioned that there were certain legal fees in there, and I think you concede that is so, but you explained that it was only for the legal fees of running the District.

Mr. Tinning: The same fees that were paid continuously from the time the contract work started, sometime in the spring of 1934.

Mr. Marrin: Surely. That was the only reference Mr. Alexander made to legal fees. I understand that. We are perfectly willing to stipulate that that exhibit does not contain any of those legal expenses or other expenses for the conduct of this litigation, and I understand that that is what you want cleared up.

Mr. Tinning: Yes.

The Court: There are no additional attorneys' fees other than—— [2266]

Mr. Marrin: Other than the ordinary running expenses.

The Court: That were being paid out while Six Companies was on the job.

Mr. Tinning: Gentlemen, this is the situation, to be sure what we are stipulating to: The first page of the exhibit, in the column "Office and legal services," for example, the month of July is a typical month, the first full month where this matter appears, because there was a change in the legal compensation paid me as attorney for the District; that was enacted by resolution of the Board of Directors, as a matter of fact, on the 15th of June, 1936, after the rescission notice was served. This item of $1,178, which is accounted for here, includes the attorney fees, or salary, it would be better to call it a salary, because it was a fixed sum; the salary of the comptroller of the district; the salary of the two stenographers of the district who had been employed by the District continuously for two or three years precedent, and includes the salary of Mrs. Veale, who has charge of the records and accounts, and who has been continuously employed for several years. Those are the only items, and, of course, this was offered under a general understanding we would offer a summary instead of bringing in the original books, and if it will be stipulated along those lines I have indicated there is no reason for putting on that testimony, but I certainly understood from the argument that was made, although I have not seen the record, that

Mr. Alexander was at least intimating that this contained expenses of attorneys' compensation with respect to this litigation, and I understood him with respect to the consultants. Those would not appear, as I stated in the offer of the other matters, to have any place in this case. In fact, it was necessary for us to rewrite this whole thing, because our auditor, in making up the exhibit, included those matters in the [2267] rest of the expenses of the District, and over the Memorial Day holiday we had to get this whole thing worked out again, because it was a mistake.

If it be understood that is the fact I don't desire to offer evidence, but I don't want to be met in some other court or somewhere else by intimations that this exhibit is anything but what we offered it for, and we offer it sincerely on that basis, and in view of the general understanding outside of the court-room we would not produce the original books, because we all desired saving incumbering the record.

Mr. Smith: That is satisfactory.

Mr. Marrin: Yes, that is our understanding. The understanding is, Mr. Tinning, that this Exhibit 114-X—

The Court: Pardon me. So there is no commitment on your part, or anything, there are only half a dozen items in that, let him take the stand and limit it to those items, so then you will be free——

Mr. Smith: Well, your Honor, the evidence in the case has been closed.

The Court: However, it is immaterial to me.

Mr. Smith: The stipulation is the equivalent of evidence.

The Court: I understand that, but on account of your stipulation, and you don't want to make commitments, that is all I wished.

Mr. Marrin: We are perfectly willing to stipulate that the exhibit X-114 does not contain any of the additional expenses of the District in connection with this litigation. I understand that is the only purpose of it.

Mr. Wittschen: Only in connection with completing the tunnel, the maintenance of the District during that period.

Mr. Marrin: The ordinary running expenses of the District. [2268]

Mr. Wittschen: Yes.

Mr. Marrin: We would not stipulate it was incurred in connection with completing the tunnel.

Mr. Tinning: It was on the ordinary running expenses.

Mr. Smith: Yes, we so understand. We understand it.

Mr. Tinning: That is also your understanding, Mr. Alexander?

Mr. Alexander: It was always my understanding. I never have suggested, or meant to suggest, that the legal expense includes an expense for this case, and it should be so understood. You misunderstood me.

Mr. Tinning: Is it stipulated now that these items set up in Exhibit 114 are for salary and for the items of expense of operating the District, and do not contain any items with respect to this litigation, either for attorneys' fees or consultants?

Mr. Smith: Your last statement is a satisfactory stipulation for that.

Mr. Alexander: We accept it, also.

Mr. Smith: Very well.

The Court: Now that the difficulty is over, you may proceed, gentlemen.

Mr. Alexander: Will your Honor give me just a moment to make a note of that stipulation?

The remainder of Mr. Alexander's argument and Mr. Wittschen's argument in reply have been omitted by stipulation.

At the conclusion of Mr. Wittschen's argument (which has been omitted by stipulation) the following took place: [2269]

The Court: What is the amount of your judgment you are seeking?

Mr. Wittschen: $383,000. I can give it to your Honor accurately.

The Court: There is some confusion as to that $278 a day.

Mr. Wittschen: That $278 a day should not be confused, your Honor. That was given for the purpose of showing that the cost of running the District was that much, but obviously if we get the penalty of $500 a day liquidated damages we could

not get that. I might say that the interest on the investment and that cost together exceeds $500 a day. I am merely arguing as to those matters to show that the penalty of $500 a day is reasonable, but if your [2309] Honor gives us the penalty those matters cannot be considered. We cannot have both. We are limited by the penalty of $500 a day.

The Court: What is the definite figure?

Mr. Wittschen: I will give it to your Honor, it is $383,568.16. If your Honor would like me to give the items, they are, the extra cost of completing the work is $108,066.31.

The Court: That is cost for completion?

Mr. Wittschen: That is cost for completion over and above all credits, what we actually paid to other contractors. Then the protecting of the work and the insurance, and re-advertising is $69,001.85. Then we have for delay 413 days at $500 a day, $206,500, and the three together added up amount to $383,568.16. Those are all pleaded in the cross complaint.

Mr. Smith: We would like to renew the motion to strike that we made upon which your Honor has not ruled.

The Court: Have you a memorandum of it?

Mr. Smith: It is in the record. The motion was read into the record and appears at page 1707. I can repeat it, it will only take a minute.

The Court: Very well.

Mr. Smith: "Plaintiff and cross defendant moves to strike from the record in the case the evi-

dence given and offered through the witness Wallace B. Boggs concerning

"(a) Cost of employing engineers, office force, watchmen, and procuring materials and supplies for operation of the District after June 13, 1936;

"(b) Cost or expense to the District for interest on its outstanding bond issue during any period after June 13, 1936;

"(c) Amount of traffic over the so-called Tunnel Road, or evidence concerning alleged damage to public from non-completion of the project of the District on or before May 24, 1936. [2310]

"The evidence so objected to commences at approximately line 7 on page 1671 of the transcript, beginning with the question: 'During the period following the 24th day of May, 1936, did the District continue to employ engineers, etc.?' and continues down to and including the question: 'Under the direction and control of what department—was it the Department of Public Works of the State of California?' on page 1682 of the transcript; and this motion is directed to all thereof beginning at the page and place noted and ending at the page and place noted.

"Also, to supplement what I have written out, the motion is likewise directed to the testimony adduced here this morning along the same lines, concerning the same subjects which

I have mentioned, and, of course, I am not able to give a page number of the record because we have not yet been furnished with the typewritten record; but this motion is directed to the evidence which I specifically pointed out, as well as to what has been received this morning through the witness Boggs on the same subjects.

"The evidence objected to and admitted subject to motion of plaintiff and cross defendant to strike same is now moved to be stricken out upon the grounds that same is not proof in any manner of damage caused to cross-complainant by cross defendant; also that the elements of damage sought to be established thereby are too remote and too speculative and not within the purview or rules of damages covering this subject; further, that, had it not been for the breach of the contract by the cross complainant in improperly deducting penalties against the cross defendant, all of the work would have been completed not later than January 3, 1937, which would have been the latest possible date when it would have been necessary for any of the elements covered by this evidence to have continued further, that no matter whether cross complainant was engaged in [2311] constructing its project or not it was liable for payments of its bond interest; that no revenue was derived by cross complainant from the tunnels or project, and therefore no

damage could have possibly been sustained by any delay in completion of same by Joint Highway District or by the public; that the evidence concerning the use of the highways by the public is purely speculative and guesswork, and has nothing to do with any issues involved in this case; further, for the reasons stated by me, the evidence is incompetent, irrelevant and immaterial, and should be stricken from this case."

We renew that motion.

Mr. Alexander: We join, your Honor, in the renewal of the motion to strike out on the same grounds.

Mr. Wittschen: The evidence as to the loss of the use of it by the public was not put in to get a money judgment for the same. It was simply to show the inconvenience of the public and as showing the impossibility of the claim at the time the contract was entered into of proving actual damages, and to sustain liquidated damages. The other matter, as to bond interest, that is a definite sum. That is purely a matter of mathematics. It is there for what it is worth. There is nothing vague or indefinite about that, it is a certain sum.

Mr. Smith: We will submit the matter.

Mr. Wittschen: We will submit it.

The Court: The case stands submitted on both sides. [2312]

[Endorsed]: No. 9113. United States Circuit Court of Appeals for the Ninth Circuit. Upon Appeal from the District Court of the United States for the Northern District of California, Southern Division.

PARKER PRINTING COMPANY, 545 SANSOME STREET, SAN FRANCISCO

[CLERK'S NOTE: Excerpt from stipulation of counsel re portions of record to be printed:

"(1) It is stipulated that an agreed statement of facts in the form hereto attached and marked Exhibit 'A' shall be printed in the record in lieu of plaintiff's exhibits numbers 1, 5, 6, 8, 9, 11, 12, 13, 14, 15, 17, 19, 20 and 21."]

EXHIBIT "A"

AGREED STATEMENT OF FACTS

Defendant, by resolution of its Board of Directors, adopted on March 3, 1933, duly and regularly approved the final surveys, plans and specifications and detailed drawings and final estimate of cost of the project which it proposed to construct. Said specifications, plans and drawings so approved were the same as plaintiff's Exhibits Nos. 3 and 2, respectively, introduced in evidence herein. Said estimate of cost was the same as plaintiff's Exhibit No. 4.

Thereafter, by resolution of its Board of Directors, adopted January 9, 1934, defendant duly and regularly approved the first amendment to said specifications, plaintiff's Exhibit No. 7 herein, and thereafter, by resolution of its Board of Directors, adopted April 3, 1934, defendant duly and regularly approved the second amendment to said specifications, plaintiff's Exhibit No. 10 herein.

All of said specifications and amendments thereto and said plans, surveys, detailed drawings and esti-

mate of cost were duly and regularly approved by the Director of the Department of Public Works of the State of California.

On May 4, 1934, the Board of Directors of defendant adopted a resolution to proceed with the construction of the project of defendant and directing that a notice to contractors be published that sealed bids for the construction of defendant's project would be received until May 22, 1934.

Thereafter, said notice was duly and regularly published.

On May 22, 1934, plaintiff submitted to defendant a bid for constructing said project of defendant. Said bid was in the amounts set forth in the contract thereafter entered into between plaintiff and defendant, plaintiff's Exhibit No. 16 herein, and was the lowest and best bid submitted.

On May 29, 1934, the Board of Directors of defendant adopted a resolution accepting said bid of plaintiff and awarding to it a contract for the construction of said project of defendant and authorizing the execution of said contract.

Said contract was thereafter duly and regularly executed by the parties thereto.

Thereafter, a bond for faithful performance of the contract and a bond for the payment of materialmen and laborers were duly and regularly filed by plaintiff with defendant. Both bonds were dated June 12, 1934, and both were duly and regularly approved by a resolution of the Board of Directors of defendant, adopted June 14, 1934.

Attached to the cross-complaint herein is a full, true and correct copy of said bond for faithful performance, which is plaintiff's Exhibit No. 18.

Defendant is, and at all times which are material to this case, has been, a duly and regularly organized and existing public corporation under the law of the State of California. Prior to entering into said contract with plaintiff, defendant duly and regularly complied with all the requirements of the laws of the State of California relating to its organization, the construction of its project and the awarding of said contract to plaintiff for the construction thereof.

PLAINTIFF'S EXHIBIT No. 3

Specification No. One
Set No. 99

JOINT HIGHWAY DISTRICT No. 13
OF THE STATE OF CALIFORNIA

office of

Wallace B. Boggs, District Engineer,
1448 Webster Street
Oakland, California

Dated March 30, 1933

SPECIFICATIONS

For the Construction of a Highway Tunnel and Roadway Approaches from Broadway and Keith Avenue in Oakland to a Point on the State Highway in Contra Costa County, Approximately Fourteen Hundred Feet (1,400') Northerly from the Fish Ranch Road; Being Partly in the City of Oakland, County of Alameda, and Partly in the County of Contra Costa, and All in Joint Highway District No. 13 of the State of California.

SECTION 1. WORK TO BE DONE

The work to be done shall consist of the construction of a highway tunnel with ventilation buildings, ventilation equipment and accessories; the construction of roadway approaches with pavements, drainage structures, curbs, gutters and sidewalks where required; the construction of grade separation

structures, viaducts, retaining walls and incidental structures; connections with existing streets, highways and structures, the furnishing of all labor, material, tools and equipment and the performance of all work necessary or incidental to the construction detailed, specified and intended, and that may be necessary to perform the complete construction as shown on the plans accompanying these specifications and made a part hereof, or as specified herein, being partly in the City of Oakland, County of Alameda, and partly in Contra Costa County, State of California, and all in Joint Highway District No. 13 of the State of California.

SECTION 2. PROPOSAL REQUIREMENTS AND CONDITIONS

(a) Proposal Forms.—Prospective bidders will, upon request to the District Engineer, 1448 Webster Street, Oakland, California, be furnished with Proposal Forms which will state the location and description of the contemplated construction and contain a schedule of items for which bid prices are asked, all proposals and bids to be submitted on the forms supplied by the District.

(b) Estimates of Quantities.—Where estimates of quantities are given on the Proposal Form, or in "Notice to Contractors," or in any Contract executed hereunder, it is hereby declared and shall be understood that such quantities are approximate only, being given as a basis for comparison of bids. The District does not expressly or by implication agree or

guarantee that the actual amount of work will correspond therewith, but reserves the right to increase or decrease the amount of any class or portion of the work, or to omit portions of the work as may be deemed necessary or expedient by the District Engineer.

(c) Examination of Plans, Specifications and Site of Work.—The bidder is required to examine carefully the site of the work, the Proposal Form, and plans, specifications and contract forms for the work contemplated. The submission of a Proposal shall be considered prima facie evidence that the bidder has made such an examination and is satisfied as to the conditions to be encountered, as to the character, quality and quantities of work to be performed and materials to be furnished, and as to the requirements of the specifications, plans and contract, or contracts.

* * * * * * * *

(i) Competency of Bidders.—Any bidder, if required by the Board of Directors, shall furnish a statement as to his ability to perform the work contemplated, and the Board of Directors reserves the right to reject the proposal of any bidder who, in their opinion, fails to show that he has the necessary capital, financial standing, organization, facilities, experience and ability to begin the work promptly and perform and complete the work to be done under the contract in a satisfactory manner.

SECTION 3. AWARD AND EXECUTION OF CONTRACT

(a) Acceptance or Rejection of Proposals.—The Board of Directors reserves the right to reject any and all proposals.

(b) Award of Contract.—The award of the contract, if one be awarded, will be to the responsible bidder whose proposal is the lowest regular acceptable bid and complies with all the requirements prescribed by law and these specifications.

(c) Bonds.—The Contractor to whom an award is made shall, in addition to the execution of the contract in a form approved by the attorney for the District, within twenty (20) days after the date of the award of such contract by the Board of Directors, execute and deliver to the District bonds for the faithful performance of the contract and for the payment of all claims for labor and material thereunder in the manner provided by law and in the form approved by the attorney for the District. Said bonds shall be executed by the bidder with a corporate surety or sureties duly authorized to do business as such under the law of the State of California and each in amounts which shall be not less than fifty per cent (50%) of the aggregate contract price.

(d) Execution of Contract.—Contracts shall be executed in a form approved by the attorney of the District and delivered to the District within twenty (20) days after the date of the award of such contract by the Board of Directors. No proposal shall

be considered binding upon the District until the execution of the contract and bonds as hereinbefore provided.

(e) Failure to Execute Contract.—Any bidder who fails to execute a contract and file acceptable bonds as provided herein within twenty (20) days after the date of the award of such contract by the Board of Directors shall be subject to having his bid annulled, and his certified bid check forfeited to the District as liquidated damages. In such event, awards may then be made to the next lowest responsible and acceptable bidder, or the District may call for new bids, as the Board of Directors thereof may determine.

SECTION 4. TIME

(a) Commencement of Work.—The Contractor shall commence work within ten (10) days after the execution of the contract for the work by the Board of Directors and shall continue without interruption unless otherwise directed by the District. At least three (3) days before starting, the Contractor shall notify the District Engineer in writing of the date that work is to commence.

(b) Completion of Work.—The time of completion of the entire work specified herein shall be within a period of seven hundred and twenty (720) calendar days from the date of the execution of the contract by the Board of Directors.

(c) Extension of Time.—The time during which the Contractor is delayed in said work by Acts of

God, or by stormy or inclement weather, or by any reason which, in the judgment of the District Engineer, unavoidably delays the work, shall be added to the aforesaid time for completion, provided that the Board of Directors approve in advance the written application therefor, which must be made by the Contractor for such an extension, before the expiration of the time limit fixed herein, or a duly granted extension thereof.

(d) Damages for Delay.—The parties hereto expressly stipulate and agree that time is the essence of this contract. In case the work is not completed within the time specified in the contract or within such extensions of the contract time as may be allowed as herein provided, it is distinctly understood and agreed that the Contractor shall pay the District as agreed and liquidated damages and not as a penalty five hundred dollars ($500.00) for each and every working day which may elapse between the limiting date as herein provided and the date of actual completion of the work, said sum being specifically agreed upon as a measure of damage to the District by reason of delay in the completion of the work; it being expressly stipulated and agreed that it would be impracticable to estimate and ascertain the actual damages sustained by the District under such circumstances; and the Contractor agrees and consents that the amount of such liquidated damages so fixed, shall be deducted and retained by the District from any money then due, or thereafter to become due, the Contractor.

[Clerk's Note: As amended by Plaintiff's Exhibit No. 10]

SECOND AMENDMENT AND SUPPLEMENT TO FINAL SPECIFICATIONS FOR CONSTRUCTION OF PROJECT

SECTION 5. PAYMENTS

(a) Partial Payments.—Payments will be made only upon the certificate of the District Engineer for work actually performed. The District Engineer shall measure the work on or about the first day of each month and at the time of completion of the entire work, and shall render a certificate on or about the tenth day of each month and at the completion of the entire work, stating the amount of work performed during the previous calendar month and during the current month at the time of completion. The Contractor shall then, at the times above specified, be entitled to receive a payment from the District in an amount to be determined as follows: Until the total value of the work done since commencement of performance of the contract exceeds Four Hundred Thousand Dollars ($400,000.00) the payment will be seventy-five per cent (75%) of the amount specified in the District Engineer's certificate; thereafter and until the total value of the work done since the commencement of performance of the contract equals One Million Dollars ($1,000,000.00), the constant sum of One Hundred Thousand Dollars ($100,000.00) will be retained by the District out

of said total value; thereafter the progress payment will be ninety per cent (90%) of the amount specified in the Engineer's certificate, provided that no such estimate of payment shall be required to be made when, in the judgment of the District Engineer, the work is not proceeding in accordance with the provisions of the contract, or when, in his judgment, the total value of the work done since the last estimate amounts to less than Five Hundred Dollars ($500.00), except the certificate and payment required at the completion of the entire work.

The acceptance by the Contractor of the final ninety per cent (90%) payment for the completed work shall be and shall operate as a release to the District from all claims and liability to the Contractor for anything done or furnished for or relating to the work, or for any act or neglect of the District or its agent in any way affecting the work, excepting the claim of the Contractor against the District for the moneys herein provided to be paid by the District to the Contractor thirty-five (35) days after the acceptance of the contract.

(b) Final Payments.—Thirty-five (35) days after the acceptance of the work by a certificate of acceptance duly rendered by the District Engineer and final approval and acceptance by the Board of Directors of the District, the Contractor shall be entitled to receive a payment of the balance due under this contract in the amount of ten per cent (10%) of the aggregate amount of all certificates of the District Engineer.

SECTION 6. GENERAL PROVISIONS

(a) Definitions.—Whenever in these specifications, or in any documents or instruments in construction where these specifications govern, the following words or terms, or pronouns in place of them are used, they shall have the respective meaning and intent here given:

(1) District.—Refers to and indicates Joint Highway District No. 13 of the State of California.

(2) Board of Directors or Board.—Refers to and indicates the Board of Directors of Joint Highway District No. 13 of the State of California.

(3) District Engineer or Engineer.—Refers to and indicates the District Engineer of Joint Highway District No. 13 of the State of California, appointed by the Board of Directors of said District and acting either directly or through properly authorized agents. Such agents acting within the scope of the particular duties entrusted to them.

(4) Contractor.—Refers to and indicates the person or persons, copartnership or corporation, or association who have entered into a contract with Joint Highway District No. 13 of the State of California to perform the work to be done in accordance with these specifications, or their legal representatives.

(5) Bidder.—Refers to and indicates the person or persons, copartnership or corporation, or association submitting a proposal for the work contemplated, acting directly or through duly authorized representatives.

(6) Surety or Bondsmen.—Refers to and indicates the corporate body which is bound with and for the Contractor for the faithful performance of the contract and for the completion of the work, and for the payment of all claims for labor or materials thereunder, in the manner provided by law.

(7) Specifications.—Refers to, indicates and includes all specifications, provisions, directions and requirements of every kind, whether general, detailed or otherwise, relating to the equipment, materials, or work and the installation thereof; and the plans and drawings, or exact reproductions thereof accompanying and supplementing the same, which are made a part thereof.

(8) Plans.—Refers to, indicates, and includes the official plans, profiles, general and typical cross-sections and details, or the exact reproductions thereof, approved by the District Engineer, which show the location, character, dimensions and details of the work to be done and which

accompany and are supplementary to the specifications and are made a part thereof.

(9) Contract.—Refers to, indicates and includes the written agreement entered into by the Contractor and the District, covering the performance of the work and the furnishing of labor, materials and equipment in the construction of the work. The Contract shall include the Notice to Contractors, the proposal, plans, specifications and contract bonds.

(10) Contract Bond or Bonds.—Refers to, indicates and includes the approved form of security furnished by the Contractor and his surety as a guaranty that he or they will complete the work in accordance with the terms of the contract, and to secure the payment of claims for materials provisions, provender or other supplies or equipment, used in, upon, for or about the performance of the work, or for any work or labor thereon.

(11) The Work.—Refers to, indicates, and includes all the work specified or indicated by the plans and specifications for the contemplated improvement covered by the contract.

(12) As Directed, etc.—Whenever the words "as directed," "as required," " as permitted," or words of like effect or intent are used, it shall be understood that the

direction, requirement or permission of the District Engineer is intended. The words "sufficient," "necessary" or "proper" or words of like import, shall mean sufficient, necessary or proper in the judgment of the District Engineer. The words "approved," "acceptable," "satisfactory," or words of like import, shall mean approved by, acceptable to, or satisfactory to the District Engineer.

(b) Authority of District Engineer.—The District Engineer shall decide any and all questions which may arise as to the quality or acceptability of materials furnished and work performed and as to the manner of performance and rate of progress of the work, and shall decide all questions which may arise as to the interpretation of the plans and specifications, and all questions as to the acceptable fulfillment of the contract on the part of the Contractor and as to compensation. His decisions shall be final and he shall have executive authority to enforce and make effective such decisions and orders as the Contractor fails promptly to carry out.

(c) Compliance with Specifications.—It shall be the duty of the Contractor to see that the provisions of these specifications are complied with in detail, irrespective of the inspection of the work during its progress by the District Engineer or his representatives.

(d) Inspection.—The Contractor shall afford every facility necessary for the safe and convenient

inspection of the work throughout its construction and for inspection of materials used or to be used. The District Engineer shall have power to reject material and workmanship which are not in accordance with specifications, and all such must be removed promptly by the Contractor and replaced to the satisfaction of the District Engineer without extra expense to the District.

All inspection of materials shall be made after delivery at the site, unless the District Engineer shall direct otherwise. Material rejected at the place of manufacture or elsewhere shall not be delivered on the site of the work, and material rejected at the site of the work shall be removed from the site as soon as possible and not returned thereto.

The failure of the District Engineer or his representatives to discover and condemn work not in accordance with the specifications shall not relieve the Contractor of his obligation to the District to furnish proper materials and work as provided in these specifications; nor shall it relieve the Contractor from being compelled to remove and replace promptly any work found to be defective at any time during the construction of the work, or before the final acceptance of the work.

(e) Disputes.—To prevent disputes and litigation the District Engineer shall in all cases determine the amount, quality and acceptability of the work and materials which are to be paid for under these specifications. He shall determine all questions

in relation to said work and materials and performance thereof and all questions which may arise relative to the fulfillment or interpretation of these specifications on the part of the Contractor. His estimate and decision shall be final and conclusive, and in case any question shall arise between the Contractor and the District pertaining to the contract, the District Engineer's estimate and decision shall be a condition precedent to the right of the Contractor to receive any moneys under the contract.

(f) Contractor to Be On Work.—The Contractor shall be constantly on the work during its progress, either in person or represented by duly authorized representatives, who are competent to receive and carry out any instructions that may be given by the proper authorities, and said Contractor will be held liable for the faithful observance of any instructions which may be delivered to him or to his representatives on the work. The District Engineer shall be notified by the Contractor in writing as to the personnel of authorized representatives and all changes pertaining thereto.

The Contractor shall maintain an office on the site of the work and install and maintain a telephone connected with local and long distance telephone, all at his own expense.

(g) Alterations.—In case of reduction or increase in quantities of work, by reason of alterations or any cause whatsoever, the Contractor shall accept payment in full at the contract unit prices

for the actual quantities of work done and no allowance will be made for anticipated profits due to such reduction or increase.

(h) Interpretation of Plans and Specifications. —Should it appear that the work to be done or any matters relative thereto are not sufficiently detailed or explained in the plans and specifications, the Contractor shall apply to the District Engineer in writing for such further details and explanations as may be necessary, and he shall conform to the same as part of the contract insofar as they may be consistent with the original specifications and plans. In the event of any doubt or question regarding the true meaning of the specifications, the decision of the District Engineer shall be final. In the event of any discrepancy between any drawing and figures written thereon, figures shall be taken as correct.

Should the Contractor believe that any work ordered is not properly a part of his contract or according to the intent of these plans and specifications, he shall before commencing same notify the District Engineer in writing of his objection to same and shall not perform such work until notified in writing by the District Engineer as to his decision in the matter. The commencement of any such work shall act as a waiver by the Contractor of any objection he may have to the execution of such work, and as a waiver of any claim for extra work in consequence of such order.

These specifications and plans shall be considered as supplementary one to the other, so that ma-

terials and workmanship, indicated, called for, or necessarily implied by the one and not by the other, shall be supplied and placed in the work the same as though specifically called for by both.

(i) Compliance With Legislation.—The Contractor shall conform to all federal, State, County and Municipal laws, ordinances and regulations, which may apply to the work herein provided for, and during the progress thereof, and shall pay for licenses, fees and other charges levied or charged in accordance with such laws, ordinances or regulations, and no claim for extra payment shall be made to the District for such fee, license or charge, it being specifically understood that such licenses, fees or charges are covered by the unit prices bid.

(j) Royalties.—The Contractor shall pay all royalties or other charges that may arise due to methods, types of construction, processes, materials or use of equipment and shall hold the District harmless from any charges whatsoever which may arise, and shall furnish written assurance satisfactory to the Board of Directors that such charges have been paid, and the Contractor shall be liable for all such charges under the bonds furnished with said contract.

(k) Contractor's Liability.—On all work the Contractor is to assume all liability of every kind or nature, arising from said work, either from accident, negligence or any cause whatsoever during the progress of the work and before the final acceptance thereof, and shall indemnify and hold the

District harmless therefrom, and the bonds given by the Contractor shall hold and secure the said District free and harmless from any or all damage or expense whatsoever.

(l) Insurance.—The Contractor at his own expense shall effect and maintain such Liability and Workmen's Compensation Insurance as will protect him, the District and the District Engineer from claims under the Workmen's Compensation Acts and from any other claims for damages for personal injury, including death, which may arise from operations under the contract, whether such operations be by himself or by any subcontractor or by anyone employed directly or indirectly by either of them.

The Contractor shall also at his own expense provide insurance against loss by fire, payable to the District, to cover any and all structures or property belonging to or in possession of the District and placed at the Contractor's disposal in whole or in part, and also to cover all materials accepted but not placed in the work which have been included in the monthly estimates and which have been or are to be taken over by the District.

The Contractor shall, before commencing work on this contract, deliver to the District Engineer certificates from insurance companies or their agents stating that said insurances are in force and will not be cancelled without written notice to the District Engineer.

(m) Sub-letting and Assignment.—No subcontractor will be recognized as such and all persons engaged in the work of construction will be considered as employees of the Contractor and their work shall be subject to the provisions of the contract and specifications. Where a portion of the work which has been sublet by the Contractor is not prosecuted in a manner satisfactory to the District Engineer, the subcontractor shall be removed immediately on the order of the District Engineer and shall not be employed again upon the work.

Neither the contract nor any part thereof shall be assigned unless the Board of Directors first consents in writing to such assignment. Such assignment shall not relieve the Contractor or his bondsmen from any liability whatsoever.

(n) Contractor Guarantees Work.—It is understood that the Contractor is skilled in the trade or calling necessary to perform the work herein set forth and that the District, not being skilled in such matters, relies upon the Contractor to do and perform all work necessary, and to do, supply and furnish all the acts and things necessary, at the proper times and in the most skilful and desirable manner, and the Contractor guarantees the workmanship and materials furnished and supplied to be the best of their kind. The acceptance of any part or of the whole of the work does not operate to release the Contractor or his bondsmen from said guarantee.

(o) Dismissal of Workmen.—The District Engineer may, if he deem it necessary for the good of the work, require the Contractor to dismiss any workman on the work and such person shall not again be employed on the work.

(p) Sanitary Arrangements.—The Contractor shall make provision for and maintain in a sanitary manner at the work, all necessary and sanitary conveniences for the workmen in accordance with the rules and regulations of the Department of Public Health, or the Department of Industrial Relations, acting in conjunction with said Department of Public Health, and of all lawful authority.

(q) District May Perform Work.—(1) The Contractor agrees that if the work to be done under this contract shall be abandoned, or, if in the opinion of the Board of Directors the work or any part thereof is unnecessarily or unreasonably delayed, or if the same is not prosecuted with the diligence and force specified, meant and intended in and by the terms of the contract; or if the Contractor is wilfully violating any of the conditions or covenants of the contract and specifications or of the plans or of any part of the contract, or is executing the work in bad faith, the said Board of Directors shall then have the power to notify said Contractor to discontinue the work or any part thereof under the contract, and thereupon the Contractor shall cease to continue such work or such part thereof as the Board of Directors may designate.

(2) The said District shall thereupon have the power to place such or so many persons and to obtain by contract, purchase or hire such animals, equipment, tools, materials and labor as the District Engineer may deem necessary to work at and to be used to complete the work herein described, or such part thereof as the District Engineer may deem necessary; and to use such material as may be found upon the site of the work, and to procure other material for the completion of the work, and to charge the expense of such labor, material, animals, equipment, etc., to the Contractor, and the expense so charged shall be deducted and paid by the District out of such money as may be due or may at any time thereafter become due to the Contractor under and by virtue of this contract or any portion thereof.

(3) In case such expense is less than the sum which would have been payable under this contract at the unit prices bid, as calculated from the District Engineer's final estimate if the work had been completed by the Contractor, then the Contractor shall be entitled to receive the difference, but in case such expense shall exceed the last said amount then the Contractor and his bondsmen shall be jointly and severally liable to pay the amount of such excess to the District on notice by the District of the amount of excess so due.

(r) Temporary Suspension of Work.—The District Engineer shall have the authority to suspend the work wholly or in part for such period as he

may deem necessary, due to unsuitable weather, or to such other conditions as are considered unfavorable for the suitable prosecution of the work, or for such time as he may deem necessary due to the failure on the part of the Contractor to carry out orders given, or to perform any provision of the contract. The Contractor shall immediately respect the written order of the District Engineer to suspend the work wholly or in part. The work shall be resumed when conditions are favorable and methods are corrected, as ordered or approved in writing by the District Engineer.

(s) Lines and Grades.—The Contractor is to furnish free of charge all stakes necessary for marking and maintaining points and lines given by the District Engineer; and shall give the District Engineer such facilities and materials for giving said lines and points as he may require, and the District Engineer's marks must be carefully preserved.

Sufficient points to line and grade will be set for the Contractor to work to and no additional stakes will be set. Any such stakes or marks lost, damaged or obliterated shall be replaced at the expense of the Contractor.

The Contractor shall do his own engineering and shall be responsible for the completion of the work to proper lines and grades in conformance with the stakes set by the District Engineer.

The District Engineer shall be furnished facilities for the checking of lines, elevations, grades and forms at all times during the progress of the work.

The Contractor shall, without charge to the District, provide openings for and suspend work that will in any way interfere with the surveys, at such times and for such periods as the District Engineer may deem necessary.

(t) Materials.—(1) All materials shall be new and of the best quality of their respective kinds and fully up to the general standards of these specifications, and all workmanship shall be fully up to the highest standard of modern construction and practice.

The District Engineer may at any time order the removal of rejected material from the site of the work.

(2) Materials shall be stored so as to insure the preservation of their quality and fitness for the work. Stored materials shall be located so as to facilitate prompt inspection.

During the progress of the work all material taken up and new material to be used shall be piled and disposed of by the Contractor so that public traffic and private property shall not be unduly interfered with and all material shall be put in places approved by the District Engineer.

(3) Samples of all materials used or offered for use in connection with the work shall be furnished to the District Engineer without cost to the District, and he shall be given facilities and time of not less than twelve (12) days for inspection and testing of materials where necessary, in his opinion, to check other tests.

No material shall be used until it has been approved by the District Engineer.

In addition to the above, the Contractor shall furnish, at his own expense, materials and samples for all tests specified herein or deemed necessary by the District Engineer, and shall provide facilities at his own expense, on all parts of the work and at sources of supply, for the necessary sampling and inspection of materials to be furnished, and of work performed.

The standard and tentative specifications of the American Society for Testing Materials, referred to hereinafter by title or by their serial designations, are made a part of these specifications and of any contract based thereon. When the abbreviation "A.S.T.M." is used, it shall mean the American Society for Testing Materials, whose main office is at 1315 Spruce Street, Philadelphia, Pa. The requirements of said society, except as herein specifically modified or otherwise provided for, shall govern for all materials required to complete any work specified, where detailed specifications are omitted as a whole or in part.

(u) Inspection.—The Board of Directors, District Engineer and other authorized representatives and assistants shall at all times have access to the work during its construction and shall be furnished with every reasonable facility for ascertaining that the stock and materials used or employed, and workmanship are in accordance with the intention of these specifications.

(v) Use of Explosives.—When the use of explosives is necessary for the prosecution of the work, the Contractor shall use the utmost care not to endanger life or property. All explosives shall be stored in a secure manner, in compliance with local laws and ordinances, and all such storage places shall be marked clearly "Dangerous Explosives."

(w) Damage to Property.—The Contractor shall restore, at his own expense, all damaged property, whether public or private, including sidewalks, curbs, fences, pipes, conduits, sewers, monuments, stakes, bridges, culverts, pavements, etc., to a condition as good as it was when he entered upon the work, and in working order for the use and purposes intended. He shall take such precautions as are necessary to avoid damage and he shall properly strengthen structures over which he may move his implements of equipment, before using them.

The Contractor will be held responsible for all damage caused by his equipment or the use of same, and shall hold the District free and harmless from any or all damage or cost of damage whatsoever.

The Contractor shall be responsible for any and all damage to any person or property resulting from defects or obstructions or from any cause whatsoever during the progress of the work or at any time before its completion and final acceptance, and shall indemnify and save harmless the District and its officers and employees from all suits or actions of every name and description brought for, or on

account of any injuries or damages received or sustained by any person or persons by or from the Contractor, his servants or agents; and so much of the money due to the Contractor by virtue of the contract as is considered necessary by the Board of Directors shall be retained by the District until such suits or claims for damages shall have been settled and evidence to that effect furnished to the satisfaction of the Board of Directors.

Where the Contractor uses any private property he shall make all arrangements therefor and shall assume all damages resulting therefrom.

Where property of the District is damaged said District will deduct from any or all payments due an amount sufficient to repair any and all such damage. If the cost of repairing such damage is in excess of the amount due or to become due the Contractor, the Contractor and his bondsmen shall be jointly liable to pay the amount of such excess to the District.

(x) No Personal Liability.—The District, the Board of Directors or any member thereof, the District Engineer, his representatives, or any other officer or authorized employee of the District, shall not in any manner be answerable or accountable for any loss or damage that may happen to the work, or any part thereof, or on account of said work or part thereof, or on account of any action of the Contractor, his agents or employees, whether in connection with said work or the performance of any part thereof, or otherwise, and the Contrac-

tor must make good all damage from whatsoever cause, being strictly responsible for the same under this contract.

(y) Eight Hours to Constitute a Day's Work.—The time of service of any laborer, workman or mechanic employed upon any of the works herein specified shall be limited and restricted to eight (8) hours during any one (1) calendar day, and no laborer, workman or mechanic employed upon said work herein specified shall be required or permitted to labor more than eight (8) hours during any one (1) calendar day, except in cases of extraordinary emergency caused by fire, flood or danger to life or property; provided, however, that within thirty (30) days after any employee is permitted to work over eight (8) hours in any one (1) calendar day, due to such extraordinary emergency, the Contractor or his duly authorized agent shall file with the Board of Directors of the District a report verified by his oath setting forth the nature of the said emergency, which report shall contain the name of said worker and the hours worked by him on said day, and failure to file the said report within the said time shall be prima facie evidence that no extraordinary emergency existed. The Contractor and each subcontractor shall also keep an accurate record showing the names and actual hours worked of all workers employed by him in connection with the said public work, which record shall be open at all reasonable hours to the inspection of the Board of Directors of the District or its agent, and to the chief of the Division of Labor Statistics and Law

enforcement of the Department of Industrial Relations, his deputies or agents.

The Contractor shall forfeit as a penalty to the District ten dollars ($10.00) for each laborer, workman or mechanic employed in the execution of said contract by him or by any subcontractor under him upon any public work herein specified for each calendar day during which said laborer, workman or mechanic is required or permitted to labor more than eight (8) hours in violation of the provisions of Section 653c of the Penal Code of the State of California, and amendments thereto, and said sums and amounts which shall have been so forfeited pursuant to this paragraph shall be withheld and retained from payments due to the Contractor pursuant to this contract and the terms of said act; provided, however, that no sum shall be so withheld, retained or forfeited, except from the final payment, without a full investigation by either the Division of Labor Statistics and Law Enforcement of the State Department of Industrial Relations, or by said Board of Directors.

(z) Structures.—(1) The removal and replacing of any existing structures, pipes, sewers, conduits, wires, etc., necessary for the proper completion of any work herein specified, shall be performed by the Contractor and no claim for extra work shall be made for such removal and replacement.

(2) In case it shall be necessary to remove any telephone, telegraph or electric power transmission

poles, water pipes, electrical conduits, or underground structures of any character, or any portion thereof, the owner or owners thereof, or their agents or superintendents, shall be notified by the Contractor and the Contractor shall make the necessary arrangements for such removal. The right is reserved to the District and also to railway, water, gas, telephone, telegraph and electrical power transmission companies to enter upon the work for the purpose of making repairs and changes that have become necessary by reason of the work specified herein.

(3) The Contractor shall thoroughly investigate all existing poles, wires, pipes and conduits above and below ground and shall provide for the maintenance or replacing of same in good condition and at no expense to the District. Any necessary new or additional pipe or material shall be furnished by the Contractor at his expense.

(4) At the completion of the work the Contractor shall furnish the District Engineer with a written certificate from the owner or owners of each and all such conduits, pipes or structures to the effect that such replacements and maintenance have been satisfactorily performed.

(5) In case work is to be done over or under railroad tracks the Contractor shall make all arrangements with the railroad companies concerned and shall give written notice to the District that such necessary arrangements have been made before any work at such places shall be started.

(z-2) Payment of Not Less than the General Prevailing Rate of Wages.—The Contractor and all subcontractors under him shall pay all their laborers, workmen, mechanics and employees on said work a salary or wage at least equal to the prevailing salary or wage for the same quality of service rendered to private persons, firms or corporations under similar employment, and which salary or wage shall not be less than the general prevailing rate of per diem wages for work of a similar character in the locality in which the work is performed, and not less than the general prevailing rate of per diem wages for overtime work, and which salary or wage shall not be less than the stipulated rates contained in a schedule thereof which has been ascertained and determined by the Board of Directors of the District and which is now on file with the Secretary of said Board and by reference incorporated herein and made a part hereof and a copy of which is hereto appended and marked "Exhibit A." The Contractor shall forfeit as a penalty to the District ten dollars ($10.00) for each laborer, workman or mechanic employed, for each calendar day, or portion thereof, such laborer, workman or mechanic is paid less than the said stipulated rates for work done under said contract, by him, or by any subcontractor under him in violation of Chapter 397 of the Laws of 1931 of the State of California, and said sums and amounts which shall have been so forfeited shall be withheld and retained from payments due to the Contractor

pursuant to this contract and the terms of said Act; provided, however, that no sum shall be so withheld, retained or forfeited, except from the final payment, without a full investigation by either the Division of Labor Statistics and Law Enforcement of the State Department of Industrial Relations or by said Board of Directors.

(z-3) Alien Labor and Record of Names and Citizenship of All Workers Employed.—The Contractor and Subcontractor upon said work herein specified shall not employ or cause or allow to be employed thereon any alien except in cases of extraordinary emergency caused by fire, flood or danger to life or property; provided, however, that within thirty (30) days after any alien is permitted to work thereon due to such an extraordinary emergency, the Contractor doing the work, or his duly authorized agent, shall file with the Board of Directors a report verified by his oath, setting forth the nature of the said emergency and containing the name of the said alien and each date he was permitted to work, and failure to file the said report within the said time shall be prima facie evidence that no such extraordinary emergency existed. The Contractor and each Subcontractor shall also keep, or cause to be kept, an accurate record showing the names and citizenship of all workers employed by him, in connection with the said public work, which record shall be open at all reasonable hours to the inspection of the District Engineer,

his deputies and agents or to the Board of Directors, its deputies and agents, and to the Chief of the Division of Labor Statistics and Law Enforcement of the State Department of Industrial Relations, his deputies and agents.

The Contractor shall forfeit as a penalty to the District ten dollars ($10.00) for each alien employed in the execution of said contract, by him, or by any subcontractor under him, upon said work herein specified, for each calendar day, or portion thereof, during which such alien is permitted or required to labor in violation of the provisions of Chapter 398 of the Laws of 1931 of the State of California, and said sums and amounts which shall have been so forfeited pursuant to the herein paragraph shall be withheld and retained from payments due to the Contractor pursuant to this contract, and the terms of said Act; provided, however, that no sum shall be so withheld, retained or forfeited, except from the final payment, without a full investigation by either the Division of Labor Statistics and Law Enforcement of the State Department of Industrial Relations or by said Board of Directors.

(z-4) Traffic and Detours.—The Contractor shall provide for ingress and egress for people living adjacent to the site of work and for through traffic where good detours cannot be arranged. He shall arrange to take care of the existing traffic so as to inconvenience the public as little as possible. He shall provide and maintain such fences, barriers,

signs, red lights, watchmen and other means as may be necessary to prevent accidents to the public. He shall furnish and place at points designated by the District Engineer such signs as may be necessary to direct or control traffic and shall provide lights as may be necessary for illuminating the said signs.

All expense in connection with the construction and maintenance of detours and the above mentioned provisions for the public safety shall be at the expense of the Contractor.

(z-5) Schedule of Work.—The Contractor shall submit to the District Engineer within five (5) days after signing the contract a proposed schedule of work, setting forth times of commencement, proposed progress and probable dates of completion of the various units and phases of the work. Such schedule may be altered or amended from time to time, by and with the written approval and consent of the District Engineer, but such alteration or amendment shall not in any case be construed to change the final date of completion of the work as set forth in the contract.

[Clerk's Note: As Amended by Plaintiff's Exhibit No. 10.]

(z-6) General Provisions.—In all cases where the said final specifications provide that the Contractor shall submit to the District Engineer with his bid detailed information, test data, performance curves, or other matters pertaining to equipment or materials to be furnished, or data in connection

therewith, or other such information as is hereinafter called for in these specifications to be submitted with bids, such data and information setting forth all of the matters and things as specified shall not be submitted with the bid but instead shall be submitted to the District Engineer in sufficient time to permit of checking and testing but not less than four (4) months prior to the installation of such equipment on the project.

SECTION 7. CLEARING

1. Clearing.—Clearing shall consist of clearing and grubbing the site of the work of all trees, rubbish, stumps, roots, grass, heavy sod, debris, decayed vegetable matter or other encumbrances, and the removal and disposal of same. Trees or stumps within the roadway area shall be removed to a depth of not less than three feet (3′) below the finished grade of any roadway area, and the holes thus made shall be backfilled with earth or gravel and thoroughly tamped. Trees or stumps on portions outside of roadway areas or within the roadway areas upon which fills in excess of three feet (3′) are to be placed, or on areas where the District has slope privileges but which will be under fills, may be cut off at the level of the ground as it exists prior to the placing of the fills. On slopes in excavation, trees, stumps and roots shall be cut off to the line of the finished slopes.

2. Disposal of Cleared Material.—Trees, stumps, brush, limbs and other debris for which burning is

practicable, may be burned or otherwise disposed of away from the site of the work at the expense of the Contractor. No accumulation of inflammable or combustible material shall be permitted to remain on or adjacent to the site of the work. Burning shall be done in a manner to prevent damage to surrounding or adjacent property and shall conform to all rules, regulations and ordinances of the State, County or Municipality where such apply. The District Engineer shall have the right to regulate the hours in which burning is done, so as not to interfere with other portions of the work, and to prevent inconvenience to nearby residents and property owners.

The Contractor shall obtain the approval of the District Engineer as to methods and time of burning, before any such operation is permitted.

Material which cannot be efficiently destroyed by burning shall be removed entirely and disposed of away from the site of the work by the Contractor who shall make his own arrangements for such removal and disposal.

3. Payment for Clearing.—No separate payment or allowance shall be made to the Contractor for work connected with clearing, grubbing and disposal of debris, but the price paid per unit of work under "Grading" shall include full compensation for furnishing all labor, materials, tools, implements and equipment, and doing all incidental work necessary to clear the site of the work as above specified.

SECTION 8. GRADING

1. Description.—Grading shall consist of the performing of all operations necessary, to excavate earth and rock from the roadway prism, to excavate ditches and borrow pits, to build fills and embankments in the locations and to the elevations, form and cross-sections designated or planned for same, to grade all approaches to structures, either existing or new and to make proper connections with existing streets or roadways, to transport excavated material to portions of the work where a deficiency exists within the limits of free haul designated, to dispose of surplus material from the site of the work, and shall include the furnishing of all labor, materials and equipment necessary for these operations and the performance of incidental work of whatsoever nature as may be required to build the grade and the approaches to it and maintain them in the form specified until the completion and acceptance of the contract.

2. Construction Roads.—Grading involved in the building of construction roads which may be required to give easy access to any portion of the work, or to facilitate constructing embankments in layers, or which may be done for the convenience of the Contractor or may be necessary for the proper operations of the Contractor in the conduct of the work, will not be paid for. Full compensation for such work will be considered as included in the price bid for "Grading," and no additional allowance will be made therefor.

3. Unsuitable Materials.—All soft or unsuitable material shall be excavated and the space refilled with good earth, gravel or other suitable material satisfactory to the Engineer, before making fill upon it. Soft spots shall be excavated to a depth of at least two feet (2′) and refilled. The yardage actually removed will be paid for at the unit price bid for "Grading."

In solid rock excavation or other material which cannot be readily plowed, the material shall be loosened and broken up for the full width of the roadbed, so that any ribs or solid projections shall be at least six inches (6″) below subgrade elevation. The yardage so broken up for a depth of six inches (6″) will be paid for at the unit price bid for "Grading." The broken up material shall be removed and the resulting space refilled with approved material, provided, however, that the Engineer may, if, in his judgment, the broken up material is satisfactory for subgrade material, permit such material to remain without removal.

4. Blasting.—Excessive blasting or over shooting will not be permitted and the Contractor will be required to remove at his own expense any material outside the authorized cross-sections which may be shattered or loosened by blasting. The Contractor will be liable for any damages of any nature caused to public or private property, either on or off the right-of-way, by blasting operations. The Engineer shall have authority to require the Contractor to

discontinue any method of blasting which leads to overshooting or is dangerous to the public or destructive to public or private property or to natural features, but such authority of the Engineer shall not relieve or release the Contractor from his responsibility or liability for damages of any kind.

5. Slides.—The removal of large slides from outside the limits of the staked cross-section, which come into the roadway through no fault of the Contractor, will be paid for at the unit price bid for "Grading." This provision shall not be construed as to relieve the Contractor from the duty of maintaining true to cross-section all slopes and ditches, or from the requirements set forth above under "Blasting."

6. Slopes.—Excavations shall be finished with all slopes cut true and straight, in conformity with the lines and grades of slope set by the District Engineer, and all slopes whether old or new shall be maintained with true and even surfaces.

7. Drainage Ditches.—Drainage ditches shall be constructed as shown on the plans or as directed by the District Engineer, true to grade and cross-section, and thereafter so maintained for the duration of the contract. The Contractor shall exercise care to prevent excavating below the grade for the bottom of the ditch. Holes and depressions below the grade of the bottom of the ditch shall be filled with suitable material and compacted at the expense of the Contractor.

Drainage ditches off the line of the right-of-way and water channels for changing the course of streams, where shown on the plans or ordered by the District Engineer, shall be excavated by the Contractor.

8. Widening Cuts.—The District Engineer may direct that cuts be widened and slopes increased over the widths and slopes shown upon the plans, when, in his judgment, such work is necessary to provide material needed for embankments or to obtain stability of slopes; and provided that such direction is given prior to the actual commencement by the Contractor of excavation in the cut to be widened.

If the material is of such nature that it will stand at a steeper slope than that shown on the plans, and when the material that would be excavated by cutting back to the slope shown on the plans is not required or is not suitable for embankment purposes, such slopes shall be decreased where ordered by the Engineer.

9. Selected Material.—When suitable material is encountered in excavation, which, in the opinion of the Engineer, should be used for finishing, the Contractor shall excavate and segregate such material, pile the same within the limits of free haul, and later use this material to surface the roadbed or to construct shoulders. Selected material so stockpiled and later placed on the roadway by the Contractor will be paid for twice at the unit price bid for "Grading." Such additional payment, however,

will not be made if material so stockpiled is not actually placed on the roadway by the Contractor, in which case it will be paid for but once as provided under payment for "Grading."

10. Measurement.—Quantities of excavation will be computed by the method of average end areas, the distance between end areas being measured along the center line of the roadway. Excavation in excess of the authorized cross-section will not be paid for. The final estimate of excavation quantities will be the quantities included within the slope stakes set to define the limits of work and authorized modifications therefrom. This shall include authorized borrow and removal of unpreventable slides. Selected material stock-piled and later placed on the shoulders or used for surfacing will be estimated twice, both when excavated from the roadway and when rehandled from the stock piles.

11. Payment.—The price paid per cubic yard for "Grading" shall include full compensation for clearing and grubbing, the excavation, loading, transporting, depositing, watering and compacting of the roadway materials in accordance with the specifications, and all other work incidental thereto. Excavating unsuitable material, slide removal, excavation of drainage ditches, surface ditches and channels for changing the courses of streams, rehandling stockpiled material on the surface or shoulders will be paid for at the unit price bid for "Grading," which price shall include full compensation for all work necessary or incidental thereto.

Overhaul will be paid for as otherwise herein provided.

12. Embankment.—(a) After the site of the work has been cleared and grubbed to the satisfaction of the Engineer, the total width upon which fill is to be made shall be plowed and broken up so that new fill material will bind with the old earth. When embankments are to be made on hill sides or where new fill is to be applied upon existing embankments, the slopes of the existing surfaces shall be plowed deeply or cut into steps before the filling is commenced.

Only material suitable for embankments shall be used for filling. The best fine surfacing material shall be saved for finishing. Clods or hard lumps of earth over six inches (6″) in greatest dimension shall be broken up before being placed in the fill with the object of obtaining a dense embankment. Large rocks or hard lumps such as hard-pan or cemented gravel which cannot be broken readily shall be distributed throughout the embankment and filled around with fine material so as to secure a dense compact embankment. No such rocks or lumps over six inches (6″) in size shall be placed in the upper two feet (2′) of embankment unless they are buried so as to have a cover of not less than half their greatest dimension.

When embankments are made of stone, the material shall be carefully placed so that the large stones shall be well distributed and the interstices com-

pletely filled with smaller stone and earth to form a dense, solid embankment.

All adobe material placed in embankment shall be deposited at the bottom of the fill and no adobe shall be placed in embankment above a point one foot (1′) below the finished grade.

(b) Compacting.—Except as otherwise specified herein embankments shall be constructed in layers not exceeding eight inches (8″) in thickness. The sides of the fill shall be placed first and the center shall be carried up lower than the sides. Each layer shall be thoroughly compacted by rolling with a twelve (12) ton three-wheeled power roller or with a tamping roller, the outer surface of which shall be studded with teeth not less than seven inches (7″) long and having a surface area of approximately four square inches (4 sq. in.) each; the roller shall be of such a weight that the load upon each tooth will be not less than three hundred pounds (300 lbs.). Unless the material when placed in the fill is moist enough to be properly compacted, each layer shall be watered sufficiently to dampen the material before being rolled. Successive layers shall not be placed until the layer under construction has been thoroughly compacted.

Embankments built of rock or rocky material shall be constructed in layers from eight inches (8″) to not more than eighteen inches (18″) in thickness, and watered and rolled thoroughly with a three-wheeled power roller weighing not less than twelve (12) tons. The use of tamping or sheepsfoot

rollers will not be permitted for compacting layers over eight inches (8″) in thickness. The thickness of the layers of the material containing large rock shall be the minimum which the size of the rock present in the material will permit, but in no case shall the thickness of the layers exceed eighteen inches (18″). The Contractor will be required to break up oversize rock with sledges or otherwise to make the layers conform to the maximum allowable thickness.

In advance of watering and rolling, sufficient earth or other fine material shall be incorporated with the coarse rock, as it is deposited, to provide a dense solid embankment. Overhaul will be paid on such earth or fine material if it is necessary to haul it further than the limit of free haul.

In making fills or embankment around columns, abutments or other parts of structures the work shall be done as specified under "Backfill," paragraph 2 of Section 9.

(c) Shrinkage Allowance and Maintenance.—Embankments shall be maintained to the grade and cross section shown on the plans or otherwise authorized or directed, until the completion and acceptance of the contract. Suitable allowance for shrinkage and compression shall be provided for by the Contractor in the building of embankments.

The Contractor shall be responsible for the stability of all constructed embankments and shall replace, without cost to the District, any portions which in the opinion of the Engineer have become

displaced, due to carelessness or negligence, on the part of the Contractor, his employees or agents.

(d) Surplus Excavated Material.—All surplus excavation and waste material shall be used to widen embankments uniformly or to flatten slopes, or shall be disposed of in such other places and for such purposes as the Engineer may direct. The Contractor shall not waste material without written authority from the Engineer. Full compensation for the disposal of surplus excavated material shall be considered as included in the prices bid per cubic yard for "Grading," and no additional allowance will be made for such disposal.

(e) Payment.—Full compensation for constructing and compacting embankments as herein specified shall be considered as included in the prices bid per cubic yard for "Grading" and no additional allowance and no other charge will be allowed for the performance of any operation specified or intended or necessary to conform properly to the results intended by these specifications.

13. Overhaul.—(a) When excavated material is disposed of as provided by these specifications or as directed by the Engineer, within a distance of five hundred feet, no payment for overhaul shall be made, it being understood that a free haul of five hundred feet is covered by the price paid for "Grading." When excavated material is required to be hauled beyond five hundred feet (500′), the haul beyond five hundred feet (500′) shall be classed as "Overhaul."

Overhaul shall be measured by the station yard and for the purpose of measurement a station is defined as one hundred feet (100'). In computing overhaul, the number of station yards will be determined as the product of the number of cubic yards remaining in any cut, after proper deduction has been made for material placed within the free haul distance by the number of stations such material is hauled, less the five (5) stations of free haul. The distance such material is hauled will be taken as the distance between the center of volume of such remaining cut and the center of volume of the corresponding fill. The distance between centers of volume will be measured along the center line of construction.

The Contractor shall notify the District Engineer when overhaul is to be performed and no payment will be made for any overhaul unless such notification is given and a written authorization obtained from the District Engineer to proceed. Such authorization will set worth the approximate amount of overhaul for which payment will be made, and the method of measurement of same, to be agreed upon by the Contractor in writing. The decision of the District Engineer shall be final in all questions which may arise as to the disposition of material and the amount of overhaul to be allowed.

(b) Payments.—The price bid per station yard for "Overhaul" shall include full compensation for hauling and/or transporting and depositing material beyond the free haul distance as above specified.

SECTION 9. EXCAVATION FOR STRUCTURES

1. Excavation.—Excavation, including the replacing of excavated material or backfill of trenches for pipe culverts, headwalls and concrete culverts, bridges, retaining walls or other structures will be known as "Structural Excavation."

"Structural Excavation" shall include the removal of all material of whatever nature necessary for the construction of foundations and substructures in accordance with the plans or approved modifications thereof. It shall include the construction of all bracing, cribs, cofferdams, caissons and other details as may be necessary and the subsequent removal of bracing, cribs, cofferdams, caissons and other structures. It shall also include the furnishing of all materials and equipment necessary to perform the work specified, together with the incidental structures necessary.

Trenches shall be excavated of a size equal to the approximate size of the structure to be built therein, plus the additional size required for proper cribbing.

2. Backfill.—After the piers and abutments are in place materials shall be backfilled to the original ground line. No material shall be deposited in fills against the backs of abutments or walls until twenty-one (21) days have elapsed after the pouring of the concrete in the main walls taking stress.

Backfill over and around culverts, arches, abut-

ments and columns shall be brought up uniformly on all sides in order to avoid causing binding or distortional stresses in the structures.

Backfill shall be placed carefully in horizontal layers not exceeding eight inches (8″) in thickness and puddled or tamped or rolled as the District Engineer may direct. Puddling shall be prohibited in any situation where it might soften the foundations or develop hydrostatic pressure behind walls. The District Engineer may require selected material to be used in locations where, in his judgment, such use is necessary.

Material which is unsuitable for use in backfill shall not be used as such, but may be used on other parts of the work, if suitable, or, if no such place exists, shall be disposed of by the Contractor at his own expense, in a manner to be approved by the District Engineer. Surplus material which may be suitable for backfill shall be transported and used to backfill where a deficiency of suitable backfill material exists, at the site of structures or to widen fills, and no additional charge shall be made for the transporting and handling of such excess material, or unsuitable material being disposed of.

8. Measurement.—Structural excavation shall be estimated to include the actual volume of material removed to neat vertical planes, surrounding the foundation structure; and no allowance will be made for such excavation outside of neat planes as may be necessary for bracing, cribbing, cofferdams or other auxiliary structures. The top and bottom

limits of computed volume shall be the original ground surface and the bottom of the completed footing; except that for culverts in roadway or ditch cuts the volume will be computed up to the finished subgrade only and for culverts in roadway fills will be computed to the original ground surface before the fill was placed.

No allowance will be made for the removal of material caused by swelling or rising of the ground due to the driving of piles or the flow of materials through or under cofferdams or caissons.

No measurement will be allowed for backfill, but such operation shall be included in the price paid per cubic yard for material in "Structural Excavation."

4. Payment.—The price paid per cubic yard for "Structural Excavation" "Class A" shall include full compensation for excavating, backfilling and disposing of surplus material as specified and including the cost of construction of all bracing, cribs, cofferdams, caissons and other auxiliary structures and their subsequent removal.

If it is necessary in the opinion of the District Engineer to increase the depth of any or all of the excavations more than two feet (2′) below the depth shown on the plans, such excavation below said two foot (2′) additional depth will be paid for at the unit price bid for "Structural Excavation" "Class B."

No measurement will be made or separate payment allowed for "Structural Excavation" where

such excavation is specifically included as part of structures or other units of work and paid for as such, as otherwise provided herein.

SECTION 10. SUBGRADE

1. Description.—The subgrade will be considered as that portion of the roadway forming the foundation on which surfacing or paving is to be placed.

Before the surfacing or paving is placed the subgrade shall be constructed conforming to the grades and cross-sections shown on the plans and in accordance with these specifications.

The finished subgrade shall be true to cross-section, hard, uniform, smooth and must support without perceptible indentation the wheels of heavily loaded trucks.

2. Preparing Subgrade.—The surface of the roadway where pavement is to be constructed shall be brought by excavation and embankment to an elevation two inches (2″) lower than the bottom surface of the pavement, as shown on the plans. The roadbed shall then be thoroughly watered and all fills more than one foot (1′) in depth shall be dyked and flooded with water for a sufficient length of time to allow full settlement to take place. The grade shall then be rolled thoroughly and rolling shall be extended over the adjacent shoulder areas at the same time. Headerboards as hereinafter specified shall then be constructed true to line and grade. The area between the headerboards shall

then be loosened to a depth of approximately six inches (6″) with a rooter, scarifier or plow so operated that no ribs of compacted material will be left in place. Clods shall be broken up and the loosened material disked to its full depth with a cultivator. High spots shall be removed and depressions filled by means of a scraper and the cultivating continued until the soil is pulverized.

The pulverized soil shall be roughly shaped to cross-section and rolled with a power roller weighing not less than three hundred and fifty (350) pounds per lineal inch width of tire. The surface shall then be graded uniformly to a height of two inches (2″) below the bottom surface of the proposed pavement by means of a subgrader or shaper riding on the headerboards. The area between the headerboards shall then be backfilled with gravel or crushed rock backfill hereinafter specified to a depth which will, after final rolling and shaping, make a thoroughly compact subgrade true to crown and section and grade of the bottom of the proposed pavement. The gravel or crushed rock backfill shall then be worked into the previously prepared material by a harrow or cultivator until a uniform distribution of the two materials is had.

The grade shall then be watered uniformly with a sufficient quantity of water to saturate the mixed materials and shall be worked with a cultivator until the loose material for its entire depth is at the proper consistency for rolling. If dry spots become apparent, or, if spongy or wavy spots due to

use of two much water or not enough harrowing develop during rolling, the condition shall be corrected before proceeding further. Rolling shall be continued until no more compression is possible. Additional gravel or crushed rock shall be added where necessary to bring the section to the required elevation, and rolling and watering shall be continued until the entire subgrade is smooth and compact and slightly higher than the finished subgrade elevation.

Immediately after rolling the subgrade shall be cut to true grade and cross-section by means of a subgrader riding on the headerboards. The excess material shall be removed immediately and on the final cut the wheels of the subgrader shall rest on the headerboards at all points as indicated when they are revolving.

After the final cut the subgrade shall be checked by means of a scratch template. The nails in this template shall be not more than three inches (3″) apart and shall project at least three-quarters of an inch (¾″) from the wood in such a manner as to be on line for the true depth and surface of the subgrade when the template is supported on each side of the headerboards. Any high spots in the subgrade shall be immediately corrected. Low spots will be backfilled, provided the entire area is scarified, watered and rerolled after such backfilling or the Contractor may compensate for the low subgrade by additional thickness of pavement. No alteration of the finished pavement grade will be

permitted on account of low subgrade, and the additional thickness of pavement shall be provided by the Contractor at no expense to the District.

When the subgrade has been finally tested and approved by the District Engineer it shall again be watered and shall then be protected by the Contractor against damage by either his own or public traffic. Any irregularities which develop in the subgrade due to use thereof by the Contractor or the public or by storage of materials, or by any other cause, shall be corrected by the Contractor before pavement is placed.

3. Crushed Rock or Gravel Backfill.—The crushed rock or gravel backfill required for making subgrade shall be such a mixture of crushed rock or gravel or broken rock as will readily compact and after rolling and watering will make a hard, firm dense subgrade. Material from the roadway excavation will not be used for this backfill. The material shall not contain any rock or gravel over one inch (1″) in its largest dimension, and shall all be retained on a screen having one-quarter inch (¼″) openings. The Contractor shall submit samples of the material to be used to the Engineer and receive his approval before any shall be placed on the grade.

4. Payment.—The price paid per square foot for the various types of pavement shall include full compensation for all plowing, harrowing, watering, rolling, furnishing and placing crushed rock or

gravel, backfill, grading and shaping and finishing subgrade, and for furnishing all labor, materials, tools, implements and equipment and doing all work incidental to shaping and preparing the subgrade for pavement.

* * * * * * * *

SECTION 13. PORTLAND CEMENT CONCRETE

Composition of Concrete

1. Description.—Portland Cement Concrete shall be composed of specified mixtures of Portland Cement, fine aggregate, coarse aggregate and water, in two (2) general classes, as follows:

Class "A"—For sections of concrete structures having a thickness of eight inches (8") or less, or having reinforcing bars spaced four inches (4") or less in the clear.

Class "B"—For pavement, and for sections of concrete structures, including tunnel lining, having a thickness greater than eight inches (8") and having reinforcing bars spaced more than four inches (4") in the clear.

For concrete structures where strict adherence to this classification would require placing both concrete of Class "A" and Class "B" in small quantities in a continuous placement, the District Engineer

may permit the use of either class of concrete throughout the section, as he deems desirable, and his judgment in such cases shall be final.

2. Proportions and Consistency.—The proportions of fine and coarse aggregate to be used for each class of concrete will be determined by the District Engineer after the materials have been delivered to the site of the work. Such proportions will depend upon the grading of the aggregates, but the amount of fine aggregate shall always be the minimum amount required, which, when combined with cement, will produce only a slight excess of mortar over that necessary to completely fill the voids in the coarse aggregate. The District Engineer shall have the right to change the proportions of cement and of fine and coarse aggregate and the consistency of the concrete mix, when, in his judgment, such change is desirable.

The amount of water required for the proper consistency of each class of concrete shall be determined by the District Engineer by means of the slump test, made in accordance with the Tentative Method of Test for Consistency of Portland Cement Concrete, Serial Designation D 138-26T, of the American Society for Testing Materials. In general, the consistency of the concrete shall be as dry as in the judgment of the District Engineer, can be thoroughly compacted in the forms through the use of vibratory tampers to completely fill the forms without voids or stone pockets.

Samples for slump tests will be taken from the mixture immediately as it enters the forms.

Class "A" Concrete shall be a mixture as herein specified, in which the amount of cement in the finished product shall be not less than five hundred and seventeen (517) pounds and not more than six hundred and eleven (611) pounds per cubic yard of concrete. It is expected that the proportions of cement, fine aggregate and No. 4 to one and one-half inch (1½") coarse aggregate will be approximately 1:2:4 by weight, and that the slump will be not less than two inches (2") nor more than four inches (4").

Class "B" Concrete shall be a mixture as herein specified, in which the amount of cement in the finished product shall be not less than four hundred and seventy (470) pounds and not more than five hundred and sixty-four (564) pounds per cubic yard of concrete. It is expected that the proportions of cement, fine aggregate, No. 4 to one and one-half inch (1½") coarse aggregate and one and one-half inch (1½") to two and one-half inch (2½") coarse aggregate will be approximately 1:2½:4:1 by weight, and that the slump will be not less than one inch (1") nor more than four inches (4").

The range in amounts of cement and in permissible slump is for the purpose of obtaining the best mix with the aggregates furnished, adapted to the methods of transportation and placing of concrete to be used by the Contractor in the various structures. In general, when the maximum slump is

necessary, the larger amount of cement will be required, but it is the purpose and intent to obtain mixtures which will produce the desired strength with the minimum amount of cement. It is hereby specified, and the District Engineer will require, that methods of handling and placing be adopted which will permit the use generally of a mixture whose consistency will approximate the lower limits of the specified slumps.

Should conditions arise which, in the opinion of the District Engineer, require, for proper transporting and placing, the use of concrete mixtures which have consistencies producing a slump in excess of the maximum specified, the District Engineer shall determine an additional amount of cement to be added to the mixture for the purpose of obtaining a strength equivalent to that of the specified mixture, and the Contractor shall furnish such additional cement at his expense and without charge to the District. The judgment of the District Engineer shall be final and binding upon the Contractor as to the necessity for and the amount of additional cement to be furnished and used.

This provision shall not be construed as giving the Contractor the option of supplying additional cement as an alternative to using methods of transporting and placing concrete of the type specified, but is intended only to meet special or unusual conditions which may arise due to the nature of the work and the possible hazards which may be involved.

Cement

3. Description.—The cement used in concrete shall consist of Portland cement conforming to the requirements of the Standard Specifications for Portland Cement, Serial Designation C9-30 of the American Society for Testing Materials.

4. Delivery.—Cement shall be furnished in bags or sacks containing ninety-four (94) pounds of cement net, with the brand and the name of the manufacturer plainly marked thereon, or, with the approval of the District Engineer, may be furnished in bulk.

5. Storage.—Cement shall be stored so as to permit of ready access for inspection and identification of each shipment, and shall be protected from exposure to moisture until used. Cement shall not be stored on the work longer than sixty (60) days, and any cement that becomes caked, lumpy or hardened shall be rejected and removed at the Contractor's expense.

6. Plant Inspection and Testing.—The Contractor shall make arrangements with the cement company from whom cement is purchased to set aside sealed bins from which samples may be taken by the Engineer, and no cement shall be shipped to the work except from such bins. Information for identification of the bin from which cement is obtained with times of filling, sampling and shipment shall accompany each shipment of cement. No cement shall be shipped to the work until it shall have satisfactorily passed all tests required by these speci-

fications, including the 28-day test for tensile strength. At intervals of approximately one month, the records of quantities of cement shipped, cement received, cement used in concrete, and cement remaining in storage at the work shall be made available to the Engineer.

The Engineer shall have the right to sample and test cement on the work, and the approval of any cement at the plant shall not prevent the rejection of cement on the work when such cement does not in every respect conform to these specifications.

Water

7. Description.—Water used for mixing concrete shall be clean and clear, free from injurious amounts of acids, alkalis, oil, sulphates, organic matter or other deleterious substances. In determining the suitability of water for use, the Engineer's judgment shall be final. Water from the regular supply of the East Bay Municipal Utility District will be considered satisfactory.

Aggregates

8. Description.—Aggregate shall consist of clean, hard, strong, durable particles of inert mineral material, free from injurious amounts of organic matter, oil, alkali and salt, and conforming to the requirements of these specifications. Aggregate shall consist of three classes, namely, fine aggregate, No. 4 to 1½ inch coarse aggregate, and 1½ to 2½ inch coarse aggregate.

For each class of aggregate the amount of clay shall not exceed one per cent (1%) by weight, and the total amount of clay, shale and soft or flaky particles shall not exceed five per cent (5%) by weight.

Aggregate for test shall be sampled in accordance with the Standard Methods of Sampling, Serial Designation D75-22, of the American Society for Testing Materials. The sieve analysis shall be made in accordance with the Standard Method of Test for Sieve Analysis of Aggregates for Concrete, Serial Designation C41-24 of the American Society for Testing Materials.

Aggregate of each class shall be from one source of supply only, except by permission of the District Engineer. Prior to the beginning of the work the Contractor shall submit representative samples to the District Engineer for test and approval, and the grading of aggregates as furnished shall not vary from that of the approved samples by more than the amounts hereinafter specified.

9. Fine Aggregate.—Fine aggregate shall consist of washed sand conforming to the requirements of these specifications.

The total amount of clay, silt and other material removable by decantation shall be not less than one per cent (1%) and not more than three per cent (3%) by weight, when tested in accordance with the Standard Method of Decantation Test for Sand and other fine aggregates, Serial Designation

D 136-28, of the American Society for Testing Materials.

The amount of organic matter shall be not greater than that which will produce a color equal to or lighter than that of the standard color solution, when tested in accordance with the Standard Method of Test for Organic Impurities in Sands for Concrete, Serial Designation C 40-27, of the American Society for Testing Materials.

Briquets of mortar made of one part of cement to three parts of fine aggregate, by weight, shall develop after the age of seven (7) days not less than ninety per cent (90%) of the strength of similar briquets made of standard Ottawa testing sand, using the same cement, the same mix, and having the same consistency.

Fine aggregate shall be well graded from coarse to fine within the specified limits, and when tested by means of laboratory sieves shall conform to the following requirements:

Passing No. 4 sieve	95% to 100%
Passing No. 30 sieve	25% to 45%
Passing No. 50 sieve	5% to 15%

The fineness modulus of fine aggregate as expressed by 1/100 of the sum of the cumulative percentages coarser than each of the Tyler standard sieves in the standard sieve analysis shall be not less than 2.50 nor more than 3.25.

The grading of fine aggregate shall be reasonably constant and the fineness modulus shall not vary from that for the approved representative sample submitted at the beginning of the work by more than ± 0.20.

10. Coarse Aggregates.—Coarse aggregate shall consist of washed gravel, washed crushed stone or washed crushed gravel, free from adherent coatings and conforming to the requirements of these specifications.

The total amount of clay, silt and other material removable by decantation shall be not more than five-tenths per cent (0.5%) by weight when tested in accordance with the Standard Method of Test for Quantity of Clay and Silt in Gravel for Highway Construction, Serial Designation D72-21, of the American Society for Testing Materials.

Coarse aggregate shall pass the Sodium-sulfate test for soundness, made in accordance with the Tentative Method of Test for Soundness of Coarse Aggregates by the Use of Sodium Sulfate, Serial Designation C89-31T, of the American Society for Testing Materials, except that aggregates failing in the accelerated soundness test may be used if they pass a freezing and thawing test satisfactory to the District Engineer.

Coarse aggregates shall have a French coefficient of wear of not less than ten (10) when tested in accordance with the Standard Method of Test for Abrasion of Rock, Serial Designation D2-26, of the American Society for Testing Materials.

Coarse aggregate shall be batched in two separate sizes, herein designated as No. 4 to 1½ inch coarse aggregate, and 1½ to 2½ inch coarse aggregate.

No. 4 to 1½ in. coarse aggregate shall be well graded within the specified limits, and shall conform to the following requirements:

Passing a sieve having 1½ in. sq. openings	95 to 100%
Passing a sieve having ¾ in. sq. openings	60 to 75%
Passing a No. 4 sieve	0 to 5%

The 1½ to 2½ in. coarse aggregate shall conform to the following requirements:

Passing a sieve having 3 in. sq. openings	100%
Passing a sieve having 2½ in. sq. openings	95 to 100%
Passing a sieve having 2 in. sq. openings	75 to 95%
Passing a sieve having 1½ in. sq. openings	20 to 40%
Passing a sieve having ¾ in. sq. openings	0 to 10%
Passing a No. 4 sieve	0 to 5%

For each coarse aggregate the grading shall be reasonably constant, and the fineness modulus as expressed by 1/100 of the sum of the cumulative percentages coarser than each of the sieves in the

standard sieve analysis, except the 1-inch and 2-inch sieves, shall not vary from that for the approved representative sample submitted at the beginning of the work by more than ± 0.50, except by special permission of the Engineer.

In case the concrete is not of workable character, or when finished does not exhibit a proper surface due to the presence of an excess of particles approximately one-eighth inch (⅛") to one-half inch (½") in size, either a fine aggregate having a sufficiently greater percentage of fine material or a No. 4 to 1½ inch coarse aggregate having a sufficiently smaller percentage of fine material shall be used, as directed by the Engineer.

Coarse aggregate used in Class A Concrete shall consist of No. 4 to 1½ inch coarse aggregate only. Coarse aggregate used in Class B concrete shall be a mixture of No. 4 to 1½ inch and 1½ to 2½ inch coarse aggregates, in proportions as directed by the Engineer, and batched separately.

11. Combined Aggregate.—The combined aggregates including the fine aggregate shall be so graded as to obtain, in the judgment of the Engineer, concrete of maximum density and strength with suitable workability and without the use of an excessive amount of cement. In general, it is expected that the percentage composition by weight will be within the limits in the following tabulation:

Combined Aggregate Grading	Percentage 0 to 2½ in. Aggregate	0 to 1½ in. Aggregate
Passing a 3-in. square opening	100	
Passing a 2½-in. square opening	97 to 100	
Passing a 2-in. square opening	92 to 99	100
Passing a 1½-in square opening	80 to 90	97 to 100
Passing a ¾-in. square opening	62 to 75	70 to 80
Passing a No. 4 sieve	29 to 39	35 to 45
Passing a No. 8 sieve	21 to 30	26 to 35
Passing a No. 16 sieve	16 to 24	19 to 27
Passing a No. 30 sieve	7 to 13	9 to 15
Passing a No. 50 sieve	2 to 5	2 to 6
Passing a No. 100 sieve	0 to 3	0 to 4

12. Storing Aggregates. — Bins and stockpiles shall be so arranged that the various classes of aggregates will be kept completely separate until batched. Aggregates shall be stockpiled or handled in such manner as to avoid separation of the coarser and finer particles.

Care shall be taken that foreign matter caused by passing traffic or by other means does not become mixed with the aggregates. When necessary, roads and detours adjacent to the piles of aggregate shall be kept moist at the expense of the Contractor in order to keep dust from coating the aggregates.

Each of the various aggregates shall have a reasonably uniform and stable moisture content when batched and placed in the mixer. The moisture content of fine aggregate shall not exceed eight per cent (8%) by weight when batched.

At least one hundred and fifty (150) cubic yards of fine aggregate, two hundred and fifty (250) cubic

yards of No. 4 to 1½ inch coarse aggregate, and one hundred (100) cubic yards of 1½ to 2½ inch coarse aggregate shall be stored at the work before beginning each day's concreting.

MEASURING MATERIALS

13. Description.—The several ingredients of concrete, including water, shall be measured separately before being mixed. Uniform proportions of materials in each batch will be positively required with a tolerance of one per cent (1%) for cement and two per cent (2%) for aggregates. All measuring devices shall be furnished by the Contractor, and shall be capable of ready adjustment for changing the concrete mix proportions.

Cement shall be measured by weight, except that cement furnished in sacks as herein specified and measured in even multiples of one sack will be considered as weighing ninety-four pounds (94 lbs.) per sack without further weighing.

Water shall be measured by a water-measuring device satisfactory to and controlled by the Engineer, capable of being locked at any fixed setting and so constructed that the water can be discharged only while the mixer is being charged.

Fine and coarse aggregates shall be measured by weight, except for small isolated structures when, by the special permission of the Engineer, they may be measured by volume, as the Contractor may elect.

When cement or aggregates are measured by weight, the scales shall be consistently accurate, and shall be sealed at the expense of the Contractor as frequently as the Engineer may deem necessary to insure their accuracy. The apparatus for indicating weight shall be readily visible for inspection at all times.

When fine or coarse aggregate is measured by volume, the Contractor shall provide measuring batchers such that the amount of aggregate measured thereby may be readily checked by the Engineer at any time.

MIXING

14. Description.—All concrete shall be mixed in a batch mixer of approved type and capacity which will insure a uniform distribution of the materials throughout the mass so that the mixture will be homogeneous and uniform in color. The mixer shall be equipped with a suitable charging hopper, water storage and water measuring devices and with a device for automatically locking the discharge lever until the batch has been mixed the required time. The mixer shall be cleaned at frequent intervals when in use.

The capacity of the concrete mixer shall be sufficient to provide a uniform operation in the mixing and placing of the concrete, consistent with the required progress of the work, the magnitude of units required to be completed in a continuous operation or placement, and the physical features of the con-

crete section being placed. The volume of the mixed material per batch shall not exceed the manufacturer's rated capacity of the mixer.

The mixing of each batch shall continue not less than one (1) minute for a mixer of one cubic yard or less capacity, and not less than one and one-half (1½) minutes for a mixer of capacity greater than one cubic yard, after all materials are in the mixer and before any part of the batch is released from the mixer. The rate of rotation of the mixer drum shall be such as to insure thorough mixing in the time specified. The entire contents of the mixer shall be discharged before recharging.

Remixing or retempering of concrete, grout or mortar which has appreciably set or hardened shall not be permitted, and such partially hardened material shall be removed from the work.

No concrete shall be mixed while the air temperature is below thirty-six degrees (36°) F. unless adequate means, approved by the District Engineer, are employed to heat the aggregates and water, and unless satisfactory provision is made and carried out for protecting the work. The use of any salt or chemical to prevent freezing will not be permitted.

Placing

15. Description.—Concrete shall be transported from the mixer to the forms and placed in the forms as specified in Section 15, "Concrete Structures."

Damaged or Defective Concrete

16. Description.—Concrete or concrete materials not complying with these specifications in all respects shall be removed from the site of the work without additional compensation therefor.

Concrete damaged by freezing, or from any other cause, or any concrete which shall be found defective in quality or workmanship at any time before the completion and acceptance of the work, shall be removed and replaced with acceptable concrete by the Contractor at his expense, and as directed by the Engineer.

Payment

17. Description.—Portland cement concrete will be measured and paid for as provided under the various items of work in which it is used.

SECTION 14. REINFORCING STEEL

1. Material.—Reinforcing steel shall conform in physical and chemical composition and in method of manufacture to the requirements of the American Society for Testing Materials, Standard Specifications for Billet Steel Concrete Reinforcement Bars, Structural Steel Grade (Serial Designation A 15-30).

All reinforcing steel shall be branded with the maker's brand and the Contractor shall furnish in writing a statement giving the maker's name and the distinctive brand used for identification.

2. Description.—Reinforcing steel shall be of open hearth method of manufacture, structural steel

grade and rolled from new billet stock, and showing no mill scale or rust.

All bars shall be of deformed or corrugated type and shall have the following net sections:

One-quarter inch (¼") round net section	0.05 sq. in.
Three-eighth inch (⅜") round net section	0.11 sq. in.
One-half inch (½") round net section	0.20 sq. in.
One-half inch (½") square net section	0.25 sq. in.
Five-eighths inch (⅝") round net section	0.31 sq. in.
Three-quarters inch (¾") round net section	0.44 sq. in.
Seven-eighths inch (⅞") round net section	0.60 sq. in.
One inch (1") round net section	0.79 sq. in.
One inch (1") square net section	1.00 sq. in.
One and one-eighth inch (1⅛") square net section	1.27 sq. in.
One and one-quarter inch (1¼") square net section	1.56 sq. in.

3. Sampling.—Reinforcing steel will be sampled by the Engineer at the source of supply if within the State of California, and the Contractor shall notify the Engineer in sufficient time before shipment is made to permit sampling and testing. If material is obtained outside the State of California

sampling will be done at the point of distribution within the State. Steel submitted for sampling at mill, warehouse, or upon the work shall be identified by heat or mill number and accompanied by mill analysis and test reports. All test samples shall be furnished by the Contractor without cost to the District. Facilities must be provided for the Engineer, both on the work and at the source of supply, for the sampling of all steel furnished or to be furnished.

4. Cleaning.—Reinforcing steel shall be thoroughly cleaned of all scale, rust, mortar, oil, dirt, or coatings of any character that will tend to destroy or reduce the bond before being placed in the forms.

5. Steel Lists.—Reinforcing steel lists showing full details of cuts and bends shall be submitted in triplicate by the Contractor, at his own expense, to the Engineer for approval. Such approval shall not be construed as relieving the Contractor of full responsibility for the accuracy of details and lists.

6. Bending.—Reinforcing steel shall accurately conform to the dimensions shown on the plans. The radius of bends shall be not less than four times the least dimension of the bar. All bends in field or shop shall be cold bends, and in no case shall the steel be heated for bending or straightening. Bars with kinks or unauthorized bends shall not be used.

7. Placing.—Reinforcing bars shall be accurately shaped, bent, assembled and placed in the forms or position intended, as shown on the plans or as other-

wise authorized. They shall be firmly and securely held in position by wiring at intersections with at least two wraps of No. 16 gauge soft black annealed wire; and by using concrete or metal chairs, spacers, metal hangers, supporting wires and other approved devices, furnished by and at the expense of the Contractor. Metal supports which extend to the surface of the concrete and wooden supports shall not be used. Placing bars on layers of fresh concrete as the work progresses and adjusting bars after concrete is poured will not be permitted.

All spliced bars shall lap over each other not less than forty times the least dimension of the bar and shall be securely wired together in at least two places, having five (5) wraps each of No. 16 gauge soft black annealed wire. Where adjacent bars are spliced, arrangement shall be made to break joints.

Full length bars shall be used wherever possible. Splices in lower longitudinal bars in beams shall be made only at the supports of the beams. Bent up bars shall end as detailed on the plans and shall have no splices. Splices of tensile reinforcement at points of maximum stress shall be avoided.

Bars shall be accurately spaced as shown on the plans. In no case shall the clear distance between parallel bars be less than two inches (2"). The clear space between the face of the concrete and the face of steel shall not be less than one and one-half inches (1½").

No concrete shall be deposited until the Engineer has inspected the placing of the reinforcing steel and given permission to place concrete.

All concrete placed in violation of this provision will be rejected and must be removed at the Contractor's expense.

8. Measurement of Quantities. — Reinforcing steel in place will be paid for by the pound except where specifically provided elsewhere that compensation for furnishing and placing reinforcing steel shall be considered as included in the prices paid for other items of work.

Weights of reinforcing steel shall be calculated on the basis of the following unit weights:

	Pounds per lineal foot
One-quarter inch (¼") round	0.17
Three-eighths inch (⅜") round	0.38
One-half inch (½") round	0.68
One-half inch (½") square	0.86
Five-eighths inch (⅝") round	1.06
Three-quarters inch (¾") round	1.52
Seven-eighths inch (⅞") round	2.07
One inch (1") round	2.70
One inch (1") square	3.44
One and one-eighth inch (1⅛") square	4.35
One and one-quarter inch (1¼") square	5.37

Only reinforcing steel in place, and covered with final concrete will be paid for, and the poundage will be calculated for straight line lengths, no splices

included, except where splices are specifically detailed or called for on the plans.

No poundage will be allowed for clips, tie wires, metal chairs, spacers, hangers, supporting wires or other such devices.

9. Payment.—The price paid per pound for reinforcing steel in place shall include full compensation for furnishing, hauling, transporting, bending and placing all reinforcing steel, furnishing all the tie wire and supporting devices and doing all work necessary or incidental to furnishing and placing reinforcing steel as herein specified or as shown on the plans.

No measurement will be made or separate payment allowed for "Reinforcing Steel" where such steel is specifically included as part of structures or other units of work and paid for as such, as otherwise provided herein.

SECTION 15. CONCRETE STRUCTURES

1. Description.—"Concrete Structures" shall include concrete bridges, buildings, viaducts, headwalls, retaining wall, foundations, footings, tunnel linings, accessory structures or parts thereof, and all work or structures in which either plain or reinforced concrete is used; and the specifications herein contained shall apply, except as modified or otherwise provided for by specific provisions or details set forth for particular structures or work or parts thereof in other parts of these specifications.

Concrete structures shall be constructed to the

lines and grades given by the Engineer and in accordance with the Standard, typical or special designs shown on the plans, including details which may be furnished by the Engineer from time to time during the progress of the construction.

All materials used in concrete structures shall conform to the specifications herein contained for such materials and to any special provisions or details elsewhere herein provided for particular structures or work, or parts thereof. Concrete used in concrete structures shall conform in all respects to the specifications herein for "Portland Cement Concrete."

Foundations

2. Description.—The elevations and shapes of the bottoms of footings, as shown on the plans, shall be considered as approximate only, and the Engineer may order in writing such changes in dimensions or elevations, or shapes of footings, as may be necessary to secure a satisfactory foundation. It is understood and agreed that the determination of the nature, type and depth of footings can be made only as excavation progresses, and the earth or rock structures are exposed, and the Engineer shall have full power and authority to make such changes or alterations in the foundation details as he may deem necessary upon inspection of the excavation and the materials excavated. The Contractor shall have no claim for extra payments other than the unit prices bid for the various units of the work.

The Contractor shall dig test pits before opening up an excavation, or during the process of excavating, if ordered in writing to so do by the Engineer. Material excavated for such purposes shall be paid for as "Structural Excavation" provided that where such test pits become a part of the foundation excavation the material so excavated will be measured and paid for once only, and the Contractor shall not be entitled to any separate or special payment for the separate handling or excavation of such material.

3. Cofferdams and Caissons.—Where cofferdams, caissons, cribbing or other devices are necessary for the proper construction of footings or foundations, the Contractor shall construct the same of such sizes, strength and materials as may be necessary to provide proper clearances and perform the functions for which they are constructed.

The Contractor shall submit to the Engineer for his approval drawings showing the proposed methods and details of such construction, and shall not proceed with such work until details and methods satisfactory to the District Engineer have been furnished; provided, however, that approval by the District Engineer shall not relieve the Contractor of his responsibility under this contract for the successful construction of the work or for any loss or damage which may occur due to methods or types of construction.

No shorings will be permitted in cofferdams or caissons which will induce stress, shock, or vibration

in the permanent structure; cross-struts or bracing below low water may be permitted to extend through foundation concrete only upon written permission of the District Engineer. Such timbers above low water shall be removed, and all volumes displaced by removed timbers shall be filled with concrete of the same mix as the surrounding concrete.

Cofferdams and cribs with all sheeting and bracing shall be removed to the level of the natural ground adjacent thereto by the Contractor at his own expense after the completion of the substructure. The removal shall be effected in such a manner as not to disturb or mar the finished structure.

When conditions are encountered which, in the opinion of the District Engineer, render it impossible to unwater the foundation before placing concrete, the Contractor shall deposit under water, by means of a tremie or bottom dump bucket, a layer of concrete of sufficient thickness to thoroughly seal the cofferdam. This seal shall be allowed to remain in place not less than seven (7) days before unwatering, so as to set sufficiently to withstand the hydrostatic pressure.

After sufficient time has elapsed to insure proper strength in the concrete, the footings shall be unwatered and the remainder of the concrete poured in the dry.

4. Pumping.—Pumping from any foundation shall be performed in such a manner as to preclude the possibility of any portion of the concrete materials being carried away. Pumping will not be

permitted during the placing of concrete, nor for a period of twenty-four (24) hours thereafter, unless it be done from a suitable sump separated by a tight wall from the concrete being poured.

5. Inspection.—No concrete shall be placed in any excavation until the District Engineer shall have approved the depth of the excavation and the character of the foundation material.

6. Payment.—The price paid per cubic yard for "Structural Excavation" shall include full compensation for all cribbing, shoring, bulkheading, caissons and cofferdam construction, sealing and unwatering of foundations and any work incidental thereto, including the removal of such cribbing, shoring, bulkheading, caissons, cofferdam construction, and other accessory structures and any other work, material, labor or equipment made necessary for the proper excavation and preparation of the foundations and footings to construct the concrete substructure.

Concrete placed to seal footings shall be measured and paid for in the same manner as provided for the concrete in the substructure.

Forms and Falsework

7. Forms.—Forms shall be of dimensions and to lines and grades as shown on the plans or as directed by the District Engineer. The design of forms shall be adapted to the structure and shall be satisfactory to the District Engineer. Forms shall be constructed and maintained smooth and tight and

shall be substantially built and securely tied and braced to prevent any movement or deflection during the placing of concrete. Forms for the tunnel lining shall be of steel. Well matched lumber or steel shall be used for forms for all other structures or parts thereof.

Forms shall be of sufficient strength to carry the dead weight of the concrete as a liquid without deflection, and, if any deflection occurs, it shall be sufficient cause for the rejection of the work. In general, wooden sheathing for all outside surfaces above the permanent surface of the ground shall be worked from one inch (1") by eight inch (8") or one inch (1") by six inch (6") stock with edges rabbetted to form a lap siding. The material shall be S1S 2E Douglas Fir lumber, free from defects that will result in unsatisfactory concrete structures. Outside surfaces as herein intended shall include the faces of wing walls and abutments above ground slopes, the faces of piers extending beyond the outside of outside girders or arch rings, the outside surfaces of outside girders and arch rings, the surfaces of copings, parapets and curbs, and all surfaces seen in side elevation. Except where otherwise directed by the District Engineer, the rough side of the lumber shall be applied against the concrete.

All sharp edges shall be chamfered with one inch (1") by one inch (1") triangular fillets, unless otherwise shown on the plans or directed by the District

Engineer. Curved surfaces where steel forms are not used shall be formed of elementary strips not over four inches (4″) wide and of well matched lumber. On parapet forms the workmanship shall be equivalent to first class pattern work. Where necessary, in the opinion of the District Engineer, to make a perfect mold, forms shall be oiled or shall be painted if the District Engineer requires, with one coat of white shellac before being used.

Forms shall be constructed so that portions, where finishing is required, may be removed without disturbing other portions.

When ties extending through the concrete are used to support or strengthen forms, they shall be so constructed and so removed that no tie other than metal will be left in the concrete, and that no metal tie which extends within one inch (1″) of any concrete surface which will be exposed to view or to weather shall be left in the concrete.

Forms shall be thoroughly wet or oiled inside and outside immediately before concrete is to be placed, and all excess water shall be drained away. All dirt, chips, sawdust and other foreign matter shall be removed before any concrete is deposited. Lumber which has been previously used for forms shall be thoroughly cleaned before again being used.

Complete forms shall not extend more than five feet (5′) above concrete previously laid or being laid except by permission of the District Engineer. Forms shall be so constructed that free access can

be obtained to them to permit proper spading, working and tamping of the concrete.

Forms and falsework supporting concrete beams, slabs or other members subject to direct bending stress, or forms or falsework supporting any loads shall be left in place at least twenty-one (21) days unless otherwise permitted by the District Engineer. At time of low temperature of other adverse conditions, the District Engineer may increase the time before forms or falsework may be removed, if, in his judgment, this seems necessary. Vertical or side forms not supporting loads shall be left in place from two (2) to five (5) days. Such forms shall be so constructed that they may be removed without disturbing load-resisting forms. No forms or falsework shall be removed until the proposed removal is approved by the District Engineer.

8. • Falsework.—The Contractor shall provide a substantial system of falsework which will not deflect or sag during the process of placing concrete, and which can be taken down and removed without jar or vibration to the structure. Falsework shall be supported on posts, piles, columns or footings adequate to support safely the loads to be imposed without deformation or settlement. Where wedges are used to bring forms or falsework to exact position and elevation, they shall be used in pairs to insure uniform bearing. Laminated sections will not be permitted.

Where danger exists during the construction period from flood waters or overflows, footings and

posts shall be set deep enough in the ground to prevent undermining and the Contractor shall assume all risks as to safety, stiffness and adequacy of falsework and supports used on the work.

The Contractor shall furnish to the District Engineer for approval, plans of staging and falsework to be used on the work. The approval of the District Engineer shall not relieve the Contractor of his full responsibility for the accuracy of dimensions, details and strength of falsework, or of the safety of the structure during construction, and the Contractor shall be responsible for any injury or damage arising from inadequate forms or falsework or from the premature removal of forms or falsework.

9. Payment.—No separate charge or payment shall be made for the construction and removal of forms or falsework, but the price paid for Portland Cement Concrete in the structure shall include full compensation for the construction and removal of forms and falsework, and for all work incidental thereto.

Placing Concrete

10. Time and Rate of Placing.—No concrete shall be placed unless an authorized representative of the Engineer is present, and the Contractor shall give ample notice to the Engineer as to the time he intends to start the placement. Where continuous placement is called for by the specifications or plans, the Contractor shall satisfy the Engineer that all

provisions for such placement is adequate and complete before starting the work.

Parts of each structure which depend upon each other for strength shall be cast at the same time. Slabs, girders and floor beams shall be placed continuously as a single unit, without stopping the work for more than thirty (30) minutes. Where caps, girders or other projecting members are to be placed against or over columns or walls, the concrete in the columns or walls shall have been permitted to set at least one (1) hour before the superstructure is placed, in order that the column or wall concrete may have opportunity to settle in the forms.

Concrete for the tunnel lining shall be placed continuously between any two (2) adjacent construction joints, in lifts not more than six feet (6′) deep, measured in a vertical direction. The topmost lift, having a width not to exceed eight feet (8′), shall not be placed until the adjoining concrete on both sides has been in place for at least seven (7) days, unless otherwise directed by the District Engineer.

All concrete shall be used while fresh and before it has taken an initial set. Concrete shall not be used after more than thirty (30) minutes have elapsed from the time water was first brought into contact with the cement.

11. Preparation of Forms and Surfaces.—All surfaces on or against which concrete is to be placed

shall be clean and free from debris. Immediately before placing concrete on any horizontal surface, except pavement subgrade or footings, the surface shall be covered with a layer at least one-half inch (½") thick of plastic mortar consisting of one (1) part of cement to two and one-half (2½) parts of sand by weight. The mortar shall be thoroughly worked with brooms or otherwise into all irregularities of surface, and concrete shall then be placed upon the fresh mortar.

All concrete surfaces upon or against which concrete is to be placed and to which new concrete is to adhere, shall be roughened and wetted before placing concrete or mortar upon or against them, in a manner satisfactory to the District Engineer. All laitance and all loose or defective surface material shall be removed by thorough chipping, brushing, and washing with clean water or cleaning with air under pressure, and no new concrete or mortar shall be placed until all excess material and water have been removed.

Water shall be removed from excavations before concrete is deposited. Water shall be prevented from entering any excavation while concrete is being placed or while it is setting, and shall be conducted away in such a manner that the concrete shall be placed in the dry. All drainage and pumping shall be at the expense of the Contractor. No concrete shall be deposited in or under water except with the written consent of the District Engineer and approval by him of the method to be used.

12. Conveying, Placing and Compacting Concrete.—Concrete, when mixed, shall be immediately conveyed to the forms and deposited without separation of its ingredients. The use of open chutes to convey and deposit concrete will not be permitted, except for distances of less than twenty feet (20′), and then only by special permission of the District Engineer. When open chutes are used, they must be of such cross-section and laid at such inclination that they will permit the flow of concrete of the consistencies herein specified, without the use of additional water to promote free flow. Only methods of transporting and placing which will deliver concrete of specified consistency without separation of its ingredients will be permitted.

Concrete shall not be permitted to fall from a height greater than six feet (6′), except through an enclosing pipe, in which case the height of fall shall not exceed twelve feet (12′). An enclosing pipe may be required by the District Engineer for placing concrete in columns, walls and deep footings.

Concrete shall be uniformly distributed during the process of depositing and in no case after depositing shall any portion be displaced in the forms more than three feet (3′) in a horizontal direction. Care must be taken not to displace the reinforcement, pipes, anchor bolts or other devices which are to be embedded in the concrete.

Concrete shall be deposited in uniform horizontal layers, not deeper than twelve inches (12″), care being taken to avoid inclined planes or inclined con-

struction joints. Construction joints must be built with square ends and level tops, except as otherwise directed by the District Engineer; in arch type structures, joints shall be made at right angles to the axis of the rib. Each layer shall either be placed before the previous layer shall have taken its initial set, or, if the previous layer has taken its initial set, the surface of the previous layer shall be prepared as herein specified for the preparation of hardened surfaces.

As the concrete is placed in the forms, it shall be thoroughly compacted by means of internal vibratory tampers of a type satisfactory to the District Engineer. The vibratory tamper shall be inserted directly into the concrete in the forms and shall not be attached to either the inside or the outside of the forms, nor shall it be attached to the reinforcing steel in any manner. The vibratory tamper shall have sufficient power to thoroughly compact all concrete of the consistencies herein specified.

The compaction shall be produced by inserting the tamper into the concrete directly for a period sufficient to produce the specified compaction. This insertion shall occur approximately every two and one-half feet (2½′), or where necessary to produce concrete of maximum density. Continuous attention shall be given to the working of concrete next to the forms and around reinforcing steel and embedded fixtures or inserts, in such a manner as to

produce a dense, homogeneous concrete mass, filling all corners and angles of the forms, thoroughly embedding the reinforcement and embedded fixtures, eliminating rock pockets and bringing a slight excess of mortar to the exposed surfaces of concrete during placement. The Contractor shall furnish and use at least one (1) vibratory tamper for every twenty-five (25) cubic yards of concrete placed per hour, and shall keep spare units in reserve. All concrete shall be completely compacted within fifteen (15) minutes after depositing the concrete in the forms. The furnishing and use of vibratory tampers shall be at the expense of the Contractor and no extra payment shall be made therefor.

Concrete for pavements will not be required to be compacted by the vibratory process above specified for all other concrete, but shall be compacted and the surface finished as specified in Section 16, "Portland Cement Concrete Pavement." Concrete for sidewalks, curbs and gutters will not be required to be compacted by the vibratory process above specified for all other concrete, but may be compacted by tamping as specified in sections 18 and 19.

In placing and compacting concrete, the Contractor shall use every means to secure a dense, impervious, homogeneous concrete, free from voids or pockets. The Contractor shall furnish, in addition to other concrete workers and vibratory tamper operators, sufficient laborers, acting under the direction of a foreman, whose sole duties during the

placing of concrete shall be the working, agitating and compacting of the deposited concrete with suitable tools of an approved type. Portions next to forms shall be cut in with spades or wedge-shaped tampers to secure a smooth external surface.

13. Construction Joints. — Construction joints necessitated by the temporary or diurnal cessation of placing concrete shall be located and constructed to the satisfaction of the District Engineer so that weakness in the finished structure will not result. Joints shall be keyed where required by the District Engineer. Where keys are required by the District Engineer, they shall be of sufficient area to transmit all shear on the section; in no case shall the area of keys be less than twenty-five per cent (25%) of the cross-sectional area of the section. Keys shall be formed by beveled strips or boards at right angles to the direction of shear and shall be at least one and one-half inches (1½") in depth.

Before placing new concrete at construction joints, the hardened surface against which concrete is to be placed shall be prepared as herein specified, and concrete shall be placed against such joints as herein specified.

Protection and Curing

14. Description.—All fresh concrete shall be carefully protected from the weather and from direct sunlight. Except as otherwise specified herein or permitted by the District Engineer, all concrete shall be cured by keeping the surface continuously

moist for at least twelve (12) days after placing. Floor slabs and roadway slabs shall be kept moist by means of damp burlap. Forms for all other concrete shall be kept wet for at least twenty-four (24) hours after placing concrete, and, when forms are removed, the concrete shall be kept sprinkled or kept protected by damp burlap hangings, except during the actual finishing of the surface, until the concrete is at least twelve (12) days old.

Except where otherwise directed, the surface of the concrete in the tunnel lining shall be protected by means of a waterproof coating satisfactory to the District Engineer. The coating shall consist of an approved asphaltic emulsion which will harden readily and quickly after it has been applied to the concrete surface. Such coating shall be applied immediately upon removal of forms, under pressure by means of a spray nozzle or atomizer in such a manner as to cover the entire surface with a uniform film and in sufficient quantity to thoroughly seal the surface of the concrete.

The Contractor shall protect all concrete from injury until it is thoroughly set, and all concrete surfaces from injury at all times. Working or walking on concrete shall not be permitted for at least twenty-four (24) hours after it has been deposited and compacted.

Finishing Concrete Surfaces

15. Description.—Forms on all vertical surfaces which do not act as supporting members shall be

removed as soon as practicable, but not sooner than forty-eight (48) hours after concrete is poured. The District Engineer shall be the sole judge as to which parts of the forms constitute supporting members.

Immediately after the forms have been removed, the Contractor shall remove all form bolts and ties to a depth of at least one inch (1") below the surface of the concrete. The holes shall then be carefully cleaned out and filled with a mortar containing one (1) part cement to two (2) parts of sand, and the surface shall be rubbed smooth. Care shall be taken to obtain a perfect bond with the concrete and to obtain the same color in the mortar as in the surrounding concrete.

Voids, air holes or rock pockets shall not be pointed up until inspected by the District Engineer. If, in his judgment, rock pockets or holes are of such an extent and character as to materially affect the strength of the concrete, or endanger the life of the steel reinforcement, he may declare the concrete defective and require the removal of the entire member or part, together with adjacent members, if such members act with the member or part containing the defective concrete. The whole shall then be recast with first class and acceptable concrete at the expense of the Contractor.

Where voids, air holes or rock pockets are not of an extent or character, in the opinion of the District Engineer, to endanger the strength or life of the structure, they shall be cleaned out and the

space refilled with concrete or cement mortar, held in place by forms, if necessary. The District Engineer may require that rock pockets be pressure grouted in the manner specified herein. All pockets containing voids shall be entirely removed until solid concrete is reached. The edges of the concrete shall be cut away square and true, and the old concrete saturated with water before refilling with the mortar.

All fins caused by form joints, and other projections, shall be removed.

All repairs and patches shall be rubbed down until smooth and flush with adjacent surfaces. Care shall be taken to obtain perfect bond and to obtain the same color in the patches as in the surrounding concrete.

After the completion of the above patching in a manner satisfactory to the District Engineer, all surfaces, except those poured against earth and surfaces such as pavement, sidewalk and others for which special surfacing methods are specified, shall be finished as follows: The entire surface shall be thoroughly rubbed with coarse carborundum stones and all unsightly blemishes and irregularities removed. If a mechanical finisher is used, a period of not less than four (4) days shall elapse between the pouring of the concrete and the start of the finishing. The operation shall be performed and continued until a smooth even surface of uniform texture and appearance is obtained, satisfactory to

the District Engineer. The surface shall then be washed with water to remove stains and loose particles.

Roadway surfaces, curbs and sidewalk shall be finished in accordance with specifications herein contained in, Section 16 "Portland Cement Concrete Pavement," Section 18 "Concrete Curbs and Gutters" and Section 19 "Cement Sidewalks," respectively, except that lampblack or other color admixtures shall not be used unless directed by the District Engineer.

Where special finishes are elsewhere provided, or called for, such finishes shall be applied only after all patching and rubbing down as herein set forth has been completed to the satisfaction of the District Engineer.

16. Grouting.—Where deemed necessary by the District Engineer, the seams and cavities in rock adjacent to the tunnel lining shall be grouted by a pressure method, satisfactory to the District Engineer. Grout holes shall be drilled to the depth directed by the District Engineer, and shall be not less than one inch (1") in diameter at the bottom. Suitable grouting connections in the form of two inch (2") iron pipe, eighteen inches (18") to twenty-four inches (24") long, shall then be installed, anchored, and packed to prevent leakage around the connection. If required by the District Engineer, each grout hole shall be tested prior to grouting by having first applied to it clear water

under pressure. Each grout hole and grout connection shall have forced into it under a pressure as directed by the District Engineer, but not exceeding one hundred and fifty (150) pounds per square inch, a grout composed of cement and water, or cement, sand and water, in proportions determined by the District Engineer. Sand for pressure grouting shall meet all requirements for concrete sand specified herein except as to grading, which shall be as follows:

One hundred per cent (100%) shall pass a No. 8 sieve, and twenty per cent (20%) to thirty-five per cent (35%) shall pass a No. 50 sieve.

Cement for pressure grouting shall conform to the requirements herein specified for Portland Cement.

The apparatus for mixing and placing grout shall be of a pumping type approved by the District Engineer and capable of effectively and continuously mixing and stirring the grout and forcing it into the holes at any desired pressure up to one hundred and fifty (150) pounds per square inch. Grouting shall not be stopped in any hole until directed by the District Engineer. After the grouting of the hole is finished, the pressure shall be maintained by means of a stop-cock or other suitable device until the grout has set sufficiently so that it will be retained in the hole.

If ground is supported by steel ribs and liners, spaces behind the steel shall be grouted prior to

placing the tunnel lining. Grout as herein specified for grouting rock shall be forced into the space behind the steel, as directed by the District Engineer, under pressure not exceeding twenty-five (25) pounds per square inch.

Any unfilled space above the crown of the tunnel arch which remains after concrete is placed, or any space behind the tunnel lining which cannot be filled with concrete as intended shall be grouted by a pressure method satisfactory to the District Engineer, and such grouting shall be done at such times after placing concrete as the District Engineer may direct. Grout and grout materials, and methods of mixing and placing, shall be as herein specified for grouting rock.

For the purpose of introducing grout through the arch, a grout pipe system consisting of one inch (1") risers at intervals of approximately ten feet (10') shall be installed prior to the time the concrete is placed. The upper end of such risers shall be wrapped with burlap and wire in such a manner that concrete will not enter the risers during placement, but that grout will be forced from the riser into the space above the arch when pressure is applied. After grouting is completed, and the grout has thoroughly set, the one inch (1") pipe risers shall be removed to a depth of at least one inch (1") back of the concrete surface, and the space thus formed filled with 1:2½ mortar, carefully troweled to a smooth finish with the tunnel lining.

Full compensation for grouting shall be considered as included in the price paid for "Tunnel Construction" as specified in Section 32 hereof, and no additional allowance will be made therefor.

Contraction Joints

17. Description. — Expansion and contraction joints are to be constructed as shown on the plans or determined by the District Engineer. Joints to be filled with asphalt shall be carefully cleaned out and filled with asphalt having a penetration of from one hundred and seventy-five (175) to two hundred and twenty-five (225). Full compensation for constructing and filling expansion and contraction joints, as herein specified, shall be considered as included in the prices paid per cubic yard for concrete in structures, and no additional allowance will be made therefor.

Drains and Weep Holes

18. Description.—Drains back of and weep holes through walls and tunnel lining shall be provided as shown on the plans or as directed by the District Engineer. Drains shall be constructed in accordance with specifications in Section 23, "Underdrains," except as otherwise shown on the plans or directed by the District Engineer.

For all walls, the price paid per cubic yard of concrete in place shall include full compensation for the furnishing and placing of all weep holes and drains as above specified. For the tunnel, the price

paid per lineal foot for "Tunnel Construction," Section 32 shall include full compensation for the furnishing and placing of all weep holes and drains as above specified.

Lighting Conduit

19. Description.—Conduit for lighting equipment shall be galvanized or sherardized both inside and outside and shall be of the size called for on the plans. At expansion joints, where the conduit passes through diaphrams or brackets, a zinc sleeve shall be placed about the conduit and oiled or otherwise treated to prevent adhesion to the concrete. The length of conduit between junction boxes shall not exceed seventy feet (70'); wooden plugs shall be inserted in all open ends of conduits to prevent plugging.

Full compensation for furnishing and placing conduits with all necessary fittings and incidental work connected therewith shall be considered as included in the prices paid for other items of work and no additional allowance will be made therefor.

Concrete Parapets

20. Description.—Special care shall be taken to construct parapets true to line and grade. Where the top of the parapet is to be a vertical curve, no broken lines shall appear. Panels shall be straight and true. Parapet forms shall be of selected matched lumber and framing shall conform to best cabinet or pattern work practice. The inside of

forms shall be oiled or painted with a coat of white shellac as the District Engineer may direct. Perceptible breaks in the lines or parapets will be sufficient cause for removal and rebuilding at the Contractor's expense.

21. Payment.—Actual concrete in the finished structure, as shown on the plans, with such modifications as the District Engineer has directed in writing, will be paid for.

The price paid per cubic yard for "Concrete Structures" shall include full compensation for furnishing, placing and removing forms and falsework, furnishing, placing, finishing and curing concrete, furnishing and placing expansion details, and all work necessary or incidental thereto. No allowance will be made for cofferdams, pumps, labor, or other items which may be necessary on account of water.

Tunnel lining will be paid for as hereinafter provided, and no other payment for separate units thereof will be made.

Reinforcing Steel will be paid for as provided under Section 14, "Reinforcing Steel."

No measurement will be made or separate payment allowed for "Concrete Structures" where such concrete is specifically included as part of structures or other units of work and paid for as such, as otherwise provided herein.

SECTION 17. PENETRATION OIL MACADAM PAVEMENT

1. Description.—A Penetration Oil Macadam Pavement shall be constructed at locations and of

widths shown on the plans, and as directed by the District Engineer. The pavement shall consist of two (2) courses, namely, a waterbound base course consisting of rock and screenings, compacted by rolling and watering and of a depth not less than six inches (6") after final compacting, and a penetration oil macadam top course two inches (2") in thickness after compacting, consisting of rock and screenings compacted by rolling and bound and sealed by applications of hot road oil or cold emulsified road oil, as hereinafter specified.

2. Waterbound Base Course: (a) Materials.—The broken stone for the waterbound base course shall be crushed from sound ledge rock or boulders, of such character that it will compact and thoroughly lock under watering and rolling so as to make a stable, well keyed base. The rock shall be free from clay, loam, adobe, vegetable matter or other deleterious material. It shall have a coefficient of wear of not less than eight (8) when tested in the manner hereinafter set forth for "Abrasion Test of Rock." It shall be of such size that it will all pass a screen having circular openings three inches (3") in diameter and at least ninety-five per cent (95%) will pass a screen having circular openings two and one-half inches (2½") in diameter; not more than seventy per cent (70%) will pass a screen having circular openings two inches (2") in diameter and at least ninety-five per cent (95%) will be retained on a screen having circular openings one and one-quarter inches (1¼") in diameter.

Screenings shall be that portion of the crusher run, including stone dust, which passes a screen having circular openings three-quarters inch (¾") in diameter. Screenings shall be obtained from rock of the same qualities as hereinabove specified for broken stone.

(b) Constructing Base.—The broken stone shall be placed upon a subgrade prepared as hereinbefore specified, and between side forms or headerboards set to line and grade for the edges of the finished pavement. If curbs and gutters are to be placed they shall be constructed prior to the placing of the rock, and headerboards shall be omitted.

The broken stone shall be placed in two courses, each course not to exceed four inches (4") in thickness, measured before rolling. Work on each course shall be handled in a similar manner.

The broken stone shall be spread in a layer of uniform thickness, using either spreading boxes, self-spreading vehicles, or by spreading from the vehicle by hand. Dumping in piles upon the subgrade will not be permitted. The course shall be rolled with a self-propelled roller weighing at least three hundred (300) pounds to the linear inch width of tread, and rolling shall be done at the sides of the roadway first, gradually working toward the center, until the entire surface is compact and the broken stone thoroughly locked and keyed. Screenings shall then be spread in thin layers and each layer rolled dry until no more screenings can be forced into the voids. The surface shall then be

inkled until the stone is thoroughly wet but not ficiently to saturate the subgrade, and again led. Excess screenings shall be scattered by light eeping, additional screenings shall be added as l where voids develop, rolling and sweeping shall continued until the entire surface is completely ed and the course is firm and unyielding. The face shall be swept to remove all surplus screen- s to slightly below the surface of the compacted k.

The succeeding course shall be constructed in the ntical manner and the finished water-bound base rse shall be firm and hard, and true to grade and tion. If the surface varies at any place more n one-quarter inch (¼") from the lower edge of en foot (10') straight-edge it shall again be trued and rerolled. This process shall be repeated il the surface conforms to the above test for uracy.

. Penetration Oil Macadam Top Course.—Using road oil.

a) Materials—Rock and Stone.—The broken ne for the penetration oil macadam top course ll be crushed from sound ledge rock or boulders, l shall be sound, hard, tough and have irregular avage. It shall be of such a character that it will roughly compact and lock when rolled. It shall free from clay, loam, adobe, vegetable matter or er deleterious material. It shall have a coeffi- nt of wear of not less than ten (10) when tested the manner hereinafter set forth for "Abrasion

Test of Rock." The large size rock shall be such that all will pass a screen having circular openings two and one-half inches (2½") in diameter; not more than seventy per cent (70%) shall pass a screen having circular openings two inches (2") in diameter and all shall be retained on a screen having circular openings one and one-quarter inches (1¼") in diameter.

The intermediate size rock shall be of the same quality as the broken stone and shall be of such size that at least ninety-five per cent (95%) will pass a screen having circular openings one and one-quarter inches (1¼") in diameter and at least ninety-five per cent (95%) will be retained on a screen having circular openings three-quarters inch (¾") in diameter.

Stone chips shall be crushed from broken stone of the quality above described and shall be of such size that all will pass a screen having circular openings three-quarters inch (¾") in diameter and be retained on a screen having circular openings one-quarter inch (¼") in diameter. Clean, hard, durable pea gravel passing the same screen tests may be used in place of stone chips.

(b) Materials—Road Oil.—The road oil shall be made from an asphaltic base oil; it shall be either a naturally homogeneous oil or a homogeneous residue from oil. It shall not have been distilled at a temperature high enough to injure by burning or to produce flecks of carbonaceous matter, and upon

arrival at the work shall show no signs of separation into lighter and heavier components.

Oil must be delivered at the point required for spraying at a temperature of not less than three hundred and fifty degrees (350°) F. nor more than four hundred and thirty-five degrees (435°) F.

In determining the quantity of oil delivered the correction for expansion by heat shall be made as follows: From the measured volume of oil received at any temperature above sixty degrees (60°) F. an amount equivalent to four-tenths (4/10) of one per cent (1%) for every ten degrees (10°) above said sixty degrees (60°) F. shall be subtracted as the correction for expansion by heat. For the purpose of measuring the oil a temperature of sixty degrees (60°) F. shall be deemed normal temperature.

The oil shall conform to the following tests:

1. Penetration.—The oil shall contain a minimum of ninety-four per cent (94%) of asphaltic residue of eighty (80) penetration (Test D 243-26T A.S.T.M.).

2. Flash Point.—The flash point by the Cleveland Open Cup method shall be not less than four hundred twenty-five degrees (425°) F. (Test D 92 A.S.T.M.).

3. Volatibility.—The loss on heating at three hundred and twenty-five degrees (325°) F. for five hours shall not be more than three per cent (3%). The residue at seventy-seven degrees (77°) F. shall have a penetration of not less than sixty (60); (Test D-6 A.S.T.M.).

4. Solubility.—The bitumen shall be not less than ninety-nine per cent (99%) soluble in carbon bisulphide (Test D-4 A.S.T.M.). The solubility in carbon tetrachloride shall be not less than ninety-nine and five-tenth per cent (99.5%) of the amount soluble in carbon bisulphide (Test D-165 A.S.T.M.).

5. The oil shall contain not more than five-tenths per cent (0.5%) of water nor more than one per cent (1%) of sediment (Tests D-95 and D-96 A.S.T.M.).

(c) Constructing Pavement.—Upon the water-bound base course, thoroughly cleaned, broomed and dry, shall be laid a layer of the broken stone of the large size to a uniform depth sufficient so that when the intermediate rock and rock chips have been added and the whole compacted, the finished surface will be true to grade and cross-section. The broken stone shall be placed by means of spreading boxes or other devices, approved by the District Engineer. It shall then be thoroughly rolled until it is firm, uniform, to the required cross-section, and the stone interlocked and thoroughly keyed.

The hot oil shall then be applied uniformly over the surface at the rate of seven-eighths (⅞) gallon per square yard of street surface covered. The oil shall be applied under a pressure of at least thirty (30) pounds per square inch. Suitable appliances shall be used which shall be capable of spraying the pavement in strips at least eight feet (8′) wide; and shall, in addition to having the necessary nozzles for spraying such strips, be equipped with a hose

and attached spraying nozzle for the purpose of spraying portions of the pavement inaccessible to the regular oiling nozzles.

Immediately after applying the oil a layer of intermediate size rock shall be spread over the surface in sufficient quantity to permit rolling without adhesion of the oil to the roller. The surface shall then be immediately rolled, broomed, and all lumps broken up and distributed. The rolling shall continue with the application of stone chips and brooming, as required, until the surface is thoroughly compacted and bonded, true to section and grade.

The hot oil shall then be uniformly applied over the surface at the rate of three-eighths (⅜) gallon to the square yard of street surface covered, then covered with stone chips and rolled, with stone chips added as necessary until the surface is uniform and firm.

Rolling shall be done with a self-propelled roller, weighing at least three hundred (300) pounds to the linear inch width of tread.

All rolling shall progress from the sides of the roadway gradually toward the center.

All oiling shall be done while the atmospheric temperature is above sixty-five degrees (65°) F. or when the sun is shining. No oiling will be permitted when the layer of broken stone or the stone chips are wet.

Stone chips and intermediate size rock shall be spread by mechanical spreaders, or shall be depos-

ited along the sides of the street in piles, and distributed and placed from there with shovels. Stone chips and rock shall not be dumped on the top course in piles.

No traffic shall be permitted upon the roadway between the time of spreading the broken stone and the time of completion of the last oiling and rolling, excepting the oil spraying appliance during its operation.

4. Penetration Oil Macadam, Top Course.—Using Emulsified Road Oil:

(a) Materials—Rock and Stone.—The broken stone for the top course shall be crushed from sound ledge rock or boulders, and shall be sound, hard, tough and have irregular cleavage. It shall be of such a character that it will thoroughly compact and lock when rolled. It shall be free from clay, loam, adobe, vegetable matter or other deleterious material. It shall have a coefficient of wear of not less than ten (10) when tested in the manner hereinafter set forth for "Abrasion Test of Rock." It shall be of such size that all will pass a screen having circular openings two and one-half inches (2½") in diameter; not more than seventy per cent (70%) shall pass a screen having circular openings two inches (2") in diameter, and all shall be retained on a screen having circular openings one and one-quarter inches (1¼") in diameter.

Screenings used for key rock shall be of the same quality as broken stone and shall be of such size that not less than ninety per cent (90%) will pass

a screen having circular openings one inch (1") in diameter; not more than seventy-five per cent (75%) will pass a screen having circular openings three-quarters inch (¾") in diameter and not more than five per cent (5%) will pass a ten (10) mesh sieve.

Rock chips will be crushed from rock of the same quality as the broken stone, or clean, hard, uncrushed pea gravel may be used in place of crushed rock. Rock chips shall be of such a size that not less than ninety-five per cent (95%) will pass a screen having circular openings three-eighths inch (⅜") in diameter, and not more than five per cent (5%) will pass a ten (10) mesh sieve.

(b) Materials — Emulsified Road Oil. — The Emulsified Road Oil shall consist of petroleum asphalt, slightly alkaline water and an emulsifying agent. It shall be uniformly emulsified and shall break rapidly when applied to the rock. It shall be of a consistency suitable for application through a pressure distributor without heating, and, when tested in accordance with the methods herein described, shall conform to the following requirements:

Specific Gravity 25° C. (77° F.)_____
_____Not less than 1.00
Viscosity, Saybolt-Furol 60 CC at 25° (77° F.)
_____Not more than 45 seconds
Loss at 163° C. (325° F.) 3 hrs. 200 grams___
_____Not more than 45%
Petroleum Asphalt_____Not more than 55%

Total amount of all alkali and saponifiable substances, including Petroleum acids_____
_____Not more than 1%
Settlement 10 days_____Not more than 3%
Free asphalt, retained on forty (40) mesh sieve
_____Not more than 0.05 of 1%

The petroleum asphalt contained in the emulsion shall conform to the following requirements:

Percentage 80 penetration asphalt_95% to 98%
Solubility in carbon tetrachloride_____
_____Not less than 98.5%
Solubility in carbon disulphide_____
_____Not less than 99%

The methods of testing Emulsified Road Oil shall be as follows:

Specific Gravity—A. S. T. M. Standard D 70-27.

Viscosity—A. S. T. M. Standard D 88-30.

Loss at 163° C.—A. S. T. M. Standard D-6-30, except that determination of loss shall be the average of three (3) gram samples, heated for three (3) hours in a porcelain evaporating dish six inches (6") in diameter and about two inches (2") in depth.

Amount of Saponifiable Substances—Including petroleum acids, soaps, fatty or resinous acids and sulphonated oils in accordance with Test Method 37 E, as described on page 753 of the Third Edition of "Asphalt and Allied Substances" by Abraham.

Settlement.—An average sample of one (1) gallon or more shall be taken from each lot or shipment and tested for stability. Samples shall be shipped in clean, air-tight containers. A determination of the amount of residue, based on the average of two (2) tests, shall be made on this sample, in accordance with the test for "Loss at 163° C."

Two (2) samples of five hundred (500) cubic centimeters each from the average sample shall be placed in air-tight, cylindrical glass containers with an inside diameter of four (4) to five (5) centimeters and allowed to stand for ten (10) days at laboratory atmosphere temperature. Fifty (50) grams shall then be siphoned from the top of each sample, care being taken not to disturb the remainder of the content. Approximately four hundred (400) cubic centimeters of the emulsion shall then be removed with the siphon and finally a fifty (50) gram sample shall be taken from the bottom of each container. The samples taken from the top and from the bottom of the container shall then be tested in the same manner as the original sample.

Neither the average per cent of the residue from the top samples nor the average per cent of the residue from the bottom samples shall differ from the average per cent of residue obtained in the test on the original sample by more than three per cent (3%).

Free Asphalt—Retained on Forty (40) Mesh Sieve.—The Standard forty (40) mesh sieve shall consist of a copper cylinder one and one-half inches (1½") in diameter and two inches (2") high, to the

bottom of which is soldered a copper standard forty (40) mesh wire screen. The test shall be carried out as follows:

The lower half of the weighed sieve shall be dipped into distilled water and the excess water drained off. The emulsion to be tested shall then be poured through the sieve until no more will go through or until eight hundred (800) to one thousand (1,000) CC have passed through. The emulsion adhering to the sieve shall be immediately washed off with distilled water until the washings come through clear. The sieve and free asphalt thereon shall then be dried for one and one-half hours at a temperature of one hundred and fifteen degrees (115°) Centigrade. The percentage of free asphalt is then determined from the weight of the emulsion passed through the sieve and the weight of the asphalt retained on the sieve. The small amount of the emulsion washed off from the sieve will be neglected.

The methods of testing the Petroleum Asphalt contained in the Emulsion shall be as follows:

Penetration ..... A.S.T.M Standard D-5-25

Solubility Carbon Disulphide ..... A.S.T.M. Standard D-4-27

Loss at 163° C ..... A.S.T.M. Standard D-6-30

Flash Point (Open Cup) ..... A.S.T.M Standard D-92-24

Percentage 80 Penetration Asphalt ..... A.S.T.M. Standard D 243-26T

(c) Constructing Pavement.—Upon the water-bound base course, thoroughly cleaned and broomed, shall be spread a layer of the broken stone to a uniform depth sufficient so that when the key rock and screenings have been added and the whole has been compacted the finished surface will be true to grade and cross-section. The broken stone shall be placed by means of spreading boxes or devices approved by the District Engineer. It shall then be lightly rolled, after which all high or low spots shall be trued up by removing or adding stone as required. It shall then be rolled again and trued up where necessary. These operations shall be repeated until a uniform surface free from high or low spots is secured, and the broken stone is locked and keyed together. Rolling shall be done with a self-propelled roller weighing at least three hundred (300) pounds to the linear inch width of tread.

The rock chips as specified shall then be evenly spread mechanically with an approved spreading device or broadcast with a sideswing of the shovel and then lightly rolled and broomed until worked down between the rock. Filling shall extend to within one inch (1") of the surface.

The Emulsified Road Oil shall then be uniformly applied over the surface at the rate of five-eighths (⅝) gallon per square yard of street surface covered. The oil shall be applied under a pressure of at least thirty (30) pounds per square inch. Suitable appliances shall be used which shall be capable of spraying the pavement in strips at least eight

feet (8') wide, and shall, in addition to having the necessary nozzles for spraying such strips, be equipped with a hose and attached spraying nozzle for the purpose of spraying portions of the pavement inaccessible to the regular oiling nozzles.

After the Emulsified Road Oil shall have been completely broken and shall have adhered to the rock, the surface shall be rolled once over. Screenings shall then be spread uniformly in sufficient quantity to completely fill the remaining voids. The screenings shall be broomed and dragged to aid in uniform distribution and shall then be rolled. Additional screenings, if required, shall be applied and rolling, brooming and dragging shall continue until the voids in the coarse rock are filled and the key rock is thoroughly locked in the surface.

The second application of emulsified road oil shall then be made at the rate of one-half (½) gallon per square yard to street surface covered. After the emulsion in this application has broken and adhered to the stone the pavement shall be rolled once over and shall then be covered with rock chips applied at the rate of about fifteen (15) pounds per square yard of pavement surface. The rock chips shall then be broomed and dragged to every portion of the surface to obtain uniform distribution and complete filling of the voids. Rolling shall continue during the brooming process and until the pavement is thoroughly and uniformly compacted.

At least twelve (12) hours shall elapse between the first and second applications of the emulsified road oil.

A seal coat shall be applied in not less than twenty-four (24) hours nor more than seven (7) days after the completion of the work previously set forth. All loose material and loose rock chips remaining on the surface shall be removed by brooming. Emulsified Road Oil shall be applied to the surface at the rate of three-eighths (3/8) galion per square yard of street surface. The surface shall then be covered with a light spread of rock chips, ten (10) to twelve (12) pounds to the square yard of surface being used. The cover material shall be broomed to secure even distribution, and then rolled and broomed until thoroughly compacted.

The total time of actual rolling shall be not less than eight (8) hours for each one hundred (100) tons combined weight of coarse rock, screenings and rock chips used in the pavement.

The pavement may be opened to traffic twenty-four (24) hours after completion.

5. Abrasion Test for Rock.—The coefficient of wear for rock shall be obtained as follows:

Rock shall be tested in a Standard Deval rattler according to the following method:

At least thirty (30) pounds of coarse, crushed rock, free from any fragments showing rounded or water worn surfaces shall be available for the test. The rock to be tested shall be broken into pieces as nearly uniform in size as possible and a test sample

shall consist of not less than forty-nine (49) nor more than fifty-one (51) pieces. The total weight of crushed rock to be placed in each cylinder shall be five (5) kilograms (eleven (11) pounds).

All test pieces shall be washed and thoroughly dried before weighing. Ten thousand (10,000) revolutions at the rate of between thirty (30) and thirty-three (33) to the minute shall constitute a test. Only the percentage of material worn off which will pass through a No. 16 sieve shall be considered in determining the amount of wear.

The wear shall be expressed by a coefficient known as the coefficient of wear which shall be obtained by the formula $C = \frac{400}{W}$ where "C" is the coefficient and "W" the weight in grams of the detritus passing the No. 16 sieve per kilogram of rock used.

6. Measurement.—Measurement of Penetration Oil Macadam Pavement shall be by the square feet of surface of actual pavement constructed in place, as shown on the plans or as directed by the District Engineer. No allowance will be made for excess thicknesses or material or work which may have been necessary for any reason whatsoever, to complete the pavement to the grade and section required.

7. Payment.—The price paid per square foot for Penetration Oil Macadam Pavement shall include full compensation for preparing the subgrade, furnishing and setting headerboards and side forms, constructing water-bound base course and Pene-

tration Oil Macadam Top Course, with either hot road oil or Emulsified Road Oil, as specified, together with the furnishing of all labor, materials, tools and equipment and the performance of all work necessary or incidental to constructing the finished pavement, complete in place, as specified.

SECTION 32. TUNNEL CONSTRUCTION

1. General Description.—Highway tunnels shall be constructed at the locations and in accordance with the details as shown on the plans.

The tunnels shall be excavated to the required sections and lined with Portland Cement Concrete throughout their lengths. Accessory structures and facilities, such as ventilation structures and ducts, cross adits, portal structures, lighting and illumination systems, water pipes, hydrants and accessories, ducts, conduits and electrical systems, signals, traffic control systems, sidewalks, railings, pavement, drainage systems and structures, and all incidental structures, facilities and equipment shall be provided and constructed in accordance with the plans and details.

2. Materials.—All materials and workmanship shall conform to the specifications hereinafter set forth in this section, provided that whenever materials, work or methods of construction are not set forth in detail herein, such materials, work or methods of construction shall conform to the requirements elsewhere set forth or provided for or intended by these specifications, and that in all

cases such material, work or methods of construction shall be the best of their kind or quality and in accordance with the highest standard of modern construction practice, and the omission of any specific detail or requirement herein shall not be construed as permitting the use of materials or methods inferior in quality or type to the general intent of these specifications.

3. Safety Rules.—The Contractor shall provide himself with copies of "Tunnel Safety Rules" and "General Construction Safety Orders Relating to the Storage and Use of Explosives," together with all revisions and amendments thereto, as required by the Industrial Accident Commission of the State of California and keep copies of these at the site of the work at all times. He shall consult with officials of the Industrial Accident Commission and inform himself of any and all conditions which they may require, whether set forth in the published rules or specially provided for on this work. He shall thoroughly familiarize himself with the provisions of said rules and all regulations of said Commission and govern all his operations by the requirements in all particulars where the same are applicable. He shall see to it that all superintendents, foremen and other employees having responsibility for the various phases of the tunnel work are likewise familiar with the provisions referred to above, and that all work is conducted in accordance therewith. The requirements concerning ventilation, general safety precautions, transportation,

roof inspection, timbering, electrical installations and use of explosives are of particular importance.

Representatives of the U. S. Bureau of Mines and of the Industrial Accident Commission of the State of California shall be afforded free access to the work at all times and be given every facility for inspecting methods, equipment and familiarity of workmen with the various safety rules and requirements.

All Federal and State regulations for such work or parts thereof and regulations of Counties and Municipalities having local jurisdiction shall be strictly adhered to, and authorized officials representing the Federal or State governments or Counties or Municipalities having jurisdiction shall be given every facility for inspection and proper enforcement of rules, provisions, regulations and ordinances which may apply to the conduct of the work. The Contractor shall be responsible during the entire progress of the work for the proper enforcement of all such requirements and shall assume all liabilities which may occur due to accidents of any kind or nature. The fact that no apparent violation of rules or regulations has occurred shall not serve to relieve the Contractor of his full liability or responsibility in case of accident or damage to persons, employees, or to any part of the work.

Provisions shall be made by the Contractor for a supply of fresh air sufficient for the safety, comfort and efficiency of all persons engaged in the tun-

nel construction, at all times in all portions of the work. Provision shall be made for the quick removal of gases resulting from blasting and frequent tests shall be made for harmful or explosive gases emanating from the rock structure.

Should compliance with safety rules and regulations require special equipment the Contractor shall at all times keep on hand on the work enough of such special equipment to supply, in addition to his own requirements, complete equipment for at least three men, for the use of the District Engineer and his assistants in inspections of the work or in giving lines and grades, or as the District Engineer may direct.

4. Geological Data.—A preliminary report on the geological structures through which the tunnel will pass is on file in the office of the District Engineer. This report is available for inspection by prospective bidders at the office of the District Engineer. The Board of Directors of the District and the District Engineer do not guarantee in any respect the accuracy of this report or the findings or recommendations contained therein. The fact that prospective bidders are permitted to inspect this report shall not in any respect relieve prospective bidders of their responsibility to make their own investigations as to the materials which may be encountered or the geological structures, independent and separate from those made by the District, and the Contractor shall have no claim whatsoever for damages, unexpected costs, difficul-

ties, or for the alteration or voiding of the contract, should materials encountered vary in any respect from those indicated in the preliminary report referred to.

5. Excavation of Tunnels: (a) Excavation.—The Contractor shall use approved modern methods in driving and excavating the tunnels, such as will assure a good rate of progress. He shall furnish and install all timbering, lagging and other supports necessary to provide ample security against falling earth or rock, caving or other movements of the roof, sides or bottom of the excavation. He shall provide for the proper drainage and disposal of water encountered in the excavation.

Before performing any excavation in the tunnel the Contractor shall submit to the District Engineer his proposed method of procedure, giving in detail the various operations leading up to and including the final completed lined section, and no such work shall be performed until the approval by the District Engineer of the procedure has been obtained. Such approval by the District Engineer shall not, however, in any way relieve the Contractor of his responsibility for the failure of the method, or for lack of proper progress in his operations.

The Contractor shall inspect the drift or heading which has been driven by the District at the site of the work, and shall take all necessary steps to prevent caving or failure of timbers in this drift until it is incorporated in the final construction, and shall retimber the same, if, in his judgment,

such work is necessary. He shall assume full responsibility for the maintenance of this drift from the time his contract is approved and in effect, and the provisions of these specifications shall apply in all respects to the proper maintenance and completion of this drift and the construction of the lining and other structures, as though the existing drift had been constructed by the Contractor as a part of his contract. Any alterations or work which may be necessary to make this drift conform to these specifications shall be performed by the Contractor at his own expense and as a part of the work set forth in this contract.

Material excavated from the tunnel section shall be used to make embankments as provided under Section 8, "Grading" of these specifications, and all operations in placing such material in fills or embankments shall conform thereto; provided, however, that any material which in the opinion of the District Engineer is unsuitable for use in embankments shall be disposed of at the expense of the Contractor in a manner satisfactory to the District Engineer; and provided further that material in excess of that required for embankments and for which, in the opinion of the District Engineer, there is no practicable use on any part of the work, shall also be disposed of by the Contractor at his own expense and in a manner satisfactory to the District Engineer.

Material excavated from the tunnel section and required to be used in the making of embankments

will be used only on the highway west of the West Portal, and it is contemplated that all tunnel excavation which is suitable for the purpose will be used to make necessary embankments on this section of the highway. No provision has been made for using any such material on the Northeast highway approach and none shall be placed thereon unless the District Engineer so directs.

Where excavated material is used for embankments on any part of the work the Contractor will be allowed "Overhaul" as provided in Section 8, "Grading" of these specifications, with the following modifications thereof.

No payment for "Overhaul" will be allowed for the distance material is transported within the limits of the tunnels, but haul will be measured from the Station of the Portal of the Tunnels, as shown on the plans, and the provisions for free haul of five hundred feet (500′) shall apply to any distances material is required to be transported beyond such Portal Station. Overhaul will not be paid where unsuitable or surplus material is required to be disposed of by the Contractor at his own expense.

(b) Overbreak.—Excavation shall be of sufficient size to allow for the proper bracing, timbering, construction of lining and forms, and drainage. Extreme care shall be taken in making excavation for the tunnel that the minimum of earth or rock shall be removed or allowed to cave or settle outside of the outer periphery of the concrete structure which forms the tunnel lining. However, should the

Contractor damage or shatter, in any way, materials lying outside of the neat lines of the concrete structure, or should it become necessary in order to properly support the excavated sections that excess volumes be excavated to permit proper timbering or other supports, the Contractor shall remove the rock or materials so damaged or excavated, and the space between the neat lines of the concrete structure, and the lines of actual excavation shall be filled with Portland Cement Concrete mixed in the same proportion and placed at the same time as the concrete in the neat structure, or, when permitted by the District Engineer, dry packed and grouted as hereinafter provided. Where timber is employed for tunnel timbering it shall be removed before any concrete is placed, and any spaces outside the neat lines of the concrete structure caused by such removal shall be filled with concrete as above provided. In the event that it is found impracticable, in the opinion of the District Engineer, to remove timbering or portions thereof, such timbering may be allowed to remain permanently in place, but in no case shall such timber so remaining be allowed to project into the neat lines of the concrete structure. Where timber is permitted to remain, all spaces outside of the neat lines of the concrete structure shall be filled with concrete mixed in the same proportions and placed at the same time as the concrete in the neat structure. If structural steel shapes are used for tunnel sets they may be allowed to remain permanently in place provided

that they do not project into the concrete more than four inches (4″) beyond said neat lines of the concrete structure.

Any excavation which, due to requirements of timbering or the nature of the material, or caused by overbreakage, extends more than one foot (1′) from the outside neat lines of the concrete structure, may, at the option of the Contractor, in lieu of replacing with the Structural Concrete specified, be filled to within one foot (1′) of said neat lines of concrete with spalls, boulders, or other material approved by the District Engineer and grouted in with a cement grout consisting of one (1) part of cement to three (3) parts of fine aggregate, and applied as directed by the District Engineer and to his satisfaction. Such construction, however, shall not be permitted within the one foot (1′) space outside of the neat lines of the concrete structure, and such space shall be filled only with Portland Cement Concrete mixed in the same proportion and placed at the same time as the structural concrete, provided that if steel liner plates and ribs are used and are allowed by the District Engineer to remain in place, the spaces back of plates and ribs shall be dry packed and grouted as provided, but any space between the plates and the neat lines of the structure shall be filled with concrete at the same time as the neat structure.

Wherever reference is made to "neat lines of the concrete structure" it is hereby specified that the neat lines so referred to are the outside lines of the

structural concrete lining, as shown on the plans.

(c) Explosives.—The Contractor shall submit to the District Engineer, and receive his approval of any and all plans for the drilling and shooting of holes, storage and use of explosives, together with time schedules when blasting will be carried on. Extreme care will be required in the use of explosives that the rock or earth lining will not be shattered and that no damage will be done to either temporary or permanent structures which may have been constructed. The District Engineer may, at any time when in his judgment it is necessary, limit the size and strength of explosive charges, or prohibit the use of explosives entirely. The approval by the District Engineer of any method used, quantity or strength of charges, shall not in any way relieve the Contractor of his responsibility for proper execution of the work and the proper use of explosives.

(d) Drainage.—Whenever sand or other granular or loose material is encountered care shall be taken to drain carefully all material to be excavated before such material is removed. Extreme care shall be taken to avoid the removal of any solid material in so draining the excavation. Drains shall be so arranged as to permit inspection of drainage water and avoid the carrying off of any solid material.

Water which may be encountered in the course of the work shall be removed by proper drainage methods, and the Contractor shall provide at his

own expense all pipe, pumps, drains and drainage structures as may be necessary to keep the excavations free from water. He shall dispose of drainage water in such a way as to avoid damage to other parts of the work or to public or private property, and shall save the District harmless from any and all loss or damage therefor at his own cost and expense. All methods adopted by the Contractor shall be subject to the approval of the District Engineer.

(e) Timbering.—The term "Timbering" as used herein shall include all wooden pieces or structures used to support the earth or rock adjacent to any excavation. The Contractor shall furnish, put in place, construct and maintain all timbering necessary to support the sides and top of the excavations, preliminary to the placing of the concrete lining. The timbering shall be so constructed as to prevent any movement or caving which might in any way injure the proposed structures or endanger any person. Wherever, in the opinion of the District Engineer, sufficient or proper timbering has not been provided, the Contractor shall furnish additional timbering; but neither compliance with the District Engineer's instructions nor failure of the District Engineer to give such instructions shall relieve or release the Contractor from his responsibility for the sufficiency of the timbering.

It is the general intent of these specifications that all timbering shall be removed from the excavation before concrete is placed. Should conditions arise

where, in the opinion of the District Engineer, it is impracticable to remove certain timbers or structures, such timbering, upon the written consent of the District Engineer, may be permitted to remain, subject, however, to the provisions herein contained in respect to clearances outside of the concrete lining. Timbers allowed to remain in place shall in no case project into the neat lines of the concrete structure, and, in the event that it is apparent, during the process of excavation and timbering, that the safety of the excavation will require timbering to remain in place, the Contractor shall enlarge the excavated section to the extent necessary to set the timbers outside of future concrete lines; timbers found to project within the concrete lines shall be removed and reset before concreting. Permission to allow timbers to remain will not be granted for any other reason than to secure the safety of the structure.

Where timber is allowed to remain it shall be keyed or wedged firmly against the adjacent rock or earth, and shall be securely fastened, spiked or bolted so that no movement, shifting or settlement shall occur. All joints shall have full and firm bearing, timber to timber, without shimming or blocking. All timber, whether permanent or temporary, shall be sound Douglas fir and no second hand material shall be used, provided, however, that material already used in tunnel construction and removed in good condition, may, with the ap-

proval of the District Engineer, be reused where conditions permit.

Timbering shall be placed in such a manner as to be readily removed, without endangering the safety of the excavation or causing weakness or excessive stresses in adjacent timber sets or concrete structures, and any damage which may occur shall be remedied by the Contractor at his own expense, including the removal and replacement of any concrete which has, in the judgment of the District Engineer, been damaged or subjected to excessive loads on account of such operations.

Lagging behind timber sets shall be restricted to the least extent consistent with safety, and, if, in any case, permitted by the District Engineer to remain permanently in place, shall be so spaced as to permit the unrestricted flow of concrete through the lagging to fill any spaces between the lagging and the excavated surfaces.

(f) Structural Steel Supports.—Structural steel shapes may be used to support the sides and tops of the excavation, either entirely or in connection with timbering. Where structural steel ribs are used the same may be allowed to remain in place, provided that they do not project into the concrete more than four inches (4″) beyond the neat lines of the concrete structure. The manner of framing, supporting and removal shall be such as to fully support the excavation while in place, and permit removal without endangering other parts of the structure. All timbering used in connection therewith shall con-

form to the requirements set forth under "Timbering," including the removal before concrete is placed. Where steel is permitted to remain in place, all spaces between the steel and the adjacent earth or rock shall be thoroughly filled with concrete so as to provide firm and uniform bearing and the steel ribs and liners shall be so constructed and erected that no settlement or movement will occur. Liner plates allowed to remain in place shall not project into the neat concrete structure.

(g) Types of Tunnel Section.—Two typical tunnel sections are shown on the plans. The District Engineer shall determine which section shall be used in any specific location in order to meet varying conditions which may be encountered. In general, it is expected that the Type "A" section will be used throughout the major length of the tunnels, but if conditions arise which, in the judgment of the District Engineer, require the use of Type "B" section, the Contractor shall make such modifications in construction as may be necessary.

No extra payment will be allowed on account of such change, but the unit prices bid for the various units or types of work shall include full compensation for such work, labor, material or equipment as may be necessary.

Concrete Lining

6. Description.—The concrete lining for the tunnels shall consist of the concrete arch ring as shown on the plans, with steel reinforcing as designated or as otherwise directed by the District Engineer.

The thicknesses of concrete shown are minimum thicknesses, and the attention of the Contractor is directed to provisions hereinbefore set forth in this section, requiring additional concrete as made necessary by the methods of excavating, timbering, or otherwise supporting the excavation.

7. Materials.—Concrete for lining shall be Class "B" concrete, as provided in Section 13, "Portland Cement Concrete," of these specifications, and the provisions thereof and the provisions contained in Section 15, "Concrete Structures," shall apply to all concrete in tunnel linings except as modified herein. Grouting shall be performed as elsewhere specified in these specifications.

Reinforcing steel, as shown on the plans, is the minimum requirement and the District Engineer shall have the right and authority to increase the amount of reinforcing steel in accordance with his judgment as to necessity; the Contractor shall furnish and place such additional reinforcing steel at no additional cost to the District, other than the price per pound bid for "Reinforcing Steel in Place." Reinforcing Steel shall conform in all respects to requirements contained in Section 14, "Reinforcing Steel" of these specifications.

All brackets, hangers and other steel work shown shall be placed before pouring of concrete and securely anchored to the satisfaction of the District Engineer, so as not to be disturbed or altered in location by the placing of concrete.

8. Finish.—The surfaces of concrete linings which constitute portions of air ducts shall be constructed with extreme care to obtain the smoothest surface possible. The use of metal forms is elsewhere specified for this work. Repairing of pockets, voids and other irregularities in the surface shall be done with extreme care and all surface irregularities shall be removed so that the finished surface is extremely smooth, and will offer the minimum of frictional resistance to the flow of air.

Ceilings and Partitions

9. Ceilings and Partitions.—The ceilings and partitions, except as otherwise provided, shall be constructed of Class "A" Concrete with structural steel shapes and reinforcing steel as shown on the plans. The Contractor's attention is called to the two inch (2") partition forming the side of the exhaust air duct, where welded wire fabric reinforcing mesh, as shown, is to be covered on each side with a "Gunite" or approved equal covering in a manner to provide a dense, air-tight partition with surfaces of extreme smoothness to avoid frictional resistance to flow of air. The "Gunite" or other approved covering shall consist of a mixture of one (1) part Portland Cement to four and one-half (4½) parts of sand, thoroughly mixed dry and screened to remove any particles over three-eighths inch (⅜") in size. Only sufficient water shall be added to provide a uniform mortar capable of being placed and finished by the methods provided.

Any rebound pockets occurring shall be cut out and replaced with proper material. The surface shall be rodded and steel troweled to a smooth even finish.

Ceiling, partition and wall connections with other walls, partitions or ceilings shall be air-tight, and the approval of the Engineer shall be obtained for all methods of constructing joints. Openings for ducts and ports shall be provided in the forms before the placing of concrete; also for all pipes, conduits and other purposes, including electrical wiring, and for all outlets or other required openings for electrical installations.

The surfaces which constitute the walls and ceiling of the roadway area shall be carefully finished to remove all irregularities in the surface and given a cement wash paint coat, as hereinafter provided for exterior walls in Section 33, "Ventilation Buildings."

10. Fresh Air Flues.—Fresh air flues of the materials and dimensions and location shown on the plans shall be erected on one wall of each tunnel at twelve foot (12′) centers, as shown.

Flues shall be constructed of Structural Grade Steel Plate one-eighth inch (⅛″) thick, and shall be constructed in such a manner as to provide a smooth and air-tight inner surface free from offsets, welds or roughness of any sort. The flues shall be rigidly attached to the arch ring by means of three-eighths inch (⅜″) anchor expansion bolts at twelve inch (12″) centers.

The outlet nozzle shall be fitted with an adjustable zinc plate, of No. 16 (0.045 inch) Sheet Zinc Gauge, welded on hinged edge to steel flue and slotted and held in position by five (5) galvanized three-eighths inch (⅜") set screws and washers for each plate.

A typical flue, complete with adjustable nozzle shall be assembled and submitted to the District Engineer for approval before proceeding with the fabrication of all flues.

The three (3) fresh air flues on each end of each tunnel shall be special flues extended to the fresh air ducts of the transition section.

At each of the three (3) cross adits a fresh air flue three inches (3") deep by eighteen inches (18") wide shall be extended from the main fresh air duct of the up-grade tunnel to the crown of the adit. This flue shall have an inlet opening eighteen inches (18") square and an outlet of three inches (3") by eighteen inches (18") and located as shown on the plans.

11. Exhaust Ports.—Exhaust ports shall be located in pairs in the roadway ceiling at fifteen foot (15') intervals in both tunnels and shall be formed complete at the time the ceiling slab is poured. Special reinforcement at these openings shall be placed as shown on the plans. Water deflectors formed in and as a part of the ceiling slab shall be placed on the up-grade side of each port as shown on the plans. Adjustable zinc slides, of No. 16

(0.045 inch) Sheet Zinc gauge, shall be installed on each port, together with bolts, all as shown on the plans.

12. Sheet Zinc.—Sheet zinc adjustable plates for fresh air flues and exhaust ports shall conform to the Standard Specifications for Rolled Zinc (Type "B") of the American Society for Testing Materials (Serial Designation B 69-29) as amended to date.

13. Air Duct Bulkheads.—Across each air duct in each tunnel at locations designated on the plans, a two inch (2") "Gunite," as hereinabove specified, partition shall be constructed, reinforced with welded wire fabric mesh as shown on the plans. These bulkhead partitions shall have Kalamein doors, with necessary fittings, of size shown on the plans.

14. Air Measurement Stations.—At locations designated on the plans, ferrules shall be placed in the ceiling slab and upper air duct slab. These shall consist of one and one-half inch (1½") inner diameter iron pipe size brass or bronze couplings of lengths as shown and with lugs on exterior surface to prevent turning in concrete and with inside surface threaded at each end and equipped with brass or bronze plugs deeply slotted on face to permit of removal.

15. Roadway Pavement.—The Contractor shall construct the roadway pavement of the thickness and section shown on the plans, and in accordance with specifications contained in Section 16, "Port-

land Cement Concrete Pavement." The subgrade shall be prepared in the manner provided in Section 10 for preparation of subgrade.

16. Curbs and Sidewalks.—The curbs and sidewalks shall be poured integrally with each other and all proper provisions made for pipe lines and conduits as shown on the plans.

Concrete shall be Class "B" concrete, and the top three-quarter inch (¾") of the sidewalk shall consist of a mortar wearing coat of one (1) part Portland Cement and two (2) parts fine aggregate, applied not more than one-half (½) hour after the concrete is placed. The wearing coat shall be troweled smooth and marked as directed by the District Engineer.

17. Drainage Structures and Conduits.—Drainage structures, consisting of pipes, conduits, manholes, lampholes, catchbasins and gratings and cast iron metal work shall be constructed at locations and of dimensions shown on the plans. The materials and workmanship shall conform in all respects to specifications elsewhere contained herein, and anything required for a complete working installation, but not specifically mentioned or specified, shall be furnished and installed by the Contractor and shall be of quality and workmanship equal to the general intent of these specifications and to the satisfaction of the District Engineer.

18. Water Pipes.—Water pipes shall be constructed in the locations shown on the plans and shall conform to requirements set forth in Sec-

tion 24, "Piping," of these specifications. All cocks, plugs, adaptors and other necessary accessories as shown on the plans or as required for proper installation shall be furnished and installed.

19. Measurement.—The lineal feet of tunnel sections between portal buildings, as shown on the plans or as modified by the District Engineer, shall constitute the basis of payment for "Tunnel Construction." The measurement will be the horizontal projection of the center line axis of the finished pavement surface which constitutes the Engineer's survey of the alignment and lengths of tunnels. No other method of measurement will be allowed. Where various types of sections are constructed the actual lengths of such sections as constructed, measured as above stated, shall constitute the lengths of such sections to be paid for. No measurement will be made for concrete placed outside the "neat lines of concrete structure" as defined herein, excess excavation or overbreakage or for transporting material except as provided for under "Overhaul."

Cross adits shall be similarly measured by lineal foot of adit along the center line of the floor between the inner or roadway walls of the tunnels they connect.

20. Payment.—The prices bid per lineal foot for "Tunnel Construction" of the various sections and of "Cross Adits" shall constitute full compensation for all excavation; removing, transporting and de-

positing of materials, as herein provided, timber, ing, drilling, blasting, draining, ventilation, timber and removal, structural steel supports and removal, and all concrete work as shown on the plans, including all concrete placed outside the "neat lines of the concrete structure" and all grouting; for all material furnished and the transporting and placing of all materials; for all form work, including the construction, erection and removal thereof; for all finishing and painting of concrete surfaces; for all ceilings and partitions; for pavement and curbs and sidewalks; for water pipes and accessories; for all drainage structures, pipes, conduits, manholes, lampholes, catch-basins, gratings, cast iron metal work; for furnishing and erecting structural steel shapes and members; for construction complete of flues, ports, bulkheads, air measurement stations; for all conduits, pipes, outlets and fixtures, except as otherwise provided, and for all other necessary construction, as shown on the plans, excepting furnishing and placing of reinforcing steel; and for the performance of all work and the furnishing of all labor, materials, tools and equipment necessary or incidental to the completion of the "Tunnel Construction" and "Cross Adits" as specified herein, or shown on the plans.

"Overhaul," measured outside the Portal limits, shall be paid as provided in Section 8, "Grading," at the unit prices bid, and such payment shall constitute full compensation for the hauling, placing and compacting of excavated material on other

parts of the work. No payment will be made for transporting and disposing of surplus materials not used on other parts of the work.

Reinforcing steel shall be paid for per pound in place, as provided in Section 14, "Reinforcing Steel," of these specifications.

SECTION 33. VENTILATION BUILDINGS

1. Description.—Ventilation buildings shall be constructed at the Easterly and Westerly ends of the Tunnel, as shown on the plans, and shall include both the superstructure and the foundations, together with the transition sections and connecting ducts to the Tunnel proper, and including the roadway pavement, curbs and sidewalk. All necessary excavation shall be included as part of the construction of the buildings.

The ventilation building at the Easterly Portal shall include as an integral part the construction complete of the roadway structure or bridge immediately to the Northeast of the building proper, and which will carry the existing road to a connection with the present Tunnel Road.

The buildings shall be of reinforced concrete and structural steel type of construction, as shown on the plans, and shall conform in all respects to the specifications contained in this section and in other sections which may apply.

This section is intended primarily to cover architectural requirements and the Contractor shall consider this section only as a part of the entire speci-

fication, and not as a separate or complete specification in itself.

Wherever provisions of other parts of these specifications appear to conflict with specifications in this section, provisions of this section shall govern, but in all other respects, when applicable, the provisions of the various sections herein contained shall apply, although not specifically repeated or otherwise referred to in this section.

The work to be done shall include the complete construction of the structures, together with all necessary accessories, including metal work, plumbing, pipes and conduits, roofing, flashing, glazing, hardware, floor coverings, partitions, painting, plastering, doors, elevator—including installation, drains, septic tanks, and whatever else is necessary to properly complete the buildings as shown on the plans or as specified herein. The omission of any detail not specifically shown or mentioned herein shall not relieve the Contractor of his responsibility to provide a complete and finished structure suitable for the purposes intended, with all labor and materials for any detail necessary to carry out the purpose and intent of the plans and specifications; and without extra charge therefor.

Ventilation stacks, fans, damper doors and motors, and electrical equipment, are not a part of the buildings as intended by this section, but the construction of the building shall include the placing and setting of all connection bolts and fittings re-

quired for the complete assembly of the above in the locations required.

2. Conduct of Work.—The Contractor shall so conduct his work that the construction as set forth in this section shall coordinate with other parts of the work, whether done by one Contractor or several Contractors.

The Contractor shall employ at all times on the work provided for in this section a competent general foreman, who shall have had previous experience in general building construction.

The Contractor shall have the full responsibility of constructing the various units of the work as set forth in this section, and his attention is particularly directed to the provisions set forth in Section 6, these specifications, under paragraph "M", "Sub-letting and Assignment."

3. Clearing, Grading and Excavating.—"Clearing," "Grading" and "Structural Excavation" shall be performed in accordance with Sections 7, 8 and 9 of these specifications, and payment for these items will be made in accordance with provisions therein at the unit prices bid.

Joint Highway District No. 13
of the State of California
office of
Wallace B. Boggs,
District Engineer
1448 Webster Street
Oakland, California

January 9, 1934

AMENDMENTS AND SUPPLEMENTS TO FINAL SPECIFICATIONS FOR CONSTRUCTION OF PROJECT.

Paragraph 17 of Section 34 of the final specifications heretofore adopted by the Board of Directors of Joint Highway District No. 13 of the State of California on the 30th day of March, 1933, and approved by Earl Lee Kelly, Director of the Department of Public Works of the State of California on the 5th day of April, 1933, is hereby amended to read as follows:

"After the final award of contract and not less than four (4) months prior to the installation of the ventilating equipment provided for in these specifications in the buildings on the project, tests on one (1) blower fan and one (1) exhaust fan will be required to verify the performance curves submitted with the bid. These tests will be made at the manufacturer's plant or other place suitable to

all concerned. These tests shall be made in the presence of a reputable testing engineer or firm of testing engineers to be designated by the District Engineer, and shall be in strict accordance with the Standard Test Code of the National Association of Fan Manufacturers and of the American Society of Heating and Ventilating Engineers, adopted June 1923, or as subsequently amended."

The final specifications adopted March 30, 1933, by the Board of Directors of the District and approved on the 5th day of April, 1933, by Earl Lee Kelly, Director of the Department of Public Works of the State of California, are hereby amended to read as follows:

"In all cases where the said final specifications provide that the Contractor shall submit to the District Engineer complete shop drawings in triplicate of all the equipment proposed to be furnished, which drawings shall show the weight of all parts and of the assembled units; material from which each part is constructed, complete dimensions and clearances required for removal of parts of units; location and sizes of anchor and connection bolts, and all such information as is hereinafter called for in these specifications and as may be required by the District Engineer. Such shop drawings showing all of the matters and things hereinabove specified shall be submitted to the District Engineer in not less than four (4) months prior to the installation of any mechanical equipment on the project."

Attention of all bidders under these specifications is called to the fact that since the adoption of the final plans and specifications for the project of Joint Highway District No. 13 on the 30th day of March, 1933, and the approval thereof by Earl Lee Kelly, Director of the Department of Public Works of the State of California on the 5th day of April, 1933, the President of the United States has approved the National Industrial Recovery Act and in accordance with law has created a Public Works Administration and a special Board for public works, and that said National Industrial Recovery Act and the Rules and regulations approved by said special Board for public works require consideration by bidders in submitting proposals under said plans and specifications.

The attention of all bidders is hereby specifically called to Bulletin No. 2 of Federal Emergency Administration of Public Works entitled "General Information and Instructions for the Guidance of State Advisory Boards and State Engineers (P.W.A.)." A grant of thirty (30) per cent of the cost of labor and material used in the project of the District has been made by the Public Works Administration of the United States under the terms of said National Industrial Recovery Act, and all bidders are hereby advised that the Directors of the District will cooperate with the Public Works Administration and all its officers and employees in the enforcement of all of the provisions of said

National Industrial Recovery Act and the rules and regulations heretofore and hereafter promulgated applicable to the performance of the work on the project of the District.

Bidders are advised to secure complete information as to the rules and regulations of the Public Works Administration applicable to the work to be performed to complete the project of the District, to the latest date available at the time the respective proposals of the bidders are submitted to the District.

All bidders are hereby advised that the District has applied to the Public Works Administration for a waiver of the provisions of subdivision (c) of Article A of subdivision B of said Bulletin No. 2 of the Public Works Administration which reads as follows:

"(c) No work shall be permitted on Sundays or legal holidays, except in cases of emergency," for the reason that the tunnel work on the project of the District may be more safely and efficiently performed if continuous construction is permitted. Whether or not the application of the District for a waiver of said provision of said subdivision (c) will be granted, cannot be ascertained until proper authorities of the Public Works Administration have acted upon the request of the District for said waiver, and all bidders are hereby notified to inquire at the office of the District Engineer, 1448 Webster Street, Oakland, California, at least ten

(10) days prior to the final date for the submission of bids to ascertain whether or not the application of the District for a waiver of the provisions of said subdivision (c) has been acted upon, and as to whether or not work may proceed on the project of the District on Sundays and holidays.

Wherever reference is made in the said final specifications adopted March 30, 1933, and approved by Earl Lee Kelly, Director of the Department of Public Works of the State of California on the 5th day of April, 1933, to any law of the State of California or to the regulation of any commission or regulatory body of the State of California, said final specifications are hereby amended to include a reference to all laws of the State of California enacted since the adoption of said final specifications which amend, supplement, complement or repeal any of the laws refered to in said final specifications. Likewise all regulations of any commission or official board or official body of the State of California, which have been promulgated or issued since the date of the adoption of said final specifications which supplement, amend, complement or add to the regulations of such commission, board or official body, in effect at the date of the adoption of said final specifications, are hereby referred to and incorporated in said final specifications for all purposes the same as if set forth herein at length, it being the intention of the District by this paragraph of the final specifications to

call the attention of all bidders to the fact that all laws of the State of California and all regulations of all commissions, boards and public bodies of the State of California enacted or promulgated since the adoption of said final specifications as aforesaid shall apply to the work to be performed under the contract awarded to the successful bidder as fully as if in these specifications set forth at length.

Paragraph (z-2) of Section 6 of the original specifications adopted March 30, 1933, and approved by Earl Lee Kelly, Director of the Department of Public Works of the State of California on the 5th day of April, 1933, is hereby amended to read as follows:

"(z-2) Payment of Not Less Than General Prevailing Rate of Wages . The Contractor and all subcontractors under him shall pay all their laborers, workmen, mechanics and employees on said work a salary or wage at least equal to the prevailing salary or wage for the same quality of service rendered to private persons, firms or corporations under similar employment and which salary or wage shall not be less than general prevailing rate of per diem wages for the work of a similar character in the locality in which the work is performed, and not less than the general prevailing rate of per diem wages for overtime work, and which salary or wage shall not be less than the stipulated rates contained in a schedule thereof which has been ascertained and determined by the Board of Directors of the Dis-

trict and which is now on file with the Secretary of said Board and by reference incorporated herein and made a part hereof, and a copy of which is hereunto appended and marked "Exhibit A." Reference to said schedule of salary or wages, a copy of which is hereto appended and marked "Exhibit A" was ascertained and determined and adopted by a resolution of the Board of Directors of the District on the 9th day of January, 1934. The Contractor shall forfeit as a penalty to the District Ten ($10.00) Dollars for each laborer, workman or mechanic employed for each calendar day or portion thereof, if such laborer, workman or mechanic is paid less than said stipulated wages for work done under said contract by him, or by any subcontractor under him, in violation of Chapter 397 of the Laws of 1931 (Stats. 1931, page 910) of the State of California, and said sums and amounts which shall have been so forfeited shall be withheld and retained from payments due to the Contractor pursuant to this contract and the terms of said Act; provided, however, that no sum shall be so withheld, retained or forfeited except from the final payment, without a full investigation by either the Division of Labor Statistics and Law Enforcement of the State Department of Industrial Relations or by said Board of Directors.

AMENDMENTS AND SUPPLEMENTS TO FINAL SPECIFICATIONS TO CONFORM TO REQUIREMENTS OF FEDERAL EMERGENCY ADMINISTRATION OF PUBLIC WORKS

Article A. (a) Convict Labor. No convict labor shall be employed on the project and no materials manufactured or produced by convict labor shall be used on the project.

(b) Thirty-Hour Week. Except in executive, administrative and supervisory positions, so far as practicable and feasible in the judgment of the Government Engineer, no individual directly employed on the project shall be permitted to work more than 30 hours in any 1 week: Provided, That this clause shall be construed to permit working time lost because of inclement weather or unavoidable delays in any 1 week to be made up in the succeeding 20 days.

This provision shall for the purposes of this contract supersede the terms of any code adopted under title I of the National Industrial Recovery Act.

(c) No work shall be permitted on Sundays or legal holidays except in cases of emergency. (Note: See page 4 of these Amendments.)

Article B. (a) Wages. All employees directly employed on this work shall be paid just and reasonable wages, which shall be compensation sufficient to provide, for the hours of labor as limited, a standard of living in decency and comfort. The

Contractor and all subcontractors shall pay not less than the minimum hourly wage rates for skilled and unskilled labor prescribed by the Federal Emergency Administration of Public Works, viz:

Skilled Labor	$1.10
Unskilled Labor	$ .45

(b) A clearly legible statement of all wage rates to be paid the several classes of labor employed on the work shall be posted in a prominent and easily accessible place at the site of the work, and the Contractor shall keep a true and accurate record of the hours worked by and the wages paid to each employee and shall furnish the Government Engineer with a sworn statement thereof on demand. All employees shall be paid in full not less often than once each week and in lawful money of the United States in the full amount accrued to each individual at the time of closing of the pay roll, which shall be at the latest date practicable prior to the date of payment, and there shall be no deductions or rebates on account of goods purchased, rent, or other obligations, but such obligations shall be subject to collection only by legal process.

(c) In the event that the prevailing hourly rates prescribed under collective agreements or understandings between organized labor and employers on April 30, 1933, shall be above the minimum rates specified above, such agreed wage rates shall apply: PROVIDED, That such agreed wage rates shall be effective for the period of this contract, but

not to exceed 12 months from the date of the contract.

(d) The above designated minimum rates are not to be used in discriminating against assistants, helpers, apprentices, and serving laborers who work and serve skilled journeymen mechanics and who are not to be termed as "Unskilled Laborers."

(e) The minimum wage rates herein established shall be subject to change by the Federal Emergency Administration of Public Works on recommendation of the Board of Labor Review. In event that the Federal Emergency Administration of Public Works acting on such recommendation establishes different minimum wage rates, the contract price shall be adjusted accordingly on the basis of all actual labor costs on the project to the Contractor, whether under this contract or any subcontract.

(f) The Board of Labor Review shall hear all labor issues arising under the operation of this contract and as may result from fundamental changes in economic conditions during the life of this contract. Decisions of the Board of Labor Review, including decisions as to its jurisdiction to act upon the application of persons not parties to this contract, shall be binding upon all parties.

Article C. (a) Labor Preferences. Preference shall be given, where they are qualified, to ex-service men with dependents, and then in the following order: (1) To citizens of the United States and aliens who have declared their intention of becom-

ing citizens, who are bona fide residents of the political subdivision and/or county in which the work is to be performed and (2) to citizens of the United States and aliens who have declared their intention of becoming citizens, who are bona fide residents of the State, Territory, or district in which the work is to be performed: Provided, that these preferences shall apply only where such labor is available and qualified to perform the work to which the employment relates.

(b) Employment Services. To the fullest extent possible, labor required for the project and appropriate to be secured through employment services, shall be chosen from the lists of qualified workers submitted by local employment agencies designated by the United States Employment Service: Provided, however, That organized labor, skilled and unskilled, shall not be required to register at such local employment agencies but shall be secured in the customary ways through recognized union locals. In the event, however, that qualified workers are not furnished by the union locals within 48 hours (Sundays and holidays excluded) after request is filed by the employer, such labor may be chosen from lists of qualified workers submitted by local agencies designated by the United States Employment Service. In the selection of workers from lists prepared by such employment agencies and local unions, the labor preferences provided in section (a) of this article shall be observed.

(c) Compliance with Title I, N.I.R.A. The Contractor agrees to comply with the conditions prescribed in section 7 (a) (1) and 7 (a) (2) of title I of the National Industrial Recovery Act, and to cause all subcontractors to comply therewith.

Article D. Human Labor. The maximum of human labor shall be used in lieu of machinery wherever practicable and consistent with sound economic and public advantage; and to the extent that the work may be accomplished at no greater expense by human labor than by the use of machinery, and labor of requisite qualifications is available, such human labor shall be employed.

Article E. Compensation Insurance. The Contractor will furnish compensation insurance for employees on this work and comply with the workmen's compensation laws of the State, Territory, or district in which the work is to be performed, and will give proof of such adequate insurance satisfactory to the Government Engineer.

Article F. Persons Entitled to Benefits of Labor Provisions. The Contractor will extend to every person who performs the work of a laborer or of a mechanic on the project or on any part thereof the benefits of the labor and wage provisions of this contract, regardless of any contractual relationship between the Contractor and such laborer or mechanic, or between any subcontractor and such laborer or mechanic. There shall be no discrimination in the selection of labor on the ground of race, creed or color.

Article G. Withholding Payment. Joint Highway District No. 13 of the State of California may withhold from the Contractor so much of accrued payments as may be necessary to pay to laborers or mechanics employed by the Contractor or any subcontractor on the work, the difference between the rate of wages required by this contract to be paid to laborers or mechanics on the work and the rate of wages actually paid to such laborers or mechanics.

Article H. Inspection of Record. The Federal Emergency Administration of Public Works, through its authorized agents, shall have the right to inspect all work as it progresses, and shall have access to all pay rolls, records of personnel, invoices of materials, and any and all other data relevant to the performance of this contract.

Article I. (a) N.R.A. Materials. So far as articles, materials, and supplies produced in the United States are concerned, only articles, materials, and supplies produced under codes of fair competition under title I of the National Industrial Recovery Act, or under the President's Reemployment Agreement, shall be used in the performance of this work, except when the Government Engineer certifies that this requirement is not in the public interest or that the consequent cost is unreasonable.

(b) Local Preference. So far as practicable, and subject to the provisions of section (a) of this article, preference shall also be given to the use of

locally produced materials if such does not involve higher cost, inferior quality, or insufficient quantities, subject to the determination of the Government Engineer.

Article J. Reports. The Contractor will make report in triplicate monthly and cause all subcontractors to report in like manner, within 5 days after the close of each calendar month, on forms to be furnished by the United States Department of Labor, the number of persons on their respective pay rolls, the aggregate amount of such pay rolls, and the man-hours work, wage scales paid to the various classes of labor, and the total expenditures for materials. Two copies of each monthly reports are to be furnished to the Government Engineer, and one copy to the United States Department of Labor. The Contractor shall also furnish to the Joint Highway District No. 13 of the State of California, to the Government Engineer, and to the United States Department of Labor the names and addresses of all subcontractors on the work at the earliest date practicable.

Article K. Accident Prevention. The Contractor shall at all times exercise reasonable precautions for the safety of employees on the work and shall comply with all applicable provisions of the Federal, State, and municipal safety laws and building and construction codes. All machinery and equipment and other physical hazards shall be guarded in accordance with safety codes approved by the

American Standards Association, unless such codes are incompatible with Federal, State, or municipal laws or regulations.

Article L. (a) Subcontractors. The Contractor shall cause appropriate provisions to be inserted in all subcontracts relating to this work to insure the fulfillment of all provisions of this contract affecting such subcontractors, particularly articles A-K, inclusive.

(b) All bids submitted by subcontractors should state the minimum wage rates established in article B hereof.

(c) No subcontract shall be let to any subcontractor who has not signed and complied with the applicable code or codes of fair competition approved under title I of the National Industrial Recovery Act for the trade or industry or subdivision thereof to which the work relates, or, if there be no approved code of fair competition for such trade or industry or subdivision, who has not signed and complied with the President's Reemployment Agreement.

Article M. Termination for Breach. In the event that any of the provisions of articles A to L of this contract are violated by the Contractor or by any subcontractor on the work, the Joint Highway District No. 13 of the State of California may terminate the contract by written notice to the Contractor. In such event Joint Highway District No. 13 of the State of California may take over the work

and prosecute the same to completion by contract or otherwise, and the Contractor and his sureties shall be liable to the Joint Highway District No. 13 of the State of California for any excess cost occasioned the Joint Highway District No. 13 of the State of California, and Joint Highway District No. 13 of the State of California may take possession of and utilize in completing the work, such materials, appliances, and plant as may be on the site of the work and necessary therefor.

Article N. Definition. The term "Government Engineer" as used herein shall mean the State Engineer (P.W.A.) or his duly authorized representative, or any person to whom his duties or functions may be transferred by the Federal Emergency Administration of Public Works, or its successors.

[Endorsed]: U. S. Dist Ct. N. D. Cal. No. 20101-R. Plff's Ex. No. 7. Filed April 13, 1938. Walter B. Maling, Clerk. By J. A. Schaertzer, Deputy Clerk.

PLAINTIFF'S EXHIBIT No. 16

CONTRACT

Between Joint Highway District No. 13 of the State of California and Six Companies of California, a corporation.

Dated: June 4th, 1934. Filed June 14th, 1934. Harry M. Stow, Secretary, by L. V. Eaton, Ass't Secty.

Note: This form for information only. The actual contract will be prepared on a similar form by the Attorney for the District upon award of contract.

CONTRACT

THIS AGREEMENT, made and entered into this 4th day of June, 1934, by and between Joint Highway District No. 13 of the State of California, hereinafter designated as the first party, and Six Companies of California, a Nevada corporation duly qualified to, and doing business in the State of California, hereinafter designated as the second party;

WITNESSETH:

That whereas it has been determined by the Board of Directors to construct, erect and complete the project of said Joint Highway District No. 13 of the State of California, which includes a highway, highway tunnel and approaches with appurtenant structures, including ventilation buildings, ventilation equipment and accessories, and the con-

struction of highway approaches with pavement, drainage structures, curbs, gutters and sidewalks where required, construction of grade separation structures, viaducts, retaining walls and incidental structures, and connections with existing streets; located partly in the City of Oakland, County of Alameda, State of California, and partly in the County of Contra Costa, State of California, and all in said Joint Highway District No. 13 of the State of California, the westerly terminus of said project being located near Broadway and Keith Avenue in the said City of Oakland and the easterly terminus of said project being a point on the State Highway in said Contra Costa County approximately fourteen hundred (1,400') feet northerly from the intersection of the Fish Ranch Road with said State Highway which is commonly known as and called the "Tunnel Road," all in accordance with the final surveys, plans, specifications and detailed drawings therefor adopted by the Board of Directors of said Joint Highway District No. 13 on the 30th day of March, 1933, and the amendments and supplements to said final specifications adopted by the Board of Directors of said Joint Highway District on the 9th day of January, 1934, and on the 3rd day of April, 1934, made by Wallace B. Boggs, District Engineer, now on file in the office of the first party, and which said final surveys, plans, specifications and detailed drawings are hereby referred to for a more definite, complete and distinct description of the work to be performed

under this contract, and which are hereby made a part of this contract the same as though fully set forth herein;

Now, therefore, in consideration of the premises and in further consideration of the sums to be paid by the first party to the second party herein, as hereinafter provided, in full for the performance of all acts and things to be done and performed by said second party, the said second party, for itself, its successors or assigns, hereby promises, covenants and agrees with the said first party that the said second party will honestly and faithfully do and perform the work herein referred to and will furnish all the labor and material necessary therefor in strict accordance with the said plans and specifications and in strict accordance with the terms of this contract and agreement, and upon the completion of said work as provided for by the terms of this contract that the said second party will deliver said work and structures herein provided for to the first party or its authorized agents.

That in consideration of the foregoing covenants, promises and agreements on the part of the second party and the faithful performance of said work and the strict and literal fulfillment of each and every such covenant, promise and agreement, and as compensation agreed upon for said work of construction, erection and completion as aforesaid, the first party covenants, promises and agrees to pay the sums hereinafter set forth to the second party in full for said work, as follows, to-wit:

Items	Quantity Estimates	Unit Prices		Estimated Total
1. Grading	763,000 cu. yds.	at $ 0.33	per cu. yd.	$ 251,790.00
2. Overhaul	8,100,000 sta. yds.	at $ 0.005	per sta. yd.	$ 40,500.00
3. Structural Excavation, Class "A"	44,000 cu. yds.	at $ 1.20	per cu. yd.	$ 52,800.00
4. Structural Excavation, Class "B"	1,000 cu. yds.	at $ 2.00	per cu. yd.	$ 2,000.00
5. Shoulders	362,000 sq. ft.	at $ 0.035	per sq. ft.	$ 12,670.00
6. Reinforcing Steel	4,420,000 lbs.	at $ 0.04	per lb.	$ 176,800.00
7. Structural Steel	445,000 lbs.	at $ 0.05	per lb.	$ 22,250.00
8. Concrete Structures, Class "A" Concrete	12,150 cu. yds.	at $15.50	per cu. yd.	$ 188,325.00
9. Concrete Structures, Class "B" Concrete	3,200 cu. yds.	at $14.50	per cu. yd.	$ 46,400.00
10. Portland Cement Concrete Pavement, 8 inch	37,700 sq. ft.	at $ 0.24	per sq. ft.	$ 9,048.00
11. Portland Cement Concrete Pavement, 6 inch	30,400 sq. ft.	at $ 0.18	per sq. ft.	$ 5,472.00
12. Asphalt Concrete	44,000 sq. ft.	at $ 0.08	per sq. ft.	$ 3,520.00
13. Penetration Oil Macadam Pavement	724,000 sq. ft.	at $ 0.14	per sq. ft.	$ 101,360.00
14. Concrete Curbs, 6 inch	2,725 lin. ft.	at $ 0.52	per lin. ft.	$ 1,417.00
15. Concrete Curbs, 12 inch	945 lin.ft.	at $ 0.80	per lin. ft.	$ 756.00
16. Concrete Curb, 6 inch, with guard	46 lin. ft.	at $ 1.00	per lin.ft.	$ 46.00
17. Concrete Gutters	4,300 sq. ft.	at $ 0.25	per sq. ft.	$ 1,075.00
18. Cement Sidewalks	21,000 sq. ft.	at $ 0.13	per sq. ft.	$ 2,730.00
19. Fill Protectors	15	at $19.00	each	$ 285.00
20. Corrugated Metal Pipe Culvert, 8 inch	1,470 lin. ft.	at $ 1.30	per lin. ft.	$ 1,911.00
21. Corrugated Metal Pipe Culvert, 12 inch	210 lin. ft.	at $ 2.00	per lin. ft.	$ 420.00

Items	Quantity Estimates	Unit Prices		Estimated Total
22. Corrugated Metal Pipe Culvert, 18 inch	3,300 lin. ft.	at $ 3.00	per lin. ft.	$ 9,900.00
23. Reinforced Concrete Pipe Culvert, 10 inch, "S"	340 lin. ft.	at $ 1.20	per lin. ft.	$ 408.00
24. Reinforced Concrete Pipe Culvert, 12 inch, "S"	750 lin. ft.	at $ 1.50	per lin. ft.	$ 1,125.00
25. Reinforced Concrete Pipe Culvert, 15 inch "S"	430 lin. ft.	at $ 1.80	per lin. ft.	$ 774.00
26. Reinforced Concrete Pipe Culvert, 18 inch "S"	85 lin. ft.	at $ 2.00	per lin. ft.	$ 170.00
27. Reinforced Concrete Pipe Culvert, 24 inch "X"	1,470 lin. ft.	at $ 4.40	per lin. ft.	$ 6,468.00
28. Reinforced Concrete Pipe Culvert, 36 inch "X"	680 lin. ft.	at $ 8.50	per lin. ft.	$ 5,780.00
29. Vitrified Pipe Sewers, 6 inch	190 lin. ft.	at $ 1.00	per lin. ft.	$ 190.00
30. Vitrified Pipe Sewers, 8 inch	415 lin. ft.	at $ 1.20	per lin. ft.	$ 498.00
31. Manholes, Standard tops	10	at $90.00	each	$ 900.00
32. Manholes, Inlet tops	5	at $100.00	each	$ 500.00
33. Manholes, Grating tops	4	at $90.00	each	$ 360.00
34. Storm Water Inlets, 34-inch openings	1	at $75.00	each	$ 75.00
35. Storm Water Inlets, "B"	10	at $100.00	each	$ 1,000.00
36. Storm Water Inlets, "C"	12	at $80.00	each	$ 960.00
37. Lampholes, 6 inch	1	at $24.00	each	$ 24.00
38. Lampholes, 8 inch	1	at $26.00	each	$ 26.00
39. Lampholes, 12 inch	3	at $36.00	each	$ 108.00
40. Handhole	1	at $30.00	each	$ 30.00
41. Underdrains, 8 inch Perforated Corrugated Metal Pipe	4,100 lin. ft.	at $ 1.40	per lin. ft.	$ 5,740.00

Items	Quantity Estimated	Unit Prices		Estimated Total
42. Piping, Cast Iron, 6 inch	2,020 lin. ft.	at $ 1.50	per lin. ft.	$ 3,030.00
43. Guard Rail	12,400 lin. ft.	at $ 0.80	per lin. ft.	$ 9,920.00
44. Pipe Hand Rail	640 lin. ft.–	at $ 3.00	per lin. ft.	$ 1,920.00
45. Riprap	220 cu. yds.	at $ 5.00	per cu. yd.	$ 1,100.00
46. Metal Cribbing	46,000 lbs.	at $ 0.13	per. lb.	$ 5,980.00
47. Stone or Gravel for Foundations	330 cu. yds.	at $ 3.00	per cu. yd.	$ 990.00
48. Tunnel Construction Type "A"	5,620 lin. ft.	at $325.00	per lin. ft.	$1,826,500.00
49. Tunnel Construction Type "B"	200 lin. ft.	at $400.00	per lin. ft.	$ 80,000.00
50. Cross Adits	322 lin. ft.	at $40.00	per lin. ft	$ 12,880.00
51. Ventilation Buildings, West Building and East Building, Complete	Lump sum			$ 340,000.00
52. Ventilation Equipment, Furnishing and Installing, Complete	Lump sum			$ 160,000.00
53. Mechanical Equipment, Furnishing and Installing, Complete	Lump Sum			$ 60,000.00
54. Electrical Equipment, Furnishing and Installing, Complete	Lump sum			$ 210,000.00
55. Carbon Monoxide Detectors and Recorders, Furnishing and Installing, Complete	Lump sum			$ 15,000.00
			Total	$3,683,931.00

The unit prices hereinabove set forth are the prices bid by the second party and accepted by the first party and payment shall be made to second party on the basis of the units furnished of each item hereinabove specified. The lump prices for items 51 to 55 inclusive, hereinabove set forth, are in each case the total prices to be paid by the first party to the second party for the items therein listed.

A copy of the bid of the second party is on file with the Secretary of the Board of Directors of the first party and is hereby expressly referred to and made a part of this agreement.

It is hereby mutually understood and agreed by and between the parties hereto as follows:

1. That the work provided for by this contract shall be actually commenced by said second party within (10) calendar days from and after the execution of the same and shall be completed within seven hundred twenty (720) calendar days from and after the execution of this contract, time being of the essence hereof.

2. That the price to be paid said second party as hereinbefore provided shall be paid in legally executed and regularly issued warrants of the said first party, drawn on the appropriate fund or funds of said Joint Highway District, as required by law and the order of the Board of Directors of the first party.

3. That the said first party, or its regularly appointed District Engineer and his assistants and

agents shall, at all times during the progress of said work, have free access thereto, and shall be allowed to examine the same, and all the material to be used therein, and if the same or any part thereof shall not be in strict accordance with said plans and specifications herein referred to, it shall refuse to accept and shall reject said defective work and material.

The whole of said work is to be done to the satisfaction and approval of said first party and its agents authorized to superintend the same, in strict accordance with the plans and specifications hereinbefore referred to.

4. That the second party is skilled in the trade or calling necessary to perform the work agreed to and done under this contract, and that the first party, not being skilled in such matters, relies upon the skill of said second party to do and perform the work and labor necessary in the most skillful and durable manner, and said second party guarantees the same, and the acceptance of the work does not operate as a release to said second party or its bondsmen from said guarantee.

5. That the second party further agrees that if the work to be done under this contract and agreement shall be abandoned, or if this contract shall be assigned by the second party, or if at any time the District Engineer shall be of the opinion, and shall so certify in writing to the said first party

that the said work or any part thereof is unnecessarily or unreasonably delayed, or that the said second party is wilfully violating any of the conditions or covenants of this contract, or is executing this contract in bad faith, the said first party shall have the power to notify the said second party to discontinue all work or any part thereof under this contract, and thereupon the said second party shall cease to continue said work or such part thereof as said first party may designate, and the said first party shall thereupon have the power to place such and so many persons, and to obtain by contract, purchase or hire, such animals, carts, wagons, implements, tools, material or materials, by contract or otherwise, as said first party may deem advisable, to work at and be used to complete the work herein described, or such part thereof as the agent authorized to superintend the same may deem necessary, and to use such material as they may find upon the line of said work and to charge the expense of such labor and material, animals, carts, wagons, implements and tools to the second party, and the expense so charged shall be deducted and paid by the first party out of such moneys as may be either due or may at any time thereafter become due to the said second party under and by virtue of this contract or any part thereof.

In case such expense is less than the sum which would have been payable under this contract, if the same had been completed by the said second party,

the said second party shall be entitled to receive the difference, and in case such expense shall exceed the last said amount, then the said second party or its bondsmen shall pay the amount of such excess to the first party on notice from the said first party of the excess so due.

6. That upon notice of the completion of said work, the said first party or its agent shall proceed without delay to examine the same, and if found to be in accordance with the aforesaid plans and specifications and this agreement, shall accept said work and shall notify the second party thereto, or its agents, of such acceptance.

7. Payments for said work will be made only upon the certificate of the District Engineer for work actually performed. The District Engineer shall measure the work on or about the first day of each month and at the time of completion of the entire work, and shall render a certificate on or about the tenth day of each month and at the completion of the entire work, stating the amount of work performed during the previous calendar month, and during the current month, at the time of completion. The Contractor shall then, at the times above specified, be entitled to receive a payment from the District in an amount to be determined as follows: Until the total value of the work done since commencement of performance of the contract exceeds Four Hundred Thousand Dollars ($400,000.00) the payment will be seventy-five per

cent (75%) of the amount specified in the District Engineer's certificate; thereafter and until the total value of the work done since the commencement of performance of the contract equals One Million Dollars ($1,000,000.00), the constant sum of One Hundred Thousand Dollars ($100,000.00) will be retained by the District out of said total value; thereafter the progress payment will be ninety per cent (90%) of the amount specified in the Engineer's certificate, provided that no such estimate of payment shall be required to be made when, in the judgment of the District Engineer, the work is not proceeding in accordance with the provisions of the contract, or when, in his judgment, the total value of the work done since the last estimate amounts to less than Five Hundred Dollars ($500.00), except the certificate and payment required at the completion of the entire work.

The acceptance by the Contractor of the final ninety per cent (90%) payment for the completed work shall be and shall operate as a release to the District from all claims and liability to the Contractor for anything done or furnished for or relating to the work, or for any act or neglect of the District or its agent in any way affecting the work, excepting the claim of the Contractor against the District for the moneys herein provided to be paid by the District to the Contractor thirty-five (35) days after the acceptance of the contract.

Thirty-five (35) days after the acceptance of the work by a certificate of acceptance duly rendered by

the District Engineer and final approval and acceptance by the Board of Directors of the District, the Contractor shall be entitled to receive a payment of the balance due under this contract in the amount of ten per cent (10%) of the aggregate amount of all certificates of the District Engineer.

8. That the said second party shall furnish and deliver to the said first party, upon the execution of this contract, a good and sufficient bond and undertaking in the sum of One Million Eight Hundred Forty-two Thousand ($1,842,000.00) Dollars, with sufficient corporate surety thereon, approved by the Board of Directors of first party, conditioned for the faithful performance of this contract by second party, according to the terms and provisions herein.

9. That the said second party shall furnish and deliver to said first party, upon the execution of this contract, a good and sufficient bond and undertaking in the sum of at least One Million Eight Hundred Forty-two Thousand ($1,842,000.00) Dollars, approved by the Board of Directors of first party, with sufficient corporate surety thereon in accordance with any law of the State of California requiring the same and with an Act of the Legislature of the State of California, entitled, "An Act to secure the payment of the clams of persons employed by contractors upon public works, and the claims of persons who furnish materials, supplies, teams, implements or machinery used or consumed by such contractors in the performance of

such works, and prescribing the duties of certain public officers with respect thereto," and any Act or Acts amendatory thereof.

10. That eight hours' labor shall constitute a day's work for any one calendar day, and all work and labor performed under and in accordance with the terms and conditions of this contract.

11. That no laborer, workman or mechanic employed at any time by the said second party, or by any subcontractor or subcontractors under it, upon the work or upon any part of the work contemplated by this contract, shall be required or permitted to work thereupon more than eight hours in any one calendar day, except in cases of extraordinary emergency caused by fire, flood or danger to life or property, or except to work upon public, military or naval defenses or works in time of war; provided, however, that within thirty (30) days after any employee is permitted to work over eight hours in any one calendar day due to such extraordinary emergency, the contractor or its duly authorized agent shall file with the Board of Directors of the first party a report verified by oath setting forth the nature of the said emergency, which report shall contain the name of said worker and the hours worked by him on said day, and failure to file the said report within the said time shall be prima facie evidence that no extraordinary emergency existed. The contractor and each subcontractor shall also keep an accurate record showing the names and actual hours worked of all workers em-

ployed in connection with the said public work, which record shall be open at all reasonable hours to the inspection of the Board of Directors of the first party or its deputies or agents, and to the Chief of the Division of Labor Statistics and Law Enforcement of the Department of Industrial Relations, his deputies or agents. The said second party hereby agrees to forfeit as a penalty to the said first party, out of any moneys becoming due to it from the said first party, under the terms of this contract, the sum of Ten ($10.00) Dollars for each laborer, workman, or mechanic employed in the execution of this contract by said second party, or by any subcontractor under said second party, for each and every calendar day during which said laborer, workman or mechanic is required or permitted to labor more than eight hours in violation of the provisions of Section 653c of the Penal Code of the State of California, and that the said first party is hereby authorized and directed through its proper representatives, to withhold and retain from the said second party, or from the said subcontractors under it, all sums and amounts which shall have been forfeited pursuant to this stipulation, as the property of the said first party, as provided for by Section 653c of the Penal Code of the State of California, and any Act or Acts amendatory thereof; provided, however, that no sum shall be so withheld, retained or forfeited, except from the final payment, without a full investigation by either the Division of Labor Statistics and Law En-

forcement of the State Department of Industrial Relations or by said Board of Directors.

12. That the said second party shall, at its own expense, before commencing work under this contract, take out and at all times during the prosecution of the work hereunder, and until final completion and acceptance thereof, maintain, in full force and effect, compensation insurance with an insurance carrier satisfactory to said first party, covering the full liability of said second party to any and all persons employed by said second party, directly or indirectly, in or upon said work, or their dependents, in accordance with the provisions of the Workmen's Compensation Insurance and Safety Act, Chapter 176 of the Laws of 1913 of the State of California, and any Act or Acts amendatory thereof.

And said second party failing to take out or maintain such compensation insurance before commencing work under this agreement, the same may be taken out, maintained or renewed by said first party at the cost and expense and in the name of said second party, said cost and expenses thereof to be deducted from any installment payment becoming due to said second party hereunder.

13. That if any material, composition, process, or any other thing so called for or required by the plans and specifications heretofore adopted by the first party is covered by letters patent, all royalties and expenses thereof, all litigation therefrom, or other things whatsoever, which may develop as a

cost from the use of such material, composition, process or any other thing which is covered by letters patent shall be borne by the second party.

14. That any alteration or alterations made in the plans and specifications which are a part of this contract or any provision of this contract shall not operate to release any surety or sureties from liability on any bond or bonds attached hereto and made a part hereof, and consent to make such alterations is hereby given, and the sureties to said bonds hereby waive the provisions of Sections 2819 and 2840, and each of them, of the Civil Code of the State of California.

15. That said second party and all subcontractors under it shall pay all their laborers, workmen, mechanics and employees on said work a salary or wage at least equal to the prevailing salary or wage for the same quality of service rendered to private persons, firms or corporations under similar employment, and which salary or wage shall not be less than the general prevailing rate of per diem wages for work of a similar character in the locality in which the work is performed, and not less than the general prevailing rate of per diem wages for legal holiday and overtime work, and which salary or wage shall not be less than the stipulated rates contained in a schedule thereof which has been ascertained and determined by the Board of Directors of the first party and which is now on file with the Secretary of said Board and by reference incorporated herein, and made a part hereof, and a copy

of which is hereto appended and marked "Exhibit A." The said second party hereby agrees to forfeit as a penalty to the said first party, out of any moneys becoming due to it from the said first party, under the terms of this contract the sum of Ten ($10.00) Dollars for each laborer, workman or mechanic employed, for each calendar day, or portion thereof, such laborer, workman or mechanic is paid less than the said stipulated rates for work done under this contract, by it, or by any subcontractor under it in violation of Chapter 397 of the Laws of 1931 of the State of California, and that the first party is hereby authorized and directed, through its proper representatives, to withhold and retain from the said second party, or from the subcontractors under it all sums and amounts which shall have been forfeited pursuant to this stipulation, as the property of the said first party, as provided by Chapter 397 of the Laws of 1931 of the State of California, and any Act or Acts amendatory thereof; provided, however, that no sum shall be so withheld, retained or forfeited, except from the final payment, without a full investigation by either the Division of Labor Statistics and Law Enforcement of the State Department of Industrial Relations or by said Board of Directors.

16. That the said second party and any subcontractor or subcontractors under it, shall not knowingly employ or cause or allow to be employed upon the work, or upon any part of the work contemplated by this contract, any alien, except in cases of

extraordinary emergency caused by fire, flood, or danger to life or property, or except upon public, military or naval defenses or works in time of war; provided, however, that within thirty (30) days after any alien is permitted to work thereon due to such an extraordinary emergency, the contractor doing the work, or its duly authorized agent, shall file with the Board of Directors a report, verified by oath, setting forth the nature of the said emergency and containing the name of the said alien and each date he was permitted to work, and failure to file the said report within the said time shall be prima facie evidence that no such extraordinary emergency existed. The contractor and each subcontractor shall also keep, or cause to be kept, an accurate record showing the names and citizenship of all workers employed by him in connection with the said public work, which record shall be open at all reasonable hours to the inspection of the Board of Directors, its deputies and agents, and to the Chief of the Division of Labor Statistics and Law Enforcement of the State Department of Industrial Relations, his deputies and agents. The said second party hereby agrees to forfeit to the said first party, out of any moneys becoming due to it from the said first party, under the terms of this contract the sum of Ten ($10.00) Dollars for each alien knowingly employed in the execution of this contract, by it or by any subcontractor under it, upon said work herein specified, for each calendar day, or portion thereof, during which such alien is permitted or required to labor

in violation of the provisions of Chapter 398 of the Laws of 1931 of the State of California, and that the first party is hereby authorized and directed, through its proper representatives, to withhold and retain from the said second party, or from any subcontractor under it, all sums and amounts which shall have been forfeited pursuant to this stipulation, as the property of the said first party, as provided by Chapter 398 of the Laws of 1931 of the State of California, and any Act or Acts amendatory thereof; provided, however, that no sum shall be so withheld, retained or forfeited, except from the final payment, without a full investigation by either the Division of Labor Statistics and Law Enforcement of the State Department of Industrial Relations or by said Board of Directors.

17. That no laborer, workman or mechanic employed at any time by the said second party, or by any subcontractor or subcontractors under it, upon the work or upon any part of the work contemplated by this contract, shall be required or permitted to work thereupon more than thirty hours during any one calendar week, except in cases of extraordinary emergency caused by fire, flood or danger to life or property, or except to work upon public military or naval defenses or works in time of war; provided, however, that within thirty (30) days after any employee is permitted to work over thirty hours during any one calendar week due to such extraordinary emergency, the contractor or its duly authorized agent shall file with the Board of

Directors of the first party a report verified by oath setting forth the nature of the said emergency, which report shall contain the name of said worker and the hours worked by him during said week, and failure to file the said report within the said time shall be prima facie evidence that no extraordinary emergency existed. The contractor and each subcontractor shall also keep an accurate record showing the names and actual hours worked of all workers employed by him in connection with the said public work, which record shall be open at all reasonable hours to the inspection of the Board of Directors of the first party or its deputies or agents, and to the Chief of the Division of Labor Statistics and Law Enforcement of the Department of Industrial Relations, his deputies or agents. The said second party hereby agrees to forfeit as a penalty to the said first party, out of any moneys becoming due to it from the said first party, under the terms of this contract, the sum of Ten ($10.00) Dollars for each laborer, workman or mechanic employed in the execution of this contract by said second party, or by any subcontractor under said second party, for each and every calendar day of each week during which said laborer, workman or mechanic is required or permitted to labor more than thirty hours in violation of the provisions of Section 653c-1 of the Penal Code of the State of California, and that the said first party is hereby authorized and directed through its proper representatives, to withhold and retain from the said second

party, or from the said subcontractors under it, all sums and amounts which shall have been forfeited pursuant to this stipulation, as the property of the said first party, as provided for by Section 653c-1 of the Penal Code of the State of California, and any Act or Acts amendatory thereof; provided, however, that no sum shall be so withheld, retained or forfeited, except from the final payment, without a full investigation by either the Division of Labor Statistics and Law Enforcement of the State Department of Industrial Relations or by said Board of Directors.

18. That only materials and supplies substantially produced in the United States shall be used. In accordance with Chapter 226 of the Laws of 1933, only such unmanufactured articles, materials and supplies as have been mined or produced in the United States and only such manufactured articles, materials and supplies as have been manufactured in the United States, substantially all from articles, materials and supplies mined, produced or manufactured, as the case may be, in the United States shall be used in the performance of the contract. If the contractor shall fail to comply with this provision of the Laws of 1933, he shall not be awarded any contract to which this act applies by the first party for a period of three years from the date of such violation.

19. That said Joint Highway District shall not in any way or manner be answerable or suffer loss, damage, expense or liability for any loss or damage

that may happen to said highway, highway tunnel, the appurtenances thereof, or any part thereof, or in, or about the same during its construction and before acceptance, and the said second party shall assume all liabilities of every kind or nature arising from said work, either by accident, negligence or any cause whatever; and shall hold the first party harmless from all liability of every kind and nature arising from accident, negligence or any cause whatever; save and except in the event of damage to said tunnel, shaft or any other underground structure comprising a portion of the work to be performed under this contract, resulting from an earthquake, the second party shall not be liable for any expense necessary to restore such tunnel, shaft or underground structure to a condition equivalent to that which existed prior to the occurrence of said earthquake, in excess of the sum of Five Thousand ($5,000) Dollars; provided that the second party shall be responsible for and shall repair at its own cost and expense any such damage not discovered and reported to the District Engineer by the second party in writing within forty-eight (48) hours after its occurrence; and provided further, that such repair work directly due to earthquake action discovered and reported as herein provided for in excess of Five Thousand ($5,000) Dollars for each earthquake, will be paid for as extra work except for such portions thereof as can be fairly classified under appropriate items of the contract, which portions shall be paid for at the

unit prices hereinbefore set forth; that no payment shall be made by the first party to the second party for loss of time or extra cost due to delays resulting directly or indirectly from such cause. If completion of the whole work is delayed due to earthquake damage, an extension of time shall be granted to the second party as set forth in section 4 of the specifications.

The term "earthquake" as used herein shall be limited to seismic disturbances recorded by recognized observatories in Northern California which have an intensity at the work of VII or more on the Rossi-Forel seismic intensity scale, and for the purposes of this proviso, any series of such seismic disturbances occurring within any one twenty-four (24) hour period shall be considered as a single earthquake.

20. The following rules and regulations adopted by the Federal Emergency Administration of Public Works, (hereinafter called the "Administrator") to carry out the purposes and control the Administration of Title II of the National Industrial Recovery Act, are required to be and form a part, of all the construction contracts on projects to which a grant has been made under the terms of said Act, and a grant having been made by the United States under the terms of said Act to the project for which this is the construction contract, the same are hereby made a part hereof, binding on all parties to this contract, to-wit:

1. (a) Convict labor.—No convict labor shall be employed on the project, and no materials manufactured or produced by convict labor shall be used on the project.

(b) Thirty-hour week.—Except in executive, administrative, and supervisory positions, so far as practicable and feasible in the judgment of the Government Engineer, no individual directly employed on the project shall be permitted to work more than 8 hours in any 1 day nor more than 30 hours in any one week:

Provided, That this clause shall be construed to permit working time lost because of inclement weather or unavoidable delays in any 1 week to be made up in the succeeding 20 days.

2. Wages.—(a) All employees directly employed on this work shall be paid just and reasonable wages which shall be compensation sufficient to provide, for the hours of labor as limited, as standard of living in decency and comfort. Such wages shall in no event be less than the minimum hourly wage rates for skilled and unskilled labor prescribed by the Administrator for the zone or zones in which the work is to be done, viz:

Skilled labor, One and 10/100ths ($1.10) Dollars;

Unskilled labor, 45/100ths ($0.45) Dollars.

(b) In the event that the prevailing hourly rates prescribed under collective agreements or understandings between organized labor and employers in effect on April 30, 1933, shall be above the minimum rates specified above, such agreed

wage rates shall apply: Provided, That such agreed wage rates shall be effective for the period of this contract, but not to exceed 12 months from the date of the contract.

(c) The above designated minimum rates are not to be used in discriminating against assistants, helpers, apprentices, and serving laborers who work and serve skilled journeymen mechanics and who are not to be termed as "unskilled laborers."

(d) The provisions of this contract relating to hours and minimum wage rates for labor directly employed on the project shall for the purposes of this contract, to the extent applicable, supersede the terms of any code adopted under Title I of the Act permitting longer hours or lower minimum wage rates.

(e) All employees shall be paid in full not less often than once each week and in lawful money of the United States, unless otherwise permitted by the Government Engineer, in the full amount accrued to each individual at the time of closing of the pay roll, which shall be at the latest date practicable prior to the date of payment, and there shall be no deductions or rebates on account of goods purchased, rent, or other obligations, but such obligations shall be subject to collection only by legal process: Provided, however, That this clause shall not be construed to prohibit the making of deductions for premiums for compensation and medical aid insurance, in such amounts as are authorized by the laws of the State of California to be paid by employees, in those cases in which, after the mak-

ing of the deductions, the wage rates will not be lower than the minimum wage rates herein established.

(f) A clearly legible statement of all wage rates to be paid the several classes of labor employed on the work, together with a statement of the deductions therefrom for premiums for workmen's compensation and/or medical aid insurance authorized by the laws of the State of California, should such deductions be made, shall be posted in a prominent and easily accessible place at the site of the work, and there shall be kept a true and accurate record of the hours worked by and the wages, exclusive of all authorized deductions, paid to each employee, and the engineer inspector shall be furnished with a sworn statement thereof on demand.

(g) The Board of Labor Review (herein called the "Board") shall hear all labor issues arising under the operation of this contract and such issues as may result from fundamental changes in economic conditions during the life of this contract.

(h) The minimum wage rates herein established shall be subject to change by the Administrator on recommendation of the Board. In the event that, as a result of fundamental changes in economic conditions, the Administrator, acting on such recommendation, from time to time establishes different minimum wage rates (referred to in paragraph 2 (a), (b), and (c) hereof) all contracts for work on the project shall be adjusted accordingly by the parties thereto so that the contract price to

the contractor under any contract or to any subcontractor under any subcontract shall be increased by an amount equal to any such increased cost, or decreased in an amount equal to such decreased cost.

(i) Engineers, architects, and other professional and subprofessional employees engaged on the project shall receive the prevailing local rates for the various types of service to be rendered, except that in no case shall they receive less than the hourly rates set for the highest paid class of skilled labor directly employed on the project.

(j) Superintendents and foremen shall receive an hourly rate of compensation at least equal to the hourly wage rate paid employees who work under their direction, up to 40 hours per week.

In the event that superintendents or foremen work more than 40 hours per week, they shall receive at least 50 per cent more than the weekly wage, on a 30-hour basis, of the men working under their immediate direction.

The above are minimum rates only, and shall be determined prior to entering on the work.

3. (a) Labor Preferences.—Section 206 of the National Industrial Recovery Act establishes preferences to be followed in the employment of labor. As between fully qualified applicants for the positions these preferences will be observed as follows:

1. Ex-service men with dependents who are residents of Joint Highway District No. 13.

2. Other citizens and aliens who have declared their intention of becoming citizens who are bona fide residents of Joint Highway District No. 13.

3. Ex-service men with dependents who are bona fide residents of the State of California.

4. Other citizens and aliens who have declared their intentions of becoming citizens who are bona fide residents of the State of California.

(b) Employment services.—To the fullest extent possible, labor required for the project and appropriate to be secured through employment services shall be chosen from the lists of qualified workers submitted by local employment agencies designated by the United States Employment Service: Provided, however, That union labor, skilled and unskilled, shall not be required to register at such local employment agencies, but, if such labor is desired by the employer, shall be secured in the customary ways through recognized union locals. In the event, however, that employers who wish to employ union labor are not furnished with qualified union workers by the union locals which are authorized to furnish such labor residing in the locality within 48 hours (Sundays and holidays excluded) after request is filed by the employer, all labor shall be chosen from lists of qualified workers submitted by local agencies designated by the United States Employment Service. In the selection of workers from lists prepared by such employment agencies and union locals, the labor preferences provided in section (a) of this paragraph 3 shall be observed,

and preference shall be given to those unemployed at the date of registration who, at the date of selection, have no other available employment.

(c) Compliance with Title 1 of the Act.—The following sections 7 (a) (1) and 7 (a) (2) of Title 1 of the Act shall be observed:

(1) That employees shall have the right to organize and bargain collectively through representatives of their own choosing, and shall be free from the interference, restraint, or coercion of employers of labor, or their agents, in the designation of such representatives or in self-organization or in other concerted activities for the purpose of collective bargaining or other mutual aid or protection; (2) that no employee and no one seeking employment shall be required as a condition of employment to join any company union or to refrain from joining, organizing or assisting a labor organization of his own choosing.

4. Human labor.—The maximum of human labor shall be used in lieu of machinery wherever practicable and consistent with sound economic and public advantage; and to the extent that the work may be accomplished at no greater expense by human labor than by the use of machinery, and labor of requisite qualifications is available, such human labor shall be employed.

5. Compensation insurance.—Every employer of labor shall provide, if permitted by the laws of the State of California, adequate workmen's compensation insurance for all labor employed by him on

the project who may come within the protection of such laws and shall provide, where practicable, employers' general liability insurance for the benefit of his employees not protected by such compensation laws, and proof of such insurance satisfactory to the Government engineer shall be given. Where it is not permitted by law that such insurance be provided, some method satisfactory to the Administrator must be provided by which the employees may, by paying the entire amount of the premiums, derive a similar protection.

6. Persons entitled to benefits of labor provisions.—There shall be extended to every person who performs the work of a laborer or of a mechanic on the project or on any part thereof the benefits of the labor and wage provisions of this contract, regardless of any contractual relationship between the employer and such laborer or mechanic. There shall be no discrimination in the selection of labor on the ground of race, creed, or color.

7. Withholding payment.—Under all construction contracts, said Joint Highway District No. 13 of the State of California, may withhold from the contractor so much of accrued payments as may be necessary to pay to laborers or mechanics employed on the work the difference between the rate of wages required by this contract to be paid to laborers or mechanics on the work and the rate of wages actually paid to such laborers or mechanics.

8. Accident prevention.—Reasonable precau-

tions shall at all times be exercised for the safety of employees on the work and applicable provisions of the Federal, State, and municipal safety laws and building and construction codes shall be observed. All machinery and equipment and other physical hazards shall be guarded in accordance with the safety provisions of the Manual of Accident Prevention in Construction of the Associated General Contractors of America, unless and to the extent that such provisions are incompatible with Federal, State, or municipal laws or regulations.

9. (a) N. R. A. materials.—So far as articles, materials, and supplies produced in the United States are concerned, only articles, materials, and supplies produced under codes of fair competition under Title 1 of the Act, or under the President's Reemployment Agreement, shall be used in the performance of this work, except when the Government engineer certifies that this requirement is not in the public interest or that the consequent cost is unreasonable.

(b) Local preference.—So far as practicable, and subject to the provisions of section (a) of this paragraph 9, preference shall also be given to the use of locally produced materials if such does not involve higher cost, inferior quality, or insufficient quantities, subject to the determination of the Government engineer; but there shall be no requirement providing price differentials for, or restricting the use of materials to, those produced within the Nation or State.

10. (a) Inspection of records.—The Administrator, through his authorized agents, shall have the right to inspect all work as it progresses, and shall have access to all pay rolls, records of personnel, invoices of materials, and any and all other data relevant to the performance of this contract. There shall be submitted to the Administrator, through his authorized agents, the names and addresses of all personnel and such schedules of the cost of labor, costs and quantities of materials, and other items, supported as to correctness by such evidence as, and in such form as, the Administrator, through his authorized agents, may require. The submission and approval of said schedules, if required, shall be a condition precedent to the making of any payment under the contract.

(b) There shall be provided for the use of the engineer inspector such reasonable facilities as he may request. In case of dispute the Government engineer shall determine the reasonableness of the request.

11. (a) Reports.—Every employer of labor on the project shall report within 5 days after the close of each calendar month, on forms to be furnished by the United States Department of Labor, the number of persons on their respective pay rolls directly connected with the project, the aggregate amounts of such pay rolls, and the man-hours work, wage scales paid to the various classes of labor, and the total expenditures for materials. Two copies of each of such monthly reports are to be furnished to

the Government engineer, and one copy of each to the United States Department of Labor.

The contractor under any construction contract shall also furnish to said Joint Highway District No. 13 of the State of California, to the Government Engineer, and to the United States Department of Labor the names and addresses of all subcontractors on the work at the earliest date practicable.

(b) Copies, in triplicate, of all pay rolls for work performed under this contract, whether done by the contractor or under a subcontract or otherwise, prepared on approved forms and certified under oath by the contractor or his authorized representative, shall be filed with the District Engineer, within five (5) days after the close of each calendar month, showing the name of each employee, the State and county of his bona fide residence, the agency from which his name was obtained, whether or not an ex-service man with dependents, the class of work performed, the hours worked each day, the total hours for each calendar week, the total hours for the month, the wage rate paid, the total amount earned, deductions for board and lodging, if any, and the net amount paid.

The pay rolls shall be divided into three (3) sections under which shall be appropriately grouped:

(1) Executive, administrative and supervisory employees.

(2) Skilled labor.

(3) Unskilled labor.

Each of these classifications shall be grouped separately and the totals for each group shown under the following headings: hours per week, hours for the month, amount earned, deductions and net amount paid.

12. Signs.—Signs bearing the legend Public Works Project No. 2231 shall be erected in appropriate places at the site of the project.

13. All reasonable rules and regulations which the Public Works Administration may prescribe toward the effectuation of the matters covered by paragraphs 1 to 12, inclusive, shall be observed in the performance of the work.

14. Subcontractors.—(a) Appropriate provisions shall be inserted in all subcontracts relating to this work to insure the fulfillment of all provisions of this contract affecting such subcontractors, particularly paragraphs 1 to 13, inclusive.

(b) No bid shall be received from any subcontractor who has not signed U. S. Government Form No. P. W. A. 61, revised (March, 1934).

15. Termination for breach.—In the event that any of the provisions of subdivisions 1 to 14 inclusive, of this paragraph 20 of this contract, are violated by the contractor under the construction contract or by any subcontractor under any subcontract on the work, said Joint Highway District No. 13 of the State of California, may, subject to the approval of the Government Engineer, and upon request of the Administrator, shall terminate the contract by serving written notice upon the contractor of its intention to terminate such contract, and, un-

less within 10 days after the serving of such notice such violation shall cease, the contract shall, upon the expiration of said 10 days, cease and terminate. In the event of any such termination said Joint Highway District No. 13 of the State of California may take over the work and prosecute the same to completion or otherwise for the account and at the expense of the contractor and/or such subcontractor, and the contractor and his sureties shall be liable to said Joint Highway District No. 13 of the State of California for any excess cost occasioned said Joint Highway District in the event of any such termination, and said Joint Highway District may take possession of and utilize in completing the work, such materials, appliances, and plant as may be on the site of the work, and necessary therefor. This clause shall not be construed to prevent the termination for other causes provided in the construction contract.

16. Definitions.—The term "Act" as used herein refers to the National Industrial Recovery Act. The term "Government Engineer" as used herein shall mean the State engineer (P. W. A.) or his duly authorized representative, or any person designated to perform his duties or functions under this agreement by the Administrator. The term "engineer inspector" as used herein refers to State engineer inspectors, resident and assistant resident engineer inspectors, and supervising engineers, appointed by the Administrator. The term "materials" as used herein includes, in addition to materials incorporated in the project used or to be used in the opera-

tion thereof, equipment and other materials used and/or consumed in the performance of the work.

21. The contractor shall comply with each approved code of fair competition to which he is subject, and if he is engaged in any trade or industry for which there is no approved code of fair competition, then as to such trade or industry with an agreement with the President under Section 4 (a) of the National Industrial Recovery Act (President's Reemployment Agreement), and the said Joint Highway District No. 13 shall have the right to cancel this contract for failure to comply with this provision and may have the work called for by this contract otherwise performed at the expense of the contractor, and the contractor shall not accept or purchase for the performance of this contract or enter into any subcontracts for any articles, materials, or supplies in whole or in part produced or furnished by any person who shall not have certified that he is complying with and will continue to comply with each code of fair competition which relates to such articles, materials, or supplies, and/or in case there is no approved code for the whole or any portion thereof then to that extent with an agreement with the President as aforesaid.

22. Any person falsely certifying as to compliance as aforesaid who submits any such proposal, bid, contract, or subcontract, or accepts any purchase order, may be punished as provided in section 10 (a) of the National Industrial Recovery Act, by a fine of not to exceed Five Hundred ($500.00) Dollars or imprisonment not to exceed

six months, or both, and in event of any such false certification by any such person, any contract, subcontract, or purchase order to which he is party secured by or in furtherance of any such proposal or bid may be canceled by the other party thereto, and the unfinished portion thereof completed at the expense of the person guilty of such false certification and his sureties, if any.

23. Whenever a dispute shall arise between any agency of the said Joint Highway District No. 13, and any bidder, contractor, supplier or other person as to compliance with any code of fair competition or with an agreement with the President as aforesaid in connection with any proposal, bid, contract, subcontract, or purchase order mentioned herein, the Administrator for Industrial Recovery, or such agency as he shall designate, shall decide such dispute, and, for the purposes of action under the President's Executive order, such decision shall be final and conclusive; but the determination of such agency of the said Joint Highway District No. 13 shall be effective for all purposes pending such decision.

24. It is understood and agreed by both parties hereto that the per diem wages listed in Exhibit "A", attached hereto, are based on the customary eight (8) hour working day, and that when less time is worked per day, the amount paid therefor shall be the hourly rate set forth in said Exhibit "A", multiplied by the number of hours worked.

25. In the event that any provision of this contract is in conflict with the final specifications for the work to be done hereunder, adopted March 30, 1933, and the amendments and supplements adopted on January 9, 1934, and on April 3, 1934, respectively, by the Board of Directors of said Joint Highway District No. 13 of the State of California, it is understood and agreed that the provisions of this contract shall govern, and shall supersede said specifications in every case where such conflict or conflicts exist.

In Witness Whereof, the said parties hereto have caused their respective corporate names to be signed and their corporate seals to be affixed by their respective Presidents and Secretaries, thereunto duly authorized, the day and year first above written.

Exhibit A

RESOLUTION ASCERTAINING AND DETERMINING GENERAL PREVAILING RATE OF PER DIEM WAGES TO BE PAID ON THE PROJECT OF JOINT HIGHWAY DISTRICT No. 13 OF THE STATE OF CALIFORNIA.

Whereas this Board of Directors is about to call for bids for the construction of the project of Joint Highway District No. 13 of the State of California, including construction of a highway, highway tunnel and approaches with appurtenant structures in the said District,

Now, Therefore, after an investigation of the general prevailing rate of per diem wages paid in the Counties of Alameda and Contra Costa, the locality in which the work is to be performed, for each craft or type of workman or mechanic needed to execute the contract for the project of the District, it is hereby

Resolved, that the following schedule of rates of per diem wages is hereby adopted, fixed, ascertained and established to be paid by the Contractor and subcontractors on said project for each craft or type of workman or mechanic employed to execute the contract, and that said schedule is a schedule of the general prevailing rate of per diem wages in said locality, to-wit:

Position	Per Diem Rate	Hourly Rate
Blacksmith	$ 8.80	$ 1.10
Carpenter	8.80	1.10
Cement gun operator	6.00	.75
Compression engineer	10.00	1.25
Concrete finisher, pavement	8.80	1.10
Concrete laborers	6.24	.78
Concrete mixer operator	10.00	1.25
Drill operator	6.00	.75
Electrical worker	8.80	1.10
Grader operator	6.00	.75
Labor, unskilled	4.80	.60
Machinist	8.80	1.10
Mechanic	8.80	1.10
Painter	8.80	1.10
Plasterer	11.00	1.375
Plumber	8.80	1.10
Portable hoist engineer	10.00	1.25
Powder man	7.00	.875
Power shovel operator	10.00	1.25
Roller operator	9.00	1.125
Sheet metal worker	9.44	1.18
Steam fitter	10.00	1.25
Steel worker, reinforcing	9.00	1.125
Steel worker, structural	11.00	1.375
Subgrade finisher operator	6.00	.75
Teamster	6.00	.75
Tractor driver, 50 h.p. and under	7.00	.875
Tractor driver, over 50 h.p.	9.00	1.125
Truck driver, 2 yds.	5.50	.6875
Truck driver, 3 yds.	6.00	.75
Truck driver, 4 yds.	6.50	.8125
Truck driver, 5 yds.	6.50	.8125
Truck driver, 6 yds.	6.50	.8125
Not Otherwise Covered		
Skilled	$ 8.80	$ 1.10
Unskilled	3.60	.45

For laborers, workmen and mechanics employed thirty hours a week, the general prevailing rate for work on Sundays and all other legal holidays is

hereby fixed as the rate for the same craft or type of workman on days other than Sunday and legal holidays; provided, however, as the project for which said bids are to be called has received a grant of funds under the provisions of The National Industrial Recovery Act, and that all proceedings for the construction of said project are taken subject to rules and regulations of the Public Works Administration which has heretofore promulgated "Bulletin No. 2," paragraph (c) of Art. A of Section B of which provides as follows: "(c) No work shall be permitted on Sundays or legal holidays except in cases of emergency"; and that said Joint Highway District has applied for a waiver of the provisions of said paragraph (c) which has not been acted upon at the time of the adoption of this schedule of prevailing wages by said Joint Highway District; in the event said waiver is not obtained and said paragraph (c) remains in effect as to work on said project, that the general prevailing rate for work on Sundays and all other legal holidays is hereby fixed as and shall be at the rate of twice the rate fixed herein for the same craft or type of workman on days other than Sunday and legal holidays.

All overtime work shall be at the rate of one and one-half times the regular hourly rate for each hour of overtime worked for each craft or type of workman employed as hereinabove set forth.

[Endorsed]: U. S. Dist. Ct. N. D. Cal. No. No. 20101-R. Plff's Ex. No. 16. Filed April 13, 1938. Walter B. Maling, Clerk. By J. A. Schaertzer, Deputy Clerk.

PLAINTIFF'S EXHIBIT No. 18

BOND FOR FAITHFUL PERFORMANCE

Know All Men by These Presents:

That we, Six Companies of California, a Nevada Corporation, herein referred to as "Contractor" as Principal, and Hartford Accident and Indemnity Company, a Connecticut Corporation, Fidelity and Deposit Company of Maryland, a Maryland Corporation, The Aetna Casualty and Surety Company, a Connecticut Corporation, Indemnity Insurance Company of North America, a Pennsylvania Corporation, American Surety Company of New York, a New York Corporation, Fireman's Fund Indemnity Company, a California Corporation, Maryland Casualty Company, a Maryland Corporation, United States Fidelity and Guaranty Company, a Maryland Corporation, The Fidelity and Casualty Company of New York, a New York Corporation, Glens Falls Indemnity Company, a New York Corporation, Standard Surety and Casualty Company of New York, a New York Corporation, Standard Accident Insurance Company, a Michigan Corporation, Pacific Indemnity Company, a California Corporation, Massachusetts Bonding and Insurance Company, a Massachusetts Corporation, Continental Casualty Company, an Indiana Corporation, and New Amsterdam Casualty Company, a New York Corporation, as Sureties, are held and firmly bound unto Joint Highway District No. 13 of the State of California, a public corporation of the State of Cali-

fornia, in the sum of One Million Eight Hundred Forty-two Thousand Dollars ($1,842,000.00), lawful money of the United States of America, for the payment whereof, well and truly to be made, we hereby bind ourselves, our heirs, administrators, successors and assigns, firmly by these presents, as follows:

The Principal and Hartford Accident and Indemnity Company, a Connecticut Corporation, as Surety, jointly and severally, in a sum equal to ten per centum (10%) of the total amount of each claim recoverable hereunder, but in no event shall the aggregate liability of Hartford Accident and Indemnity Company, a Connecticut Corporation, hereunder exceed the amount of One Hundred Eighty-four Thousand Two Hundred Dollars ($184,200.00);

The Principal and Fidelity and Deposit Company of Maryland, a Maryland Corporation, as Surety, jointly and severally, in a sum equal to ten per centum (10%) of the total amount of each claim recoverable hereunder, but in no event shall the aggregate liability of Fidelity and Deposit Company of Maryland, a Maryland Corporation, hereunder exceed the amount of One Hundred Eighty-four Thousand Two Hundred Dollars ($184,200.00);

The Principal and The Aetna Casualty and Surety Company, a Connecticut Corporation, as Surety, jointly and severally, in a sum equal to ten per centum (10%) of the total amount of each claim recoverable hereunder, but in no event shall

the aggregate liability of The Aetna Casualty and Surety Company, a Connecticut Corporation, hereunder exceed the amount of One Hundred Eighty-four Thousand Two Hundred Dollars ($184,200.00);

The Principal and Indemnity Insurance Company of North America, a Pennsylvania Corporation, as Surety, jointly and severally, in a sum equal to ten per centum (10%) of the total amount of each claim recoverable hereunder, but in no event shall the aggregate liability of Indemnity Insurance Company of North America, a Pennsylvania Corporation, hereunder exceed the amount of One Hundred Eighty-four Thousand Two Hundred Dollars ($184,200.00);

The Principal and American Surety Company of New York, a New York Corporation, as Surety, jointly and severally, in a sum equal to ten per centum (10%) of the total amount of each claim recoverable hereunder, but in no event shall the aggregate liability of American Surety Company, a New York Corporation, hereunder exceed the amount of One Hundred Eighty-four Thousand Two Hundred Dollars ($184,200.00);

The principal and Fireman's Fund Indemnity Company, a California Corporation, as Surety, jointly and severally, in a sum equal to seven per centum (7%) of the total amount of each claim recoverable hereunder, but in no event shall the aggregate liability of Fireman's Fund Indemnity Company, a California Corporation, hereunder exceed

the amount of One Hundred Twenty-eight Thousand Nine Hundred Forty Dollars ($128,940.00);

The Principal and Maryland Casualty Company, a Maryland Corporation, as Surety, jointly and severally, in a sum equal to six and one-half per centum (6½%) of the total amount of each claim recoverable hereunder, but in no event shall the aggregate liability of Maryland Casualty Company, a Maryland Corporation, hereunder exceed the amount of One Hundred Nineteen Thousand Seven Hundred Thirty Dollars ($119,730.00);

The Principal and United States Fidelity and Guaranty Company, a Maryland Corporation, as Surety, jointly and severally, in a sum equal to six and one-half per centum (6½%) of the total amount of each claim recoverable hereunder, but in no event shall the aggregate liability of United States Fidelity and Guaranty Company, a Maryland Corporation, hereunder exceed the amount of One Hundred Nineteen Thousand Seven Hundred Thirty Dollars ($119,730.00);

The Principal and The Fidelity and Casualty Company of New York, a New York Corporation, as Surety, jointly and severally, in a sum equal to five per centum (5%) of the total amount of each claim recoverable hereunder, but in no event shall the aggregate liability of Fidelity and Casualty Company of New York, a New York Corporation, hereunder exceed the amount of Ninety-two Thousand One Hundred Dollars ($92,100.00);

The Principal and Glens Falls Indemnity Company, a New York Corporation, as Surety, jointly and severally, in a sum equal to four and one-half per centum (4½%) of the total amount of each claim recoverable hereunder, but in no event shall the aggregate liability of Glens Falls Indemnity Company, a New York Corporation, hereunder exceed the amount of Eighty-two Thousand Eight Hundred Ninety Dollars ($82,890.00);

The Principal and Standard Surety and Casualty Company of New York, a New York Corporation, as Surety, jointly and severally, in a sum equal to four per centum (4%) of the total amount of each claim recoverable hereunder, but in no event shall the aggregate liability of Standard Surety and Casualty Company of New York, a New York Corporation, hereunder exceed the amount of Seventy-three Thousand Six Hundred Eighty Dollars ($73,680.00);

The Principal and Standard Accident Insurance Company, a Michigan Corporation, as Surety, jointly and severally, in a sum equal to four per centum (4%) of the total amount of each claim recoverable hereunder, but in no event shall the aggregate liability of Standard Accident Insurance Company, a Michigan Corporation, hereunder exceed the amount of Seventy-three Thousand Six Hundred Eighty Dollars ($73,680.00);

The Principal and Pacific Indemnity Company, a California Corporation, as Surety, jointly and severally, in a sum equal to four per centum (4%)

of the total amount of each claim recoverable hereunder, but in no event shall the aggregate liability of Pacific Indemnity Company, a California Corporation, hereunder exceed the amount of Seventy-three Thousand Six Hundred Eighty Dollars ($73,680.00);

The Principal and Massachusetts Bonding and Insurance Company, a Massachusetts Corporation, as Surety, jointly and severally, in a sum equal to four per centum (4%) of the total amount of each claim recoverable hereunder, but in no event shall the aggregate liability of Massachusetts Bonding and Insurance Company, a Massachusetts Corporation, hereunder exceed the amount of Seventy-three Thousand Six Hundred Eighty Dollars ($73,680.00);

The Principal and Continental Casualty Company, an Indiana Corporation, as Surety, jointly and severally, in a sum equal to two and one-half per centum (2½%) of the total amount of each claim recoverable hereunder, but in no event shall the aggregate liability of Continental Casualty Company, an Indiana Corporation, hereunder exceed the amount of Forty-six Thousand Fifty Dollars ($46,050.00);

The Principal and New Amsterdam Casualty Company, a New York Corporation, as Surety, jointly and severally, in a sum equal to two per centum (2%) of the total amount of each claim recoverable hereunder, but in no event shall the aggregate liability of New Amsterdam Casualty

Company, a New York Corporation, hereunder exceed the amount of Thirty-six Thousand Eight Hundred Forty Dollars ($36,840.00).

The condition of the foregoing obligation is such that:

Whereas, said Contractor has been awarded and is about to enter into the annexed contract with the said Joint Highway District No. 13 of the State of California for the construction of a highway, highway tunnel and appurtenances in accordance with the final plans and specifications therefor adopted by the Board of Directors of said Joint Highway District No. 13 on the 30th day of March, 1933, and the amendments and supplements thereto adopted by said Board on the 9th day of January, 1934, and on the 3d day of April, 1934, and is required by said Joint Highway District to give this bond in connection with the execution of said contract;

Now, Therefore, if the said Contractor shall well and truly do and perform all of the covenants and obligations of said contract on its part to be done and performed at the time and in the manner specified therein, then this obligation shall be null and void, otherwise it shall be and remain in full force and effect. It is expressly agreed that any suit or suits that may be brought to enforce the obligation hereof may be commenced and prosecuted jointly and severally against all or any of the persons and parties named herein.

Provided, that any alterations in the work to be done, or the material to be furnished which may be made pursuant to the terms of said contract shall not in any way release the Contractor or the sureties hereunder, nor shall any extensions of time granted under the provisions of said contract release either the Contractor or sureties, and notice of such alteration or extensions of the contract is hereby waived by the sureties.

Witness our hands this 12th day of June, 1934.

Geological Report

Berkeley, California
June 23, 1932

Mr. George A. Posey, District Engineer
Joint Highway District No. 13
454 Fifth Street, Oakland, California.

Dear Sir:

Proposed New Tunnel Road.

The following is a report on the geological conditions along the line of the proposed new low tunnel highway between Alameda and Contra Costa Counties, based on observations made on the ground surface along and in the vicinity of the proposed highway and tunnel line, with the aid of such clearing, cuts and artificial openings as were made up to June 18, 1932, supplemented by laboratory studies of some of the collected material. The proposed line is that indicated on the map entitled: Joint Highway District No. 13, Topography from Broadway to West Portal, Nov. 6, 1930, and corresponding profile dated March, 1931, and on the plan and profile of tunnel dated May, 1932, and in geological cross section dated July 7, 1930.

From the geological standpoint the proposed highway and tunnel appear to be quite feasible and the line chosen is probably as good a line as could have been selected to accomplish the desired results.

Naturally, the geological conditions vary along the route, different portions possessing local characteristics of rock type or structure that require special consideration or treatment by the engineer.

I shall describe and comment on these features in some detail in the order in which they would be encountered if one started from Broadway, Oakland, and followed the line of the proposed highway to the vicinity of the east portal of the tunnel. Locations of the conditions described will be indicated by reference to station numbers, corresponding to the stationing of the maps and profiles referred to above.

From Broadway to Temescal Creek Crossing.

At present there is a cliff-like cut in the bedrock along the southeast side of Broadway where the proposed new highway is to take off. From the junction of Brookside Avenue a basic igneous rock (greenstone) in the Franciscan formation extends southwestward along Broadway about 300 feet. It is largely weathered to a brown color. For about 150 feet from Brookside Avenue it is rather massive. Beyond this it is badly sheared and the shearing has involved and displaced small masses of shale. The rock here is weak and on steep slopes tends to slump. It has at times slumped down over the sidewalk and the detritus has been artificially removed. Farther along a small mass of chert is exposed which stands well, but picks down rather easily because of numerous poorly cemented closely spaced fractures. It is followed southwesterly by Franciscan sandstones and shales which also have suffered more or less shearing.

The various rock types and structures mentioned will all be encountered in the proposed cut for the

new road for several hundred feet from Broadway. In my opinion the material involved will make a satisfactory general foundation for the new road in the cut as planned. I believe that the only trouble that may be experienced would be the result of any steep exposed face in badly sheared rock. This would tend to slump, especially when wet. On the southeast side where a slope up from the road would be left by the cut, rock material might slump down onto the road. If steep slopes in badly sheared material were left below the road, as might happen on its northwest side, they might cause the edge of the pavement to be undermined and crumble away. As to whether the badly sheared parts of the bedrock would be exposed in such a way by the proposed cut as to make possible such minor troubles, can best be determined when the excavation is completed. Appropriate precautions can then be taken to prevent possible slumping. The distribution of rock types and shearing is too irregular to make it worthwhile trying to determine possible location of such weak zones before the actual cut is made.

Similar rocks are exposed in a quarry off of Brookside avenue, stations 15 to 17. The west wall of the quarry is of Franciscan chert with a practically vertical dip, and with strike along the quarry wall. It stands well on a steep slope. The rest of the quarry is mostly in Franciscan sandstones and shales, irregularly sheared, and showing here and there patches of greenstone, and chert. A small patch of chert occurs at the east end of the quarry

face curve (Sta. 17). Beyond the quarry, road cuts expose Franciscan sandstone and shale to about Station 18. Farther along the bedrock is covered, first by detritus (hill waste) of Franciscan rock types, and finally by alluvial wash down Rosewood Court gulch.

Near Stations 22+50 is a pit in badly sheared Franciscan sandstone and shale.

It is possible that Rosewood Court is a zone of faulting—a subordinate fracture zone related to the Hayward fault. This is suggested by the physiography, and by the fact that this feature is parallel to the Haywards fault zone and only about 900 feet distant from it. Proof of this might be difficult. It could possibly be determined by a pit or trench carried into bedrock through the alluvium of Rosewood Court.

The slope above Golden Gate Avenue (between Stations 23+50 and 26+00) in which a cut is proposed, exposes somewhat sheared Franciscan sandstone and shale with some spots of greenstone and narrow belts of sheared serpentine. This serpentine, as exposed, is not the common bouldery type of sheared serpentine; the shearing has produced a parallel shale-like structure. The rock types here, as near Broadway, are so irregularly distributed and sheared through one another that no prediction can be made as to the exact location of the separate types in the final cut. The same conditions may be encountered here as were outlined for the cut just off of Broadway. In addition it may be said that

particular attention should be given to the serpentine which has a tendency to cause the sliding over it of the associated rock material, especially when wet; and also to move itself.

From about Station 26 to Station 28, the proposed highway line traverses a grassy hillside field without rock exposures. It is undoubtedly underlain by rocks of the Franciscan formation which are probably similar to those found in the slopes above Golden Gate avenue (Sta. 23+50 to 26).

The steep hill slope between Stations 29 and 32 is apparently mostly in Franciscan sandstone, which, near the surface, is weathered brown, is moderately soft and easily broken. It is somewhat sheared. It stands at a rather steep slope, and will probably yield a good foundation in the cut. A pit near Station 29 and at the top of the slope, shows the nature of the weathered sandstone. Lower down the slope firmer sandstone is encountered, and the cut will probably expose firmer material than is exposed at the surface.

The fill from Station 32 to Station 35+30 will be built on a natural slope that is underlain chiefly if not wholly by Franciscan sandstone. Near Station 33+50 occurs an exposure of fairly tough hard sandstone. Beyond, it is apparently softer.

The cut from Station 35+30 to Station 43+23 will be chiefly or wholly in Franciscan sandstone. A little beyond Station 41 is a pit which exposes weathered brown sandstone. The actual cut will probably expose firmer rock. Insofar as the road is

located on cut ground it will have a stable and satisfactory rock foundation. In the approach to this cut and to the cut west of Station 31, the natural hill slope is steep, and there will naturally be a tendency for the fill to settle or move down with respect to the bedrock exposed in cut. This is a not unusual condition where an earth fill is placed against a fairly steep slope of solid rock, and yet it is sometimes overlooked in construction.

It looks as if there had been some sliding at the northwest end of the Station 39+41 hill, but no fresh evidence of such action was observed, and it does not look as though it would threaten the stability of the fill.

The rocks become firmer and stronger as one goes southeastward into the ridge that bounds Temescal Creek valley on the southwest, but where the road is to cross appears to be very satisfactory as a bedrock foundation.

Temescal Creek Crossing,
Station 43+23 to Station 53+10.

This part of the valley of Temescal Creek is well recognized as a fault line valley, eroded in the shear zone of the "Hayward" fault. It is evident that the Hayward fault has been in existence for a long period of time, and that during this period the earth's crust has been displaced along the fault many times. The total number of movements and the intervals between these movements cannot be determined even approximately on the basis of our

present knowledge, but the total horizontal displacement, the summation of the small movements that have taken place from time to time, is probably not less than a half a mile. Each of the individual movements of displacement probably gave rise to an earthquake. The last strong earthquake that has been referred to the Hayward fault occurred in 1868. Many small shocks recorded by seismographs, sometimes actually felt by human beings, but giving rise to no damage, have occurred from time to time since that date. The Hayward fault is what is known as an "active" or "live" fault and future movements can be reasonably expected to occur along it, although at present the time of the next strong movement cannot be predicted with any certainty.

If any strong displacement should occur along the Hayward fault in the valley of Temescal Creek, any structure extending across this valley would be subject to two kinds of disturbances: 1) Actual rupture and displacement of the ground along the fault line, and 2) shaking by the resultant earthquake.

1) Throughout the known history of the Hayward fault, the prevailing displacement has been such that the country to the west of the fault has moved in a northerly direction with respect to the country on the east side of the fault. The magnitude of the horizontal displacement at any one time of active movement is not known. It may be recalled that at the time of the strong earthquake in

1906, horizontal displacements along the San Andreas fault, which shows a similar type of movement to that of the Hayward fault, varied along the fault trace from 0 to a maximum of 21 feet.

Observations along the San Andreas fault give us suggestions as to how a movement on the Hayward fault would probably express itself at the surface of the earth. Firstly, although the San Andreas shear zone is sometimes very wide, the movement was not distributed throughout the shear zone, but generally broke cleanly along a definite line that cut the surface sharply as if a furrow had been plowed across a field. Judging from this the break will probably be a sharp one, and the position of the line of rupture within the shear zone—or even outside of it—cannot be predicted. In other words, in case of a movement along the Hayward fault the line of surface rupture, although it is likely to occur within the limits of Temescal valley, may break through any part of the valley cross section. Secondly, the ground to the west of the break will probably move bodily in a northerly direction with respect to the ground to the east of the break. As the observations are purely relative, the actual movement may be southerly on the east side, or both sides may actually move in opposite directions. The practical result is locally the same whatever the distribution of absolute displacement between the two sides may be. At the end of the movement a point on the west side of the break will be distant from an originally adjoining point on the east side

by a number of feet representing the total horizontal displacement—as, for example, in the 1906 movement along the San Andreas fault, the road across the valley of Tomales Bay, from Pt. Reyes Station going to Inverness, suffered a total displacement of 21 feet, the roadbed to the west of the break then lying 21 feet from corresponding parts of the roadbed east of the break and in a northerly direction.

No known human structure can prevent this movement of the earth's crust. The effect on a structure resting on the ground and crossing the line of fracture will depend on the nature of the structure. A strong, strongly held together, unit structure might be warped, rotated, or otherwise disturbed without fracture. A roadbed or masonry wall, will normally be fractured and carried by its foundation, and suffer the same type of displacement and to the same extent as the ground upon which it rests.

An earth-rock embankment, or earth-rock fill such as is intended for the new road, if built with reasonable stability, would probably suffer as little serious damage as any man-made structure. It would certainly suffer displacement corresponding to that of the ground, and any pavement would be broken or shattered along or near the line of displacement. But it should not collapse as a bridge might whose piers were displaced, and it could be repaired at a cost of only a small fraction of the original cost of the valley crossing.

It may be well to call attention to the fact that liability to damage from this cause is not peculiar to the route chosen. Any other route that might be selected, to connect Oakland or Berkeley through the hills with the country to the east would have to cross the Hayward fault.

For completeness sake it may be pointed out that in the geological growth of the Berkeley Hills, displacements with vertical components have been involved. Occasionally these have acted to displace the rocks along the Hayward fault zone although some stretches along that zone show no displacements. Whether these movements have taken place simultaneously with the movements of horizontal displacement along the fault is not known. In any case the actual vertical displacements of a fault-like nature along the Hayward fault zone are in their totality only a small fraction of the horizontal displacements—from 0 to possibly not over 20%. If in the course of a fault movement affecting the valley of Temescal Creek a vertical component is involved, it will probably be of such a nature that the ground west of the break will be depressed with respect to that east of the break (or that east will be elevated with respect to that west). If that should happen it would be necessary to reestablish a grade with regard to the road on the two sides of the break. I believe that it is not likely to be a very serious matter, if it occurs at all.

2) In regard to the shaking movements of an earthquake that may have its origin on the Hay-

ward fault, it may be pointed out that such movement would not be limited to the vicinity of the fault trace, but would extend out in all directions, affecting a surface area the magnitude of which would depend on the severity of the originating shock. At the surface of the earth the destructive effects might not be strongest along the trace of the fault, but at some distance, even miles, away. In planning the road and appurtenant structures, it should be taken for granted that any part or all of them may be subject to strong earthquake shock. In connection with the crossing of the valley of Temescal Creek, it is probable that a good earth-rock fill with stable side slopes, and well drained, would probably not be injured at all by even a severe earth-quake shock.

Temescal Dam

Temescal dam extends across the valley of Temescal Creek a short distance above the proposed new roadway. It is an old structure, probably originally built as a lower dam over 60 years ago, and later raised and broadened. When the first plans were made for the new tunnel road, it appeared that a satisfactory and economical crossing of the valley could be made by using the dam as base for the road fill. The East Bay Municipal Utility District which had recently acquired the dam from the East Bay Water Company was agreeable to the project but could find in the files no record of the mode of construction or history of the old dam, which is said to

have been originally built by the pioneer, Mr. Chabot. It was necessary therefore to put down a series of test holes to determine the composition and condition of the dam.

Altogether, 18 holes are put down, varying from 25½ to 63½ feet in depth. Samples of material were collected and studied in the laboratory and logs prepared for all the wells, in each case showing depths and nature of materials encountered, and in a number of cases the results of mechanical analyses of the samples. A contour map of the dam and its surroundings shows the location of the test holes. The map and test hole logs are attached to the present report as an appendix.

The borings show the dam to be made up largely of hydraulically filled material derived chiefly from the northeast side of the valley; a smaller amount from the southwest side. A series of dikes are recognizable, built up to form basins into which material was sluiced. At intervals in the test holes, clay layers are found that definitely represent the slow settling from the muddy water overlying the directly sluiced-in fills in the basins. These layers of clay interfere with the passage of water vertically within the dam; but when moist they produce roughly horizontal soft plastic layers in the fill.

The lower layers of fill are largely derived from serpentine country while the upper layers are chiefly from the rhyolitic talus and hill waste, so abundant on the upper slopes of the northeast side of the valley.

The rock foundation under the dam is chiefly a more or less sheared serpentine—except along the southwest valley edge where it is schist and sandstone.

Height of Dam. The borings show that the dam is higher than would be judged from surface appearance. None of the wells along the crest of the dam reached the bedrock or recognizable valley floor (depths 62, 50, and 63½ feet respectively). An approximate estimate, based on a conservative slope, carried from holes that did strike bottom, is 80 - 85 feet for height of the fill over the deepest part of the old valley under the crest of dam. The height of the crest above the lowest part of the downstream toe is about 105 feet.

Old Stream Course and the Spillway. The old stream trench was evidently near the southwest edge of the valley, and the filling of this trench, and apparently also the effort to stop percolation through the dam has caused the dam to be extended much farther downstream along the southwest side of the valley, giving an unsymmetrical form to the fill. The spillway was placed on the opposite side of the valley where the valley side slope is more gentle, and bedrock comparatively shallow.

Problems presented by conditions found. If the highway were to cross the dam as originally proposed, the following conditions would be met:

1. Approaching from the east side, a part of the road fill would be on the upstream (reservoir)

side of the dam. If it were thrown directly on the silt accumulation of the reservoir, the latter would probably move and cause the fill to flow or creep out into the reservoir. While no recent test has been made of the character and depth of the silt in the reservoir just above the dam, estimates of probable depth of the original floor indicate that in the deepest part underlying the proposed road fill, the silt is 40 - 50 feet deep. When wet this material might flow its own weight, and tend to fill any deep excavation.

2. The road fill would cross the dam diagonally and on the northeast end it would have been about 25 feet over the dam crest, crossing over to the downstream face at progressively lower elevations. Along the higher part of the dam, it would be unevenly loaded. It is doubtful whether this dam would stand such uneven loading without some movement of deformation. A series of holes put in the central and eastern part of the dam show water in the dam, its upper surface at elevation 389 - 391 under the dam crest, and 382 under the highest berm. This water does not extend uniformly to the base of the dam, but is commonly cut off by a clay layer, giving a zone of water through that part of the dam, 5 to 10 feet thick (at 415 reservoir level) resting on a clay layer base, which is plastic, especially in its upper part. Uneven loading might well cause movement along this wet plastic zone.

If the water were cut off and the clay allowed to become dry I believe it would be firm enough

to hold. The water layer referred to extends well along and through the dam. Expense, and time for cut off drainage and drying would be involved.

3. Farther west the roadway would run over the lower downstream part of the dam, crossing the lowest two berms overlying the old stream trench. This part of the dam was found to contain a considerable thickness of soft wet clay carrying a varying percentage of small rock fragments. The worst condition was shown in hole 8 on the lowest berm (elevation 364.5 feet). The surface was "swampy", water stood in the hole a few inches below the surface, and for 33 feet down from the surface was a body of soft wet clay carrying only 15 - 30% of small rock fragments and sand, and yielding 70 - 85% of clay and mud washings on mechanical analysis. A 50-foot-high road fill was planned to overlie this area. Such a load would probably cause the soft clay to squeeze out, and would give a slippery, soft, foundation for the embankment. The conditions shown in holes E and F on the next higher berm are only a little better. In hole F water was struck at 4½ feet and the material encountered was watersoaked all the way down (46 feet). There is a larger proportion of rock fragments than in hole 8. [87].

Near and just below the "swamp" area toward the southwest valley side, water seeps out and is in part carried away from the fill surface in pipes. It has the appearance of spring water, possibly

coming from the bedrock in the vicinity. With the idea of determining whether this water and the "swamp" water supply was entirely local and not from the reservoir, holes E, F, on the 370 foot berm, C at 382.7 elevation and G on the highest berm (399 feet) were put down. These holes showed that water passes through the whole dam continuously to the "swamp" area. The free water surface in the holes was found, with reservoir water surface at 415 - 420 feet elevation, to be as follows:

	Elevation, top of hole	Water Surface
Hole 7, crest of dam	434.8	391.0
G	399.0	380.0
C	382.7	375.7
E	369.2	368.2
F	370.2	365.7
8 (swampy area)	374.5	364.0

If a fill should be placed along the downstream slope of the dam, as originally proposed, it would be desirable to remove the soft clay and provide drainage for the water coming through the dam, and for any spring water that may reach the surface in the area involved. It is questionable whether it would be safe to remove 33 feet of soft clay unless the reservoir and dam were first freed from most of their water. It might start a movement or sloughing in that part of the dam that overlies the old stream trench.

Conclusion. Surface examination and borings have disclosed conditions that would require special engineering treatment if a high road embankment is to be placed diagonally across Temescal dam. Such treatment on the one hand would incur expense that would offset a considerable amount of straight fill required if the dam is not used, and, on the other hand, would involve risk of seriously damaging the dam structure during construction of the embankment. I therefore advised that the road be routed below and clear of the main body or of the lower berm area of the dam.

Furthermore, I am of the opinion that with a high water surface in the reservoir, and leaving the dam just as it is, if a strong movement should recur on the Hayward fault in such a way as to shear the dam and subject it to the accompanying earthquake shock, or possibly even without the direct shear if a severe earthquake shock the dam, there would be danger of its failure. I would advise, therefore, that you arrange if possible for the maintenance of a water level in the reservoir as low as feasible, and that if the road crosses the valley, below the dam, the highway fill be constructed on the theory that it may possibly be subject to the effects of failure of the dam.

The Railroad Crossing.

On the northeast side of the valley of Temescal Creek the Sacramento Northern Railroad runs parallel to the valley and must be crossed by the new

road. The railroad grade is here in an open cut that lies between stations 50 and 52 and is about 23 feet deep along the center line of the proposed road. Sheared serpentine outcrops on the west side of the cut near the center line of the proposed road grade. To the southeast the cut is in rhyolitic detritus. This rhyolitic material occupies the slope up to and beyond the old tunnel road. Where it is in place, it shows general shearing. But most of the material of the lower slope is slide, talus, and wash from above. About 100 yards northwest of the crossing of the Pacific Gas and Electric Company's road over the railroad, serpentine comes in on the east side of the cut rising to the northwest until it extends upward about 35 feet above the track. It continues along the cut to its northwest end. On the hill slope above the cut a sheared greenstone overlies the serpentine behind a concrete wall, and is overlain in turn by the rhyolitic material, the contact between the latter two dropping down to the southeast, so that only rhyolite is found in the southeast portion of the cut. Several times when examined, water was observed seeping into the cut apparently from both sides, but chiefly from the Northeast side, southeast of the end of the concrete wall. Again on a small flat north of Station 51 water seepage was observed. The railroad engineers must have had some difficulty with sliding or slumping in the cut, and protected it by a concrete wall, by continuous drainage ditches on both

sides of the cut, and a drain to a sewer with a perforated metal plate at surface to take off the water which at times must be much more abundant than when I observed it.

Any plan to make this crossing in the form of a bridge or viaduct supported by piers or columns, would have to be carried out with great care and special precautions in construction and in draining, because of uncertain stability of the ground and the likelihood that the sheared serpentine would not withstand locally applied high stresses. One plan suggested, that of placing the railroad within an artificially constructed concrete "tunnel", on which the highway fill will be placed, the tunnel to be so constructed that the stress will be distributed throughout a monolithic floor, and not locally concentrated, appears to me to be most suitable to the ground conditions. Not only would the problem of satisfactory footings be solved, but the fill would tend strongly to stabilize the sheared and detrital material on the uphill side of the present cut. In any case, I believe it would be well to take appropriate measures to drain off the water that now soaks and softens parts of the ground east of the track.

Toward the creek from the lower end of the railroad cut are evidences of an old landslide. A number of large trees are growing on the slide material, and no noticeable action appears to have taken place since the trees were planted. This action may possibly have taken place at the time of

the 1868 earthquake, 62 years ago, and still show the present tree growth. It may of course have been still earlier. Evidence of similar action on a small scale is found east of the railroad near the road crossing. If a heavy earthquake follows a wet season during which the ground is well soaked it is likely to start slides at a number of localities, as was done by the earthquake of 1906. It is possible that in the future a heavy earthquake under like circumstances might cause slumping or sliding in this vicinity, and also further along up to Station 60, especially if steep-sided cuts are made in the rhyolitic talus and hill waste. Such an event is to be considered as a rare occurrence as it depends on the concurrence of two unrelated factors one of which recurs every few years and the other at much longer intervals. It might result in the slumping, sliding or rolling from the upper slopes, of earth and rock detritus onto the road. The chances are very slight that the roadway itself would be carried away. It may be noted here that along the Contra Costa County extension of the old tunnel road, such occurrences are not infrequent and take place after practically every wet winter without requiring the aid of any earth shock. While such action is possible along this part of the road, it may be expected to be a very rare event.

From Temescal Creek Crossing
to Tunnel Portal.

Between Stations 53+20 and 59+90 a cut is planned. The material along this stretch is rhyo-

litic hill waste and detritus. The excavation is to remove up to forty feet or more of material and may reach rhyolite in place. The bottom of the cut will probably be entirely satisfactory for roadway foundation. The hillside slope of the cut will encroach on the old tunnel road which will have to be set back by means of a lateral cut into the hill, if it is to be retained as a road. If fairly firm rock is not uncovered in the hillside slope of the cut for the new road, this slope may be subject to slumping or sliding after wet seasons.

After a short fill between Stations 59+90 and 60+40 the proposed grade crosses a spur in a cut between Stations 60+40 and 62+50. This spur shows outcrops of rather massive rhyolite and some soil. The rhyolite is somewhat sheared with a certain amount of clay gouge in the fractures. The cut will propably expose rock over much of its course, and should be satisfactory for road foundation.

Between Stations 62+50 and 65+85 the proposed road crosses Temescal Creek on a fill. While on the upstream part of the right bank there is a considerable amount of soil and hill wash, the downstream part exposes rather massive though somewhat sheared rhyolite. Throughout, underlying in part hill wash and a thin covering of stream detritus along the creek-way, in part exposed at the surface, is rather firm rhyolite. The foundation for this fill is entirely satisfactory, probably the best along the whole road.

Between Stations 65+85 and 74+95 is a long cut. The first 70 to 100 feet is in rhyolite as just described and then passes into Chico shales and sandstones. The contact is faulted and shows shearing, but there is no indication that this is an active fault or liable to any further displacements.

The surface depression roughly between Stations 67 and Station 69 is due to general erosion in the Chico shales. These shales by their weathering yield a clayey surface which becomes soft and slick when wet. It is probable that the cut will remove most if not all of such material from the surface except along the deepest part of the depression. This deepest part of the depression naturally carries the bulk of the drainage from the higher slopes. Not much water is involved but in the past it has greatly softened the ground, and given rise to a spring and swampy spots. Care should be taken to handle the water and prevent a slick sliding-surface developing under the fill. The waste from this cut if used for fill on the creekward slope, should be placed where it will cause no trouble from its propensity to soften when water-soaked.

Beyond approximately Station 69 the formation carries considerable sandstone with only subordinate shale, to about Station 70, then more shale to about Station 71, then more sandstone again. This sandstone is light brownish to grayish when fresh, and while usually not a hard rock, should on the deep cut make a good foundation and on moderate slopes

hold up well. There is some shearing in the rock. Most of the better developed fractures and shear planes dip back obliquely into the hill and would cause no practical trouble. Between Stations 74+75 and 76+10 the road grade is to be partly on fill and partly in cut. The formation between Stations 74+75 and 75+55 is chiefly shale, beyond this, to Station 77 is a mixture of sandstone and shale, more or less broken up. With a considerable proportion of sandstone fragments and blocks in association with the shale, the clayey products of the shale weathering will act as a binder and allow satisfactory consolidation of the fill, and will cause no trouble if the clay is not too abundant and, then, not unless it becomes water-soaked. Insofar as the hill slope is steep, any part of the grade which in the same cross section is partly on cut and partly on fill may suffer from a settling or sagging of the fill with respect to the rock in the cut. Where the fill is chiefly sandstone or even sandy detritus from the sandstone, if its base is well founded, such action will not take place. Shale or clayey fill ought not to be based on the steep slope.

A test cut above Station 76+10 shows more shale than sandstone. If this is the prevailing condition in the slope of the road when made, it may be desirable to reduce the slope to a lower angle.

Between Stations 76+10 and 79+70 the roadway is to be placed on a fill across a branch of Temescal Creek. It lies between two spurs of dominantly sandstone formation. The only special point to

which attention may be called is that along the tributary streamway and for some distance up the right bank on the hillside to about Station 78+80 there is a considerable amount of clayey material. Fortunately it is on a rather flat slope, and does not appear to be so located as to be subject to water soaking if covered by a fill.

Between Stations 79+70 and 82+40 the proposed road is again in a cut, the rock is chiefly a moderately firm sandstone with subordinate shale. Conditions in general are satisfactory. Beyond Station 81+50 the road will be partly in cut and partly on fill and the same statement applies as was made for the stretch between Stations 74+75 and 76+10.

A reef of stronger sandstone crosses the creek between Stations 83+50 and 85+10. Although it has suffered shearing, it is excellent foundation for cut or fill.

Between Stations 82+40 and 87+50 the proposed road again crosses Temescal Creek on a fill. Conditions appear to be entirely satisfactory.

The cut from Station 87+50 to Station 89 exposes shale and sandstone badly broken up. It stands well on a steep slope when dry. If strongly water soaked, as after a heavy winter, it would probably show some slumping. The cut is not high, and the effect on the road would not be serious. The present fill taken directly from the cut, shows some settling and development of cracks. It is probable that the clay shale when originally excavated was more or

less wet from the winter rains and shows the result of drying and settling. If thoroughly settled and rolled and protected from water-soaking it should stand satisfactorily.

Between Stations 89+00 and 90+50 a fill is placed across a small natural drainage way. The fill about 30 feet high will probably be made up chiefly of a mixture of sandstone and shale detritus with associated clayey material. Reasonable protection from water soaking will render it entirely satisfactory. The underlying rock is shale.

Between Stations 90+50 and 93+50 is a cut in rather badly broken sandstone and shale. Sandstone is dominant in the central part of the cut, with shale dominant towards the ends. Some fresh, hard, gray rock is found in base of cut. This cut has a higher side slope than the one between Stations 87+50 and 89, but will stand better, because of the sandstone in the higher part of the cut slope.

A fill over a small tributary lies between Stations 93+50 and 95+50. The statement made for fill between Stations 89+00 and 90+50 applies to this fill.

In the cut between Stations 95+50 and 96+75, the central portion is occupied by a hard sandstone reef. Softer sandstone and shale is found towards both ends of the cut. The high slope of cut is satisfactory and stable, and the material excavated makes a firm and stable fill.

Upstream from this cut, sandstone is exposed about Station 97+50 to 98+00, but beyond this the

bedrock appears to be dominantly shale. It is poorly exposed.

A long fill is proposed from Station 96+75 to Station 106+50. It practically occupies the bottom of the creek valley. The grade of the original floor is not high, and the side slopes are moderate. Rock is only occasionally and poorly exposed, and is apparently chiefly Chico shale with subordinate thin sandstone layers. There is a general development of clay especially in the soil. Between Stations 98. and 100. a tributary comes in from the north, and between Stations 103. and 105. is a low sloped country which will normally feed water into the clay and fill in wet seasons. The lowness of this part of the fill and its stable position in the valley bottom, make such conditions of minor importance along the stretch. However reasonable drainage should be provided for.

Proposed Highway Tunnel
West Portal

The material at the portal as indicated in profile is largely stream wash, hill wash, and creep, —soft, weak and pervious to water. In the actual construction much of this will probably be removed entirely by open cut, any that remains will require positive support as it cannot be expected to maintain itself unsupported for any length of time.

The hill slope from the indicated portal up to near the crossing of the present "tunnel road", carries a considerable covering of hill wash and

creep material, largely consisting of a fairly loose sandy soil. Its depth cannot be accurately estimated. At about 950′ elevation it is about 15 feet thick and above this towards the present tunnel road it varies from about 10 to 3 feet in thickness. It erodes out very easily under the action of running water and the road culvert has had its outlet position changed at least twice, apparently due to the deep trenches the water has cut.

Near Station 113, from altitude 860 - 870 is a bench that appears to be a stream terrace the back part of which carries a thick coating of wash and creep material from the hillside above. It all lies above the level of the tunnel roof but would have a tendency to carry water for awhile after rains and feed it down into the tunnel.

Monterey (Sobrante?) Sandstone.

The first bedrock formation encountered is of sandstone and sandy shale, probably of the Monterey Group (Sobrante Sandstone?). The sandstones are light gray when fresh, light ochreous colored when weathered. When fresh they are firm, sometimes hard and resistant, but most of the material slacks on exposure to the atmosphere, oxfoliates and crumbles down. On weathering it assumes a pale yellowish or ochreous color and mostly disintegrates into sand. The sandy shales when fresh are brownish and firm but also slack, exfoliate, and disintegrate on exposure at the surface of the ground. A test tunnel recently run in about 124 feet in the

west portal region exposes the fresh sandstones and sandy shales in the face. If this fresh and relatively unbroken condition continues, the formation will prove satisfactory insofar as sufficient height of such material lies above the tunnel roof to give satisfactory support. Where it is but a thin mass between the tunnel roof and the overlying disintegration products it is desirable to plan for its artificial support or removal even if it stands well on first opening.

Even in the tunnel these rocks will be subject to gradual slackening, although much more slowly than when exposed at the surface of the ground. This should cause but slight difficulty during construction, and when the formation is protected by the finished tunnel lining this action will no longer be effective.

As at the surface of the ground, only the weathering products are to be observed, before actually driving the tunnel through, the condition of this formation along the tunnel line, and depth to the top of the fresh firm rock, can be determined only by test holes or borings. The condition shown in the face of the tunnel are promising of satisfactory conditions beyond.

On the surface the sandstone ends about at the present "tunnel road" which probably means that along the proposed tunnel line it would end about Station 118 or 118+50, 175 feet - 180 feet underground.

For statement of oil and gas possibilities see under Claremont Cherts.

Claremont Cherts.

After leaving the sandstones the prevailing formation for about 1200 - 1300 feet, is the Claremont Chert (called Claremont Shales in the San Francisco Folio of the U. S. Geological Survey). This formation consists chiefly of a series of alternations of layers of chert from 2 –6 inches or more thick, and somewhat thinner layers of siliceous shale. Occasionally a layer of clay shale, sandstone, siliceous ferruginous limestone, or volcanic ash is encountered.

Water. The strata of this formation intersect the ground surface at steeply inclined angles, and they are cut by many small faults, which in many cases also intersect the surface. The cherts are quite brittle, and any fractures or crush zones produced in them by earth movements tend to remain open and allow free movement of water. The combination of these characters generally results in water flowage through many lines in the formation. Previously stored water may be trapped by the tunnel driving. The Claremont tunnel penetrated this formation at a greater depth, and therefore under conditions likely to develop more water than the proposed tunnel. It also encountered it where affected by marked faulting. Nearly 700 gallons a minute were yielded by the cherts when first penetrated,

but this yield has since dropped to less than 50 gallons a minute.

The old inter-county highway tunnel lies entirely in the chert formation, but at a still higher level than the proposed tunnel. I do not know whether it developed much water during construction. It must have yielded some but probably not very much. At present, after rains, there is a certain amount of drip and seepage into the tunnel, and a similar renewal of water flow after rains would undoubtedly take place in the cherts penetrated by the proposed tunnel, even after all storage water had been drained off.

Fortunately none of the rock types found in the Monterey chert formation as developed in this area suffers from contact with water. They all stand as well wet as dry.

Oil and gas. The cherts and most of the shales of the Monterey formation are bituminous, and on being heated to a high temperature yield oil and gas. This property, however, is not likely to cause any trouble in the course of tunnel driving. But in the course of the geological history of these rocks, some oil and gas has been developed and may be encountered in tunneling, where formation is moderately dry.

In the Claremont tunnel, presumably largely due to the very free flow of water through the cherts, but little oil and gas was encountered, and no trouble was experienced from this source. It may be

added that on account of gas troubles in the Chico formation, the tunnel was worked with strict rules about open lights, matches, and smoking, and this may have had something to do with the lack of gas trouble in the cherts. Some of the oil and gas which undoubtedly originated in the Monterey chert formation, was found in the Orinda formation at and not very far from the contact with the cherts. The oil and gas had apparently penetrated the Orinda formation along small faults and fissures. They caused considerable trouble in the eastern part of the Claremont tunnel, where at one time a heavy blast in the face set fire to the oil and gas which in turn ignited the timbers, entailing much delay and expense.

In the San Pablo tunnel, where the body of cherts is more closed in by overlying rocks than in the proposed tunnel, a serious explosion occurred while they were driving through the cherts.

It is possible that some oil or gas or both developed from the cherts, may have found its way into the Monterey (?) sandstones, and it would therefore be a measure of safety to drive the tunnel with suitable precautions, especially as the cherts are approached within a few hundred feet. If light oil is struck in any part of the tunnel it should not be allowed to collect in pools or depressions or stand in drainage ditches as it may gradually develop gas and become liable to ignition or even explosion, setting fire to timbers or causing worse damage. It is impossible to predict the exact location or amount

of such material that may be encountered. It may be little or none, or it may be in troublesome amounts. It should be watched for and given immediate attention if encountered.

Structural Characters. In general the chert belt is rather regular in its structure, the strata dipping high (56° - 80° at the surface) to the southwest.

The southwest 100 feet or more of the chert is the most irregular part of the belt intersected by the proposed tunnel line (about 118+50 to 119+50). It is cut through by a fault of considerable magnitude which is probably a continuation of the Wildcat fault of the San Francisco folio. This fault has caused more or less shearing, and displacement along subsidiary fractures with rotation of minor blocks and crushing in certain zones. To the northeast of Station 120+00, the structure appears to be remarkably regular to the northeast limit of the chert belt, although there are present some minor faults and crushed zones.

The fault zone will be occupied by broken and possibly crushed chert. In the Claremont tunnel, the chief yield of water from the cherts came from this fault zone.

In driving through the cherts, the combination of crushed zones and water often presents difficulties. The crushed rock (with or without water) may flow out into the tunnel almost like quicksand, or, if it holds together better, it may develop considerable pressure, until the water pressure is relieved by free flow into the tunnel. In the Clare-

mont tunnel the careful driving forward of spiling was necessary in the more broken and the crushed portions of the chert. In certain cases where a broken or crushed mass of rock lies within intersecting fault planes, and thereby loses its bond to surrounding rock, it may slump down into the open working, leaving a chamber in the wall or roof. If this is experienced at all in the proposed tunnel it will probably be in the southwestern fault zone mentioned above. If such unsupported blocks or masses are met, it would probably be best to let them down or remove them, before placing the concrete of the completed structure.

Based on experience gained from other tunnels in the cherts, and judging from long exposed steep quarry faces in the same formation, it may be expected that after driving, and after the material in the immediate vicinity of the tunnel has come to equilibrium, the rock will stand well and need no support. The main belt of cherts beyond the fault zone has a particularly favorable structure from this standpoint, and is the strongest and most stable material to be penetrated by the tunnel. Even the part in the fault zone is likely to stand well after the driving through it is completed. This was the experience in the Claremont tunnel.

The Orinda Formation.

From about Station 130 (as judged by surface dip, but it may be farther along in the tunnel as the dip may steepen underground), to the east portal

of the proposed tunnel, the bore will be entirely in the Orinda formation of Pliocene age. This formation consists of a series of alternations of beds of consolidated gravel, clayey sandstone, and sandy clays, which were laid down as fresh water deposits. The beds dip at high angles (55° - 60°) to the southwest. Tunnel driving is generally rapid in the sandstones and clays, somewhat slower in the gravels, which are naturally harder on drill steel. The formation usually breaks rather blocky and often develops a certain amount of overbreak.

Water and its Effects. Water is usually in very slight amount in the Orinda formation, coming in along certain gravels and coarse sands, or seeping along minor faults or shear zones. Most of the formation is likely to be dry. In the tunnels already driven through it, the greater part of the clayey sandstones and clays were dry and dusty.

While these sandstones and clays are naturally mostly dry, they are generally affected by contact with water. In fact they are sensitive to both drying and wetting, and a chunk removed from underground and exposed above ground usually cracks and slacks in the sun, and breaks down into a soft clay or mud in the rain. While the beds are firm, and when dry stand well underground, they carry but little natural cementing material, except in occasional layers. These cemented layers remain firm even on exposure to sun or water.

Where not badly sheared this formation is likely to stand well provided it is protected from water

action and air slacking. In the Lafayette and Claremont Tunnels where water (a comparatively small amount) came down through sheared clays or clayey sands, a locally weak zone was produced that made weight on the timbers, or slowly pushed them in laterally. Such zones required special support. If such zones occur along the proposed tunnel line they are likely to be narrow, and not very serious.

In the flood that occurred in the east portal region of the Claremont tunnel (flood water coming in from San Pablo creek), the water filled the tunnel and stood against walls and roof as well as floor. Portions of the roof slumped down, causing considerable chambers that ran 20 or 30 feet above the tunnel roof line. A number of timbers slipped in laterally, and in places timber sets collapsed before the water was all pumped out. I mention this to illustrate the effect of water lying against an exposed surface of the formation.

Along the proposed tunnel line conditions are very good from this standpoint, as no important source of underground water exists upgrade from the Orinda beds. It should be easy to prevent the water from the cherts working up into the Orinda region. During construction and later, the tunnel bore through the Orinda beds should be protected from possible influx of water from the surface drainage near the junction of the Tunnel Road and the Fish Ranch Road (called on map, Claremont Avenue Extension).

As naturally exposed at the ground surface, the Orinda formation slacks down into soil and gives very few rock exposures. It is also subject to landsliding. Such a slide has taken place just below the chert contact and about 100 feet north of Station 134. Its movement has been northward away from the tunnel line. Another lies 50 - 100 feet south of Station 136 and has moved eastward. These are somewhat off the tunnel line, are superficial and have affected the ground for a depth of but 15 - 30 feet where the tunnel lies 200 or more feet below the surface. Landsliding in this formation does not take place when it is dry and normally occurs following a rainy season, especially one of above the average precipitation. As the slope of the ground is fairly steep near the east portal, and as it may be steepened and otherwise disturbed during tunnel operations, the possibility of the sliding or slumping of this formation in the portal region should be kept in mind and guarded against.

Support. I believe that in general this formation will stand well if reasonable care is taken in handling it, except near the east portal where the overburden is comparatively slight, and the surface influence may have weakened or may in the future weaken the material sufficiently to require artificial support.

Oil and Gas. As noted above, under the Monterey Cherts, it is possible that some showings of oil and gas derived from the cherts may be encountered in driving through the Orinda formation.

Their occurrence in this formation is so irregular that their presence cannot be definitely predicted, but it would be well in driving the tunnel to watch for them and, in case their presence is noted, and they can be easily recognized in this formation, use care in blasting and have no open lights or flames. See further the statement under Monterey Cherts.

Tunnel Earthquake Relations.

As far as we have any definite evidence concerning the faults that cut the proposed tunnel line, their movements were connected with a period of geological activity that is past. There is no field evidence, or evidence from history or from our seismographs that any movements have taken place along these faults in recent times. While the evidence is wholly negative, I believe that it is reasonably safe to assume that no fault will by its movement cut or directly deform any structure that may be placed in the belt under consideration. That future movements will take place farther west near the base of the hills is probable, and it is also likely that the tunnel formations will be shaken by future earthquakes. The rocks should, however, stand satisfactorily even in the face of a severe shaking up by an earthquake, any weak near-surface stretches in the region of the portals possibly excepted.

Tunnel in General.

In a general way the rocks and rock structures that would be encountered in the proposed tunnel

are favorable from the engineering standpoint. The strata mostly dip at high angles and are intersected by the tunnel at a high angle to their trend. Such a condition restricts the widths of belts that may show local weakness or much water, and presents the strongest arrangement of the type of strata involved, and the easiest to deal with in tunneling.

Throughout the main belt of cherts, the rocks may be expected to be entirely self-supporting indefinitely; in the fault belt of cherts and in the Orindan, with proper care in driving and handling, the rocks should stand well and be self-supporting except possibly along certain shear zones which may require local reenforcement to withstand local pressure (not general weight). These statements do not refer to any measures that may appropriately be taken to prevent the detachment or falling of fragments or blocks from the surfaces exposed by the tunnel, but to general support of the mass of rock in the sides and roof of the tunnel.

Near the portals the rocks will probably be found weak and will require positive support to prevent movement or caving.

The question has been raised as to the relative desirability of a single larger tunnel or two smaller ones. The relative advantages in operation of the finished tunnel or tunnels are outside the scope of this report. The geological aspect is related to construction and to the maintenance of the integrity of the finished structure. I do not know of any geological considerations that would indicate that the

smaller tunnels are feasible and a larger one not. It is certain that in cases where support is necessary or resistance to any possible earth pressure must be provided, the forces or stresses involved will be much greater with a larger tunnel and the problem of handling such conditions to that extent more serious. I have at present no reason to say that the larger tunnel would be impossible or that it would constitute a risk that should not be taken.

From the East Portal of Tunnel
to Station 156+50.

From the east portal of the proposed tunnel to the end of the surveyed line Station 156+50, the formations involved are the Orinda, as described in the section on the tunnel, with comparatively thin layers of alluvium along and near the creek lines, and soil and hill waste on the slopes. The plan for the highway is shown on a blueprint of Joint Highway District No. 13 entitled Right of Way thru Apartment Estates Club of America Incorporated Property, and dated Sept. 1931.

From Station 140+50 to about Station 147 the roadway will be sunk into the ground, in part covered over (Station 140+50 and Station 142+19), in part open above (Sta. 142+19 to Sta. 147). The upper part of the cut will be in hill waste, soil and alluvium, the lower, at least along some of the distance, in the Orinda formation. No special problem arises as the result of the geological conditions. Any covering will have to be supported, and the side walls will have to receive such thrust as is occa-

sioned by the seasonal wetting of the clayey ground. Only comparatively small stresses are involved.

From Station 147 to Station 156+50 the road is to be largely on fill with short stretches of cut on right or left. If the fill material is taken from the tunnel it will contain a considerable amount of clay in its make-up, becoming quite soft when water-soaked. As the fill will be in the bottom of the valley it cannot be subject to any important sliding, and as its side slopes are at a maximum only 10 or 12 feet high no serious slumping is to be expected.

The cuts made into the hillside affect but a small distance along the road: The Claremont Avenue Extension southeast lane between Stations 144+00 and 148+50, and the main road from Stations 154+00 to Stations 156+50. Insofar as these slopes may be in clay, they may slump onto the road after a wet winter, but they are not high and the effects will probably not be serious. Between Stations 149+50 and 154+00 the old tunnel road grade protects the new road from any slumping from the hillside on the east side. The only place where some recent slide movement was noted is between Stations 149+50 and 151+50 along this east side stretch.

Respectfully submitted,

(Signed) GEORGE D. LOUDERBACK,
Consulting Geologist.

PLAINTIFF'S EXHIBIT NO. 92

INDUSTRIAL ACCIDENT COMMISSION

State Building
San Francisco
April 16, 1936

Six Companies of California,
1522 Latham Square Bldg.,
Oakland, California

Gentlemen:

You are hereby advised that the order of this Commission covering the Broadway Low Level Tunnels, dated February 29, 1936, is hereby rescinded, if the following conditions are complied with:

1. Driving may be continued in the upgrade tunnel beyond the junction of the wall plate drifts to the East portal and driving may be resumed in the downgrade tunnel beyond the caved-in portion to the East portal, if a method is followed as presented by your drawing No. 119, dated April 10, 1936, which consists in general of installing 8 x 10 timber spreaders in each timber set and extending across the tunnel approximately 19 and 27 feet respectively above the finished floor of the tunnel; further by continuing to use excavation equipment which may be operated beneath the lower spreader without interfering with it.

The top spreader is to be installed immediately after the completion of the segment set. The lower spreader is to be installed immediately after the core is excavated sufficiently to allow this spreader to be installed. Two longitudinal timbers, 2 x 12", are to be spiked to the top of each lower spreader to prevent bowing.

Two sets of hangers, two to each set, are to be provided for both the bottom and top spreaders all as per detailed drawing No. 119.

2. A wall plate system for driving the tunnel will be permitted provided 12 x 12 plumb posts are installed under each segment set, tightly wedged in place. Batter posts may be used provided in plumb posts are installed immediately after excavation is done for such posts. The batter shall not exceed 6 to 15 from the vertical.

Dowels shall be installed in each A segment and wall plate. (The dowel system will be accepted in lieu of placing the spreader at the wall plate joint.)

The plates shall be blocked behind each segment set and shall set on a firm and even bearing.

Provision must be made against undermining the wall plates by the Bagley system of excavation, and also against overshooting the side walls directly under the wall plates.

3. In addition to the Fire Bosses keeping the record of overbreaks as outlined under the Commission's order of March 16, 1936, the Fire Bosses shall check the segment sets daily to determine if the

wall plates have settled, thereby loosening the wedging and packing of the segments.

The contractor shall also make a daily check of the segment sets to determine if the wedging and packing is tight.

If the segments are found to have become loose rewedging shall be done.

4. The core of the tunnel section shall continue to be sloped sufficiently to provide safety against caving ground to the workmen drilling lifters or similar holes.

Very truly yours,

(Signed) T. A. REARDON
Commissioner

(Signed) FRANK J. BURKE
Deputy Commissioner.

DEFENDANT'S EXHIBIT D

PRELIMINARY REPORT ON THE GEOLOGY OF THE CLAREMONT TUNNEL

Introduction

The following report has been designed with a view towards forecasting in so far as possible the nature of the rocks and rock conditions which will be encountered in driving the Claremont Tunnel. Scientific details are largely omitted except where they have a direct bearing on the engineering problems involved. Special emphasis is placed on the nature, hardness, and "standing ability" of the rocks which will be encountered; on the thickness of the various types of rocks along the line of the tunnel; on the location of faults of consequence; and on the possibility of encountering water and gas.

The data presented herein is based on field work carried out by the writer during April, 1926. Field observations were accurately tied to the survey following the surface line of the tunnel. Such errors as enter the work therefor, are due to observation and interpretation rather than to inaccurate location. Needless to say, imperfect surface exposures of the rocks make certain errors inevitable. Limits of error will, where possible, be indicated at appropriate places in the following description.

GEOLOGY OF THE CLAREMONT TUNNEL Sta. 0 to 66.

Thickness 6600 feet. Orindan formation. Composed predominantly of loosely cemented gravels and sandstones, and some shales. These rocks are part of the same group as now exposed in the west heading (first 1100 feet) of the Lafayette tunnel, and may reasonably be expected to show the same characteristics. The relative abundance of gravels, sandstones and shales will approximate the proportions of these rocks shown in the Lafayette tunnel, though a slight increase in the proportion of gravels may be expected to the westward.

These rocks should break and muck easily. Occasional slabs will break along the bedding planes, but with reasonable care such oversize breakage should be occasional only.

For the first 1000 feet the rocks may be expected to be rather badly broken due to the thin back, the cover being in general less than 100 feet through this distance, averaging about 50 feet. PROBABLY MORE OR LESS TIMBER WILL BE REQUIRED HERE. Beyond Sta. 10, however, and especially beyond Sta. 19, the back rapidly thickens, so that the solidity of the rocks and HENCE THEIR STANDING ABILITY SHOULD CONSEQUENTLY INCREASE.

No great quantity of water should be encountered between Sta. 0 and 66, though some seepages will undoubtedly be met with.

Minor faults may occur within this zone but should cause no difficulties. No surface evidence exists to suggest the presence of any pronounced faults cutting this part of the tunnel, except possibly in the vicinity of Sta. 23. Due to a thick cover of brush and poor exposures, the surface evidence at this place is not conclusive.

The Orindan formation is folded into an anticline (arch), the crest of which occurs between Sta. 42 and 50. (See section.) Due to variable thickness of the formation, the base of the Orindan cannot be definitely determined here, so that a possibility exists for encountering older underlying rocks between the above mentioned stations. The nature of these cannot be forecast. The writer is of the opinion however that the base of the Orindan will not be penetrated, the tunnel remaining entirely within that formation.

The location of the western limit of the Orindan (Sta. 66) is probably accurate within plus or minus 100 feet.

Sta. 66 to 88+50.

Thickness 2250 feet. Composed predominantly of lava flows with some interbedded fragmental volcanic material (tuffs and agglomerates) and gravels. (For details see section.)

The lavas (chiefly andesites) consist of rocks which are both hard and tough. Most of the rocks between Sta. 66 and 88 will be of this nature. THESE ROCKS WILL PROBABLY STAND

WITH A MINIMUM OF SUPPORT, BUT DUE TO JOINTING MAY TEND TO BREAK BLOCKY.

Intercolated with the lavas, a certain amount of interbedded fragmental material may occur. The position of such layers cannot be accurately predicted. Such material, if encountered, may be only slightly softer than the lavas themselves, due to the contained lava fragments.

A gravel horizon occurs interbedded with the lava flows. The gravels are entirely similar to the gravels present in the Orindan formation. Approximately 200 feet of gravels should be encountered (about Sta. 68 to 70) after the first 200 feet of lavas have been passed through from the east. The thickness of gravels encountered may be modified by faulting. The same gravel horizon, probably not over 100 feet thick, should again be encountered about 150 feet from the western edge of the lavas (Sta. 86 to 87). Since the gravels wedge out westward, the thickness here cannot be determined exactly.

A major fault cuts the line of the tunnel and should be encountered at about Sta. 68. This fault cannot be located on the surface closer than about 200 feet; nor can its dip be accurately determined, other than that it is steep to the east. In consequence the indicated intersection with the tunnel may be in error by several hundred feet. The intersection was obtained using a strike of N. 12 E., and a dip of 80 degrees east for the fault.

Abundant water may be expected from the lavas between Sta. 66 and 88. This question will be discussed later under the heading "Water Problems".

The western limit of the lavas, Sta. 88 plus 50, is located with a probable accuracy of about 100 feet.

Sta. 88+50 to 108.

Thickness 1950 feet. Orindan formation. The same group of rocks as occur between Sta. 0 and 66. THE CONDITIONS HERE SHOULD BE QUITE SIMILAR EXCEPT THAT THE ROCKS ARE PROBABLY MORE PREDOMINANTLY LOOSELY CEMENTED GRAVELS. LITTLE TIMBER SHOULD BE REQUIRED SINCE THE ROCKS SHOULD STAND WELL. No great amount of water should occur.

Sta. 108-118.

Thickness 1000 feet Claremont cherts. Consist of thin layers (one to three inches) of hard but brittle cherts, interbedded with thin (¼ to ½ inches) layers of shale. A few beds of sandstone and extremely hard tough limestone occur; thickness one to three feet.

The cherts will be hard on drill steel, but due to their brittleness should break well. THEY SHOULD STAND WELL AND REQUIRE LITTLE TIMBER. Since the beds stand practically vertical no trouble from slabbing should occur.

The cherts are bounded on the west (Sta. 108) by a major fault line. The fault is located with a probable accuracy of 50 feet.

Sta. 118 to 171+50.

Thickness 5350 feet. Chico sandstone. Comparatively soft compact massive sandstone, with only occasional thin beds of shale and gravelly sand. These sandstones should drill, break and muck easily. They should contain comparatively little water, though occasional seepages may occur. Where dry these rocks should stand well and require little support. Due to the massive nature of the beds, slabbing should be infrequent. Altogether this group of rocks would seem ideal for tunneling purposes.

The western boundary of the Chico sandstones is a prominent vertical fault. Under ordinary conditions this fault could be accurately located on the surface. Unfortunately the surface here is a closely built up section of Claremont, and in consequence of the houses, gardens, and other surface improvements, the position of the fault may be in error by as much as 200 feet.

Sta. 171+50 to 180+60 (Portal).

Thickness 910 feet. Largely if not entirely silica-carbonate rock. This rock when fresh is of moderate hardness, BREAKS WELL AND STANDS WELL. Near the surface, however, IT WEATHERS EASILY AND MAY BE MORE OR LESS SOFTENED, DECOMPOSED AND BROKEN UP.

Silica-carbonate rock is well exposed between Sta. 181 and 184, but no exposures occur between Sta. 171+50 and 181, due to surface improvements, houses, gardens, etc. Silica carbonate rock may occur through this interval, or its place may be taken by Franciscan sandstone, a moderately hard, tough rock where solid and fresh, but inclined to be rather highly sheared and fractured near the surface. TIMBERING WILL PROBABLY BE REQUIRED THROUGH PART OF THIS DISTANCE SINCE THE BACK IS NOT GREAT.

Gas Problems.

Through two portions of the tunnel all precautions should be taken to guard against gas.

Sta. 108 to 118.

The Claremont cherts between these stations belongs to the formation which is the source of much of the oil in California. The cherts of this belt, even on the surface, have an appreciable bituminous odor. While the structure here is not favorable for the accumulation of great quantities of gas, it is practically certain that some gas will be encountered.

It will be recalled that the explosion which occurred in the San Pablo-Wildcat tunnel of the East Bay Water Company a few years back resulted from gas derived from this same group of rocks, and under very similar structural conditions.

Sta. 42 to 50.

The rocks which may be reasonably expected here, the Orindan formation, are not in themselves a source of gas. But the structure of these rocks between the stations indicated is favorable for the accumulation of gas in quantity. The tunnel certainly passes close to the base of the Orindan, if it does not actually penetrate it. The rocks beneath the Orindan (nature not determinate but possibly the Claremont cherts) may be looked upon as a potential source of gas. If conditions are such that gas does occur as high up as the tunnel, it might well occur in quantity, while the occurrence of gas here is purely a hypothetical condition, it is a possibility which should certainly be guarded against.

Water Problems

Sta. 66 to 88+50.

Water in quantity need not be expected except between Sta. 66 and 88. The lavas, the predominant rocks between these stations, are prone to be traversed by numerous fractures, the result of folding and also shrinkage on cooling. The rocks therefore tend to contain numerous open waterways. The interbedded fragmental volcanic material likewise tends to be porous.

The structure between Sta. 66 and 88, that of a syncline or basin, is decidedly favorable for the accumulation of water, diverting all the surface drainage of the area underlain by the lavas towards the trough of the fold.

It may be pointed out that the wells of the East Bay Water Company in upper Wildcat Canyon, and also the numerous springs which occur on the east slope of the range (Sta. 50 to 60) derive their water from these lavas. The flow of water from the lavas which may be expected in the tunnel may be expected to have some effect on the ultimate producing capacity of these springs and wells.

Water derived from these lavas in the tunnel may be expected to be quite free from surface pollution, and might well be added to the water supply of the Utility District.

Faults

Three important faults will be intersected by the tunnel.

The tunnel will cut Pinole fault at Sta. 68 (possible error of location 200 feet). The movement on this fault, which dips steeply to the east, has been such that the east side has moved up and south with respect to the west side.

The tunnel will cut the Wildcat fault, which again appears to dip steeply to the east, at about Sta. 108. This location is probably accurate to 50 feet. The east side of the fault appears to be the downthrown side. The horizontal component of motion is not known.

The tunnel will cut an un-named, approximately vertical fault at about Sta. 171+50. The possible error of location of this fault may be as much as 200 feet. The direction of movement on this fault is not certain, but is probably up on the east side.

Summary of Geology of Claremont Tunnel.

Sta.	Thickness	Remarks
0 – 66	6600	Gravels, sandstones and shales similar to those in the west heading of the Lafayette tunnel. Orindan formation.
66 – 88+50	2250	Predominantly lavas with some interbedded fragmental volcanic materials and gravels.
68	—	Pinole fault. Location may be in error by 200 feet.
88+50 – 108	1950	Gravels, Orindan formation.
108 – 118	1000	Claremont cherts.
118	—	Wildcat fault.
118 – 171+50	5350	Chico standstone.
171+50	—	Fault; location may be in error by 200 feet.
171+50 – 180+60	900	Silica-carbonate rock; possibly some Franciscan sandstone.

Respectfully submitted,

(Signed) CHARLTON D HULIN.

DEFENDANT'S EXHIBIT E

Oakland, Cal.
Feb. 26, 1929

Prof. Geo. D. Louderbach,
University of California,
Berkeley, Cal.

My dear Professor—In the following summary of conditions and methods used in meeting them, in the excavation of the Claremont tunnel, I have endeavored to give Station numbers where I had such in my possession; otherwise set numbers.

It has appeared to me to be better for me to follow the order of progress rather than that of stationing, although that involves working against the station numbering.

We encountered a small amount of water after penetrating about twenty feet from the west portal, but the ground was firm enough to avoid spile driving or breast boarding.

At approximately one hundred feet in, as I now recall it, we encountered the formation noted in Mr. Hulins report as silica-carbonate rock. This was blocky, overbreaking in many cases, considerable.

At a distance in of approximately seven hundred feet, sand and well rounded gravel, the latter of a probable maximum dimension of approximately three inches, was encountered, carrying some water—probably about forty gallons per minute. No shooting was done in this formation, which ex-

tended for approximately one hundred sixty-five feet. There was some clay in the sand and gravel content; but the standing condition was favored by an overlying strata of almost pure clay that almost followed to line of top of cap.

When we passed thru this, we encountered about twenty feet of a rather easy breaking reddish rock that required light blasting, but offered no unusual difficulties.

The contact beyond this formation was a sort of "gumbo" that mined easily and stood well for a short period, when swelling began and it was necessary to relieve pressures wherever possible to, prevent breaking of the timber. In some cases this corrective was not sufficient, and retimbering had to be done intermittantly for about eighty or a hundred feet. This heavy, constant pressure gradually lessened as we proceeded with our excavation up to station 164 plus 00.

At that point we encountered better standing ground, that offered no unusual difficulties. Slight quantities of water was encountered at intervals up to about station 160, where the shale began to show the presence of gas in small quantities. The gas increased slightly as we proceeded forward, being most noticeable where the shale formation was broken with soft sandstone carrying a small quantity of water.

The shale worked easily and stood well for a short period, giving us time to erect six foot sets after mucking out, the spiling was placed immediately after shooting.

At set 636 a run of small particles of comparatively clean sandstone, forced out by a quantity of water sufficient to flood the tunnel to a depth of a foot for a distance of several hundred feet occurred at the end of the spiling just as preparations were being made to erect the set. About three hours thereafter there was a gas explosion that injured a number of workmen. It appears that the gas ignited as it was entering the tunnel, because the flame concentrated about the point from which the run came, and appeared to have pressure behind it.

From that point forward gas and water appeared together when the disintegrated sandstone was encountered, tho in lesser quantities.

A year or so after having passed thru this formation weight began to show in the vicinity of sets 330 to 345, and 562 to 586, 619 to 634, 816 to 823, 984 to 1002. Relieving sets were erected to hold the ground.

At station 123 plus 31 to 121 plus 91, from whence we merged from the Chico standstone section as noted by Mr. Hulin, to the Chert, concrete invert and arch were poured to take care of a ground swell and consequent weight, and to act as a deterrant to a spread of fire if oil were encountered in the cherts.

We had made it a plan to stop excavation and pour invert whenever water of sufficient quantity was encountered to make track maintainance and train operation difficult. As a consequence the invert was concreted to station 121 plus 91 when we attacked the main body of chert.

When excavation was resumed at the last named station we began to feel pressure on our right. We had proceeded about twenty-four feet when the pressure became so great that relieving sets were erected to support regular four foot sets. Suddenly water broke out alongside in a quantity of probable two hundred gallons per minute, and the pressure was relieved.

At set 1039 we encountered a large flow in a badly broken chert formation. For a few hours our pumps, having a rated capacity of eight hundred gallons could not handle it. This reduced in quantity to five hundred eighty gallons within seven hours, when the reduction apparently ceased. It was necessary to drive spiling and erect breast boards from this set 1052, when the chert showed a tendency to stiffen.

Blasting was permissible then to set 1054 when we again encountered water and badly broken chert, forcing us to again resort to spile driving and breast boarding. At set 1064 we again reached former ground which permitted blasting until set 1065 was reached when a further addition of water and bad ground forced spile driving again. At set 1069 we appeared to have found better going, tho we had later on to erect spiling before blasting the lower part of the face. This condition prevailed until the point of set 1085 was reached.

From there on until the chert was passed the ground progressively stiffened, and some heavy blasting was necessary to break the vertical chert.

Timbering was spaced up to a distance of twelve feet between sets where ground was standing well. At sets 1136 to 1139 we later had to erect two relieving sets.

Generally speaking this vertical chert did not take weight after we passed thru it.

Very little oil was found in the chert, and such as was observed was more apparent in the slippery sand following the water, which generally showed in the broken formation as we approached nearer the firmer cherts.

Leaving the chert we entered the Orindan, which was very firm and hard to break, as was the cemented gravels that frequently appeared. These materials gradually grew softer as we left the chert behind and approached the lava. Most of the oil and oil gas we encountered was found on the contact of the orindan with the cemented gravel. As we approached nearer the lava the gas decreased and the gravel increased, with water dripping in increasing amount. The orindan section, generally stood well under six foot timber spacing, but broke blocky, and did not muck well. One mucker man expressed it that it was like mucking wool.

When it was apparent we were approaching near to the lavas and water began to show evidence of decided increase, we discontinued excavation long enough to bring our concrete invert to the then face.

On resuming mining, our second shot brought us into the lava. The contact was reasonable soft, but the ground stiffened to such an extent that we found

it advisable to discontinue the use of jack-hammers and proceed with leyners. The ground drilled well and broke well and, tho containing some water, gave promise of continuing leyner ground. At station about 89 plus 00 one of the shots in the right breast penetrated a volcanic ash deposit lying in a sufficiently loose state with a large amount of water, that within three hours the face had broken in against our efforts to hold it and the ash accompanied with a flow of fourteen hundred gallons of water per minute partly filled the tunnel for a distance of sixty feet before a sufficient bulkhead to hold it could be erected. The pressure exerted longitudinally forced collar braces from one and one half inches to complete penetration of some of the eight by twelve timbers. The ash surrounded the sets so that none of them were completely knocked down.

We dropped back to Station 94 plus naught eight to 94 plus forty-eight where we had encountered very heavy swelling ground and had found full circle sets at two foot spacing, constantly relieved, not holding the ground, and concreted this section while awaiting stability of the volcanic ash section, and hoping, in the meantime, that water pressure would reduce. The quantity dropped to nine hundred gallons, and it appeared that it might be cut off from the main tunnel by a short drift to our right, which then appeared the direction of the supply. This drift materially relieved the pressure at the face for a few feet and allowed us to excavate the ash to our former face without much difficulty.

However, when we erected our breast boards and began to press forward we found the main water supply was coming from a point forward, and apparently in the line of bore. As we drove our spiling, each one a couple of inches, until a penetration of six to eight feet was accomplished, we attempted to open a small hole in the breast board at the last set and advance a new one four feet ahead. This often took hours, as the runs of fine ash with an ever increasing quantity of water made it almost impossible to make the slightest opening in our former breast boarding. We gradually advanced a small board on the end of a stull to a point four feet distant. This was our most difficult feat, and the new breast board, however small, would aid in stiffening the new face. The next board, also advanced at the end of stull was then placed, after many attempts, each stull being nailed to the cap of the last set. When two feet of new breast was well boarded, the new breast boards were put in at an elevation lower than the old breast board four feet back so that the fine material could not flow out during the placing of the new board. During all of this time we had run after run of fine material, that it took all our efforts to check—tho the total losses were never enough to cause much of a void overhead, or permit a sudden drop of material. When the new breast board was completed two feet down, one or the other of us would creep over the old breast board and place the next lower new board. This sometimes resulted in hasty retreats and near strangulation as

the runs and water attempted to engulf its intended victim; and on at least one occasion emergency pull by the remainder of the men present saved burial.

After getting thru this ash deposit, holes were made in the overhead spiling, sufficiently large to loosen and cause to run such overlying fine material as was necessary to bring large boulders that showed evidence of being there, down on the top of the spiling to forestall a possible future run and drop of material that might cause a collapse of the timbering and resultant trapping and drowning of the crew. These boulders now rest on the timbering and act as a reinforcement against a drop of others.

We encountered an ever increasing quantity of water until three thousand nine hundred twenty gallons per minute were measured on the wier. As we proceeded we encountered new flows, and the area left behind, gradually and fairly rapidly, decreased.

Spile driving and breast boarding were again necessary in broken formations carrying large quantities of water at sets 1612 to set 1606, Stations 82+92 to 82+82, 82+06 to 81+75, 80+14 to 79+84, 78+06 to 77+79, 76+28 to 76+01, 74+98 to 74+55, 75+52 to 75+27, 73+25 to 72+74, tho at no other point than the one in vicinity of Station 89+00 did we have runs that we found it difficult to control.

In some of the latter breast board places we could advance our spiling with coal picks and moils, and breast board as we pulled the muck away from the face. At other times we could breast board half way down the face and lightly shoot the toe to make mucking easier.

In cases where we found enough clay present, the star steel was difficult to free, we found augers worked better. Track laying under twelve to eighteen inches of water, we found difficult, and all timber and lagging and collar braces had to be "tied down" to prevent them from floating away and derailing trains. Wedges were a constant menace, as their size made them hard to hold and easy to float.

When we re-entered the orindan, we found it reasonably soft and blocky. Very little water and no gas penetrated it.

Very respectfully yours,

L. M. LARSON.

Re. Broadway Tunnel
Tunnel Construction
Joint Highway District No. 13
1448 Webster Street
Oakland, California.

Gentlemen:

We enclose herewith one blue print of our Drawing T 15 titled Tunnel Construction and one blue print of Pacific Coast Steel Corporation Drawing T 2 A titled Proposed Location of Splices in Re-Inforcing Steel.

We attach hereto a schedule of a proposed sequence of operations for approximately the first 100 feet for each tunnel.

These enclosures and the attachment are submitted for your consideration and criticism.

We would appreciate an early appointment with you at some time to suit your convenience so that we can discuss the whole problem with you.

Yours very truly,
SIX COMPANIES OF
CALIFORNIA
By (Signed) T. M. PRICE.

San Francisco, California

Gentlemen:

The Government Engineer (Bureau of Public Roads of the United States Department of Agriculture acting by and through C. H. Sweetser, District Engineer, District No. 2) has authorized this District to waive the provisions of subsection (b) of section 1 of paragraph 20 of your contract dated June 4, 1934 with Joint Highway District No. 13 of the State of California to permit you to employ men on tunnel work not to exceed forty (40) hours in any one week, nor more than eight (8) hours in any one day. This waiver is based upon the application filed by you with this District on December 6, 1934 which was transmitted to the Government Engineer in accordance with the resolution of the Board of Directors of this District adopted December 6, 1934.

Joint Highway District No. 13 of the State of California, in accordance with the terms and conditions embodied in said contract and in accordance with the letter of C. H. Sweetser, Esq., District Engineer of District No. 2, said Bureau of Public Roads, dated December 19, 1934, a copy of which is annexed hereto, marked Exhibit "A", made a part hereof and incorporated herein as fully as though set forth herein at length, hereby authorizes and

permits you to employ men on the tunnel work to be performed under said contract not to exceed forty (40) hours in any one week, nor more than eight (8) hours in any one day, and upon all of the conditions and limitations and under the regulations set forth and detailed in said Exhibit "A".

JOINT HIGHWAY DISTRICT No. 13 OF THE STATE OF CALIFORNIA,

[Corp't Seal] By THOMAS E. CALDECOTT, President.

By HARRY M. STOW, Secretary.

Exhibit "A"

United States Department of Agriculture
Bureau of Public Roads
District No. 2

December 19, 1934.

Mr. Wallace B. Boggs,
District Engineer,
Joint Highway District #13
1448 Webster Street,
Oakland, California.

Dear Sir:

On December 10, 1934 I received from the Secretary of Joint Highway District No. 13 of the State of California a letter dated December 8 enclosing four certified copies of the application of Six Com-

panies of California, a corporation, the contractor now constructing the project of Joint Highway District No. 13 of the State of California, known as the "Broadway Low Level Tunnel", for a waiver of the provisions of Subsection (b) of Section 1 of Paragraph 20 of the contract to permit said contractor to employ men in the tunnel work not exceeding 48 hours per week, together with four certified copies of the resolution of the Board of Directors directing that said application be submitted to the United States Bureau of Public Roads, the Government Engineer under the terms of said contract, for such action as the Government Engineer may consider proper. The Secretary requested me to advise you of my action in respect to said application.

After considering the application of Six Companies of California; the order of T. A. Reardon, Director of the Department of Industrial Relations of California, permitting Six Companies to employ men on tunnel work on the construction of the Broadway Low Level Tunnel not to exceed 48 hours in each week; and letter from R. C. Stillwell, Veterans' Representative, State of California, dated December 10, acting for Mr. John A. Stellern, State Director of the National Reemployment Service, State of California, copy of which is enclosed; Mr. Stellern's letter dated December 15, concurring in Mr. Stillwell's letter, copy enclosed; and after further investigation by the Bureau of Public Roads it is in my judgment not practicable nor feasible, particularly considering safety of workmen, to proceed

with the tunnel work on a thirty (30) hour per week basis. Under no circumstances, however, can forty-eight (48) hours per week be granted, but you are authorized to waive the provisions of Subsection (b) of Section (1) of Paragraph 20 of the contract dated June 4, 1934 between Joint Highway [206] District No. 13 of the State of California and Six Companies of California, contractor, and permit the contractor to employ men on tunnel work not to exceed forty (40) hours in any one week, nor more than eight (8) hours in any one day.

If satisfactory as to details the following classification of men performing work in the tunnel as submitted in the application of Six Companies of California, should be adopted and these men should be carried on a separate payroll:

Tunnel Shifters
Tunnel Miners
Tunnel Timbermen
Tunnel Shovel Operators
Tunnel Locomotive Operators
Tunnel Hoist Men
Tunnel Powdermen
Tunnel Brakemen
Tunnel Chuck Tender
Tunnel Mechanics
Tunnel Laborers
Tunnel Muckers
Tunnel Vibrators
Tunnel Tampers

Tunnel Form Men
Tunnel Concrete Men
Tunnel Concrete Finishers
Tunnel Cement Gun Operators
Tunnel Pump Men
Tunnel Concrete Laborers
Tunnel Drill Operators
Tunnel Electrical Workers
Tunnel Labor—Unskilled
Tunnel Plumbers
Tunnel Portable Hoist Engineers
Tunnel Power Shovel Operators
Tunnel Track Men

Yours very truly,
C. H. SWEETSER,
District Engineer.

[Endorsed]: U. S. Dist. Ct. N. D. Cal. No. 20101-R. Deft's Ex. AA. Filed April 26, 1938. Walter B. Maling, Clerk. By J. A. Schaertzer, Deputy Clerk.

DEFENDANT'S EXHIBIT BB

Builders of Low Level Broadway Tunnel
SIX COMPANIES OF CALIFORNIA
Field Office Post Office Box 120
Berkeley, California

December 26, 1934

(Received Dec. 27, 1934 Joint Highway Dist. No. 13.)

Mr. Wallace B. Boggs,
District Engineer,
Joint Highway District No. 13,
1448 Webster St.,
Oakland, California.

Dear Sir:

We send you herewith three drawings which illustrate the methods we are now using in the tunnel excavation.

Drawing No. 1 illustrates the method now used in the south tunnel. According to the plan, an excavation or drift 7 ft. wide at the bottom is started at foundation level on each side of the tunnel. This is gradually carried up by means of working platforms to the crown. Muck is worked down to the bottom and is removed by a scraper operated by a hoist. When the excavation has progressed sufficiently the posts and wall plates are put in position, and then the arch segments.

Drawings Nos. 2 and 4 indicate the method in the north tunnel. This is practically a heading and bench method, but the heading is carried out in an annular shape. At the sides the bench level is at the bottom of the wall plate, which rests on the ground and which is placed as soon as the drift is deep enough. A top heading is carried on simultaneously with the wall plate drift and then the earth between is excavated. Segmental arch sets are placed on the wall plates. The muck is shoveled or wheeled and allowed to fall over the sloping face of the bench.

After segmental arches are in, the core is to be excavated by means of the shovel, the face being on a slope for greater stability. When the toe of the face slope is about three feet from the position of the next post, a place for same will be hand excavated and the post set under the wall plate.

In the south tunnel the slope of the face of the core will follow the rake of the most inclined post, and the core will be removed by the shovel.

As to the engineering work required so that we may be able to carry out the above methods: It is proposed to use a chord length of 25 feet in each tunnel and the following work would be required:

South Tunnel:

Establish center line and an offset line on each side 12′ 6″ from the center line. These lines to be established so that they can be projected forward into the excavation.

For grade, elevations giving the grade of tunnel should be established as follows: a grade 2′ 6″ above the subgrade or foundation grade of side walls; a grade 2′ 0″ above bottom of wall plate at its lower inner edge; and a grade 2′ 0″ above inner face of concrete lining at crown.

North Tunnel:

The work here is similar to that in the south tunnel. The center line of tunnel and offset lines 11′ 0″ on each side of center line will be required for alignment. For grades, the requirements will be as follows: a grade 2′ 6″ above bottom of foundations of side walls; a grade 2′ 0″ above bottom of wall plate; and a grade 2′ 0″ above top of footing block of top heading, this grade being 9 inches below the inner face of concrete lining at the crown. Grades should be so given that they can be projected with straight edges.

Both the system of excavation and the engineering involved are necessarily subject to change as the ground changes.

Your very truly,

SIX COMPANIES OF CALIFORNIA

Builders of Low Level Broadway Tunnel

SIX COMPANIES OF CALIFORNIA

Field Office Post Office Box 120

Berkeley, California

April 2nd, 1935

Mr. Wallace B. Boggs, District Engineer,
Joint Highway District No. 13
1448 Webster Street
Oakland, Calif.

Dear Sir:

We are inclosing a print of our drawing No. 19, which shows the arrangement we have adopted for placing concrete in the tunnel lining. We think that this drawing is self-explanatory, but some explanation may be necessary.

When we discussed this matter in your office some time ago, we contemplated the use of 36 foot forms. We have now decided on a length of 27 feet.

While the drawing is schematic, it is intended to fairly represent the method and forms. The forms will be supported by jacks from the form carrier. In order to move the forms, the sides will be swung in and the entire form lowered.

Concrete will be brought from the central mixing plant to a double concrete pump, mounted on a car

as indicated. Moto mixers, operated only when dumping, will be used to transport the concrete. Each side of the concrete pump will be independently operated, so that concreting could be carried on in case of a break-down of one pump.

For the side walls, the concrete will be discharged through two pipes serving both sides of the form. It will be conducted by fixed spouts through openings in the forms, into final position. Short spouts, at the openings, will provide for inspection and working of the concrete if that should be necessary. It will not be necessary to move the pump outfit while pouring the side walls.

It is contemplated to pour the arch ring in the usual manner, by moving back the pipes and car as the filling advances.

Very truly yours,

SIX COMPANIES OF CALIFORNIA

By (Signed) T. M. PRICE,

Project Manager.

Field Office Post Office Box 120
Berkeley, California

Sept. 17, 1935

Received Sept. 18, 1935 (W. B. B.).
Mr. Wallace B. Boggs,
District Engineer,
Joint Highway District No. 13,
1448 Webster St., Oakland

Dear Sir:

Now that we have a complete survey of the condition of the tunnel timbers, we find that in a good many places it will be necessary to trim as much as six inches to obtain the required thickness of our concrete lining. In order to make the job as safe as possible, we propose to Gunite a reinforced concrete ring as shown on the enclosed sketch, supporting it where practical against rock at intervals, to give the timber the necessary stability so that trimming can be carried out just ahead of the concrete. In most places, this ring can be kept back of the neat concrete lines, but there are places where it will be necessary to let the Gunite ring encroach into the concrete a maximum of four inches. Inasmuch as the Gunite rings are a permanent material and will bond well with the concrete lining, it might be well to place some of the permanent steel in these

rings while they are being built. The encroachment into the concrete will be left rough and cleaned.

The reason for the four-inch encroachment is because it is our opinion that anything in the way of a Gunite ring less than ten inches would be of no value.

It is only proposed to use the above plan where the maximum trimming is six inches or less to get the required thickness of concrete.

We propose to try out this method, and if it proves satisfactory to everybody concerned, we will continue its use where practical and necessary, but if we find after a fair trial that it is not giving the results we hoped for, it will be discontinued.

In cases where it is necessary to trim more than six inches, it will be necessary to use some other method, which is being worked out at the present time.

We would be pleased to have your approval of this plan.

Yours very truly,
SIX COMPANIES OF
CALIFORNIA

Oakland, California.

Dear Sir:

You are hereby requested to grant permission for the undersigned Contractor to install the permanent reinforced concrete tunnel lining in all portions of the tunnel bores which have been excavated but were not lined, on September 30, 1935, with the permanent tunnel lining called for in the plans and specifications, to a section with an intrados crown position 10 inches lower than the crown position called for in the plans and specifications and with the position of the interior walls of the sides of the tunnel lining a maximum of 6 inches inside of the position provided for in the plans and specifications, and to all of the dimensions shown on Sheet 187 S of the plans, entitled: "Main Tunnel Special Section Type A Date September 28, 1935 Joint Highway District No. 13 State of California", a copy of which is attached hereto, the Contractor to install proper tran-

sitions in the special sections of the permanent lining to the sections of the permanent lining built in accordance with the original design and to make such alterations in the location of the ceilings, flues, hangers and other details of the completed structure as are determined to be necessary by the District Engineer of the Joint Highway District No. 13 to adjust the same to the special section, all without additional cost to the District for additional labor or material required to change the form and position of the section as requested.

Yours very truly,

[Endorsed]: U. S. Dist. Ct. N. D. Cal. No. 20101-R. Deft's Ex. No. KKK. Filed April 27, 1938. Walter B. Maling, Clerk. By J. A. Schaertzer, Deputy Clerk.

DEFENDANT'S EXHIBIT UUU

Before the Industrial Accident Commission of the State of California

I hereby certify that the foregoing, consisting of twenty-eight pages, is a true and correct copy of the testimony taken at the hearing before the Industrial Accident Commission on September 24, 1935, at 2 p. m., at the offices of the Commission, State Building, San Francisco, California, said testimony being with reference to the "Broadway Tunnel."

(Signed) FLORENCE H. JONES,
[Seal] Hearing Reporter.

Dated at San Francisco, California this 6th day of April, 1938.

Attest:
(Signed) FRANK J. BURKE,
Secretary Industrial Accident Commission
of the State of California.

HEARING

Before the Industrial Accident Commission of the State of California

September 24, 1935—2 P. M.

State Building, San Francisco

Present:

T. A. Reardon, Chairman
Frank C. MacDonald, Commissioner, I. A. C.

Mr. Boggs, Engineer, Highway Dist. No. 13

Mr. Reardon: Gentlemen, the reason we called this hearing is with reference to the tunnel known as the "Broadway Tunnel." There has been an accident over there, an unfortunate accident, and our only duty with reference to that tunnel is the safety.

We have nothing to do with how the tunnel is designed—right or wrong—but the safety of the men working there is what we are interested in. We have Mr. Reinhardt here, who is an engineer of this Commission, and he has filed a report with the Secretary, Mr. Burke, which I will ask that Mr. Burke please read.

Mr. Burke: This is an inter-communication from the Department of Safety, dated San Francisco, September 19, 1935, addressed to the attention of Mr. Reardon, Director, Department of Industrial Relations, subject:

"Broadway Tunnel."

"As per your telegram of September 17th, I made an inspection and survey of the Broadway Tunnel this date and found the following conditions:

"There is approximately 1800 feet of full section tunnel which is timbered and I would estimate that 75 percent of this timbering has to be removed and set back in order to clear the forms on Design A, the original design, before concreting can be done.

"The investigation of the cave-in on August 28th, in which three men lost their lives was the result of moving back one of these timber sets. As far as my investigation could determine this work was being done in a careful manner according to standard practices and the cave-in therefore was not the fault of the mechanical operation, but due to a peculiar formation in

the earth above the tunnel section, which possibly permitted a crust to form with a void back of the crust, allowing a major slide to occur once it started, thereby breaking two or more sets of timbering.

"My opinion is that in disturbing the present timbers we are inviting a similar cave-in in one or more places of the 1800 feet of timbered section.

"On September 2nd, Mr. Fry advised the Six Companies that he had been in consultation with the consulting engineers, Messrs. Tibbitts and Phillips, and agreed with their recommendation that the timbers should not be disturbed, that the forms should be lowered to clear the encroachment on the tunnel section by the shifted timbering. Mr. Fry's letter recommended that this be done.

"I understand consulting engineers Lippincott and Van Norman also recommended the lowering of the form and not disturbing the present timbered sections.

"Up to Saturday, September the 14th, it was tentatively agreed by the Six Companies, the Joint Highway District and P. W. A. that the forms would be lowered 8" and the timbers not disturbed, but this agreement was cancelled due to some legal objections on the part of the Joint Highway District and the scheme was called off. The Joint Highway District then notified the Six Companies that they were to

abide with paragraph E, Section 32, page 60, which states in part 'timbers found to project within the concrete lines shall be removed and reset before concreting.'

"At the time of my inspection this work was getting under way. As I considered it a serious hazard to disturb the timbers, I urgently recommend that the Commission issue a Special Order requiring both the Joint Highway District and the Six Companies not to remove and reset the timbering but to either lower the forms or submit to this department some other plan for approval whereby the timbering will not be disturbed."

Mr. MacDonald: Gentlemen, I have just started a paper along the line, which I ask that you sign, so that we may know who is present today.

May I suggest that the law of the State of California, that is, the Workmen's Compensation, Insurance and Safety Laws, prescribe in part, Section 34:

"Sec. 34. Every employer shall furnish employment which shall be safe for employees therein and shall furnish a place of employment which shall be safe for employees therein, and shall furnish and use such safety devices and safeguards, and shall adopt and use such practices, means, methods, operations and processes as are reasonably adequate to render such employment and place of employment safe, and

shall do every other thing reasonably necessary to protect the life and safety of such employees."

Section 35 continues:

"No employer shall require, permit or suffer any employee to go or be in any employment or place of employment which is not safe, and no such employer shall fail to furnish, provide and use safety devices and safeguards, or fail to adopt and use methods and processes reasonably adequate to render such employment and place of employment safe, and no such employer shall fail or neglect to do every other thing reasonably necessary to protect the life and safety of such employees, and no such employer shall occupy or maint in any place of employment that is not safe.'

The Industrial Accident Commissioners recognize the fact that largely due to the formation in which the tunnel is being driven, we have a very hazardous undertaking. The timber is now holding the ground, but there has been a shifting of the ground, and, basing our opinion and judgment upon the reports of our investigators, we are very fearful that moving any of the timbers, prior to putting reinforced concrete in, may cause, and, we fear, will cause the loss of additional lives. Now, it is in our province or duty to tell contractors just how they shall do the work. The laws impose the responsibility of safe employment upon the contractor. We have heard conflicting reports and stories concerning methods of operation. We are satisfied that it is the earnest

desire of all parties concerned to have the work done under safe conditions. We have issued an order which has interfered with the continued progress of the work directing all timbering in both the north and south tunnels shall not be removed and reset before concreting; and (2) The concrete forms may be lowered sufficiently to clear encroachments in the tunnel section, or some other plan, whereby the timbering will not be disturbed, may be submitted to the Commission for approval.

It is our desire now to ascertain what determination, if any has been made as to further procedure of the work, that is going to be safe for the lives and limbs of the workers therein.

Mr. A. B. Tinning: I am the attorney for the Highway District. May I say that you have expressed the opinion of the Board of Directors respecting the desire of having all possible precaution respecting risk, taken. However, we are very anxious that in this order a valid order be made by the Commission, in which it has jurisdiction, and we communicated with you on September 20th, asking that a formal hearing be held, because, as we understand our provisions of the Workmen's Compensation Act, it is necessary before a special safety order is made, that a hearing be held, and I assume that it will be satisfactory to use as evidence at this hearing, Mr. Reinhardt's report, as a basis for the finding that operation as conducted, in the opinion of the Commission, is not safe, and if that is done and is stipulated to by the attorneys for the contractor, we are ready to offer the recommenda-

tion as a plan for our side of the matter.

Mr. Thelen: I am one of the atorneys for the Six Companies, and will be very glad to stipulate according to Mr. Tinning's suggestion.

Mr. Tinning: Mr. Boggs, I think you have prepared a tentative plan?

Mr. Boggs: I have—I am District Engineer.

Mr. Tinning: I will say, Gentlemen of the Commission, that this plan is a development of various discussions at previous times, and the result of close work done since this order was issued on September 19th. It is entitled: "Preliminary—Joint Highway District No. 13, State of California, Alameda County, Contra Costa County—Modification, Type A Section," and I would like to have Mr. Boggs, for the purpose of the record, read a statement which has been prepared, respecting this plan and the manner in which it is offered, as a proposal.

Mr. Boggs (reading):

"The recommendation for a modification of the plan for the Broadway Low Level Tunnel which follows, is made solely because of the delay of the Contractor in placing the permanent reinforced concrete tunnel lining in the portions of the tunnel bores which have been excavated——

Mr. Tinning (interrupting): Excuse me. I should state in making this statement, we do not want to be put in the position that our silence may not be construed as an omission. We want to just

state our position in connection with offering this plan—but we waive no rights.

Mr. Reardon: Mr. Tinning, we always carry our meetings on as an open forum, so that any one who has ideas on safety—we will allow them to speak on that subject.

Mr. Tinning: Thank you.

Mr. Boggs (reading):

> "The recommendation for a modification of the plan for the Broadway Low Level Tunnel which follows, is made solely because of the delay of the contractor in placing the permanent reinforced concrete tunnel lining in the portions of the tunnel bores which have been excavated, but not lined with the permanent lining called for in the plans and specifications."

Mr. Thelen (Interrupting): Reference is made to the delay of the contractor. We do not concede that there has been any unreasonable delay of the contractor. It seems to me that the only thing the Commission is interested in, is the safety and what shall be done to make safe conditions.

Mr. Reardon: This is an open forum. You people realize I was President of the Board of Public Works, and I carried on the work of public works in the same manner, as I am now, with the assistance of Commissioner MacDonald, and I will allow Mr. Tinning to submit his evidence.

Mr. Tinning: I am not asking that anything be conceded. We only want our definite statement as to our position, as an excess of precaution. We

waive nothing in connection with this plan. We are simply trying to state our position, not trying to put it to the side.

Mr. Thelen: I may suggest that if references of that kind are made, we may have to introduce evidence tc show that the references are not justified. We do not admit there has been any delay.

Mr. MacDonald: I hardly think we will rule on the statement, but we will recognize and are compelled to recognize Mr. Thelen's right to file with this Commission any supplemental statement he may desire, setting forth the position of his clients.

Mr. Thelen: I think that is very very fair.

Mr. Boggs (Continuing reading):

"These open sections of the tunnel bores are supported by temporary timber supports which have been generally intruded into the space necessary for placing the permanent tunnel lining in accordance with the Plans and Specifications. If the permanent lining had been installed promptly after excavation the present condition of the timbers would not exist.

"To eliminate so far as practical the demonstrated hazard to the lives and safety of workmen arising from resetting the temporary timber supports, and, at the same time to provide a structure equal in strength and capacity to the original design, a modified design is recommended. In making this recommendation, or in its later authorization, it is not intended in any respect to admit the modification is made

because of any demand, claim, or contention of the Contractor which has heretofore been communicated to the Joint Highway District No. 13 of the State of California, or to any of its officers or employees, and the District if the modification is authorized, waives none of its rights under the contract dated June 4th, 1934, with the Six Companies of California.

"The District Engineer recommends as a design for the permanent reinforced concrete tunnel lining for those portions of both bores of the Broadway Lower Level Tunnel, which are now excavated and supported by temporary support, and in which the permanent tunnel lining has not yet been placed, a section with an intrados crown position 10 inches lower than the present designed crown position, the position of the sides of the tunnel lining 6 inches inside of the present designed position, and to all of the dimensions shown on the preliminary plat of Joint Highway District No. 13 of the State of California, entitled, 'Modification Type A Section—Sept. 21, 1935.'

"This recommendation is that said modification in dimensions of the permanent reinforced concrete tunnel lining be authorized by the District, under all of the terms of the Contract, plans and specifications, for the sections of tunnels now open and unlined, the Contractor to be paid therefor at the price per lineal foot as provided in the contract of June 4, 1934 (extra

concrete necessary to fill the space left by the contraction of the dimensions of the tunnel lining, to be furnished by the Contractor at its own cost), all reinforcing steel required in the construction of the modified section to be paid for by the District at the unit price provided in the contract of June 4, 1934; the proposed modification of the tunnel lining will not apply to the portions of the tunnel bores which are already lined, nor to any portions which are not now fully excavated and supported by temporary timbering supports; and the Contractor will be required to excavate, and to install the permanent reinforced concrete tunnel lining in all parts of the bores not yet fully excavated, to the dimensions specified in the original plans and specifications, and to install proper transitions from the modified sections to the sections of lining built to the original design, and to make such alteration in location of the ceilings, flues, hangers and other details of the complete structure are determined necessary by the District Engineer to adjust such portions to the modified sections, all without any extra charge to the District, and at the prices provided in the contract of June 4, 1934.

"Before the above recommendation is finally approved by the Board of Directors of the Joint Highway District No 13, it is subject to the approval by the Director of the Department of Public Works of the State of California, and

the proper officials of the Bureau of Public Roads, and/or the P. W. A. of the United States, after which the Board of Directors of the Joint Highway No. 13, will act upon the recommendation for the modification."

Mr. Reardon: I realize that all of that has no bearing on the case—only the recommendations for safety. You have data in there that affects the construction of the tunnel, and we are not interested in the price of the tunnel, or the change of the plans—our only interest is for safety. If you have such recommendation for the safety of the men working in the tunnel, the Chairman will entertain that. You are protecting yourselves, protecting a price or an agreement which will be made between you. You can take the parts out which are for the recommendation of safety, and the Chairman will entertain any part of that.

Mr. Tinning: We shall be very glad to have the Commission take any part it may desire, but we will not waive any rights. We are not submitting it as evidence. We are submitting it as an offer or a plan which is for the purpose of affording safety, and those provisions are not intended to change the force of the contract, but they are placed there so we will not change our position. That is the only purpose. We do not ask the Commission to take any action on that—but we do not wish to waive our rights. We have this plan which we are ready to offer, and it is offered with the direct understanding that we do

not expect the contractor to change his position and we will not change ours.

Mr. MacDonald: This Commission issued an order practically prohibiting the moving of timbering until such time as the concrete is in place. We also went beyond our real rights, as far as the contractor is concerned by stipulating that concrete forms may be lowered sufficiently to clear encroachments in the tunnel section, or some other plan whereby the timbering will not be disturbed, may be submitted to the Commission for approval. We can only pass on that, as Commissioner Reardon has pointed out, with one thought in mind—safety.

The drawing you submit and the statement you have just read is submitted for the purpose of giving assurance to the Commission that so far as the District is concerned, you are willing to accept a modification of the original plan to the one herein indicated, but you are serving public notice at the same time that you relinquish none of the legal matters in the District made between the District and the contractors, and, in the latter matter, we have no authority to pass any opinion or judgment. It would be void—it would be of no force and effect, but we have the right to insist upon safety. We appreciate the spirit in which the District is acting in the matter for the protection of human life. I can see no reason, Mr. Chairman, why the entire statement cannot be incorporated in the record, subject to the conditions you have stated, and assurance of this given to Mr. Thelen, that the legal

rights of his clients can be safeguarded to any extent that he feels they should be safeguarded, by a supplemental statement that can be filed with the Commission, and made of record.

Mr. Thelen: That is agreeable; but unless we are driven to it we will not file a supplemental statement. We feel that there is much in that statement that is not material here. We think there is a good deal that is immaterial, and the Commission has not jurisdiction. The arrangements between the District and contractors we are not interested in—we are only interested in the safety features. In that statement reference is made to the situation shown on the blue print—that goes directly to the safety. As I understand it, it is intended to lower the crown some 10 inches, to be filled in with concrete, and over here (referring to blueprint) on each side the concrete is to be poured some six inches or so beyond the original plans and specifications, for the purpose of strengthening the structure, and making it unnecessary to remove timbers, and that is the thing for which the Commission is driving.

Mr. Tinning: There is no change made for the purpose of strengthening the structure. The purpose is to prevent the necessity of having to reset or trim timbers, and we do not for one moment concede that the structure is any respect strengthened by that proposal.

Mr. Reardon: Mr. Reinhardt, you have heard the reading of that communication?

Mr. Reinhardt: Yes.

Mr. Thelen: We are trying to avoid a controversy, and the necessity of filing a supplemental statement—if it may be understood that we do not agree with some of those statements—I think we will avoid the filing of the supplemental statement.

Mr. Tinning: That is stipulated, as far as the Highway District is concerned.

Mr. Boggs: That stipulation will be to what effect?

Mr. Thelen: To the effect that we do not agree with those portions of the statement which has been read which do not relate directly to the safety matter.

Mr. Reardon: The Chairman rules on that point—there is lots in that statement that does not relate to safety.

Mr. MacDonald: In order that we may understand Mr. Thelen—your clients, the Six Companies, are agreeable to proceeding with the work in conformity with the modified design herein indicated in conducting the work—that is, placing the concrete in before they attempt to remove timber, in order to insure safety?

Mr. Thelen: I would like to have our engineer, Mr. Peterson, answer that question directly—if he will.

Mr. O. W. Peterson (Engineer for the Six Companies): This plan will eliminate almost in its entirety, the necessity of moving timbers. It will be necessary still to move a very limited number of timbers, and it is planned in doing that to build

up the very substantial framework called a square-set, in the place of those timbers—and I think that work can be done under the supervision of one of your safety engineers. The safety of the District requires a certain minimum thickness of concrete to get the proper theoretical section of the tunnel, and it is not possible to entirely avoid the necessity of some of that work. I would say that that special amount of timber work should and can be done under the supervision of the engineer of the State Commission.

Mr. Thelen: Based on the statement of Mr. Peterson, that answers my question directly—that we are willing to proceed under an order to be made by this Commission, and under order of the District.

Mr. Tinning: I think, Gentlemen, that if we consider the legal situation, believe that it is necessary to have another order, because I do not think the order of September 19th—there might be some question about it, unless there had been a hearing preceding this.

Mr. Thelen: The Company accepted the order in the spirit in which it was made, and we are continuing to obey it until it is changed, and we are not raising the point no notice was given.

Mr. MacDonald: Mr. Boggs, do you feel that the order as of the date of September 19th is sufficient, or was it simply the legality of the order that you had in mind? Did you feel that the order should be amplified?

Mr. Boggs: The order as it exists here would not fully cover the conditions as set forth, and in that it states that all timbering shall not be removed, and follows in paragraph 2 "whereby the timbering will not be disturbed,"—as Mr. Peterson stated, there will be some sections where it will be necessary, under this modified plan, to alter the timbering.

Mr. MacDonald: If the order were modified to read: "All timbering in both the north and south tunnels shall not be removed and reset before concreting, except in such cases where square-sets are substituted for present timbering, and that the timbering thereafter be removed."

Mr. Boggs: I believe that would clarify it.

Mr. Tinning: As I understand the matter at the present time, there will be a certain amount of timber which will have to be trimmed or reset, but it would not be so removed—it would be only the square-sets that would be removed. The vertical segment and arch would stand.

Mr. Peterson: I think the word "reset" is what the discussion really pertains to.

Mr. Reardon: Could the specification read that where out of alignment they should be taken down and reset—that is removing. Now, isn't it a fact that in some of the timbers, there are four inches on each side out of alignment in that tunnel? Now, if that is carried out, we should have to take them down and set them up again, is that not right?

Mr. Peterson: Substantially so, and we would have some other construction to hold it while that is being done.

Mr. Thelen: May I make a suggestion which is directed to the same end you have in mind—so that it will read: "Timbering in both the north and south tunnels shall not be removed and reset before concreting, except in such special instances and under such conditions as the representative of the Industrial Accident Commission on the ground may authorize." That would give you absolute control of the situation.

Mr. Tinning: That would be satisfactory, providing it be understood that there be no intrusion under that section. We expect to have that modified plan there to follow—without intrusion of timber.

Mr. MacDonald: I think it leaves it exclusively in your authority. It is simply with regard to moving the timber.

Mr. Tinning: I thought the wording was such that it might be thought that we would be eliminating consideration of this modified section. It gives you ten inches right there. It only carries where your timbers have intruded more than that, and you eliminate a very large proportion on movement.

Mr. Reardon: That is the business of Mr. Reinhardt and Mr. Lowell of this Commission, and nothing is taken up without their recommendation, or passed upon by Mr. Reinhardt, who is our engineer. Your specifications read just what I have repeated, and Mr. Reinhardt said if you trim, it takes out the tensile strength.

Mr. Tinning: I hope that the order can embody some reference to this section, so that there may be no misunderstanding.

Mr. MacDonald: My thought was that the one clause, amplified as suggested in the language of Mr. Thelen, would cover the entire situation, and that the Commission would rescind the second one, which is not an order, and that will leave it one order dealing solely with the question of timbering, as the order of the Commission, and will recognize, perfectly agreeable I am sure, to the company, the right of the District to reset these, if the contractor accepts this modification of size, and that will be strictly a matter between you and the contractors.

Mr. Tinning: That is satisfactory, providing the order itself is clear with respect to some plan. I did not want it to say that all timber shall not be reset by concreting—it would have to be all timbering outside of this section may be moved under the direction of the Commission, or in a manner satisfactory to the Commission's engineers—something of that kind.

Mr. MacDonald: Can't we add to the clause—it is what you suggested, Mr. Thelen—say, for instance, so that the work may be constructed in accordance with the agreed modified construction plans contained in "Preliminary Joint Highway District No. 13, State of California, Alameda County, Contra Costa County, Modification Type A section," dated September 21, 1935. That will identify it. Is that perfectly agreeable?

Mr. Reardon: We have heard from the contractor's engineer and the District's engineer, but we have not yet heard from our own engineer, and,

as I said before, our guiding spirit is the engineer, and before we submit this, I would like to hear from our Mr. Reinhardt. You people have seen this blueprint—have you seen it, Mr. Reinhardt?

Mr. Reinhardt: Yes.

Mr. MacDonald: Mr. Reinhardt, do you feel that the modified construction will be a safe construction—for the purpose of the stipulations we are setting forth here today, for the completion of the tunnel work?

Mr. Reinhardt: Well, it is an improvement of about forty percent over the old method. We will never get one hundred percent, because the encroachments are too large in some places as much as 12 inches. I do not think it would be practical or possible to design a form that will clear the encroachments, but this will clear conditions anyway fifty percent, and with supervision over the removing the timbers, in which we cannot use this form, I do not see but what it can be done safely. Mention was made of square-setting—of course, the whole tunnel can be square-setted, but time is the essence of the hazard of this tunnel, and to square-set the tunnel will probably take four or five months, and in the four or five months, I would say the tunnel would probably be the same as it is today—so we are speeding the work, and I would estimate that in five weeks we would probably have the tunnel lined, and in the few cases where we have to take the timbers out, it can be safely done under the square-setting, and the proposed supervision. There is

nothing more that I can add. This is a mighty fine scheme, and think that it should be done. In my estimation I think it is the maximum that can be done and still keep our original tunnel.

Mr. MacDonald: In order that I may be clear—it is the intent to only use square-sets where timbers are to be removed?

Mr. Boggs: That is up to the contractor.

Mr. Reinhardt: That is up to the Commission it might have to remove these timbers.

Mr. MacDonald: But there is no intention for the substitution of the general construction with square-sets—it is only to use square-sets where you have to remove the timber in order to put in the proper concrete form.

Mr. Tinning: The District does not control the matter of construction; you will have to ask the contractor.

Mr. MacDonald: It is my understanding that square-sets are only to be used in such cases where you have to remove present timber.

Mr. Peterson: That is correct. We are using a rather popular term when we call them square-sets—it is square-setting—I think that might be a little nearer the proper statement, or I would say other equipment in construction, acceptable to the safety engineers—I think the safety engineers should govern, even in the use of the square-setting method.

Mr. Thelen: That is why I made the suggestion leaving the authority in all special cases in your own hands.

Mr. Reardon: It leaves the responsibility right up to you, then, Mr. Reinhardt.

Mr. Reinhardt: There is no objection to that.

Mr. MacDonald: Mr. Thelen, you wouldn't take unfair advantage?

Mr. Thelen: Absolutely not—I think you are absolutely competent.

Mr. Reinhardt: There is no objection to assuming responsibility, and the only difficulty is the time allowed for inspection. If I am to be there every day, I will be glad to assume responsibility for what I know, with the capable assistance of Mr. Jarrett, who is there, but, of course, I could not be responsible when I am not there. If I am on the bridge, I could not be over on the tunnel, and that is the drawback to the arrangement it seems to me.

Mr. Tinning: Would there be any chance of assigning this gentleman for the four or five weeks that it would take to complete this emergency work, and keeping him there?

Mr, Reardon: No. This Department is unfortunately curtailed not only for the tunnel work, but every department. Mr. Reinhardt, you say this plan would increase the efficiency about 40 percent, but never 100 percent, and then further on in your testimony you said 50 percent better than at the present time. How far would you go on record here that this plan submitted, these blueprints submitted, are as near as possible of making that tunnel secure?

Mr. Reinhardt: Yes, I think I have made that statement. In other words, the plan is the maximum that we can obtain in point of design and still maintain our original tunnel.

Mr. Reardon: As a safety measure, you don't question the designing of that tunnel do you?

Mr. Reinhardt: No, not at all. What I was thinking of when I mentioned the original tunnel was the size and amount of clearance, and so forth.

Mr. Reardon: Are you familiar with these blueprints?

Mr. Reinhardt: Yes.

Mr. Reardon: And you, Mr. Tinning, are you familiar with them?

Mr. Tinning: As much as I am with any blueprints—I can't read them.

Mr. Reardon: Mr. Boggs, you are familiar with the blueprints, and that they are acceptable to you people?

Mr. Boggs: Yes—this is acceptable to us.

Mr. Thelen: We have stated on the strength of Mr. Peterson's statement that is agreeable to us.

Mr. Peterson: We understand this to be a preliminary drawing. We have steel forms already built, and we will assume that the steel forms which we have can be modified in a reasonable way to build this structure, and I think we understand each other on that point, and the contractor is willing to make these modifications.

Mr. Reardon: Well, the three people interested are satisfied. Now, Mr. Lowell, we have not heard from you—you know that tunnel—what is your opinion?

Mr. Lowell: I am not on the tunnel now, but my recommendation to the Commission is that this be the plan—that is, lower the forms so that they could put in the concrete of the proper thickness, without removing the timbers. I made three recommendations, and the first and second were not acceptable, could not be agreed upon, and then the third one, which was the least to be desired.

Mr. Reardon: Read the report, Mr. Burke.

Mr. Burke (reading):

"1. The writer recommends that the Joint Highway District engineers and the engineers for the Six Companies of California agree upon a plan whereby the concreting of the remaining unconcreted portion of the tunnels be done by lowering the forms in the arched section sufficiently so that it will not be necessary to remove and reset new timbers or cut back the present timbers. In that portion of the tunnel where it is necessary to support the timbers, wooden forms shall be constructed around the timber supports and after the forms have been removed, the supports shall be removed and the holes filled with concrete. Other portions of the tunnel where timbers are not supported, steel forms for concreting might be used.

"2. If No. 1 recommendation is not agreed upon, the writer recommends that structural steel shapes be used for tunnel sets and these sets are to be placed between the present wooden sets and allowed to extend 4 inches beyond the neat line of the concrete structure if necessary. This is allowed under Section 32, paragraph 5, under the heading of 'overbreak.' The wooden timbers may then be trimmed back to the neat line and the pouring of concrete proceed as in No. 1.

"3. If numbers 1 and 2 are not acceptable, then the writer recommends supports of all timber sets in heavy ground by square sets and timbers cut back a reasonable distance and others replaced where they have encroached too far. The concreting shall be done with built-in wooden forms and the timber supports removed after the concrete has set and the holes filled with concrete. This suggestion is less desirable than No. 1 or No. 2 but in the opinion of the writer can be done successfully and safely.

"4. It is recommended that in future the arch timbers shall consist of 8 segments instead of 7. In other words, instead of there being a flat top segment, there shall be two segments. The cost of this change, including the added concrete cost, in the judgment of the writer, should be adjusted as is provided under the heading of 'adjustments' in Section 6

of the General Provisions in the Specifications, page 5, paragraph (g), which reads as follows:

"Alterations: 'In case of reduction or increase in quantities of work, by reason of alterations or any cause whatsoever, the Contractor shall accept payment in full at the contract unit prices for the actual quantities of work done and no allowance will be made for anticipated profit due to such reduction or increase.'

"5. It is suggested that in future, the open portion of the fully excavated tunnel be concreted as near to the face of the excavated core as can be done safely without injury to the concrete from blasting and this concreting continue simultaneously with the driving of the headings

(Signed) FRED L. LOWELL."

Mr. Reardon: An objection, Mr. Boggs?

Mr. Boggs: No. I think Mr. Lowell's recommendations, in general, are possible to follow and probably will meet the conditions for safety and accelerate the work .

Mr. Reardon: Mr. Peterson, you heard that?

Mr. Peterson: I think Mr. Lowell's statement covers quite a number of details, some of which we would make use of in the actual work of building forms, etc., and this is what we refer to in the general statement of Mr. Thelen's outline. I think Mr. Thelen's statement, with the addition that was added, covers the thing in a very broad manner.

Mr. Reardon: Mr. Reinhardt, you are familiar with that?

Mr. Reinhardt: That is all right. I think it is along the same lines we are working.

Mr. Reardon: Well, there will be no disagreement when I get through. You fellows will all agree.

Mr. MacDonald: May I ask this question. It is my understanding that there is urgent need of placing the concrete just as rapidly as possible. Am I correct in understanding that it is the intention of the contractors to proceed forthwith with the tunnel lining with reinforced concrete, prior to doing any further excavation work in the two headings?

Mr. Thelen: Yes, that is correct.

Mr. MacDonald: I wish the record to show that.

Mr. Thelen: And furthermore, if I may suggest at this time—I would like to ask Mr. Tinning as to whether it is agreeable to the District if the Commission makes an order along the lines here agreed upon, that we should go ahead and do the work without waiting for the formal order?

Mr. Tinning: It is entirely agreeable with us, I can say for the Board of Directors and Mr. Boggs, that we do have this factor we should consider. I think from our discussion with the State, it will take about 48 hours to get that from the State, but we don't know how long it will take to get the special approval from the Bureau of Public Roads, because it has to come from Washington. We

started the movement as soon as we received this order, we started the machinery of getting it moving rapidly, and we understand it will be given us by wire from Washington, but there may be some delay in that, but we have everything ready, and we will move as rapidly as possible, but it is possible we may have some suggestion from some one in Washington, but as far as the District is concerned, within its power, we are willing to go ahead on that basis.

Mr. Thelen: May I say that I realize that, and that was the reason why I asked the question. I wanted to know if we couldn't go ahead, giving the District the time necessary.

Mr. Tinning: I understand you have 100 feet of the tunnel section where you can go to work immediately without having to reset the timber.

Mr. Peterson: That is only with one set of forms. We are anxious to get all four sets going. We can then work about five times as fast.

Mr. Tinning: In view of our past experience I am rather hesitant to say "sure," because I know there may be some holdup in Washington, but everything seems favorable to proceed immediately.

Mr. Thelen: Then may I say to the members of the Commission, if the Commission will get the order that is agreeable, we will go ahead right away, on the assumption that we will get an order from the District, and will not wait for the technicality of this consent from Washington.

Mr. Tinning: I am speaking for the District, but with the reservation that we do have to finally get this order from the P.W.A., or the Bureau of Public Roads, whichever one has jurisdiction in this matter, to make an order authorizing us to make this change—we cannot do it until we have that authority, and we started Friday trying to get that through.

Mr. Reardon: Mr. Peterson, you made some statement that the position of the work could go ahead without referring to the original design of the tunnel?

Mr. Peterson: There is about 200 feet of the tunnel which can be lined. We are anxious, however, the contractor is anxious to work at about four other places, so that we may proceed five times as fast as it is now proceeding, because, as Mr. Reinhardt points out, we have not only the matter of handling timber, but we have the problem of the weather, which will affect the situation materially, and will add to hazards, so time is a very important factor.

Mr. Reardon: Mr. Reinhardt, is that your opinion also?

Mr. Reinhardt: Yes, sir.

Mr. Reardon: That is about all we can do—to proceed with this job under this blueprint.

Mr. MacDonald: May I ask a question of the engineer of the Six Companies? In the recommendation of Mr. Lowell here, he states: "It is recommended that in future the arch timbers shall

consist of 8 segments instead of 7. In other words, instead of there being a flat top segment. there shall be two segments." Mr. Lowell makes that recommendation, because he feels it is practically a flat arch on the top two segments, and he is fearful you may have another cave-in. Is it your intention to change from a 7 segment to an 8 segment arch there?

Mr. Peterson: I would say, with regard to that, that if it is necessary to use a heavier member on the top, the contractor will do that. We will do anything that is necessary to make that timbering safe.

Mr. MacDonald: Yes, the heavier timber abutting on the lighter frame below, safeguarded. It is not the question alone of the size, but it is the thrust of the ground coming down on that.

Mr. Peterson: I don't think I am prepared to speak on that point. I would rather leave the situation in the position that the contractor will be glad to go over this matter with the Engineer of the Commission, and give it thought, and not give an answer off-hand. We can assure the Commission, however, that we will follow construction which is safe and sufficient for the condition, so far as the size and shape of the timber is concerned. We would rather give more careful consideration to the number of timbers or changes.

Mr. Reardon: Does any one want to say anything further before we leave this room?

Mr. MacDonald: Mr. Muire, you have built a wonderful tunnel that is standing up.

Mr. Thelen: May we thank the Commission for the consideration you have given us.

Mr. MacDonald: Gentlemen, we thank each and every one of you who have come here and assisted, and we appreciate the fine spirit that has been shown here, and we hope with your cooperation, that we will finish the tunnel without any further catastrophe or loss of life.

Mr. Bechtel: We want to do whatever we can in the safest way possible, and will cooperate with you and with the District, and we shall continue to do so.

Meeting adjourned.

[Endorsed]: U. S. Dist. Ct. N. D. Cal. No. 20101-R. Deft's. Ex. No. U U U. Filed April 28, 1938. Walter B. Maling, Clerk. By J. A. Schaertzer, Deputy Clerk.

Tightly Bound

DEFENDANT'S EX. O-4.

Grant Agreement, dated as of March 9, 1934, between Joint Highway District No. 13 of the State of California (herein called the "First Party"), and the United States of America (herein called the "Second Party").

Whereas, the Second Party, acting in conformity with Title II, National Industrial Recovery Act, (herein called the "Act"), approved June 16, 1933, is authorized and empowered to grant to any State, Municipality or other public body not in excess of 30 per centum of the cost of the labor and materials employed upon any public works project of any such State, municipality or other public body when such project has been included in the comprehensive program prepared pursuant to Section 202 of the Act; and

Whereas, the First Party has duly filed with the Second Party an application (Docket Number 2231) for a Grant to aid in financing the construction of the highway improvements described in Paragraph 2, Part One (herein called the "Project"), to be owned and operated by the First Party; and

Whereas, the First Party has represented that it (a) has full power to and will undertake and complete the Project; (b) will provide from lawful sources, funds, which, together with the amount to be represented by the Grant, will be sufficient to pay all costs thereof; and (c) will apply such Grant

solely to the cost of constructing the Project; and

Whereas, with a view to increasing employment quickly, and to aid said First Party in financing the Project, upon the foregoing representations, said Project has been included in said comprehensive program:

Now, therefore, the First Party and the Second Party hereby agree:

Part One

PROCEDURE AND GENERAL PROVISIONS

1. Amount, Use and Purpose. Subject to the terms and conditions set forth below, the Second Party will grant to the First Party an amount not to exceed 30 per centum of the cost of the labor and materials employed upon the Project, (such amount being herein called the "Grant"), but in no event to exceed in the aggregate $1,095,000. The First Party will accept the Grant, and will construct the Project in accordance with plans and specifications submitted to and approved by the Second Party, all pursuant to Title II of the Act, the rules and regulations adopted by the Second Party relative thereto, and the Constitution and Statutes of the State of California.

2. The Project. The Project (more fully described in the application of the First Party), to aid in the financing of which the Grant will be made, is substantially as follows: The construction of 2.82 miles of main highway, 40 feet wide, with asphaltic macadam surface on rock base, in-

cluding twin bore tunnels averaging 2,910 feet in length; 3 reinforced concrete overhead structure; 1 reinforced viaduct; 1 reinforced concrete railway grade separation structure; 2 portal buildings housing ventilation equipment; and retaining walls and drainage facilities; all with such minor alterations or modifications thereof or additions thereto as may from time to time, be approved by the Second Party before or during the course of construction.

3. Preliminary Proceedings by First Party. Promptly after receipt from the Second Party of an unexecuted copy of this Agreement, the First Party will;

(a) Adopt a resolution approving this Agreement, and authorizing and directing the execution and delivery thereof by the officials designated to sign the same on its behalf;

(b) Send to the Second Party complete extracts from the minutes of the meetings of the First Party's governing body showing all proceedings taken incident to such authorization, including a copy of said resolution, all duly certified, and three signed copies of this Agreement;

(c) Commence all necessary proceedings, if any, to authorize the construction of the Project, and to obtain funds, which, together with the amount to be represented by the Grant, will be sufficient to pay all the costs of constructing the Project. The term "cost of constructing the Project", as used in this Agreement, shall include all costs of acquir-

ing all necessary lands, easements, franchises, and rights-of-way necessary to the completion and operation of the Project;

(d) Apply for all necessary authorizations, permits, licenses and approvals from Federal, State, county, municipal and other authorities for the construction of the Project;

(e) Submit to the Second Party plans, drawings, and specifications of the work and materials called for by all contracts let, or proposed to be let; the latest data as to the expected cost of the Project; a statement as to when and how it is proposed to advertise for bids and to let contracts for work; forms of bids, and copies of the advertisements thereof if heretofore advertised; a statement as to when it is proposed to acquire the necessary lands, easements, franchises, and rights-of-way; and any other details or data that may be requested by the Second Party's engineers.

4. Construction of Project. On or before the date of the execution by the Second Party of this Agreement, the First Party may, and within such time thereafter, as shall be satisfactory to the Second Party, the First Party will commence or cause to be commenced the construction of the Project and will thereafter continue the same with all practicable dispatch, in an efficient and economical manner, at a reasonable cost, and in accordance with plans, drawings, specifications and construction contracts which shall be in form and substance as approved by the Second Party, and in accord-

ance with such engineering supervision and inspection as the Second Party or its representatives may require. Except with the prior written consent of the Second Party, no materials or equipment for the Project shall be purchased by the First Party subject to any chattel mortgage or to any conditional sale or title retention agreement.

5. Completion of Proceedings. As soon as practicable after the execution by the Second Party of this Agreement, the First Party will complete all necessary proceedings and procure all necessary authorizations, permits, licenses, and approvals referred to in Paragraph 3 (c) and (d), Part One, hereof; will obtain the necessary funds, or will take appropriate proceedings to legally obtain the necessary funds, which, together with the amount to be represented by the Grant, will be sufficient to pay all costs of constructing the Project; and will lawfully acquire all lands, easements, franchises, and rights-of-way necessary to the completion of the Project, and to put the Project in operation.

6. First Requisition. After the First Party shall have complied with the requirements of Paragraphs 3 and 5, Part One, hereof, and shall have expended not less than fifty per centum of the estimated cost of constructing the Project, the First Party may, at any time thereafter, file with the Second Party a requisition, requesting the Second Party to pay to the First Party, as provided in Paragraph 7, Part One, hereof, the first portion of the Grant, such requisition to be accompanied by:

(a) One certified copy of each necessary authorization, permit, license and approval from Federal, State, county, municipal and other authorities for the construction of the Project;

(b) A signed and dated opinion of the duly qualified and acting attorney of the First Party to the effect that the First Party has complied with all the requirements of Paragraph 5, Part One, hereof, and that all such proceedings are in accordance with the Constitution and Statutes of the State of California. Such opinion shall also state that the First Party has lawfully obtained and/or arranged to obtain the funds, which, together with the amount to be represented by the Grant, may be used lawfully to pay all costs of constructing the Project;

(c) A signed and dated affidavit of a duly authorized officer of the First Party, approved by the engineer or architect in responsible charge of construction of the Project, covering in such detail as the Second Party's engineers request:

(1) The purposes for which the First Party proposes to expend such portion of the Grant;

(2) An accounting for all deposits in and expenditures from the special account or accounts referred to in Paragraph 2, Part Three, hereof;

(3) The cost of the labor and materials employed upon the Project to the date thereof;

(4) The quantities of work actually completed to the date thereof;

(5) The amount of funds expended upon the Project to the date thereof; and

(6) The amount of funds expended to the date thereof for labor and materials employed upon the Project;

(d) A signed and dated no-litigation certificate of the duly qualified and acting attorney of the First Party; and

(e) A statement by each bank in which have been deposited, in the special account or accounts referred to in Paragraph 2, Part Three, hereof, the funds for the construction of the Project, showing all deposits made therein and the balance then remaining in each such special account.

The requisition and each of the documents accompanying same shall be in form and substance satisfactory to the Second Party, and, except for those described in Paragraph 6 (a) Part One, hereof, shall bear the same date.

7. First Payment. If such requisition and documents accompanying the same are satisfactory to the Second Party, then, subject to the terms and conditions of this Agreement, upon reasonable notice to the First Party, and within a reasonable time after the receipt by the Second Party of such requisition and other documents, (but not earlier than ten days after the receipt thereof, unless the Second Party shall waive such time limit), the Second Party will pay to the First Party an amount equal to twenty-five per centum of the total cost of the labor and materials employed upon the Project, as, in the opinion of the Second Party, is shown

in all statements theretofore approved by the Second Party. Such payment will be made at the Federal Reserve Bank of San Francisco, San Francisco, California, or at such other place or places as the Second Party may designate, against delivery by the First Party of its receipt therefor.

8. Intermediate Requisitions. From time to time after such first payment, but not oftener than once in thirty days, (unless otherwise satisfactory to the Second Party), the First Party may file requisitions with the Second Party, requesting the Second Party to make additional payments on account of the Grant, each such requisition to be accompanied by:

(a) Documents corresponding to those described in Paragraph 6 (b) and (d), Part One hereof;

(b) A signed and dated affidavit of a duly authorized officer of the First Party, approved by the engineer or architect in responsible charge of construction of the Project, covering in such detail as the Second Party's engineers may request:

(1) The purposes for which the First Party proposes to expend such portion of the Grant;

(2) An accounting for all expenditures theretofore made on the Project, in so far as such expenditures have not been previously so accounted for;

(3) The cost of the labor and materials employed upon the Project to the date thereof;

(4) The quantities of work actually completed to the date thereof;

(5) The quantities of work actually completed during each of the periods between all respective requisitions;

(6) The amount of funds expended upon the Project during each such period; and

(7) The amount of funds expended during each such period for labor and materials employed upon the Project;

(c) A statement by each bank in which have been deposited, in the special account or accounts referred to in Paragraph 2, Part Three, hereof, the funds (including any previous payments on account of the Grant) for the construction of the Project, showing the balance then remaining in each special account, provided no such statement need be submitted by any bank in which no such balance remains on deposit and which has previously so certified.

The requisition and each of the documents accompanying the same shall be in form and substance satisfactory to the Second Party and shall bear the same date.

9. Intermediate Payments. If such requisition and documents accompanying same are satisfactory to the Second Party, then, subject to the terms and conditions of this Agreement, upon reasonable notice to the First Party, and within reasonable time after receipt by the Second Party of such requisition and other documents, the Second Party

will pay to the First Party an amount equal to 25 per centum of the cost of the labor and materials employed upon the Project, not exceeding, however, with all previous payments on account of the Grant, an amount equal to 25 per centum of the total cost of such labor and materials as shown in the statements theretofore approved by the Second Party, but in no event, to exceed, together with all such previous payments, in the aggregate, the sum of $912,500. Each such payment shall be made at the place or places as hereinbefore provided for, against delivery by the First Party of its receipt therefor.

10. Final Requisition. When the Project has been completed and all costs in connection therewith have been determined, then the First Party may file the final requisition with the Second Party, requesting the Second Party to make the final payment on account of the Grant. Such requisition shall be accompanied by:

(a) Documents corresponding to those described in Paragraph 6 (b) and (d), and Paragraph 8 (c), Part One, hereof:

(b) An affidavit corresponding to that described in Paragraph 8 (b), Part One, hereof, which shall also be approved by the Government Engineer:

(c) An affidavit by the engineer or architect in responsible charge of construction of the Project, (which shall be approved by the Government Engineer), showing, among other things, and in such detail as shall be satisfactory to the Second Party;

(1) The quantities of work completed during each of the periods between the dates of each respective requisition;

(2) The cost of labor and materials employed upon the Project, the total cost of the Project, and separately, the amounts of such cost expended; and

(3) The completion of the Project in accordance with the plans and specifications therefor.

The term "Government Engineer" as used herein, shall mean the State Engineer (P.W.A.), or his duly authorized representative, or any person to whom his duties or functions may be transferred by the Federal Emergency Administration of Public Works, or its successors.

11. Final Payment. If such requisition and the documents accompanying the same are satisfactory to the Second Party, then, subject to the terms and conditions of this Agreement, upon reasonable notice to the First Party, and within a reasonable time after receipt by the Second Party of such requisition and other documents, the Second Party will pay to the First Party a sum of money, which, together with all payments theretofore made on account of the Grant, shall not exceed 30 per centum of the cost of labor and materials employed upon the Project, but in no event, to exceed, in the aggregate; together with all such previous payments, the sum of $1,095,000. Such final payment shall be made at the place or places as hereinbefore provided

for, against delivery by the First Party of its receipt therefor.

Part Two

CONSTRUCTION CONTRACTS.

In Consideration of the Grant the First Party Covenants That:

1. Construction Contracts. All construction contracts made by the First Party and all subcontracts for work on the Project shall be subject to the rules and regulations adopted by the Second Party to carry out the purposes and control the administration of the Act, and shall contain provisions appropriate to insure that:

(a) Convict Labor. No convict labor shall be employed on the Project, and no materials manufactured or produced by convict labor shall be used on the Project.

(b) 30-Hour Week. Except in executive, administrative and supervisory positions, so far as practicable and feasible in the judgment of the Second Party, no individual directly employed on the Project shall be permitted to work more than thirty hours in any one week, but in accordance with rules and regulations from time to time made by the Second Party, this provision shall be construed to permit working time lost because of inclement weather or unavoidable delays in any one week, to be made up in the succeeding twenty days.

(c) Wages.

(1) All employees shall be paid just and reasonable wages which shall be compensation sufficient to provide, for the hours of labor as limited, a standard of living in decency and comfort;

(2) All contracts and subcontracts shall further prescribe such minimum wage rates for skilled and unskilled labor as may be determined by the Second Party and shall be subject to all rules and regulations which the Second Party may promulgate in connection therewith. Such minimum rates, if any, shall also be stated in all proposals of bids submitted, including those of subcontractors; and a clearly legible statement of all wage rates to be paid the several classes of labor employed on the work shall be posted in a prominent and easily accessible place at the site of the work. All contractors shall keep a true and accurate report of the hours worked by and the wages paid to each employee and shall furnish the Second Party with sworn statements thereof on demand;

(3) All employees shall be paid in full not less often than once each week and in lawful money of the United States of America in the full amount accrued to each individual at the time of closing of the pay roll, which shall be at the latest date practicable prior to the date of payment, and there shall be no reduction on account of goods purchased, rent, or other obligations, but such obligations shall be subject to collection only by legal process.

(d) Labor Preferences. Preference shall be given, where they are qualified, to ex-service men

with dependents, and then in the following order:

(1) To citizens of the United States and aliens who have declared their intention of becoming citizens, who are bona fide residents of the County of Alameda or the County of Contra Costa, State of California; and

(2) To citizens of the United States and aliens who have declared their intention of becoming citizens, who are bona fide residents of the State of California, provided, that these preferences shall apply only where such labor is available and qualified to perform the work to which the employment relates.

(e) Employment Services. To the fullest extent possible, labor required for the Project and appropriate to be secured through employment services, shall be chosen from lists of qualified workers submitted by local employment agencies designated by the United States Employment Service; provided, however, that organized labor, skilled and unskilled, shall not be required to register at such local employment agencies but shall be secured in the customary ways through recognized union locals. In the event, however, that qualified workers are not furnished by the union locals within 48 hours (Sundays and holidays excluded) after request is filed by the employer, such labor may be chosen from lists of qualified workers submitted by local employment agencies designated by the United States Employment Service. In the selection of

workers from lists prepared by such employment agencies and union locals, the labor preferences provided in Paragraph 1 (d), Part Two, hereof, shall be observed in accordance with such rules and regulations as the Second Party may prescribe.

(f) Human Labor. In accordance with such rules and regulations as the Second Party may prescribe, the maximum of human labor shall be used in lieu of machinery wherever practicable and consistent with sound economy and public advantage; and to the extent that the work may be accomplished at no greater expense by human labor than by the use of machinery, and labor of requisite qualifications is available, such human labor shall be employed.

(g) Accident Prevention. Every construction contract for work on the Project shall contain an undertaking to comply with all applicable provisions of the laws and building construction codes of the State, Territory, District and/or municipality in which the work is done, and with any regulations for the protection of workers which may be promulgated by the Second Party.

(h) Compensation Insurance. Every construction contract for work on the Project shall contain a provision requiring the employer to furnish compensation insurance for injured workers and to give proof of such adequate insurance satisfactory to the Second Party.

(i) Persons Entitled to Benefits of Labor Provisions. Every person who performs the work of a laborer or of a mechanic on the Project, or any part thereof, shall be entitled to the benefits of the labor and wage provisions hereof, regardless of any contractual relationship between the contractor or subcontractor and such laborer or mechanic. There shall be no discrimination in the selection of labor on the ground of race, creed or color.

(j) Bonding of Contracts. Construction contracts shall be supported by adequate surety or other bonds or security satisfactory to the Second Party for the protection of labor and material-men employed on the Project or any part thereof.

(k) Materials. So far as articles, materials, and supplies produced in the United States are concerned, only articles, materials and supplies produced under codes of fair competition adopted pursuant to the provisions of Title I of the Act, or under the President's Reemployment Agreement, shall be used in work on the Project, except when the Second Party determines that this requirement is not in the public interest or that the consequent cost is unreasonable. So far as feasible and practicable, and subject to the above, preference shall be given to the use of locally produced materials, if such use does not involve higher cost, inferior quality, or insufficient quantity, subject to the determination of the Second Party; but there shall be no requirements providing price differentiations for

or restricting the use of materials to those produced within the Nation or State.

(l) Inspection and Records. The Second Party, through its authorized agents, shall have the right to inspect all work as it progresses and shall have access to all pay rolls, records of personnel, invoices of materials, and other data relevant to the performance of the contract.

(m) Reports. Subject to such rules and regulations as the Second Party may prescribe, contractors and subcontractors shall make reports in triplicate to the Second Party monthly within five days after the close of each calendar month on forms to be furnished by the United States Department of Labor, which reports shall include the number of persons on their pay rolls; the aggregate amount of the pay rolls; the man-hours worked; wage scales paid to various classes of labor; and the total expenditures for materials. The contractors shall also furnish to the Second Party the names and addresses of all subcontractors at the earliest dates practicable.

(n) Compliance With Title I of the Act. All contractors and subcontractors must comply with the conditions prescribed in Section 7 (a) (1) and Section 7 (a) (2) of Title I of the Act.

2. Restriction as to Contractors. No contract shall be let to any contractor or subcontractor who has not signed and complied with the applicable

approved code of fair competition adopted under Title I of the Act for the trade or industry or subdivision thereof concerned, or, if there be no such approved code, who has not signed and complied with the provisions of the President's Reemployment Agreement.

3. Termination for Breach. The First Party will enforce compliance with all provisions of this part of this Agreement, and, as to any work done by it in connection with the construction of the Project, will itself comply therewith. All construction contracts shall provide that if any such provisions are violated by any contractor or subcontractor, the First Party may with the approval of the Second Party, and shall at the request of the Second Party, terminate by written notice to the contractor or subcontractor, the contract of such contractor or subcontractor, and have the right to take over the work and prosecute the same to completion by contract or otherwise and such contractor or subcontractor and his sureties shall be liable for any excess cost occasioned thereby and/or, if so requested by the Second Party, the First Party shall withhold from such contractor or subcontractor so much of the compensation due to him as may be necessary to pay to laborers or mechanics the difference between the rate of wages required by the contract and the rate of wages actually paid to the laborers and mechanics.

4. Force Labor. Provided, however, that if prices in the bids are excessive, the First Party reserves the right, anything in this Agreement to the contrary notwithstanding, to apply to the Second Party for permission to do all or any part of the Project by day labor, upon such conditions as the Second Party may impose, with the understanding that all provisions in this Agreement, including those relating to labor, wages, hours and recruitment, shall be observed.

Part Three.

MISCELLANEOUS

1. Conditions Precedent to the Second Party's Obligations. The Second Party shall be under no obligation to make the Grant or any part thereof:

(a) Cost of Project. If the Second Party shall not be satisfied that the First Party will be able to construct the Project within the cost estimated at the time when the Grant was approved by it, unless, in the event that additional funds appear to the Second Party to be necessary in order to pay in full the cost of the construction of the Project, the Second Party shall be satisfied that the First Party will be able to obtain such funds, as needed, through additional borrowing or otherwise;

(b) Compliance. If the First Party shall not have complied, to the satisfaction of the Second Party, with all agreements and conditions contained

or referred to in this Agreement theretofore to be complied with by the First Party;

(c) Legal Matters. If the Second Party shall not be satisfied as to all legal matters and proceedings affecting the Project;

(d) Representations. If any representations made by the First Party in this Agreement or in the application for the Grant or any other data submitted by the First Party shall be found by the Second Party to be incorrect or incomplete in any material respect;

(e) Financial Condition. If, in the judgment of the Second Party, the financial condition of the First Party shall have changed unfavorably in a material degree from its condition as theretofore represented to the Second Party.

No waiver by the Second Party, express or implied, of any such condition shall constitute a waiver thereof as applied to any subsequent obligation of the Second Party under this Agreement.

2. Deposit of Proceeds. The First Party will deposit the Grant, and all funds which it has represented to the Second Party as on hand or hereafter available for the construction of the Project, in a bank or banks which are members of the Federal Reserve System, in a special account or accounts.

3. Disbursement of Proceeds. The First Party will expend the funds in such special account or accounts only in paying the cost of constructing the Project.

4. Information. During the construction of the Project, the First Party will furnish to the Second Party all such information and data as the Second Party's engineers may request as to the construction, cost and progress of the work.

5. Representations and Warranties. The First Party represents and warrants as follows:

(a) Authorization. All necessary authorization, permits, licenses and approvals from Federal, State, county, municipal and other authorities have been or will be obtained for the construction and operation of the Project.

(b) Litigation. No litigation or other proceedings are now pending or threatened which might adversely affect the powers and authority of the First Party in reference to the construction or financing of the Project, or the financial condition of the First Party.

(c) Fees and Commissions. No fee or commission has been or will be paid by the First Party or any of its officers, employees, agents or representatives, and no agreement to pay a fee or commission has been or will be entered into by or on behalf of the First Party or any of its officers, employees, agents or representatives, in order to secure the Grant hereunder.

(d) Affirmation. Every statement contained in this Agreement, in the application for a Grant, in any supplement thereto or amendment thereof, and any other data submitted or to be submitted to the

Second Party by or on behalf of the First Party is, or when so submitted will be, correct and complete, and no relevant fact materially affecting the Project or the financing thereof by the First Party has been or will be omitted therefrom.

6. Indemnification. The First Party will indemnify the Second Party against any loss or liability incurred by reason of any inaccuracy or incompleteness in any representation contained herein.

7. Use of Second Party's Name. Without the prior written consent of the Second Party, the First Party will not refer to this Agreement or to any Grant authorized or made hereunder as an inducement for the purchase of any securities of the First Party, and will not permit any purchaser from it of any such securities to do so.

8. Expenses. The First Party will pay all costs, charges and expenses incident to compliance with all the terms and conditions of this Agreement on its part to be complied with, including, without limiting the generality of the foregoing, the cost of preparing, executing and delivering to the Second Party all the documents required herein to be furnished by the First Party.

9. Supplemental Instruments. Upon request, the First Party will furnish such data, agreements and other instruments as the Second Party may deem necessary or desirable in connection with the performance of the obligations of the First Party under this Agreement.

10. Agreement Not for the Benefit of Third Parties. This Agreement is not for the benefit of any person or corporation other than the parties hereto.

11. Interest of Member of Congress. No Member of or Delegate to Congress shall be admitted to any share or part of this Agreement, or to any benefit to arise thereupon.

12. Miscellaneous. No rights of the First Party hereunder shall be assignable except with the prior written consent of the Second Party. All obligations of the First Party shall cease upon payment in full of all costs of constructing the Project. This Agreement contains the entire agreement between the parties, and shall be governed by and construed in accordance with the laws of the District of Columbia.

13. Undue Delay by the First Party. The Second Party shall have the right to rescind the allotment for the Project and annul any obligation to make a grant to the First Party unless the First Party shall within a reasonable time:

(a) Sign and return to the Second Party three copies of this Agreement; as provided in Paragraph 3, Part One hereof. (For the purposes of this subparagraph 13 (a) a reasonable time shall be deemed to be ten days in the ordinary course of events or such longer period as shall be allowed in the absolute discretion of the Federal Emergency Administrator of Public Works);

(b) Comply with all the provisions of Paragraph 4, Part One hereof.

The Federal Emergency Administrator of Public Works shall determine in his absolute discretion what constitutes a reasonable time within the meaning of this Paragraph 13.

In Witness Whereof, the First Party and the Second Party have respectively caused this Agreement to be duly executed as of the day and year first above written.

JOINT HIGHWAY DISTRICT No. 13 OF THE STATE OF CALIFORNIA.

[Seal] By THOMAS E. CALDECOTT,
President.

Attest:
HARRY M. STOW,
Secretary.

UNITED STATES OF AMERICA,
By HAROLD L. ICKES,
Federal Emergency Administrator of Public Works.

[Endorsed]: U. S. Dist. Ct. N. D. Cal., No. 20101-R. Defendant's Exhibit O-4. Filed May 26, 1938. Walter B. Maling, Clerk. J. A. Schaertzer, Deputy Clerk.

[Clerk's Note: Excerpt from stipulation of counsel re portions of record to be printed:

"(48). It is stipulated that an agreed statement of facts in the form hereto attached and marked 'Exhibit B' shall be printed in the record in lieu of defendant's exhibits X-1, X-2, X-4, to X-10 both inclusive, and X-12 to X-102, both inclusive."]

EXHIBIT "B"

AGREED STATEMENT OF FACTS PROVED BY DEFENDANT'S EXHIBITS X-1, X-2, X-4 TO X-10, BOTH INCLUSIVE, X-12 TO X-102, BOTH INCLUSIVE, WHICH EXHIBITS WERE OFFERED IN EVIDENCE BY DEFENDANT AND CROSS-COMPLAINANT AND RECEIVED IN EVIDENCE IN SUPPORT OF CROSS-COMPLAINT.

It Is Stipulated by and between all parties to this appeal that during the trial of the issues raised by the cross-complaint, defendant and cross-complainant offered and there was received in evidence defendant's exhibits Nos. X-1, X-2, X-4 to X-10, both inclusive, X-12 to X-102, both inclusive. These are formal documents, are lengthy and will greatly enlarge and encumber the record if included in the printed record on appeal.

It Is Further Stipulated that the printing of said exhibits may be omitted from the printed

record on appeal and this agreed statement of facts be printed in the record on appeal and considered in lieu thereof.

Said exhibits proved among other things the following facts:

After plaintiff ceased work on June 13, 1936, on the contract between plaintiff and defendant, and on August 17, 1936, the board of directors of defendant adopted a resolution approving a supplement to the specifications (Defs. Ex. X-3) describing the work then remaining to be done on the project of the District, which work had been left unfinished by plaintiff, which supplement made no change in the character or extent of the work from that required by the original contract between plaintiff and defendant, as applied to the then unfinished work. Said supplement was thereafter approved by the Director of the Department of Public Works of the State of California. Thereafter, after the adoption of a proper resolution by its board of directors, defendant advertised for the time and in the manner required by law for bids to be received on September 11, 1936, for a contract for the completion of its said project. No bids were submitted to defendant under its said call for bids.

On September 23, 1936, the board of directors of defendant adopted a resolution rescinding the supplement to the specifications approved August 17, 1936, and approved another supplement to the specifications (Defs. Ex. X-11) which described the un-

finished work and divided it into eight subdivisions called in said supplement Schedules A, B, C, D, E, F, G and H, and which provided for completing the work under eight separate contracts. The character and extent of the work to be done was not changed from that required by the original contract between plaintiff and defendant as applied to the unfinished work. Thereafter, said supplement was approved by the Director of the Department of Public Works of the State of California.

Defendant duly and regularly advertised for bids to complete the work specified in each of said schedules. Bids were received for performing the work included in each of said respective schedules and contracts were let accordingly in each case to the lowest responsible bidder respectively, one contract for each schedule of work. Defendant's Ex. X-11 was a part of each of said contracts and remained a part thereof until completion of same. The defendant paid the respective contractors under the respective schedules the amount specified in defendant's Ex. X-109. Thereafter the work was completed under each of said contracts and accepted by defendant. The work required to be done under said schedules collectively, was the identical work left unfinished by plaintiff when it ceased work on defendant's project on June 13, 1936; no new or additional work was included in any of the schedules or in any call for bids or in any new contract. All contracts were duly and regularly approved and

let in accordance with the law governing said District in the doing of public work.

The following is a tabulation showing in the various columns thereof the following facts:

Column 1. Title of schedule.

Column 2. Name of contractor for the schedule, to whom the contract was awarded, and who did the work on the schedule.

Column 3. Date on which contract was made between defendant and contractor named in Column 2.

Column 4. Date of actual completion of work.

Column 5. Amount or number of dollars deducted from contract price paid to contractor for the schedule as liquidated damages.

1. Schedule	2. Name of Contractor	3. Date of Letting Contract	4. Date of Completion	5. Liquidated Damages Deducted
A	Pollock & Clifford	Nov. 9, 1936	June 22, 1937	none
B	R. G. Clifford	Dec. 24, 1936	June 22, 1937	"
C	Fred K. Du Puy	Feb. 19, 1937	Nov. 27, 1937	$1[illegible],000
D	E. T. Lesure	Feb. 8, 1937	Dec. 1, 1937	none
E	Alta Electric & Mechanical Company, Inc.	Jan. 7, 1937	Dec. 1, 1937	"
F	Alta Electric & Mechanical Company, Inc.	Apr. 8, 1937	Sept. 4, 1937	"
G	Heafey-Moore Co.	Jan. 12, 1937	Nov. 9, 1937	"
H	Berkeley Steel Construction Company, Inc.	Apr. 30, 1937	Sept. 18, 1937	"

Of the above schedules, Schedule A was for the completion of excavation of tunnels and cross adit and completion of construction of concrete arch ring lining of tunnels and cross adit.

Schedule B was for the completion of grouting in the tunnels around the concrete ring which had been installed by plaintiff.

Schedule C was for the completion of tunnel construction remaining to be completed after concrete arch ring tunnel lining was constructed and grouting was completed.

Schedule D was for the completion of the ventilation buildings.

Schedule E was the completion of ventilation equipment, mechanical equipment and electrical equipment.

Schedule F was the furnishing and installation of carbon monoxide detectors and recorders.

Schedule G was the completion of highway construction and appurtenant structures.

Schedule H was for the construction and furnishing of certain steel structures.

It Is Further Stipulated that appellants and each of them by making this stipulation do not waive and shall not be considered as waiving any objections made at the trial or exceptions taken as to the admissibility of any such exhibits, nor do said appellants or any of them waive any defenses interposed to said cross-complaint.

The Parties Further Stipulate that if at any time during this appeal it should appear that the inspection of any of said original exhibits is necessary or desirable the court may examine such orig-

inals, all of which have been transmitted by the Clerk of the District Court to the Clerk of this Court. That if it further should appear that in order to comply with any rule of this court, or to properly determine this appeal, the whole or any portion of said exhibits to which this stipulation applies are required to be printed the appellant will forthwith print and furnish a supplemental record and file the same herein and cause all due and regular certification to be made thereto, and the said defendant and cross-complainant, the appellee herein, is not to be prejudiced in any way because of this stipulation or because it consents to the omission of the printing of said exhibits or any part thereof from the printed record.

DEFENDANT'S EXHIBIT X-3.

JOINT HIGHWAY DISTRICT No. 13.
OF THE
STATE OF CALIFORNIA.

SUPPLEMENT TO SPECIFICATIONS.

For Construction of Project of the District, Including Highway, Highway Tunnel and Approaches with Appurtenant Structures, Adopted March 30, 1933, as Amended and Supplemented by Amendments and Supplements to Said Specifications Adopted January 9, 1934 and April 3, 1934 Respectively.

JOINT HIGHWAY DISTRICT No. 13 OF THE STATE OF CALIFORNIA.

Office of
WALLACE B. BOGGS,
District Engineer
1448 Webster Street,
Oakland California.

Adopted August 17, 1936.

Supplement to Specifications for Construction of Project of the District, Including Highway, Highway Tunnel and Approaches with Appurtenant Structures, Adopted March 30, 1933, as Amended and Supplemented by Amendments and Supplements to said Specifications Adopted January 9, 1934 and April 3, 1934 Respectively.

PART I. STATEMENT OF CONDITIONS.

A Contractor under contract with Joint Highway District No. 13 of the State of California abandoned work on the project of this District described in said Specifications on or about the 13th day of June, 1936, after performing part of the work described in the Plans and Specifications for said project, and left uncompleted the remainder of such work substantially as hereinafter described.

This Supplement to said Specifications describes the work remaining to be performed on the project

of the District. All of the said work remaining to be done is to be performed in accordance with the Plans and Specifications adopted by the Board of Directors of Joint Highway District No. 13 of the State of California on the 30th day of March, 1933, as amended and supplemented by amendments and supplements thereto adopted on January 9, 1934 and April 3, 1934, respectively, and with this supplement thereto and in strict compliance with all of the terms thereof; with the intent and purpose on the part of the Contractor and this District that the work shall be completed in every part, in every respect in accordance with the said Plans and Specifications.

The Contractor who undertakes the completion of said project shall do and perform and complete every part of the work described in said Plans and Specifications now remaining unperformed or partly completed, in order that the project shall be completed in each and every part, in accordance with said Plans and Specifications.

Prospective bidders shall examine the site of the work and all structures and parts of structures forming a part of the project and are required to satisfy themselves as to the conditions there existing, and the amount of work remaining to be done to complete the project.

The following description of the work is an approximation or estimate of the work remaining to be done and it is hereby declared and shall be

understood by all prospective bidders that the quantities set forth herein or on the Proposal Sheet, or Notice to Contractors, or in any Contract executed hereunder are approximate only, and are given as a basis for comparison of bids, and any Contractor whose proposal is accepted shall, by the terms of his contract with the District, guarantee to furnish all labor, materials, tools, and equipment necessary to the completion of all work on the project and to perform all work necessary or incidental to the construction of the portions of the project remaining to be completed as detailed, specified, and intended so as to furnish upon completion of said contract the completed project as required by the Plans and Specifications.

In order to provide a proper method for payment for the work of completing the project of the District which has been partially constructed as hereinabove mentioned, it has become necessary to provide in this supplement for a different method of payment for certain items of the work remaining to be performed, than was provided for respecting payment for said items in the Specifications heretofore adopted. Wherever, in this supplement, a basis for payment for any part of the work is provided which differs, conflicts, or is at variance with the basis of payment provided for in other parts of the Specifications, the basis for payment set forth in this supplement shall govern.

Joint Highway District No. 13 of the State of California reserves the right to increase or decrease

the amount of any part or portion of the work, or to omit such portions of the work as the District Engineer may deem it necessary or expedient to omit.

Wherever the words "Plans and Specifications" are herein used, the same shall be construed as meaning the Plans and Specifications for the Project of the District adopted by the Board of Directors of Joint Highway District No. 13 of the State of California on the 30th day of March, 1933, as amended and supplemented by the amendments and supplements thereto adopted January 9, 1934, and April 3, 1934, respectively, and by this supplement thereto.

PART II. TIME OF COMPLETION.

The entire work as described under Part III of this Supplement to the Specifications shall be completed within a period of two hundred fifty (250) calendar days from the date of execution of the contract therefor.

PART III. DESCRIPTION OF WORK REMAINING TO BE PERFORMED.

Section 1. Grading.

The work remaining to be done under "Grading" consists of the completion of the excavation and filling of the roadway prism to specified grade and cross section, the construction of drainage ditches, the removal of slides and disposing of

surplus material, and the performance of all necessary work as required by the Plans and Specifications.

It is estimated that there are approximately forty-five thousand (45,000) cubic yards of material remaining to be excavated.

Overhaul to be performed as specified is estimated to be approximately five hundred thousand (500,000) station yards.

Section 2. Excavation for Structures.

The work remaining to be done under "Excavation for Structures" consists of excavation for structures for which the excavations have not yet been made, or have not yet been completed, and the necessary backfilling thereof; also backfilling of all other structures at all points where such backfilling is not at present completed as required by the Plans and Specifications.

It is estimated that there are approximately seven hundred (700) cubic yards of excavation remaining.

Uncompleted backfilling is estimated to consist of approximately four hundred (400) cubic yards. No measurement will be made or separate payment allowed for backfilling. Full compensation for furnishing all materials, labor, tools, implements, equipment and supplies, and doing all work incidental to backfilling shall be considered as included in the price paid for "Excavation for Structures."

Section 3. Subgrade.

The work remaining to be done under "Subgrade" consists of the construction of the subgrade in all places designated as required by the Plans and Specifications where pavement has not yet been laid.

It is estimated that there are approximately seven hundred two thousand seven hundred (702,700) square feet of subgrade remaining to be constructed.

Section 4. Shoulders.

The work remaining to be done for completion of "Shoulders" consists of the construction of shoulders at locations designated in the Plans and Specifications where the same have not yet been constructed, and the completion of shoulders partly constructed, but not yet completed, as required by the Plans and Specifications.

It is estimated that there are approximately two hundred forty-five thousand (245,000) square feet of shoulders remaining to be constructed, and that there are approximately one thousand eight hundred (1,800) square feet of partially constructed shoulders to be completed by the Contractor as required by the Plans and Specifications.

Section 5. Reinforcing Steel.

The work remaining to be done consists of the furnishing and placing of "Reinforcing Steel" at all locations as required by the Plans and Specifications; and also includes the brushing and cleaning, straightening and otherwise adjusting to conform

to the Plans and Specifications of all reinforcing steel already placed, but about which concrete has not been placed, which has been exposed to the elements, and which has become rusted or coated with dirt or other foreign material, or bent or deformed, all to conform to the Plans and Specifications, and to provide reinforcing for the completed structure.

It is estimated that there are approximately eight hundred twenty-seven thousand (827,000) pounds of reinforcing steel remaining to be furnished and placed.

Section 6. Steel Structures.

The work remaining to be performed under "Steel Structures" consists of the furnishing and placing of the trusses, which support the louver frames, between the approach walls at the portals at each end of tunnel, and the furnishing and placing, in the tunnels, as required by the Plans and Specifications, of the structural steel which has not yet been installed.

It is estimated that there are approximately one hundred forty thousand (140,000) pounds of structural steel in the trusses.

It is estimated that there are approximately five hundred fifty-three thousand (553,000) pounds of structural steel to be furnished and placed in the tunnels.

Section 7. Concrete Structures

The work remaining to be done for completion of "Concrete Structures" consists of the construc-

tion, as required by the Plans and Specifications, of a retaining wall on the South side of the Service Roadway at the West Portal; coping structures at ends of Approach walls at East Portal, walls at Margarido Drive and Buena Vista place; parapet walls and rails on the Landvale Overhead structures, on Landvale Viaduct and walls, and on East Portal Approach walls.

It is estimated that there are approximately four hundred thirty (430) cubic yards of Class "A" concrete remaining to be placed in these structures. (Tunnel and building concrete remaining to be furnished and placed is described in Sections twenty-one (21) and twenty-two (22) of this Supplement.)

Section 8. Portland Cement Concrete Pavement

The work remaining to be done under "Portland Cement Concrete Pavement" consists of all of the eight inch (8") Portland cement concrete pavement at East and West Portals, as required by the Plans and Specifications.

It is estimated that there are approximately thirty-seven thousand seven hundred (37,700) square feet of eight inch (8") Portland cement concrete pavement remaining to be constructed. The six inch (6") Portland cement concrete pavement required by the Plans and Specifications has been completed.

Section 9. Penetration Oil Macadam Pavement

The work remaining to be done under "Penetra-

tion Oil Macadam Pavement" consists of the construction of all penetration oil macadam pavement as required by the Plans and Specifications which has not yet been constructed, and also includes repairs to previously completed penetration oil macadam pavement necessary to make the same conform to the requirements of the Plans and Specifications. Penetration oil macadam pavement has been constructed on the Tunnel Road, and on the westerly approach road from its intersection with Broadway northeasterly a distance of approximately eight hundred (800) lineal feet. Penetration oil macadam pavement which requires repairs is located in the vicinity of the Pedestrian Underpass on the westerly approach road, and on the Tunnel Road.

It is estimated that there are approximately six hundred sixty-five thousand (665,000) square feet of penetration oil macadam pavement remaining to be constructed as required by the Plans and Specifications.

It is estimated that there are approximately eight thousand eight hundred (8,800) square feet of penetration oil macadam pavement which must be repaired to complete the same as required by the Plans and Specifications.

Section 10. Concrete Curb and Gutter

The work remaining to be done under "Concrete Curb and Gutter" consists of the construction of the following:

Six inch (6″) curb in the vicinity of Margarido Drive, Buena Vista Place, Golden Gate Avenue, and Pacific Gas and Electric Substation.

Twelve inch (12″) curb in the vicinity of Sacramento Northern Railway retaining wall and in the vicinity of the East and West Tunnel portals.

Gutter in the vicinity of Margarido Drive, Buena Vista Place, Golden Gate Avenue, Sacramento Northern Railway retaining wall, and Pacific Gas and Electric Substation.

All of said curb and gutter shall be constructed as required by the Plans and Specifications.

It is estimated that there are approximately one thousand two hundred (1,200) lineal feet of six inch (6″) curb, approximately nine hundred forty-five (945) lineal feet of twelve inch (12″) curb, and approximately two thousand five hundred (2,500) square feet of gutter, remaining to be constructed.

Section 11. Cement Sidewalks

The work remaining to be done under "Cement Sidewalks" consists of the construction of cement sidewalks in the vicinity of Pedestrian Underpass, Margarido Drive, Buena Vista Place, Golden Gate Avenue, Sacramento Northern Railway Retaining Walls, and the East and West Tunnel Portals as required by the Plans and Specifications.

It is estimated that there are approximately nine thousand (9,000) square feet of cement sidewalks remaining to be constructed.

Section 12. Corrugated Metal Pipe Culverts

The work remaining to be done under "Corrugated Metal Pipe Culverts" consists of the furnishing and installing of eight inch (8") diameter corrugated metal pipe culverts for drainage purposes along the roadway approaches; twelve inch (12") diameter corrugated metal pipe culverts for drainage purposes in the vicinity of the East Portal of the Tunnel; and eighteen inch (18") diameter corrugated metal pipe culverts for drainage purposes on the West Approach roads, all as required by the Plans and Specifications.

Fill protectors remain to be constructed for drainage purposes on the West approach roads, as required by the Plans and Specifications.

It is estimated that there are approximately one thousand (1,000) lineal feet of eight-inch (8") diameter corrugated metal pipe culvert remaining to be furnished and installed, approximately one hundred fifty (150) lineal feet of twelve inch (12") diameter corrugated metal pipe culvert remaining to be furnished and installed, and approximately five hundred (500) lineal feet of eighteen inch (18") diameter corrugated metal pipe culvert remaining to be furnished and installed.

It is estimated that there are nine (9) fill protectors remaining to be furnished and installed.

Section 13. Reinforced Concrete Pipe Culvert

The work remaining to be done under "Reinforced Concrete Pipe Culvert" consists of the furnishing and installing of approximately one hundred ninety (190) lineal feet of twenty-four inch

(24") diameter reinforced concrete pipe culvert, extra strength (X type), as provided in the Plans and Specifications, for drainage purposes in the vicinity of the West Portal.

Section 14. Vitrified Pipe Sewers

The work remaining to be done under "Vitrified Pipe Sewers" consists of the construction, completion and repair of manholes with standard tops, manholes with inlet tops, manholes with grating tops, storm water inlets and lamp holes.

It is estimated that the following manholes are to be furnished and installed; one (1) manhole with standard top, one (1) manhole with inlet top, three (3) manholes with grating tops, two (2) storm water inlets, Type "B," three (3) storm water inlets, Type "C"; one (1) lamphole is to be repaired.

These items are to be installed in the vicinity of the East and West Tunnel portals and on the approach roadways, all as required by the Plans and Specifications.

All vitrified pipe required to be furnished and installed has been furnished and installed except that required in the Tunnel, and Ventilation Buildings.

Section 15. Underdrains

The work remaining to be done under "Underdrains" consists of furnishing and installing eight inch (8") perforated corrugated metal pipe underdrains in the vicinity of the East and West Tunnel portals and along the West Approach roadways for drainage purposes, as required by the Plans and Specifications.

It is estimated that there are approximately two thousand one hundred (2,100) lineal feet of underdrains remaining to be furnished and installed.

Section 16. Piping

The work remaining to be done under "Piping" consists of the furnishing and installing of all of the six inch (6") diameter cast iron pipe together with all fittings and accessories, as required by the Plans and Specifications, outside the Tunnels and Ventilation Buildings. Piping within the Tunnels and Ventilation Buildings is provided for in Sections twenty-one (21) and twenty-two (22) of this Supplement.

It is estimated that there are approximately two thousand twenty (2,020) lineal feet of piping, cast iron, six inch (6") diameter, remaining to be furnished and installed, outside the Tunnels and Ventilation Buildings.

Section 17. Guard Rails and Pipe Hand Rails

The work remaining to be done under "Guard Rails and Pipe Hand Rails" consists of the construction of all guard rails required by the Plans and Specifications but not yet constructed. Seven hundred (700) lineal feet of guard rails have been constructed along the Tunnel Road.

It is estimated that approximately twelve thousand (12,000) lineal feet of guard rails required by the Plans and Specifications remain to be constructed.

Pipe hand rails remain to be constructed, as required by the Plans and Specifications, on walls, in the vicinity of Golden Gate Avenue, Temescal Culvert, Pacific Gas and Electric Substation, and underpasses.

It is estimated that approximately six hundred twenty (620) lineal feet of pipe hand rail remain to be constructed.

Pipe hand rails partially completed shall be finished and completed as required by the Plans and Specifications. All pipe hand rails already in place which have been damaged shall be repaired, or new material supplied to complete the same, all as required by the Plans and Specifications.

Section 18. Rip Rap

The work remaining to be done under "Rip Rap" consists of the construction of rip rap structures in the vicinity of the Landvale Overhead structure as required by the Plans and Specifications.

It is estimated that there are approximately ninety (90) cubic yards of rip rap remaining to be constructed.

Section 19. Paint and Painting

The work remaining to be done under "Paint and Painting" consists of:

(a) The painting, as required by the Plans and Specifications, of all structural steel not yet installed;

(b) The completion of the painting, as required by the Plans and Specifications, of all struc-

tural steel which has not yet received the requisite number of coats;

(c) The repainting, to the standard required by the Plans and Specifications, of all surfaces heretofore painted which have been damaged;

(d) The painting, as required by the Plans and Specifications, of all timber guard rail which has not yet been constructed; and completion of the painting of constructed timber guard rail which has not yet received the requisite number of coats, or on which paint coats have become damaged.

The Contractor shall examine carefully and thoroughly all painted or partially painted structures, and shall satisfy himself as to conditions there existing and the amount of work remaining to be done in connection with additional coats of paint and the repainting of damaged surfaces so that same shall conform to the requirements of the Plans and Specifications.

The decision of the Engineer as to the locations and surfaces which may require additional coats of paint or repainting of damaged surfaces at any time during the progress of the work, shall be final and no extra payment will be allowed in the event the Contractor shall claim that the amount of repainting, or completion of partially painted surfaces required by the District Engineer does not correspond with that estimated by the Contractor.

Section 20. Metal Cribbing

The work remaining to be done under "Metal Cribbing" consists of furnishing and placing of the metal cribbing in the vicinity of the Landvale Viaduct as required by the Plans and Specifications.

No metal cribbing has been furnished or installed. It is estimated that there are approximately forty-six thousand (46,000) pounds of metal cribbing to be furnished and installed.

Section 21. Tunnel Construction

"Tunnel Construction" covers the construction of tunnels complete, as required by the Plans and Specifications. Some work has been performed on every portion of the tunnels, but no portion is complete. A general description of the approximate amount of the work which remains to be done to complete the "Tunnel Construction" is as follows: (for convenience, in addition to the description of the approximate lineal feet of items of work remaining to be done, the description by Engineer's Stations of approximate location of items is also given.)

1. Upgrade or South Tunnel:

(a) Excavation: Four hundred forty-six (446) lineal feet, (Stations 135+79 to 140+25), of excavation remains to be performed. Two (2) drifts have been excavated through this length. The necessary maintenance and support of these drifts to pre-

vent cave-in shall be performed by the Contractor during the progress of the excavation of this Tunnel.

(b) Concrete Arch Ring: Five hundred eighty-two (582) lineal feet of concrete arch ring remains to be constructed, (Stations 134+28 to 140+10). Footings for concrete arch ring have been constructed ahead of the full ring a distance of one hundred twenty-eight (128) lineal feet, (Stations 134+28 to 135+56).

(c) Grouting: Grouting has been completed a distance of one thousand forty-seven (1,047) lineal feet, (Stations 111+53 to 122+00), from the West end of the concrete arch ring. There remains one thousand three hundred sixteen (1,316) lineal feet, (Stations 122+00 to 134+28 and 140+10 to 140+98), of the concrete arch ring now installed around which groutings is to be placed, as required by the Plans and Specifications. Grouting, as required by the Plans and Specifications, shall be placed around all portions of the concrete arch ring hereafter constructed.

(d) Ceilings and Partitions: The ceiling or partition between the fresh air duct and the exhaust air duct has been partially constructed a distance of eight hundred eighty-one (881) lineal feet from the West end of the concrete arch ring, (Stations 111+53 to 120+34). The ceiling or partition between the roadway portion of the Tunnel and the exhaust air duct has been partially constructed a distance of eight hundred eighty-four (884) lineal

feet, (Stations 111+53 to 120+37), from the West end of the concrete arch ring.

Patching, finishing and painting of the surfaces of the concrete on the partially constructed portions of the ceilings and partitions remain to be done.

Gunite partitions and other partition details, and air duct bulkheads, remain to be constructed in connection with these partially constructed ceilings and partitions. Exhaust port openings have been left in partially constructed ceilings. Slides, deflectors and other details required by the Plans and Specifications remain to be installed.

Completion of these partially constructed portions and the construction of ceilings and partitions in all of the remainder of the Tunnel, with all accessories, remain to be done as required by the Plans and Specifications.

(e) Side Walls and Fresh Air Flues: Side walls and fresh air flues have been partially constructed and installed a distance of eight hundred eighty-four (884) lineal feet, (Stations 111+53 to 120+37), from the Westerly end of the concrete arch ring; these walls require surface finishing, patching and painting, and flues require cleaning out, and setting and adjustment of nozzle openings, as required by the Plans and Specifications.

Finishing of partially completed walls and installation of flues and construction of flues and side walls in all remaining portions of the tunnels, as required by the Plans and Specifications, remain to be done.

(f) Curbs and Sidewalks: No part of the curbs and sidewalks required for the completion of this Tunnel has been constructed, and all remains to be done, as required by the Plans and Specifications.

(g) Roadway Pavement: No portion of the subgrade or roadway pavement required by the Plans and Specifications has been constructed, and all remains to be done.

(h) Drainage Structures and Conduits: No portions of the drainage structures and conduits required by the Plans and Specifications have been constructed, except drains installed back of and through the arch ring in the portion of the Tunnel in which the concrete arch ring and footings have been constructed; the Contractor will be required to furnish and construct all remaining portions of drainage structures and conduits, as required by the Plans and Specifications, in the portions of this Tunnel in which the concrete arch ring and footings have been constructed. In all portions of this Tunnel in which the concrete arch ring and footings have not been placed, the complete drainage structures and conduits, as required by the Plans and Specifications, shall be furnished, constructed and installed by the Contractor.

(i) Water Pipes: No part of the water pipes required to be constructed in this Tunnel has been constructed. The Contractor will be required to furnish and install all water pipes, cocks, plugs, adaptors and other necessary accessories, as re-

quired by the Plans and Specifications, in the entire length of this Tunnel.

2. Downgrade or North Tunnel:

(a) Excavation: Nine hundred sixty-two (962) lineal feet, (Stations 129+86 to 139+48), of excavation remains to be performed. One (1) drift has been excavated through on the South side; on the North side of this Tunnel a drift has been excavated a distance of approximately seven hundred eighty-two (782) lineal feet westerly from the East Portal, and a distance of approximately one hundred fifty-nine (159) lineal feet easterly from the face of the main excavation; the distance remaining unexcavated between the ends of this drift is approximately ninety-nine (99) lineal feet; the necessary maintenance and support of these drifts to prevent cave-in shall be performed by the Contractor during the progress of the excavation of this Tunnel.

(b) Concrete Arch Ring: One thousand eighty-nine (1,089) lineal feet of concrete arch ring remains to be constructed (Stations 128+50 to 139+39). Footings for concrete arch ring have been constructed ahead of the full ring a distance of one hundred and twenty-one (121) lineal feet, (Stations 128+50 to 129+71).

(c) Grouting: Grouting has been completed a distance of one thousand one hundred and seven (1,107) lineal feet, (Stations 111+43 to 122+50), from the West end of the concrete arch ring. There

remains six hundred seventy-nine (679) lineal feet, (Stations 122+50 to 128+50 and 139+39 to 140+18), of the concrete arch ring now installed around which grouting is to be placed, as required by the Plans and Specifications. Grouting, as required by the Plans and Specifications, shall be placed around all portions of the concrete arch ring hereafter constructed.

(d) Ceilings and Partitions: The ceiling or partition between the fresh air duct and the exhaust air duct has been partially constructed a distance of eight hundred seventy-three (873) lineal feet from the West end of the concrete arch ring, (Stations 111+43 to 120+16). The ceiling or partition between the roadway portion of the Tunnel and the exhaust air duct has been partially constructed a distance of eight hundred eighty-four (884) lineal feet, (Stations 111+43 to 120+27), from the West end of the concrete arch ring.

Patching, finishing and painting of the surfaces of the concrete on the partially constructed portions of ceilings and partitions remain to be done.

Gunite partitions and other partition details, and air duct bulkheads, remain to be constructed in connection with these partially constructed ceilings and partitions. Exhaust port openings have been left in partially constructed ceilings. Slides, deflectors and other details required by the Plans and Specifications remain to be installed.

Completion of these partially constructed portions and the construction of ceilings and parti-

tions in all of the remainder of the Tunnel, with all accessories, remains to be done, as required by the Plans and Specifications.

(e) Side Walls and Fresh Air Flues: Side walls and fresh air flues have been partially constructed and installed a distance of eight hundred eighty-four (884) lineal feet, (Stations 111+43 to 120+27), from the Westerly end of the concrete arch ring; these walls require surface finishing, patching and painting; and flues require cleaning out, and setting and adjustment of nozzle openings, as required by the Plans and Specifications.

Finishing of partially completed walls and installation of flues and construction of flues and side walls in all remaining portions of the Tunnels, as required by the Plans and Specifications, remain to be done.

(f) Curbs and Sidewalks: No part of the curbs and sidewalks required for the completion of this Tunnel has been constructed, and all remains to be done, as required by the Plans and Specifications.

(g) Roadway Pavement: No portion of the subgrade or roadway pavement required by the Plans and Specifications has been constructed, and all remains to be done.

(h) Drainage Structures and Conduits: No portions of the drainage structures and conduits required by the Plans and Specifications have been constructed, except drains installed back of and through the arch ring in the portion of the Tunnel

in which the concrete arch ring and footings have been constructed; the Contractor will be required to furnish and construct all remaining portions of drainage structures and conduits, as required by the Plans and Specifications, in the portions of this Tunnel in which the concrete arch ring and footings have been constructed. In all portions of this Tunnel in which the concrete arch ring and footings have not been placed, the complete drainage structures and conduits, as required by the Plans and Specifications, shall be furnished, constructed and installed by the Contractor.

(i) Water Pipes: No part of the water pipes required to be constructed in this Tunnel have been constructed. The Contractor will be required to furnish and install all water pipes, cocks, plugs, adaptors and other necessary accessories, as required by the Plans and Specifications, in the entire length of this Tunnel.

3. Cross Adits:

The two (2) most Westerly "Cross Adits" of the three (3) required by the Plans and Specifications have been completed. Excavation for the third cross adit has been started from the South or Upgrade Tunnel and the excavation has proceeded approximately fifteen (15) lineal feet toward the North or Downgrade Tunnel. The Contractor is required to complete this adit as required by the Plans and Specifications.

4. Completion of Tunnels:

The Contractor shall complete the Tunnels in every detail, as required by the Plans and Specifications. The general description of work remaining to be constructed and completed, as hereinabove set forth, is approximately only and, in particular, does not include a complete statement of the repairs and re-finishing that will be required to finish the work as left in place by the Contractor who abandoned the work on this project. The Contractor shall perform all work, furnish all labor, materials, tools and equipment necessary and incidental to the repair and re-finishing of work now in place, and the execution of all additional work required for the completion of the "Tunnel Construction" as specified. The omission herein of specific mention of any detail, item, or quantity shall not relieve the Contractor of his responsibility and obligation to perform all labor and furnish all materials of each and every kind necessary and to construct, complete, and finish these Tunnels in every detail as required by the Plans and Specifications; all of this is to be done without other payment therefor than the price bid for "Tunnel Construction."

5. Payment:

The price bid and the price to be paid by the District, to complete "Tunnel Construction" shall constitute full compensation to the Contractor for the completion of "Tunnel Construction" including cross adits, as required by the Plans and Specifica-

tions, except that "Reinforcing Steel" shall be paid for per pound in place, as provided in the Specifications.

Section 22. Ventilation Buildings

The "Ventilation Buildings" required by the Plans and Specifications to be constructed at the Easterly and Westerly ends of the Tunnel are partially constructed.

The Contractor shall complete the Ventilation Buildings in every detail as required by the Plans and Specifications. The Contractor shall perform all work, furnish all labor, materials, tools and equipment necessary and incidental to the repair and refinishing of work now in place, and required for the completion of the construction of these buildings in accordance with the Plans and Specifications.

The roofing over the fan room of the West ventilation building has been damaged and was rejected by the District prior to the abandonment of the work by the former Contractor. The Contractor who completes the work shall completely reconstruct this roofing, damaged roofing to be removed and new roofing to be furnished and constructed in accordance with the Plans and Specifications. The Contractor shall patch and repair defective or damaged wall surfaces and all other portions of said structures.

The foregoing general description of the work remaining to be done, constructed and completed,

as herinabove set forth, is approximate only and, in particular, does not include a complete statement of the repairs and refinishing that will be required to complete the structures as left in place by the Contractor who abandoned the work on this project. The omission herein of specific mention of any detail, item or quantity shall not relieve the Contractor of his responsibility and obligation to provide all labor, tools, equipment, and materials of each and every kind necessary to construct, complete and finish the Ventilation Buildings in every detail as required by the Plans and Specifications. All of this is to be done without other payment therefor than the price bid for the completion of the Ventilation Buildings.

Section 23. Ventilation Equipment

The "Ventilation Equipment" required by the Plans and Specifications to be furnished and installed in the Ventilation Buildings at the Easterly and Westerly ends of the Tunnel has been partly furnished and installed.

The Contractor is required to furnish and install all of the remainder of the ventilation equipment in both of the said buildings in every detail, as required by the Plans and Specifications, and the Contractor shall perform all work and furnish all labor, tools, material, equipment and accessories necessary to complete the installation of the ventilation equipment strictly in accordance with the requirements of the Plans and Specifications.

The Contractor shall make a detailed examination

of the ventilation equipment now on the project and shall satisfy himself as to the amount and existing conditions thereof, and as to the amount of material, equipment and accessories remaining to be furnished, and work remaining to be done; and, in addition to furnishing all labor, tools, materials, equipment and accessories necessary to complete the same, the Contractor shall make all necessary repairs and adjustments to the portions of the ventilation equipment now in place, and do all things necessary in order that, at the completion of the Contract, the ventilation equipment shall be complete in every respect, and shall meet all of the requirements and tests set forth in the Plans and Specifications.

Section 24. Mechanical Equipment

The "Mechanical Equipment" required by the Plans and Specifications to be furnished and installed on the project of the District has been partly furnished and installed.

The Contractor is required to furnish and install all of the remainder of the mechanical equipment on the project in every detail, as required by the Plans and Specifications, and the Contractor shall perform all work and furnish all labor, tools, material, equipment and accessories necessary to complete the installation of the mechanical equipment strictly in accordance with the requirements of the Plans and Specifications.

The Contractor shall make a detailed examination of the mechanical equipment now on the project,

and shall satisfy himself as to the amount and existing conditions thereof, and as to the amount of material, equipment and accessories required to be furnished, and work remaining to be done; and, in addition to furnishing all labor, tools, materials, equipment and accessories necessary to complete the same, the Contractor shall make all necessary repairs and adjustments to the portions of the mechanical equipment now in place, and do all things necessary in order that, at the completion of the Contract, the mechanical equipment shall be complete in every respect, and shall meet all of the requirements and tests set forth in the Plans and Specifications.

Section 25. Electrical Equipment

The "Electrical Equipment" required by the Plans and Specifications to be furnished and installed on the project of the District has been partly furnished and installed.

The Contractor is required to furnish and install all of the remainder of the electrical equipment on the project in every detail, as required by the Plans and Specifications, and the Contractor shall perform all work and furnish all labor, tools, material, equipment and accessories necessary to complete the installation of the electrical equipment strictly in accordance with the requirements of the Plans and Specifications.

The Contractor shall make a detailed examination of the electrical equipment now on the project,

and shall satisfy himself as to the amount and existing conditions thereof, and as to the amount of material, equipment and accessories required to be furnished, and work remaining to be done; and, in addition to furnishing all labor, tools, materials, equipment and accessories necessary to complete the same, the Contractor shall make all necessary repairs and adjustments to the portions of the electrical equipment now in place, and do all things necessary in order that, at the completion of the Contract, the electrical equipment shall be complete in every respect, and shall meet all of the requirements and tests set forth in the Plans and Specifications.

Section 26. Carbon Monoxide Detectors and Recorders

The "Carbon Monoxide Detectors and Recorders" shall be furnished and installed, as required by the Plans and Specifications.

No part of this equipment has been furnished or installed.

Section 27. Completion Painting, Repairing Damage, Repairing Imperfect Work and Cleaning Up

The Contractor shall perform all work, furnish all labor, tools, material and equipment necessary for finishing and completing all parts of the work in every detail, as required by the Plans and Specifications, in a workmanlike manner.

Without limiting the generality of the foregoing, and as a general description of the work required

to be done in repairing damaged and imperfect work, the Contractor shall perform all work and furnish all labor, tools, material and equipment necessary to repair and complete the partially constructed shoulders hereinbefore mentioned; to brush, clean, straighten and otherwise adjust exposed reinforcing steel as hereinbefore mentioned; to repair the lamphole hereinbefore mentioned; to complete partially completed pipe hand rails and repair damaged pipe hand rails hereinbefore mentioned; to complete the paint and painting hereinbefore mentioned; and to repair and complete any other work which is imperfect or has been damaged in any manner whatsoever; all to be performed in a manner and with the purpose that all parts of the work shall be completed in accordance with the requirements of the Plans and Specifications.

The Contractor shall also clean out all culverts and drainage channels which have become blocked or otherwise obstructed in any manner during previous construction operations or during Contractor's operations, and shall maintain and keep the same clear at all times during construction as a part of the work to be performed under the Contract; the Contractor shall also, as a part of the work to be performed under the Contract remove all debris, construction material, construction buildings and construction equipment, whether placed there by the Contractor, or by the contractor who heretofore abandoned work on the project, from the project at the close of construction in order that the project shall be left in a clean, sightly and finished

condition throughout the entire area thereof. The Contractor shall also remove all of the debris, construction material, construction buildings and construction equipment from all areas adjacent to the project which have been occupied or used by the Contractor, or by the contractor who heretofore abandoned work on the project, during construction and leave said areas in a clean, sightly condition.

The price bid for "Completing Painting, Repairing Damage, Repairing Imperfect Work and Cleaning Up" shall constitute full compensation to the Contractor for the furnishing of all labor, tools, material and equipment and the performance of all work necessary or incidental to the completion of the above described work.

Section 28. Conditions Respecting Removal of Construction Equipment, Construction Plant, and Personal Property Now Located on the Right of Way of the District

Certain construction equipment, construction plant, and other personal property owned by or in the possession of Six Companies of California, a corporation, is now located on the right of way of the District, or adjacent thereto.

Prospective bidders are hereby notified that under a guaranteed written agreement with the District, Six Companies of California will remove all said construction equipment, construction plant, and personal property from the right of way of the District, at its own cost and expense within twenty-

one (21) calendar days from and after the date fixed by the District as the day upon which bids will be received for the completion of the project, or within ten (10) calendar days from and after the date of execution of a Contract for completion of the project of the District, depending on which time gives Six Companies of California the greatest length of time to remove the same, if the Contractor to whom a contract is awarded by the District does not effect arrangements satisfactory to himself and said Six Companies of California, with said Company, for the use of said construction equipment, construction plant and other personal property, in the performance of the work.

The foregoing notification is not intended as, nor shall it be construed as a provision of this Supplement requiring or recommending that Prospective bidders effect an arrangement with said Six Companies of California for the use of said construction equipment, construction plant, and other personal property, and the same is incorporated herein for the sole purpose of advising all prospective bidders of the fact that said construction equipment, construction plant, and other personal property, will be removed from the right of way of the District, without cost to the Contractor hereunder, if, for any reason, such Contractor does not desire to use the same.

[Endorsed]: U. S. Dist. Ct. N. D. Cal. No. 20101-R. Deft's Ex. X-3. Filed June 1, 1938. Walter B. Maling, Clerk. By J. A. Schaertzer, Deputy Clerk.

DEFENDANT'S EXHIBIT X-11.

Joint Highway District No. 13 of the State of California.

SUPPLEMENT TO SPECIFICATIONS.

For Construction of Project of the District, Including Highway, Highway Tunnel and Approaches with Appurtenant Structures, Adopted March 30, 1933, as Amended and Supplemented by Amendments and Supplements to Said Specifications Adopted January 9, 1934 and April 3, 1934, Respectively.

JOINT HIGHWAY DISTRICT No. 13 OF THE STATE OF CALIFORNIA

Office of
WALLACE B. BOGGS
District Engineer
1448 Webster Street,
Oakland, California

Adopted September 23rd, 1936.

Supplement to Specifications for Construction of Project of the District, Including Highway, Highway Tunnel and Approaches with Appurtenant Structures, Adopted March 30, 1933, as Amended and Supplemented by Amendments and Supplements to Said Specifications Adopted January 9, 1934 and April 3, 1934, Respectively.

PART I—STATEMENT OF CONDITIONS.

Section 1—General Conditions.

A contractor under contract with Joint Highway District No. 13 of the State of California abandoned work on the project of this District described in said Specifications on or about the 13th day of June, 1936, after performing part of the work described in the Plans and Specifications for said project, and left uncompleted the remainder of such work substantially as hereinafter described.

This Supplement to said Specifications describes the work remaining to be performed on the project of the District. All of the said work remaining to

be done is to be performed in accordance with the Plans and Specifications adopted by the Board of Directors of Joint Highway District No. 13 of the State of California on the 30th day of March, 1933, as amended and supplemented by amendments and supplements thereto adopted on January 9, 1934 and April 3, 1934, respectively, and with this Supplement thereto, and in strict compliance with all of the terms thereof; with the intent and purpose that the work shall be completed in every part, in every respect as required by the said Plans and Specifications.

In order to provide a method of procedure for completing the project of the District, which has been partially constructed as hereinbefore mentioned, the work remaining to be performed to complete the project has been subdivided, and the District will advertise for the tender of proposals from contractors to enter into contracts wherein the Contractor will contract with the District to perform all work, furnish all labor, materials, tools, and equipment necessary and incidental for finishing and completing the portions of the project included within each such subdivision, at such time or times as are hereafter determined upon by the District, under schedules hereinafter set forth.

The Contractor who undertakes the completion of any portion of the project included in any schedule for said portion of the project as hereinafter set forth, shall do and perform and complete every portion of the work set forth in said schedule now re-

maining unperformed or partly completed, in every respect in accordance with the Plans and Specifications.

Prospective bidders, under any schedule for any portion of the project, shall examine the site of the work and all structures and parts of structures to which said schedule pertains, and are required to satisfy themselves as to the conditions there existing and the amount of work remaining to be done to complete the portion of said project included within said schedule.

The description of the work hereinafter set forth is an approximation or estimate of the work remaining to be done. It is hereby declared and shall be understood by all prospective bidders that the quantities set forth herein or on any Proposal Sheet, or Notice to Contractors, or in any Contract executed hereunder for any schedule, are approximate only, and are given as a basis for comparison of bids. Any Contractor whose proposal on any schedule is accepted shall, by the terms of his Contract with the District, guarantee to furnish all labor, materials, tools and equipment and to perform all work necessary or incidental to the construction and completion of the portions of the project remaining to be completed to which said schedule applies, as detailed, specified and intended, so as to furnish upon completion of said contract the completed portion of the project included in said schedule as required by the Plans and Specifications.

Joint Highway District No. 13 of the State of California reserves the right to increase or decrease the amount of any part or portion of the work, or to omit such portions of the work as the District Engineer may deem it necessary or expedient to omit.

Wherever in this Supplement a basis for payment for any part of the work is provided which differs, conflicts or is at variance with the basis of payment provided for in other parts of the Specifications, the basis for payment set forth in this Supplement shall govern.

Wherever the words "Plans", "Specifications", "Plans and Specifications" are herein used, the same shall be construed as meaning the Plans and Specifications for the project of the District adopted by the Board of Directors of Joint Highway District No. 13 of the State of California on the 30th day of March, 1933, as amended and supplemented by the amendments and supplements thereto adopted January 9, 1934, and April 3, 1934, respectively, and by this Supplement thereto.

Part II—Description of Subdivisions of Project—Schedules for Construction.

The following is a description of the schedules into which the work remaining to be performed, and the material and equipment remaining to be furnished and supplied, to complete the project of the District, which has been partially constructed as hereinbefore mentioned, has been subdivided; the

District will advertise for separate proposals from contractors to perform all work, furnish all labor, tools, material and equipment necessary for, and incidental to, completing all parts of the work, included in each separate schedule as follows:

Schedule A—Completion of Excavation of Tunnels and Cross Adit and Completion of Construction of Concrete Arch Ring Lining of Tunnels and Cross Adit.

Under this schedule the Contractor shall complete the excavation of the tunnels and cross adit, and the construction of the concrete arch ring tunnel linings, and cross adit lining, together with the grouting around the portions of the arch ring tunnel linings which are to be constructed under this schedule, and shall furnish and install dowels and hanger connections, drainage structures and conduits required to be embedded in the concrete arch ring tunnel linings.

"Reinforcing Steel" required in the construction of the concrete arch ring tunnel linings and cross adit lining shall be furnished and installed by the Contractor under this schedule.

Schedule B—Completion of Grouting in Tunnels Around Concrete Lining Now Installed.

Under this schedule the Contractor shall complete the grouting, as required by the Plans and Specifications, around the concrete arch ring tunnel linings now installed in each tunnel, where grouting has not been completed. The portions of the concrete arch

ring tunnel linings around which the Contractor under this schedule will be required to place grouting are set forth in Section 21 of Part IV hereof.

Grouting will be measured and paid for under this schedule by the barrel of cement used in such grouting, and the price to be paid for grouting under this schedule shall constitute full compensation to the Contractor to whom a contract is awarded under this schedule, for furnishing of all labor and material, tools and equipment necessary and incidental to the performance of the work included within this schedule.

Schedule C—Completion of Tunnel Construction Remaining to Be Completed After Concrete Arch Ring Tunnel Lining Is Constructed and Grouting Is Completed.

Under this schedule the Contractor shall complete the construction of ceilings and partitions, including furnishing and installing of structural steel, sidewalls and fresh air flues, curbs and sidewalks, roadway pavement, drainage structures and conduits, water pipes and all other portions of the work necessary for the completion of the partially completed tunnels throughout their entire length as required by the Plans and Specifications under "Tunnel Construction", excepting the portions thereof described in Schedule A and Schedule B hereof.

"Reinforcing Steel" required in the construction of the portions of the tunnels described in this schedule shall be furnished and installed by the Contractor under this schedule.

Portions of "Electrical Equipment" within the limits of the tunnel structures which are required to be embedded in the concrete or are required to be furnished and installed either prior to or concurrently with the placing of concrete, shall be furnished and installed by the Contractor under this schedule. Said portions of "Electrical Equipment" consist of conduits, outlet boxes, luminaire bodies, transformer cabinets and pull boxes, fire alarm and police telephone boxes, and accessories thereto, conduit crossovers, including drilling therefor, all as required by the Plans and Specifications.

Schedule D—Completion of Ventilation Buildings.

Under this schedule the Contractor shall complete the Ventilation Buildings as required by the Plans and Specifications.

Portions of "Electrical Equipment" within the limits of the ventilation building structures, which are required to be embedded in the concrete or are required to be furnished and installed either prior to or concurrently with the placing of concrete shall be furnished and installed by the Contractor under this schedule. Said portions of "Electrical Equipment" consist of conduits, outlet boxes, pull boxes, luminaire bodies, fire alarm and police telephone boxes, and accessories thereto, all as required by the Plans and Specifications.

Schedule E—Completion of Ventilation Equipment, Mechanical Equipment, and Electrical Equipment.

Under this schedule the Contractor shall complete the furnishing and installing of Ventilation Equipment, Mechanical Equipment, and Electrical Equipment, as required by the Plans and Specifications, excepting such portions of Electrical Equipment as are required to be furnished and installed under Schedule C and Schedule D hereof.

The work included in this Schedule E has been further subdivided for the purpose of obtaining alternate proposals for furnishing and installing the equipment included in each such subdivision thereof. The said subdivision of Schedule E is as follows:

Subdivision 1—Schedule E—Completion of Ventilation Equipment.

Under this subdivision of this schedule, the Contractor shall complete the furnishing and installing of the Ventilation Equipment as required by the Plans and Specifications.

Subdivision 2—Schedule E—Completion of Mechanical Equipment.

Under this subdivision of this schedule, the Contractor shall complete the furnishing and installing of the Mechanical Equipment as required by the Plans and Specifications.

Subdivision 3—Schedule E—Completion of Electrical equipment.

Under this subdivision of this schedule, the Contractor shall complete the furnishing and installing of the Electrical Equipment as required by the Plans and Specifications, excepting such portions of Electrical Equipment as are required to be installed under Schedule C and Schedule D hereof.

Prospective bidders under Schedule E will be required to bid upon Schedule E as a whole under an alternate proposal No. 1, and upon each and all of the hereinbefore set forth subdivisions of Schedule E as an alternate proposal No. 2.

The District reserves the right to accept or reject any or all proposals submitted under this Schedule E; to accept one or more subdivisions of alternate proposal No. 2, and to reject other subdivisions of alternate proposal No. 2, as the interest of the District may require.

Schedule F—Carbon Monoxide Detectors and Recorders.

Under this schedule the Contractor shall furnish and install Carbon Monoxide Detectors and Recorders complete as required by the Plans and Specifications.

Schedule G—Highway Construction and Appurtenant Structures.

Under this schedule the Contractor shall complete the highway approach roads and the structures thereon, outside the limits of the tunnels and ven-

tilation buildings, including all Grading, Overhaul, Excavation for Structures, Subgrade, Shoulders, Reinforcing Steel, Concrete Structures, Portland Cement Concrete Pavement, Penetration Oil Macadam Pavement, Concrete Curb and Gutter, Cement Sidewalks, Corrugated Metal Pipe Culverts, Fill Protectors, Reinforced Concrete Pipe Culvert, Vitrified Pipe Sewers, Underdrains, Piping, Guard Rails and Pipe Hand Rails, Rip Rap, Paint and Painting, Metal Cribbing, Completing Painting, Repairing Damage and Imperfect Work and Drainage, all in accordance with the Plans and Specifications.

Schedule H—Steel Structures.

Under this schedule the Contractor shall furnish and place the structural steel trusses, purlins, and connections which support the louver frames between the approach walls at the portals at each end of the tunnels, all as required by the Plans and Specifications.

Other Contracts—Cooperation Between Contractors.

The District will award contracts for the various divisions of the work described in the schedules hereinbefore set forth, and each Contractor to whom a contract is awarded by the District for the performance of the work to be performed, under any and all of said schedules, shall fully cooperate with all other Contractors on the project, and carefully fit his own work to that provided for under other contracts. No contractor shall commit, nor permit, any act which will interfere with the performance of the work of any other Contractor.

Cleanup.

Each Contractor performing work on the project of the District under any schedule or schedules hereof, shall before acceptance of the work by the District, remove from the site of the work and any and all areas adjacent thereto, occupied or used by him, all debris, excess construction material, falsework, temporary structures created, placed, used or constructed by him, in connection with the performance of his contract, so as to leave the project in a clean, orderly and sightly condition.

Part III—Time of Completion, Extensions of Time, Damages for Delay.

(a) Time of Completion.

The entire work described in each of the various schedules hereinbefore mentioned shall be completed within periods as follows:

Schedule A—One hundred eighty (180) calendar days from the date of execution of the contract therefor.

Schedule B—Sixty (60) calendar days from the date of execution of the contract therefor.

Schedule C—Two hundred (200) calendar days from the date of execution of the contract therefor.

Schedule D—One hundred fifty (150) calendar days from the date of execution of the contract therefor.

Schedule E—One hundred fifty (150) calendar days from the date of execution of the contract therefor.

Subdivision 1—Schedule E—One hundred fifty (150) calendar days from the date of execution of the contract therefor.

Subdivision 2—Schedule E—One hundred fifty (150) calendar days from the date of execution of the contract therefor.

Subdivision 3—Schedule E—One hundred fifty (150) calendar days from the date of execution of the contract therefor.

Schedule F—One hundred fifty (150) calendar days from the date of execution of the contract therefor.

Schedule G—Two hundred (200) calendar days from the date of execution of the contract therefor.

Schedule H—One hundred (100) calendar days from the date of execution of the contract therefor.

(b) Extensions of Time.

The following supplementary provisions to the Specifications relative to extension of time are inserted herein to provide a means for extending the time of completion under contracts awarded for work to be performed under the various schedules into which the work of completing the project has been subdivided, and the same do not modify, rescind, vacate or repeal any other provision of the Specifications, relating to extensions of time.

The time during which any Contractor under any contract awarded under any schedule of these Specifications, is delayed by reason of the failure of any other Contractor to complete work under another

contract, which work must be completed to enable the first mentioned Contractor to proceed with the work required to be performed under his contract shall be added to the period fixed in his contract as the period within which the work thereunder shall be completed, provided that the Board of Directors approve the written application of such first mentioned Contractor for such extension, which application must be made to the Board of Directors by such first mentioned Contractor at the time such delay first occurs, and before the expiration of the time of completion fixed in his contract, and thereafter the time for completion under such contract shall be extended for the period fixed in the resolution of the Board of Directors granting the application for such extension; provided that no Contractor shall be entitled to an extension of time for completing the work required to be performed under his contract, if at the time such delay first occurs by reason of the failure of any other Contractor to complete work, there remain portions of the work to be performed by the first mentioned Contractor upon which, in the judgment of the District Engineer, the first mentioned Contractor may proceed, without undue interference by reason of delay in the performance of the work of such other Contractor or Contractors.

(c) Damages for Delay.

All parties to all contracts awarded for the work to be performed, described in said schedules, shall

and do hereby expressly stipulate and agree that time is the essence of each of said contracts. In case the work is not completed within the time specified in any contract for any schedule hereof, or within such extensions of the contract time as may be allowed under these specifications, it is distinctly understood and agreed by each such Contractor that the Contractor shall pay the District as agreed and liquidated damages, and not as a penalty, the amounts hereinafter set forth for the various schedules, for each and every working day which may elapse between the limiting date as herein provided and the date of actual completion of the work required to be performed under each such contract; each of said sums pertaining to each contract awarded under each of said schedules, being hereby specifically agreed upon by each such Contractor, as a measure of the damage to the District by reason of delay in the completion of the work under each such contract, it being expressly stipulated and agreed by each such Contractor that it would be impracticable to estimate and ascertain the actual damages sustained by the District under such circumstances, and each such Contractor hereby agrees and consents that the amount of liquidated damages so fixed, shall be deducted and retained by the District from any money then due, or thereafter to become due such Contractor.

The stipulated amounts of agreed and liquidated

damages to be inserted as a provision in each contract to be awarded for the portion of the work of the completion of the project of the District, and included in each of said schedules, are as follows:

Schedule A—Five Hundred Dollars ($500) per day.

Schedule B—Fifty Dollars ($50) per day.

Schedule C—Five Hundred Dollars ($500) per day.

Schedule D—One Hundred Dollars ($100) per day.

Schedule E—One Hundred Dollars ($100) per day.

Subdivision 1—Schedule E—One Hundred Dollars ($100) per day.

Subdivision 2—Schedule E—One Hundred Dollars ($100) per day.

Subdivision 3—Schedule E—One Hundred Dollars ($100) per day.

Schedule F—Fifty Dollars ($50) per day.

Schedule G—Two Hundred Fifty Dollars ($250) per day.

Schedule H—Fifty Dollars ($50) per day.

Part IV—Description of Work Remaining to Be Performed.

Section 1—Grading.

The work remaining to be done under "Grading" consists of the completion of the excavation and filling of the roadway prism to specified grade and

cross section, the construction of drainage ditches, the removal of slides and disposing of surplus material, and the performance of all necessary work as required by the Plans and Specifications.

It is estimated that there are approximately forty-five thousand (45,000) cubic yards of material remaining to be excavated.

Overhaul to be performed as specified is estimated to be approximately five hundred thousand (500,000) station yards.

Section 2—Excavation for Structures.

The work remaining to be done under "Excavation for Structures" consists of excavation for structures for which the excavations have not yet been made, or have not yet been completed, and the necessary backfilling thereof; also backfilling of all other structures at all points where such backfilling is not at present completed as required by the Plans and Specifications.

It is estimated that there are approximately seven hundred (700) cubic yards of excavation remaining.

Uncompleted backfilling is estimated to consist of approximately four hundred (400) cubic yards. No measurement will be made or separate payment allowed for backfilling. Full compensation for furnishing all materials, labor, tools, implements, equipment and supplies, and doing all work incidental to backfilling shall be considered as included in the price paid for "Excavation for Structures".

Section 3—Subgrade.

The work remaining to be done under "Subgrade" consists of the construction of the subgrade in all places designated as required by the Plans and Specifications where pavement has not yet been laid.

It is estimated that there are approximately seven hundred two thousand seven hundred (702,700) square feet of subgrade remaining to be constructed, outside of tunnels and ventilation buildings. (Subgrade to be constructed in tunnels and ventilation buildings is included in the work provided for in Section Twenty-one (21) and Section Twenty-two (22), of Part IV of this Supplement, respectively).

Section 4—Shoulders.

The work remaining to be done for completion of "Shoulders" consists of the construction of shoulders at locations designated in the Plans and Specifications where the same have not yet been constructed, and the completion of shoulders partly constructed, but not yet completed, as required by the Plans and Specifications.

It is estimated that there are approximately two hundred forty-five thousand (245,000) square feet of shoulders remaining to be constructed, and that there are approximately one thousand eight hundred (1,800) square feet of partially constructed shoulders to be completed by the Contractor as required by the Plans and Specifications.

Section 5—Reinforcing Steel.

The work remaining to be done consists of the furnishing and placing of "Reinforcing Steel" at all locations as required by the Plans and Specifications; and also includes the brushing and cleaning, straightening and otherwise adjusting to conform to the Plans and Specifications of all reinforcing steel already placed, but about which concrete has not been placed, which has been exposed to the elements, and which has become rusted or coated with dirt or other foreign material, or bent or deformed, all to conform to the Plans and Specifications, and to provide reinforcing for the completed structures.

It is estimated that there are approximately thirty-three thousand (33,000) pounds of reinforcing steel remaining to be furnished and placed in various structures on the approach highways, and approximately seven hundred ninety-four thousand (794,000) pounds of reinforcing steel remaining to be furnished and placed in the tunnels.

Section 6—Steel Structures.

The work remaining to be performed under "Steel Structures" consists of the furnishing and placing of the trusses, purlins, braces and connection bolts, which support the louver frames, between the approach walls at the portals at each end of tunnel, and the furnishing and placing, in the tunnels, as required by the Plans and Specifications, of the structural steel which has not yet been installed. The Contractor, before fabricating steel to be erected at

any location, shall make such field measurements as are necessary to ensure the proper dimensions and fit of such steel at the location where it is to be placed.

It is estimated that there are approximately one hundred forty thousand (140,000) pounds of structural steel in the supports for the louver frames.

(It is estimated that there are approximately five hundred fifty-three thousand (553,000) pounds of structural steel remaining to be furnished and placed in the tunnels which are included in "Tunnel Construction", Section Twenty-one (21) of Part IV of this Supplement.

Section 7—Concrete Structures.

The work remaining to be done for completion of "Concrete Structures" consists of the construction, as required by the Plans and Specifications, of a retaining wall on the south side of the service roadway at the West Portal; coping structures at ends of approach walls at East and West Portals; walls at Margarido Drive and Buena Vista Place; parapet walls and rails on the Landvale Overhead structures, on Landvale Viaduct and walls, and on East Portal approach walls.

It is estimated that there are approximately four hundred thirty (430) cubic yards of Class "A" concrete remaining to be placed in these structures. (Tunnel and ventilation building concrete remaining to be furnished and placed is included in Sections Twenty-one (21) and Twenty-two (22) of Part IV of this Supplement, respectively.)

Section 8—Portland Cement Concrete Pavement.

The work remaining to be done under "Portland Cement Concrete Pavement" consists of all of the eight inch (8") Portland cement concrete pavement at East and West Portals, as required by the Plans and Specifications.

It is estimated that there are approximately thirty-seven thousand seven hundred (37,700) square feet of eight inch (8") Portland cement concrete pavement remaining to be constructed. The six inch (6") Portland cement concrete pavement required by the Plans and Specifications has been completed. (Concrete pavement to be constructed in tunnels and ventilation buildings is included in the work provided for in Section Twenty-one (21) and Section Twenty-two (22) of Part IV of this Supplement, respectively.)

Section 9—Penetration Oil Macadam Pavement.

The work remaining to be done under "Penetration Oil Macadam Pavement" consists of the construction of all penetration oil macadam pavement as required by the Plans and Specifications which has not yet been constructed, and also includes repairs to previously completed penetration oil macadam pavement necessary to make the same conform to the requirements of the Plans and Specifications. Penetration oil macadam pavement has been constructed on the Tunnel Road, and on the westerly approach road from its intersection with Broadway northeasterly a distance of approximately eight hundred (800) lineal feet. Penetration oil macadam

pavement which requires repairs is located in the vicinity of the Pedestrian Underpass on the westerly approach road, and on the Tunnel Road.

It is estimated that there are approximately six hundred sixty-five thousand (665,000) square feet of penetration oil macadam pavement remaining to be constructed as required by the Plans and Specifications.

It is estimated that there are approximately eight thousand eight hundred (8,800) square feet of penetration oil macadam pavement which must be repaired to complete the same as required by the Plans and Specifications.

Section 10—Concrete Curb and Gutter.

The work remaining to be done under "Concrete Curb and Gutter" consists of the construction of the following:

Six inch (6") curb in the vicinity of Margarido Drive, Buena Vista Place, Golden Gate Avenue, and Pacific Gas and Electric Substation.

Twelve inch (12") curb in the vicinity of Sacramento Northern Railway retaining wall and in the vicinity of the East and West portals of the tunnels.

Gutter in the vicinity of Margarido Drive, Buena Vista Place, Golden Gate Avenue, Sacramento Northern Railway retaining wall, and Pacific Gas and Electric Substation.

All of said curb and gutter shall be constructed as required by the Plans and Specifications.

It is estimated that there are approximately one thousand two hundred (1,200) lineal feet of six inch (6") curb, approximately nine hundred forty-five (945) lineal feet of twelve inch (12") curb and approximately two thousand five hundred (2,500) square feet of gutter, remaining to be constructed.

Section 11—Cement Sidewalks.

The work remaining to be done under "Cement Sidewalks" consists of the construction of cement sidewalks in the vicinity of Pedestrian Underpass, Margarido Drive, Buena Vista Place, Golden Gate Avenue, Sacramento Northern Railway Retaining Walls, and the East and West portals of the tunnels as required by the Plans and Specifications.

It is estimated that there are approximately nine thousand (9,000) square feet of cement sidewalks remaining to be constructed.

Section 12—Corrugated Metal Pipe Culverts.

The work remaining to be done under "Corrugated Metal Pipe Culverts" consists of the furnishing and installing of eight inch (8") diameter corrugated metal pipe culverts for drainage purposes along the roadway approaches; twelve inch (12") diameter corrugated metal pipe culverts for drainage purposes in the vicinity of the East Portal of the tunnel; and eighteen inch (18") diameter corrugated metal pipe culverts for drainage purposes on the West approach roads, all as required by the Plans and Specifications.

Fill protectors remain to be constructed for drainage purposes on the West approach roads, as required by the Plans and Specifications.

It is estimated that there are approximately one thousand (1,000) lineal feet of eight inch (8") diameter corrugated metal pipe culvert remaining to be furnished and installed, approximately one hundred fifty (150) lineal feet of twelve inch (12") diameter corrugated metal pipe culvert remaining to be furnished and installed, and approximately five hundred (500) lineal feet of eighteen inch (18") diameter corrugated metal pipe culvert remaining to be furnished and installed.

It is estimated that there are nine (9) fill protectors remaining to be furnished and installed.

Section 13—Reinforced Concrete Pipe Culvert.

The work remaining to be done under "Reinforced Concrete Pipe Culvert" consists of the furnishing and installing of approximately one hundred ninety (190) lineal feet of twenty-four inch (24") diameter reinforced concrete pipe culvert, extra strength (X type), as provided in the Plans and Specifications, for drainage purposes in the vicinity of the West portal of the tunnels.

Section 14—Vitrified Pipe Sewers.

The work remaining to be done under "Vitrified Pipe Sewers" consists of the construction, completion and repair of manholes with standard tops, manholes with inlet tops, manholes with grating tops, storm water inlets and lamp holes.

It is estimated that the following manholes are to be furnished and installed: one (1) manhole with standard top, one (1) manhole with inlet top, three (3) manholes with grating tops, two (2) storm water inlets, Type "B", three (3) storm water inlets, Type "C"; one (1) lamphole is to be repaired.

These items are to be installed in the vicinity of the East and West portals of the tunnels and on the approach roadways, all as required by the Plans and Specifications.

All vitrified pipe required to be furnished and installed has been furnished and installed except that required in the tunnels and ventilation buildings.

Section 15—Underdrains.

The work remaining to be done under "Underdrains" consists of furnishing and installing eight inch (8") perforated corrugated metal pipe underdrains in the vicinity of the East and West portals of the tunnels and along the West approach roadways for drainage purposes, as required by the Plans and Specifications.

It is estimated that there are approximately two thousand one hundred (2,100) lineal feet of underdrains remaining to be furnished and installed.

Section 16—Piping.

The work remaining to be done under "Piping" consists of the furnishing and installing of all of the six inch (6") diameter cast iron pipe together with all fittings and accessories, as required by the Plans

and Specifications, outside the tunnels and ventilation buildings. (Piping within the tunnels and ventilation buildings is provided for in Sections Twenty-one (21) and Twenty-two (22), Part IV of this Supplement, respectively.)

It is estimated that there are approximately two thousand twenty (2,020) lineal feet of piping, cast iron, six inch (6") diameter, remaining to be furnished and installed, outside the tunnels and ventilation buildings.

Section 17—Guard Rails and Pipe Hand Rails.

The work remaining to be done under "Guard Rails and Pipe Hand Rails" consists of the construction of all guard rails required by the Plans and Specifications but not yet constructed. Seven hundred (700) lineal feet of guard rails have been constructed along the Tunnel Road. It is estimated that approximately twelve thousand (12,000) lineal feet of guard rails required by the Plans and Specifications remain to be constructed.

Pipe hand rails remain to be constructed, as required by the Plans and Specifications, on walls, in the vicinity of Golden Gate Avenue, Temescal Culvert, Pacific Gas and Electric Substation, and underpasses.

It is estimated that approximately six hundred twenty (620) lineal feet of pipe hand rail remain to be constructed.

Pipe hand rails partially completed shall be finished and completed as required by the Plans and

Specifications. All pipe hand rails already in place which have been damaged shall be repaired, or new material supplied to complete the same, all as required by the Plans and Specifications.

Section 18—Rip Rap.

The work remaining to be done under "Rip Rap" consists of the construction of rip rap structures in the vicinity of the Landvale Overhead structure as required by the Plans and Specifications.

It is estimated that there are approximately ninety (90) cubic yards of rip rap remaining to be constructed.

Section 19—Paint and Painting.

The work remaining to be done under "Paint and Painting" consists of:

(a) The painting, as required by the Plans and Specifications, of all structural steel not yet installed;

(b) The completion of the painting, as required by the Plans and Specifications, of all structural steel which has not yet received the requisite number of coats;

(c) The repainting, to the standard required by the Plans and Specifications, of all surfaces heretofore painted which have been damaged;

(d) The painting, as required by the Plans and Specifications, of all timber guard rail which has not yet been constructed; and completion of the painting of constructed timber guard rail which has not

yet received the requisite number of coats, or on which paint coats have become damaged.

The Contractor shall examine carefully and thoroughly all painted or partially painted structures, and shall satisfy himself as to conditions there existing and the amount of work remaining to be done in connection with additional coats of paint and the repainting of damaged surfaces so that same shall conform to the requirements of the Plans and Specifications.

The decision of the District Engineer as to the locations and surfaces which may require additional coats of paint or repainting of damaged surfaces at any time during the progress of the work shall be final, and no extra payment will be allowed in the event the Contractor shall claim that the amount of repainting, or completion of partially painted surfaces required by the District Engineer does not correspond with that estimated by the Contractor.

Section 20—Metal Cribbing

The work remaining to be done under "Metal Cribbing" consists of furnishing and placing of the metal cribbing in the vicinity of the Landvale Viaduct as required by the Plans and Specifications.

No metal cribbing has been furnished or installed. It is estimated that there are approximately forty-six thousand (46,000) pounds of metal cribbing to be furnished and installed.

Section 21—Tunnel Construction

"Tunnel Construction" covers the construction of tunnels complete, as required by the Plans and Specifications. Some work has been performed on every portion of the tunnels, but no portion is complete. A general description of the approximate amount of the work which remains to be done to complete the "Tunnel Construction" is as follows: (for convenience, in addition to the description of the approximate lineal feet of items of work remaining to be done, the description by Engineer's Stations of approximate location of items is also given).

1. Upgrade or South Tunnel

(a) Excavation: Four hundred forty-six (446) lineal feet, (Stations 135+79 to 140+25), of excavation remains to be performed. Two (2) drifts have been excavated through this length. The necessary maintenance and support of these drifts to prevent cave-in shall be performed by the Contractor during the progress of the excavation of this tunnel.

(b) Concrete Arch Ring: Five hundred eighty-two (582) lineal feet of concrete arch ring remains to be constructed, (Stations 134+28 to 140+10). Footings for concrete arch ring have been constructed ahead of the full ring a distance of one hundred twenty-eight (128) lineal feet, (Stations 134+28 to 135+56).

(c) Grouting: Grouting has been completed a distance of one thousand forty-seven (1,047) lineal

feet, (Stations 111+53 to 122+00), from the western end of the concrete arch ring. There remains one thousand three hundred sixteen (1,316) lineal feet, (Stations 122+00 to 134+28 and 140+10 to 140+98), of the concrete arch ring now installed around which grouting is to be placed, as required by the Plans and Specifications. Grouting around the portions of the concrete arch ring now installed, but not yet grouted, includes such clearing out, and drilling out of grout holes as is necessary to place the grouting as required by the Plans and Specifications. Grouting, as required by the Plans and Specifications, shall be placed around all portions of the concrete arch ring hereafter constructed.

(d) Ceilings and Partitions: The ceiling or partition between the fresh air duct and the exhaust air duct has been partially constructed a distance of eight hundred eighty-one (881) lineal feet from the western end of the concrete arch ring, (Stations 111+53 to 120+34). The ceiling or partition between the roadway portion of the tunnel and the exhaust air duct has been partially constructed a distance of eight hundred eighty-four (884) lineal feet, (Stations 111+53 to 120+37), from the western end of the concrete arch ring.

Structural steel hangers and supports are partially installed easterly of these locations.

Patching, finishing and painting of the surfaces of the concrete on the partially constructed portions of the ceilings and partitions remain to be done.

Gunite partitions and other partition details, and air duct bulkheads, remain to be constructed in connection with these partially constructed ceilings and partitions. Exhaust port openings have been left in partially constructed ceilings. Slides, deflectors and other details required by the Plans and Specifications remain to be installed.

Completion of these partially constructed portions and the construction of ceilings and partitions in all of the remainder of the tunnel, with all accessories, remain to be done as required by the Plans and Specifications.

(e) Side Walls and Fresh Air Flues: Side walls and fresh air flues have been partially constructed and installed a distance of eight hundred eighty-four (884) lineal feet, (Stations 111+53 to 120+37), from the western end of the concrete arch ring; these walls require surface finishing, patching and painting, and flues require cleaning out, and setting and adjusting of nozzle openings, as required by the Plans and Specifications. Air flues for two (2) adits have been partially installed.

Finishing of partially completed walls and installation of flues and construction of flues and side walls in all remaining portions of the tunnel, as required by the Plans and Specifications, remain to be done.

(f) Curbs and Sidewalks: No part of the curbs and sidewalks required for the completion of this tunnel has been constructed, and all remains to be done, as required by the Plans and Specifications.

(g) Roadway Pavement: No portion of the subgrade or roadway pavement required by the Plans and Specifications has been constructed, and all remains to be done.

(h) Drainage Structures and Conduits: No portions of the drainage structures and conduits required by the Plans and Specifications have been constructed, except drains installed back of and through the arch ring in the portion of the tunnel in which the concrete arch ring and footings have been constructed; the Contractor will be required to furnish and construct all remaining portions of drainage structures and conduits, as required by the Plans and Specifications, in the portions of this tunnel in which the concrete arch ring and footings have been constructed. In all portions of this tunnel in which the concrete arch ring and footings have not been placed, the complete drainage structures and conduits, as required by the Plans and Specifications, shall be furnished, constructed and installed by the Contractor.

(i) Water Pipes: No part of the water pipes required to be constructed in this tunnel has been constructed. The Contractor will be required to furnish and install all water pipes, cocks, plugs, adaptors and other necessary accessories, as required by the Plans and Specifications, in the entire length of this tunnel.

2. Downgrade or North Tunnel

(a) Excavation: Nine hundred sixty-two (962) lineal feet, (Stations 129+86 to 139+48), of exca-

vation remains to be performed. One (1) drift has been excavated through on the south side of this tunnel; on the north side of this tunnel a drift has been excavated a distance of approximately seven hundred eighty-two (782) lineal feet westerly from the East Portal, and a distance of approximately one hundred fifty-nine (159) lineal feet easterly from the face of the main excavation; the distance remaining unexcavated between the ends of this drift is approximately ninety-nine (99) lineal feet; the necessary maintenance and support of these drifts to prevent cave-in shall be performed by the Contractor during the progress of the excavation of this tunnel.

(b) Concrete Arch Ring: One thousand eighty-nine (1,089) lineal feet of concrete arch ring remains to be constructed, (Stations 128+50 to 139+39). Footings for concrete arch ring have been constructed ahead of the full ring a distance of one hundred and twenty-one (121) lineal feet, (Stations 128+50 to 129+71).

(c) Grouting: Grouting has been completed a distance of one thousand one hundred and seven (1,107) lineal feet, (Stations 111+43 to 122+50), from the western end of the concrete arch ring. There remains six hundred seventy-nine (679) lineal feet, Stations 122+50 to 128+50 and 139+39 to 140+18), of the concrete arch ring now installed around which grouting is to be placed, as required by the Plans and Specifications. Grouting around

the portions of the concrete arch ring now installed, but not yet grouted, includes such clearing out, and drilling out of grout holes as is necessary to place the grouting as required by the Plans and Specifications. Grouting, as required by the Plans and specifications, shall be placed around all portions of the concrete arch ring hereafter constructed.

(d) Ceilings and Partitions: The ceiling or partition between the fresh air duct and the exhaust air duct has been partially constructed a distance of eight hundred seventy-three (873) lineal feet from the western end of the concrete arch ring, (Stations 111+43 to 120+16). The ceiling or partition between the roadway portion of the tunnel and the exhaust air duct has been partially constructed a distance of eight hundred eighty-four (884) lineal feet, (Stations 111+43 to 120+27), from the western end of the concrete arch ring.

Structural steel hangers and supports are partially installed easterly of these locations.

Patching, finishing and painting of the surfaces of the concrete on the partially constructed portions of ceilings and partitions remain to be done.

Gunite partitions and other partition details, and air duct bulkheads, remain to be constructed in connection with these partially constructed ceilings and partitions. Exhaust port openings have been left in partially constructed ceilings. Slides, deflectors and other details required by the Plans and Specifications remain to be installed.

Completion of these partially constructed portions and the construction of ceilings and partitions

in all of the remainder of the tunnel, with all accessories, remains to be done, as required by the Plans and Specifications.

(e) Side Walls and Fresh Air Flues: Side walls and fresh air flues have been partially constructed and installed a distance of eight hundred eighty-four (884) lineal feet, (Stations 111+43 to 120+27), from the western end of the concrete arch ring; these walls require surface finishing, patching and painting; and flues require cleaning out, and setting and adjustment of nozzle openings, as required by the Plans and Specifications.

Finishing of partially completed walls and installation of flues and construction of flues and side walls in all remaining portions of the tunnel, as required by the Plans and Specifications, remain to be done.

(f) Curbs and Sidewalks: No part of the curbs and sidewalks required for the completion of this tunnel has been constructed, and all remains to be done, as required by the Plans and Specifications.

(g) Roadway Pavement: No portion of the subgrade or roadway pavement required by the Plans and Specifications has been constructed, and all remains to be done.

(h) Drainage Structures and Conduits: No portions of the drainage structures and conduits required by the Plans and Specifications have been constructed, except drains installed back of and through the arch ring in the portion of the tunnel

in which the concrete arch ring and footings have been constructed; the Contractor will be required to furnish and construct all remaining portions of drainage structures and conduits, as required by the Plans and Specifications, in the portions of this tunnel in which the concrete arch ring and footings have been constructed. In all portions of this tunnel in which the concrete arch ring and footings have not been placed, the complete drainage structures and conduits, as required by the Plans and Specifications, shall be furnished, constructed and installed by the Contractor.

(i) Water Pipes: No part of the water pipes required to be constructed in this tunnel has been constructed. The Contractor will be required to furnish and install all water pipes, cocks, plugs, adaptors and other necessary accessories, as required by the Plans and Specifications, in the entire length of this tunnel.

3. Gross Adits

The two (2) most westerly "Cross Adits" of the three (3) required by the Plans and Specifications have been completed. Excavation for the third cross adit has been started from the South or Upgrade Tunnel and the excavation has proceeded approximately fifteen (15) lineal feet toward the North or Downgrade Tunnel. The Contractor is required to complete this adit as required by the Plans and Specifications.

4. Completion of Tunnels

The tunnels shall be completed in every detail, as required by the Plans and Specifications. Schedule A, Schedule B and Schedule C hereinbefore set forth in Part II, of this Supplement, provide for the performance of this work. The general description of work remaining to be constructed and completed, as hereinabove set forth, is approximate only. The Contractor under any Schedule shall perform all work, furnish all labor, materials, tools and equipment necessary and incidental to the completion of work now partially constructed and for the execution of all work required for the completion of the various elements of "Tunnel Construction" which have not yet been constructed, all as required by the Plans and Specifications and included in such Schedules. The omission herein of specific mention of any detail, item, or quantity shall not relieve the Contractor of his responsibility and obligation to perform all labor and furnish all materials of each and every kind necessary, and to construct, complete and finish the various elements of these tunnels included in the Schedules therefor, in every detail as required by the Plans and Specifications; all of this is to be done without other payment therefor than the prices bid for "Tunnel Construction", under each Schedule as hereinbefore provided.

5. Payment

The prices bid and the prices to be paid by the District to complete "Tunnel Construction" under Schedule A, Schedule B and Schedule C shall constitute full compensation to the Contractor for the completion of "Tunnel Construction", including "Cross Adit", as required by the Plans and Specifications, under each of said Schedules respectively, except that "Reinforcing Steel" furnished and installed under Schedule A and Schedule C shall be paid for per pound in place, as provided in the Specifications.

Section 22—Ventilation Buildings

The "Ventilation Buildings" required by the Plans and Specifications to be constructed at the eastern and western ends of the tunnel are partially constructed.

The Contractor shall complete the ventilation buildings in every detail as required by the Plans and Specifications. The Contractor shall perform all work, furnish all labor, materials, tools and equipment necessary and incidental to the repair and refinishing of work now in place, and required for the completion of the construction of these buildings in accordance with the Plans and Specifications.

The roofing over the fan room of the West ventilation building has been damaged and was rejected by the District prior to the abandonment of the work by the former contractor. The Contractor

who completes the work shall completely reconstruct this roofing, damaged roofing to be removed and new roofing to be furnished and constructed in accordance with the Plans and Specifications. The Contractor shall patch and repair defective or damaged wall surfaces and all other portions of said structures before painting.

The Contractor who completes the work shall construct, supply and furnish roadway pavement, curbs, sidewalks and all accessories in the ventilation buildings all as required by the Plans and Specifications.

The foregoing general description of the work remaining to be done, constructed and completed, as hereinabove set forth, is approximate only and, in particular, does not include a complete statement of the repairs and refinishing that will be required to complete the structures as left in place by the contractor who abandoned the work on this project. The omission herein of specific mention of any detail, item or quantity shall not relieve the Contractor of his responsibility and obligation to provide all labor, tools, equipment, and materials of each and every kind necessary to construct, complete and finish the ventilation buildings in every detail as required by the Plans and Specifications. All of this is to be done without other payment therefor than the price bid for "Completion of Ventilation Buildings".

Section 23—Ventilation Equipment

The "Ventilation Equipment" required by the Plans and Specifications to be furnished and installed in the ventilation buildings at the eastern and western ends of the tunnel has been partly furnished and installed.

The Contractor is required to furnish and install all of the remainder of the ventilation equipment in both of the said buildings in every detail, as required by the Plans and Specifications, and the Contractor shall perform all work and furnish all labor, tools, material, equipment and accessories necessary to complete the installation of the ventilation equipment strictly in accordance with the requirements of the Plans and Specifications.

The Contractor shall make a detailed examination of the ventilation equipment now on the project and shall satisfy himself as to the amount and existing conditions thereof, and as to the amount of material, equipment and accessories remaining to be furnished, and work remaining to be done; and, in addition to furnishing all labor, tools, materials, equipment and accessories necessary to complete the same, the Contractor shall make all necessary repairs and adjustments to the portions of the ventilation equipment now in place, including cleaning and relubricating bearings, and do all things necessary in order that, at the completion of the Contract, the ventilation equipment shall be complete in every respect, and shall meet

all of the requirements and tests set forth in the Plans and Specifications.

Section 24—Mechanical Equipment

The "Mechanical Equipment" required by the Plans and Specifications to be furnished and installed on the project of the District has been partly furnished and installed.

The Contractor is required to furnish and install all of the remainder of the mechanical equipment on the project in every detail, as required by the Plans and Specifications, and the Contractor shall perform all work and furnish all labor, tools, material, equipment and accessories necessary to complete the installation of the mechanical equipment strictly in accordance with the requirements of the Plans and Specifications.

The Contractor shall make a detailed examination of the mechanical equipment now on the project, and shall satisfy himself as to the amount and existing conditions thereof, and as to the amount of material, equipment and accessories required to be furnished, and work remaining to be done; and, in addition to furnishing all labor, tools, materials, equipment and accessories necessary to complete the same, the Contractor shall make all necessary repairs and adjustments to the portions of the mechanical equipment now in place, and do all things necessary in order that, at the completion of the Contract, the mechanical equipment shall be complete in every respect, and shall meet all of the re-

quirements and tests set forth in the Plans and Specifications.

Section 25—Electrical Equipment

The "Electrical Equipment" required by the Plans and Specifications to be furnished and installed on the project of the District has been partly furnished and installed. The completion of the electrical equipment has been divided into Schedule C, Schedule D, and Schedule E.

The Contractor under each Schedule last above mentioned is required to furnish and install all of the remainder of the electrical equipment included in the Schedule for which he is awarded a Contract, in every detail, as required by the Plans and Specifications, and shall perform all work and furnish all labor, tools, material, equipment and accessories necessary to complete the installation of such electrical equipment strictly in accordance with all the requirements of the Plans and Specifications.

The Contractor shall make a detailed examination of the electrical equipment now on the project, and shall satisfy himself as to the amount and existing conditions thereof, and as to the amount of material, equipment and accessories required to be furnished, and work remaining to be done under the Schedule upon which he bids; and, in addition to furnishing all labor, tools, materials, equipment and accessories necessary to complete the same, the Contractor shall make all necessary repairs and

adjustments to the portions of the electrical equipment now in place, and do all things necessary in order that, at the completion of the Contract awarded to him, the electrical equipment included therein shall be complete in every respect, and shall meet all of the requirements and tests set forth in the Plans and Specifications.

Section 26—Carbon Monoxide Detectors and Recorders

The "Carbon Monoxide Detectors and Recorders" shall be furnished and installed, as required by the Plans and Specifications.

No part of this equipment has been furnished or installed.

Section 27—Repairing Damage and Imperfect Work and Drainage, on Highway Construction and Appurtenant Structures

The Contractor to whom a Contract is awarded to perform the work included in Schedule G shall perform all work, furnish all labor, tools, materials and equipment necessary for finishing and completing all parts of the work on the highway approaches and appurtenant structures in every detail, as required by the Plans and Specifications.

Without limiting the generality of the foregoing, and as a general description of the work required to be done in repairing damaged and imperfect work on said portions of the project, the Contractor shall perform all work and furnish all labor, tools,

material and equipment necessary to repair and complete the partially constructed shoulders hereinbefore mentioned, to repair penetration oil macadam pavement hereinbefore mentioned, to complete and repair curbs and gutters previously constructed so as to make the same conform to the Plans and Specifications, to brush, clean, straighten and otherwise adjust exposed reinforcing steel as hereinbefore mentioned, to repair the lamphole hereinbefore mentioned, to complete partially completed pipe hand rails and repair damaged pipe hand rails hereinbefore mentioned, to complete the paint and painting, of work included in Schedule G, to clean out all culverts and drainage channels which have become blocked or otherwise obstructed in any manner during previous construction operations or during Contractor's operations, and to maintain and keep the same clear at all times during construction as a part of the work to be performed under the Contract awarded under said Schedule G. All of the work described in this section of Part IV hereof, is to be performed by the Contractor in a manner, and with the purpose that all parts of the work included in Schedule G hereof, shall be completed in accordance with the requirements of the Plans and Specifications.

The price bid for "Repairing Damage and Imperfect Work and Drainage, on Highway Construction and Appurtenant Structures" shall constitute full compensation to the Contractor for the furnish-

ing of all labor, tools, material and equipment and the performance of all work necessary or incidental to the completion of the above described work.

PART V—PAYMENTS

(a) Partial Payments

Payments will be made only upon the certificate of the District Engineer for work actually performed. The District Engineer shall measure the work on or about the first day of each month and at the time of the completion of the work, and shall render a certificate on or about the tenth day of each month and at the completion of the work, stating the amount of work performed during the previous calendar month, and during the current month, at the time of completion. The Contractor shall then, at the times above specified, be entitled to receive a payment from the District in the amount of seventy-five percent (75%) of the amount specified in said District Engineer's certificate, provided that no such estimate or payment shall be required to be made when, in the judgment of the District Engineer, the work is not proceeding in accordance with the provisions of the contract, or when, in his judgment, the total value of the work done since the last estimate amounts to less than Five Hundred Dollars ($500.00), except the certificate and payment required at the completion of the entire work.

The acceptance by the Contractor of the final seventy-five percent (75%) payment for the completed work shall be and shall operate as a release

to the District from all claims and liability to the Contractor for anything done or furnished for or relating to the work, or for any act or neglect of the District or its agent in any way affecting the work, excepting the claim of the Contractor against the District for the moneys herein provided to be paid by the District to the Contractor thirty-five (35) days after the acceptance of the contract.

(b) Final Payments.

Thirty-five (35) days after the acceptance of the work by a certificate of acceptance duly rendered by the District Engineer and final approval and acceptance by the Board of Directors of the District, the Contractor shall be entitled to receive a payment of the balance due under this contract in the amount of twenty-five percent (25%) of the aggregate amount of all certificates of the District Engineer.

[Endorsed]: U. S. Dist. Ct. N. D. Cal. No. 20101-R. Deft's Ex. No. X-11. Filed June 1, 1938. Walter B. Maling, Clerk. By J. A. Schaertzer, Deputy Clerk.

DEFENDANT'S EXHIBIT X-111

Schedule Showing Computed Total Cost of Construction of Project Based on Unit Prices Set Forth in Contract Dated June 4, 1934, Between Six Companies of California and Joint Highway District No. 13 of the State of California, and Units of Work Performed Under All Contracts.

No.	Items	Quantities by Estimate No. 25 Six Companies of California	Quantities—Total Six Companies of California and Schedules A, B, C, D, E, F, G and H	Units	Six Companies of California Contract Prices	Amounts at Six Companies of California Contract Prices
1	Grading	807,032	865.370	Cu. Yds.	0.33	$ 285,572.10
2	Overhaul	4,586,272	5,716,795	Sta. Yds.	0.005	28,583.98
3	Structural Excavation—Class "A"	37,767	39,062.89	Cu. Yds.	1.20	46,875.47
4	Structural Excavation—Class "B"	361	361	Cu. Yds.	2.00	722.00
5	Shoulders	5,400	224,803	Sq. Ft.	0.035	7,868.11
6	Reinforcing Steel	3,739,949	4,719,214	Lbs.	0.04	188,768.56
7	Structural Steel	270,307	424,112	Lbs.	0.05	21,205.60
8	Concrete Structures—Class "A" Concrete	12,608	13,032.77	Cu. Yds.	15.50	202,007.94
9	Concrete Structures—Class "B" Concrete	1,223.1	1,223.1	Cu. Yds.	14.50	17,734.95
10	Portland Cement Concrete Pavement—8 inch	—	30,760	Sq. Ft.	0.24	7,382.40
11	Portland Cement Concrete Pavement—6 inch	31,101	31,101	Sq. Ft.	0.18	5,598.18
12	Asphalt Concrete	42,609	42,609	Sq. Ft.	0.08	3,408.72
13	Penetration Oil Macadam Pavement	80,000	745,612.30	Sq. Ft.	0.14	104,385.72
14	Concrete Curbs—6 inch	3,391	4,654.88	Lin. Ft.	0.35	2,420.54

JOINT HIGHWAY DISTRICT #13
OF THE STATE OF CALIFORNIA

COST ATTRIBUTABLE TO CESSATION
OF WORK BY SIX COMPANIES OF CALIFORNIA

June 13, 1936, to November 9, 1936.

Protection and Maintenance:			
Materials, Supplies and Expense	—Schedule A-3	$19,769.48	
Engineering Services	—Schedule B-1	4,810.19	
Watchmen, Fire Bosses and Labor as per summary at foot of	—Schedule B-2	23,364.66	
Total—Protection and Maintenance			$47,944.33
Measuring Work and Completing Specifications:			
Materials, Supplies and Expense	—Schedule A-3	$ 1,442.78	
Services Measuring Work	—Schedule B-3	3,639.79	
Services Completing Specifications	—Schedule B-3	51.65	
Total—Measuring Work and Completing Specifications			5,134.22
Re-Advertising:			
Cost of Publication of Advertising	—Schedule A		1,862.45
Insurance:			
Cost of Fire, Explosion, Liability, Fidelity and Workmen's Compensation Insurance	—Schedule A		14,060.85
Total Costs—Above			$69,001.85

JOINT HIGHWAY DISTRICT NO. 13 OF THE STATE OF CALIFORNIA — SCHEDULE A-1

Detail of Charges for Material and Supplies, and Services Other Than Labor, Occasioned by Cessation of Work by Six Companies of California. June 13, 1936 to November 30, 1937

Voucher Numbers	Firm to Which Paid	Description of Charges	Total Amount of Voucher	Amount Charged Elsewhere	Amount Charged Herein	Protection to, and Maintenance of Property	Measuring Work and Completing Specifications	Readvertising	Insurance Costs
	June, 1936, Vouchers

31		85.65	
Totals—Measuring Work	489.26	1,965.06	1,185.47

foregoing represent an aggregate of $3,689.79 expended suring work between the 15th day of June, 1936, and h day of August, 1936.

ddition, during this same period of time, the aggregate $51.65 is shown as having been expended for services pleting specifications.

services so indicated may be identified as to the days ch performed, as follows:

July 21, 1936	15.00
July 22, 1936	14.00
July 31, 1936	8.65
August 12, 1936	14.00
Total—Completing Specifications	51.65

Indorsed]: U. S. Dist. Ct. N. D. Cal. No. 20101-R. Deft's -113. Filed June 1, 1938. Walter B. Maling, Clerk. By Schaertzer, Deputy Clerk.

[Endorsed]: U. S. Dist. Ct. N. D. Cal. No. 20101-R. Deft's Ex. X-114. Filed June 1, 1938. Walter B. Maling, Clerk. By J. A. Schaertzer, Deputy Clerk.

DEFENDANT'S EXHIBIT X-116.

State of California,
County of Contra Costa—ss.

I, S. C. Wells, County Clerk of the County of Contra Costa, and Ex-Officio Clerk of the Board of Supervisors of the County of Contra Costa, State of California, do hereby certify that the annexed is a full, true and correct copy of a certified copy of a resolution of the Board of Directors of Joint Highway District No. 13 of the State of California, which was delivered to and filed with the Board of Supervisors of the County of Contra Costa, State of California, on the 2nd day of December, 1937, and that the same is now on file with such Board of Supervisors, and a part of the records of said Board.

Dated, this 2nd day of December, 1937.

[Seal of Board of Supervisors]

S. C. WELLS,
County Clerk and Ex-Officio Clerk of the Board of Supervisors of the County of Contra Costa, State of California.

I, Harry N. Stow, Secretary of Joint Highway District No. 13 of the State of California, hereby certify that the annexed is a full, true and correct copy of the Certificate and Receipt of S. C. Wells, County Clerk of the County of Contra Costa, and ex-officio Clerk of the Board of Supervisors of the

County of Contra Costa, State of California, filed in the records of this District on the 2nd day of December, 1937.

HARRY M. STOW,
Secretary, Joint Highway District No. 13 of the State of California.

[Seal] By B. V. RIORDAN,
Assistant Secretary.

RESOLUTION OF BOARD OF DIRECTORS OF JOINT HIGHWAY DISTRICT No. 13 OF THE STATE OF CALIFORNIA, THAT PROJECT IS COMPLETED; ADOPTED UNDER THE PROVISIONS OF SECTION 32 OF THE "JOINT HIGHWAY DISTRICT ACT."

"Whereas, on the 29th day of November, 1937, Wallace B. Boggs, District Engineer, made and furnished to the Director of Public Works of the State of California, an affidavit and certificate, in writing, showing that the highway, highway tunnels and appurtenances constituting the project of this District, had been constructed, improved and completed in accordance with the plans and specifications and supplements thereto previously adopted therefor; and

Whereas, on the 30th day of November, 1937, the Director of Public Works of the State of California issued and made his certificate, in writing, showing

that the said highway, highway tunnels and appurtenances constituting the project of this District had been duly constructed, improved and completed in accordance with the plans and specifications previously adopted therefor, which said certificate is now on file in the records of this District;

It is hereby resolved that the Board of Directors of Joint Highway District No. 13 of the State of California hereby declare that the project of said Joint Highway District has been duly constructed, improved and completed in accordance with the plans and specifications therefor adopted on the 30th day of March, 1933, and the amendments and supplements thereto adopted on the 9th day of January, 1934, the 3rd day of April, 1934, and the 23rd day of September, 1936, made by Wallace B. Boggs, District Engineer, and now on file in the office of said Joint Highway District, and that the said highway, highway tunnels and appurtenances are now complete and ready for use by the public;

It is hereby further resolved that the secretary or assistant secretary prepare certified copies of this resolution and transmit the same to Earl Lee Kelly, Director of Public Works of the State of California, and to the Boards of Supervisors of the Counties of Alameda and Contra Costa, which said counties comprise the counties within said Joint Highway District."

I, Harry M. Stow, Secretary of Joint Highway District No. 13 of the State of California, hereby certify that the foregoing is a full, true and correct

copy of a resolution adopted by the unanimous vote of all of the members of the Board of Directors of Joint Highway District No. 13 of the State of California, at a regular meeting of said Board of Directors held on the 1st day of December, 1937.

[Seal] HARRY M. STOW,
Secretary, Joint Highway District No. 13 of the State of California.
By B. V. RIORDAN,
Assistant Secretary.

AFFIDAVIT AND CERTIFICATE OF DISTRICT ENGINEER THAT JOINT HIGHWAY DISTRICT PROJECT IS COMPLETE.

State of California,
County of Alameda—ss.

Wallace B. Boggs, being first duly sworn, deposes and says and certifies:

That at all times mentioned herein he was, and now is, the duly appointed, qualified and acting District Engineer of Joint Highway District No. 13 of the State of California;

That the project of said District, which includes a highway, highway tunnels and approaches with appurtenant structures, located partly in the City of Oakland, County of Alameda, State of California, and partly in the County of Contra Costa, State of California, all in said Joint Highway District No. 13 of the State of California, the westerly terminus of said project being located at a point near the intersection of Broadway with Keith Avenue in the said City of Oakland and the easterly terminus of said project being located at a point on the State Highway in Contra Costa County, approximately fourteen hundred feet northerly from the intersection of the Fish Ranch Road with said State Highway, which is commonly known as and called the "Tunnel Road", has been duly constructed, improved and completed in strict accordance with the plans and specifications therefor adopted by the Board of

Directors of said Joint Highway District on the 30th day of March, 1933, and the amendments and supplements to said specifications adopted by the Board of Directors of said District on the 9th day of January, 1934, on the 3rd day of April, 1934, and the 23rd day of September, 1936, all of which said plans and specifications and supplements thereto were approved by the Director of Public Works of the State of California;

That this affidavit and certificate of the undersigned as District Engineer of said Joint Highway District, is made for the purpose of securing a certificate, under the provisions of Section 32 of the Joint Highway District Act of 1931 (Stats. 1931, page 1026), and of a resolution of the State Highway Commission of the State of California adopted July 8, 1933, approving an additional contribution of $400,000 to the cost of the project of said District by the State of California, from the Director of Public Works of the State of California, showing that the project of the District, which has been completed as aforesaid, has been duly constructed, improved and completed in accordance with the plans and specifications previously adopted therefor.

WALLACE B. BOGGS,

Subscribed and sworn to before me this 29th day of November, 1937.

[Notarial Seal] C. E. PAUL,

Notary Public in and for the County of Alameda, State of California.

My Commission expires Oct. 31, 1941.

[Endorsed]: Filed November 29, 1937. Harry M. Stow, Secretary, Joint Highway District No. 13 of the State of California. By B. V. Riordan, Assistant Secretary.

[Title of Cause.]

ORDER DIRECTING FILING OF OPINION AND FILING AND RECORDING OF JUDGMENT

By direction of the Court, Ordered that the typewritten opinion this day rendered by this court in above cause be forthwith filed by the clerk, and that a judgment be filed and recorded in the minutes of this court in accordance with the opinion rendered.

[Title of Circuit Court of Appeals and Cause.]

Upon Appeal from the District Court of the United States for the Northern District of California, Southern Division.

OPINION

Before: Denman, Mathews and Healy,
Circuit Judges.

Healy, Circuit Judge.

Six Companies of California, a Nevada corporation, contracted with Joint Highway District No. 13 of the State of California to construct the Broad-

way Tunnel, near Oakland. For convenience these parties will be referred to as the Contractor and the District. After part performance the Contractor attempted to rescind and brought suit to recover the reasonable value of materials and labor theretofore furnished, asserting that the District had breached the contract and had misrepresented the nature of the country through which the tunnel was to be driven.

The District answered, alleged a wrongful abandonment of the contract, and by cross complaint sought damages against the Contractor and its sureties. The court found on all issues in favor of the District, awarding damages in a large sum on the cross complaint. The Contractor and its sureties appeal.

The contract, dated June 4, 1934, was for the construction of two parallel tunnels, together with approaches and appurtenant structures, the tunnels to penetrate the Coast Range between Alameda and Contra Costa counties.[1] Prior to bidding the Contractor was furnished with a copy of the plans and specifications. The specifications, which were made a part of the contract, invited attention to a geological report on file in the office of the District Engineer. The Contractor examined this report and copied a part of it. It also copied an estimate of the cost of the work prepared by the District Engineer, and inspected a test bore and test pits on the ground.

---

[1]The total contract price was $3,683,931.

The contract required completion of the work within 720 days from its date; but the specifications contained a clause entitling the Contractor to an extension of time under conditions presently to be stated. There was a provision for liquidated damages in the amount of $500 per day in the event of delay. Time was made of the essence.

The Contractor met with difficulties which put it behind schedule. Slides occurred during the construction of an approach, and other incidents delayed the commencement of the tunnel work. There was delay in getting the proper equipment and trouble in working out an efficient method of pouring concrete. The Contractor had assumed that for the major portion of the distance to be tunneled the country rock would hold without artificial support until the concrete lining was installed in the bores. However, unstable and swelling ground was encountered to the extent that constant timbering was necessary and all timbers had to be left in place. In April or May, 1935, the Contractor complained to the District Engineer that the work had been delayed by bad ground and rainy weather. Shortly thereafter it requested an extension of time, but the request was denied. In August of that year it again requested an extension and claimed additional compensation because of the difficult ground conditions.

On the day the latter request was filed a cave-in occurred which led to a stoppage of the work by order of the state Industrial Accident Commission. After work was resumed a second cave-in caused a

further interruption. Finally, on May 11, 1936, the Contractor filed its last application for an extension, which was denied three days later.

On June 10, 1936, the District delivered a check representing a progress payment for the month of May. The amount certified as due by the District Engineer was actually $3500 more, but the difference was withheld as liquidated damages for the seven days' delay occurring subsequent to May 24, 1936, the date fixed for final completion of the work. The Contractor returned the check and by letter to the District purported to rescind, one of the stated grounds for rescission being the retention of the $3500. On the same day—June 13—the Contractor quit work, at which time the project was about 70% complete. The District promptly gave notice that unless work was resumed within three days the action would be regarded as an abandonment. Some two weeks thereafter the Contractor commenced this suit. Later the District let new contracts for the completion of the project and in December, 1936, filed its cross complaint.

The Contractor predicates its claimed right to rescind on three grounds: (a) that the retention of the liquidated damages, together with the implied purpose of the District to make further deductions for delay, was a material breach of the contract; (b) that the District misrepresented the nature of the ground through which the tunnels were to be driven; and (c) that the District breached the contract by refusing to perform certain work in setting

lines and grades. All these grounds were enumerated in its rescinding letter.

(a) With respect to the withholding of the liquidated sum, it is urged that the District failed to obtain its engineer's opinion whether the work had been unavoidably delayed;[2] and that, assuming the engineer had ruled on the subject, his opinion was arbitrary and capricious, or so grossly mistaken as not to be a binding determination.

The trial court found that the delays were not attributable to Act of God or to stormy or inclement weather, and that they were not unavoidable. Also that the District Engineer had in fact passed on the Contractor's claimed right to an extension, and that in ruling adversely the engineer acted fairly and honestly in the exercise of his judgment. These findings are supported by the evidence.

The question whether there were unavoidable delays was one committed by the contract to the judgment of the engineer. His judgment may be impeached for fraud only, or for mistake so gross as to amount to fraud. American Hawaiian, etc., Co. v. Butler, 165 Cal. 497, 504, 513, 133 P. 280, 286; Connel v. Higgins, 170 Cal. 541, 150 P. 769; Gray v. Cotton, 166 Cal. 130, 134 P. 1145. See also, United

---

[2]A subparagraph of the specifications reads as follows: "Extension Of Time.—The time during which the Contractor is delayed in said work by Acts of God, or by stormy or inclement weather or by any reason which, in the judgment of the District Engineer, unavoidably delays the work, shall be added to the aforesaid time for completion . . ."

States v. Gleason, 175 U. S. 588; No. Pac. Ry. Co. v. Twohy Bros. Co., 9 Cir., 95 F. (2d) 220, 225. There is persuasive evidence, most of it coming from the Contractor's own witnesses, that by the use of proper methods and equipment the delay could have been avoided. Clearly, no grounds exist for holding that the decision of the engineer was either fraudulent or palpably unreasonable.

It is argued that, because of the stoppage order of the state authorities following the cave-ins, and in line with a local statute,[3] the delay in performance was excused by operation of law. The court found, however, that any delays which occurred were caused by the Contractor's own acts; and there is ample support for the holding that the cave-ins were due to the Contractor's incompetence. We think the state statute has no application to a situation like this. See Restatement, Contracts, Vol. 2, §458.

It is urged that the delay was excused under the modern doctrine of impossibility of performance. We find no merit in the argument. The ground conditions encountered were not radically different from those which the Contractor should reasonably have anticipated. See Williston on Contracts (Rev. Ed.), Vol. 6, §1931, p. 5410; Restatement, Contracts, Vol. 2, §§454, 456.

(b) The Contractor asserts that it was misled by statements in the geological report to the effect that

---

[3] §1511, California Civil Code.

the rock structures were favorable from an engineering standpoint. It refers also to provisions in the specifications which it claims gave rise to a similar belief. On this issue the trial court properly found that the District made no misrepresentations; that the Contractor assumed the risk of unfavorable ground conditions; and that even if the facts had been misrepresented the point was waived.

The contract stipulated that there was no guaranty of the accuracy of the geological report, and that bidders were not relieved of the duty of making their own investigations; and that the submission of a bid should be considered as prima facie evidence that the bidder had examined the site and had satisfied himself as to the conditions. Also that the Contractor was skilled in the trade while the District was not.

Moreover, it affirmatively appears that the Contractor was under no illusions concerning the possible difficulties to be met with in tunneling the Coast Range, and that it was not misled by the geological report or by any provision in the contract. Indeed, there was no claim of misrepresentation until more than a year after the work began. It was not until August, 1935, that the Contractor claimed the right of rescission on this ground; and even then it waited almost a year longer before attempting to rescind.

(c) With respect to the claim that the District breached the contract by failing to indicate lines and grades, the evidence shows that the District maintained the required monuments on a center

line following within 100 to 300 feet of the core. From the end of this line the Contractor was compelled to extend the lines and grades into the drifts. It several times complained that the District was not fulfilling its obligation in this respect, but the latter as consistently maintained that it was doing all the contract required.

We may assume, without deciding, that the District was at fault in failing to continue the lines into the drifts. From the commencement there had been an honest dispute in respect of this matter, and remembering the magnitude of the project we think the refusal of the District to furnish the proper lines for the balance of the operation was not such a material breach as would of itself justify a recission. The point seems to be largely makeweight.

CROSS COMPLAINT OF THE DISTRICT

The following items make up the judgment entered on the cross complaint: (1) $142,000 as liquidated damages for delay at 284 days; (2) $69,001.85, covering "interim" expenditures made by the District in protecting, insuring and measuring the work, and in advertising for new bids; and (3) $98,066.31, representing the completion cost in excess of the Contractor's bid, after deducting unpaid amounts owing the Contractor at the time of abandonment.[4]

---

[4]The difference between the cost of completing the work and the contract price for the unfinished work was $591,325.47. From this the court deducted the sum of $493,259.16, owed the Contractor for work done prior to abandonment.

The tunnels were not completed until more than a year after the prescribed date. In computing liquidated damages for the delay, the court included the delay of 20 days occurring prior to abandonment, and found that a reasonable time for the completion of the project was 264 days. The period of 149 days elapsing between the date of abandonment and the resumption of work under the new contracts was excluded from the computation.

Appellants assert that the stipulation for liquidated damages is unenforceable, citing California Civil Code §§1670-1671. This statute declares such a provision void unless it appears from the nature of the case that it would be "impracticable or extremely difficult to fix the actual damage", in which event the amount agreed upon by the parties is presumed to be the actual damage.

Under this statute it is held that the test of impracticability is to be applied as of the date of the contract, rather than as of the time of trial. Hanlon, Drydock & Shipbuilding Co. v. McNear, 70 Cal. App. 204, 232 P. 1002. The question is one of fact; and the party seeking recovery under a provision for liquidated damages has the burden of alleging and proving facts sufficient to satisfy the statutory requirement. City of Los Angeles v. Shafer, 53 Cal. App. 458, 200 P. 384; Consol. L. Co. v. City of Los Angeles, 33 Cal. App. 698, 166 P. 385; Robert Marsh & Co. v. Tremper, 210 Cal. 572; Mente & Co. v. Fresno C. & W. Co., 113 Cal. App. 325, 298 P.

126; Kelly v. McDonald, 98 Cal. App. 121, 276 P. 404.

It was shown that the District—a special and temporary public corporation—was under the expense of keeping its organization intact during the added time required to complete the project. The actual cost of the operating overhead was $272.89 per day. It is plain that this item of damage was neither impracticable nor extremely difficult of ascertainment, hence does not of itself remove the the cause from the ban of the statute. However, the District pleaded and proved, in addition, that the project provided a modern highway of low gradient between portions of Contra Costa County and the business section of Oakland, and was several miles shorter than existing undesirable routes which it was designed to supplant; that more than a million and a half vehicles yearly traveled the old routes, all of which could more safely and more economically move over the new highway; and that delay in completing the project would result in loss to resident taxpayers for whose use the highway was intended—loss great in extent but impracticable of ascertainment. The question here is whether this proof satisfies the requirements of the local statute.

The only California case we have found throwing important light on the subject is City of Oakland v. De Guarda, 95 Cal. App. 270. In that case there was a failure to perform a contract for the improvement of a street. Special assessments had been levied against abutting properties, and in a reletting

of the work it was necessary to increase the amount of these assessments to meet the increased cost of the new contract. The court allowed recovery of an amount equal to the added assessments in a suit by the municipality on the contractor's bond, on the theory that the municipality was trustee for the property owners and the damages were recoverable for their benefit. The bond made no mention of the property owners. Cf. Consol. L. Co. v. City of Los Angeles, supra.

Although a municipality, in its corporate capacity, may suffer no damage from delay in the completion of a public improvement, it may validly contract for liquidated damages for delay in contemplation of the inconvenience and loss which will flow to its inhabitants for whose benefit the improvement is intended and at whose cost it is to be built. Such is the rule applied in the cases generally. United States v. Bethlehem Steel Co., 205 U. S. 105; Md. Dredging etc. Co. v. United States, 241 U. S. 184; City of Reading v. U. S. Fidelity & Guaranty Co. (D. C. E. D. Pa.), 19 F. Supp. 350; Bankers' Surety Co. v. Elkhorn R. Drainage Dist., 8 Cir., 214 F. 342; Brooks v. Wichita, 8 Cir., 114 F. 297; Parker-Washington Co. v. Chicago, 267 Ill. 136, 107 N.E. 872, Ann. Cas. 1916C 337; Marshall v. Atkins, 60 Tex. Civ. App. 336, 127 S.W. 1148; Ann. Cas. 1912C 1028; Whiting v. New Baltimore, 127 Mich. 66, 86 N.W. 403; Detroit v. Peoples Telephone Co., 135 Mich. 696, 98 N.W. 745; Spring Wells Township v. Detroit P. & N. R. Co., 140 Mich. 277, 103

N.W. 700. For other cases on the subject see note, 34 A.L.R. 1345 et seq. The provision is valid.

Appellants contend that the clause does not apply to the delay in completion after abandonment by the Contractor. The stipulation is shown on the margin.[5] Fairly construed, it means that the period for which the damages are to be computed comprises the time between the agreed date of completion of the "work" and its actual completion, whether by the Contractor or by the District. It is not for delay in completion of the contract but for delay in the completion of the work that the damages are provided. The clause does not in terms or by implication empower the Contractor to put an end to the accrual of the liquidated damages by the mere process of refusing to go ahead after the time for completion had passed. The Court of Appeals for the Second Circuit in construing a New York contract so holds and finds authority therefor in the New York de-

---

[5] "* * * The parties hereto expressly stipulate and agree that time is the essence of this contract. In case the work is not completed within the time specified in the contract or within such extensions of the contract time as may be allowed as herein provided, it is distinctly understood and agreed that the Contractor shall pay the District as agreed and liquidated damages and not as a penalty five hundred dollars ($500.00) for each and every working day which may elapse between the limiting date as herein provided and the date of actual completion of the work, said sum being specifically agreed upon as a measure of damage to the District by reason of delay in the completion of the work * * *"

cisions. So. Pacific v. Globe Indemnity Co., 21 F. (2d) 288. To similar effect are School Dist. No. 3 v. U. S. Fidelity & G. Co., 96 Kan. 499, 152 P. 668; Natl. Loan & Exch. Bank v. Gustafson, 157 S.C. 221, 154 S.E. 167, 171; City of Reading v. U. S. Fidelity & G. Co., supra.

Cases cited by appellants and by Williston on Contracts (Rev. Ed.), Vol. 3, §747, p. 2210, are, with one exception,[6] distinguishable. They are Geary v. City of Pasco, 89 Wash. 352, 154 P. 433, where there was no abandonment by the contractor; likewise in Fidelity & Deposit Co. v. Robertson, 136 Ala. 379, 34 So. 933, 944, in Moore v. Board of Regents, 215 Mo. 705, 115 S.W. 6, in Joint School Dist. v. Bailey Marsh Co., 181 Wis. 202, 194 N.W. 171, and in Shields v. John Shields Cons. Co., 81 N. J. Eq. 286, 86 A. 958; City of Rainier v. Masters, 79 Ore. 534, 154 P. 426, where there was no allegation or proof of the completion of the work; Moses v. Antuono, 56 Fla. 497, 47 So. 925, and Board of Education v. Sandman, 234 N.Y.S. 665, 667, where the performance of the contract never was commenced; Bacigalupi v. Phoenix Bldg. etc. Co., 14 Cal. App. 632, 637, where no damage was awarded for delay and the appellant merely claimed that the liquidated damage clause for delay prevented a recovery for the increased cost of completing the building.

Appellants argue that we are bound by the decision of a California District Court of Appeal in

---

[6]Village of Canton v. Globe Indemnity Co., 195 N.Y.S. 445. See 52 Harv. L. Rev. 160-161.

Sinnott v. Schumacher, 45 Cal. App. 46, 52, 53. There the contractor had abandoned the contract and, while the fact does not appear on the face of the opinion, actual damages for delay were allowed in lieu of the liquidated amount. In that case there was a petition for hearing by the Supreme Court of the state, but not on this point. The decision is adverse to ours, but the court failed to consider the authorities and stated its mere conclusion without reasoning. The case is not persuasive, and we think was wrongly decided.

California is divided territorially into four judicial districts in each of which sits a District Court of Appeal, an intermediate appellate court. While there is conflict in these courts whether the decision of one is binding on another, Skaggs v. Taylor, 77 Cal. App. 519, Clover v. Jackson, 81 Cal. App. 55, the most recent case holds that one District Court of Appeal is not bound by the decision of another. People v. Brownell, 2 Cal. App. (2d) 287. However this may be, a decision of the intermediate court is not binding on the Supreme Court of the state even where the latter denies a petition for hearing. People v. Rabb, 202 Cal. 409.

This court is no more bound to follow a decision of a District Court of Appeal than is the court of last resort of the state. Our position here, in a case where the point at issue has not been decided by the highest California court, Erie R. Co. v. Tompkins, 304 U.S. 64, Lyon v. Mutual Benefit Health & Acc. Assn., 305 U.S. 484, 489, is that we have been substi-

tuted for the California Supreme Court as the appropriate court of appeal, and that it is our duty to apply the California law as the Supreme Court of the state would apply it on an appeal there. Wichita Co. v. City Bank, 306 U.S. 103, 107. In the performance of that function we may regard the decision of an intermediate appellate court as persuasive, but it is not controlling. Security First Natl. Bank v. United States, 9 Cir., 103 F. (2d) 188, 190; Russell v. Todd, U. S., decided February 26, 1940.

Appellants assert that the contract itself (Article 5) fixed the measure of damages and established the procedure to be followed by the District in completing the work; and that in its cross complaint the District did not allege compliance with this procedure or claim damages in conformity with the article.[7] The clause, it is said, required the District to

---

[7]Article 5, so far as material, reads as follows: "The [Contractor] agrees that if the work to be done under this contract . . . shall be abandoned, or if this contract shall be assigned by the [Contractor], or if at any time the District Engineer shall be of the opinion, and shall so certify in writing to the said [District] that the said work or any part thereof is unnecessarily or unreasonably delayed, or that the said [Contractor] is wilfully violating any of the conditions of this contract, or is executing this contract in bad faith, the said [District] shall have the power to notify the [Contractor] to discontinue all work or any part thereof under this contract, and thereupon the said [Contractor] shall cease to continue said work or such part thereof as said [District] may designate, and the said [District] shall thereupon have the power to place such

complete the project with its own forces and did not authorize a re-letting. Also, it required the District, upon completion of the work, to audit the expenses incurred and cast a balance; whereupon the District was obliged to give notice before any liability for an unfavorable balance would accrue.

In response to this argument, the District denies that it was under any obligation to proceed in conformity with the terms of the article.

So far as concerns the District, the provisions of the article are plainly optional. The Contractor agrees that the District "shall have the power" to

---

and so many persons, and to obtain by contract, purchase or hire, such animals, carts, wagons, implements, tools, material or materials, by contract or otherwise, as said [District] may deem advisable, to work at and be used to complete the work herein described, or such part thereof as the agent authorized to superintend the same may deem necessary, and to use such material as they may find upon the line of said work and to charge the expense of such labor and material, animals, carts, wagons, implements and tools to the [Contractor], and the expense so charged shall be deducted and paid by the [District] out of such moneys as may be either due or may at any time thereafter become due to the said [Contractor] under and by virtue of this contract or any part thereof. In case such expense is less than the sum which would have become payable under this contract, if the same had been completed by the said [Contractor], the said [Contractor] shall be entitled to receive the difference, and in case such expense shall exceed the last said amount, then the said [Contractor] or its bondsmen shall pay the amount of such excess to the [District] on notice from the said [District] of the excess so due."

complete the work in the manner indicated. The latter did not promise to follow the procedure, nor agree to relinquish its right, under general law, to let new contracts and hold the Contractor for damages. Bd. of Education v. Md. Casualty Co., 3 Cir., 27 F. (2d) 20; City of Reading v. U. S. Fidelity & G. Co., supra. Cf. United States v. U. S. Fidelity & G. Co., 236 U.S. 512; Prudence Co. v. Fidelity Co., 297 U.S. 198. Nor, having re-let the work for a definite sum, was the District obliged to await its completion before bringing suit to recover its damages. Bacigalupi v. Phoenix Bldg. Co., supra; United States v. U. S. Fidelity & G. Co., supra; Bd. of Education v. Md. Casualty Co., supra; City of Reading v. U. S. Fidelity & G. Co., supra.

If we assume, contrary to the interpretation of the parties themselves, that the language of Article 5 is broad enough to authorize the District to proceed, as it did, by re-letting the work to other independent contractors, still the stipulated mode of assessing damages was not compulsory. It is plain that the prescribed method was to become operative only in the event the District, by serving the stipulated notice, should elect to cause the Contractor to discontinue and itself take over the work. No such notice was in fact given. What the District did was to notify the Contractor that, unless the latter resumed work within three days, the District would proceed to complete it and hold the Contractor and its bondsmen liable for any cost in excess of the contract price and "any and all damages to this

District by reason of your wilful abandonment of the work."

There is another interpretation of the article which entirely eliminates it from consideration. Read as a whole, it appears to contemplate contingencies in which the District may take the initiative and compel the Contractor to discontinue the work, in whole or in part. In Natl. Contracting Co. v. Hudson River W. P. Co., 118 App. Div. 665, 103 N.Y.S. 641, a substantially identical clause was held inapplicable in a situation where, as here, the builder wrongfully abandoned the contract and quit the work of its own motion. This holding was cited with approval in Bacigalupi v. Phoenix Bldg. Co., supra. See also 17 C.J.S. §512, pp. 1095-6; George A. Fuller Co. v. Doyle, 87 Fed. 687.

In any event, we are satisfied that the article was not intended as a limitation upon the rights of the District, but rather as an enlargement of them.

Other points have been argued. We have considered all of them and find no error warranting a reversal.

Affirmed.

[Endorsed]: Opinion. Filed Mar. 14, 1940. Paul P. O'Brien, Clerk.

United States Circuit Court of Appeals
for the Ninth Circuit

No. 9113

SIX COMPANIES OF CALIFORNIA,
a corporation, et al.,

Appellants,

vs.

JOINT HIGHWAY DISTRICT NO. 13 OF THE STATE OF CALIFORNIA, a public corporation,

Appellee.

JUDGMENT

Upon appeal from the District Court of the United States for the Northern District of California, Southern Division.

This Cause came on to be heard on the Transcript of the Record from the District Court of the United States for the Northern District of California, Southern Division, and was duly submitted:

On consideration whereof, it is now here ordered and adjudged by this Court that the judgment of the said District Court in this cause be, and hereby is affirmed, with costs in favor of the appellee and against the appellants.

It is further ordered and adjudged by this Court that the appellee recover against the appellants for its costs herein expended, and have execution therefor.

[Endorsed]: Filed and entered March 14, 1940. Paul P. O'Brien, Clerk. By F. H. Schmid, Deputy.

United States Circuit Court of Appeals
for the Ninth Circuit

Before: Denman, Mathews and Healy,
Circuit Judges.

[Title of Cause.]

ORDER DENYING PETITION FOR REHEARING

Upon consideration of the petition of appellants for rehearing of above cause, filed on April 12, 1940, and the answer thereto filed on April 18, 1940, and by direction of the Court, it is ordered that the said petition be, and hereby is denied.

[Title of Circuit Court of Appeals and Cause.]

ORDER STAYING ISSUANCE OF MANDATE

Upon application of Paul S. Marrin, Esq., counsel for the appellants, and good cause therefor appearing, it is ordered that the issuance, under Rule 28, of the mandate of this Court in the above cause be, and hereby is stayed to and including June 21, 1940; and in the event the petition for a writ of certiorari to be made by the appellant herein be docketed in the Clerk's office of the Supreme Court of the United States on or before said date, then the mandate of this Court is to be stayed until

after the said Supreme Court passes upon the said petition.

WILLIAM DENMAN,
United States Circuit Judge.

Dated: San Francisco, California, April 27, 1940.

[Endorsed]: Filed Apr. 27, 1940. Paul P. O'Brien, Clerk.

[Title of Circuit Court of Appeals and Cause.]

CERTIFICATE OF CLERK, U. S. CIRCUIT COURT OF APPEALS FOR THE NINTH CIRCUIT, TO RECORD CERTIFIED UNDER RULE 38 OF THE REVISED RULES OF THE SUPREME COURT OF THE UNITED STATES.

I, Paul P. O'Brien, as Clerk of the United States Circuit Court of Appeals for the Ninth Circuit, do hereby certify the foregoing two thousand six hundred thirty-six (2,636) pages, numbered from and including 1 to and including 2,636, Volume VIII being the Book of Exhibits containing six hundred and forty-one (641) pages, numbered from and including 1 to and including 641, to be a full, true and correct copy of the entire record, excluding original exhibits, of the above-entitled case in the said Circuit Court of Appeals, made pursuant to request of counsel for the appellants, and certified under Rule 38 of the Revised Rules of the Supreme Court of the United States, as the originals thereof remain on file and appear of record in my office.

Attest my hand and the seal of the said the United States Circuit Court of Appeals for the Ninth Circuit, at the City of San Francisco, in the State of California, this 17th day of June, 1940.

[Seal] PAUL P. O'BRIEN,
Clerk.

SUPREME COURT OF THE UNITED STATES

ORDER ALLOWING CERTIORARI—Filed October 14, 1940

The petition herein for a writ of certiorari to the United States Circuit Court of Appeals for the Ninth Circuit is granted, limited to the first question presented by the petition and the case is assigned for argument immediately following No. 74.

And it is further ordered that the duly certified copy of the transcript of the proceedings below which accompanied the petition shall be treated as though filed in response to such writ.

IN SUPREME COURT OF THE UNITED STATES

STIPULATION AS TO CONTENTS OF RECORD—Filed October 24, 1940

It is hereby stipulated that there may be omitted from all copies of Volume VIII (book of exhibits) of the printed record to be filed with the above entitled court, except the ten copies which were filed with the petition for the writ of certiorari, all photostatic matter, such photostatic matter not being essential to a consideration of the questions presented by the petition for the writ and that the record may be considered complete upon there being furnished to the Clerk of the above entitled court the required number of copies of the record with such photostatic material included in only ten copies of said Volume VIII.

Dated: October 16, 1940.

Petitioners,

vs.

JOINT HIGHWAY DISTRICT NO. 13 OF THE STATE OF CALIFORNIA, a public corporation,

Respondent.

Petition for a Writ of Certiorari to the United States Circuit Court of Appeals for the Ninth Circuit.

To the Honorable the Chief Justice and Associate Justices of the Supreme Court of the United States:

Your petitioners, Six Companies of California, and Hartford Accident and Indemnity Company, Fidelity and Deposit Company of Maryland, The Aetna Casualty and Surety Company, Indemnity Insurance Company of North America, American Surety Company of New York, Maryland Casualty Company, United States Fidelity and Guaranty Company, The Fidelity and Casualty Company of New York, Glen Falls Indemnity Company, Standard Surety and Casualty Company of New York, Standard Accident Insurance Company, Massachusetts Bonding and Insurance Company, Continental Casualty Company and New Amsterdam Casualty Company, respectfully show:

A.

SUMMARY STATEMENT OF THE MATTER INVOLVED.

Two questions are presented by this petition:

The first question is whether a California rule of law, declared by its District Court of Appeal in a decision which the California Supreme Court refused to review, which decides that a clause in a construction contract providing for liquidated damages for delay in completion of the contract work does not apply after the contractor abandons the contract, is a rule of law which is binding on the courts of the United

States in an action arising in California and subject to its laws.

A second question is also presented as to whether *any* liquidated damages can be recovered in the present case (regardless of the answer to the first question) because sections 1670-71 of the California Civil Code declare provisions in a contract for such damages void unless "from the nature of the case, it would be impracticable or extremely difficult to fix the actual damage". In this case such impracticability or extreme difficulty did not exist.

Petitioner Six Companies of California, as contractor, (hereinafter called "contractor" to distinguish it from the other petitioners which were sureties on a bond given by contractor) contracted with respondent Joint Highway District No. 13 of the State of California for the construction of a highway project including two parallel tunnels commonly known as the Broadway Tunnel near Oakland, in Alameda and Contra Costa Counties, California. After part performance, contractor, asserting that respondent had breached the contract, served notice of rescission and stopped work. Contractor thereafter brought suit against respondent in the District Court of the United States for the Northern District of California for the reasonable value of materials and labor furnished. Respondent answered alleging a wrongful abandonment of the contract and cross-complained for damages against the contractor and its sureties, including damages for delay in the amount of $206,500.00 (R. 58).

The claim of respondent for damages for delay was based solely on a contract clause providing that contractor would pay to respondent $500.00 per day for each day after May 24, 1936, until the work was actually completed (R. 53-57). Respondent neither pleaded nor attempted to prove it had sustained any actual damage from any delay.

The District Court found against petitioners on all issues raised by both the complaint and cross-complaint. It found that the contractor had wrongfully abandoned the work on June 13, 1936 (R. 155) and was not entitled to judgment on the complaint (R. 216). It found that the time when the contractor was required to complete the work under the contract expired on May 24, 1936, that there was a delay of twenty days beyond that date prior to abandonment of the contract on June 13, 1936, and the following delays after abandonment:

1. A delay of 149 days after abandonment before new contracts were let by respondent for doing the work.
2. A delay of 264 days after the first new contract was let before the work was completed (Finding of Fact XXIII R. 199-201).

The District Court concluded that respondent was entitled to judgment on its cross-complaint including judgment for liquidated damages for delay in the amount of $142,000.00, being damages at the stipulated contract rate of $500.00 per day for 20 days'

delay prior to abandonment and 264 days' delay after abandonment.

On September 27, 1938, in conformity with the conclusions of the District Court a judgment was entered by that Court against the contractor on the complaint and in favor of respondent and against all the petitioners on the cross-complaint. There was included in the judgment in favor of respondent on the cross-complaint the above mentioned amount of $142,000.00 as liquidated damages for delay (R. 309).

On November 25, 1938, petitioners appealed the judgment of the said District Court to the United States Circuit Court of Appeals for the Ninth Circuit which on March 14, 1940, affirmed the judgment (R. 2634). Petitioners thereafter filed a petition for rehearing which was denied on April 25, 1940 (R. 2635).

Petitioners here seek to review only that part of the judgment of the Circuit Court of Appeals which affirms the judgment of the District Court awarding to respondent liquidated damages for delay in the amount of $142,000.00.

The Circuit Court of Appeals affirmed that part of the judgment on the cross-complaint on the grounds,

(a) that the provision in the contract for liquidated damages for delay was applicable to delay after abandonment, and in so holding refused to be bound by or to follow a decision to the contrary by the District Court of Appeal of the State of California (*Sinnott v. Schumacher*, (1919) 45 Cal.

App. 46, 187 Pac. 105). In so holding the Circuit Court of Appeals conceded that its decision was adverse to that of the District Court of Appeal (R. 2629) but held that such decision was not binding on it because it was not a decision by the Supreme Court of California, and

(b) that such provision was valid notwithstanding sections 1670 and 1671 of the California Civil Code even though the respondent in its corporate capacity suffered no actual damages from delay which were impracticable or extremely difficult to fix.

B.

JURISDICTION.

1. The jurisdiction of the Supreme Court of the United States to issue the writ of certiorari herein prayed for is invoked under Judicial Code, Section 240 (a), as amended by the Act of February 13, 1925, 43 Stat. 938 (28 U. S. C., Section 347 (a)).

2. The judgment which is sought to be reviewed was entered by the United States Circuit Court of Appeals for the Ninth Circuit on March 14, 1940. A petition by petitioners for a rehearing (filed within the time allowed by the rules of said Circuit Court of Appeals) was denied on April 25, 1940 (R. 2635).

3. The petitioners claim that, under and by virtue of the local law of California, as established by its Courts, provisions in construction contracts for liqui-

dated damages for delay have no application to delay subsequent to abandonment and that, under and by virtue of the local law of California, as established by the statutes thereof, such provisions are void unless there are actual damages to a party to the contract which it would be impracticable or extremely difficult to fix and that the record shows conclusively that there were no such damages. On both of these grounds petitioners claim that the part of the judgment of the Circuit Court of Appeals affirming the judgment of the District Court against them on the cross-complaint for liquidated damages for delay is erroneous.

4. Petitions for writs of certiorari to review decisions of the United States Circuit Courts of Appeals which have failed to follow the laws of the several States have been heretofore granted by this Court. *Erie Railroad Co. v. Hilt* (1918) 247 U. S. 97, 38 S. Ct. 435, 62 L. Ed. 1003; *Fidelity Union Trust Company v. Field* (1940) 60 S. Ct. 890, Preliminary print official reports Vol. 309, No. 2, p. IV. (Petition in the last cited case for Writ of Certiorari to Circuit Court of Appeals for the Third Circuit was granted by the Supreme Court April 22, 1940.)

C.

REASONS RELIED ON FOR THE ALLOWANCE OF THE WRIT.

1. The decision of the United States Circuit Court of Appeals for the Ninth Circuit in refusing to be bound by or to follow the decision of the District

Court of Appeal of California in the case of *Sinnott v. Schumacher* (1919) 45 Cal. App. 46, 187 Pac. 105, is in conflict with Section 34 of the Judiciary Act of 1789, now found in the Judicial Act in 28 U. S. C., Section 725, as construed by the case of *Erie Railroad Co. v. Tompkins* (1938) 304 U. S. 64, 58 S. Ct. 817, 82 L. Ed. 1188.

2. The decision of the United States Circuit Court of Appeals for the Ninth Circuit, in refusing to be bound by or to follow the decision of a District Court of Appeal of California is in conflict with the decision of the United States Supreme Court in the case of *Rindge Company v. County of Los Angeles* (1923) 262 U. S. 700, 43 S. Ct. 689, 67 L. Ed. 1186. In that case, the United States Supreme Court held it was controlled so far as state law was concerned by a decision of a District Court of Appeal of California. It is also in conflict with the opinion rendered by the United States Supreme Court in *Tipton v. Atchison, Topeka & Santa Fe Railway Co.* (1936) 298 U. S. 141, 56 S. Ct. 715, 80 L. Ed. 1091.

3. The decision of the United States Circuit Court of Appeals in passing upon the validity of the clause of the contract providing for liquidated damages followed the general rule of law and not the California rule as set forth in the statutes of this State (Sections 1670 and 1671 of the California Civil Code) and for that further reason is in conflict with the decision of this Court in *Erie Railroad Co. v. Tompkins*, supra. (Said code sections are quoted in full in the following brief).

WHEREFORE, your petitioners respectfully pray that a writ of certiorari be issued out of and under the seal of this Honorable Court directed to the United States Circuit Court of Appeals for the Ninth Circuit, commanding that Court to certify and to send to this Court for its review and determination, on a day certain to be therein named, a transcript of the record and proceedings herein; and that that part of the judgment of the United States District Court for the Northern District of California on the cross-complaint which awards to respondent $142,000.00 liquidated damages for delay and that part of the order and judgment of the United States Circuit Court of Appeals for the Ninth Circuit affirming such part of said judgment of said District Court be reversed by this Honorable Court, and your petitioners have such other and further relief in the premises as to this Honorable Court may seem meet and just.

PAUL S. MARRIN,
MAX THELEN,
DELANCEY C. SMITH,
Attorneys for Petitioner
Six Companies of California

JEWEL ALEXANDER,
Attorney for all other
Petitioners.

In the Supreme Court of the United States

OCTOBER TERM, 1940

No. .....

SIX COMPANIES OF CALIFORNIA, a corporation, and HARTFORD ACCIDENT AND INDEMNITY COMPANY, a corporation, FIDELITY AND DEPOSIT COMPANY OF MARYLAND, a corporation, THE AETNA CASUALTY AND SURETY COMPANY, a corporation, INDEMNITY INSURANCE COMPANY OF NORTH AMERICA, a corporation, AMERICAN SURETY COMPANY OF NEW YORK, a corporation, MARYLAND CASUALTY COMPANY, a corporation, UNITED STATES FIDELITY AND GUARANTY COMPANY, a corporation, THE FIDELITY AND CASUALTY COMPANY OF NEW YORK, a corporation, GLEN FALLS INDEMNITY COMPANY, a corporation, STANDARD SURETY AND CASUALTY COMPANY OF NEW YORK, a corporation, STANDARD ACCIDENT INSURANCE COMPANY, a corporation, MASSACHUSETTS BONDING AND INSURANCE COMPANY, a corporation, CONTINENTAL CASUALTY COMPANY, a corporation, and NEW AMSTERDAM CASUALTY COMPANY, a corporation,

Petitioners,

vs.

JOINT HIGHWAY DISTRICT NO. 13 OF THE STATE OF CALIFORNIA, a public corporation,

Respondent.

Brief in Support of Petition for Writ of Certiorari.

I.

OPINIONS OF THE COURTS BELOW.

The opinion of the District Court was rendered April 8, 1938, and was reported under the title of Six Companies of California v. Joint Highway District No. 13 of the State of California in 24 Fed. Supp. 346. The opinion of the Circuit Court of Appeals was rendered March 14, 1940, and was reported under the same title in 110 F. (2d) 620, and is set forth in full in the record (R. 2616).

II.

GROUNDS ON WHICH THE JURISDICTION OF THIS COURT IS INVOKED.

A full statement of these grounds has heretofore been given under heading B in the petition, and in the interest of brevity the statement will not be repeated in this brief.

III.

STATEMENT OF THE CASE.

As stated in the petition, we are requesting this Court to reverse only that part of the judgments rendered by the Courts below which awarded to respondent on its cross-complaint liquidated damages for delay. For that reason we shall confine this statement to those facts which are pertinent to a review of that question.

Under the limited review requested we are not questioning the correctness of the conclusion of the Courts below that petitioner Six Companies of California (hereinafter called contractor) abandoned, on June 13, 1936, without sufficient justification, its contract with respondent for the construction of a highway and highway tunnels. We accept as correct for the purposes of this petition, the findings of fact of the District Court that the time for completion of the work under the contract, as provided in that document, expired on May 24, 1936 (Finding XXXIII, R. 199) and that the reasonable time for completion of the work after respondent relet it to others was 264 days (R. 200).

The cross-complaint of respondent (R. 46) against petitioners claimed damages for its cost of measuring and reletting the work (R. 50-52) and the excess cost over the contract price of completing the work (R. 52-53). Judgment was entered in favor of respondent on both these items and that part of the judgment is not questioned here.

In addition, the cross-complaint claimed damages of $206,500.00 from delay, basing that claim on the following provision of the contract:

> "(d) Damages for Delay.—The parties hereto expressly stipulate and agree that time is the essence of this contract. In case the work is not completed within the time specified in the contract or within such extensions of the contract time as may be allowed as herein provided, it is distinctly understood and agreed that the Con-

tractor shall pay the District as agreed and liquidated damages and not as a penalty five hundred dollars ($500.00) for each and every working day which may elapse between the limiting date as herein provided and the date of actual completion of the work, said sum being specifically agreed upon as a measure of damage to the District by reason of delay in the completion of the work; it being expressly stipulated and agreed that it would be impracticable to estimate and ascertain the actual damages sustained by the District under such circumstances; and the Contractor agrees and consents that the amount of such liquidated damages so fixed, shall be deducted and retained by the District from any money then due, or thereafter to become due, the Contractor." (R. Volume VIII, Book of Exhibits, p. 9).

The cross-complaint neither alleged nor asked any actual damages from delay, but the part thereof claiming damages from delay was based entirely on the quoted provision in the contract for liquidated damages (R. 53-58).

The Circuit Court of Appeals, as stated in the petition, refused to be bound by and follow a decision of the District Court of Appeal of California, admittedly contrary to the decision of the Circuit Court of Appeals (R. 2629), holding such provisions inapplicable after abandonment. Had the Circuit Court of Appeals applied the law of California as decided by the District Court of Appeal, the judgment for liquidated damages would have been only $10,000.00 instead of $142,000.00.

In an effort to comply with the California rule, as expressed in sections 1670 and 1671 of the California Civil Code and the decisions of the Courts of that State that one seeking to enforce such a provision must both plead and prove facts showing that "from the nature of the case, it would be impracticable or extremely difficult to fix the actual damage", respondent alleged in its cross-complaint three items of damage from delay which it claimed established this. They were:

1. Damage to the public (R. 55, 56);
2. Cost of maintaining defendant's staff and organization (R. 57);
3. Interest on its bonds (R. 57).

The District Court found in accordance with these allegations of the cross-complaint (R. 202), concluded that respondent was entitled to a judgment for $142,000.00 liquidated damages (R. 217) and included that amount of such damages in the judgment rendered (R. 310).

The Circuit Court of Appeals sustained the contractual provision on the sole ground that respondent had proved that there would be damage from delay to taxpayers who were residents of respondent—though not to respondent itself—great in extent but impracticable of ascertainment and that respondent, a municipal corporation, could, for that reason, enforce the provision (R. 2624-2626). In so holding the Circuit Court of Appeals applied a rule of general law pre-

vailing in other jurisdictions but contrary to the express provisions of California statutes (Civil Code Sections 1670-1671).

IV.

SPECIFICATION OF ERRORS.

A. The United States Circuit Court of Appeals for the Ninth Circuit erred in holding it is not bound to follow the decision of the District Court of Appeal of California rendered in the case of *Sinnott v. Schumacher* (1919) 45 Cal. App. 46, 187 Pac. 105, that provisions for liquidated damages in construction contracts are inapplicable after abandonment.

B. The United States Circuit Court of Appeals for the Ninth Circuit erred in holding that the decision of the District Court of Appeal of California in *Sinnott v. Schumacher,* supra, did not establish the law of the State of California on the point in issue.

C. The United States Circuit Court of Appeals for the Ninth Circuit erred in substituting its opinion for the opinion of the District Court of Appeal of California as to what the law of California is on the point in issue.

D. The decision of the United States Circuit Court of Appeals for the Ninth Circuit, in refusing to follow the decision of a District Court of Appeal of California, is in conflict with Section 34 of the Judiciary Act of 1789, now found in the Judicial Act in 28 U. S. C., Section 725, as construed by the cases of

Erie Railroad Co. v. Tompkins (1938) 304 U. S. 64, 58 S. Ct. 817, 82 L. Ed. 1188, and *Ruhlin v. New York Life Insurance Co.* (1938) 304 U. S. 202, 58 S. Ct. 860, 82 L. Ed. 1290.

E. The decision of the United States Circuit Court of Appeals for the Ninth Circuit, in refusing to follow the decision of a District Court of Appeal of California, is in conflict with prior decisions of this Court in *Tipton v. Atchison, Topeka & Santa Fe Railway Co.* (1936) 298 U. S. 141, 56 S. Ct. 715, 80 L. Ed. 1091, and *Rindge Company v. County of Los Angeles* (1923) 262 U. S. 700, 43 S. Ct. 689, 67 L. Ed. 1186.

F. The decision of the United States Circuit Court of Appeals for the Ninth Circuit is in conflict with sections 1670 and 1671 of the Civil Code of California.

V.

ARGUMENT.

SUMMARY OF THE ARGUMENT.

Point A. The Circuit Court of Appeals erred in holding that it is not bound to follow the decision of the District Court of Appeal of California in the case of *Sinnott v. Schumacher* (1919) 45 Cal. App. 46, 187 Pac. 105.

The jurisdiction of the District Courts of Appeal of California is State-wide.

This Court has decided that the Courts of the United States sitting in California are bound by de-

cisions of the California District Courts of Appeal where the Supreme Court of California has denied a rehearing after decision of such Courts.

Point B. The Circuit Court of Appeals erred in holding that the stipulation in the contract for liquidated damages was valid under the law of California.

POINT A.

THE CIRCUIT COURT OF APPEALS ERRED IN HOLDING THAT IT IS NOT BOUND TO FOLLOW THE DECISION OF THE DISTRICT COURT OF APPEAL OF CALIFORNIA IN THE CASE OF SINNOTT v. SCHUMACHER, (1919) 45 Cal. App. 46, 187 Pac. 105.

The Circuit Court of Appeals in its opinion herein conceded that the District Court of Appeal of California had decided in *Sinnott v. Schumacher,* supra, that a liquidated damage provision in a construction contract applies only to delay while the contractor is performing the work under the contract and has no application after the contractor has abandoned the work and that the damages from delay, if any, recoverable in such case are the actual damages and not the liquidated amount (R. 2629).

It held, however, that it was not bound by that decision and that, with respect to decisions of the California District Courts of Appeal, it was in the same position as the California Supreme Court and could apply the law of California as it construed it regardless of District Court of Appeal decisions (R. 2629-2630).

We think that in so holding the Circuit Court of Appeals fell into error and misconstrued the decision of this Court in *Erie Railroad Co. v. Tompkins* (1938) 304 U. S. 64, 58 S. Ct. 817, 82 L. Ed. 1188.

It took the view that the *Erie Railroad Co.* case holds that Courts of the United States are bound only by the decisions of state courts of last resort. But this overlooks what we believe is the fundamental basis of the decision. As this Court said in the *Erie* case, at page 78:

> "Except in matters governed by the Federal Constitution or by Acts of Congress the law to be applied in any case is the law of the State."

The question involved then is—What is the law of California? It seems to us, under the reasoning of the *Erie Railroad Co.* case that it makes little difference what state court has declared the law so long as it is the rule of decision in the state. It is true that in the *Erie* case this Court referred to the law of the state as declared by its highest court in a decision. But it did not say that the law of the state might not be established by the decision of an intermediate appellate court and where the decision of such court does in fact announce a rule of law which other state courts are bound to follow it establishes the law of the state even though another court of the state has the power to overrule its decision.

In *Ruhlin v. New York Life Insurance Co.* (1938) 304 U. S. 202, 58 S. Ct. 860, 82 L. Ed. 1290, this Court said, at pages 208, 209:

"Application of the 'State law' to the present case, or any other controversy controlled by *Erie R. Co. v. Tompkins,* does not present the disputants with duties difficult or strange. The parties and the federal courts must now search for and apply the entire body of substantive law governing an identical action in the state courts. Hitherto, even in what were termed matters of 'general' law, counsel had to investigate the enactments of the state legislature. Now they must merely broaden their inquiry to include the *decisions of the state courts, just as they would in a case tried in the state court,* and just as they have always done in actions brought in the federal courts involving what were known as matters of 'local' law." (Emphasis ours.)

Had this case been tried in any superior (trial) court of California, such court would have been bound by the decision in *Sinnott v. Schumacher,* and the result would have been the opposite of that announced by the Circuit Court of Appeals. If, therefore, as this Court says in the *Ruhlin* case, the state law is to be determined just as it would in a case tried in the state courts we cannot escape the conclusion that the decisions of the California District Courts of Appeal are binding on the federal courts.

The power of the Supreme Court of California to overrule decisions of the District Courts of Appeal has little bearing on the solution of the problem. The Supreme Court has the power to overrule its own decisions, but its prior decisions, as well as prior decisions of the District Courts of Appeal, are the law of the state unless and until overruled. It is not un-

usual for courts of last resort to overrule earlier decisions, but until they do so the earlier decision must be followed by inferior courts.

The Decision of One District Court of Appeal in California Binds the Others, Particularly When a Petition for Hearing by the Supreme Court of the Earlier Case Has Been Denied.

The opinion of the Circuit Court of Appeals in this case states, in discussing the question of whether the decision of one District Court of Appeal is binding on another:

> "* * * While there is conflict in these courts, whether the decision of one is binding on another, *Skaggs v. Taylor,* 77 Cal. App. 519, *Clover v. Jackson,* 81 Cal. App. 55, the most recent case holds that one District Court of Appeal is not bound by the decision of another. *People v. Brownell,* 2 Cal. App. (2d) 287." (R. 2629)

We must respectfully differ from this statement. In addition to *Skaggs v. Taylor* and *Clover v. Jackson,* cited in the above quotation, all of the following cases hold that the District Courts of Appeal of one district are bound by prior decisions of such courts in another district, where the Supreme Court has denied a hearing in the prior case.

Bridges v. Fisk (1921) 53 Cal. App. 117, 122, 200 Pac. 71;

People v. Whitaker (1924) 68 Cal. App. 7, 11, 228 Pac. 376;

Masonic Mines Association v. Superior Court (1934) 136 Cal. App. 298, 300, 28 Pac. (2d) 691.

People v. Brunwin (1934) 2 Cal. App. (2d) 287, 37 Pac. (2d) 1072 (cited in the quotation from the opinion as *People v. Brownell*) states no different rule. In that case, as the court points out in its opinion at page 294, the Supreme Court in *People v. Rabe* (1927) 202 Cal. 409, 261 Pac. 303, had previously disapproved the ruling in the prior decision of the District Court of Appeal upon which reliance was placed. Upon such disapproval it, of course, ceased to be authority.

As the District Courts of Appeal of one district are bound by the decisions of the same courts in their own and other districts, such decisions are of state-wide scope and application. A rule of law announced in one district will be followed in all others and, of course, must be followed by all trial courts.

Does not, therefore, the decision of the Court in the instant case perpetuate the evils condemned in *Erie Railroad Co. v. Tompkins,* supra? There are many propositions of state law in California which have never been decided by its Supreme Court but which have been decided by a District Court of Appeal on which the Supreme Court has denied a hearing. These decisions of the District Courts of Appeal are accepted as the law throughout the state and the rules announced by them are applied in litigation in its courts. Many of the rules of law announced by the District Courts of Appeal of the state have never been decided by its Supreme Court and probably never will be, because under the enlarged jurisdiction conferred upon the District Courts of Appeal by the 1928 amendment to Article VI, section 4, of

the California Constitution most appeals are taken directly to these courts and it is very unlikely that the Supreme Court would order any case in which it believes the District Courts of Appeal have properly applied the law to be transferred to it for hearing. We earnestly contend that the decisions of these courts are the law of the state when there is no decision of the Supreme Court which conflicts with them. If the federal courts refuse to follow them we may have, for long and indefinite periods of time, one rule in the federal courts and another in the state courts, a condition substantially the same as that brought about by the rule announced in *Swift v. Tyson,* 16 Pet. 1.

Sinnott v. Schumacher, supra, was a case in which the appeal was properly taken in the first instance to the Supreme Court and was then transferred by the Supreme Court to the District Court of Appeal for hearing. Under such circumstances, the denial by the Supreme Court of a hearing after decision by the District Court of Appeal meant that the Supreme Court considered the decision correct upon the case shown by the record and not simply that no error appeared upon the face of the opinion of the District Court of Appeal, as would be the situation if the case had been in the appellate jurisdiction of the District Court of Appeal and if the judgment had been appealed directly to that court.

This distinction was clearly stated by the Supreme Court of California in denying a rehearing in the

case of *Burke v. Maze* (1909) 10 Cal. App. 206, 101 Pac. 438.

We quote from the decision of the Supreme Court appearing at pages 211 and 212 of the appellate reports:

> "The petition for a rehearing of this cause in the supreme court, after judgment in the district court of appeal, is denied. It is a cause which, under the recent amendment to article VI of the constitution, went properly by direct appeal to the district court for the first district. In such cases a rehearing in this court is granted only when error appears upon the face of the opinion of the appellate court, or when a doubtful and important question is presented upon which we desire to hear further argument. In such cases the denial of a petition for a rehearing would or might establish a mischievous precedent, and for that reason alone we feel obliged to review the decision of a cause which is not within our jurisdiction by direct appeal. In causes properly appealed to this court and referred by us to the district court for hearing and decision the rule as to rehearings is different; for if it is contended that the case stated in the opinion of the district court of appeal differs materially from the case as it appears in the record, we feel bound to look into the record to see whether anything deserving consideration has been overlooked in deciding the cause, or any of the facts misconceived in material particulars. If so we order a rehearing notwithstanding the opinion of the district court may be correct on its face, because the complaining

party has a right to the opinion of this court upon the precise case shown by the record."

The rule announced by *Burke v. Maze* has never been departed from in California. It must, therefore, be assumed that before denying a hearing in *Sinnott v. Schumacher,* supra, the Supreme Court reviewed the record and was satisfied that all the points involved were correctly decided.

In *Eisenberg v. Superior Court* (1924) 193 Cal. 575, 578, 226 Pac. 617, the court said:

> "* * * The order of this court denying a petition for a transfer to this court after said decision of the district court of appeal may be taken as an approval of the conclusion there reached, but not necessarily of all of the reasoning contained in that opinion."

It is the *conclusion* reached in *Sinnott v. Schumacher* upon which we rely here and under the rule announced by the California Supreme Court in the *Eisenberg* case that conclusion was approved by the Supreme Court of the state.

The Jurisdiction of the District Courts of Appeal is State-Wide.

While it is true, as stated in the opinion of the Circuit Court of Appeals, that California is divided into four districts in each of which sits a District Court of Appeal, the jurisdiction of those courts is not limited to the consideration of appeals from trial courts of the district in which they sit.

Article VI, section 4b, of the California constitution, in defining the jurisdiction of the District Courts of Appeal, states:

> "The district courts of appeal shall have appellate jurisdiction on appeal from the superior courts (except in cases in which appellate jurisdiction is given to the supreme court) in all cases at law in which the superior courts are given original jurisdiction. * * *"

It is to be noted that their jurisdiction is not confined to appeals from superior (trial) courts *in their respective districts.* They are given jurisdiction to hear appeals from *any superior court in the state* whether situated in their district or not and, as pointed out hereinafter, they frequently hear and decide appeals from superior courts in other districts which are transferred by the Supreme Court from one District Court to another.

They also have jurisdiction to hear and decide any case, even though originally appealable to the Supreme Court, which is transferred to them for decision. We quote further from Article VI, section 4b, of the California Constitution:

> "The said courts shall also have appellate jurisdiction in all cases, matters, and proceedings pending before the supreme court which shall be ordered by the supreme court to be transferred to a district court of appeal for hearing and decision." (The full text of Article VI, sections 4, 4a, 4b and 4c of the California Constitution defining the jurisdiction of the Supreme Court and

District Courts of Appeal of California is set forth in the appendix.)

Article VI, section 4c, of the same constitution, provides as follows:

> "§4c. *Transfer of cases between supreme and appellate courts.* The supreme court shall have power to order any cause pending before the supreme court to be heard and determined by a district court of appeal, and to order any cause pending before a district court of appeal to be heard and determined by the supreme court. The order last mentioned may be made before judgment has been pronounced by a district court of appeal, or within fifteen days in criminal cases, or thirty days in all other cases, after such judgment shall have become final therein. The judgment of the district courts of appeal shall become final therein upon the expiration of fifteen days in criminal cases, or thirty days in all other cases, after the same shall have been pronounced.
>
> "The supreme court shall have power to order causes pending before a district court of appeal for one district to be transferred to the district court of appeal for another district, or from one division thereof to another, for hearing and decision."

Article VI, section 4, of the state constitution contained almost identical provisions at the time *Sinnott v. Schumacher* was tried and appealed.

Under the authority thus conferred on it by the state constitution the California Supreme Court may,

and frequently does, transfer cases pending before it to the District Courts of Appeal and transfer cases pending before one District Court of Appeal to a District Court of Appeal for another district. The District Court of Appeal to which a case is so transferred has jurisdiction to hear and decide it even though it may be on appeal from the decision of a superior court in an entirely different district.

We have listed in the appendix a few of the cases in the District Courts of Appeal where those appellate courts have decided appeals from trial courts in other districts and have printed therein an excerpt from the seventh report of the Judicial Council of California showing the frequency of this practice in California.

It is clear that those courts have jurisdiction of appeals from any superior court in the state and that their jurisdiction is not limited to hearing appeals from superior courts in their own districts.

This Court Has Decided That the Courts of the United States Sitting in California Are Bound by Decisions of the California District Courts of Appeal Where the Supreme Court of California Has Denied a Rehearing After Decision of Such Courts.

In *Tipton v. Atchison, Topeka & Santa Fe Railway Co.* (1936) 298 U. S. 141, 56 S. Ct. 715, 80 L. Ed. 1091, this Court considered the question of whether the federal courts were bound to follow two decisions of the California District Courts of Appeal. While

it held they were not because the decisions were based on an erroneous conception of federal statutes, it said that they would have been if the state court decisions had been based on a construction of the California law.

The Court said, at page 149, of the decision of the Circuit Court of Appeals for the Ninth Circuit:

> "Whether this conclusion is right depends upon the force and effect of two District Court of Appeal decisions, which the Supreme Court of the State refused to review."

And, at page 151:

> "If these decisions of intermediate courts of appeal, and the refusal of the Supreme Court of California to review them, amount to no more than a judicial construction of the compensation act as having, by its terms, no application in the circumstances, they are binding authority in federal courts. * * *"

And, further, at page 152:

> "The Supreme Court of the State refused to review either of the cases although this court had recently defined the scope of the Safety Appliance Acts in the *Moore* and *Gilvary* cases. If we were convinced that the court acted solely upon a construction of the workmen's compensation law, uninfluenced by the decisions following the supposed authority of the *Rigsby* case, we should not hesitate to hold United States courts bound by such construction of the state statute. * * *"

It seems very clear from the foregoing that, so far as questions of state law are concerned, this Court considers decisions of the California District Courts of Appeal binding on the federal courts where the Supreme Court of California has denied a hearing.

See also *Ridge Company v. County of Los Angeles* (1923) 262 U. S. 700, 43 S. Ct. 689, 67 L. Ed. 1186, where the Court said, at page 708, of a decision of the California District Court of Appeal, on which the California Supreme Court had denied a hearing:

> "We necessarily accept, as a matter of state law, the holding of the District Court of Appeal that the proviso to §1241 of the Code made the resolutions of the Board of Supervisors conclusive evidence as to the necessity of taking these particular highways and the other matters therein specified. So construed it was held by that court not to be objectionable to any provision of the State or Federal Constitutions. *By this we are controlled so far as the provisions of the state constitution are concerned.*" (Emphasis ours.)

This Court has held that where the state court is an important tribunal its decisions should be followed.

Erie Railroad Co. v. Hilt (1918) 247 U. S. 97, 38 S. Ct. 435, 62 L. Ed. 1003.

This Court has granted certiorari to review a recent decision of the Circuit Court of Appeals for the third circuit which decided that it was not bound by a decision of the Court of Chancery of New Jersey be-

cause it was a court of original jurisdiction and not the highest state court.

> *Field v. Fidelity Union Trust Co.* (1939) (C. C. A. 3rd) 108 F. (2d) 531. Certiorari granted April 22, 1940, 60 Sup. Ct. 890, preliminary print official reports Vol. 309, No. 2, p. IV.

We respectfully urge that the federal courts are bound by the decisions of the District Courts of Appeal in California, for, as we have hereinbefore pointed out, jurisdiction of those courts is not limited to their own districts but is state-wide, and their decisions are binding on all courts of first instance and all intermediate appellate courts in the state. We think that this Court has already decided in the *Tipton* and *Rindge Company* cases, supra, that the federal courts are so bound, particularly where the California Supreme Court has refused a hearing after decision in the District Court of Appeal.

The Circuit Court of Appeals in this case, by its opinion herein, asserts that it has been substituted for the California Supreme Court as the appropriate court of appeal and in the performance of that function will regard the decision of an intermediate court of appeal as persuasive, but not controlling, citing as authority for the statement *Wichita Royalty Co. v. City National Bank of Wichita Falls* (1939) 306 U. S. 103, 59 S. Ct. 420, 83 L. Ed. 515 (R. 2629-30).

The *Wichita* case is not, in our opinion, authority for the proposition for which it has been cited. That case was first tried in the state court and appealed to the Texas Supreme Court which reversed and remanded the cause for a new trial and stated the applicable principles of law for guidance of the trial court. After the cause was remanded, it was removed to the federal District Court and after trial there was appealed to the Circuit Court of Appeals. In denying a petition for rehearing after the decision of this Court in *Erie Railroad Co. v. Tompkins,* the Circuit Court of Appeals held that it was not obligated to follow the earlier decision of the Supreme Court of Texas because it thought a later decision of the Supreme Court of that state had modified the rule announced in the earlier state court decision.

The statement in the opinion of the Circuit Court of Appeals in this case is apparently based upon the following language in the opinion in the *Wichita* case, at page 107:

> "In departing from the 'law of the case,' as announced by the state court, and applying a different rule, the court below correctly stated that *by reason of the removal* it had been substituted for the Texas Supreme Court as the appropriate court of appeal and that it was its duty to apply the Texas law as the Texas court would have declared and applied it on a second appeal if the cause *had not been removed.* It was the duty of the federal court to apply the law of Texas as declared by its highest court." (Emphasis ours.)

It was only *because the case had been removed* to the federal courts that the Circuit Court of Appeals was substituted as the court of appeal. If we correctly interpret that decision this Court was commenting only upon the unusual situation which had arisen in that case. It was not announcing any rule that the Circuit Courts of Appeals generally are in the position of the state courts of last resort and free, therefore, to overrule, or disregard decisions of lower state courts because it disagrees with them and thinks the highest state courts would have done so.

This Court further held that the Circuit Court of Appeals was in error in holding that the later decision of the Supreme Court of Texas had modified the earlier. It said at page 110:

> "We think that the opinion of the Supreme Court of Texas in the present case has not been modified by the *Quanah* case and must be accepted as stating the law of Texas; and that it affords the appropriate guide for the District Court so far as it may be applicable to the facts which have been developed on the trial there."

It seems very clear to us from what was actually decided in that case that this Court did not consider the Circuit Court of Appeals a court of coordinate power with the state Supreme Court in deciding what the state law might be. The question of the power of the federal courts to disregard decisions of lower state courts was not at all involved. As the Court said, at page 107:

"* * * the only question for our decision is whether the Court of Appeals rightly concluded that the state court had thus altered its opinion."

We submit that the case is not authority for the broad proposition announced by the Circuit Court of Appeals in the instant case and that its decision is contrary to the principles there applied.

POINT B.

THE CIRCUIT COURT OF APPEALS ERRED IN HOLDING THAT THE STIPULATION IN THE CONTRACT FOR LIQUIDATED DAMAGES WAS VALID UNDER THE LAW OF CALIFORNIA.

The paragraph of the contract providing for liquidated damages has been quoted supra, pages 12 and 13.

The validity of agreements in contracts whereby the damages to be paid in the event of a breach are determined in anticipation thereof is regulated by statute in California.

Section 1670 of the California Civil Code provides as follows:

"Every contract by which the amount of damage to be paid, or other compensation to be made, for a breach of an obligation, is determined in anticipation thereof, is to that extent void, except as expressly provided in the next section."

Section 1671 of the California Civil Code provides as follows:

"The parties to a contract may agree therein upon an amount which shall be presumed to be

> the amount of damage sustained by a breach thereof, when, from the nature of the case, it would be impracticable or extremely difficult to fix the actual damage."

The general rule in many states is that where the amount of liquidated damages fixed is reasonably related to actual damage the agreement will be sustained. This rule, however, is not applicable in California.

> *Moore v. Investment Properties Corporation* (1934) (C. C. A. 9th) 71 Fed. (2d) 711, 718.

Under the above quoted Code sections a party seeking to recover liquidated damages must plead and prove that from the nature of the case it would be impracticable or extremely difficult to fix the *actual damage.*

The Circuit Court of Appeals in this case recognizes and states this rule (R. 2624) and as we agree with this particular statement of that Court we shall not, in the interest of brevity, discuss it further.

As hereinbefore stated at page 14, respondent, in an effort to meet this burden, pleaded three items of damage from delay. They were (1) cost of continued operating overhead of respondent, (2) bond interest, and (3) loss to the general public.

The Circuit Court of Appeals rightly held (R. 2625) that it was neither impracticable nor extremely difficult to ascertain respondent's operating overhead and

that this item did not remove the clause in the contract from the ban of the statute.

That Court did not comment on the item of bond interest. All of respondent's bonds were issued in May, 1932, and were payable serially on specified dates and carried a fixed rate of interest which did not vary with the date of completion of the contract work (R. 2546-7). Delay in the completion of the project did not increase the obligations of respondent either as to principal or interest on its bonds. But, as in the case of the operating costs of respondent, the amount of interest payable on the bonds during any delay was easily capable of exact ascertainment and no such item of damage would support a provision in a contract for liquidated damages in California. It was a mere matter of arithmetical calculation.

The Circuit Court of Appeals held the clause of the contract for liquidated damages valid on the sole ground that delay in completion of the project would result in loss, not to respondent, but to resident taxpayers thereof. It cites (R. 2626) a number of cases from other jurisdictions in support of its decision on this point. As stated above, the general rule by which the validity of such clauses is measured in most of the states does not prevail in California. In that State the clause must meet the test prescribed by the statute. In relying upon and applying the rule of other jurisdictions having no statute similar to that of California the Court fell into error. It should have

decided the point with reference to the California rule, not the general rule.

The only California case cited by the Circuit Court of Appeals, *City of Oakland v. De Guarda* (1928) 95 Cal. App. 270, 272 Pac. 779, 273 Pac. 819, is very different from this. In that case the city recovered on a bond of a contractor who defaulted in the performance of a contract to improve a street. The work was being done under a statute whereby most of the cost of the work was assessed directly against the property owners. In a detailed analysis of the statute the court points out that the city was acting in the capacity of a trustee for the property owners and that the property owners were the persons beneficially interested in the performance of the work. Furthermore, it appeared that the damages were actual, definite and certain and that the persons who suffered them and the amount suffered by each could be definitely determined. In concluding its opinion, at page 286, the court states that the recovery by the city was for the use and benefit of the property owners and that it would be a wrongful act for the city to convert the money to its own use.

The cross-complaint in this case is not based upon any theory that respondent seeks recovery as a trustee. It asks for damages for its own use and benefit.

We have found no California case directly in point. However, the meaning of the statute seems perfectly clear from the mere reading of it. There must be

actual damage which it would be impracticable or extremely difficult to fix before the clause is valid. Actual damage to whom? Obviously to the parties, not to third persons. The statute is very restrictive, making every such stipulation void except such as comply with the stated exception and there is nothing in the exception which authorizes an agreement to pay liquidated damages to a *party thereto* because *others* may suffer damages from its breach which would be difficult to fix. It merely permits, in a defined case, the parties to agree upon the amount of damages to *them* from a breach and to substitute such agreed damages for actual damages. It does not authorize an agreement to pay liquidated damages where there are no actual damages.

Rispin v. Midnight Oil Co. (1923) (C. C. A. 9th) 291 Fed. 481, 484.

This clause of the contract (p. 12, supra) itself expressly states that the amount of $500.00 per day is "agreed upon as a measure of damage to the *District* (respondent) by reason of delay in completion of the work; it being expressly stipulated and agreed that it would be impracticable to estimate and ascertain the actual damages sustained by the *District* under such circumstances. * * *"

Thus by the very terms of the contract the liquidated damages are stated to be damages agreed upon in lieu of actual damages to one of the parties. The contractor made no promise to pay any such agreed

sum in lieu of damages which third parties might suffer from delay.

The clause was not inserted in this contract for the benefit of the resident taxpayers of respondent. They do not seek to recover on it and respondent has shown no damage to itself from delay in completion of the work which could not be easily and exactly determined. Its showing of speculative damage to the general public is, we submit, insufficient to entitle it to recover liquidated damages for delay under the rule in California that a party seeking such damages has the burden of proving that such party would suffer actual damages impracticable or extremely difficult to fix. The fact that the contract stipulates that there would be such damage is insufficient. It must be proved by independent facts.

Robert Marsh & Co., Inc., v. Tremper (1930) 210 Cal. 572, 576; 292 Pac. 950.

It is submitted that, in enforcing this clause and affirming the judgment for liquidated damages on the cross-complaint the Circuit Court of Appeals failed to apply the law of California as expressed in the statutes thereof and substituted a general rule, not applicable in California, in lieu thereof and, in so doing decided contrary to the rule announced by this Court in *Erie R. R. Co. v. Tompkins,* supra, and other cases, that the Courts of the United States are bound by the law of the states in which they sit whether expressed by their statutes or in decisions of their courts.

It is respectfully submitted that the writ should issue.

(APPENDIX FOLLOWS)

Appendix

Constitution of California, Article VI, Section 4:

"*Jurisdiction of supreme court and courts of appeal.* The supreme court shall have appellate jurisdiction on appeal from the superior courts in all cases in equity, except such as arise in municipal or justices' courts; also, in all cases at law which involve the title or possession of real estate, or the legality of any tax, impost, assessment, toll, or municipal fine also, in all such probate matters as may be provided by law; also, on questions of law alone, in all criminal cases where judgment of death has been rendered; the said court shall also have appellate jurisdiction in all cases, matters and proceedings pending before a district court of appeal, which shall be ordered by the supreme court to be transferred to itself for hearing and decision, as hereinafter provided. The said court shall also have power to issue writs of mandamus, certiorari, prohibition, and habeas corpus, and all other writs necessary or proper to the complete exercise of its appellate jurisdiction. Each of the justices shall have power to issue writs of habeas corpus to any part of the state, upon petition by or on behalf of any person held in actual custody, and may make such writs returnable before himself or the supreme court or before any district court of appeal, or before any justice thereof, or before any superior court in the state, or before any judge thereof."

Constitution of California, Article VI, Section 4a:

"*Appellate districts.* The state is hereby divided into three appellate districts, in each of which there shall be a district court of appeal, consisting of such number of divisions having three justices each as the legislature shall determine; and until so determined otherwise, the courts of appeal for the first and second appellate districts shall each consist of two divisions, and the court of the third appellate district shall consist of one division.

"The legislature may from time to time create and establish additional district courts of appeal and divisions thereof and fix the places at which the regular sessions thereof shall be held and may provide for the maintenance and operation thereof. For that purpose the legislature may redivide the state into appellate districts, subject to the power of the supreme court to remove one or more counties from one appellate district to another as in this section provided.

"Each of such divisions shall have and exercise all of the powers of the district court of appeal.

"The district court of appeal as existing immediately prior to the approval and ratification of this amendment by the people shall not be affected thereby as to the officers or terms of office of the justices thereof.

"Upon the creation of any additional division of the district court of appeal the governor shall appoint three persons to serve as justices thereof until the first day of January after the next general elec-

tion. The justices of said division elected at such general election shall so classify themselves by lot that one of them shall go out of office at the end of four years, one of them at the end of eight years, and one of them at the end of twelve years, and entry of such classification shall be made in the minutes of said division, signed by the three justices thereof, and a duplicate thereof filed in the office of the secretary of state.

"The justices of the district courts of appeal shall be elected by the qualified electors within their respective districts at the general state elections except as provided in section 2¾ of article II; and the term of office of said justices shall be twelve years from and after the first day of January next succeeding their election.

"If any vacancy occur in the office of a justice of the district courts of appeal, the governor shall appoint a person to hold office until the election and qualification of a justice to fill the vacancy. Such election shall take place at the next succeeding general state or primary election after the first day of April next succeeding the occurrence of such vacancy; the justice then elected shall hold office for the unexpired term; provided, that whenever the term of office of the justice whose place is filled by appointment is fixed by law to expire on the first day of January after the next or such succeeding general election, then the person so appointed to fill the vacancy shall hold office for the remainder of such unexpired term.

"One of the justices of each of the district courts of appeal, and of each division of said courts, shall be the presiding justice thereof, and as such shall be appointed or elected, as the case may be.

"In cases wherein the presiding justice is not acting, the other justices shall designate one of their number to perform the duties and exercise the powers of presiding justice.

"The presence of two justices shall be necessary for the transaction of any business by such court except such as may be done at chambers, and the concurrence of two justices shall be necessary to pronounce a judgment.

"No appeal taken to the supreme court or to a district court of appeal shall be dismissed for the reason only that the same was not taken to the proper court, but the cause shall be transferred to the proper court upon such terms as to costs or otherwise as may be just, and shall be proceeded with therein as if regularly appealed thereto.

"All statutes now in force allowing, providing for or regulating appeals to the supreme court shall apply to appeals to the district courts of appeal so far as such statutes are not inconsistent with this article and until the legislature shall otherwise provide.

"The first district shall embrace the following counties: San Francisco, Marin, Contra Costa, Alameda, San Mateo, Santa Clara, Fresno, Santa Cruz, Monterey and San Benito.

"The second district shall embrace the following counties: Tulare, Kings, San Luis Obispo, Kern, Inyo, Santa Barbara, Ventura, Los Angeles, San Bernardino, Orange, Riverside, San Diego and Imperial.

"The third district shall embrace the following counties: Del Norte, Siskiyou, Modoc, Humboldt, Trinity, Shasta, Lassen, Tehama, Plumas, Mendocino, Lake, Colusa, Glenn, Butte, Sierra, Sutter, Yuba, Nevada, Sonoma, Napa, Yolo, Placer, Solano, Sacramento, El Dorado, San Joaquin, Amador, Calaveras, Stanislaus, Mariposa, Madera, Merced, Tuolumne, Alpine and Mono.

"The supreme court, by orders entered in its minutes, may from time to time remove one or more counties from one appellate district or another, but no county not contiguous to another county of a district shall be added to such district.

"Said district courts of appeal shall hold their regular sessions respectively at San Francisco, Los Angeles and Sacramento, and they shall always be open for the transaction of business."

(A fourth District was created by the California legislature in 1929, California Statutes 1929, p. 1202.)

Constitution of California, Article VI, Section 4b:

"*Jurisdiction of district courts of appeal.* The district courts of appeal shall have appellate jurisdiction on appeal from the superior courts (except in cases in which appellate jurisdiction is given to the supreme

court) in all cases at law in which the superior courts are given original jurisdiction; also, in all cases of forcible or unlawful entry or detainer (except such as arise in municipal, or in justices' or other inferior courts); in proceedings in insolvency; in actions to prevent or abate a nuisance; in proceedings of mandamus, certiorari, prohibition, usurpation of office, removal from office, contesting elections, eminent domain, and in such other special proceedings as may be provided by law; also, on questions of law alone, in all criminal cases prosecuted by indictment or information, except where judgment of death has been rendered.

"The said courts shall also have appellate jurisdiction in all cases, matters, and proceedings pending before the supreme court which shall be ordered by the supreme court to be transferred to a district court of appeal for hearing and decision. The said courts shall also have power to issue writs of mandamus, certiorari, prohibition and habeas corpus, and all other writs necessary or proper to the complete exercise of their appellate jurisdiction. Each of the justices thereof shall have power to issue writs of habeas corpus to any part of his appellate district upon petition by or on behalf of any person held in actual custody, and may make such writs returnable before himself or the district court of appeal of his district, or before any superior court within his district, or before any judge thereof."

Constitution of California, Article VI, Section 4c:

"Transfer of cases between supreme and appellate courts. The supreme court shall have power to order any cause pending before the supreme court to be heard and determined by a district court of appeal, and to order any cause pending before a district court of appeal to be heard and determined by the supreme court. The order last mentioned may be made before judgment has been pronounced by a district court of appeal, or within fifteen days in criminal cases, or thirty days in all other cases, after such judgment shall have become final therein. The judgment of the district courts of appeal shall become final therein upon the expiration of fifteen days in criminal cases, or thirty days in all other cases, after the same shall have been pronounced.

"The supreme court shall have power to order causes pending before a district court of appeal for one district to be transferred to the district court of appeal for another district, or from one division thereof to another, for hearing and decision."

Cases Pending in the District Court of Appeal in One Appellate District and Transferred to Another Appellate District by Order of the Supreme Court.

Centrifugal National Concentrator Company v. Eccleston, 122 Cal. App. 698.

Pending in *Second* Appellate District.

Transferred to *Third* Appellate District.

City of Los Angeles v. Hall, 103 Cal. App. 460.

Pending in *Second* Appellate District.

Transferred to *First* Appellate District.

Dooley v. Johnson, 133 Cal. App. 459.
Pending in *Fourth* Appellate District.
Transferred to *First* Appellate District.
Muller v. John J. Davi & Bro., 131 Cal. App. 156.
Pending in *Third* Appellate District.
Transferred to *First* Appellate District.
McKinney v. Wright, 105 Cal. App. 401.
Pending in *Fourth* Appellate District.
Transferred to *Third* Appellate District.
People v. Frank, 132 Cal. App. 360.
Pending in *Second* Appellate District.
Transferred to *Fourth* Appellate District.
Jenkins v. Board of Civil Service Commissioners, 137 Cal. App. 410.
Pending in *Second* Appellate District.
Transferred to *First* Appellate District.

The foregoing are illustrative only. Many similar cases of transfer from one district to another for hearing and decision could be cited.

Excerpt from the Seventh Report of the Judicial Council of California (Covering Period July 1, 1936, to June 30, 1938)

The following is quoted from page 30 of the above Report:

"It is perhaps well to explain that in the exercise of the power of the Supreme Court to transfer cases from itself to the district courts of appeal and in an endeavor to hold the several districts as nearly as possible in equitable balance, many cases, which would

have been sent to the second appellate district had it been sufficiently manned, have been transferred from the Los Angeles Supreme Court district to the first and third appellate districts and considered and disposed of by those courts; also that since creation of the fourth appellate district court in 1929, practically all appeals to the Supreme Court from the counties within that district, as well as a substantial number originating in the present second appellate district, have been transferred to the fourth appellate district for hearing and determination."

I.

REASONS FOR PETITIONERS' REQUEST FOR CERTIORARI IN THIS CASE.

The basis upon which we request this Court to issue its writ of certiorari in this case is that the United States Circuit Court of Appeals for the Ninth Circuit, contrary to prior decisions of this Court, has declined to follow and apply the law of California in a cause tried in a District Court of the United States for the Northern District of that State. The brief of respondent in opposition to the petition tends to confuse this primary issue by the inclusion therein of a rather extensive argument attempting to show that the case of *Sinnott v. Schumacher* (1919) 45 Cal. App. 46, 187 Pac. 105, does not decide what the Circuit Court of Appeals held that it decided and by a further argument that, even if the Circuit Court of Appeals was in error in affirming the judgment for liquidated damages, the petition should be denied because respondent is entitled to actual damages in a similar amount. Neither proposition urged by respondent is sound, as we shall hereinafter point out, but, before answering these arguments, we desire to make clear the reasons for requesting that the decision of the Circuit Court of Appeals be reversed.

The Circuit Court of Appeals has announced in its opinion rendered in this case that it is not bound by a decision of a District Court of Appeal of California which the Supreme Court of the State refused to review.

If certiorari is denied in this case and the opinion of the Circuit Court of Appeals is permitted to stand it will be followed hereafter by that Court and the District Courts in the Ninth Circuit and probably in other Circuits. As we pointed out, at pages 21 and 22 of our opening brief, this will inevitably lead to the application, in many cases, of one rule in the federal trial courts and another in the state trial courts.

Is a decision of a District Court of Appeal of California, a court with broad appellate jurisdiction, the decisions of which are binding on state trial courts and, as we contend, on courts of coordinate appellate jurisdiction, which decision the State Supreme Court has refused to review, likewise binding on federal courts or are the federal courts free to disregard such decision and apply their own rules? The opinion of the Circuit Court of Appeals in this case presents that question squarely. The correct answer is a matter of public concern. It will affect the rights, not only of the litigants now before the Court, but the rights and obligations of the many who will hereafter engage in litigation in the United States District Courts. It is submitted that the doubt should now be set at rest by an authoritative decision by this Court.

We have pointed out in our brief in support of the petition the importance of the decisions of the California District Courts of Appeal in shaping the law of this State. Their original appellate jurisdiction is very broad and their jurisdiction to hear and decide cases transferred to them by the Supreme Court is coordinate with the jurisdiction of that Court itself (appendix pp. v and vi, opening brief).

Their jurisdiction is not limited to deciding appeals from trial courts in their own districts (opening brief pp. 24-27).

The jurisdiction of these Courts and the binding effect of their decisions have been fully set forth in our opening brief and in the interest of brevity we respectfully refer the Court to that brief.

Respondent relies upon *People v. Davis* (1905) 147 Cal. 346, 81 Pac. 718, to support its assertion that the denial by the Supreme Court of a hearing, after decision by the District Court of Appeal, is not an approval of the propositions of law set forth in the opinion of the District Court of Appeal. But, as we pointed out at pages 22-24 of our opening brief, the rule is different where the case is originally appealed to the Supreme Court and thereafter transferred to the District Court of Appeal for hearing. That was the situation in *Sinnott v. Schumacher.*

We have set forth in our opening brief our construction of prior decisions of this Court and we merely affirm, without repetition, what we have said

there. We think the decisions cited at pages 27-29 of that brief are decisive of the point.

II.

THE DECISION IN SINNOTT V. SCHUMACHER, 45 CAL. APP. 46, 187 PAC. 105, DECIDED SQUARELY THE POINT THAT THE LIQUIDATED DAMAGE CLAUSE IN A CONSTRUCTION CONTRACT DOES NOT APPLY AFTER ABANDONMENT.

On this point the Circuit Court of Appeals agrees with petitioners (R. 2629). Respondent takes the position (pp. 24-29 of its brief) that both that Court and petitioners are incorrect in their interpretation of the holding in that case and quotes in the appendix to its brief excerpts from the record and briefs in the *Sinnott* case which it claims support its argument.

The *Sinnott* case was very similar to the case at bar. There, as here, the contractor claimed that the owner had breached the contract by failing to make progress payments that were due. There, as here, the contractor rescinded and sued for the value of the work done. There, as here, the owner answered and filed a cross-complaint against the contractor for breach of contract. In both cases the owner, in the cross-complaint, asked for damages from delay. The only difference is that in this case the owner sought to recover liquidated damages under the liquidated damage clause in the contract whereas in the *Sinnott* case

the owner ignored the liquidated damage clause and asked for actual damages from delay (Paragraph V, cross-complaint, appendix p. i, respondent's brief). The trial court found that the contractor had abandoned the contract and allowed the owner actual damages for delay (Paragraph VI findings, appendix p. i, respondent's brief).

The contract in that case contained a provision for liquidated damages to be paid by the contractor for delay in the amount of ten dollars per day. We have printed that part of the contract in the appendix here to.

In his opening brief the contractor (appellant) specifically attacked this finding of the trial court awarding *actual* damages for delay and contended that the maximum amount which the owner could recover as damages from delay was the liquidated damages provided in the contract (Excerpt from plaintiff's opening brief printed at appendix pages i to iii of respondent's brief).

The owner (respondent) specifically answered this contention in his reply brief and made the distinction between the right to recover actual damages for delay in case of an absolute breach and "special damage under the terms of the contract *had it been otherwise fulfilled.*"* (Appendix page iv, respondent's brief).

The issue was thus squarely presented to the Appellate Court as to whether the liquidated damage pro-

*Emphasis throughout this brief is supplied unless otherwise indicated.

vision of the contract governed the amount of damages for delay after abandonment of the contract and it was held that it did not. The Court said, at page 52:

> "As to the appellants' contention that the court was in error in its finding and conclusion as to the amount of damages sustained by the defendants and cross-complainants by reason of the plaintiff's unjustified abandonment of work upon said building, and his failure, neglect, and refusal to complete the same, it may be stated that this contention is based upon the clause in the contract which relates to the matter of delay in the time of completion of said building and which purports to fix a penalty of fifty dollars per day for such delay; *but this provision of the contract has no application to a condition wherein the contractor is shown to have abandoned his contract without sufficient cause,* in which case the right of the defendants to damages as a result of the plaintiff's breach of said contract could not be affected or limited by said provision of the contract for a penalty for delay in the completion of the structure beyond the stipulated time for such completion."

If, as the Court clearly held, the liquidated damage clause has no application after abandonment, no recovery by the owner under it can be had in such case. It cannot logically be said that this provision of the contract remains binding on the contractor but not on the owner. It is either mutually enforceable by both parties after abandonment or it ceases to be binding on either. The Circuit Court of Appeals was

correct in holding that the decision in *Sinnott v. Schumacher* on this point was adverse to its own decision in this case.

The Circuit Court of Appeals states that although there was a petition for hearing by the Supreme Court of California in the *Sinnott* case it was not on the point here involved.

While it is true that this point was not *argued* in the petition, the entire opinion of the District Court of Appeal was a part of the petition and before the Supreme Court for review. As we pointed out in our brief in support of this petition (pp. 22-24), the *Sinnott* case was first properly appealed to the Supreme Court and then referred to the District Court of Appeal for hearing. In such cases the rule is that the Supreme Court, on petition to it for a hearing, reviews not only the opinion to see whether it correctly states the law but examines the entire record (See quotation from *Burke v. Maze* (1909) 10 Cal. App. 206, 101 Pac. 438, at page 23 of our brief in support of the petition).

The decision in *People v. Davis* (1905) 147 Cal. 346, 81 Pac. 718, cited at page 16 of respondent's brief and other cases cited at page 17 thereof, state the rule in cases which are *originally* appealable to the District Courts of Appeal and have no application to the *Sinnott* case.

Under the rule which governed consideration of the petition for hearing in the *Sinnott* case the Supreme Court would not have denied the petition unless

it considered the opinion of the District Court of Appeal correct not only on its face but on a review of the entire record. Furthermore, the point involved appeared clearly in the opinion of the District Court of Appeal.

III.

THE CIRCUIT COURT OF APPEALS ERRED IN APPLYING THE RULE WHICH PREVAILS IN OTHER JURISDICTIONS, BUT NOT IN CALIFORNIA, IN DECIDING THAT THE LIQUIDATED DAMAGE CLAUSE IN THE CONTRACT WAS VALID.

It has long since been decided by this Court that where a state statute establishes a rule of law the federal courts must follow it. We have pointed out, at pp. 33-38 of our opening brief, that the validity of liquidated damage provisions in contracts is governed entirely by statute in California and that the Circuit Court of Appeals sustained the clause in this contract by applying, not the California statute, but a general rule prevailing in other jurisdictions. We submit that in so doing it committed error. To avoid repetition, we respectfully refer the Court to the argument in our opening brief on this point.

IV.

THE STATEMENT IN PETITIONERS' BRIEF IN SUPPORT OF THE PETITION THAT RESPONDENT NEITHER PLEADED NOR ATTEMPTED TO PROVE ACTUAL DAMAGES IS ACCURATE AND CORRECT.

Respondent, at pages 5-9 of its brief, states that petitioners are inaccurate in stating that respondent neither pleaded nor attempted to prove actual damages. At pages 33-35 of its brief respondent argues that even if it is not entitled to liquidated damages for delay it is entitled to actual damages in the amount of the judgment. As these two contentions are related, we shall make one answer to them.

(a) The pleadings.

The cross-complaint seeks only enforcement of the liquidated damage clause of the contract. In paragraph XI (R. 53) it alleges the delay. In paragraph XII (R. 55) it refers to the liquidated damage provision. In paragraph XIII it alleges that the actual damage would be extremely difficult to estimate and sets forth the facts upon which it relies to prove, *not actual damages, but that such damages would be extremely difficult to estimate.* In paragraph XIV (R. 57) it alleges that it claims *"the sum of $206,500.00 as agreed and liquidated damages."* Nowhere in the cross-complaint does respondent ask actual damages for delay.

(b) Theory on which evidence on damage was admitted at the trial.

The record is very clear that the evidence on all of these items was offered, not for the purpose of

proving actual damages, but for the sole purpose of sustaining the validity of the liquidated damage clause by showing that actual damages would be extremely difficult to determine.

When such evidence was first offered, petitioners objected upon the ground, among others, that it was an attempt to prove "damages which are speculative and not in any manner within the purview of any theory upon which they (respondent) might recover under this cross-complaint" (R. 2518).

Counsel for respondent then specifically limited the purpose of the offer to prove that the liquidated damage clause was reasonable and expressly stated that respondent did not ask anything but liquidated damages (R. 2519-20, quoted at appendix pages iv and v of respondent's brief).

Respondent admits all this in its brief at page 34.

After the evidence was closed and both parties had rested (R. 2562), counsel for respondent made a motion for judgment on the cross-complaint (R. 2562). In making that motion he stated,

> "This motion is * * * also for liquidated damages at the penalty prescribed in the amount of $500 per day. *We are not asking for special damages for delay, but rely upon the penalty for liquidated damages.*" (R. 2563).

Petitioners then moved to strike this evidence from the record (R. 2564). One of the grounds of the mo-

tion was that the elements of damage sought to be established were remote and speculative (R. 2565).

In replying to this motion counsel for respondent stated:

> "Mr. Wittschen: Your Honor, so that the record may be clear, that portion of plaintiff's motion which is directed to the cost of protecting the work and taking care of the project until new bids were called is an element of damage that springs from the breach. *The cost of the bond issue, the interest on the bonds, the cost as shown to the traveling public, and those matters that counsel claims are speculative were not offered and we are not asking for those as specific items of damage. They were merely offered to show two things, one that the liquidated damages were not unreasonable, and also to show the difficulty of the proof of actual damages.* The law in California is that where actual damages cannot be proven, or that their proof will be extremely difficult, the parties may agree upon reasonable stipulated liquidated damages, and as I said before and now repeat we are not asking for double damages, we are not asking for damages in excess of the penalty of $500 a day, but we are asking for damages for that penalty because we think it is reasonable, and because it comes within the rule."

After the arguments on the motions for judgment on the cross-complaint (R. 2592) counsel for respondent made the statement set forth in the appendix to respondent's brief at pages vii to ix upon which it

places its entire reliance for the contention that it sought and proved actual damages from delay. Respondent states in its brief, at page 35, that it stated before the case was concluded that it wished the damage item of $272.89 a day, the cost of keeping the District intact, and the interest charges of $89,832.67 considered for all purposes and that it took the position at the trial that it wished to have evidence before the Court to sustain an award for actual damages for delay if liquidated damages were denied.

The portion of the record quoted by respondent does not support the foregoing statements in its brief. All that counsel for respondent said in that quotation was that respondent wanted the evidence as to those items considered as proving *facts*. He did not ask that they be considered as proof of actual damage. Of course, they proved facts, but proof of those facts was offered only for the purpose of sustaining the liquidated damage clause.

In any event, counsel for petitioners promptly objected to the evidence being considered for any purpose other than that for which it was offered (R. 2596-99) and Court was adjourned for the day without the Judge taking any action on the request of respondent (R. 2599).

On the following day (the last of the trial) counsel for respondent did not renew his request, or ask the Court to rule on it, or make any offer of this evidence for the purpose of proving actual damages and the

case was submitted without any ruling whatever by the Court on respondent's request (R. 2600-2610). The Court did not even rule on petitioners' motion to strike (R. 2607-10). Obviously, the mere statement of counsel, made after all the evidence was closed, that he wished this evidence considered as proof of facts, with no attempt made to reoffer it and with no ruling of the Court on even this narrow request that certain of the evidence be considered as proof of facts cannot be considered as converting evidence, admitted at the trial for the limited purpose of proving that actual damage was impossible or extremely difficult to prove, into proof of actual damages which would support a judgment.

(c) Even if respondent had claimed actual damage from delay it offered no competent evidence to prove such damage.

The alleged damage to the public was not damage to respondent. The project being constructed was a free public highway and respondent could suffer no damage in loss of revenue from delay in its completion (R. 2530).

Respondent cannot recover as actual damages interest on its bonds. It sold the bonds before it entered into the contract and the bonds and the interest thereon were unconditionally payable whether respondent ever completed its project or not (R. 2546-7). The amount payable was not increased by one cent by any delay which may have occurred in completing the

contract work. Respondent was required to pay this interest as a result of a contract made with the purchasers of the bonds, not as a result of any breach of the construction contract.

The daily cost of operating respondent is not a proper item of actual damage. If respondent had offered evidence of direct costs necessarily increased by the delay, it might contend that there was some proof in the record of actual damage from delay. But it did not do this. It simply proved its daily operating costs. It admitted that the $272.89 per day figure included costs not attributable to delay in the completion of this work, that such proof "was not offered as an exact item of damage" and that it did not ask the Court so to consider it.

We quote from the record:

"Mr. Wittschen:

"* * * *The actual damages for delay cannot be proven.* Take, for instance, the construction of a city hall, take a school building, it is impossible to show just what the inconvenience and damage would be to the public that want to use a new school building or to the public that wanted to use a city hall. We have merely shown, your Honor, we had several millions of dollars invested in this project, and that the cost on that alone amounted to more than $200 a day. We have also shown, your Honor, that the cost of keeping the District intact amounted to $278 a day. It is perfectly obvious that you cannot get that cost down to exact refinement. *The District*

will have to keep some nominal assistance as long as the bond issue holds; in fact, there would be no cost if the county would take that over, it is hard to say, the District may have to keep this force going for some days, even after this contract has been completed, to do certain check-up work. That $278 was not offered as an exact item of damage, and we are not asking your Honor to consider it as such, but the people who really lose the benefit of this tunnel are not alone the people residing in the District who use it, but they are the entire traveling public up and down the State.

"The Court: It is my thought on that that we are getting into the realm of speculation.

"Mr. Wittschen: That is why you have liquidated damage, because you cannot prove the actual damage; if the actual damages could be proven we would have to prove them, we could not have liquidated damages, and the Code provision provides, I think it is Section 1671 of the Civil Code—I will get it if your Honor wants it accurately." (R. 2568-2569)

There is no competent evidence of any actual damage to respondent from delay in the record and any judgment for actual damage would be wholly unsupported.

(d) Judgment and opinions of the Courts below.

The judgment of the District Court for delay was based entirely on the liquidated damage clause in the contract and was for liquidated, not actual, damages (R. 217). The opinion of the District Court (R. 130)

and the Circuit Court of Appeals (R. 2623) both show clearly that those Courts were considering only the right of respondent to liquidated damages and the respondent's right to, or the amount of, its actual damages was not even considered.

If respondent had any intention of contending that it was entitled to actual damages for delay it, by its repeated assertions and arguments as to the purpose for which it offered this evidence, misled petitioners and misled the Courts below.

It is submitted that the statements in our brief in support of our petition that respondent neither pleaded nor attempted to prove actual damages are entirely accurate and correct and that respondent is now at this late date attempting to get this Court to consider evidence for an entirely different purpose from that for which it was admitted and is attempting to change the entire theory upon which it tried, and represented to petitioners and the lower Courts it was trying, this issue of the case.

CONCLUSION.

We have attempted to confine this brief to answering new matters presented in respondent's brief and have avoided, so far as possible, repetition of points fully argued in our opening brief. This was done for the purpose of brevity and we reaffirm all the points asserted by us in the opening brief.

(APPENDIX FOLLOWS)

Appendix

The liquidated damage provision in the contract in the case of *Sinnott v. Schumacher,* 45 Cal. App. 46, 187 Pac. 105, was as follows:

> "Should the Contractor fail to complete this contract and the work provided for within the time set for completion as aforesaid, due allowance being made for the contingencies provided for herein, he shall then become liable to the Owner for all loss and damages which the Owner may suffer on account thereof, in the sum of Ten Dollars per day, which the Contractor hereby agrees to deduct from his contract price, for each day that the work shall remain unfinished beyond such time for completion.
>
> "The agreement in this paragraph made for damages is made as herein set forth for the reason that the actual damage which will be sustained by the Owner by reason of the Contractor's breach of the covenant to complete this contract within the time stated is from the nature of the case impracticable and extremely difficult to fix; and one of the considerations moving the owner to enter into this contract with the contractor is the agreement of the contractor to complete his said contract within the time herein stated and the liquidated damages herein above stated for his failure to do so."

Finding of actual damage and of liquidated damage	8
3. The actual damages caused by the delay exceed the amount awarded as liquidated damages	8
Summary of Argument	9
Argument	13
I. Discussion of the Effect of the Decision in the Case of Sinnott v. Schumacher	13
a. The Federal courts are required to follow the law of the State of California as announced by the highest court in the state	13
b. In California the denial by the Supreme Court of a petition for hearing therein after decision by a District Court of Appeal does not mean approval by the Supreme Court of the opinion and decision of the lower court	16
c. The California District Courts of Appeal have held, and the California Supreme Court recognizes, that the decision of a District Court of Appeal in one district is not binding on another	18
d. The California District Courts of Appeal are courts of limited and not state-wide jurisdiction	23
e. In the case of Sinnott v. Schumacher the California District Court of Appeal did not hold that liquidated damages could not be awarded for delay caused by abandonment	24
This case has been interpreted differently by the trial court and the Circuit Court of Appeals herein	24

Page

The record in the Sinnott case proves that liquidated damages were not sought therein; the Circuit Court of Appeals was in error in its interpretation of that case, and the construction of the Sinnott case by the trial court herein was the correct one 26

f. The opinion in Sinnott v. Schumacher is too indefinite and the case not of sufficient importance to warrant this court reviewing the action of the lower court 28

g. Cases cited by petitioners under point A distinguished 29

II. The Circuit Court of Appeals Did Not Err in Holding that the Stipulation in the Contract for Liquidated Damages Was Valid Under the Law of California 30

III. Even if Liquidated Damages Should Not Have Been Allowed, the District Was Entitled to Its Actual Damage for Delay Which in This Case Exceeds the Amount Allowed as Liquidated Damages 33

Conclusion 36

No. 267

SIX COMPANIES OF CALIFORNIA, a corporation, and HARTFORD ACCIDENT AND INDEMNITY COMPANY, a corporation, FIDELITY AND DEPOSIT COMPANY OF MARYLAND, a corporation, THE AETNA CASUALTY AND SURETY COMPANY, a corporation, INDEMNITY INSURANCE COMPANY OF NORTH AMERICA, a corporation, AMERICAN SURETY COMPANY OF NEW YORK, a corporation, MARYLAND CASUALTY COMPANY, a corporation, UNITED STATES FIDELITY AND GUARANTY COMPANY, a corporation, THE FIDELITY AND CASUALTY COMPANY OF NEW YORK, a corporation, GLENS FALLS INDEMNITY COMPANY, a corporation, STANDARD SURETY AND CASUALTY COMPANY OF NEW YORK, a corporation, STANDARD ACCIDENT INSURANCE COMPANY, a corporation, MASSACHUSETTS BONDING AND INSURANCE COMPANY, a corporation, CONTINENTAL CASUALTY COMPANY, a corporation, and NEW AMSTERDAM CASUALTY COMPANY, a corporation,

Petitioners,

vs.

JOINT HIGHWAY DISTRICT NO. 13 OF THE STATE OF CALIFORNIA, a public corporation,

Respondent.

Brief of Respondent in Opposition to Petition for Writ of Certiorari.

STATEMENT OF THE CASE.

1. The issue in this court.

Petitioner, Six Companies of California, hereinafter will be referred to as "Contractor". The remaining petitioners, all surety companies, sureties on the faithful performance bond of the Contractor given in connection with the contract hereinafter mentioned, will be referred to as "Sureties". Respondent, Joint Highway District No. 13 of the State of California, a public corporation of the State of California, will be referred to as "District".

On June 4, 1934, the Contractor agreed with the District to construct a highway, which included twin tunnels, for the sum of $3,683,931 (Finding VII, R. 146-7; Pl's. Ex. 16, Vol. VIII Book of Exhibits 157, 162). Upon completion the same was to become a free public highway of the State of California (R. 2530). On June 13, 1936, when the work was about 70% complete (Finding XIII, R. 183) the Contractor wrongfully abandoned the same (Finding XIV (Par. 9), R. 188). The Contractor claimed a right to rescind the contract, abandoned the work (Finding IX, R. 148) and brought suit against the District for the sum of $3,259,695.04, the difference between the alleged reasonable value of the work performed and the sums theretofore paid the Contractor by the District (R. 3-5). With reference to the time of completion, the contract provided that time was "of the essence hereof" (Pl's. Ex. 16, Vol. VIII Book of Exhibits 157, 163).

The District filed a cross complaint against both the Contractor and the Sureties claiming three items of damage because of the Contractor's breach of contract, as follows:

(1) $69,001.85, the reasonable expense of protecting the work, and incidental expense to which the District was put because of the abandonment (Cross Complaint IX, R. 50-2);

(2) $108,066.31, the increased cost to the District of completing the work under new contracts over and above the original contract price after giving the Contractor credit for all sums earned by the Contractor before abandonment but not yet paid (Cross Complaint X, R. 52-3); and

(3) $206,500 damages for delay for 433 days' delay caused by the Contractor's abandonment, at the stipulated sum provided in the agreement of $500 a day as liquidated damages for delay (Cross Complaint XI, XII, R. 53-5; XIV, R. 57-9).

The petitioners (Contractor and the Sureties) in asking for certiorari herein do not question the correctness of the findings in the main case which find that the Contractor wrongfully abandoned the work and was entitled to no damages against the District (Finding L, R. 216; Conclusions of Law Par. 1, R. 216). Neither do petitioners complain of the amounts awarded the District for the damage noted under sub-paragraphs (1) and (2) above.

Petitioners' sole claim for relief in this court is that liquidated damages for delay were improperly allowed[1] (Petitioners' Brief pp. 5, 12-13).

The court's findings on delay and the sufficiency of the evidence to support these findings are not challenged. The

---

(1) Unless otherwise stated all emphasis appearing herein is supplied.

court found that the following delays were occasioned through the fault of the Contractor (Finding XXXIII, R. 199-201).

(a) 20 days' delay before the contract was abandoned from May 24, 1936, when completion was due, to June 13, 1936, when abandonment took place (R. 199-201).

(b) 149 days' delay, the reasonable time required for the District to measure the unfinished work, prepare new specifications for bids, secure new bids and let new contracts (R. 200-1).

(c) 264 days' delay, the reasonable time required to complete the work abandoned by the Contractor after new contracts were let (R. 200-1).

The aggregate delay was a *total of 433 days* (R. 201).

The trial court found that 149 days was a reasonable time for the District to measure the work and do all the things mentioned in subparagraph (b) above; and the court also found that the District proceeded with all reasonable dispatch so to do (R. 200). The trial court, however, did not allow the District any liquidated damages for this 149 days' delay (Finding XXXVI, R. 204; Conclusions of Law Par. 3, R. 217). The theory of the trial court was that after abandonment the court was limited to awarding liquidated damages for delay to the period prior to abandonment and to such additional period as represented the reasonable time to complete the work, and that no other delay could be considered (Opinion of Trial Court R. 137-140). This ruling was in favor of petitioners and eliminated 149 days' delay from consideration. The District took no

appeal therefrom; therefore that matter is not now before this court. Because of this ruling the amount awarded as liquidated damages was $142,000 instead of $206,500, pleaded and proved by the District.

Two contentions only are urged by petitioners on this court:

1. Under California law no liquidated damages are recoverable for delays which occur *after* abandonment. Petitioners concede that if liquidated damages are allowable, the award of $10,000 under (a) above for 20 days' delay *before* abandonment was proper.

2. Petitioners also claim that under California law no award whatever for liquidated damages should have been made.

Thus the only matter before this court is the correctness of the award for liquidated damages of $142,000, and under one contention of petitioners $10,000 of this sum is not questioned. We challenge each of these contentions.

2. Errors in petition and petitioners' brief.

There are certain inaccuracies in the petition and in Petitioners' Brief which should be noted. Petitioners, at page 4, say:

> "Respondent neither pleaded nor attempted to prove it had sustained any actual damage from any delay."

Again, at page 13, they say:

> "The cross complaint neither alleged nor asked any actual damages from delay, but the part thereof claiming damages from delay was based entirely on

the quoted provision in the contract for liquidated damages (R. 53-58)."

The statement that the District neither pleaded nor proved actual damages for delay is in error. In both pleading and proof the District claimed substantial actual damage from delay in addition to the other items of damage resulting from abandonment, which we have mentioned, separate and apart from delay, such as increased cost of completing the work, cost of protecting and measuring the work, and the other incidental items hereinbefore referred to (supra, p. 3) which are alleged in paragraphs IX and X of the cross complaint (R. 50-3).

Pleading of actual damage and of liquidated damage.

The damages resulting solely from delay are pleaded in paragraphs XII and XIII of the cross complaint (R. 55-7). Therein it is alleged that the District itself sustained an actual damage of $272.89 a day, the expense of a staff of engineers and other employees and in keeping a District organization intact. This expense would have ceased upon completion of the project (R. 57). It was also alleged that during the period of 433 days' delay the District was required to pay interest on its outstanding bonded indebtedness amounting to $89,832.67 without having the enjoyment of the completed project (R. 57). It was also alleged that the project provided an improved highway with easier grades and a shorter route between portions of the state of California and the cities of Oakland and San Francisco (R. 56). That more than 1,600,000 vehicles a year traveled the former routes which the new

highway was to supplant all of which traffic could be more safely and economically transported over the new highway; that the resulting loss, inconvenience and damage caused by delay in opening the project for use as a public highway was exceedingly great and impracticable of exact ascertainment, but exceeded $500 a day (R. 56).

Proof of actual damage and of liquidated damage.

At the trial the average cost of operating the District during the period of delay was proved to be $272.89 a day (R. 2522-4, 2534-6; Ex. X-114 Book of Exhibits Vol. VIII 595). It was also proved that the interest charges during the period of delay for interest on the District's outstanding bonds for the project was $89,832.67 (Ex. X-115; R. 2527-8). The proof also showed that independent of this actual damage to the District *as a public corporate entity* there was other damage not capable of exact ascertainment. The importance of the new highway was conceded. The number of vehicles using the old routes which the new highway was to replace was testified to as 1,911,870 vehicles annually, an average of 5,238 vehicles a day (R. 2532). There was an average saving of two miles by use of the new highway over the existing routes (R. 2532). Based upon the number of vehicles using the old highway there was a loss of $419.04 a day to the traveling public in extra cost for transportation alone because of inability to use the new route (R. 2544-6).

No evidence was introduced by the petitioners to contradict the proof of the District with reference to any of the above items of damage.

Finding of actual damage and of liquidated damage.

The court's findings on all items of damage are in accord with the District's proofs (Finding XXXV, R. 202-4). The court also found that the daily expense to the District of $272.89 a day would be entirely eliminated upon completion of the project (R. 203). The amount paid as interest was also found (R. 204). The court also found that the loss caused by the delay in opening the project was great, was incapable of exact ascertainment, but exceeded $500 a day (R. 203). Likewise it is found that a total of 433 days' delay was caused by the abandonment (Finding XXXIII, R. 199-201).

3. The actual damages caused by the delay exceed the amount awarded as liquidated damages.

It should be noted that the actual damages which the District itself suffered from delay exceed the $142,000 awarded as liquidated damages. Interest during the 433 day period of delay on the District's outstanding bonds, issued to finance the project, amounted to $89,832.67 (R. 203-4). Expense of operation during this period is 433 times $272.89 (the per diem cost of operation) or $118,161.37. The total of the two items is $207,994.04.

If we take the lesser period of delay of 284 days, for which the trial court allowed liquidated damages, the actual damage to the district, *as a public corporate entity*, approximates the liquidated damages allowed.

284 times $272.89 is	$ 77,500.76
The interest item for the 284 day period is	58,920.28 (R. 2528)
Total	$136,421.04

The above calculations are without any consideration whatever of the very real additional damage of over $500 a day suffered by those of the traveling public who could have used the highway if completed.

The findings that the delay was entirely the fault of the Contractor are not questioned by petitioners. The allowance of liquidated damages for delay instead of actual damages for delay lessened the liability of the Contractor and the Sureties.

SUMMARY OF ARGUMENT.

1. The decision in the California case of *Sinnott v. Schumacher* does not control the decision in the instant case.

(a) The decision in *Sinnott v. Schumacher*, 45 Cal. App. 46, 187 Pac. 105, was by one of the four intermediate appellate courts in the State of California and not by the highest court of the state. The law as announced by the highest court of a state, not by an inferior court, is the law which the Federal courts are required to follow.

(b) The denial by the Supreme Court of California of a petition for a hearing in that court after a decision by a District Court of Appeal does not mean approval by the Supreme Court of the opinion and decision of the lower court. Such denial means only that the Supreme Court in the exercise of a sound discretion did not deem the case, or the matters decided therein, of sufficient importance to warrant that court entertaining the peti-

tion. In determining whether or not a decision by a District Court of Appeal should be reviewed by the Supreme Court of California, the position of that court is like the position of this court in determining whether or not a writ of certiorari should issue to a circuit court of appeals.

(c) The decision of one District Court of Appeal in the State of California is not binding upon another District Court of Appeal. It would be an anomaly to hold that the United States Circuit Court of Appeals is bound by such decision when neither the Supreme Court of the State nor the other District Courts of Appeal of the State are so bound.

(d) The District Courts of Appeal in California are not courts of statewide jurisdiction.

(e) When a reference is had to the record in the *Sinnott* case, and the decision in that case is read in the light of the record, it clearly appears that the District Court of Appeal did not decide that liquidated damages could not be recovered for any delay which occurred after abandonment of the contract. On this point the opinion in that case does not discuss the facts, or cite any authoritly, or reason the matter in any way. Only by a reference to the record in the case can it be determined what the issues were and what the court meant by the language of its opinion. The defendants (building owners) had recovered a substantial award for damages resulting from the increased cost of completing the work after abandonment. Upon appeal by the defaulting contractor the appellant contended that the contract provi-

sion for liquidated damages for delay, was a limitation on the owners' right to recover other damages caused by the abandonment, such as the award for increased cost of completion.

Where the court, in the opinion of *Sinnott v. Schumacher* (45 Cal. App. 46), at page 52, said:

> "* * * but this provision of the contract has no application to a condition wherein the contractor is shown to have abandoned his contract without sufficient cause, in which case the right of the defendants to damages as a result of the plaintiff's breach of said contract could not be *affected or limited* by said provision of the contract for a penalty for delay in the completion of the structure beyond the stipulated time for such completion."

the court was answering the contention of the contractor therein that the liquidated damage clause in the contract *limited or affected* the right of the owners to recover the full measure of their damage due to the increased cost of completion. The court did *not* decide that liquidated damages for delay could not be recovered after abandonment in a proper case, but did decide that the trial court had properly allowed the owners their actual damage for the increased cost of construction, and that the right to recover such damage was not affected because there was a liquidated damage clause in the contract.

(f) The opinion in *Sinnott v. Schumacher* cannot be regarded as authority settling an important question of local law. It is not of sufficient importance to warrant the Supreme Court of the United States reviewing

the action of the Circuit Court of Appeals in the instant case.

2. The stipulation in the contract providing for liquidated damages is a valid provision under the law of the State of California.

3. The liquidated damage clause is valid and the case was tried by the District on that assumption, but even if invalid, such holding would be of no benefit to petitioners because the actual damage suffered by the District as a public corporate entity exceeds the amount awarded to the District as liquidated damages.

ARGUMENT.

I.

DISCUSSION OF THE EFFECT OF THE DECISION IN THE CASE OF SINNOTT v. SCHUMACHER.

a. The Federal courts are required to follow the law of the State of California as announced by the highest court in the state.

Petitioners' position on this point is that *Sinnott v. Schumacher,* 45 Cal. App. 46, 187 Pac. 105, even though not a decision of the California Supreme Court, the highest court in the state, announces the law in California and until that holding is set aside by decision of the California Supreme Court the same should be followed by the Federal courts in this case.

In this reasoning petitioners are in error and misconstrue the decision of *Erie Railroad Co. v. Tompkins,* 304 U. S. 64, 58 S. Ct. 817, 82 L. Ed. 1188. The *Erie* case and the later decision by this court in *Lyon v. Mutual Benefit etc. Assn.,* 305 U. S. 484, 59 S. Ct. 297, 83 L. Ed. 303, which follows the rule of the *Erie* case, recognize that it is the law as announced by the *highest* court in the state which the Federal courts should follow.

We have examined the decisions since the pronouncement in *Erie Railroad Co. v. Tompkins,* supra, and have noted below Federal cases on appeal which cite the *Erie* case.[2] In all of these cases recognition is given

(2) *Lyon v. Mutual Benefit Health & Acc. Assn.,* 305 U. S. 484, 59 S. Ct. 297, 83 L. Ed. 303, 307; *Sommer v. Nakdimen,* 97 F. (2d) 715, 719 (1938) (C. C. A. 8th); *Perkins v. U. S.,* 99 F. (2d) 255, 258 (1938) (C. C. A. 3rd); *Rosenthal v. N. Y. Life Ins. Co.,* 99 F. (2d) 578, 579 (1938) (C. C. A. 8th); *American Nat. Ins. Co. v.*

to the fact that it is the state law as pronounced by its *supreme* or *highest* court which becomes the rule of decision.

The precise point was passed upon in the case of *West v. American Tel. & Tel. Co.*, 108 F. (2d) 347 (1939) (C. C. A. 6th). The reasoning of the lower court in the instant case is confirmed by that opinion. See, also, the decision in *Field v. Fidelity Union Trust Co.*, 108 F. (2d) 521, 523 (1939) (C. C. A. 3rd), cited at page 30 of Petitioners' Brief. The opinion in that case sums up the matter as follows (526):

> "We believe that the proper rule is that federal courts should in all instances follow the law of the state with respect to the construction of the state statutes. Where that law has been determined by the courts of last resort their decisions are stare decisis, and must be followed irrespective of our opinion as to what the law ought to be. As to the pronouncements of other state courts, however, *we*

Belch, 100 F. (2d) 48, 50 (1938) (C. C. A. 4th); *Luhman v. Hoover*, 100 F. (2d) 127, 129 (1938) (C. C. A. 6th); *Wunderlich v. Franklin*, 100 F. (2d) 164, 166 (1938) (C. C. A. 5th); *North American Acc. Ins. Co. v. Anderson*, 100 F. (2d) 452, 455 (1938) (C. C. A. 10th); *Kansas Gas & Electric Co. v. Evans*, 100 F. (2d) 549, 550 (1938) (C. C. A. 10th); *Colorado Life Co. v. Steele*, 101 F. (2d) 448, 450 (1939) (C. C. A. 8th); *Aetna Life Ins. Co. v. Conway*, 102 F. (2d) 743 (1939) (C. C. A. 10th); *Rodgers v. Mabelvale etc. Imp. Dist.*, 103 F. (2d) 844, 846 (1939) (C. C. A. 8th); *Futrell v. Branson*, 104 F. (2d) 409, 410 (1939) (C. C. A. 8th); *Baskin v. Montgomery Ward & Co.*, 104 F. (2d) 531, 533 (1939) (C. C. A. 4th); *National Candy Co. v. Fed. Trade Com.*, 104 F. (2d) 999, 1005 (1939) (C. C. A. 7th); *Investors Syndicate v. Smith*, 105 F. (2d) 611, 620 (1939) (C. C. A. 9th); *N. Y. Life Ins. Co. v. McCurdy*, 106 F. (2d) 181, 187 (1939) (C. C. A. 10th); *Demers v. Railway Express Agency*, 108 F. (2d) 107, 109 (1939) (C. C. A. 1st); *Abbott v. Railway Express Agency*, 108 F. (2d) 671, 672 (1940) (C. C. A. 4th).

are not so bound, but may conclude that the decision does not truly express the state law."

The fact that certiorari was granted recently by this court in *Field v. Fidelity Union Trust Co.,* supra, where the Circuit Court of Appeals for the Third Circuit decided it was not bound by the decision of a court other than the Supreme Court of the State of New Jersey, furnishes no precedent for granting certiorari in the instant case. In the *Field* case the decision of the state court which the Circuit Court of Appeals failed to follow, clearly decided a point of local law, but the United States Circuit Court of Appeals differed with the conclusion of the state court. While the opinion in the *Sinnott* case is not clear, the fact is, that the *Sinnott* case did not decide the point of law which the Circuit Court of Appeals herein assumed it did decide. On the contrary, the point of law which the Circuit Court considered was decided in the *Sinnott* case was never in issue in that case (infra pp. 24-8).

Compare also the decision of this court in *Burns Mortgage Co. v. Fried,* 292 U. S. 487, 54 S. Ct. 813, 78 L. Ed. 1380, 92 A. L. R. 1193, wherein this court ruled that a state statute which codifies the common law becomes a matter of local law, and the rule of decision of the *highest* court of the state is the rule which the Federal court should follow. Also, that in the absence of a decision by the *highest* court of the state the Federal courts were free to decide the controversy in accordance with the accepted canons of construction.

See, also,

Russell v. Todd, ... U. S. ....., 60 S. Ct. 527, 84 L. Ed. 517 (advance opinions);

Wichita Royalty Co. v. City Nat. Bank, 306 U. S. 103, 107, 59 S. Ct. 420, 83 L. Ed. 515, 517.

When this court used the term "highest court of the state" it did so advisedly.

The opinion of the Circuit Court of Appeals herein notes the fact that while there was a petition for a hearing in the State Supreme Court after decision in the District Court of Appeal in the *Sinnott* case the petition to the State Supreme Court *"was not on this point"*. (R. 2629). The highest court of the state was not asked to review the point here in question. This disposes of the argument made in Petitioners' Brief to the effect that the denial of a hearing by the California Supreme Court made the decision of the District Court of Appeal *stare decisis.*

b. In California the denial by the Supreme Court of a petition for hearing therein after decision by a District Court of Appeal does not mean approval by the Supreme Court of the opinion and decision of the lower court.

Petitioners argue contrary to the rule stated in the above caption, but the cases do not support them.

The leading case on this point is *People v. Davis,* 147 Cal. 346, 350, 81 Pac. 718. In that case the California Supreme Court said:

> "It is proper to add that the denial in any case of an application for the transfer of a case decided by a district court of appeal is not to be taken as an

expression of an opinion by this court, or as the equivalent thereof, in regard to any matter of law involved in the case and not stated in the opinion of that court, nor, indeed, *as an affirmative approval by this court of the propositions of law laid down in such opinion.* The course to be pursued by this court in the exercise of its power in any case is a matter in which the objects above stated are the controlling considerations, and it will not hold itself bound even where questions of law alone are involved, to order a transfer of the cause, after a decision of the district court, except where it shall appear necessary in order to carry out the above-stated purposes of securing uniformity of decision and the settlement of important questions of law. The significance of such refusal is no greater than this—*that this court does not consider that the interests of justice, or the purposes for which the power was given, require its exercise in the particular case.*"

This principle of law has received repeated approval by the California Supreme Court. Cases approving this holding are:

Bohn v. Bohn, 164 Cal. 532, 537, 129 Pac. 981;

In re Stevens, 197 Cal. 408, 423, 241 Pac. 88;

People v. Rabe, 202 Cal. 409, 418, 261 Pac. 303;

Seney v. Pickwick Stages, 206 Cal. 389, 391, 274 Pac. 536;

Shelton v. Los Angeles, 206 Cal. 544, 550, 275 Pac. 421;

Western Lithograph Co. v. State Bd. of Equalization, 11 Cal. (2d) 156, 157, 78 Pac. (2d) 731.

It will be noted from the above cases that the position of the Supreme Court of California in passing upon petitions for hearing in the Supreme Court after decision by a District Court of Appeal is not unlike the position of the Supreme Court of the United States in passing upon petitions for the issuance of a writ of certiorari. The considerations which prompt this court to grant such petition have been heretofore stated by this court a number of times. For convenience of reference we quote a short excerpt from one of the cases aptly stating the rule:

> *Magnum Import Co. v. Coty,* 262 U. S. 159, 163, 43 S. Ct. 531, 67 L. Ed. 922, 924.
>
> "The jurisdiction to bring up cases by certiorari from the circuit courts of appeals was given for two purposes: first, to secure uniformity of decision between those courts in the nine circuits; and, second, to bring up cases involving questions of importance which it is in the public interest to have decided by this court of last resort. The jurisdiction was not conferred upon this court merely to give the defeated party in the Circuit Court of appeals another hearing."

See also cases infra, pages 28-9.

c. The California District Courts of Appeal have held, and the California Supreme Court recognizes, that the decision of a District Court of Appeal in one district is not binding on another.

The argument made at page 20 and the following pages of Petitioners' Brief to the effect that the decision of one District Court of Appeal in California binds the others, particularly when a petition for a hearing has been made

to the Supreme Court after decision in the District Court of Appeal and that petition has been denied, is not a correct statement of the law.

The effect of a refusal to transfer a case to the Supreme Court after decision by a District Court of Appeal has been settled by the decision in *People v. Davis,* supra, and the decisions noted in the previous subdivision of this brief which affirm the rule of the *Davis* case. Notwithstanding the clearcut holding of the *Davis* case, some decisions of the District Courts of Appeal have, without citation of the *Davis* case, or of any other decision of the California Supreme Court affirming the rule in the *Davis* case, made general and loose statements to the effect that the denial of a petition for hearing in the Supreme Court gives a decision of a District Court of Appeal "all the authority of a pronouncement by the Supreme Court itself" (*Bridges v. Fisk,* 53 Cal. App. 117, 122, 200 Pac. 71). Such reasoning is contrary to the law of the state as established by *People v. Davis,* supra, and to the line of authority following that case.

The statement quoted above from *Bridges v. Fisk,* supra, and similar statements appearing in other cases cited at page 20 of Petitioners' Brief, are not necessary to the decisions in the several cases in which the statements are found.

That there is a conflict in the decisions of the several District Courts of Appeal in California on this point is recognized in the opinion of the Circuit Court of Appeals herein (R. 2629). In addition to the decisions noted in the opinion of the Circuit Court of Appeals, the hereinafter

mentioned cases all from District Courts of Appeal in California, either directly, or by implication, recognize that one District Court of Appeal is not bound by a decision in another. These cases are as follows:

Danley v. Superior Court, 64 Cal. App. 594, 599, 222 Pac. 362:

"And while it is true, as contended by the respondents, that the opinion and judgment of another department of the District Court of Appeal *is not binding upon this court,* nevertheless such opinion and judgment has its persuasive effect and if we agree both in the reasoning advanced and the conclusion reached it is our privilege and our duty to adopt the same."

McMillan v. Greer, 85 Cal. App. 558, 563, 566, 259 Pac. 995.

In this case the court expressly refused to follow the decision of another District Court of Appeal.

And in *Stone v. San Francisco,* 27 Cal. App. (2d) 34, 80 Pac. (2d) 175, the following appears (27 Cal. App. (2d) 37):

"Respondent relies principally upon Armas v. City of Oakland, 135 Cal. App. 411 (27 Pac. (2d) 666, 28 Pac. (2d) 422), *which case was repudiated* by Lossman v. City of Stockton, 6 Cal. App. (2d) 324 (44 Pac. (2d) 397), Rogers v. City of Los Angeles, 6 Cal. App. (2d) 294 (44 Pac. (2d) 465), and later by Raynor v. City of Arcata, 11 Cal. (2d) 113 (77 Pac. (2d) 1054)."

Notwithstanding that all but one of the decisions referred to are by District Courts of Appeal, it will be noted that

one District Court of Appeal "repudiated" the decision of another.

In *Raynor v. City of Arcata,* 11 Cal. (2d) 113, at page 120 (77 Pac. (2d) 1054), the Supreme Court of California recognizes this conflict in the decisions of the appellate courts. It is to be noted that despite the conflict the Supreme Court of California *has never ruled* that one District Court of Appeal is required to follow the decision of another. It would appear that if this were the rule the Supreme Court would long since have said so. Not only has the Supreme Court not said so but it has repeatedly reaffirmed the holding of *People v. Davis,* supra, to the effect that its refusal to hear a case decided by a District Court of Appeal does not imply an approval by the Supreme Court of the opinion of the lower court.

A District Court of Appeal in California is no more bound by a decision of another District Court than is one United States Circuit Court of Appeals bound by that of another circuit.

In *Skaggs v. Taylor,* 77 Cal. App. 519, 247 Pac. 218, cited by the lower court in its opinion and noted in Petitioners' Brief (page 20) the decision which was followed was a previous decision of the *same* District Court of Appeal.

It has also been held by the Supreme Court that a decision of a District Court of Appeal in a similar case *between the same parties, involving the same issues* which decision the Supreme Court refused to review after decision by the District Court of Appeal established no precedent which the Supreme Court was required to follow:

Bohn v. Bohn, 164 Cal. 532, 129 Pac. 981, the California Supreme Court saying (164 Cal. 537-8):

> "Our further examination of the case has led us to the conclusion that the Department opinion was correct. The principal reason for granting a hearing in Bank was that, in a case between the same parties, presenting precisely the same issues of fact and law, the district court of appeal for the second appellate district had reversed an order like the one here appealed from, and that a petition to have the appeal transferred to this court for hearing and determination had been denied. (Bohn v. Bohn, 16 Cal. App. 179, (116 Pac. 568).) It is, of course, much to be regretted that opposite rulings should be made in two cases which present identical questions. But an order by this court, refusing to transfer a cause after judgment in the district court of appeal, *does not adopt the opinion of the appellate court* so as to give it, in this court, the authoritative effect which one of our own decisions would have. Being now convinced that the order appealed from should be affirmed, we must so declare, even though this view necessarily involves the conclusion that the earlier appeal should have been transferred to this court, and thereupon disposed of by a judgment differing from that rendered in the district court of appeal. Indeed, believing, as we do, that the order now under review was properly made, it would be our duty to affirm it, even if this court had itself, in another case, reversed an order similar in all respects."

The case of *Eisenberg v. Superior Court,* 193 Cal. 575, 226 Pac. 617 (cited in Petitioners' Brief, page 24), does not say that the refusal by the Supreme Court to transfer a

case *shall* be taken as an approval of the conclusion reached by the District Court of Appeal, but merely states that it *may* be so taken.

If neither the Supreme Court of California, nor another District Court of Appeal is bound by a decision of a District Court of Appeal, but may "repudiate" such as one California case says, clearly neither the United States Circuit Court of Appeals nor this court is so bound.

d. The California District Courts of Appeal are courts of limited and not state-wide jurisdiction.

While it is true, as petitioners contend, that the California Supreme Court may transfer any case pending therein to any District Court of Appeal for decision and may also transfer a case from one District Court of Appeal to another, these District Courts of Appeal are nevertheless not of state-wide jurisdiction. California is divided territorially into four districts, each with a District Court of Appeal (R. 2629), and the various counties in the state are respectively allocated to one of these districts.[3] A case may be appealed from a Superior Court *only* to that particular District Court of Appeal to which said county is allocated.

Some of the material provisions of the present sections 4a, 4b and 4c of article VI of the California Constitution were once part of former section 4 of article VI. In so far as material to the decision of this case, however, the

(3) At pages iv and v of the Appendix to Petitioners' Brief the constitutional provisions for allocation of the several counties to the respective district courts of appeal are printed.

language of the Constitution in force when *Sinnott v. Schumacher* was decided was substantially the same as that of the present Constitution.[4]

It will be noted that the appellate jurisdiction of the District Courts of Appeal is limited except as to matters which are transferred to a District Court of Appeal by the Supreme Court, and that jurisdiction is not state-wide. But even if jurisdiction were state-wide, in view of the express limitations which have been placed upon their decisions by the Supreme Court of the State, their decisions, even when the Supreme Court refuses a hearing, are not those of the *highest* court in the state, which the Federal courts are required to follow.

e. In the case of Sinnott v. Schumacher the California District Court of Appeal did not hold that liquidated damages could not be awarded for delay caused by abandonment.

This case has been interpreted differently by the trial court and the Circuit Court of Appeals herein.

The two lower courts herein make different interpretations of the *Sinnott* case. At the trial petitioners relied upon two California cases which they argued held that liquidated damages for delay could not be recovered in California in the case of an abandoned contract. One of these was the *Sinnott* case, the other *Bacigalupi v. Phoenix Bldg. etc. Co.*, 14 Cal. App. 632, 112 Pac. 892. The position taken by petitioners in the trial court appears from the opinion of that court (R. 135-6). Petitioners in

(4) Excerpts from the California Constitution applicable to the district courts of appeal appear in the Appendix to Petitioners' Brief, pages i to vii.

the trial court made no distinction whatever between these two cases, but argued that each supported their contention that after abandonment liquidated damages for delay could not be recovered (R. 135-6).

The trial court held that while these cases permitted an aggrieved party to sue for the actual damage caused by abandonment *apart from damage caused by delay,* the rule in neither case prevented a party from recovering liquidated damages for delay (R. 136). Like petitioners, the trial court made no distinction on this point between the two cases, but it did not follow petitioners' interpretation of either (R. 136).

The opinion of the trial court regarding the *Bacigalupi* case is in accord with the interpretation of that case by the United States Circuit Court of Appeals for the Second Circuit in *Southern Pacific Co. v. Globe Indemnity Co.,* 21 F. (2d) 288 and by the Circuit Court of Appeals herein (R. 136). In distinguishing the *Bacigalupi* case the Circuit Court of Appeals herein said (R. 2628):

> "Bacigalupi v. Phoenix Bldg. etc. Co., 14 Cal. App. 632, 637, where *no damage was awarded for delay* and the appellant merely claimed that the liquidated damage clause for delay prevented a recovery for the increased cost of completing the building."

With reference to *Sinnott v. Schumacher,* however, the opinion of the Circuit Court of Appeals herein states as follows (R. 2628-9):

> "Appellants argue that we are bound by the decision of a California District Court of Appeal in Sinnott v. Schumacher, 45 Cal. App. 46, 52, 53. There

> the contractor had abandoned the contract and, while the fact does not appear on the face of the opinion, actual damages for delay were allowed in lieu of the liquidated amount. In that case there was a petition for hearing by the Supreme Court of the state, *but not on this point.* The decision is adverse to ours, but the court failed to consider the authorities and stated its mere conclusion without reasoning. The case is not persuasive, and we think was wrongly decided."

The Circuit Court of Appeals herein, by the extract of its opinion above quoted, points to the only difference between the *Sinnott* case and the *Bacigalupi* case. In the *Bacigalupi* case as the opinion in *Southern Pacific Co. v. Globe Indemnity Co.,* supra, and also the opinion of the Circuit Court Appeals herein states, there was no endeavor to recover *any* damages for delay. In the *Sinnott* case the owners did not seek *liquidated damages for delay,* but sought to recover actual damages only.

The record in the Sinnott case proves that liquidated damages were not sought therein; the Circuit Court of Appeals was in error in its interpretation of that case, and the construction of the Sinnott case by the trial court herein was the correct one.

The record in the *Sinnott* case shows that damages were allowed for the increased cost of completing the work over the contract price and other items caused by the breach including $2,641.14 damages for delay, the reasonable value of the use and rental of the building to be constructed for three months' delay at the rate of $880.38 per month. The pleadings did not ask for liquidated damages and there was *no issue on that question.*

In the appendix (page i) we have printed paragraph V of the amended cross-complaint in the *Sinnott* case, which shows that the pleading for damages for delay was for the reasonable monthly rental. This paragraph of the amended cross-complaint is the entire allegation thereof dealing with damages for delay. The findings of the court on this issue are likewise set forth in the appendix (page i) and are to the effect that the plaintiff was entitled to the reasonable market value of the use and rental of the building of $880.38 per month for three months, or a total of $2,641.14. We have also listed in the appendix (pages i to iv) quotations of the briefs of both the appellant and the respondent in the *Sinnott* case on the matter of the allowance of damages for delay. These extracts from the briefs show beyond any question that liquidated damages for delay were never an issue in the *Sinnott* case.

There is another fact which proves that such damages were never in issue. It is the rule in California that a claim for liquidated damages must be based upon a pleading affirmatively bringing the case within the exception stated in section 1671 of the California Civil Code:

Kelly v. McDonald, 98 Cal. App. 121, 125, 276 Pac. 404, 406;

Mente & Co. v. Fresno C. & W. Co., 113 Cal. App. 325, 331-3, 298 Pac. 126, 128, 129;

Long Beach City School Dist. v. Dodge, 135 Cal. 401, 405, 67 Pac. 499.

The excerpts printed in the appendix from the pleadings show that the only pleading in the *Sinnott* case for damages for delay sought *actual* damage for delay, that is to

say the reasonable market value of the rental of the building, as distinguished from liquidated damages for delay. There was no other pleading and the findings show no other issue on damage for delay.

f. The opinion in Sinnott v. Schumacher is too indefinite and the case not of sufficient importance to warrant this court reviewing the action of the lower court.

We have already pointed out that the trial court and the lower court made different interpretations of the ambiguous language of the opinion in the *Sinnott* case. Also that the record discloses that in the trial court petitioners concluded that the case of *Bacigalupi v. Phoenix Bldg. etc. Co.*, supra, and the *Sinnott* case decided the same principle of law. Each of the lower courts herein have ruled that the *Bacigalupi* case does not support petitioners' argument. We have shown that when the record in the *Sinnott* case is checked against the opinion in that case, it is clear the *Sinnott* case likewise does not support petitioners' argument and that the interpretation of the trial court herein is correct, that of the Circuit Court of Appeals wrong.

In *Layne and Bowler Corporation v. Weston Well Works, Inc.*, 261 U. S. 387, 393, 43 S. Ct. 422, 67 L. Ed. 712, 714, in speaking of the position of this court in granting certiorari on a conflict of decision between two Circuit Courts of Appeal this court announced the following rule:

> "If it be suggested that as much effort and time as we have given to the consideration of the alleged conflict would have enabled us to dispose of the case

before us on the merits, the answer is that it is very important that we be consistent in not granting the writ of certiorari except in cases involving principles the settlement of which is of importance to the public as distinguished from that of the parties, and in cases where there is a *real and embarrassing* conflict of opinion and authority between the *circuit courts of appeal.* The present case certainly comés under neither head."

In re Woods, 143 U. S. 202, 12 S. Ct. 417, 36 L. Ed. 125, wherein this court ruled (36 L. Ed. 126):

"But we do not regard the inquiry as to whether it was settled law in the State of Minnesota that a judgment of dismissal in a former suit, such as pleaded here, was not a bar to a second suit upon the same cause of action, or whether the law in respect of recovery by a servant against his master for injuries received in the course of his employment was properly applied on the trial of this case, as falling within the category of questions of such gravity and general importance as to require the review of the conclusions of the Circuit Court of Appeals in reference to them."

Certainly the vague and inconclusive opinion in the *Sinnott* case does not warrant this court in departing from the rule announced by its decisions in the two cases last cited.

g. Cases cited by petitioners under point A distinguished.

Petitioners in their brief (pages 27-33) cite several cases to the point that this court has held that United States courts sitting in California are bound by decisions

of California District Courts of Appeal where the Supreme Court of California has denied a hearing after decision in the District Court of Appeal.

In this contention petitioners are in error. The precise point whether a Federal court is bound by a decision of a state court other than the *highest* court of the state was not presented in any of the cases cited. Furthermore as the Circuit Court of Appeals noted in its opinion herein, in the *Sinnott* case a review by the California Supreme Court was not asked on the point material to this case (R. 2629).

If the Federal court is impressed with the reasoning of an intermediate state appellate court there is no rule which says that then the state court may not be followed. But this is quite different from saying that if the Federal court disagrees with the holding of an inferior state court the decision of the latter court *must* be followed. *Erie Railroad Co. v. Hilt,* 247 U. S. 97, 38 S. Ct. 435, 62 L. Ed. 1003 (cited in Petitioners' Brief, page 29) does not support the latter contention.

II.

THE CIRCUIT COURT OF APPEALS DID NOT ERR IN HOLDING THAT THE STIPULATION IN THE CONTRACT FOR LIQUIDATED DAMAGES WAS VALID UNDER THE LAW OF CALIFORNIA.

The argument under this heading is directed to Point B of Petitioners' Brief, pages 33-39 thereof. It is not the law in California that liquidated damages cannot be recovered in a contract such as that involved herein.

Section 1671 of the California Civil Code expressly provides:

> "The parties to a contract may agree therein upon an amount which shall be presumed to be the amount of damage sustained by a breach thereof, when, from the nature of the case, it would be impracticable or extremely difficult to fix the actual damage."

All that is required is that there shall be pleading and proof of the inability to fix the actual damage. Once that is established, the agreement for liquidated damages is enforceable, but the test of impracticability is to be applied *as of the date when the contract was made,* not after completion, nor at the time of trial (*Hanlon Drydock and Shipbuilding Company, Inc., v. McNear,* 70 Cal. App. 204, 232 Pac. 1002).

In the instant case the actual damage which would result from a failure to complete the contract on time could not be fixed with any certainty when the contract *was made.* The opinion of the Circuit Court of Appeals recites the facts which show the District both pleaded and proved this (R. 2625). The record supports the opinion (R. 55-7; 2522-4; 2534-6; 2527-8; 2532; 2544-6).

The opinion of the lower court is also supported by ample authority. In the interest of space we will not here recite that authority but refer to the opinion of the Circuit Court of Appeals and to the page of the record where these cases are collected (R. 2626). Petitioners have not pointed to any California case which holds that liquidated damages cannot properly be allowed in a case of this character. On the contrary it is the universal rule that

the principle which allows liquidated damages applies with special force to contracts for public improvements for the breach of which there may be no other adequate measure of damage. (See note appearing in 1912C Ann. Cases p. 1028; *Parker etc. Co. v. City of Chicago,* 267 Ill. 136, 107 N. E. 872, 1916C Ann. Cas. 337.)

A California case in point is *Consolidated Lumber Co. v. City of Los Angeles,* 33 Cal. App. 698, 166 Pac. 385, which involved a public contract where a clause for liquidated damages was upheld. In that case the court further ruled that a declaration in the contract that the damages for a breach thereof would be extremely difficult to fix (33 Cal. App. 700):

> "* * * tends strongly to establish the fact required by the statute to exist; and, further, tends to control the question as to whether the provision is one for liquidated damages or for a penalty, where the contract appears upon its face to be one allowed by the terms of section 1671 * * *"

Wise v. United States, 249 U. S. 361, 39 S. Ct. 303, 63 L. Ed. 647, was a case in this court where a clause providing for liquidated damages of $200 a day was upheld. Such sum was held to be reasonable where the cost of the buildings to be erected was approximately $1,000,000. The contract price for the improvement in the instant case was over $3,600,000 (Vol. VIII Book of Exhibits, Pl's. Ex. 16, p. 162). The liquidated damages of $500 a day here allowed is proportionately the same as that approved by this court in the *Wise* case.

Other cases in which this court affirmed the allowance of liquidated damages in construction contracts are cited in the opinion of the lower court (R. 2626). There was no error in the allowance of liquidated damages to the District.

None of the cases cited by petitioners under this point (Petitioners' Brief, pages 33-37), holds that liquidated damages cannot be awarded under the facts of the instant case.

III.

EVEN IF LIQUIDATED DAMAGES SHOULD NOT HAVE BEEN ALLOWED, THE DISTRICT WAS ENTITLED TO ITS ACTUAL DAMAGE FOR DELAY WHICH IN THIS CASE EXCEEDS THE AMOUNT ALLOWED AS LIQUIDATED DAMAGES.

A provision for liquidated damages cuts both ways. An illustration of this is found in the case of *Hanlon Drydock etc. Company Inc., v. McNear,* supra. There the liquidated damage clause which was held to be valid, provided for a payment of $400 a day for delay and the total liquidated damages allowed was $9,200. The contention on appeal was that the court should have held the provision for liquidated damages invalid and have awarded appellant the actual damage suffered of $60,000 in lieu of the lesser amount.

In the instant case the District is not seeking both liquidated and actual damages. The District tried the case on the theory that the liquidated damage clause was valid. If it is, as we believe it is, the clause controls the amount

which may be awarded as damages for delay, even though the actual damages exceed the stipulated liquidated amount. If the provision is invalid, as petitioners contend, then the District is entitled *to its actual damage* notwithstanding that this exceeds the liquidated damage. It is not the law that a contractor may breach a contract and deprive the aggrieved party of *all* damage.

The delay for 433 days at $272.89 a day (Ex. X-114, Book of Exhibits Vol. VIII 595), which was the amount found by the court to be the damage the District suffered in order to keep its organization intact, amounts to $118,-161.37 (R. 203). The interest on the outstanding bonds which the District had to pay during this period was $89,-832.67 (Ex. X-115; R. 2527-8; R. 204). The total damage to the District resulting from delay was, therefore $207,-994.04. The liquidated damages allowed were only $142,000. The difference is in petitioners' favor. We are not unmindful of the fact that petitioners undoubtedly will claim that the items of interest charges and the cost of operating the District were first placed in evidence by the District in order to show that the amount claimed as liquidated damages was reasonable, and to support its claim for liquidated damages (R. 2519-20; 2544-6). In that petitioners will be correct. The District tried the case on the theory that it was entitled to liquidated damages only (R. 2545; 2566-7; 2606-7). In addition to the expense to which the District was put because of the delay the District also placed before the trial court other evidence showing the great inconvenience, damage and delay suffered by the public apart from the damage to the District as a corporate entity (R. 2544-6).

Before the case was concluded, however, and in the course of the many attacks made by petitioners on the District's evidence, the District stated clearly and unequivocally that it wished the damage item of $272.89 a day, the cost of keeping the District intact and the interest charges of $89,832.67 during the period of delay *to be considered for all purposes* and as independent and substantive items of damage (R. 2595-9; 2610).

The District steadfastly argued for the integrity of the liquidated damage clause (R. 2519-20; 2544-6; 2567; 2606-7), but it is obvious from the position it took at the trial that it wished to have evidence before the court to sustain an award for actual damages for delay if the liquidated damage clause was to be ignored.

In the appendix to this brief (pages iv to ix) we have printed portions of the record showing the District's position on these items of damage.

The petitioners at the trial moved to strike out all evidence of the District regarding damages for delay, including not only the damage to the traveling public but the interest item and the daily expense item to the District during the period of delay (R. 2607-10). Thus, the Petitioners squarely presented their position to the court. They did this *after* the District had clearly defined its position that it wanted all evidence of delay considered *for all purposes.* Under these circumstances we contend that the evidence of delay which supports actual damage, as well as the evidence of delay which supports liquidated damage was properly before the court.

CONCLUSION

It is respectfully submitted that for the reasons stated the writ should not issue.

Dated: Oakland, California, August 21st, 1940.

ARCHIBALD B. TINNING,
THEODORE P. WITTSCHEN,
Attorneys for Respondent.

(APPENDIX FOLLOWS.)

Appendix

Excerpts from pleadings, findings and briefs in case of Sinnott v. Schumacher, 45 Cal. App. 46, 187 Pac. 105.

Paragraph V, Amended Cross-Complaint in Sinnott v. Schumacher.

"V. These defendants have been further damaged on account of the delay in the completion of said building, * * * to-wit: the period of three months, at the monthly rental of $124 (sic) a month, or $3,052; also the further sum of $1500 for attorney's fees to prosecute this action and for legal services in connection with the completing of the said building, and representing these defendants in different actions commenced to foreclose liens for work and labor performed under said plaintiff."

Paragraph VI, Findings in Sinnott v. Schumacher.

"VI. That by the acts of Sinnott and said Surety the defendants were reasonably and necessarily delayed in the completion of the building for the period of three months, and that the reasonable market value of the use and rental of said building, during said time, is the sum of $880.38 per month or total $2641.14, in which sum the defendants were damaged."

Excerpt from Plaintiff's Opening Brief, page 19, in Sinnott v. Schumacher.

"EIGHTH FINDING ATTACKED ($2641.14 rents). Find. VI, (Ax. IX.) That by delay in completion, owners were damaged in $2641.14. According to our evidence

there was no delay, but ignore our evidence and still defendants produced no evidence that Sinnott delayed the completion beyond 5 days, the damage for which under the contract is $10 per day or $50. We need not go to the reporter's notes for it is found (Find. IV, Ax. VIII), that Sinnott on Dec. 12 quit and wholly abandoned the said contract and work and since so continued to quit, and that on Dec. 14 owners gave Sinnott 3 days to go on with the work, which he did not do. Under the contract the owners on Dec. 17, had the right to enter upon the premises and furnish, etc. Said contract (Sec. 17, * * *, Tr. 2664) provides, that when the 3 days are up the owners shall then have the right to enter upon the premises and furnish (materials, etc.). And contract (Sec. 17, * * *) provides 'that whenever * * * the owner * * * shall have the right to enter upon the premises and furnish, etc., and shall exercise that right,—that from that time on the full direction and control of the completion * * * shall be under the direction of the owner and the authority of the contractor * * * shall cease.' Find. IV finds that Sinnott quit and abandoned on Dec. 12 and did so ever since. The owners' right accrued Dec. 17. Thence on Sinnott's 'authority ceased.'

From Dec. 12 to 17 is 5 days at $10 is $50. The contract fixes this as the maximum damage. It says damage for said delay shall be limited to a charge of $10 per day which is to be deducted from the contract price and is arbitrarily so fixed because the 'actual damage is from the nature of the case impracticable and extremely difficult to fix' (idem.) Besides this, Sinnott on Dec. 22 served owners with notice of rescission of contract (Tr. 1508) and that he would sue and he never was on the premises after Dec., 1914.

He filed this suit Jan. 13, 1915, and yet Find. VI, (Ax. IX) says we delayed them 3 months from (Find. V, Ax. IX) Dec. 20, 1914, to March 20, 1915, during most of this time we were trying parts of this case in court on the basis of a confessed abandonment by us because of the breach of contract. Such a finding is destitute of support."

Excerpt from Respondents' Reply Brief, page 35, in Sinnott v. Schumacher.

"The eighth finding attacked by appellant that by delay in completion owners were damaged in the sum of $2641.14;

Finding IV states:

'That said plaintiff Richard Sinnott after the execution of said contract and bond commenced to perform the work provided to be performed by the said contract and thereafter and to-wit, on the 12th day of December, 1914, voluntarily and without fault or provocation on the part of the defendants and cross-complainants, Maria Schumacher, H. W. Ludemann and Hermine Ludemann, or any of them, quit and wholly abandoned the said contract and the work he was then performing under and pursuant thereto * * * and that said Richard Sinnott and the said Pacific Coast Casualty Company thereupon and thereafter and without the fault of the owners wholly failed, neglected and refused to supply a sufficiency of any materials or workmen to complete the said contract or to perform the same.'

Finding VI:

'That by reason of the acts of the plaintiff, Richard Sinnott, and cross-defendant, Pacific Coast Cas-

> ualty Company, in abandoning said contract and the work therein provided to be done and in failing, neglecting and refusing to complete the said building and the said contract, said defendants and cross-complainants * * * were thereby deprived of the use, occupation, income and rental of the said premises and the building provided to be constructed thereon for the said period of three months and that the reasonable market value of the use, occupation and rental of said building and said premises during said time is and was the sum of $880.38 per month or the total sum of $2641.14.'
>
> This breach of the contract by appellant and his refusal to construct the building in accordance with his contract, *is an entirely different matter from and not to be confused with the question of delay* in time of completion as specified in the contract; the former is founded upon an absolute breach of contract and is for general damage, whereas the latter would be special damage under the terms of the contract had it been otherwise fulfilled."

Excerpts from record concerning damages for delay.

In connection with the testimony of Wallace B. Boggs, the following statements were made (R. 2519-20):

> Mr. Tinning (Counsel for District): The purpose of this offer, your Honor,—we have pleaded as one of the matters in this defense the penalty of $500 per day. We are offering this line of testimony to show, for instance, what the daily cost of operation of the District was. We also expect to offer proof with respect to the bond interest, and also with respect to the loss to the public by the fact they were unable to use this tunnel during the certain period of time.

Now, that proof simply goes to the point of the penalty being somewhere within striking distance of the actual loss incurred.

The Court: How is the Court going to measure that?

Mr. Tinning: I don't think the Court does, your Honor. I think, if we are entitled to a penalty, that the thing then is to determine the penalty itself is not unreasonable.

Mr. Smith (Counsel for Contractor): What did your Honor say? I did not hear your remark.

The Court: I inquired how the Court was going to determine any damage for the public using, or the failure to use, this tunnel. He answered that by saying it has to do with the penalty and the imposition of the penalty. The penalty itself is prescribed by——

Mr. Tinning: Yes, by that contract.

Mr. Smith: If they want to call it a penalty, let them accept that as his definition. The law in California provides you cannot enforce a penalty. I understood the theory was they were trying to recover on the basis of liquidated damages. They have no right to recover any penalty. The law is as clear as a bell on that, particularly because penalties are absolutely proscribed under our California law. You cannot recover a penalty. The assertion is made, in their cross-complaint, that it is a claim for liquidated damages.

The Court: I think we are confused. I don't think he expects to go beyond the penalty clause here.

Mr. Tinning: We don't expect to go beyond the liquidated damage clause. What we are showing is: it is part of the contract and it is not an unreasonable provision, in view of the situation that exists.

* * * * * * *

Record, pages 2566-67:

Mr. Wittschen (Counsel for District): Your Honor, so that the record may be clear, that portion of plaintiff's motion which is directed to the cost of protecting the work and taking care of the project until new bids were called is an element of damage that springs from the breach. The cost of the bond issue, the interest on the bonds, the cost as shown to the traveling public, and those matters that counsel claims are speculative were not offered and *we are not asking for those as specific items of damage.* They were merely offered to show two things, one that the liquidated damages were not unreasonable, and also to show the difficulty of the proof of actual damages. The law in California is that where actual damages cannot be proven, or that their proof will be extremely difficult, the parties may agree upon reasonable stipulated liquidated damages, and as I said before and now repeat *we are not asking for double damages,* we are not asking for damages in excess of the penalty of $500 a day, but we are asking for damages for that penalty because we think it is reasonable, and because it comes within the rule. And we rely upon the cases that are all in the last brief that I handed to your Honor, which I called "Defendant's First Supplemental Brief"—there are two or three cases in there that are squarely on the point; the latest, perhaps one of the best considered cases, is that City of Reading Case; and I have also put in numerous cases from California which hold that a penalty of this kind is proper or liquidated damages in lieu of the penalty.

• • • • • • •

Record, pages 2595 to 2598:

Mr. Wittschen (Counsel for District): If there is any doubt about it we would like to put Mr. Boggs on the stand and let them cross-examine him. Otherwise we want our statement accepted as a fact, that none of the costs of this litigation are reflected in Exhibit X-114. It is just the ordinary cost of continuing the District, the running expense of the District's operations. The cost of the engineers and other items of expense would have dropped the moment the job was finished, because the Counties took over the work.

The Court: If there is any question about it, that it is an incorrect statement, if you wish to call him in the matter——

Mr. Smith (Counsel for Contractor): I think I can clarify the matter. Wasn't the exhibit offered solely for the purpose of showing that you had an item of expense and not to prove the figures?

Mr. Wittschen: I wanted to straighten that out as soon as I had an opportunity to talk. I was going to then, but I would like to do it now, because Mr. Boggs is here. That item of $278 a day, the cost of keeping the District, is put in for a two-fold purpose. It was put in first to show that there was the actual expenditure as a fact, *and if there is anything in the record to the contrary it is now withdrawn,* because the intent was to put that in as a fact. The other item that we intended to put in as a fact was that there was $89,000 of bond interest during this time of delay. Those two things were facts, and when added together they total $500 (a day), and they were put in both as factual matters and also to show that the claim for liquidated damages was not unreasonable. The $419 a day which would be the cost

of people using the road because they had to travel two miles more was simply put in to show the difficulty in ascertaining actual damages; but the other two items, the cost per day of the District and the bond interest, were two elements of fact, and Mr. Marrin in his brief has regarded them as facts and has stated them as facts.

Mr. Marrin (Counsel for Contractor): Oh, no, just the reverse. I understood they were offered distinctly for the purpose of showing that the amount of damages was difficulty to fix, that they were not offered as facts and as a part of the actual damage.

Mr. Wittschen: *You have some basis for that* because it was stated in the paragraph along with the other items but now that this case is not closed and the controversy has arisen—we do not need to recall the witness—*I state to you now we want them considered over your objection as proof of a fact, and if you want to cross examine on them you may.*

Mr. Smith: At the time the evidence went in I happened to be conducting the questioning for the Six Companies, the plaintiff, and I objected to the testimony and your Honor admitted it subject to a motion to strike.

Mr. Wittschen: That is right.

Mr. Smith: On the same subject, there were three matters involved. There was this exhibit regarding the cost and maintenance of the District, which you called Cost maintenance of the District, I understood. Mr. Tinning was putting in the evidence. There was the Exhibit offered for the purpose of showing the amount of alleged bond interest, which they were paying every day, and then there was miscellaneous testimony, not in exhibit form, of the so-called traffic per day, and capitalized into an imaginary figure up

into the stratosphere somewhere, and I objected to all of those three items on the ground they were immaterial, and Mr. Wittschen said in so many words for the record that they were being offered for the sole purpose of showing the difficulty of showing liquidated damages.

The Court: He so stated now.

Mr. Smith: Yes.

Mr. Wittschen: No, I said that that speculative feature, the cost to the general public, was solely to show the difficulty of ascertaining the liquidated damages. I ask your Honor to consider, and if *there is any misunderstanding now is the time to straighten it out,* that the proof of $272.89 a day is not only for that purpose but it is actual proof of the loss that the District incurred, because the District, in taking care of this work, had to exist a certain time longer than it would have existed and that all that expenditure related to this work and was not just the work of maintaining the District, because the District had nothing else to do, and I want that showing considered, *and if they would like to cross examine further, because they misunderstood it,* or even if we did say it before, *we now correct it,* it was a misunderstanding, and we are willing that Mr. Boggs come back. I also want considered as a fact the interest matter because whether you agree it is an element of damage or not, it is a proven fact that the bonds carried so much interest, and there were so many bonds, and I would like both of those considered as facts.

JOINT HIGHWAY DISTRICT NO. 13 OF THE STATE OF CALIFORNIA, a public corporation,

Respondent.

Respondent's Petition for a Rehearing

To the Honorable the Supreme Court of the United States:

Respondent Joint Highway District No. 13 of the State of California respectfully petitions for a rehearing herein.

Respondent also requests that pending action on this petition that this court order that the issuance of the mandate herein be stayed.

GROUNDS FOR REHEARING

We respectfully contend that this court has misconceived the holding of the California court in *Sinnott v. Schumacher*, 45 Cal. App. 46, 187 Pac. 105. What was said therein concerning liquidated damages after abandonment of a contract was not directed to the point that there could be no recovery of liquidated damages for *delay* after abandonment, in a proper case.

The language therein was directed wholly to the argument of the contractor that the contract provision for liquidated damages for delay was the full measure of damage which could be recovered by the owners for all damage occasioned by a breach of the contract.

Damages for delay may be only one of several items of damage resulting from a breach of a construction contract. As in the *Sinnott* case, increased cost of completion may be a more substantial item of damage than damages for delay. Obviously increased cost is not included within a clause providing for damage for *delay only.*

When the California court said that "the right of the defendants to damages as the result of the plaintiff's breach of said contract could not be *affected or limited* by said provision of the contract for a penalty for delay" the court was answering the broad contention of the contractor that no damages other than liquidated damages

---

Note: Unless otherwise stated all emphasis appearing herein is supplied.

for delay could be recovered because of the abandonment by him.

The California court did not decide that because of abandonment, that liquidated damages *for delay* could not be recovered for such delay, in addition to other damage caused by the breach, such as increased cost of completion.

Increased cost of completion was not *within the scope* of liquidated damages for delay, and obviously could not be *"affected or limited by said provision"* fixing damages for delay.

We respectfully submit that in the *Sinnott* case the court did not decide that there could be no recovery of liquidated damages for delay after abandonment. The court there decided that a clause providing for liquidated damages *for delay only* did not preclude an award for damages on a breach, for all of the other items of damage including increased cost of completion and the rental value of the building during the period that completion was delayed because of the breach.

The following considerations demonstrate that the construction we have given to the opinion in the *Sinnott* case is proper, and that the propriety of allowing liquidated damages for delay after abandonment was never in issue in that case.

I.

Liquidated damages *for delay* were never pleaded in the *Sinnott* case and were never in issue in that case. There

was no pleading therein setting forth the necessity for the application of the liquidated damage clause and showing facts that it was impracticable or extremely difficult to fix the actual damage, as is required by California law in order to recover liquidated damages.

It is a cardinal rule of California practice that there can be no recovery for liquidated damages without first a *pleading* and also proof of the difficulty and impracticability of fixing actual damage. This is shown by the case of *Long Beach etc. Dist. v. Dodge,* 135 Cal. 401, 404, 67 Pac. 499, wherein the Supreme Court of California said:

> "The principal question presented is one of pleading. The plaintiff assumed, and, I think, correctly, that the damages stipulated in this contract could not be recovered without evidence that it would be impracticable or extremely difficult to fix the actual damage. As an illustration that such evidence is necessary, suppose the high school during this period occupied a leased building equally as well adapted to the purposes of the school as the one contracted to be erected: the damage sustained by the district would obviously be the rent of the building, and in such case stipulated damages could not control. Upon this subject the Civil Code contains the following provisions:—
>
> 'SEC. 1670. Every contract by which the amount of damage to be paid, or other compensation to be made, for a breach of an obligation, is determined in anticipation thereof, is to that extent void, except as expressly provided in the next section.
>
> 'SEC. 1671. The parties to a contract may agree therein upon an amount which shall be presumed

to be the amount of damage sustained by a breach thereof, when, from the nature of the case, it would be impracticable or extremely difficult to fix the actual damage.'

The first of these sections having declared *all* contracts fixing liquidated damages in advance to be void, except as provided in the next section, it is clearly incumbent upon the party seeking to recover upon such agreement to show by averment and proof that his case is within the exception, for without an allegation bringing his case within the exception the complaint in that regard is insufficient, the presumption being in the absence of such allegation that such agreement is void." (Emphasis is the court's.)

See also *Kelly v. McDonald,* 98 Cal. App. 121, 125, 276 Pac. 404, 406; *Mente & Co. v. Fresno C & W Co.,* 113 Cal. App. 325, 331-3, 298 Pac. 126, 128-9. These cases cite numerous authority showing that this is the uniform California rule.

We have set forth in the Brief of Respondent in Opposition to Petition for Writ of Certiorari (Appendix, page 1) the entire pleading in the *Sinnott* case on damages for delay and also the findings of the court on damages for delay. We also left with the court on oral argument a certified copy of the record in the *Sinnott* case. Appellant has not questioned the correctness of the record and the printed excerpts from the *Sinnott* case. These excerpts from the pleadings printed in our Brief and the record show that never in the *Sinnott* case was there any claim for *liquidated* damages for delay. Therefore liquidated damages for delay were never in issue. They were neither *pleaded nor proved* as required by California law.

When the court made the answer that it did to the contractor's contention that the liquidated damage clause for delay covered *all* damage, the court was not ruling that there could be no recovery for liquidated damages *for delay only* in a proper case, but was holding that the liquidated damage clause for delay *only* in that contract, had no application and did not limit the damages recoverable in the event of abandonment which might be greatly in excess of any damage for delay, and which included other items of damage apart from delay.

II.

The excerpt quoted above from the case of *Long Beach etc. Dist. v. Dodge,* quotes verbatim sections 1670 and 1671 of the Civil Code of California. These show that there can be no liquidated damages for delay, or for any cause except in cases of impracticability of fixing actual damage, and never when the actual damages can be ascertained. In the *Sinnott* case the subject of the contract was a building which had a fixed rental value. The liquidated damage clause for delay would be inapplicable to that case because the actual damage could be readily ascertained. In our Brief in Opposition to Petition for Writ of Certiorari (Appendix, page 1) we have copied paragraph VI of the Findings in the *Sinnott* case. Therein the court found that the reasonable market value of the use and rental of the building was the sum of $880.38 a month for a total of three months' delay, or $2641.14. This ability to fix the actual damages for delay was probably

why liquidated damages were not pleaded, and why such were not in issue in the case, and why the court held that the clause which was *for delay only* did not affect the recovery of general damage.

III.

There is a divided line of authority in the United States as to whether or not liquidated damages for delay apply in the event of abandonment. There was this divided line of authority when the *Sinnott* case was decided. For a holding contra to Mr. Williston (*Williston on Contracts, Rev. Ed.*, Vol. 3, sec. 785, p. 2210) see *School District No. 3 etc. v. U. S. Fidelity and Guaranty Co.*, 96 Kan. 499, 152 Pac. 668, 670, a case decided four years prior to the *Sinnott* decision. Therein it was held that liquidated damages did apply in the event of abandonment. Nevertheless, in the *Sinnott* case the court did not recognize this divided line of authority, nor cite any cases either way, or reason the matter in any way. It merely used the language previously quoted that the damages as the result of plaintiff's breach "could not be affected or limited" by the provision for a penalty for the delay, meaning thereby that the penalty for delay could not be a substitute for damage *other than delay* which sprung from the breach of the contract.

It is reasonable to assume that had the court intended to lay down for the first time in California a new rule of law regarding recovery of liquidated damages *for delay after abandonment*, it would have cited available authority

and stated its reasons for its conclusion. The decision is too inconclusive to justify a reversal. It does not even refer to the previous *Bacigalupi* case, next cited, which appellants argue states the same rule of law.

IV.

The California case of *Bacigalupi v. Phoenix Building Co.*, 14 Cal. App. 632, 638, 112 Pac. 892, supports our view. In the *Bacigalupi* case the owner entered into a contract with the defendant contractor to construct a building for $14,000.00. The Surety Company gave a bond for $3500.00 conditioned upon the faithful performance of the contract. The contractor did not complete the building and the owner brought an action against the contractor and his surety and was awarded $3300.00, the reasonable cost of completion over and above the contract price. There was no claim therein *for damages for delay.* The contractor, however, claimed that the provision in the contract for liquidated damages of $5.00 a day for delay, was the full measure of recovery. The court said (14 Cal. App. 638):

> "Manifestly this clause has relation only to damages resulting *from delay only,* and has no bearing upon the measure of damages for an abandonment of the contract and failure to complete the work at all."

In other words, that it was not a substitute for damage other than damage for delay. The only difference between the *Bacigalupi* case and the *Sinnott* case is that in

the *Bacigalupi* case there was no claim for damages for delay, while in the *Sinnott* case there was no claim for *liquidated* damages for delay, but the claim was for actual damage for delay. Actual damages for delay were awarded in the *Sinnott* case and the actual damage was the only damage *for delay* that was in issue in that case.

See *Southern Pacific Co. v. Globe Indemnity Co.*, 21 F. (2d) 288, for an interpretation of the *Bacigalupi* case and also as to that case, the opinion of the Circuit Court herein (R. 2628).

In our opinion the trial court gave the proper construction of both the *Sinnott* and *Bacigalupi* cases when it said regarding these (R. 136):

> "These cases hold that a plaintiff may sue for actual damages when a defendant has breached his contract, notwithstanding a liquidated damage clause in the agreement. *But this is not to say that a plaintiff, or cross-complainant, may not act upon the liquidated damage provision* in a contract when he seeks damages *for delay* caused by an abandonment."

This interpretation of the trial court is in accord with our position herein as to the correct construction of these two cases.

V.

The record in the *Sinnott* case shows that damages were allowed among others for the following items: $8,000.00, increased cost for completing the work; $2,500.00, attorney's fees; $2,641.14, reasonable value of the rental of the building for three months' delay in completion.

Obviously, the contention of the contractor that the liquidated damage clause for delay was a substitute for all this damage was an unsound argument. Manifestly, it is one thing to hold that the *general damage* which the owner suffers because of the contractor's abandonment of the contract is not limited or affected by a provision for stipulated damages *for delay,* and it is another thing to hold that in the event of abandonment the clause providing for stipulated damages for delay is inapplicable *to damage for delay only.* In the *Sinnott* case the court clearly decided the first point above stated, but we respectfully contend it did not decide the latter. We contend therefore that it is not the law of California that when a contractor abandons his contract, that there then can be no recovery of *liquidated damages for delay.*

VI.

There is also this distinction between the *Sinnott* case and the instant case. The *Sinnott* case dealt with a private contract. The contract in question is a public contract. Respondent District is a special and temporary public corporation. This is stated by the court below (R. 2625), and the nature of the District is shown by a case involving it (*Joint Highway District No. 13 v. Hinman,* 220 Cal. 578, 32 Pac. (2d) 144).

That the District in its corporate capacity suffered substantial actual damage from delay, is recognized in the opinion of the court below, wherein the court notes an item of $272.89 a day, the actual per diem cost to the District of operating overhead, during the period of delay

(R. 2625). The District also suffered further damage in its corporate capacity other than this per diem expense (Finding XXXV, R. 203-4).

In addition to the damage for delay sustained by the District in its corporate capacity there was other material damage suffered by the inhabitants of the District because of the necessity to use existing and obsolete routes instead of the new improvement. That this damage is exceedingly great is recognized in the opinion of the Circuit Court (R. 2625), also by the finding of the trial court (R. 202-3).

The authorities regard public corporations as in a peculiar class with respect to damage suffered by delay. In the case of *Parker etc. Co. v. City of Chicago*, 267 Ill. 136, 107 N. E. 872, 1916C Ann. Cas. 337, the court recognizes that in many cases if liquidated damages for delay may not be recovered for a public improvement, the public, though injured, would get no damages at all, saying (Ann. Cas. 1916C 339):

> "The city, in its corporate capacity, would suffer no damages for the failure to complete the work, but the citizens in whose behalf the contract was made would suffer damages which it would be practically impossible to prove."

See, also, a well considered note in Annotated Cases 1912C, page 1028 to the effect that the principle of liquidated damages applies with special force to contracts for public works. See also the opinion and supporting cases in the Circuit Court (R. 2626). Such contracts are in a special class with regard to liquidated damages for delay.

We submit that a real distinction between the *Sinnott* case and the instant case is that the *Sinnott* case dealt

with a private and not a public contract. A private contract usually deals with a structure having a definite rental value and actual damages for delay are readily ascertainable. A public contract usually deals with the converse situation. The *Sinnott* case should be interpreted, if applying at all, as applying to the particular contract involved in that case (a private contract) and not as laying down a rule of law applicable to an entirely different class of contract.

We respectfully request that this petition for a rehearing be granted.

We further respectfully ask that, pending action on this petition, this court order that the issuance of the mandate herein be stayed.

Dated: Oakland, California, December 17, 1940.

Respectfully submitted,

ARCHIBALD B. TINNING,
T. P. WITTSCHEN,
Attorneys for Respondent.

Certificate of Counsel

We certify that the above petition for rehearing is presented in good faith and not for delay.

ARCHIBALD B. TINNING,
T. P. WITTSCHEN,
Attorneys for Respondent.

P 1.

SUPREME COURT OF THE UNITED STATES.

No. 267.—October Term, 1940.

Six Companies of California, Hartford Accident and Indemnity Company, et al., *vs.* Joint Highway District No. 13 of the State of California.	On Writ of Certiorari to the United States Circuit Court of Appeals for the Ninth Circuit.

[December 9, 1940.]

Mr. Chief Justice Hughes delivered the opinion of the Court.

Six Companies of California, a contractor, brought this suit against respondent, Joint Highway District No. 13, to recover the reasonable value of materials and labor furnished under a contract. The contractor had undertaken to rescind for alleged breach by respondent and had stopped work. Respondent answered, alleging wrongful abandonment of the contract and by cross-complaint sought damages against the contractor and its sureties.

There was a clause in the contract for liquidated damages in the amount of $500 a day in case of delay in completion.[1] The District Court found against the contractor and its sureties and on the cross-complaint awarded damages which included $142,000 as liquidated damages for delay. The Circuit Court of Appeals affirmed the judgment. 110 F. (2d) 620.

---

[1] That clause provided:

"(d) Damages for Delay.—The Parties hereto expressly stipulate and agree that time is the essence of this contract. In case the work is not completed within the time specified in the contract or within such extensions of the contract time as may be allowed as herein provided, it is distinctly understood and agreed that the contractor shall pay the District as agreed and liquidated damages and not as a penalty five hundred dollars ($500 00) for each and every working day which may elapse between the limiting date as herein provided and the date of actual completion of the work, said sum being specifically agreed upon as a measure of the damage, to the District by reason of delay in the completion of the work; it being expressly stipulated and agreed that it would be impracticable to estimate and ascertain the actual damages sustained by the District under such circumstances, and the Contractor agrees and consents that the amount of such liquidated damages so fixed, shall be deducted and retained by the District from any money then due, or thereafter to become due, the Contractor".

Petitioners contended that under the law of California the clause providing for liquidated damages did not apply to delay which occurred after the abandonment of the work by the contractor. This contention was overruled. The Circuit Court of Appeals expressly recognized that its decision in that respect was contrary to the decision of the District Court of Appeal in California in the case of *Sinnott* v. *Schumacher*, 45 Cal. App. 46. But the Circuit Court of Appeals thought that decision wrong and refused to follow it. We granted certiorari limited to the question whether there was error in that ruling. October 14, 1940.

In *Sinnott* v. *Schumacher, supra*, the suit was brought to recover the value of labor and materials furnished under a building contract. After part performance the contractor gave notice of rescission and abandoned work because of failure to receive the first installment of the agreed payment. Defendants denied that the installment was due and filed a cross-complaint against the contractor and his surety asking damages because of the abandonment of the work. The trial court found against the plaintiff on his complaint and in favor of the defendants on their cross-complaint, and entered judgment for damages. The District Court of Appeal affirmed the judgment. The Supreme Court of the State denied a petition for hearing in that court.

On the appeal to the District Court of Appeal, the plaintiff-appellant contended that the trial court erred as to the amount of the damages awarded, basing his contention upon the clause in the contract which provided for liquidated damages in a stipulated amount per day in case of delay in completion.[2] The District Court of Appeal held that the clause had no application to a case where the

---

[2] The clause for liquidated damages in the contract in the Sinnott case was as follows:

"Should the Contractor fail to complete this contract and the work provided for within the time set for completion as aforesaid, due allowance being made for the contingencies provided for herein, he shall then become liable to the Owner for all loss and damages which the Owner may suffer on account thereof, in the sum of Ten Dollars per day, which the Contractor hereby agrees to deduct from his contract price, for each day that the work shall remain unfinished beyond such time for completion, and the Owner agrees to pay to the Contractor a bonus of Ten Dollars ($10) for each day that the work may be completed before the time aforesaid for the completion.

"The agreement in this paragraph made for damages is made as herein set forth for the reason that the actual damage which will be sustained by the Owner

contract had been abandoned without sufficient cause. The court said:

"As to the appellants' contention that the court was in error in its finding and conclusion as to the amount of damages sustained by the defendants and cross-complainants by reason of the plaintiff's unjustified abandonment of work upon said building, and his failure, neglect, and refusal to complete the same, it may be stated that this contention is based upon the clause in the contract which relates to the matter of delay in the time of completion of said building and which purports to fix a penalty of fifty dollars per day for such delay; but this provision of the contract has no application to a condition wherein the contractor is shown to have abandoned his contract without sufficient cause, in which case the right of the defendants to damages as a result of the plaintiff's breach of said contract could not be affected or limited by said provision of the contract for a penalty for delay in the completion of the structure beyond the stipulated time for such completion".[3]

Respondent urges that what was said by the District Court of Appeal in the *Sinnott* case with respect to the liquidated damage clause was a mere dictum. We do not so regard it. This part of the opinion of the court was its answer to the appellants' insistence that the judgment on appeal was erroneous because the liquidated damage clause had been disregarded and damages had been awarded in excess of the amount for which the contract provided. What the court said as to this was a statement of the ground of its decision. It was a statement of the law of California as applied to the facts before the court. It is said that there is a difference between the two cases. That difference appears to be that in the instant case the owner is seeking to apply the liquidated damage clause in order to recover from the contractor, while in the *Sinnott* case the contractor was seeking to limit the damage recover-

by reason of the Contractor's breach of the covenant to complete this contract within the time stated is from the nature of the case impracticable and extremely difficult to fix; and one of the considerations moving the Owner to enter into this contract with the Contractor is the agreement of the Contractor to complete his said contract within the time herein stated and the liquidated damages herein above stated for his failure to do so".

The plaintiff's contention under this clause was that the delay in completion was not more than five days the damage for which under the contract would amount to $50.

[3] Compare Bacigalupi v. Phoenix Building Co., 14 Cal. App. 632, 639. See Williston on Contracts, Rev. Ed., Vol. 3, Sec. 785, pp. 2210, 2211.

able against him to the amount agreed upon. But, so far as the question concerns the applicability of the liquidated damage clause, the difference would not seem to be material, as by the terms of the clause in each case it appears to be intended to bind both parties when applicable. The ruling as to the law of California as applied by the state court was that the stipulation in the contract as to the amount of damages in case of delay in completion was not applicable to delay after the contractor had abandoned the work. As the Circuit Court of Appeals said, that decision "is adverse to ours".

The decision in the *Sinnott* case was made in 1919. We have not been referred to any decision of the Supreme Court of California to the contrary. We thus have an announcement of the state law by an intermediate appellate court in California in a ruling which apparently has not been disapproved, and there is no convincing evidence that the law of the State is otherwise. We have fully discussed the principle involved in the cases of *West* v. *American Telephone and Telegraph Co.*, Nos. 44 and 45, and *Fidelity Union Trust Co.* v. *Field*, No. 32, decided this day, and further amplification is unnecessary. See, also, *Rindge Co.* v. *Los Angeles*, 262 U. S. 700, 708; *Tipton* v. *Atchison, Topeka & Santa Fe Rwy. Co.*, 298 U. S. 141, 151. The Circuit Court of Appeals should have followed the decision of the state court in *Sinnott* v. *Schumacher* with respect to the inapplicability of the liquidated damage clause in the event of the abandonment of work under the contract, and its judgment to the contrary is reversed. The cause is remanded for further proceedings in conformity with this opinion.

It is so ordered.

A true copy.
